1.4	6 th May 2025	Isabelle Grey	Updated to Access Evo.

1. Overview

1.1. Purpose of the Guide

This document provides guidance on how Security in PeopleXD can be used to:

- Manage PeopleXD user accounts.
- Create and manage menu profiles.
- Define the Account Profiles used apply an organisation's password policy to non-Access Evo users (standalone portal and back-office users).
- Access screens to support product level data access on PeopleXD Portal.
- Report on user access via PeopleXD Insight.
- The use of Web Services.

This guide will also outline the administrative tasks that are completed via Access Evo:

- Password Management
- Impersonation
- Authentication

1.2. Menu Profiles v Data Access

User access can be broadly split into 2 categories; menu profile access and data access. The table below outlines the difference between both:

Access Type	Description
Menu Profiles	- Provides access to system functionality - Menu options are linked to system elements including: - Dashboards - Screens - Buttons - Menu options - Widgets - Typically aligned to a user's role in the organisation e.g. a profile for 'HR Administrators', another for 'Payroll Administrators' etc.
Data Access	- Provides access to the actual data / records stored on the system. - For People Management, this includes access to the following records: - Employees - Posts - Salaries - Different employees can have access to different sets of records on PeopleXD e.g. access to all records, access to only a subset of records.

For example, users of the People Management dashboard will need to be granted access for both categories i.e. a user will need:

1. A menu profile e.g. COREPORTAL_HRADMIN, in order to see the People Management Dashboard and all functionality within that.
2. Data access to see employee records, search for posts and access salary information.

2. PeopleXD in Access Evo Overview

2.1. User Onboarding

The steps below outline the process of onboarding new users for PeopleXD in Access Evo:

1. Set up the employee in People Management. See [PeopleXD People Management: New Starter Wizard](#) for more detail.
2. The employee will then be synced to Workspace with a status of Added, and an email invite to join Access Evo will be sent automatically. See [Access Evo Invites](#) for more detail.
3. The employee receives an email invite and follows the set up link.
4. Once the employee has set their password and logged on successfully, their status will change to Active.
5. If configured, menu options will be automatically assigned to the employee. Alternatively, you can manage the employee's menu options via the Menu Profiles tab of Security. See [Assign Menu Profiles](#) for more detail.

2.1.1. Username Accounts

If the user does not have a valid email, a Username account can be created:

1. Set up the employee in People Management. See [PeopleXD People Management: New Starter Wizard](#) for more detail.
2. Enable the Username toggle from the System Users widget on the User Management tab of Security. See [Username accounts](#) for more detail.
3. Run the sync for the user, or wait for the overnight sync.
4. Set a temporary password for the user from Access Evo. See [Access Access Evo: How to change users password for username account](#) for more detail.
5. Share the password with the user. Once they log in for the first time, they will be prompted to set a new password.

2.2. Password management

For Access Evo users, you will not be able to change a user's password from within PeopleXD.

Read [Access Access Evo: Reset your Password](#) to learn how users can reset their own password.

2.3. Impersonation

Within Access Evo, impersonation allows users to give other users the option to log in as them for a period of time. This is primarily used for troubleshooting/support purposes. For example, if a user is having technical issues, they can give an IT admin permission to impersonate them.

2.3.1. Impersonation Setup

To allow a user to impersonate your account, read [Impersonation Rights](#).

2.3.2. Impersonating a User

When logging into Access Evo, you will be presented with the option to log in as yourself, or the person who has given you permission to impersonate them.

When someone logs in as a user via impersonation, the impersonated user receives an email to inform them of this. PeopleXD will make a record when someone logs on impersonating a user in Account Activity.

2.4. Authentication

There are 3 types of authentication available in Access Evo:

- Identity (Native Access Evo authentication)
- SSO via OIDC
- Active Directory Federation Service (ADFS)

To configure the authentication type, follow the below steps:

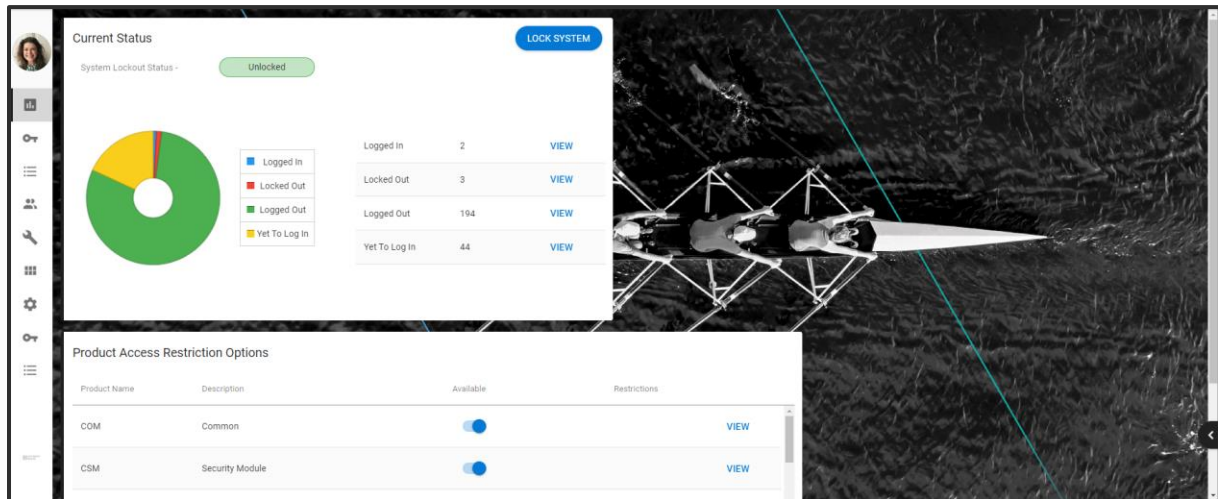

1. Click on your Access Evo Avatar.
2. Click **My Account**
3. Click **Security Policies** from the Administration section of the left-hand menu.
4. In the Federation section, select the authentication type from the Identity Provider dropdown menu.
 - a. Select **Local** for Identity (native Access Evo) authentication – default value
 - b. Select **OpenID Connect** for SSO or ADFS authentication

For additional information, see [Identity Account Management - User Guide](#).

3. Security Dashboard Overview

3.1. How to Access the Security Dashboard

To access the XD Security Dashboard, search for Security in the Quick Jump:

3.2. Security Dashboard Overview

Note:

The Security dashboard is not available to update in Dashboard Configuration.

The Security dashboard is broken into 9 tabs. The following table outlines each one:

Tab	Description
System Overview	This is the landing page of the Security dashboard. The following widgets are available on this tab: - Current Status - Product Access Restriction Options - Access Evo Configuration
Password Policy	This tab is used to manage the password policies for non-Access Evo users (i.e. back office or standalone portal user accounts).
Menu Profiles	This tab is used to manage the menu profiles on People XD. A menu profile is a defined set of menu options that can be assigned to a user in bulk.

User Management	The System Users widget on this tab is used to manage user accounts on People XD.
Set Up	This tab is used to: • Access 'system users' screens for some products, to manage user data level access. • Access some advanced Security features.
Web Service Apps	This tab is used to support the configuration of Web Services.
XD Content Security Policy	The XD Content Security Policy widget is used to control how content hosted outside of the PeopleXD application can be viewed / embedded. Further information is provided in XD Content Security Policy .
Back Office Sessions	This widget allows you to view information about back office users, such as the last time they logged on, where they connected to, if the user is currently logged on, and any locked objects can also be identified.

3.3. Production Environment Warning

The Production Environment Warning message displays automatically to a user on opening the Security dashboard, if the following elements of configuration are still present or enabled:

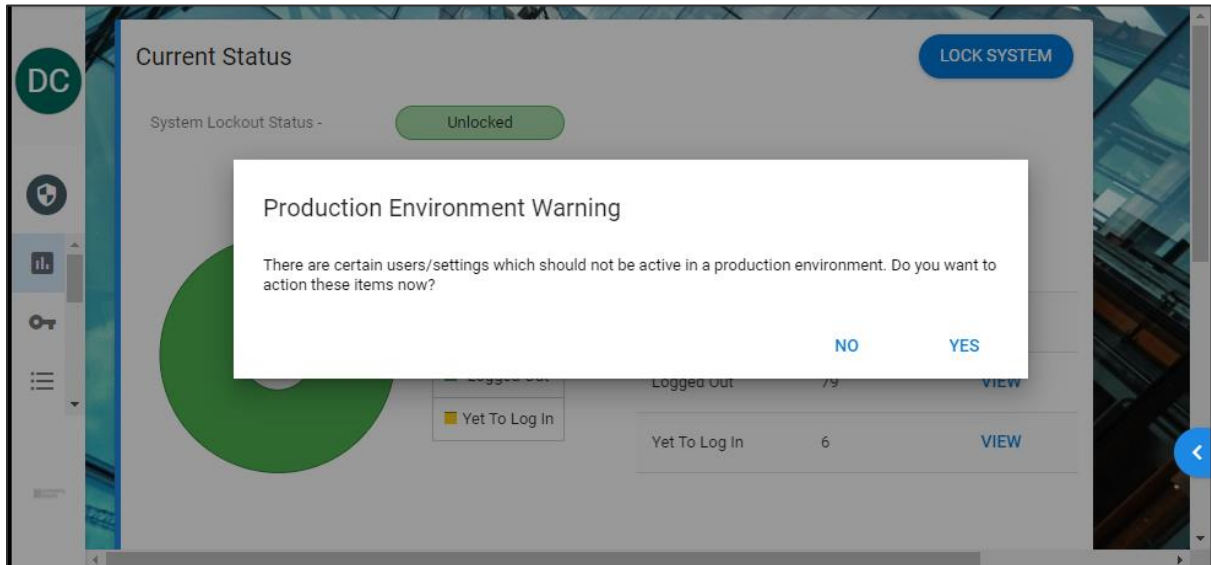

- **PeopleXD Generic User Accounts**
 - PORTALADM
 - PORTALESS
 - PORTALMSS
 - PORTALUPG

 **Note:** These accounts can be activated or deactivated at your own discretion. Please be aware that if these accounts are deactivated, it may impact PeopleXD having access using Service Accounts to your environment if required to assist with PeopleXD queries.

- **Session Mode Parameters**
 - Session Expire Mode Enabled
 - Session Cache Mode Enabled

This includes the option to jump to a new screen to directly update these settings i.e.

- Click **No** to close the message.
- OR**
- Click **Yes** to act on the accounts / settings.

The Production Environment Warning screen lists the user accounts or settings that shouldn't be active in a production (live) environment.

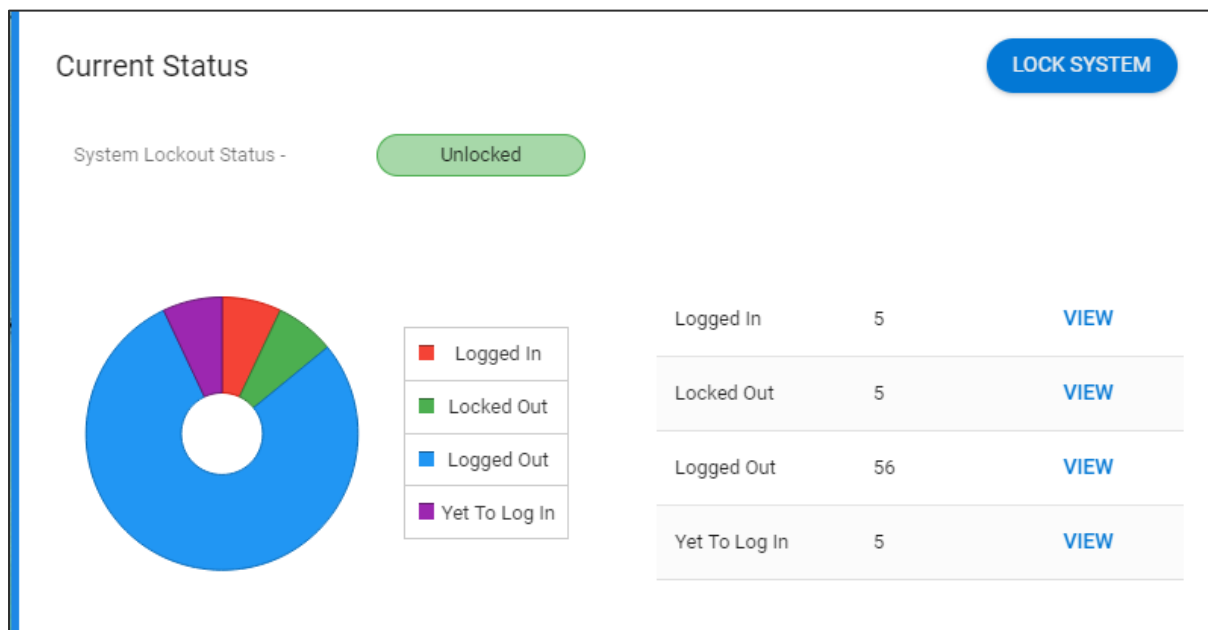

To deactivate these settings, follow the below steps:

1. Click **Deactivate** for each for the accounts listed. This list only displays active accounts. If any of the generic portal accounts have already been deactivated, they are no longer listed here. When an account is deactivated, it still exists on PeopleXD but is inactive.
2. Switch off the indicators.
 - a. **Session Expire Mode Enabled**
 - b. **Session Cache Mode Enabled**

Changes are saved automatically.

4. System Overview Tab

4.1. Current Status

Note: The Current Status widget should not be used when PeopleXD is in Access Evo. This includes the Lock System functionality.

4.2. Product Access Restriction Options

4.2.1. What is this Widget?

This widget is used to restrict access to products in PeopleXD. There are two options:

- **Global Availability:** Whether a product is available to any user of PeopleXD.
- **IP Restrictions:** Restrict access for a product to nominated IP addresses / IP range.

Note: This widget should not be updated without first contacting PeopleXD.

Product Access Restriction Options			
Product Name	Description	Available	Restrictions
COM	Common	☒	VIEW
CSM	Security Module	☒	VIEW
ERC	Recruitment	☒	VIEW
EXP	Expense	☒	VIEW
FB	Flexible Benefits	☒	VIEW
FRMCVT	Forms Conversion	☒	VIEW

4.2.2. Product Availability

Updating the **Available** indicator for a product will affect availability of that product for all users.

4.2.3. IP Address Restrictions

You can configure restrictions for each product, to allow for a list of IP addresses OR an IP range to be linked to that product. Only users with a specified IP address will be able to access the product. All other users will not have any access to that product. To do this, follow the below steps:

1. Click **View** for the product.
2. On the next screen click **Add**.
3. Provide the IP Address or IP Address Range.
4. Click **OK**.

4.3. **Access Evo Configuration Widget**

4.3.1. What is this widget?

The Access Evo Configuration widget allows you to:

- Enable automatic invite emails from Access Evo when a new employee is set up in PeopleXD.
- Enable menu matrix rules or default menu profile for new starters.
- Manage access to non-production environments.
- Manage Access Evo parameters.

Workspace Configuration	
Workspace Invites	OPEN
Workspace Menu Matrix	OPEN
Authorised Non-Production Users	OPEN
Workspace Parameters	OPEN

4.3.2. Access Evo Invites

This allows you to configure the settings for automatic invites. The table provides information on each item on the screen:

Item	Description
Enable automatic invites	Allows automatic email invites to be sent to new employees. - Once an employee is set up in People Management, the invite is triggered from Access Evo. - The user receives an email with an invite. - After clicking the link, the user is prompted to set up their password for Access Evo. If SSO is configured for their domain, the user will be prompted to sign in.
Send invites to future new starters	When enabled, invites will be sent to future starters. When disabled, invites are only sent to current employees.
Start date trigger	Allows a value to be set, so invites are only sent from Access Evo where an employee's start date is X number of days before today.

 **Note:** The email text and subject cannot be configured. The name of the Access Evo organisation is added to the invite email subject and body.

Restricting Email Invites

This allows you to restrict automatic invites to certain groups of employees, based on the reference data in their employee record. To do this, follow the below steps:

1. Click **Restrict Email Invites**.
2. Click **Add**.
3. Input a Name for your Criteria Group. The Type should be set to Access Evo Email Invites by default.
4. Click on your required reference data from the left hand menu.
5. Select the relevant attributes from the Available column and use the arrow to move it to the Assigned column. The list is automatically saved.
6. Return to the Restrict Email Invites screen via the breadcrumb menu. From here, you can add more groups, or edit and delete criteria groups from the relevant three dot menu.

Bulk Send Invites

This allows users to send invites on demand, rather than waiting for the overnight sync. To do this, follow the below steps:

1. Click **Bulk Send Invites**.
2. Click **OK**.

4.3.3. Access Evo Menu Matrix

This allows you to configure the settings for automatically assigning menu profiles to new starters. The profile will be assigned once the employee logs into their Access Evo account. Menu profiles can be auto-assigned using either:

- A Default menu profile – all new starters are auto-assigned this profile.
- Menu Profile Matrix – users are assigned a profile based on matrix rules.

The table provides information on each item on the screen:

Item	Description
Matrix Rules	If enabled, new starters will be assigned a menu profile based on matrix rules. For more information on configuring a Menu Profile Matrix, read the user guide .
Default Menu Profile	Select a menu profile from the dropdown menu to set this as the default menu profile that all new starters will be auto-assigned.

 **Note:** You can enable both options, so that both applicable menu profiles are assigned.

4.3.4. Authorised Non-Production Users

This allows you to define the authorised users that should have access to non-production environments. To add a user to the authorised list:

1. Click **Add User**.
2. Select a user from the Person dropdown list.
3. Click **OK**.

The user is now synced.

 **Note:** Users will need to have the `WORKSPACE_CF_MENU.AUTHORISEDUSERS` menu option enabled to view this option on the Workspace Configuration widget.

4.3.5. Access Evo Parameters

This contains advanced settings that control Access Evo configuration on PeopleXD.

 **Note:** Please discuss these options with your implementation consultant before making any changes.

5. Password Policy

5.1. What are Account Profiles

Account Profiles are used to control password and general account settings for user accounts e.g.

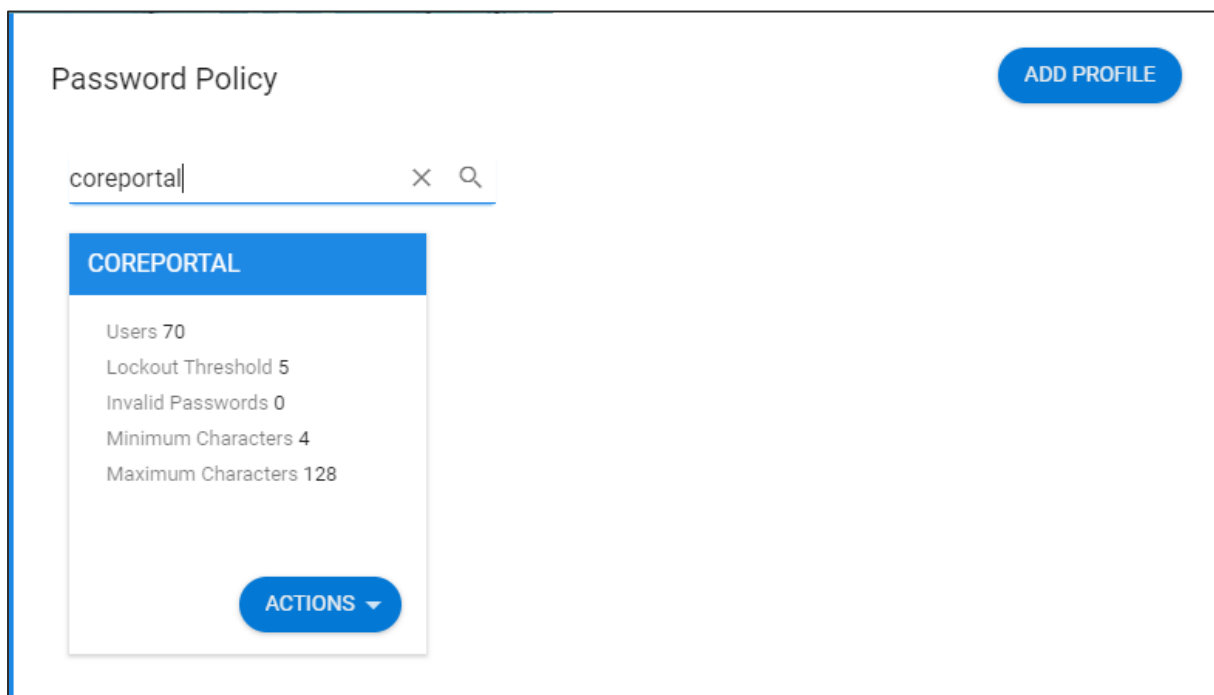

1. Password requirements.
2. Number of invalid login attempts before lockout

Note: Account Profiles are not applicable for Workspace users, or portal accounts using Single Sign On / SAML authentication types. The settings applied in the Password Policy tab will only affect Back Office and standalone portal accounts.

5.2. Access Account Profiles

To access Account Profiles:

1. On the Security Dashboard click **the Password Policy** tab.

5.3. Default Account Profile

The *COREPORTAL* menu profile is provided to XD portal user accounts by default. This is system mandatory and is used for all non-Access Evo portal user accounts.

Note: It is not possible to create multiple account profiles for Portal. Only COREPORTAL may be used. This may be updated to reflect the required password policy for the

5.4. View & Edit a Password Policy

To view the rules defined on an account profile:

1. Search for the account profile.
2. Expand **Actions** and select the **Policy Details** option.

Update policy details for COREPORTAL

Security > Update policy details for COREPORTAL

Use this policy on Portal/E-Recruitment ☒

Account Detail

Maximum failed attempts: 5

Idle time (minutes):

Cookie life time (hours): 3

Password Usage

access PeopleXD

SAVE

5.4.1. Use for Portal / E-Recruitment Indicator

The Use for Portal / E-Recruitment indicator is used to identify the account profile to be used for non-Access Evo Portal accounts i.e. COREPORTAL.

5.4.2. Account Detail

Item	Description
Account lockout threshold for invalid logon attempts	The number of invalid login attempts a user is permitted to make before their account will be locked out.
Lockout Duration (Days) *	Back Office only. The number of days that an account will remain locked out until it is automatically unlocked.
Time Before Reuse (Days)	The number of days before a user can reuse a password.
Cookie Life Time (Hours)	The cookie life time in hours.
Sessions Per User *	Back Office only. The number of concurrent open sessions a user can be logged into using their username.

5.4.3. Password Usage

Item	Description
Password life time (days)	The number of days before a user's password will expire and they will be required to create a new one.
Grace Time (Days) *	Back Office only. The number of days after a password has expired that a user can continue to use the old password.
Time before reuse (Days) *	Back Office only. The number of days before a user can reuse a password.
Changes before reuse *	Back Office only. The number of new passwords that a user must use before they can reuse an old password.

5.4.4. Password Rules

Item	Description
Minimum length	The minimum number of characters that must be used for the passwords.

Item	Description
Maximum length	The maximum number of characters that can be used for the password.
Allow username for password	Enabled: User can use their username as a password Disabled: User cannot use their username as a password
Prevent incrementing	Incrementing a password refers to incrementing a number on your password when changing e.g. password1 to password2. Enabled: Passwords can be incremented. Disabled: Passwords cannot be incremented.
Upper case characters	Minimum number of upper-case characters to be used.
Lower case characters	Minimum number of lower-case characters to be used.
Digits	Minimum number of digits to be used.
Special characters	Minimum number of special characters to be used.

5.4.5. Blacklisted Passwords

Click **Add** to define a list of passwords that users will not be permitted to use. Any text included here cannot be used to form a password for a user e.g. if "password" is listed, a user cannot use "password", or "password123" or "mypassword" etc.

Note: Saving any changes will affect all users currently linked to the Account Profile i.e. changes to COREPORTAL will affect all non-workspace Portal users (if not SSO or Identity accounts).

6. Menu Profiles

6.1. What are Menu Profiles?

Menu profiles are used to control and restrict user's access to system functionality. Various elements of the system are controlled by menu options including:

- Dashboards
- Screens
- Buttons
- Menu options
- Widgets

A menu profile is a defined set of menu options that can be assigned to a user in bulk. These are typically aligned to a user's role in the organisation e.g. a profile for 'HR Administrators', another for 'Payroll Administrators', another for regular employees etc.

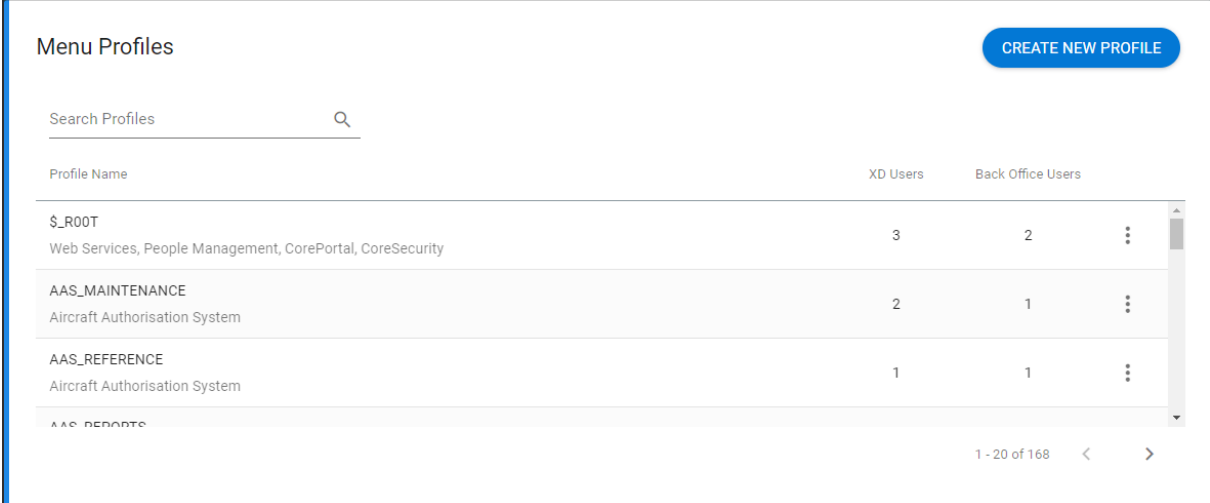

When the profile is assigned to the employee, they will get access to all of the system functionality controlled by the corresponding menu options.

Employees will require at a minimum one menu profile to access the system. However, they may have many, depending on their role e.g.

- Employee Menu Profile to access the Employee Dashboard.
- Manager Menu Profile to access the Manager Dashboard (if they are a manager).
- HR Admin Menu Profile to access the People Management dashboard (if they are a HR administrator).

6.2. Where are Menu Profiles Configured?

Menu profiles are configured on the Menu Profiles tab.

Profile Name	XD Users	Back Office Users
\$_R00T Web Services, People Management, CorePortal, CoreSecurity	3	2
AAS_MAINTENANCE Aircraft Authorisation System	2	1
AAS_REFERENCE Aircraft Authorisation System	1	1

The Menu Profiles widget lists all existing menu profiles in the system. This includes any default menu profiles provided by PeopleXD, and any additional menu profiles created by the organisation.

Use the search functionality at the top of the screen to search based on menu profile name only. The Users columns identify how many users are currently assigned to that profile.

6.3. Create New Menu Profile

6.3.1. Creating a Profile

To create a new menu profile:

1. Click **Create New Profile**.
2. Input a code (up to 30 characters without spaces).
3. Input a description (up to 50 characters).
4. Click **OK**.

At this stage, you need to add the required menu options to the menu profile. This is covered in the next section (see [Add Menu Options](#))

6.3.2. Duplicating a Menu Profile

To copy an existing menu profile, follow the below steps:

1. Search for the menu profile to be copied.
2. Click the  button and select **Duplicate**.
3. Update the Code and Description (if required).
4. Click **OK**.

6.4. Edit Existing Menu Profile

6.4.1. Add Menu Options

To add a menu option to a menu profile:

1. Search for the menu profile.
2. Click the  button and select **Manage Menu Options**.
3. Filter the results using the search bar, or by clicking the filter icon and selecting the required systems from the drop-down list. These will appear as selected blue labels at the top of the drop-down list.
4. Switch on the **Active** indicator for the required menu options. This is automatically saved.

Note:

- Some menu options are linked to each other. If you select a menu option that has any sub-menu options, these are all automatically enabled.
- The configuration guides provided with each module / feature will provide detailed guidance on what menu options are used to control each element of the system.

6.4.2. Update Menu Profile Name

To update the name / description for a menu profile:

1. Search for the menu profile.
2. Click the  button and select **Edit Profile Description**.
3. Update the Description (up to 50 characters). Code cannot be updated.

4. Click **OK**. The new Description will now be used for this menu profile.

6.5. Delete Menu Profile

To delete a menu profile:

1. Search for the menu profile.
2. Click the  button and select **Delete Profile and Remove Options**. A message is displayed to alert the user that deleting the profile will remove access to any users that are assigned to this profile.
3. Click **Yes** to proceed. The profile will now be deleted.

 **Note:** This has an immediate impact for any users that were assigned to that menu

6.6. Download Menu Profile

Download menu profile allows users to download the menu profile to a file (which can then be uploaded into another environment). To do this, follow the below steps:

1. Search for the menu profile.
2. Click the  button, then click **Download Menu Profile**.

6.7. Import Menu Options

This allows users to import menu options into the menu profile. When importing menu options, a user has two options:

1. Import menu options from an external file that has been downloaded from a different environment, such as UAT;
2. Import menu options from a different menu profile on the same environment.

To import a menu profile:

1. Search for the menu profile.
2. Click the  button, then click **Import Menu Profile**.
3. Select your import option:

- **From existing menu profile**
 - **From external file**
4. Follow the on-screen prompts to import your menu profile.
 5. Click **YES** to proceed. Your menu profile is now imported.

Note: This has an immediate impact for any users that are assigned to that menu profile.

6.8. Menu Profile Matrix

The Menu Profile Matrix feature provides a way to identify groups of employees and automatically assign menu profiles to them.

There are 2 types of assignments available:

- **Employee Organisation Role**

Menu profiles are assigned to employees based on an Organisational Role that they are assigned to. A nightly process identifies any employees with an Organisational Role that is defined in the rule matrix. If the Org Role assignment is effective that day, the process will assign the menu profile. If the Org Role is no longer active, the process will unassign the role.

- **Employee Account Provisioning**

Menu profiles are assigned to employees as part of the registration process. If the employee's current substantive contract meets the requirements in one of these rules, they will be awarded the corresponding menu profile.

To learn how to configure the menu profile matrix [read the user guide](#).

7. User Management

7.1. Access a User's Account

7.1.1. Search for a User

To search for a user and manage their account:

1. Click the **User Management** tab. The System Users widget will list all of the user accounts on PeopleXD. This is defaulted to show All Active Access Evo Accounts.

System Users

CREATE NEW USER

Search users

Q

All Active Workspace Accounts

Username	Employee	Status	Menu Groups	Menu Options	Usenam...
 Ailbe.Carton@sb03.com	Ailbe Carton PD096	Logged Out	3	826

	Alex McShane				

31 - 40 of 190

7.1.2. Search Filters

The drop-down list of options controls the list of users displayed on the System Users widget. See the table for a description of each of the options available:

Option	Description
All Active Access Evo Accounts	All Access Evo user accounts that are currently active.
All Access Evo Accounts	All Access Evo user accounts, including inactive accounts.
Non-synced Accounts	All employees in People Management that have not synced to Access Evo. This will be primarily because they do not have an email contact type., or there has been an error when syncing the employee.
All Active Portal Accounts	All standalone Portal user accounts that are currently active.
All Portal Accounts	All standalone Portal user accounts, including inactive accounts.

Option	Description
All Back-Office Accounts	All PeopleXD Back Office accounts - active and dormant.

7.1.3. View Account

To view a user's account:

1. Search for the username. Ensure that the correct filter is required, depending on the user you are searching for.
2. Expand the 3-dot menu and click **Manage Account**.

7.2. Access Evo User Accounts

7.2.1. Access Evo Account Overview

Header

The following table outlines what items are shown on the header area of a user's Access Evo account.

Item	Description
HR Person Link	The employee name that the user account is linked to.
Username	The employee's username.
Access Evo Status	The user's current status. This will be Added, Active, or Deactivated.
Menu Groups	The number of menu profiles the user has access to.
Menu Options Access	The combined number of menu options that the user has access to for the menu profiles enabled.
Last Activity	The last time the user logged in, including the duration of the session and a timestamp for the activity. <i>No activity</i> will appear if they have never logged in.
Last Sync Date	The date that the users record was last synced with Access Evo.

Menu Profiles

This is where menu profiles are assigned to user accounts. This is what controls the user's access to functionality on PeopleXD. The following table outlines what information is stored here:

Item	Description
Search	Search for the menu profile name.

Item	Description
Filter	Filter by menu profiles that have been assigned to the user already, or those who have not been assigned yet.
Results	List of menu profiles. This list will reflect all of the menu profiles that are configured on PeopleXD. If the Active indicator is on, this means that the user has that menu profile and therefore can access all the features controlled by the menu options enabled on it.

7.2.2. Assign Menu Profiles

In order for the user to be able to access the PeopleXD screens and features they require, they must be assigned to one or many menu profiles (see [Menu Profiles](#) for more detail).

To assign a menu profile for a user:

1. Search for the menu profile.
2. Select the **Active** indicator to assign a menu profile to the user.

To revoke a menu profile, i.e. remove a user's access,:

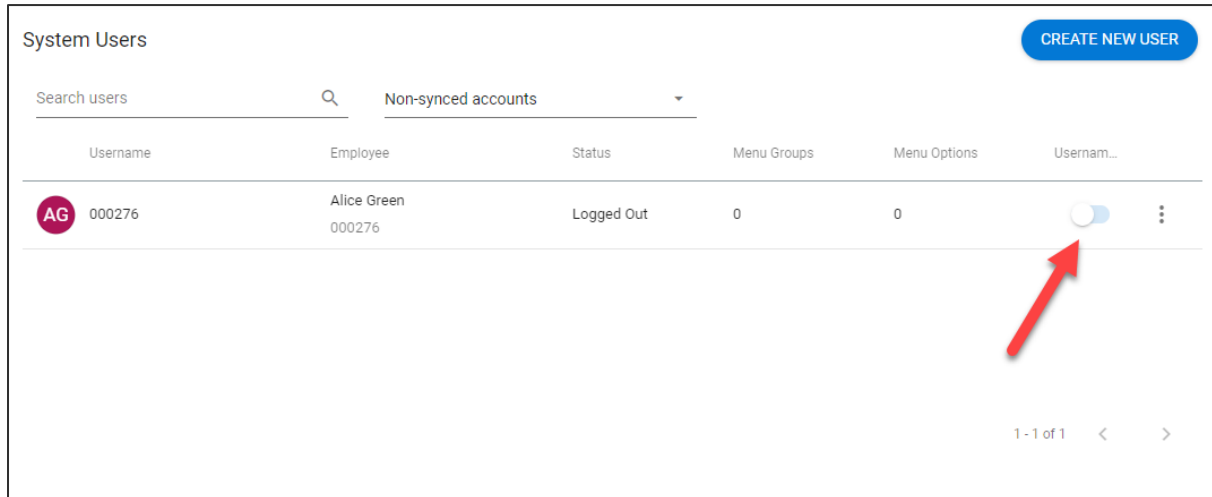

1. Search for the menu profile.
2. Disable the **Active** indicator.

7.3. Username accounts

If a user is set up in People Management without a valid email, their account is known as a Username account.

To configure a user's account, follow the below steps:

1. On the **System Users widget**, filter for Non-synced accounts. This will display all employees in People Management that have not synced to Access Evo.
2. Enable the **Username** toggle for the relevant user.

3. Expand the 3-dot menu and click **Manage Account**.
4. Click **Run Sync**.
5. Click **OK** to run the sync. If successful, the user will see a 'Sync job has completed' message.
6. Set a temporary password for the user from Access Evo. See [Access Access Evo: How to change users password for username account](#) for more detail.
7. Share the password with the user. Once they log in for the first time, they will be prompted to set a new password.

Once the user has been synced successfully, they will appear in 'All Active Access Evo Accounts'.

Note: If an email contact type is added for a user with a username account, the sync will switch the user to an email account and an invite email will be sent.

7.4. Non-Access Evo User Accounts

There are additional options for managing non-Access Evo portal user accounts.

7.4.1. Portal Account Overview

Header

The following table outlines what items are shown on the header area of a user's portal account:

Item	Description
HR Person Link	The employee name that the user account is linked to.
Status	The user's current status. This will be Logged In, Logged Out or Locked.
Two Factor	If Two Factor Authentication is enabled / disabled.
Authentication	The Authentication Type e.g. ESS or LDAP.
Menu Groups	How many menu profiles the user has access to and the combined number of menu options that the user has access to for those groups.
Password Changed & Password Expiration	How many days since the password was changed and when it is due to expire.
Last Activity	The last time the user logged in, including the duration of the session and a timestamp for the activity. No activity will appear if they have never logged in.

General

The following table outlines what items are shown on the general section of a user's portal account:

Item	Description
Locked	A non-Access Evo user account can be manually locked by the system administrator. This will prevent the user from logging in to XD Portal. • Enabled: Account is currently locked. • Disabled: Account is not locked. The Locked indicator may also be updated via other system processes including: • User attempts to login too many times using invalid details and is automatically locked out. • All non-Access Evo portal users are locked out via the Lock System feature.
Active	A user's account must be active in order to login to XD Portal. Deactivating an account will prevent the user from accessing the system. This is typically used for users that have left the organisation. If enabled, the account is currently active. If disabled, the account is dormant.
Authentication Type	Basic ESS Authentication: The user will be required to enter a unique username and password to login to PeopleXD. They are not using Single Sign On. LDAP - OID Authentication: The user will be using Single Sign On to login to PeopleXD.

Menu Profiles

This is where menu profiles are assigned to user accounts. This is what controls the user's access to functionality on PeopleXD. The following table outlines what information is stored here:

Item	Description
Search	Search for the menu profile name.

Item	Description
Filter	Filter by menu profiles that have been assigned to the user already, or those who have not been assigned yet.
Results	List of menu profiles. This list will reflect all of the menu profiles that are configured on PeopleXD. If the Active indicator is on, this means that the user has that menu profile and therefore can access all the features controlled by the menu options enabled on it.

7.4.2. Create New XD Portal User

To add a new non-Access Evo XD Portal user account, follow the below steps:

1. On the **System Users widget**, click **Create New User**.
2. Select the **Portal** from the User Type drop-down menu.

 **Note:** This should only be used for creating non-workspace Portal accounts, for example for UAT. To create a new Workspace user account, see the workflow in [1.3. User Onboarding for PeopleXD in Workspace Overview](#).

3. Enter a Username. (The system will check to see if the Username entered is available)
4. Enter a Password.
 - a. This should adhere to the password policy for the PORTAL account profile. (The system will check if this is valid password)
5. Enable the **Manage Account on creation** toggle to go straight to managing the user's access to the system.
6. Click **OK** to create the user.
7. Select an employee from the drop-down list to link the user to an existing employee record.
8. You can **Cancel** the HR Person Link, however the system will remind you that it is recommended to link the account to an employee record.

 **Note:** All accounts for employees in your organisation are linked to the relevant employee record. This is required to ensure that when they login, they can see the expected records in areas such as the Employee Dashboard, Manager Dashboard etc.

7.4.3. Set Authentication Type

The Authentication Type drop-down list contains 2 options that are used to identify how a non-Access Evo user's portal account will be authenticated when they login to PeopleXD.

1. **Basic ESS Authentication:** Account username and password are held on PeopleXD database and are subject to the COREPORTAL Account Profile.
2. **LDAP - OID Authentication:** Account username and password are not held on PeopleXD and are managed via LDAP (e.g. Microsoft Active Directory).

7.4.4. Manually Reset Password

To manually reset a user's password:

1. Go to the **Manage Portal Account** screen for the user.
2. Click **Reset Password** at the top right of the screen.
3. In **New Password** enter the new password that you will provide to the user. This must adhere to the password policy as defined on the COREPORTAL Account Profile.
4. Click **OK**.

The user can now login using the password that has been supplied in the above process. However, they will be required to change this when they successfully login.

Note: This should only be used for non-workspace portal accounts.

7.4.5. Assign Menu Profiles

In order for the user to be able to access the PeopleXD screens and features they require, they must be assigned to one or many menu profiles (see [6. Menu Profiles](#) for more detail).

To assign a menu profile for a user:

1. Search for the menu profile.
2. Select the **Active** indicator to assign a menu profile to the user.

To revoke a menu profile, i.e. remove a user's access,:

1. Search for the menu profile.

2. Disable the **Active** indicator.

7.5. XD Back Office User Accounts

As part of the Move to Portal project, PeopleXD functionality is migrating from back office to Portal. Access to back office may be required for functionality that has not yet migrated.

 **Note:** Back office is accessed using a separate URL to Portal. This will have been provided to your primary administrator during your initial implementation.

7.5.1. Create New Back Office User

To add a new XD back office user account:

1. On the **System Users widget**, click **Create New User**.
2. Select **Back Office** from the User Type drop-down menu.
3. Enter a Username.
4. Enter a Password.
5. Enable the **Manage Account on creation** setting to go straight to managing the user's access to the system.
6. Click **OK** to create the user.
7. Select an employee from the drop-down list to link the account to an existing employee record.
8. Click **OK**.

7.5.2. Configure Back Office User Account

To configure a back office user account:

1. Go to the **Manage Portal Account** screen for the user.
2. Click the **General** tab.
 - a. From the Data Base Profile drop-down menu select Manager or End User.
3. Click the **Menu Profiles** tab.
 - a. Enable the relevant toggles to assign the applicable menu profiles.
4. Click the **Menu Options** tab.
 - a. Review the menu options assigned.

5. Click the **Object Profiles** tab.
 - a. Enable the active toggle for *COREHR OBJECT PROFILE*.
 - b. Enable the relevant toggles to assign the applicable object profiles.
6. If required click **Link to HR Person**.
 - a. Select an employee.
 - b. Click **OK**.
7. Navigate to the **Set Up** tab in the Security dashboard.
8. On the System Set Up widget click **OPEN** next to the *Corehr Security* option.
9. Enter the password *university*.
10. Click **Submit**.
11. Select **Back Office Account**.

Corehr Security
Security > Corehr Security

Account Type

☐ Portal Account ☒ Back Office Account Auto Save Reports

Core HR Users

Username	Company	Company Desc	CorePersonnel Access	CorePay Access	CoreTime Access	CoreCost Access	Report Server
000004	1	UK University	☐	☐	☐	☐	
000011	1	UK University	☐	☐	☐	☐	
000013	1	UK University	☒	☒	☒	☒	
000015	1	UK University	☐	☐	☐	☐	

Cancel Add Save

12. Click the filter icon.
13. Select a **Username**.
14. Click **Filter**.

Note: If an account is not linked to an employee number this needs to be done from Back Office as on Portal the username will not be found. In Back Office, you need to go to *CoreHR > Security* (the password is *university*)

15. Select a **Company** from the drop-down menu.
16. Enable the toggles for the required modules.
17. Click **Save**.

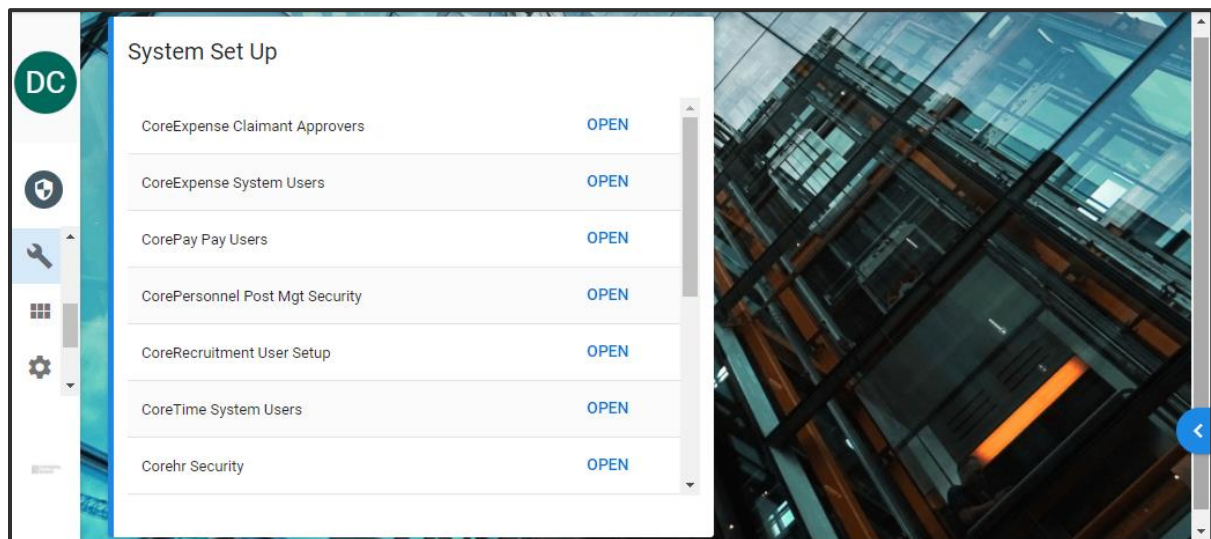

8. Other Settings

8.1. Set Up

8.1.1. Configuring Data Access by Product

Each PeopleXD product requires its own level of data security. As such, the configuration training for each product will cover this in the required detail.

The Set Up tab on the Security Dashboard includes the option to jump directly to some of the required screens to update this centrally for users.

The table below outlines the options that are available:

Option	Product
CoreExpense Claimant Approvers	Expense
CoreExpense System Users	Expense
CorePay Pay Users	Payroll
CorePersonnel Post Management	CorePersonnel / People Management
CoreRecruitment User Setup	Recruitment
CoreTime System Users	Workforce Management
System Users	Security Types: - Diversity Access - Document Access

Option	Product
	- FEC Access - HESA Security - Health and Safety Access - Letter Template Access - Personnel Access - Process Access - Recruitment Access - Salary Access - Sensitive Department Access - Training Access - User Defined Access

8.1.2. System Setup Widget

The following additional setup options are available on the Set Up tab.

Note:

These options control either:

- Advanced elements of XD Security.
- Product specific security.

Their use will be referenced where required in the corresponding training material. Each option will not be covered in detail here. For advanced security features, please do not update any configuration. These settings will be managed by PeopleXD on behalf of each

Option	Additional Information
Corehr Security	Advanced user security feature. PeopleXD use only.
Ems User Maintenance	Refer to EMS configuration training.
Installed Systems	Advanced user security feature. PeopleXD use only.

Menu Options	Advanced user security feature. PeopleXD use only.
Parameters	Advanced user security feature. PeopleXD use only.
Synonyms	Advanced user security feature. PeopleXD use only.
User Groups	Advanced user security feature. User Groups allows for different areas of the organisation to be individually responsible for their own sets of users. PeopleXD use only.
Product Specific	1. XD Expense Claimant Approvers 2. XD Expense System Users 3. XD Pay Pay Users 4. XD Personnel Post Mgmt. Security 5. XD Recruitment system Users 6. XD Time System Users 7. System Users

8.2. Web Service Apps

The following 2 menu options are required to use the Web Services Widgets.

System	Menu Option
Security	Configuration of Whitelisted Web Service Application Types
Security	Add and Configure Applications for Web Services

Web Service Application Setup

ADD APPLICATION

Application	Privileges	
CoreHR-Support-App CoreHR Support Application	0	⋮
CoreHR-WS CoreHR Web Service Application	0	⋮

Whitelist for Web Services

Web Service	Whitelisted Types	
CONTACTS Contact Web Service	4	EDIT
REFERENCES Reference Type Web Service	2	EDIT
USER User Defined Fields Web Service	0	EDIT

8.3. XD Content Security Policy

By default, content hosted outside of the PeopleXD application cannot be viewed / embedded, this includes custom video pages e.g. like those used in the Social Onboarding feature. This is to ensure a level of control, protection and security.

If an organisation wishes to include embedded content on PeopleXD, the relevant sources must be added to the XD Content Security Policy widget in Security. If a source is not listed here, the content will not display as required in PeopleXD. We recommend that you follow up with your own Security / Technical teams for guidance on the required sources for your content.

An example of this is the use of embedded videos for *Social Onboarding*. Video sources must be listed in the CSP widget. If they are not, the video will be blocked, and a user will not be able to play it.

8.4. Back Office Sessions

This widget allows you to view information about back office users, such as the last time they logged on, where they connected to, if the user is currently logged on and any locked objects can also be identified.

Sample uses of this screen are:

- To identify redundant accounts.
- To identify accounts where passwords are about to expire.
- To identify locked sessions.
- To kill sessions which are locking the database.
- To lock all users out of the database temporarily.

Back Office Sessions					VIEW ALL	ACTIONS ▼
Username	Logon Date	Logon Time	Locked Object	Status		
ADE_USER				● Open		
AJONES	14-Sep-2020	15:57:15		● Open		
API_USER	18-Dec-2013	10:54:52		● Open		
BI_SUPER	30-May-2016	14:50:31		● Locked		
BRIAN				● Expired & Locked		
CL_USER				● Locked		

8.4.1. To Lock all User Accounts

Select 'Lock All Accounts' from the Action menu

8.4.2. To Unlock all User Accounts

Select 'Unlock All Accounts' from the Action menu

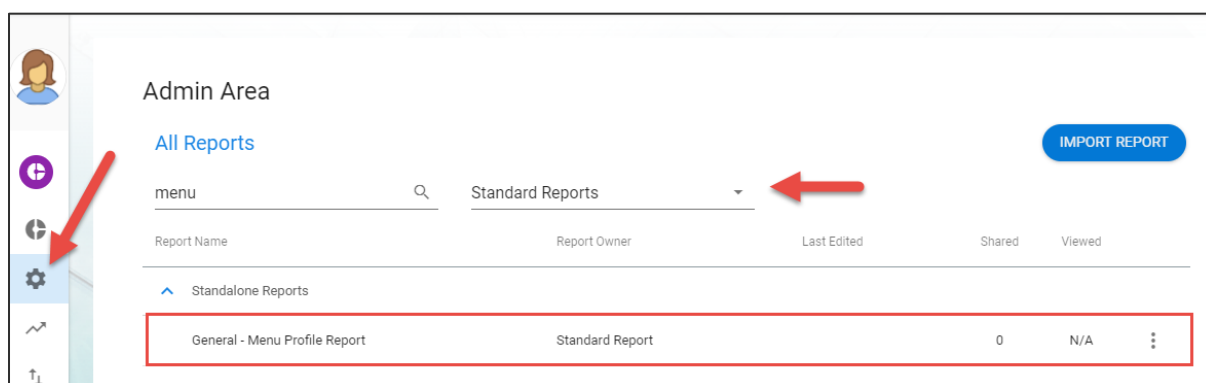

9. PeopleXD Security Reporting

9.1. Menu Profile Report

Note: To enable the Standard Report functionality, the following menu option will need to be enabled: *Portal – Insights Admin*.

If you wish to use the Security Standard reports, it is recommended that you enable this menu option in the *Portalmigration_Security* menu profile for your security administrators.

Standard Reports for Security Reporting can be accessed under the Insight Dashboard > Admin Area from the navigation panel and then Standard Reports from the Dropdown menu:

When you select a standard report to run, the *Enter Report Prompts* pop up will appear for you to enter the parameters for the report such as Username & Menu Profile.

The listed Insight views allow a user to report on specific user profiles, menu profiles and menu options which was previously done through the User / Menu Profile Form.

Back Office Form	Portal Widget	Standard Reports
User / Menu Profile Reports	Insight Standard Reports	User Profile - User Details User Profile - Menu Profile User Profile - IP Address User Profile - Database/Objects Profile Granted Options Menu Profile - Users

Back Office Form	Portal Widget	Standard Reports
Logon / Option History	Insight Standard Reports	Option History Logon History

9.2. Portal User Report (Standard Report)

A standard report is available to report on Portal User Accounts: **Portal User Report**.

9.3. Portal Migration Report

Insight can be used to review and report on which users have been granted access to the Security & Insight Dashboards, by following the below steps:

1. From the Insight Dashboard, create a new report under the *Core Statistics Business Area*.
2. Select **Menu Profile** and **Person Granted Option** views. These views will return the data specifically the Person Reference and Menu Profile columns.

The screenshot displays two side-by-side configuration panels for creating a report. The left panel, titled 'What business areas would you like to report on?', features a search bar and a list of business areas. The right panel, titled 'What views would you like to use in your report?', also has a search bar and a list of views.

Business Area	View Name
Core Health and Safety	Menu Profile
Core Hourly Timesheets	Core Statistics
Core Medical Welfare	Person Granted Option
Core Pay	Core Statistics
Core Pension	
Core Personnel	
Core Prediction	
Core Recruitment	
Core Statistics	

This report can be filtered to return only users who have been granted access to the *PortalMigration_Security* menu profile.

9.4. Logon / Option History

These views & reports will allow a user to report on and show details of a user's logon/option history. The report will list all logon and menu access activity for the selected users.

9.5. Database Profile

Under the Core Statistics business area there is a view called Database Profile which can be used to report on Database Profiles.

10. How to Configure

10.1. Menu Options

10.1.1. Moving from Back Office to XD Portal

A new menu profile *PortalMigration_Security* will automatically be assigned to users who have access to Security Product in back office as part of our release process.

This menu profile will give a user access to the following:

- All widgets on the Security Dashboard on Portal.
- The Core Statistics Business Area in Insight which will support a user being able to create and run Security Reports.

10.1.2. Security in Quick Jump

The following menu option provides access to:

- Security in **Quick Jump** menu.
- Read only access to the *System Users* widget.

System	Menu Option
Security	User Management - View

10.1.3. Access to Access Evo Configuration Widget

The following menu profile is required to access all options on the *Access Evo Configuration* Widget for an employee/user account:

System	Menu Profile
Security	WORKSPACE_CONFIG

This menu profile enables all of the following menu options:

System	Menu Options
Web Services	Update workspace config invite
Web Services	Get workspace config invite
Web Services	Update workspace config invite

System	Menu Options
Web Services	Get workspace config
Web Services	Get workspace config parameters
Web Services	Update workspace configuration parameters
Web Services	Create workspace invite Proxy (Entire Organization)
Web Services	Create workspace sync
Web Services	Create workspace sync authorised
Web Services	Delete workspace sync authorised
Web Services	Get workspace sync authorised
Security	Workspace Configuration
Security	System - Workspace Configuration Widget
Security	Workspace Configuration - Workspace Invites
Security	Workspace Configuration - Workspace Menu Profile Matrix
Security	Workspace Configuration – Authorised Non-Production Users
Security	Workspace Configuration – Workspace Parameters
CorePortal	CorePortal - HR Admin - Send Workspace Invite

10.1.4. Access to Manage Account Screen

The following menu option is required to access and update the **General** tab for an employee/user account:

System	Menu Option
Security	User Management - Update

10.1.5. Menu Profiles

The following menu option is required to:

- *View and update* menu profile assignments for users on the *System Users* widget for a chosen user.
- View menu profiles on the *Menu Profiles* widget for a chosen user but cannot save changes.

System	Menu Option
Security	Menu Profiles - View Only

The following Menu Option is required to add, delete & edit (including change name and menu option updates) via the *Menu Profiles* widget:

System	Menu Option
Security	Menu Profiles - Update

10.1.6. Lockout System

The following menu option controls access to view and use the **Lock System** functionality on the *Current Status* widget:

System	Menu Option
Security	System - Product Lockout

10.1.7. Password Policy / Account Profiles

The following menu option is used to provide access to view the *Password Policy* widget and view details for a selected Account Profile:

System	Menu Option
Security	Password Policy - View Only

The following option provides access to add, delete edit (including change name and policy details updates):

System	Menu Option
Security	Password Policy - Update

10.1.8. Product Access & Current Status Widgets

This menu option provides access to the following:

- Current Status
- Product Access

System	Menu Option
Security	System - Product Access

10.1.9. Set Up Tab Options

To access the *System Set Up* widget on the *Set Up* tab, the following menu option is required.

System	Menu Option
Security	Advanced Setup

Each option on that widget requires further menu access. See table for the break down:

Set Up Item	System	Menu Option
CorePay Pay Users	Security	Advanced Setup - CorePay
CorePersonnel Post Management	Security	Advanced Setup - Coreperssonel System Users
CoreRecruitment User Setup	Security	Advanced Setup - Corerecruit User Profile
CoreTime System Users	Security	Advanced Setup - CoreTimeSystem Users
CoreExpense Claimant Approvers	Security	Advanced Setup - Coreexpense Claimant Users
CoreExpense System Users	Security	Advanced Setup - Coreexpense System Users
Security	Security	Advanced Setup - Security
Installed Systems	Security	Set Up - Installed Systems
Menu Options	Security	Set Up - Menu Options
Parameters	Security	Set Up - Parameters
Synonyms	Security	Set Up - Synonyms
User Groups	Security	Set Up - User Groups

10.1.10. XD Content Security Policy

The following 2 menu options are required to use the XD Content Security Policy widget:

System	Menu Option
Security	View Content Security Policy
Security	Update Content Security Policy

10.1.11. Back Office Sessions

The following two menu options are required to use the Back Office Sessions Widget:

System	Menu Option
Security	User Session - View Only
Security	User Session - Update

10.1.12. Web Services

The following two menu options are required to use the Web Services Widgets:

System	Menu Option
Security	Configuration of Whitelisted Web Service Application Types
Security	Add and Configure Applications for Web Services

10.2. System Parameters

10.2.1. Page Referral Security

The following parameter must be enabled in **Site Manager > Admin Settings** in order for **Security** to appear on the Quick Jump menu:

Parameter	Value
Pagereferralsecurity	Y

10.2.2. Product Access

The following parameter must be enabled in **Site Manager > Admin Settings** if using the *Product Access* feature:

Parameter	Value
Cp_check_product_access	Y

10.3. Dashboard Configuration

The Security dashboard is not available on the Dashboard Configuration screen. All tabs are available as standard and cannot be removed or reordered. Access to certain widgets / functions is controlled by menu options, as reviewed earlier in this document for the relevant features.

11. FAQs

My colleague and I have the same access, but I cannot complete some of the same actions on screen as her?

Once menu/ data access is ruled out, the next likely issue is that the browser that you are using does not align with the supported browsers. Please refer to the certification matrix provided in the release notes for each major version.

Why can't I see a certain Widget in Portal?

Please ensure that the employee has access to the correct menu profile via Security > User Management > Menu Profiles.

What is the recommended zoom to use on your browser when running Portal?

The software has been quality assured at 100% zoom as there are issues with the ext. framework when less than 100% zoom is used. PeopleXD recommend using a 100% zoom resolution going forward.
