1. Overview

1.1. Purpose of the Guide

The purpose of the guide is to outline how to view and setup the Admin Area of XD Insight to be used in managing Insight Reports.

2. Advanced Admin Area Tasks

2.1. Admin Area Overview

The *Admin Area* screen provides access to some more advanced tasks on Insight including:

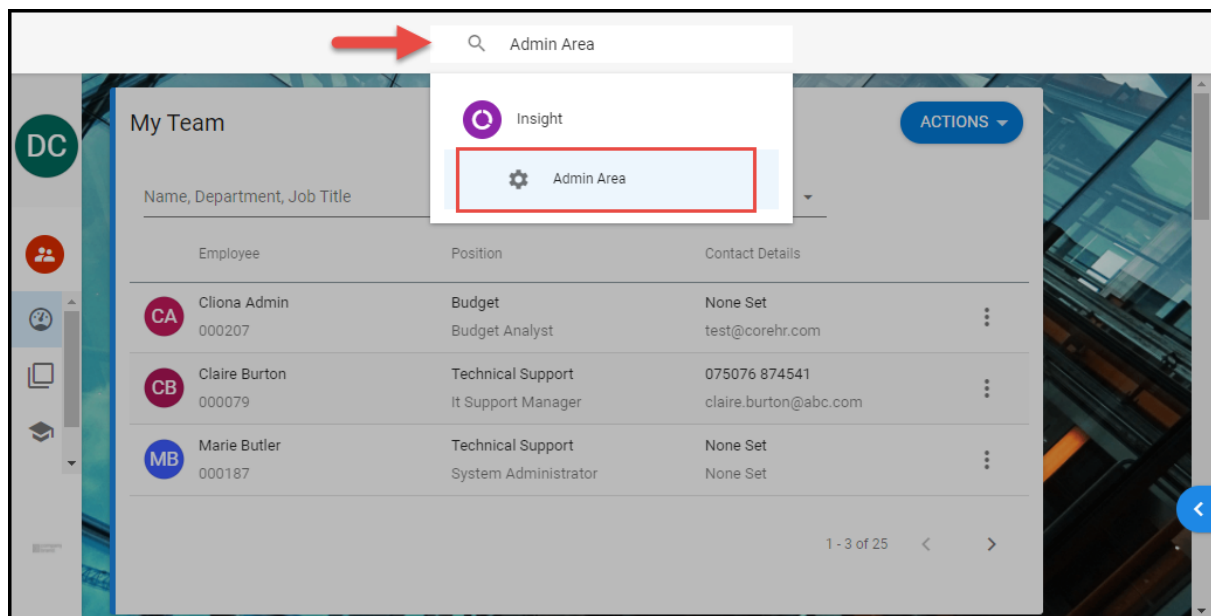

- View, manage and delete any reports created by any user in your organisation.
- Access to standard People XD reports.
- Publish reports to the *Report Store*.
- Export and import Insight reports.

Access to this screen is protected by additional security to ensure that it is only shared with those who have access to complete these advanced tasks. The following menu option controls this.

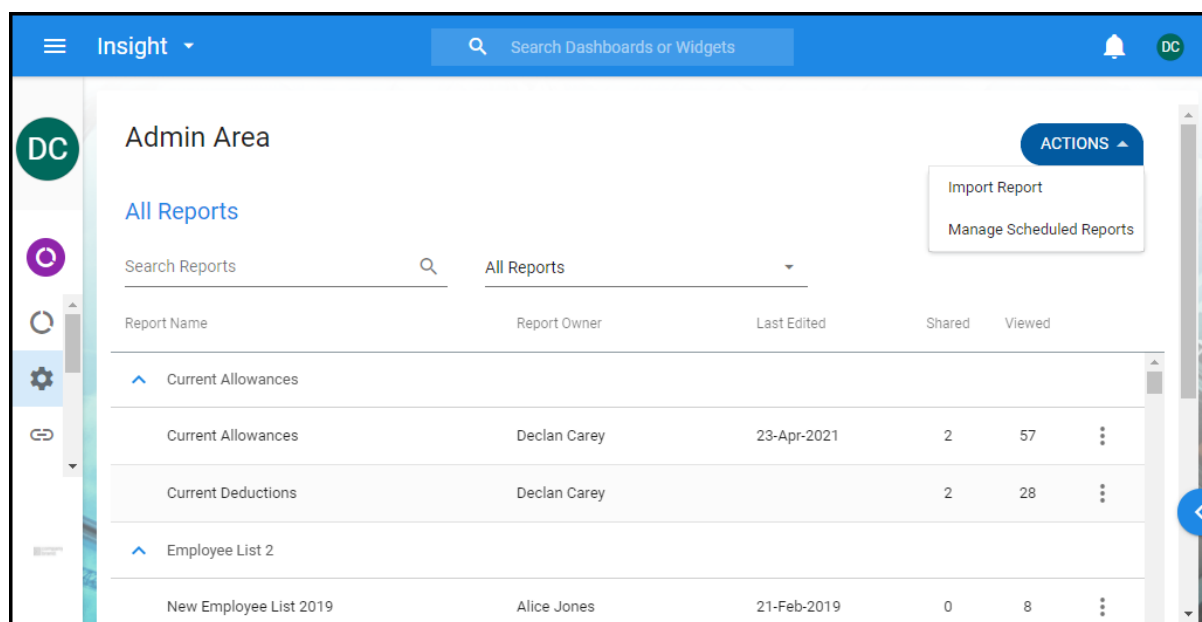

System	Menu Option	Description
CorePortal	Insight Admin	This controls access to the Admin tab on Insight.

To access the *Admin Area* screen follow the below steps:

1. Quick Jump to the *Admin Area* on Insight.

- The *Admin Area* tab opens.

- The *Admin Area* screen includes a list of all reports available on Insight. This is similar to the *All Reports* section on the *Insight > Home* screen, however this includes all of the reports that are available on Insight, not just those created by or shared with you.
- The following table shows the items that are on screen.

Item	Description
Search Reports	This allows you to search by the name of the report or the report owner.
Filter on Report Types	This allows you to filter the reports list based on the Report Type. See the following table for further information on Report Types.
Actions	The following two actions are available to carry out before a report has been selected: 1. Import Reports 2. Manage Scheduled Reports
Report Name	This is the name of the report.
Report Owner	This is the XD user who owns the report.
Last Edited	This shows the last time the report was edited.
Shared	This returns the count of how many users this report is shared with.
Viewed	This returns the count of how many times this report was refreshed.

Item	Description
Additional Options	Depending on the report type, there are different options available by clicking the  button.

5. The table below describes the types of reports available in the Admin Area.

Report Type	Description
Data Reports	Reports created by Insight users. - Filter on this to see all reports created by all users in your organisation on Insight. - The <i>Report Owner</i> identifies the user that created the report / currently owns the report and the privileges to edit this via the <i>Manage Reports</i> screen.
Discoverer Imported Reports	Reports that have been imported to Insight using the Discoverer Importer tool.
Downloaded Reports	This returns all reports downloaded from the Store.
iCues	This returns all iCues.
Interface Reports	Reports that have a scheduled interface defined on the <i>Manage Report</i> settings. - These are used to support external CoreHR interfaces. - The <i>Report Owner</i> identifies the user that created the report / currently owns the report and the privileges to edit this via the <i>Manage Reports</i> screen.
My Reports	This returns all reports created by you or where you are the Report Owner.
Published Reports	This returns reports that have published to the Store, across all XD users.
Scheduled Reports	This returns reports that are currently going through a scheduling process.
Shared Reports	This returns reports that have been shared with other users.
Standard Reports	Standard 'out of the box' standard reports provided by People XD.

6. Use the *Search Reports* box to do a keyword search for report. This search is based on the report name and report owner.
7. The table below outlines the additional options available from the  button on a report. These are repeated depending on what Report Type is selected.

Item	Description
View	This allows you to view and refresh the data in the report. The report only shows records based on your data access e.g. if this is a payroll report and you only have access to Pay Group A, not Pay Group B, then the report only shows data for Pay Group A.
Manage	Access to edit the report via the <i>Edit Mode</i> screen
Delete	Delete the report. Doing this fully deletes the report from Insight. The report is no longer be available to the <i>Report Owner</i> or any user that it has been shared with.
Manager Owner	This allows you to Change the report owner. - For example, this can be useful to reassign an existing report to a new owner to maintain this, where the original owner is no longer responsible for this e.g. has changed roles, left the organisation etc. - Standard reports cannot be edited or shared with other users from within the Admin Area. If you wish to do this, you need to use this option. The report is available in their <i>All Reports</i> section where they may have the access to Manage Report, share with others, schedule exports etc i.e. full access to all privileges associated with owning a report. - See section 2.2 Change Report Owner for further details.
Enable Notifications	This allows you to re-enable notification on individual reports.
Clear Cache	This allows you to clear the cache on the report. In order to ensure that reports are available to you as quickly as possible, Insight caches the report data from the last time you ran it.
Test Run	This allows you to test run an interface report to investigate any data issues.
Run Now	This runs an interface report.

Item	Description
Export Report	Export the Insight report, so that it can be imported in another instance of Insight. See section 2.3 Export and Import a Report for further details.
Publish Report	Publish the report to the <i>Report Store</i> .
Error Console	Review any errors encountered when generating the report

2.2. Change Report Owner

You can re-assign reports to a new report owner. The *Report Owner* is the Insight user that has full access to manage the report.

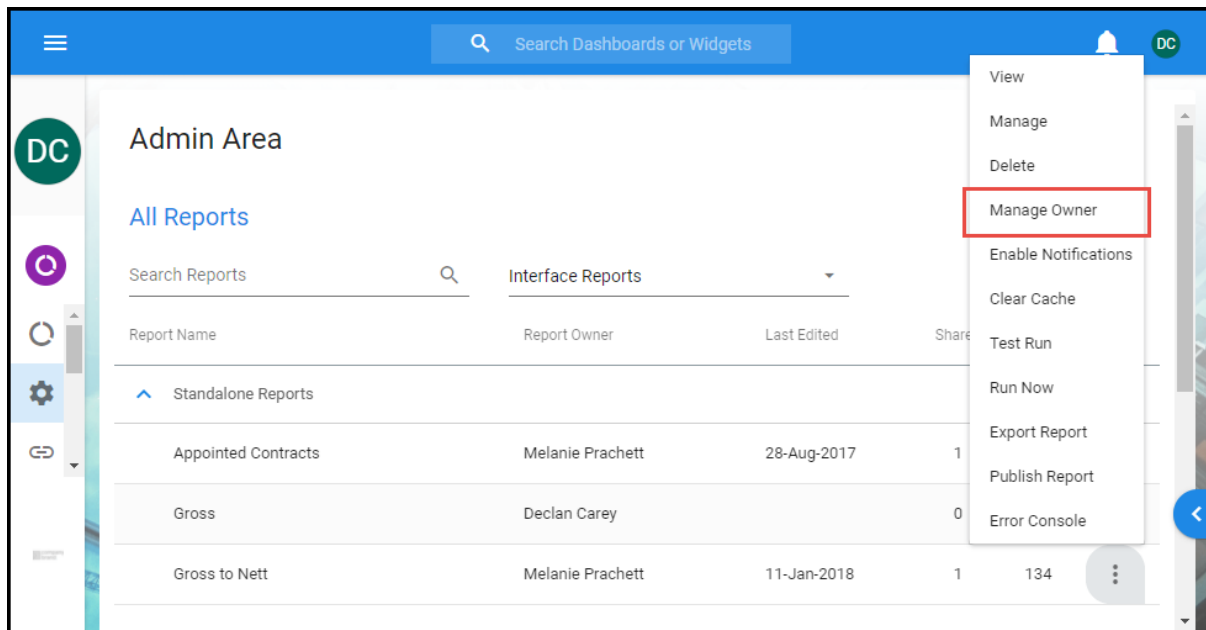

- The report is listed in their *Insight > Home* screen *All Reports* list.
- They have access to the *Manage Report* screen. They are the only user with the privileges to edit the report.
- They can share the report with others, via the *Manage Report* screen.

There are many reasons why you may need to change the report owner:

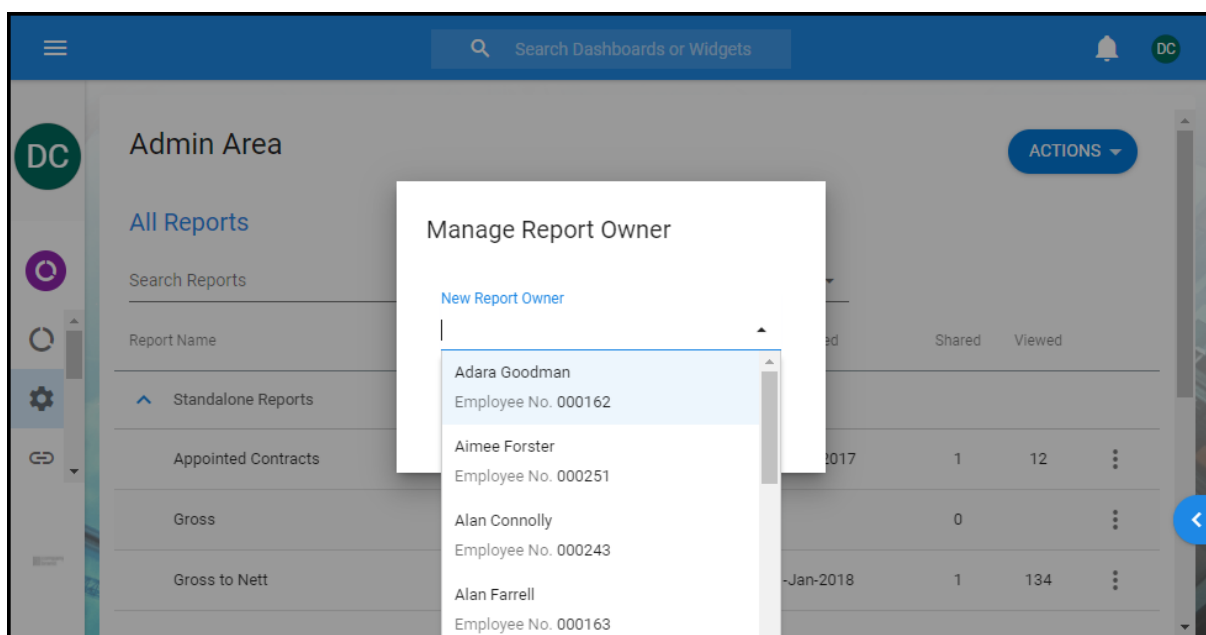

- The original / current owner is no longer responsible for managing the report because they have changed role, gone on extended leave or left the organisation.
- You want to use a Standard Report.
- You want to run a report that you have imported from BI (Oracle Discoverer).

Follow these steps to change a report owner:

1. Search for the report.
2. Click the  button and select **Manage Owner**.

8. The *Manager Report Owner* prompt appears.
9. Search for and select a *New Report Owner*.
 - a. This list is not restricted. This is a full list of all employee records on People XD.

10. Click **OK** to save.
11. The *Report Owner* is updated on the report list.

The Report Owner has been changed successfully

Standalone Reports				
Appointed Contracts	Melanie Prachett			
Gross	Declan Carey		0	
Gross to Nett	Aimee Forster	11-Jan-2018	1	

2.3. Export and Import a Report

The **Import Report** button on the *Admin Area* screen is used to import Insight reports. These are report files with an extension of “.Insight” which have been exported from an instance of Insight.

A possible use for this is to quickly set up a new report that you have created on a UAT (Test) instance, onto your PROD (Live) instance, without needing to set this up from scratch.

 Note:

This functionality is not used to:

- Import SQL to create a new report.
- Import reports from BI.

 Note:

This option is only available for the following report types:

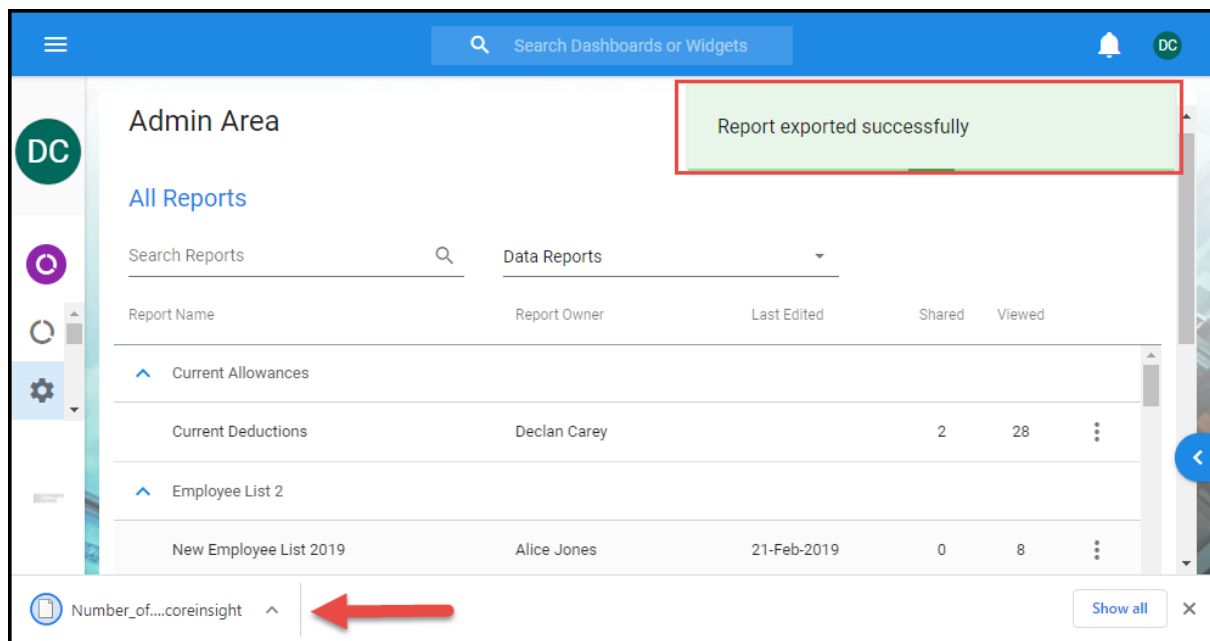

- Data Reports
- Interface Reports
- Standard Reports

To carry this process out, follow the below steps.

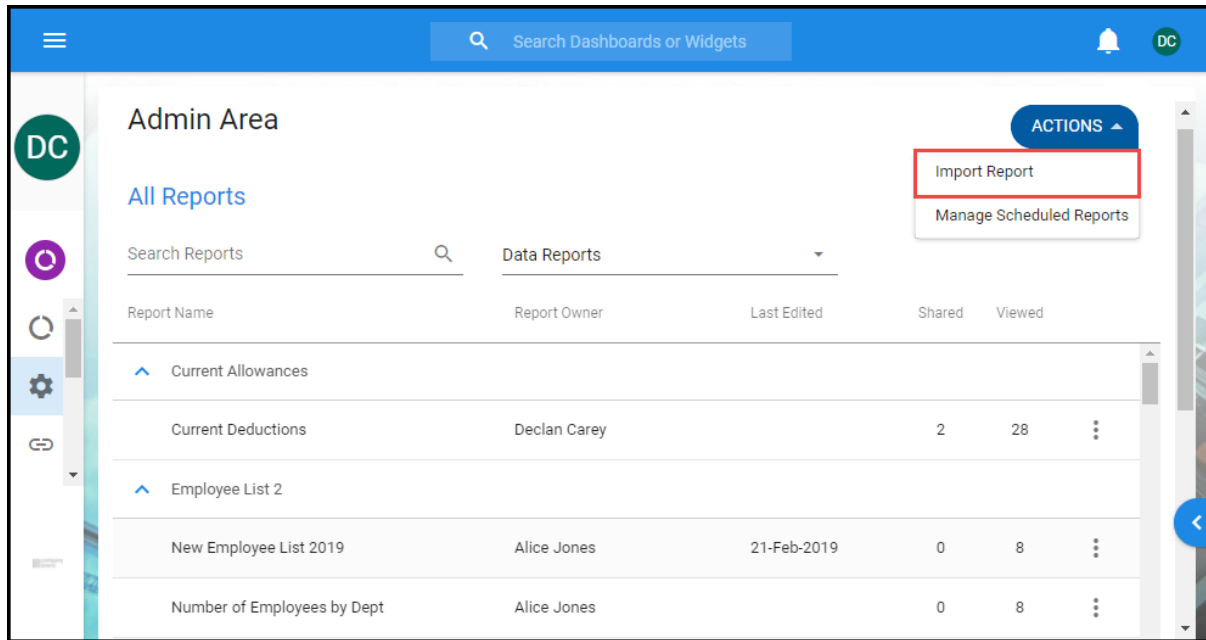

1. Search for the report on the *Admin Area* screen.
2. Click the  button and select **Export Report**.

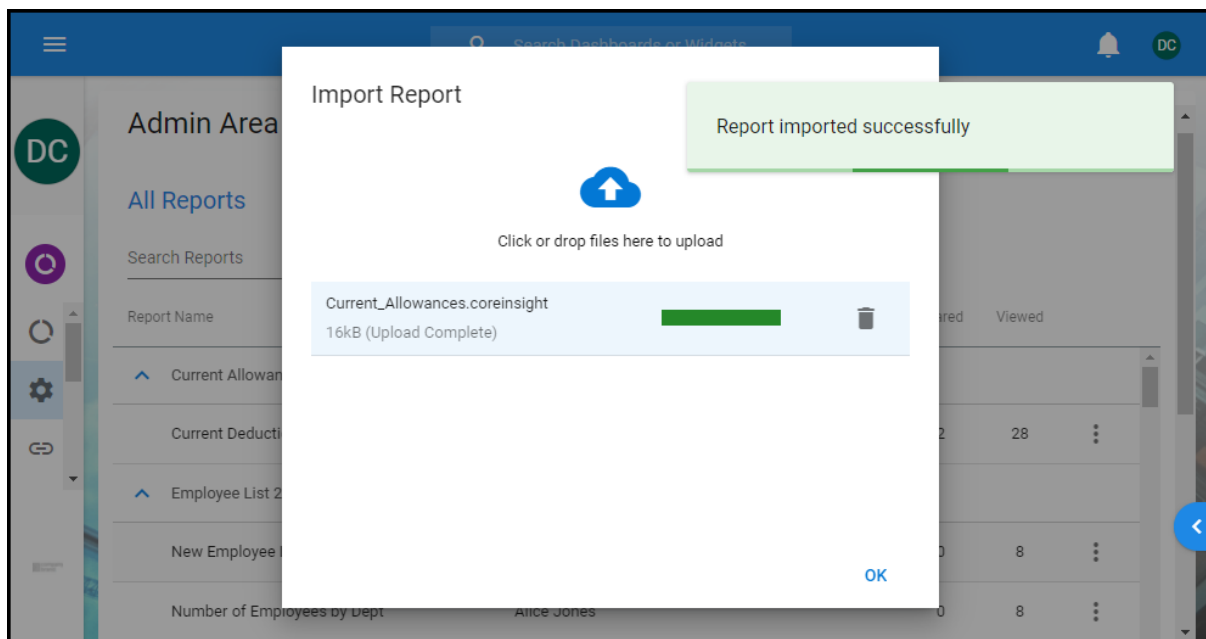

3. The report is exported as a ".Insight" file. This downloads per your browser settings.

4. To import a report into a new instance of People XD, on the *Admin Area* screen, click the **Import Report** button.

5. Browse for OR drop the *.Insight* file in the *Import Report* window.

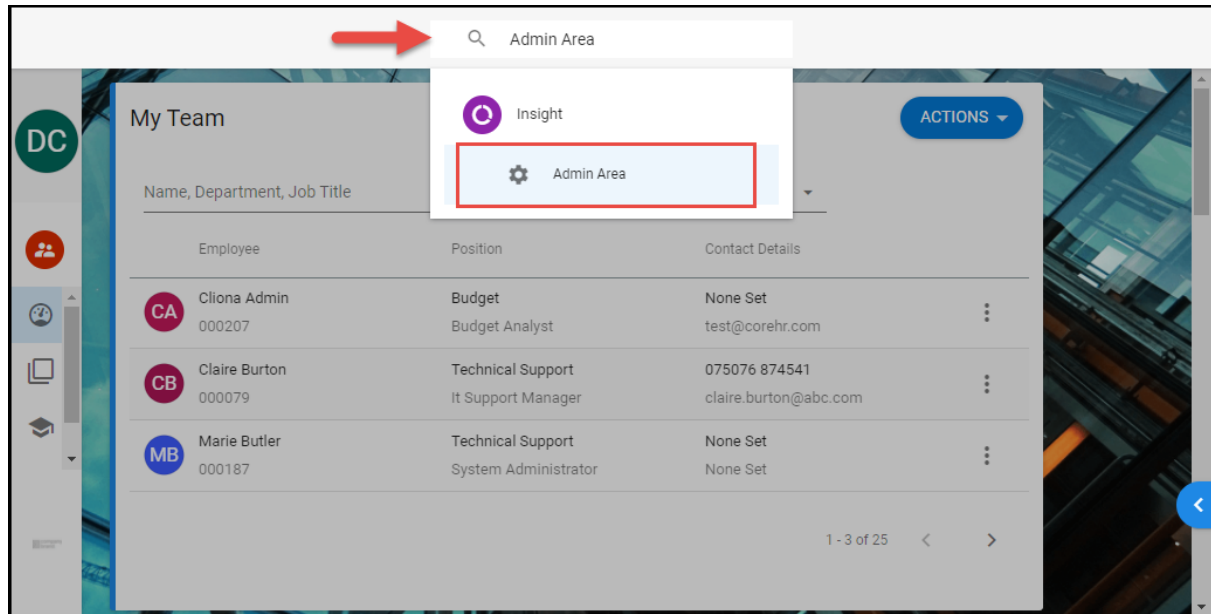

6. Click **OK** when the upload has completed.
7. The report is imported as a *Data Report*.
 - a. There is no *Report Owner* defined.

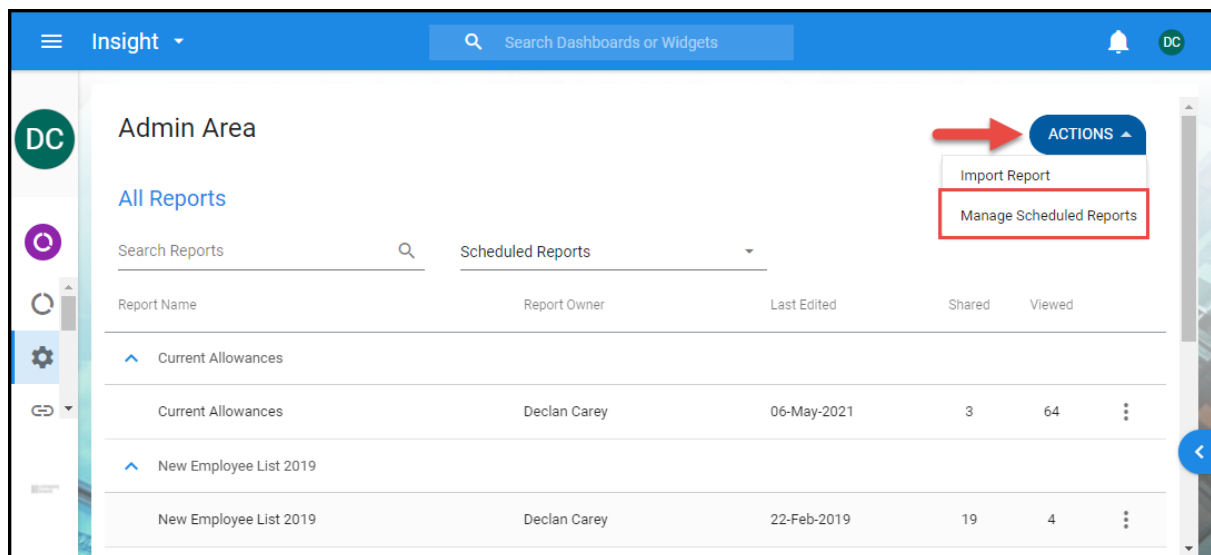

2.4. Manage Scheduled Reports

To manage and view existing reports that are scheduled within XD Insight, follow these steps.

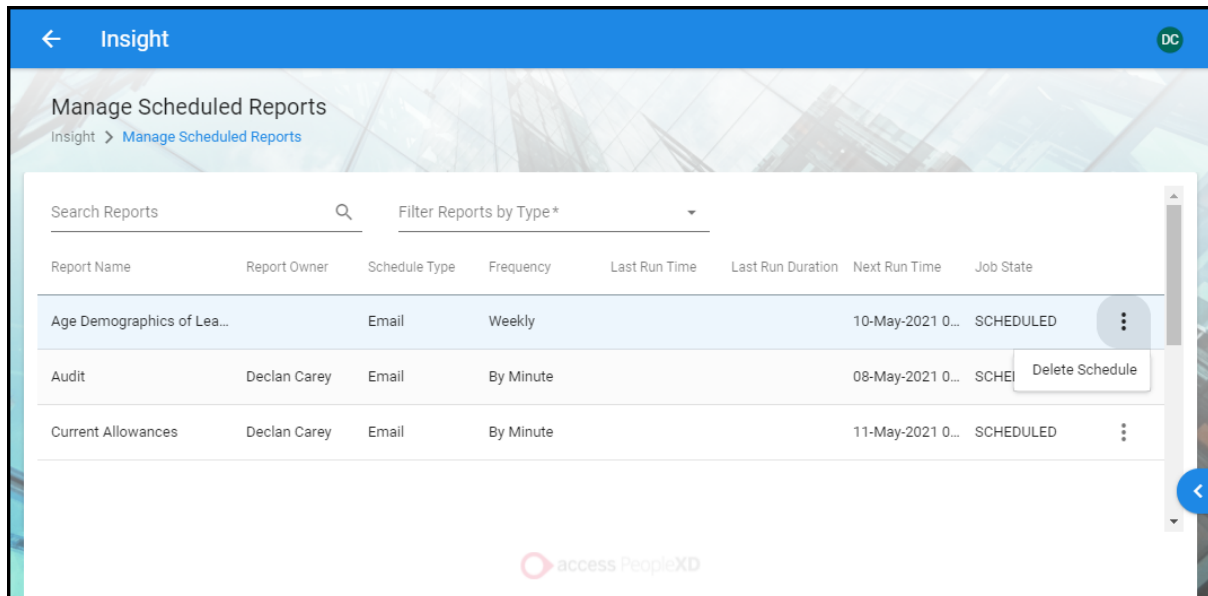

1. Quick Jump to the *Admin Area* on Insight.

2. Click on the **Actions** button.
3. Click on the **Manage Scheduled Reports** button.

The following image and table outlines the information found within the *Manage Scheduled Reports* screen.

Item	Description
Search Reports	This allows you to search on the name of the report.
Filter	This allows you to filter the reports based on the following report types: • All Reports • Email Reports • iCues • Interface Reports
Report Name	This is the name of the report.
Report Owner	This is the name of the report owner.
Schedule Type	This is the type of schedule / notification that the recipient receives for this scheduled report. The three different types are: • Email • iCue • Interface
Frequency	This is how often this report is run automatically according to the schedule.
Last Run Time	This is the date and time that the report was last run.

Item	Description
Last Run Duration	This is how the length of time it took for the report to last run.
Next Run Time	This is a date in the future that the report is scheduled to run next.
Job Status	This is the status that the schedule is currently at. This is either set to <i>Completed</i> or <i>Running</i> .
Actions	This allows you to take further action on the scheduled report. You can Delete the schedule from here. This does not delete the report itself.
