1.7	02/07/2025	Isabelle Grey	T&A guidebook guidance added to sections 2.4. 3.1.5. and 6.

1. Overview

1.1. Purpose of the Guide

The purpose of this document is to provide guidance on how to configure Premium People Analytics for PeopleXD.

This includes:

- User Management
- User Groups
- Security
- Data Mapping
- Currency
- Verification Data
- Additional Information on Pay Types mapping

Note:

- The data in People Analytics is displayed on an employee level rather than a contract level, therefore only job data relating to the substantive post is shown. However, elements such as the FTE and salary will be rolled up so that the value for the employee represents all contracts.
- Up to 3 years of PeopleXD data is available in People Analytics when it is first provisioned. The amount of data available will continue to accumulate over time.

2. User Access

2.1. Overview

You can customise the level of access a user has to People Analytics functionality and data using:

1. **Menu Options** – grants access to People Analytics screens.
2. **User Access** – grants access to the separate tabs within People Analytics.
3. **User Groups** - determines what is available to the user within the solution.
4. **Data Access** – determines what data is available to the user within the solution.

2.2. Menu Options

To access People Analytics, users require the following menu option:

Menu Option	Menu ID	System
People Analytics	MAIN_MENU.PEOPLEANALYTICS	CorePortal

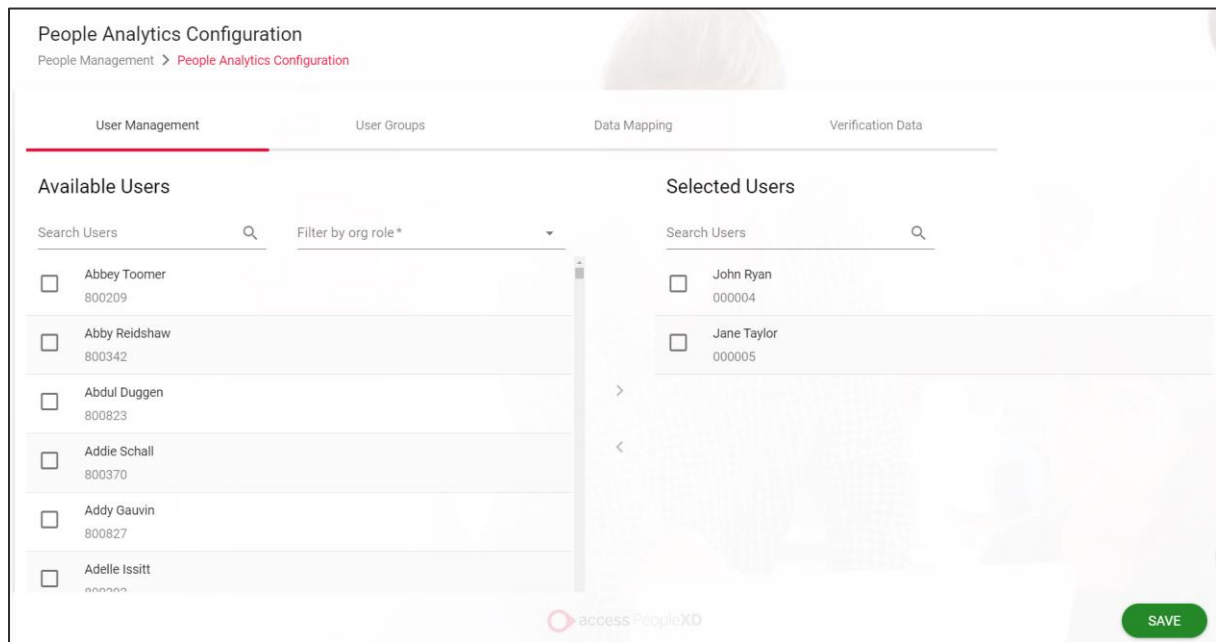

To access the People Analytics configuration screen, users require the following menu option:

Menu Option	Menu ID	System
People Analytics Configuration	MAIN_MENU.PEOPLEANALYTICSCONFIG	CorePortal

2.3. User Access

To provide a user access to People Analytics, follow the below steps:

1. On the **People Management Dashboard**, navigate to the **Data Centre** widget.
2. Open the People Analytics Configuration option.
3. Click the **User Management** tab.
4. Search for the relevant user, or filter by Org Role.
5. Select the checkbox for the relevant user.
6. Click the right arrow to move them to the Selected Users column.
7. Click **Save**.

2.4. User Groups

Once a user has been given User Management access, they can then be assigned the relevant People Analytics access via User Groups. This determines what is available to them within the solution.

Category	Feature	Standard and Manager User Group	Premium Aggregated User Group	Premium Detailed User Group
Insights	Predefined Standard KPIs Dashboards	✓	✓	✓

The table below outlines what each user group gives access to:

User Group	Description
XD Premium HR Users (Aggregated)	• Access to the People Management Guidebook, Topics, and Analysis. • Analytics data a user sees is aggregated i.e. they cannot see the underlying employee data that makes up the analysis they are viewing in People Analytics. • Who you see is based off your PeopleXD People Management access.
XD Premium HR Users (Detailed)	• Access to the People Management Guidebook, Topics, and Analysis. • Analytics data a user sees is detailed i.e. the user can drilldown on an analysis to see the underlying employee data that makes up the analysis they are viewing in People Analytics. • Who you see is based off your PeopleXD People Management access.
XD Premium Payroll Users (Aggregated)	• Access to the Payroll Guidebook, Topics, and Analysis. • Analytics data a user sees is aggregated i.e. they cannot see the underlying employee data that makes up the analysis they are viewing in People Analytics. • Who you see is based off PeopleXD People Management access.
XD Premium Payroll Users (Detailed)	• Access to the Payroll Guidebook, Topics, and Analysis. • Analytics data a user sees is detailed i.e. the user can drilldown on an analysis to see the underlying employee data that makes up the analysis they are viewing in People Analytics. • Who you see is based off PeopleXD People Management access.
XD Premium T&A Users (Aggregated)	• Access to the Time & Attendance Guidebook, Topics, and Analysis. • Analytics data a user sees is aggregated i.e. they cannot see the underlying employee data that makes up the analysis they are viewing in People Analytics.

User Group	Description
	Who you see is based off your PeopleXD People Management access.
XD Premium T&A Users (Detailed)	- Access to the Time & Attendance Guidebook, Topics, and Analysis. - Analytics data a user sees is detailed i.e. the user can drilldown on an analysis to see the underlying employee data that makes up the analysis they are viewing in People Analytics. - Who you see is based off your PeopleXD People Management access.
XD HR Super Users	- Access to all content within the People Management / HR Guidebook and all employee data across the organisation for that guidebook area. - Access to the Data Validation Guidebook
XD Payroll Super Users	Access to all content within the Payroll Guidebook and all employee data across the organisation for that guidebook area.
XD T&A Super Users	Access to all content within the Time & Attendance Guidebook and all employee data across the organisation for that guidebook area.
XD System Super Users	- User has access to all Guidebook content and all employee data across the organisation. This user group is available in the premium tier only. For example, this could be useful for a CEO who does not have HR and Payroll access, but wants to see People Analytics data. - Access to the Data Validation Guidebook
XD Standard Users	- Access to the Standard Dashboard Guidebook. - User has access to all organisational data - Analytics data a user sees is aggregated i.e. they cannot see the underlying employee data that makes up the analysis they are viewing in People Analytics.
Manager	- Access to the Manager Dashboard Guidebook - User has access to direct and indirect team data

User Group	Description
	Analytics data a user sees is aggregated i.e. they cannot see the underlying employee data that makes up the analysis they are viewing in People Analytics.

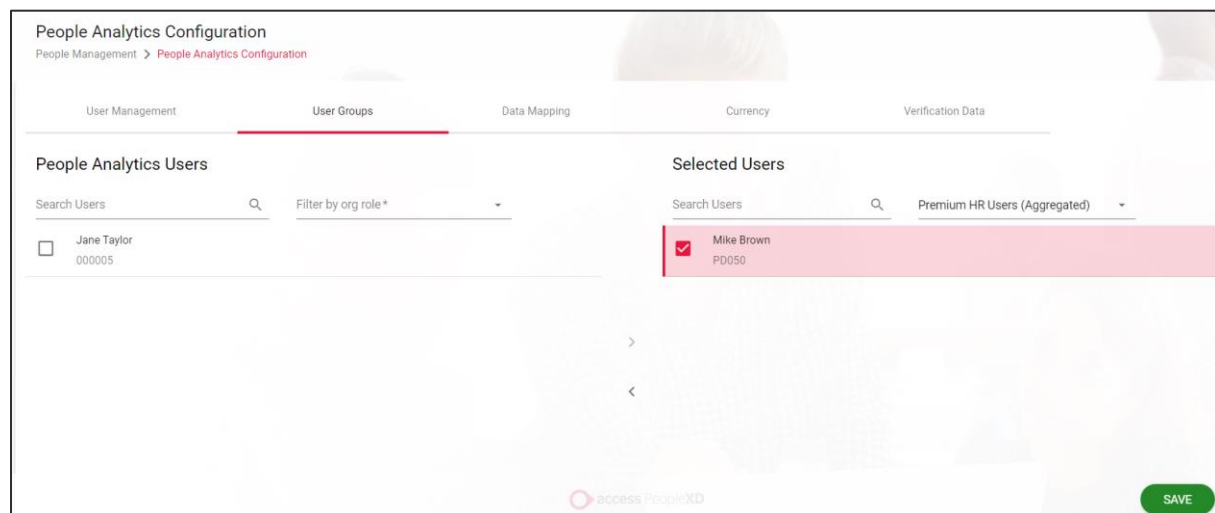

2.4.1. Assign a User Group

To assign a user to a User Group, follow the below steps:

1. On the **People Management Dashboard**, navigate to the **Data Centre** widget.
2. Open the People Analytics Configuration option.
3. Click the **User Groups** tab.
4. Select the relevant User Group from the *Select User Group* drop-down list.
5. Search for the relevant user or Filter by Org Role.

Note: This screen will only list users assigned People Analytics access in User Management. See [section User Access](#) for further detail.

6. Select the checkbox for the relevant user.
7. Click the right arrow to move them to the Selected Users column.
8. Click **Save**.

2.5. **Data Access**

Access to data is based on a user's People Management data access. You can then grant additional access to data using criteria groups. For example:

- Jane has access to departments A and B in People Management. She is granted access to department C using criteria groups. Jane will have access to departments A, B, and C within People Analytics.
- John has no access to People Management data. He is granted access to department C using criteria groups. John will have access to department C within People Analytics.

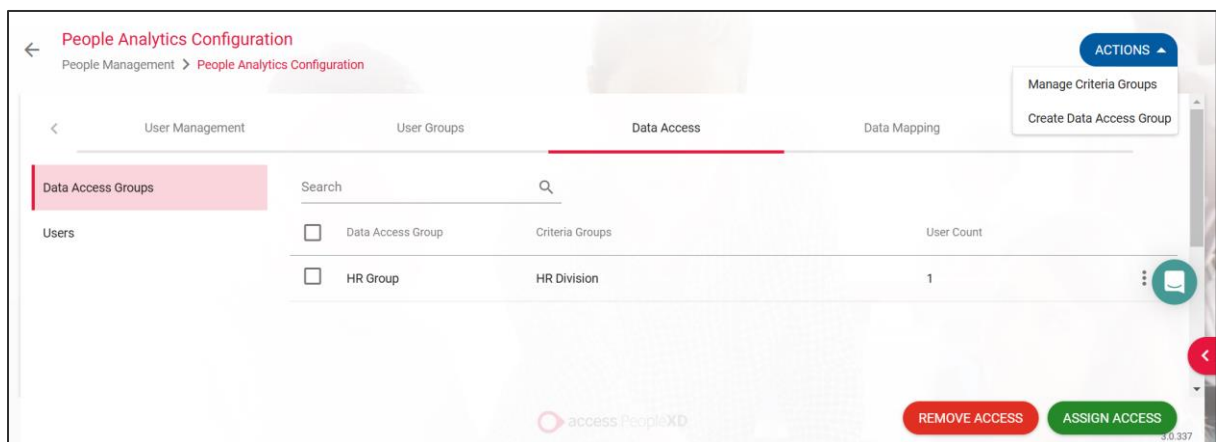

This is done by:

- Creating criteria groups.
- Creating a data access group and assigning it criteria groups.
- Assigning users to the data access group.

2.5.1. Manage Criteria Groups

To create or manage the criteria groups you will use:

1. On the **People Management Dashboard**, navigate to the **Data Centre** widget.
2. Open the People Analytics Configuration option.
3. Click the **Data Access** tab.

4. Expand the **Actions** menu and click **Manage Criteria Groups**.

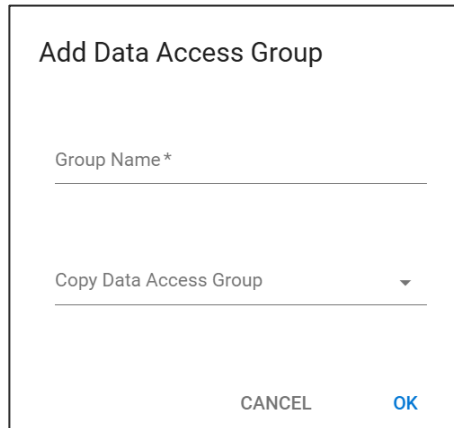

Note: This type of criteria group used in People Analytics is Analytics. The screen will be prefiltered to this type.

5. Click **Add**.
6. Fill in a name and click **OK**.
7. Select a reference data option from the left-hand menu.
8. Select the checkboxes for the relevant criteria.

9. Click the right arrow to move them to the Assigned column.
10. Repeat for all required criteria.

2.5.2. Create a Data Access Group

1. On the People Analytics Configuration screen click the **Data Access** tab.
2. Expand the **Actions** menu and click **Create a Data Access Group**.
3. Fill in a name and select whether to copy an existing group.

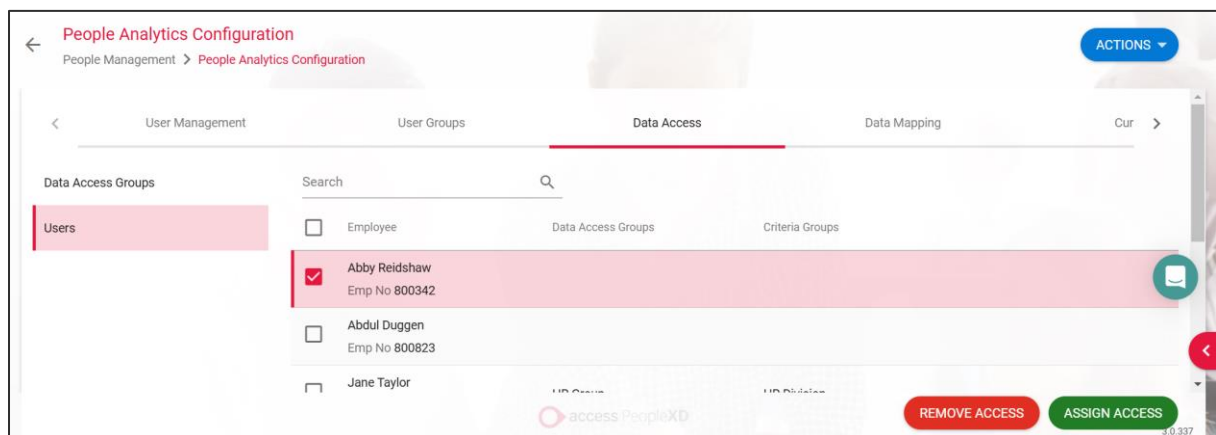

A dialog box titled "Add Data Access Group". It contains two input fields: "Group Name*" and "Copy Data Access Group" with a dropdown arrow. At the bottom right are "CANCEL" and "OK" buttons.

4. Click **OK**.
5. Click **Assign Access**.
6. Select the Criteria Groups and click **OK**.

2.5.3. Assign Data Access

1. On the People Analytics Configuration screen click the **Data Access** tab.
2. Click the **Users** tab from the left-hand menu.
3. Select the checkbox for the relevant user.

4. Click **Assign Access**.

5. Select Data Access Group and click **OK**.

3. Data Mapping

3.1. Overview

You need to map your PeopleXD data for it to appear in People Analytics and be categorised appropriately. This is a required step, because People Analytics uses a set of standardised terms, attributes, and metrics (e.g. Voluntary Resignation vs Involuntary Resignation) that relate, but do not match the customer definable reference lists held within PeopleXD.

To ensure that data displays correctly in People Analytics, certain fields need to be mapped in PeopleXD. The field types that can be mapped are detailed in the following sections.

 **Note:** Mapping will be applied to People Analytics overnight, therefore any changes made will take effect the following day.

3.1.1. Exit Type

All PeopleXD leaving reasons need to map to the following Exit Types in People Analytics:

- Resignation
- Retirement
- Termination
- Reduction in Force
- Disability Exit
- Maternity Exit

If a leaving reason is unmapped, it is mapped to *Uncategorised*.

3.1.2. Start Type

All PeopleXD reason codes used for new hires/contracts etc. need to map to the following Start Types in People Analytics:

- Expansion (i.e. employees who started as a result of organisation expansion)
- Replacement (i.e. employees who started as a result of a replacement)
- External Other (i.e. employees who started as an external hire for reasons other than expansions and replacements)
- M&A Start (i.e. employees who started as a result of mergers and acquisitions)

If a start type is unmapped, it is by default mapped to *External Other*.

3.1.3. Pay Types

PeopleXD pay code reference data needs to map to the following Pay Types in People Analytics:

- Agency Cost
- Base Pay
- Bonus
- Commissions
- Contingent Workforce Costs
- Employer Insurance and Taxes
- Health Benefits
- Long Term Incentive
- Other Supplemental Pay
- Other Variable Pay
- Other Workforce Events
- Overtime Pay
- Pay for Time Not Worked
- Premium Pay
- Recognition Overhead
- Recognition Rewards
- Referral Cost
- Relocation Cost
- Workforce Allocations

This is not mapped by default in PeopleXD. For further guidance on mapping Pay Types, see [section Pay Types Mapping – Additional Information](#).

3.1.4. Ethnicity Types

PeopleXD ethnicity reference data needs to be mapped to the following Ethnicity Types in People Analytics:

- Asian or Asian British
- Black, African, Caribbean or Black British
- Mixed or Multiple Ethnic Groups
- Other Ethnic Group
- Unknown
- White

If an ethnicity is unmapped, it is by default mapped to *Unknown*.

The Ethnicity Types mapping is required to unlock certain content and metrics in People Analytics, for example minority breakdowns. However, you will still be able to build analytics based on your own PeopleXD ethnicity reference data using the Ethnicity attribute in People Analytics.

3.1.5. T&A Pay Types

WFM pay code reference data needs to be mapped to one of the following T&A Pay Types in People Analytics:

- Regular
- Overtime
- Family Leave
- Sickness
- Annual Leave
- Absence - Other
- Late

For further guidance on mapping T&A Pay Types, [see section T&A Pay Types Mapping – Additional Information.](#)

3.2. Map PeopleXD Reference Data Fields

To map the fields in PeopleXD, follow the below steps:

1. From the People Management dashboard, navigate to the Data Centre widget.
2. Click **Open** on People Analytics Configuration.
3. Select the Data Mapping tab.
4. Select the relevant field type from the Analytics Mapping Type dropdown menu.
5. Select the relevant code from the Analytics Mapping Code dropdown menu.
6. Select the checkbox for the relevant PeopleXD codes, and click the right arrow to move them to the selected column.
7. Click **Save**.

The screenshot displays the 'People Analytics Configuration' interface, specifically the 'Data Mapping' tab. The breadcrumb trail indicates the path: 'People Management > People Analytics Configuration'. The interface is divided into four sections: 'User Management', 'User Groups', 'Data Mapping' (active), and 'Verification Data'. Under 'Data Mapping', there are two dropdown menus: 'Analytics Mapping Type' set to 'Ethnicity Types' and 'Analytics Mapping Code' set to 'White'. Below these are two panels: 'Available Codes' and 'Selected Codes'. The 'Available Codes' panel has a search bar and a list of codes with checkboxes: 'Arab' (50), 'Asian Or Asian British - Bangladeshi' (33), 'Asian Or Asian British - Indian' (31), 'Asian Or Asian British - Pakistani' (32), and 'Asian Or British Asian - Chinese' (34). The 'Selected Codes' panel also has a search bar and shows 'White - British' (11) with a checked checkbox. A green 'SAVE' button is located at the bottom right of the interface.

3.3. Data Validation Guidebook

The Data Validation guidebook allows you to validate HR & Payroll information in People Analytics and the mappings that drive Analyses in People Analytics. Data Validation areas are available for:

- People Management
- Payroll
- Time and Attendance

Access to the Data Validation Guidebook is available to users who are assigned the following User Groups:

- XD HR Super User
- XD System Super User

4. Currency

4.1. Overview

This section will cover how to set a default currency for your People Analytics solution, and add exchange rates to support conversion from your default currency to another currency.

This allows a user to select the default currency that payroll information is shown. For example, this is useful if your PeopleXD solution processes payroll in both the UK (£) and Ireland (€).

4.2. Set a Default Solution Currency

To set a default currency, follow the below steps:

1. From the People Management dashboard, navigate to the Data Centre widget.
2. Click **Open** on People Analytics Configuration.
3. Select the Currency tab.
4. Select a default currency from the Select Default Currency dropdown. Your solution will now show in the default currency.

4.3. Currency Rates

4.3.1. Overview

When converting values to a single currency, the solution uses a process called constant currency. This means that only one exchange rate (per currency) is used for a calculation, even if it spans multiple periods. The exchange rates used are based on the last day of the selected period in the Time picker.

The constant currency method allows for effective analysis of the change in costs over time. If a varying exchange rate were used, then differences in values could be caused by different rates of exchange. These fluctuations would be invisible in the analysis as they are applied to values prior to them being displayed. Using constant currency ensures that trends, such as changes in costs or the slope of a trend line, are represented using a common exchange factor. This approach provides a clearer and more reliable view of cost changes between periods.

4.3.2. Add Currency Rates

To add currency rates, follow the below steps:

1. From the People Management dashboard, navigate to the Data Centre widget.
2. Click **Open** on People Analytics Configuration.
3. Select the Currency tab.
4. Click **Add Exchange Rate** in the Currency Rates section.
5. Select the Currency, enter the Currency Rate, and select the Date Effective (i.e. the date the currency rate should apply).
6. Click **OK** to apply your changes.

The screenshot shows the 'People Analytics Configuration' interface with the 'Currency' tab selected. A modal dialog titled 'Enter Currency Rate' is open in the center. The dialog contains three input fields: 'Currency*' with a dropdown arrow, 'Currency Rate*' with a numeric input field and up/down arrows, and 'Date Effective' with a calendar icon. At the bottom of the dialog are 'CANCEL' and 'OK' buttons. In the background, the 'Currency' tab is active, showing 'Default Currency' as 'GBP' and a section for 'Currency rates' with an 'ADD EXCHANGE RATE' button.

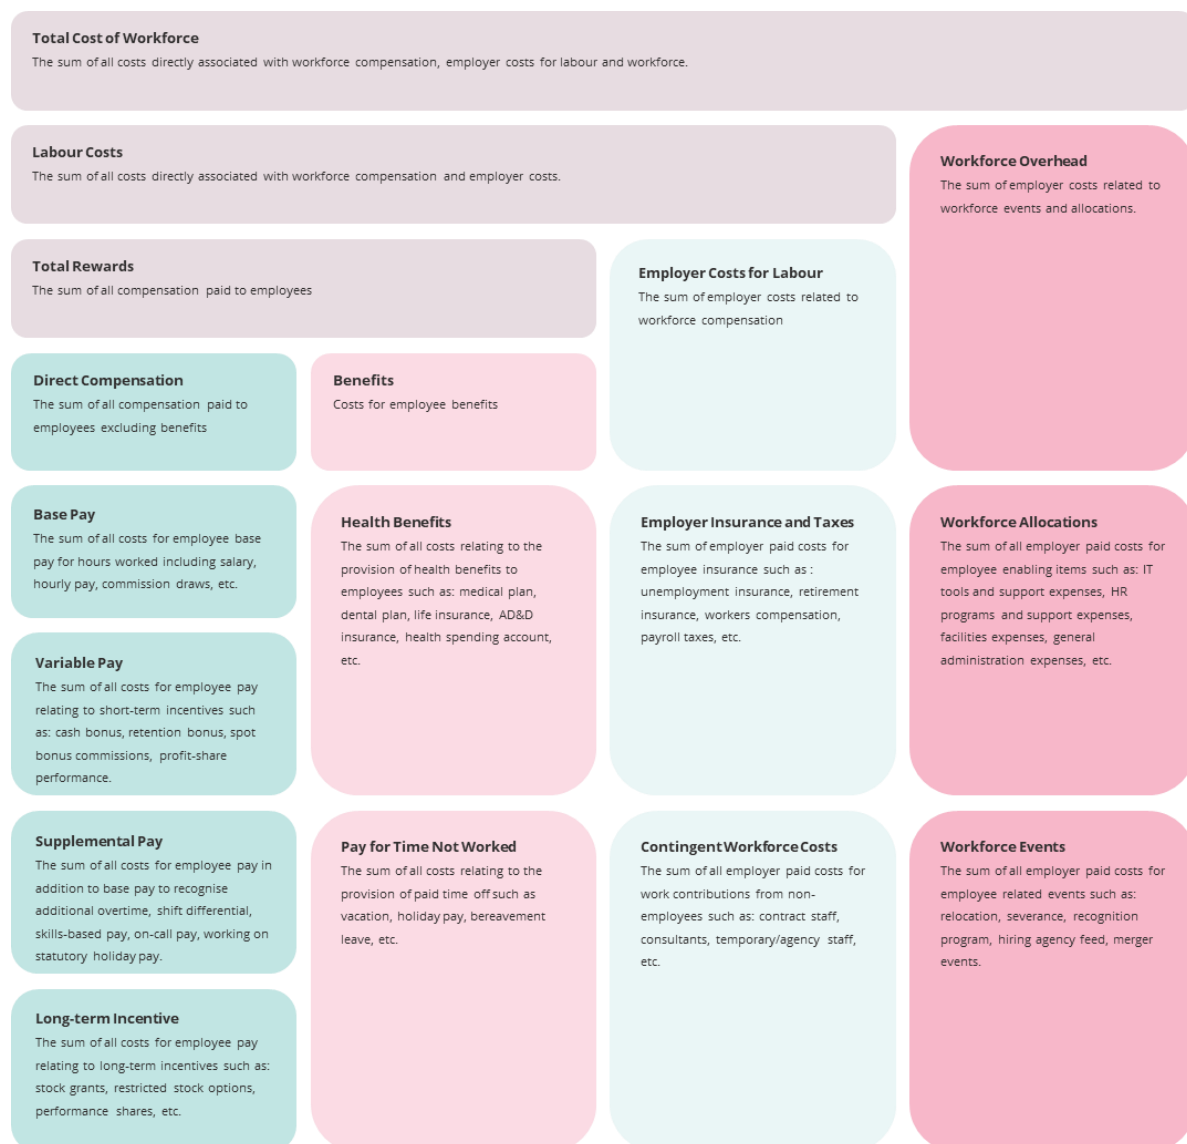

Note: To ensure that People Analytics uses the exchange rate set in the PeopleXD configuration area, select Use admin default as your display currency in the Preferences tab of People Analytics.

5. Pay Types Mapping – Additional Information

5.1. Overview

The purpose of mapping pay types in People Analytics is to categorise each pay event into buckets e.g. base pay, variable pay, etc to support the Total Cost of Workforce model (TCOW).

The below diagram shows all the categories and examples of expenses that contribute to the Total Cost of Workforce in People Analytics. The Total Cost of Workforce is the full cost of people who contribute work to the organisation, including all of the labour costs, and costs associated with supporting and maintaining this group of people. Only pay codes that are cost to the employer should be mapped.

To support mapping pay codes in PeopleXD to the set of standardised pay types in People Analytics, complete the following process:

1. Report a listing of pay codes from Insight in PeopleXD,
2. Review the definition of each standard pay type in People Analytics to understand what a pay code should be mapped to.
3. Review examples of pay codes/analysis codes and how they could be mapped to the People Analytics standards.
4. Complete the mapping steps as outlined in section [5.2. Map PeopleXD Reference Data Fields](#).

5.2. Report on Pay Codes in PeopleXD

To report on all pay codes in PeopleXD, follow the below steps:

1. From the Insight dashboard, navigate to the Report Store.
2. Search for Pay Code Extract and click on the corresponding tile.
3. Click **Download Report**.
4. Click **Yes** to open the report.
5. Select the No – I'll wait option, and click **OK**.
6. Expand the Actions button and select **Export Data**.
7. Ensure Excel is selected, and click **OK**.
8. Report will be downloaded and open in Excel.

5.3. Definition of each Standard Pay Type in People Analytics

Before you complete the mapping steps, it's recommended to review the below table which details the People Analytics pay types available, and a description of each. The TCOW mapping column details how each pay type rolls up into the Total Cost of Workforce model.

People Analytics Pay Type	Description	TCOW Mapping (i.e. where a pay type/element rolls up into the TCOW Model)
Agency Costs	Agency costs are the monies paid to recruiting agencies for the sourcing or hiring activities they perform on behalf of the organisation.	Agency Costs > Workforce Events > Workforce Overhead > TCOW
Base Pay	Base pay is the regular compensation provided directly to employees for their work contribution to the organisation. Base pay describes the most common form of compensation paid to employees. Use this metric to quickly see how much your costs are for employee base pay. Examples of base pay include: • Salary • Hourly pay • Commission-based draw	Base Pay > Direct Compensation > Total Rewards > Labour Costs > TCOW
Bonus	Bonus is provided as a reward for good performance.	Variable Pay > Direct Compensation > Total Rewards > Labour Costs > TCOW
Commission	Commissions are a form of compensation where the amount paid is directly related to the achievement of set targets. For example, commissions are	Variable Pay > Direct Compensation > Total Rewards > Labour Costs > TCOW

Configuring Premium People Analytics - User Guide

People Analytics Pay Type	Description	TCOW Mapping (i.e. where a pay type/element rolls up into the TCOW Model)
	common in sales roles where a percentage of total sales is awarded as compensation for the work done. Commission costs are highly varied, and costs are only incurred for the results achieved.	
Contingent Workforce Costs	Contingent workforce costs cover the work of people who are not classified as employees and who do work on behalf of the organisation. These people are not on payroll and do not hold employment contracts directly with the organisation. These costs are often incurred through a 3rd party such as a staffing agency and cover work done by contract staff, temporary / agency staff, consultants etc.	Contingent Workforce Costs > Employer Costs for Labour > Labour Costs > TCOW
Employer Insurance And Taxes	Employer insurance and taxes are workforce costs related to taxes and insurance premiums that must be paid based on the workforce employed (e.g. unemployment insurance, payroll taxes, workers compensation insurance etc.).	Employer Insurance & Taxes > Employer Costs for Labour > Labour Costs > TCOW
Employer Pension	Benefits relating to employer pension contributions.	Employer Pension > Benefits > Total Rewards > Labour Costs > TCOW
Health Benefits	Health benefits are the per employee costs directly associated with providing medical benefit cover to employees and their families. This includes all of the cost items related to providing insurance cover, either directly or indirectly, for medical events that happen to an employee. Use this metric to quickly see how much your costs are for employee health benefits.	Health Benefits > Benefits > Total Rewards > Labour Costs > TCOW

Configuring Premium People Analytics - User Guide

People Analytics Pay Type	Description	TCOW Mapping (i.e. where a pay type/element rolls up into the TCOW Model)
	Examples of health benefits include: • Medical plan • Dental plan • Vision plan	
Long Term Incentive	Long-term incentive pay is the current cash value of any long-term incentives that have been granted to employees, and for which the employee is currently eligible. These are workforce costs related to incentives which payout over a time frame of longer than one year. This measure deals with the actual costs, not the calculated present value or projected future value of an item such as a share option or RSU. This measure represents only the monetary or equivalent value that is paid to or budgeted for an employee based on their long-term incentive eligibility. Use this metric to quickly see how much your costs are for employee long-term incentive pay. Examples of long-term incentives include: • Stock options • Restricted stock • Performance shares	Supplemental Pay > Direct Compensation > Total Rewards > Labour Costs > TCOW

Configuring Premium People Analytics - User Guide

People Analytics Pay Type	Description	TCOW Mapping (i.e. where a pay type/element rolls up into the TCOW Model)
Other Supplemental Pay	Other supplemental pay are other unclassified compensation costs related to supplemental pay rewards.	Supplemental Pay > Direct Compensation > Total Rewards > Labour Costs > TCOW
Other Variable Pay	Other variable pay are unclassified variable compensation costs relating to a non-fixed monetary rewards. (e.g. spot bonuses, etc.).	Variable Pay > Direct Compensation > Total Rewards > Labour Costs > TCOW
Other Workforce Events	Other workforce events costs are unclassified workforce overhead costs associated with any events that impact employees (e.g. office relocation, employment related M&A costs, etc.).	Other Workforce Events > Workforce Overhead > TCOW
Overtime Pay	Overtime pay are workforce costs for that are paid for hours worked beyond the contracted working hours. Overtime costs will typically recognise these additional hours at an increased hourly rate e.g. 1.5x etc based on agreed overtime rules. There can be many different types of overtime pay and pay rates. Not all employees are eligible for overtime.	Supplemental Pay > Direct Compensation > Total Rewards > Labour Costs > TCOW
Pay for Time Not Worked	Pay for time not worked are the workforce costs associated with time off for which the employer continues to pay the employee, or the monetary value which is provided in lieu of time off. Use this metric to quickly see how much your costs are for employee pay for time not worked. Examples of pay for time not worked include:	Pay for Time not Worked > Benefits > Total Rewards > Labour Costs > TCOW

Configuring Premium People Analytics - User Guide

People Analytics Pay Type	Description	TCOW Mapping (i.e. where a pay type/element rolls up into the TCOW Model)
	- Vacation or holiday - Bereavement - Family leave	
Premium Pay	Premium pay are supplemental workforce costs for pay for employees who are eligible for a premium over and above the standard pay agreement. Premium pay can be awarded to workers who have achieved specialist skill sets or who are working in particular situations which require a temporary or conditional increase in pay.	Supplemental Pay > Direct Compensation > Total Rewards > Labour Costs > TCOW
Recognition Overhead	Recognition program costs are workforce overhead costs associated with managing and/or outsourcing costs for internal recognition programs, not including supplemental pay (e.g. processing charges for rewards, vendor premiums, etc.).	Recognition Overhead > Workforce Events > Workforce Overhead > TCOW
Recognition Rewards	Recognition rewards are variable workforce costs associated with organisational recognition programs where employees will receive monetary rewards in recognition of specific achievements e.g. a gift card for £50 based on the amount of peer recognition received in a given period.	Variable Pay > Direct Compensation > Total Rewards > Labour Costs > TCOW
Referral Cost	Referral costs are workforce costs associated with payments to employees for referring a successful candidate.	Referral Cost > Workforce Events -> Workforce Overhead > TCOW

Configuring Premium People Analytics - User Guide

People Analytics Pay Type	Description	TCOW Mapping (i.e. where a pay type/element rolls up into the TCOW Model)
Relocation Cost	Relocation costs are the hiring costs associated with moving employees from their current location to the location where they will be working. This can be attributed to new hires or employees who must change locations.	Relocation Cost > Workforce Events -> Workforce Overhead > TCOW
Workforce Allocations	Workforce allocations are workforce overhead costs for employee enablement items (e.g. IT tools and support expenses, HR programs and support, expenses, etc.).	Workforce Allocations > Workforce Overhead > TCOW

5.4. Examples of PeopleXD Pay Codes/Analysis Codes and Pay Type Mapping in People Analytics

The next step is to understand what pay codes are attributed to the full set of payroll and benefits that are provided to employees as part of their employment. Only pay codes that are a cost to the employer are included in the Total Cost of Workforce Model.

5.4.1. Allowances

Allowance pay codes are detailed in the pay code report as *Allowance* in the column *Deduction Allowance Ind.*

Allowance pay codes that are a cost to the employer are to be mapped e.g. basic pay, overtime, commission.

Deduction Allowance Ind	Analysis Description (Filter on this field in the pay code report)	Suggested Pay Type Mapping
Allowance	Absence Management	Pay for Time Not Worked
	Basic Pay	Base Pay
	Bonuses	Bonus
	Car Allowance	Pay for Time Not Worked
	Commissions	Commissions
	Early Pay	Base Pay
	Early Pay Drawdown	Base Pay
	Non Taxable Payments	Other Workforce Events or Pay for Time Not Worked
	Other GP	Pay for Time Not Worked

Deduction Allowance Ind	Analysis Description (Filter on this field in the pay code report)	Suggested Pay Type Mapping
	Other Pay	Commissions or Other Supplemental Pay or Other Variable Pay or Pay for Time Not Worked or Relocation Cost
	Overtime	Overtime Pay
	Statement Bonus and Commission	Bonus or Commissions
	Statutory Pay	Pay for Time Not Worked
	Time Management	Base Pay or Overtime Pay or Pay for Time Not Worked

5.4.2. Benefit in Kind

Benefit in Kind pay codes are detailed in the pay code report as *BIK* in the column *Deduction Allowance Ind.*

BIK pay codes that are a cost to the employer are to be mapped e.g. car

Deduction Allowance Ind	Analysis Description (Filter on this field in the pay code report)	Suggested Mapping
BIK	Benefit in Kind	Health Benefits or Pay for Time Not Worked

5.4.3. Deductions

Deduction pay codes are detailed in the report as *Deduction* in the column *Deduction Allowance Ind.*

Deductions that are a cost to the employer are to be mapped e.g. Employer NI/PRSI and Employer Pension. Employee deductions should not be mapped.

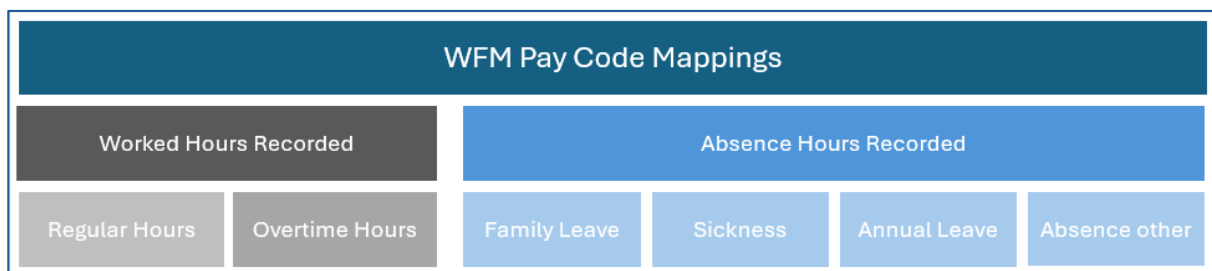

Deduction Allowance Ind	Analysis Description	Suggested Pay Type Mapping
Filter on Deduction	Employer NI / Employer PRSI	Employer Insurance and Taxes
	Employer Pension	Employer Pension

6. T&A Pay Types Mapping – Additional Information

6.1. Overview

The purpose of mapping T&A Pay Types in People Analytics is to categorise each T&A pay event into buckets e.g. Overtime, Sickness, etc.

The diagram below shows all the categories that need to be mapped, and which relate to Worked Hours versus Absence Hours.

6.2. Definition of each T&A Pay Type in People Analytics

The table below gives further details of the People Analytics T&A Pay Types available:

T&A Pay Types (In People Analytics)	Description	Example
Regular	Pay codes that contribute towards regular hours worked	Basic Hours

- Shift End Time
- Effective Date
- Scheduled Hours
- Scheduled Day of Week
- Scheduled Shift Day
- Consecutive days Scheduled
- Extraction Date

Note: All Hours are transferred as decimals to support totalling.

7. Sync Frequency

The following table details how often data gets sent to People Analytics from PeopleXD:

Data Transferred to People Analytics	Timings
Daily Deltas i.e. difference between data in PeopleXD today versus yesterday.	- Updated once per day. - Data difference is calculated as: data before 00:00 UTC today minus data that was sent yesterday - The job to send this data to People Analytics starts from 00:00 UTC - Cut off time that all data will be sent to People Analytics is 05:00 UTC
Data Mapping i.e. data that you have mapped in Data Mapping .	- Mappings updated once per day. - Any data mapped before 00:00 UTC will be sent. - Same timings as Daily Deltas above. - Historical changes follow this same process.
Security – User Management and User Groups i.e. applying access given in User Management and User Groups	Updated immediately
Data access i.e. what employee data you see based on People Management access	Updated every 2 hours.
