1.1	13 th January 2021	Peter Travers	Updated Login Screen section.
1.2	9 th June 2022	Isabelle Grey	Update to guidance for PeopleXD environments in Workspace.
1.3	13 th January 2023	Kat Murie	Updated section 2, including guidance for PeopleXD environments in Workspace.

1. Overview

1.2. Purpose of the Guide

This document provides guidance on the *Themes* functionality in Portal. This includes the following:

- What are themes and how are they used?
- How to review existing themes.
- How to create new themes.
- How to assign different themes for different companies.
- How to configure the Portal Login page.

1.3. What are Themes?

The *Themes* feature on PeopleXD allows you to change the appearance of the Portal UI, to align this to your organisation's own branding requirements.

 **Note:** This is applicable to Modern UI only.

PeopleXD provides a number of built-in themes. You can decide to use one of these themes or to create new themes, specific to your organisation.

If an organisation comprises of more than one company, different themes can be created and assigned to each company as required.

The following items can be defined per theme:

- Primary Colour
- Secondary Colour
- Card opacity level
- Background opacity level
- Upload a background image
- Upload customer logo

These items are reviewed in greater detail in [2.2 Create a New Theme](#).

When a new theme is created / existing theme updated, you are able to preview the new settings before assigning them to a given company within the organisation or applying it as the default theme for all users.

1.4. Browser Requirements

Users using the following browsers can fully experience the themes:

- Google Chrome
- Safari
- Firefox
- Microsoft Edge

Themes use modern browser features that are not available to Internet Explorer 11. Users on Internet Explorer 11 will see the following customisations only:

- Background image
- Customer logo
- Application bar
- Widget edges

2. Configuring Themes on Portal

2.1. Preview Existing Themes

To access all of the themes that are currently set up on PeopleXD, follow these steps:

1. Quick jump to the *Site Manager* widget.
2. Click **Open** for the *Themes* option.

The *Themes* screen opens. All existing themes are available to view on this screen.

These are listed under *Themes* at the left side of the screen. This includes:

- Themes provided out of the box by PeopleXD i.e. built-in.
- New themes created by your organisation i.e. custom.

Additional information is provided beneath each theme name. See the table below for a list of possible options.

Item	Description
BuiltIn	This is an out-of-the-box theme provided by PeopleXD. • These cannot be edited or deleted. • New themes can be created as a copy of these.
Custom	This is a theme created by a user in your organisation, specific to your requirements.

	• These can be edited or deleted. • New themes can be created as a copy of these.
Default	This is the default theme. • Only 1 theme can be the default at any given time. • This is the theme that all users will be presented with, unless they are part of a company that has been assigned a different theme.
Assigned to	This shows the company / companies that the theme has been assigned to.

3. Click on any of the options listed under *Themes*, to preview that theme on screen.

For example, click on “Coral Red”.

The preview updates to display that theme.

There are 3 options for preview: *Login Page*, *Widget Dashboard* and *Fullscreen Page*. These are listed to the right of the screen.

- **Login Page.** Click on this to preview an example of a Portal login page, using the selected theme. This provides a view of how the theme is applied to elements including: the background image, logo, accent colour etc.

Note: The log in page is not configured within PeopleXD for environments in Workspace. To edit the Workspace login page, go to the Branding section of Organisation Settings.

- **Widget Dashboard.** Click on this to preview an example of a Portal dashboard, using the selected theme. This provides a view of how the theme is applied to elements including: the administration bar, the tabs, widgets etc

Note: The administration bar is non configurable for PeopleXD environments in Workspace.

- **Fullscreen Page:** Click on this to preview an example of a full Portal screen using the selected theme. This provides a view of how the theme is applied to elements including: the administration bar, breadcrumb trail, menus, labels, drop-down lists etc.

Note: The administration bar is non configurable for PeopleXD environments in Workspace.

2.2. Create a New Theme

New themes are created by copying an existing theme and amending the required settings. Follow these steps to create a new theme.

1. On the **Themes** screen, select the theme that will be copied and click the  button.
2. Select the option **New From**.

The *New From Theme* screen opens.

- All configurable settings are managed under *Settings* at the left side of the screen.
- The *Preview* section of the screen will show real time updates to the theme settings, once they are changed but before they are saved. You can click on **Login Page**, **Widget Dashboard**, and **Fullscreen Page** to preview changes as they are made.

3. Update the *Name* (max 50 characters).
This is the name for your new theme. This defaults to "Copy of Theme" e.g. "Copy of Coral Red" and should be overwritten with a meaningful description.
4. Update the settings for the Login Page, Widget Dashboard, and Fullscreen Page. See sections 2.2.1 and 2.2.2 for more guidance.
5. Once all settings have been configured, click **Save** to create the new theme.
Alternatively, you can exit the screen without saving. If you do this, a new theme is not created. Once saved, the screen closes, and the new theme is now available on the list of *Themes*.

2.2.1. Settings for the Login Page

- Update the Login Accent Colour.

This is the main colour for the Login page. The preview options will display where this colour is used. Click the drop-down menu and select the required colour. There are two options available to select the required colour:

Option 1: 'Core' - This provides a full set of preconfigured colour codes that you can scroll through and select.

Option 2: 'Custom' - This provides the option to define your own required colour codes using the following options:

- Hex Colour Code
- Red / Green / Blue i.e. RGB
- Hue

Click on **Reset** to return to the last saved colour.

Click **Cancel** to exit without making a change.

Click **OK** to save the new colour.

- Update the Background Image
- Update the Login Logo

The preferred file types are .PNG and .JPG. It is better to use .PNG with embedded transparency for logos. Both types have a server limit of 10MB, and we would recommend the smallest size possible.

2.2.2. Settings for the Widget Dashboard and Fullscreen Page

- Update the Primary Colour.

This is the main colour for the theme. The preview options will display where this colour is used. Click the drop-down menu and select the required colour. There are two options available to select the required colour:

Option 1: 'Core' - This provides a full set of preconfigured colour codes that you can scroll through and select.

Option 2: 'Custom' - This provides the option to define your own required colour codes using the following options:

- Hex Colour Code
- Red / Green / Blue i.e. RGB
- Hue

Click on **Reset** to return to the last saved colour.

Click **Cancel** to exit without making a change.

Click **OK** to save the new colour.

- Update the *Secondary Colour*.

This is the secondary colour for the theme. The preview options display where this colour is used. Follow the same steps as the *Primary Colour* selection.

- Set the *Card Opacity Level*.

This controls the opacity of the cards on screen e.g. see the difference where this is set to 1 vs 5 for the sample widget (next page):

Set to 1 (i.e. more transparent)

Set to 5 (i.e. more opaque)

- Select the *Background Opacity Level*.

This controls the opacity background image on the fullscreen view e.g. see the difference where this is set to 1 vs 5 for the sample screen (next page):

Set to 1 (i.e. more transparent)

Set to 5 (i.e. more opaque)

- Upload a new *Background Image*.
- Upload a new *Logo*.
The preferred file types are .PNG and .JPG. It is better to use .PNG with embedded transparency for logos. Both types have a server limit of 10MB, and we would recommend the smallest size possible.

2.2.3. Next Steps

Once you have created a new theme, you should consider the following.

- Should this theme be set as the new default, for all users? If so, see steps in [2.4 Set as Default](#) for guidance on how to complete this.
- Is this theme for a specific company? If so, see steps in [2.5 Assign to Company](#) for guidance on how to complete this.
- Are multiple themes required for multiple companies? If so, repeat the process covered in this section to create additional themes.

2.3. Edit an Existing Theme

Note: Only custom themes can be edited. You cannot edit a 'builtin' theme.

Follow these steps to edit an existing custom theme.

1. On the **Themes** screen, select the required theme and click the  button.
2. Select the option **Edit**.

The *Editing Theme* screen opens.

3. Edit the settings as required.
All settings can be edited. Follow the guidance in section [2.2 Create a New Theme](#) for further guidance for each setting.
As settings are updated, these display in real time in the previews.
4. Once all settings have been configured, click **Save** to apply the changes.
Alternatively, you can exit the screen without saving. If you do this, no changes are saved.
Once saved, the changes are visible to all users, using that theme.

2.4. Set as Default

The default theme, is the theme that is applied to:

- all users **OR**
- any users who are not using another theme based on their company.

One theme must always be set as the default. The default theme must always be associated with a company.

- **Only 1 company on PeopleXD?** Assign the default theme to that company.
- **Multiple companies on PeopleXD?** Select a theme to use as the default. This ensures that if a user is not part of a company that uses a different custom theme, this will be applied for them.

Follow these steps to set a default theme:

1. On the **Themes** screen, select the theme that will be copied and click the  button.
2. Select the option **Set as Default**.
3. Click **Yes** to continue.

A warning message appears to prompt you to confirm you are happy to make this change. The theme is automatically updated for all assigned users. If this theme is applicable to you, the screen will refresh to use the new theme. There is no requirement to logout for the change to take effect.

The information on the theme updates to display 'Default' and the number of companies now assigned.

2.5. Assign to Company

If your organisation has multiple companies, it is possible to create multiple themes and assign these to each company, to reflect different branding and logo requirements. The default theme is automatically assigned to all companies.

If an individual company requires a different theme, follow these steps for guidance on how this can be created and assigned to it.

1. Create a new theme.

Follow the instructions in [2.2 Create a New Theme](#) to complete this step.

2. Assign the theme to a new company.

- a. On the **Themes** screen, select the required theme and click the  button.
 - b. Select the option **Assign**.
 - c. Select the required company from the *Assigned Companies* list and click **OK**.
- If required, you can select multiple companies on that list.

3. The assigned company / companies are displayed under *Assigned To* for that theme, on the list of themes.

The screenshot displays the 'Themes' management interface. On the left, a table lists themes with their assigned companies. The 'New Theme' row is highlighted with a red box. On the right, a 'Preview of Fullscreen Page' shows a sample layout with various UI components like headers, sections, and form fields.

Theme	Assigned to
Core Blue	Abc Solutions
BuiltIn, Default	+3 More
Teal Green	BuiltIn
Coral Red	BuiltIn
Charcoal Grey	BuiltIn
New Theme	Def Solutions
Custom

2.6. Delete a Custom Theme

Note: Only custom themes can be deleted. You cannot delete a 'builtin' theme.

Follow these steps to delete an existing custom theme.

1. On the **Themes** screen, select the required theme and click the  button.
2. Select the option **Delete**.

If the theme being deleted has been assigned to a company, a message will pop up on screen to confirm that the affected company / companies will be reassigned to the default theme as part of this action.

Delete New Theme

This theme is assigned to the following companies:

Def Solutions

Upon deletion, the companies will be reassigned to the default theme with immediate effect.

Would you like to proceed?

NO **YES**

3. Click **Yes** to proceed.

You cannot delete the default theme, even if this is a custom theme. If you need to delete a theme that is currently being used as a default, follow these steps:

1. Set a different theme as the default.
2. Delete the theme as required.

3. User Access to Themes

Users require the following 12 menu options in order to see and use the *Themes* option on the Site Manager widget i.e.

System	Menu Option
Web Services	Theme

Ensure that all 10 sub-menu items under *Theme* are enabled (these are enabled by default on selection of the main *Theme* menu option), so that users have access to all tasks in *Themes* i.e.

System	Menu Option
Web Services	Create
Web Services	Create assign
Web Services	Create default
Web Services	Create image
Web Services	Delete
Web Services	Delete assign
Web Services	Delete image
Web Services	Get
Web Services	Get themes
Web Services	Update

Ensure the additional menu option is also enabled.
