1. Overview

1.1. Purpose of the Guide

This document is provided to clients who wish to develop outbound interfaces from People XD by utilising the XD Insight. It can also be provided to clients that have chosen a different reporting tool other than XD Insight in order to give them an understanding of the items within XD Insight so that they can build their tool on top of it.

1.2. What is a Data Dictionary?

The XD Insight Data Dictionary contains details of every view on XD Insight including a listing of every field, their datatypes, lengths, etc.

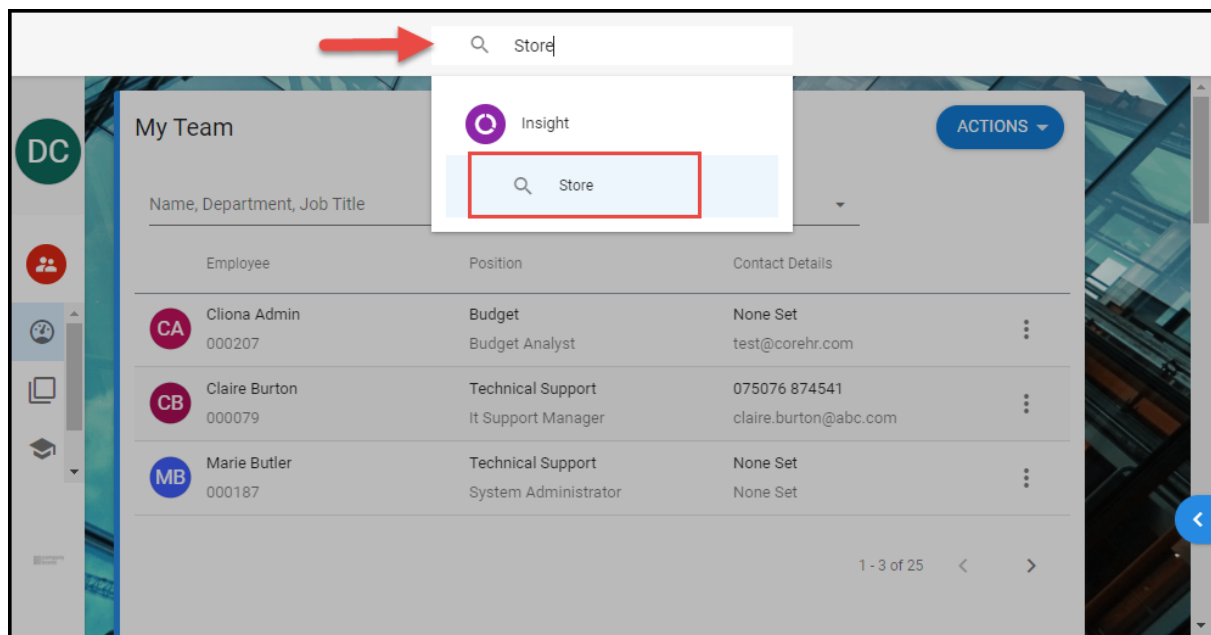

Where XD Insight is used for interfacing purposes, the Data Dictionary is provided to the client along with the People XD Integration Framework Specification so that they understand People XD's standard approach to integration and the various joins that exist between the XD Insight views.

2. Accessing the Data Dictionary

2.1. Report Store

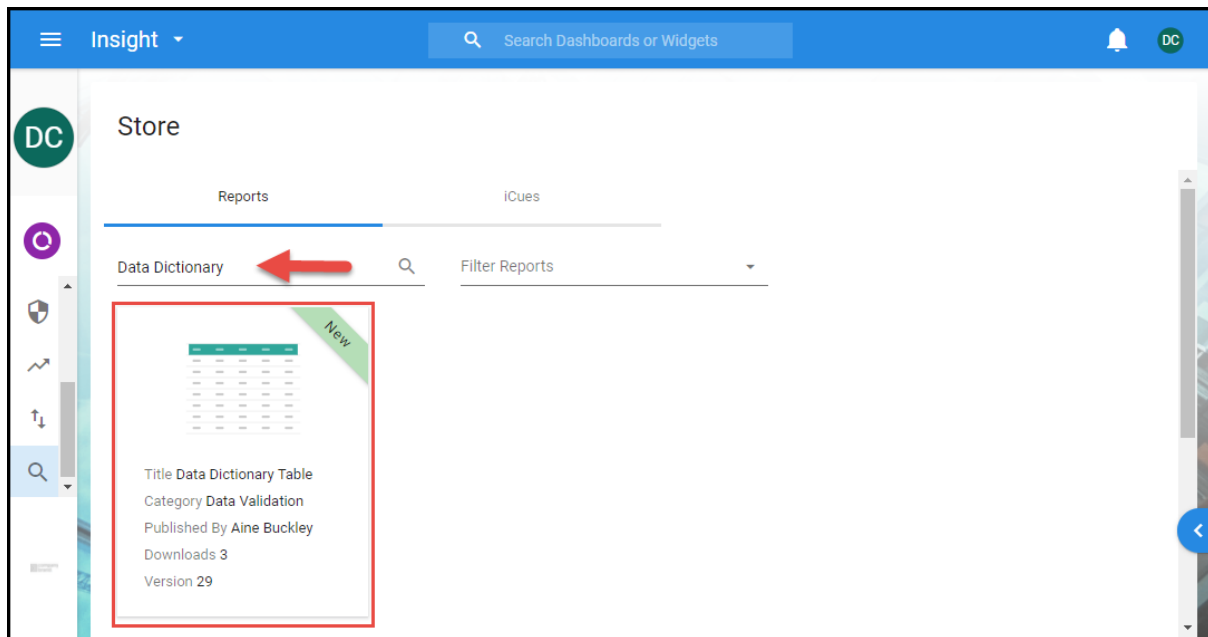

To access the Data Dictionary for your organisation's instance of XD Insight, follow the below steps.

1. Quick Jump to the *Store* on the *Insight* dashboard.

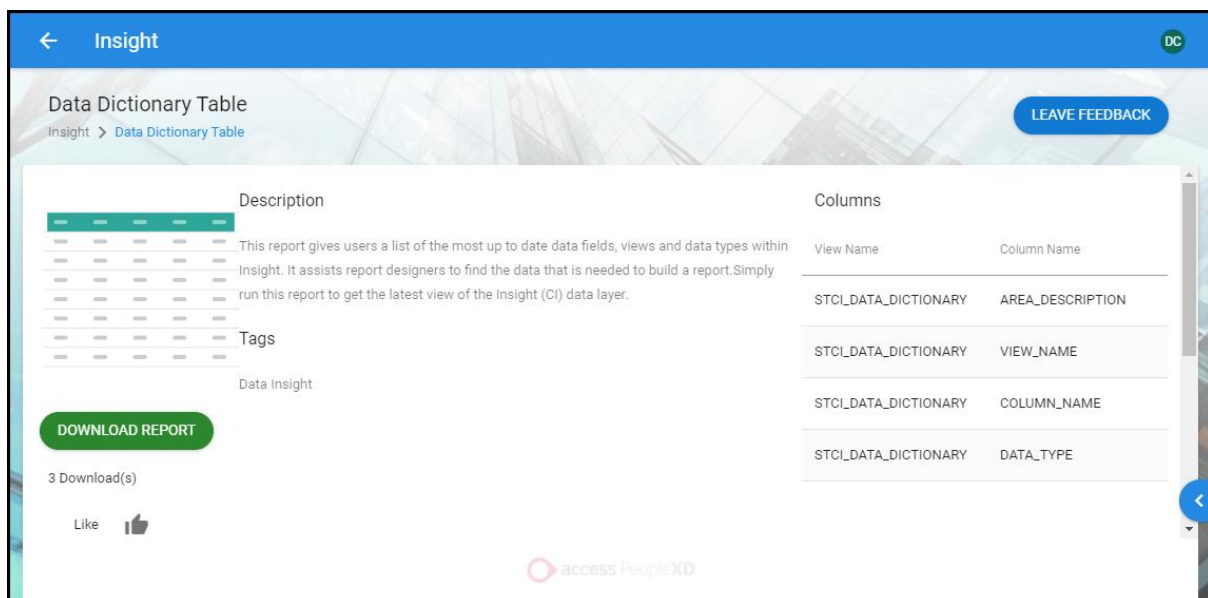

2. On the *Reports* tab, search for *Data Dictionary*
3. The *Data Dictionary* report is returned.
4. Click on the *Report*.

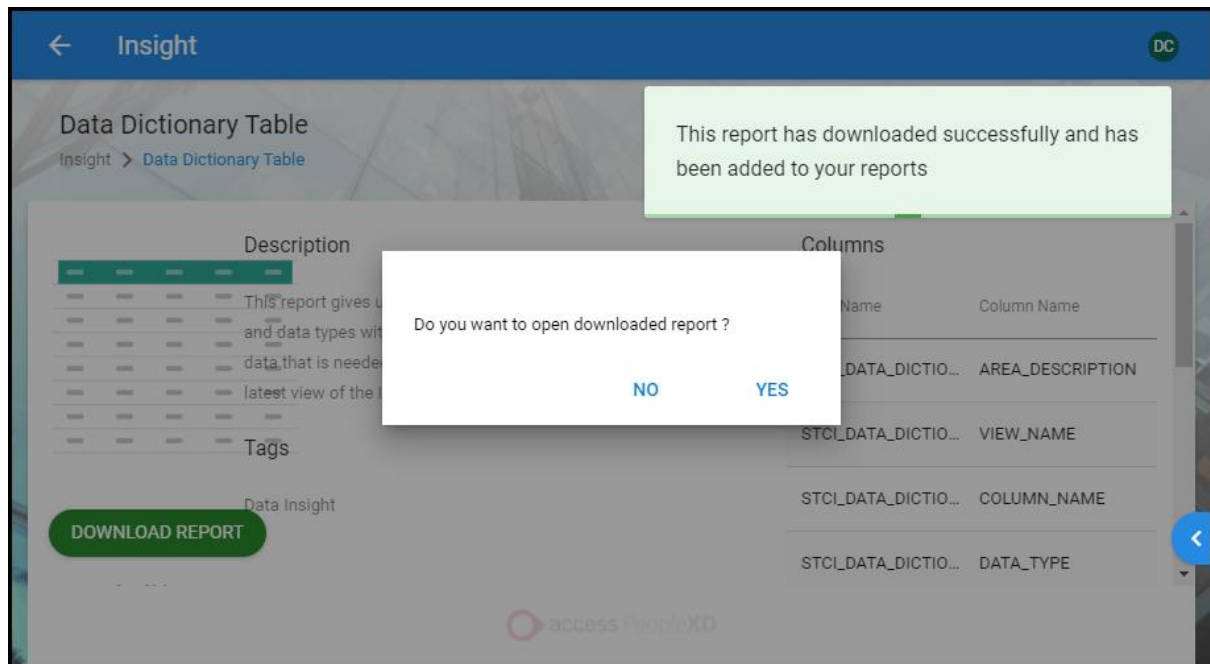

XD Reporting: Insight Data Dictionary

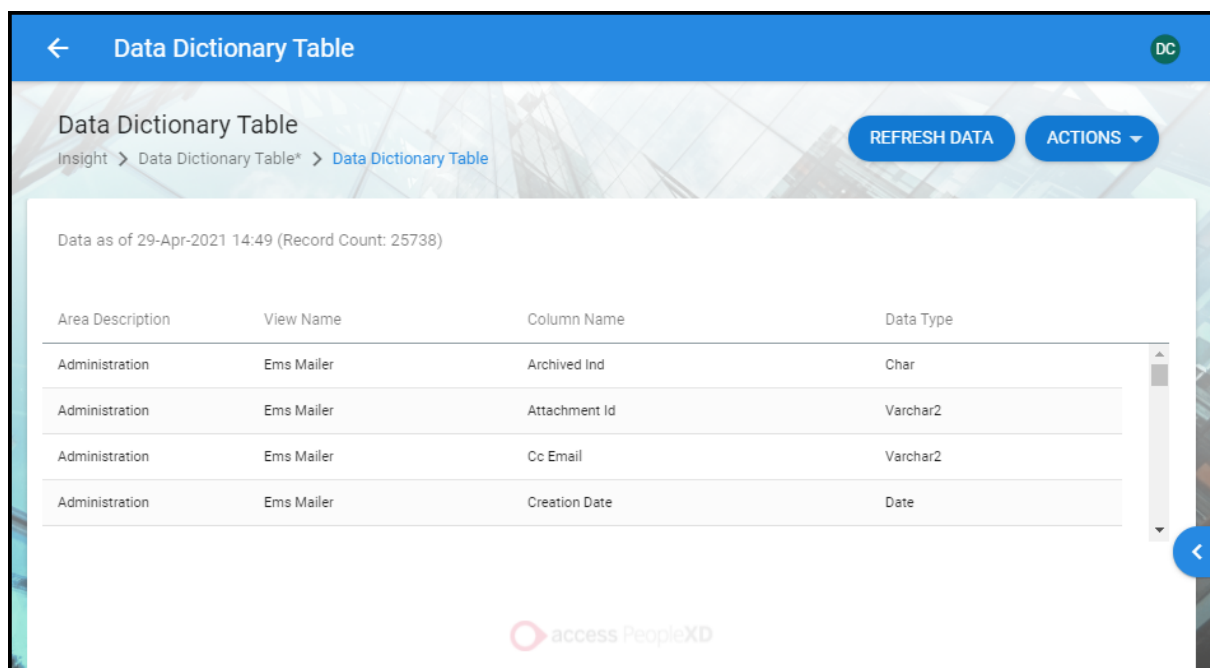

5. The report preview screen opens, allowing you to download the report to your environment.
6. Click on the **Download Report** button

7. The report has now been added to your Report library within XD Insight.
8. Click **Yes** to open the report straight away.

9. This returns all the columns that exist currently on the Insight Data Layer on People XD.

3. Common Data Layer Sections

3.1. People Management

The report, once downloaded, can be configured to filter on the People Management Business Area of the People XD database.

To carry this out, create a filter on the report for the following:

- Area Description Equal to Personnel

The screenshot shows the 'Data Dictionary Table' interface. On the left, there is a sidebar with a toggle for 'Auto refresh on all changes' and a 'Filters' section. In the 'Filters' section, a filter is configured: 'Area Description Equal to Personnel', which is highlighted with a red box. Above this filter is an 'ADD' button. The main area displays a table with columns: 'Area Description', 'View Name', 'Column Name', and 'Data'. The table contains several rows, all with 'Personnel' in the 'Area Description' column. A red box highlights the text 'Data as of 29-Apr-2021 14:55 (Record Count: 4255)' above the table. At the bottom of the interface, there is a logo for 'access PeopleXD'.

Area Description	View Name	Column Name	Data
Personnel	Accident Code Lov	Accident Code	Var
Personnel	Accident Code Lov	Accident Code And Desc	Var
Personnel	Accident Code Lov	Accident Desc	Var
Personnel	Accident Code Lov	Ref Code	Var
Personnel	Accident Code Lov	Ref Desc	Var
Personnel	Action Required Lov	Action Required	Var
Personnel	Action Required Lov	Action Required And Desc	Var

3.2. Payroll

The report, once downloaded, can be configured to filter on the Payroll Business Area of the People XD database.

To carry this out, create a filter on the report for the following:

- Area Description Equal to Pay

The screenshot shows the 'Data Dictionary Table' interface. On the left, there is a sidebar with a toggle for 'Auto refresh on all changes' and a 'Filters' section. In the 'Filters' section, a filter is added: 'Area Description Equal to Pay', which is highlighted with a red box. To the right of the sidebar, the main area displays 'Data as of 29-Apr-2021 15:00 (Record Count: 6044)', with the record count highlighted by a red box. Below this, a table lists columns with headers: 'Area Description', 'View Name', 'Column Name', and 'Data Type'. The table contains six rows of data, all with 'Pay' as the Area Description and 'Allowance Profile' as the View Name.

Area Description	View Name	Column Name	Data Type
Pay	Allowance Profile	Acting Grade	Varchar2
Pay	Allowance Profile	Acting Grade And Description	Varchar2
Pay	Allowance Profile	Acting Grade Description	Varchar2
Pay	Allowance Profile	Acting Pay Multiplier	Number
Pay	Allowance Profile	Acting Point	Varchar2
Pay	Allowance Profile	Acting Rate Type	Varchar2

3.3. WFM & Roster

The report, once downloaded, can be configured to filter on the WFM & Roster Business Area of the People XD database.

To carry this out, create a filter on the report for the following:

- Area Description Equal to Time

The screenshot shows the 'Data Dictionary Table' interface. On the left, there is a sidebar with a toggle for 'Auto refresh on all changes' and a 'Filters' section. A red box highlights the 'Area Description Equal to Time' filter, which is currently turned on. Above the table, the text 'Data as of 29-Apr-2021 15:03 (Record Count: 3269)' is displayed, with the record count highlighted by a red box. The main table lists columns: Area Description, View Name, Column Name, and Data Type. The 'Area Description' column contains the value 'Time' for all rows. The 'View Name' column contains 'Actual Daily Cost' for all rows. The 'Column Name' column lists various attributes: 'Actual Daily Cost Id', 'Appointment Id', 'Based On Hours', 'Category', 'Category Description', and 'Company Code'. The 'Data Type' column lists the corresponding data types: 'Varchar2', 'Varchar2', 'Number', 'Varchar2', 'Varchar2', and 'Number'.

Area Description	View Name	Column Name	Data Type
Time	Actual Daily Cost	Actual Daily Cost Id	Varchar2
Time	Actual Daily Cost	Appointment Id	Varchar2
Time	Actual Daily Cost	Based On Hours	Number
Time	Actual Daily Cost	Category	Varchar2
Time	Actual Daily Cost	Category Description	Varchar2
Time	Actual Daily Cost	Company Code	Number

4. Exporting the Data Dictionary

4.1. Export Options

 **Note:** The smart Data Dictionary is updated automatically with any changes to the XD Insight Data Layer & Business Areas. It is recommended that the report is not exported and left idle. The report refreshes with any updates, therefore be aware of any potential differences when detailing each instance and version of XD Insight.

There are 4 export options available within XD Insight

1. Export to Excel
2. Export to CSV
3. Export to TXT
4. Export to HTML

To export the Data Dictionary report, follow the steps below.

1. View the report.
 - a. You may want to refresh the data before completing an export to ensure that the data is current.
2. Click **Actions**.
3. Click the Export Data button.

4. Select the export option required i.e.

- Export to Excel
- Export to CSV
- Export to TXT
- Export to HTML
