3.1	28/05/2024	Georga Edwards	Updated section 6.1.4 WFM Time Files
3.2	03/02/2026	Georga Edwards	Removed: Section 1.3 What are the new V28 Data Migration Tool Enhancements as now existing functionality and covered in the guide. Section 6.1 The New and Enhanced Data Migration Template Files. Section 6.2 List of Other Data Migration Template Files. Replaced with Section 6.1 List of all available Data Migration Template files. Added New Data Migration Files to Section 6.1.1 People Management Files: • Appointment History • Employee Performance • Performance Rating

1. Overview

1.1. The Purpose of the Document

The purpose of this document is to provide guidance on how to use the *Data Migration* functionality on People XD.

Note: This document does not cover the following:

- Completing *Data Migration Templates*; however, the section [Data Migration Template Helper Files](#) can be reviewed to learn how to download a helper file.
- The *Data Migration Update Facility Widget* which is used to update existing records. For further details, see the [Data Migration Update Facility](#) user guide.
- Configuring the *Data Migration Tool*. For further details, see the [Configuring the Data Migration Tool](#) user guide.

1.2. Overview of the Data Migration Tool

The *Data Migration Tool* uses both the *Data Migration Templates Widget* and *Data Migration Options Widget* to insert new records into People XD. The *Data Migration Process* is typically used when an organisation is initially implementing People XD.

This document covers the following areas:

- [How to locate the Data Migration Tool?](#)
- The *Data Migration Templates Widget*, including:
 - [The Data Migration Template Helper Files.](#)
 - [The Data Migration Templates.](#)
- The *Data Migration Options Widget*, including:
 - [Uploading Data Migration Files.](#)
 - [Edit an Uploaded Data Migration File.](#)
 - [Process the Uploaded Records.](#)
 - [Data Migration File Status.](#)
 - [Action Data Migration Files.](#)
- [The Data Migration File Upload Order and Prerequisite Configuration.](#)

- [List of all available Data Migration Template Files.](#)

1.3. Data Migrating Reference Data

Examples of *Reference Data* which can be migrated into People XD:

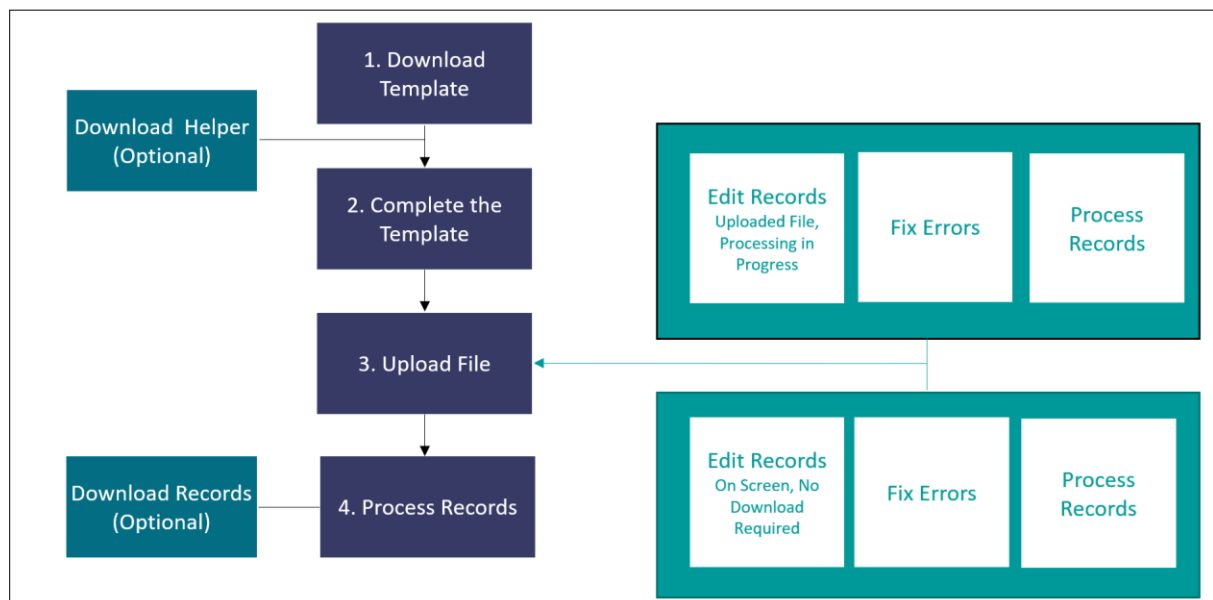

- Employees and their associated personal details.
- Contracts and their associated elements, including salary details.
- Occupational absences and payroll cumulative history.
- Selected reference data elements.

1.4. How Does the Data Migration Tool Work?

The *Data Migration Tool* provides a set of *Data Migration Templates*, which can be downloaded from XD and populated with system records. These files can then be uploaded into People XD. These records are then validated and processed so that the corresponding records are created on the system.

1.5. Overview of the Data Migration Process

The *Data Migration Process* on XD is completed in four main steps:

Step	Description
Download Template	Download the <i>Data Migration Template Files</i> from XD.
Complete the Template	- Open the <i>Data Migration Template File</i> in Excel. - Update the <i>Data Migration Template</i> file with the required records. - Save the <i>Data Migration Template File</i> as a CSV file.
Upload File to XD	Upload the completed <i>Data Migration Template File</i> to XD.
Process Records	- Update/edit records before <i>Processing</i>. - Process each record in the <i>Data Migration File</i>. - Resolve issues for any records that fail to load. - Archive the <i>Data Migration File</i>.

Important Considerations:

- Certain configuration must already be completed on XD before attempting to load a *Data Migration Template File*.
- The *Data Migration Process* requires the records to be supplied in a specific order and format. See section [Data Migration File Upload Order](#).
- Data Migration Template* files are provided to ensure that the records are supplied in an acceptable format for processing, see sections:
 - [List of all available Data Migration Template Files](#).

2. The Data Migration Tool

2.1. Overview

The *Data Migration Tool* consists of three *Data Migration Widgets*:

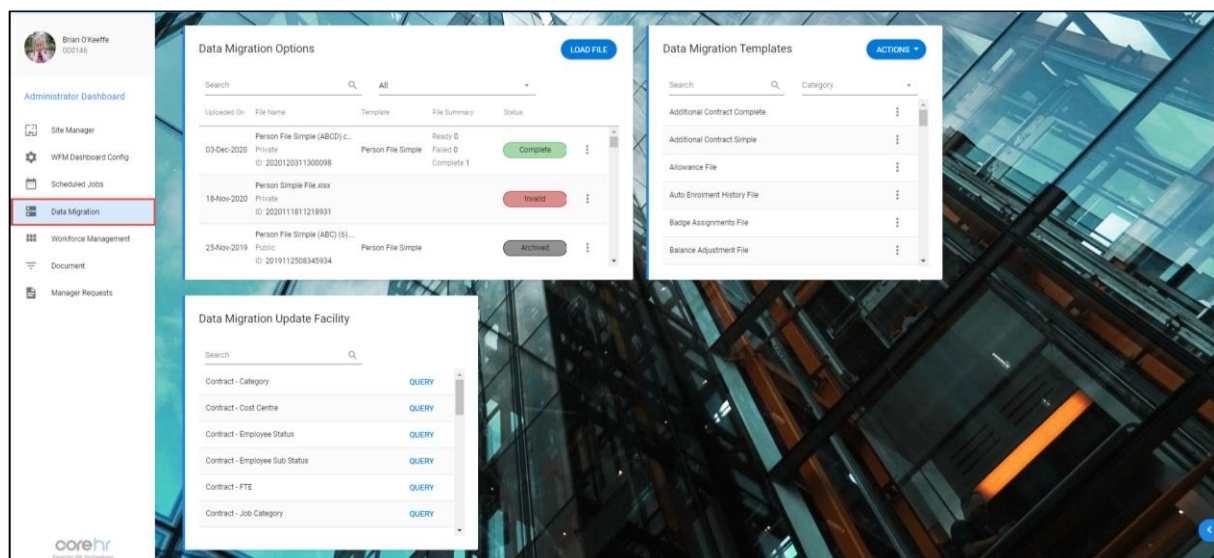

- [The Data Migration Templates Widget](#), including *Helper Files*.
- [The Data Migration Options Widget](#).
- The *Data Migration Update Widget*. For further details, see the [Data Migration Update Facility](#) user guide.

2.2. How to Locate the Data Migration Tool?

The three *Data Migration Widgets* are all available on the *Data Migration Tab* on the *Administrator Dashboard*.

To access the *Data Migration Tool*:

1. Open the *Administrator Dashboard*, then select the **Data Migration** tab.
2. The data migration widgets will display.

The **Data Migration** tab displays the following widgets:

Widget Name	Description
Data Migration Templates	Use this widget to download <i>Data Migration Templates</i> and <i>Helper Files</i> .

Widget Name	Description
Data Migration Options	Use this widget to upload and process <i>Data Migration Template Files</i> .
Data Migration Update Facility	Use this widget to bulk update selected employee, contract and reference data elements. For further details, see the Data Migration Update Facility user guide.

2.3. Improved Security Options

By default, the visibility of new *Data Migration Files* uploaded to the *Data Migration Tool* is restricted to the user who uploaded the *Data Migration File*. This restriction protects the confidentiality of the data. Data cannot be viewed or processed by other Data Migration users.

Notes:

- If required, the user can make their *Data Migration File* public. This means that the *Data Migration File*, including its contents, can be viewed by all Data Migration users.
- Existing *Data Migration Files*, uploaded before these V28 enhancements (January 2021), continue to be public. The owner of the *Data Migration File*, or a super user, can make the *Data Migration File* private.

2.3.1. User Level Security

Menu option security controls users' ability to complete the following tasks.

- View private files.
- Downloading files.
- Download errors.
- Unarchive files.

For further details, see the [Configuring the Data Migration Tool](#) user guide.

2.3.2. Template Level Security

Template level menu option security controls users' ability to:

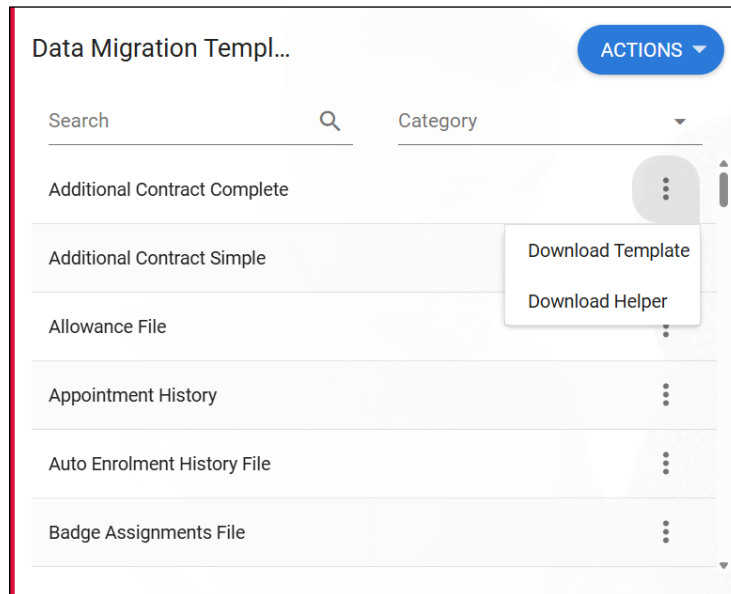

- Ability to *Process* a specific Data Migration File Template, i.e. get the data into XD.
- Ability to *Cleanup* a specific Data Migration File Template, i.e. delete the data out of XD.

Data Migration: Data Migration Tool - User Guide

For example, a user can be given permission to process/cleardown *WFM Data Migration Files* without getting access to process/cleardown *People Management Data Migration Files*. For further details, see the [Configuring the Data Migration Tool](#) user guide.

3. The Data Migration Templates Widget

The Data Migration Templates widget allows you to download the Data Migration Template and Helpers Files. You can download individual templates from the 3-dot menu or download All files, in bulk, using the Actions button.

The widget can be filtered using the following options:

Option	Details
Search	Use the search feature to find a specific template by name.
Category	Use the filter button to refine your search. You can filter Template Files by Category to filter the results by module. • Payroll • Reference • WFM Roster • People Management • Training • WFM Time

3.1. The Data Migration Template Helper Files

The Data Migration Templates widget is where you can download the *Data Migration Helpers Files*. These Excel files provide additional information about completing the corresponding *Data Migration Template* file. The *Helpers Files* identify what fields are mandatory, the expected data type, and examples of the data input expected per column.

Data Migration: Data Migration Tool - User Guide

Notes: Helper files are for reference only.

Each *Helper File* includes two tabs:

- **Template Help:** this provides guidance on populating each column in the template, including data type, field size, and useful hints.
- **Defaulted Fields:** this provides the logic used for the data elements.

Group Name	Field Name	Data Category	Data Sub Category	Jurisdiction Specific	Field Help Information
HR Details	Personnel No	Transactional			- XD has one unique number per employee, regardless of how many times they join, leave and re-join (join an employee under the same number) - This employee number must be unique across the entire Organisation or group and be one-to-one systems. Where separate legacy systems exist and employee numbers are duplicated, these will be merged into XD.
	Hr Only	Transactional			- Required to determine if the employee is to be set up in HR only. If so, then the employee should be put into a planned pay group/dummy pay group that is not used in payroll. If Y then Payroll Defaults to 'Y' if not supplied
	Forename	Transactional			- Populate with employee's forename
	Surname	Transactional			- Populate with employee's surname
	Title	Reference	Description		- Populate with employee's title - The title must exist before the file is loaded i.e. it will not be created as part of the DM. - Reference data for this field is available to update under People Management-> Reference-> Title
	Middle name	Transactional			- Populate with employee's middle name
	Known as	Transactional			- Populate with employee's known as name
	Date Of Birth	Transactional			- Populate with employee's date of birth - Required to support the minimum wage calculation

You can download Helper files in two ways Individually or in Bulk.

3.1.1. Download an Individual Helper File

To download a *Data Migration Helper File*, follow the below steps:

1. Search for the relevant template required.
2. Expand the 3-dot menu and select **Download Helper**.
3. The Helper File downloads as a zipped file, open this and extract the excel file.

3.1.2. Download All Helper Files

To bulk download all *Data Migration Helper Files*, follow the below steps.

1. Click **Actions** and select **Download All Helpers**.
2. The helper files download in a zip file. Open and extract the files to save them to your preferred location.

Note: All Module helper files are downloaded, regardless of filters applied.

3.1.3. Defaulted Fields and Reference Data Generation

Reference Data Generation

In most of the *Data Migration Template Files*, the records to be uploaded require reference data items to be provided, e.g. if uploading the *Cost Allocation File*, the *Cost Centre Code* and *Cost Centre Description* are required.

If the reference data has already been configured on XD, then only the code is required. It is not necessary to provide the description. However, it is possible to define reference data elements in the *Data Migration File* that have not yet been configured on XD. If this occurs, the *Data Migration Process* automatically creates the reference data item on XD.

Note: Where a template allows for reference data items to be automatically created, this will be clearly explained in the corresponding *Helper File*.

The reference data is generated depending on the data supplied in the *Data Migration File* and the reference data already created. This is detailed in the corresponding *Helper File*. See an extract below from the *Helper File* for the *Cost Allocation File*:

Field	Description
Cost Centre Code	Populate with the cost centre code if applicable • The reference data for this needs to exist if only the cost centre code is populated, i.e. it will not create reference data. • The reference data will be created if both the cost centre code and description is provided.
Cost Centre Description	Populate with the cost centre description if applicable • The reference data is created if only the cost centre description is provided. • The reference data is created if both the cost centre code and description is provided.

Defaulted Fields

When populating *Data Migration Template Files*, specific fields have been excluded from the *Data Migration Template File* and are automatically set to a default value on upload. Where this occurs, this will be clearly explained in the corresponding *Helper File* on the '*Defaulted Fields*' tab.

This is logically applied as to what default value is set, e.g.

- This may be a common value for all records.
- or
- This may be set to a specific value based on other details supplied for the record.

 **Note:** Where data is defaulted for employee / contract / reference records created, this is clearly explained in the corresponding Helper File.

3.2. The Data Migration Templates

You can download *Data Migration Template Files* from the *Data Migration Templates Widget*. Once downloaded, populate the *Data Migration Template Files* with records to upload to People XD. Complete each *Data Migration Template* in MS Excel, save as a CSV file, and then uploaded to XD.

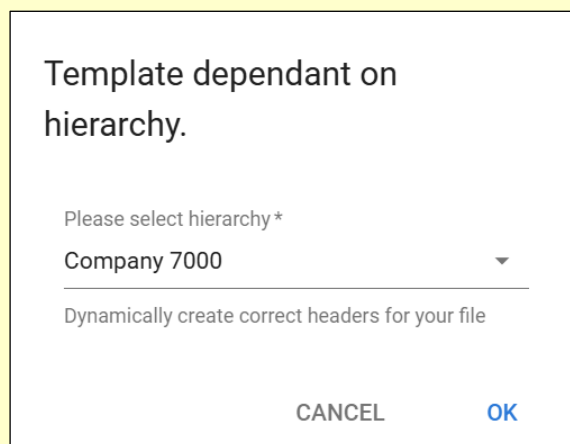

You can download Data Template files in three ways Individually, in Bulk or by Category.

3.2.1. Download an Individual Template File

To download a template file:

1. Search for the template you wish to update.
2. Expand the 3-dot menu and select **Download Template**.
3. The Data Migration Template File downloads per your browser settings.

 **Note:** When downloading a contracts type template (e.g. Person File Complete, Person File Simple), you will need to select the hierarchy against that the contracts will be uploaded to and click **OK**.

Template dependant on hierarchy.

Please select hierarchy *

Company 7000 ▼

Dynamically create correct headers for your file

CANCEL OK

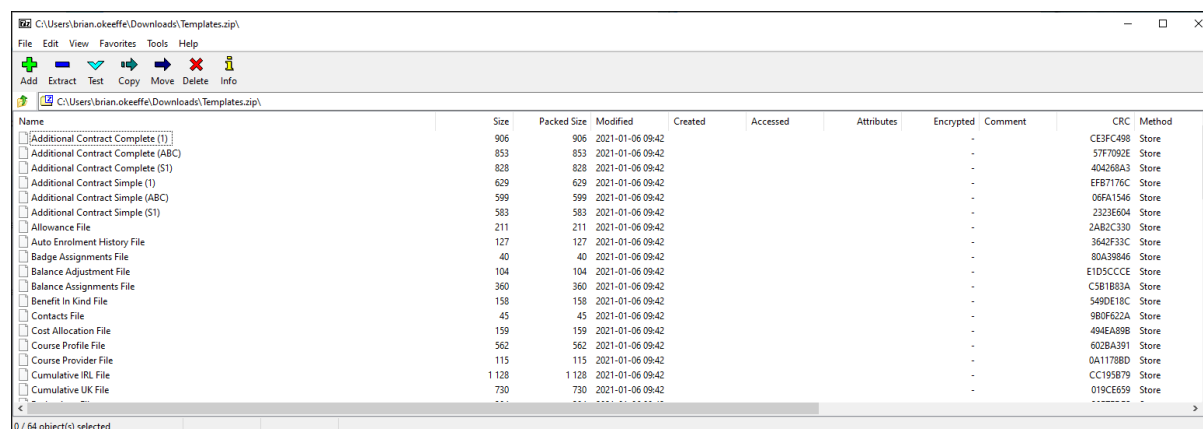

3.2.2. Download All Template Files

 **Note:** To download all module template files ensure filters are not applied.

To bulk download all *Data Migration Template Files*, follow the below steps.

1. Click **Actions** and select **Download Templates**.
2. The template files download in a zip file. Open and extract the files to save them to your preferred location.

Data Migration: Data Migration Tool - User Guide

3.2.3. Download Template Files by Category

To download *Data Migration* Template Files by module:

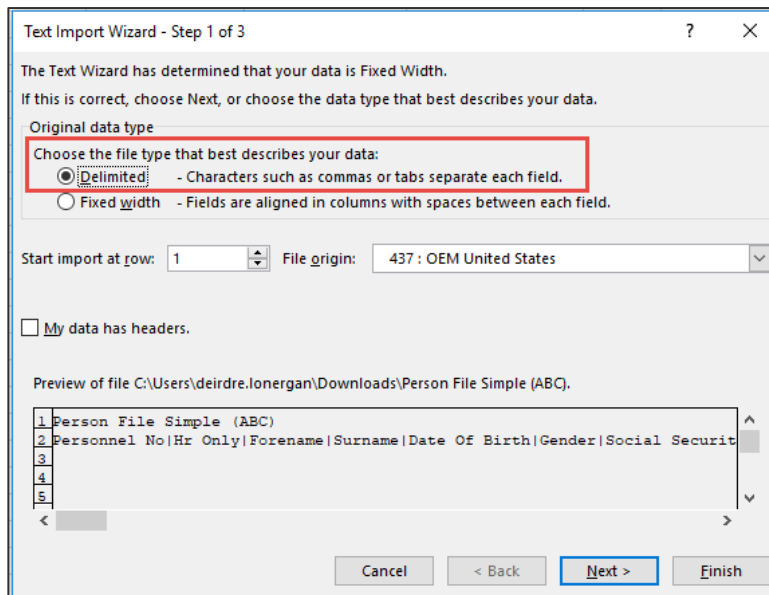

1. Select a module from the drop-down Category menu, e.g. Payroll.
2. Click **Actions**.
3. Select **Download Templates**.
4. The template files download in a zip file. Open and extract the files to save them to your preferred location.

3.2.4. Open Data Migration Template in MS Excel

To open your data migration templates in MS Excel:

1. Open MS Excel and **Browse** to open the downloaded Data Migration Template File.
 - Excel defaults to search for ".xls" type files. Ensure that the file type is updated to "All Files" so that the downloaded template appears.
2. Use the Text Import Wizard to import the file in the required format.
3. Select **Delimited** as the file type.

Data Migration: Data Migration Tool - User Guide

Text Import Wizard - Step 1 of 3

The Text Wizard has determined that your data is Fixed Width.
If this is correct, choose Next, or choose the data type that best describes your data.

Original data type

Choose the file type that best describes your data:

- ☒ Delimited - Characters such as commas or tabs separate each field.
- ☐ Fixed width - Fields are aligned in columns with spaces between each field.

Start import at row: 1 File origin: 437 : OEM United States

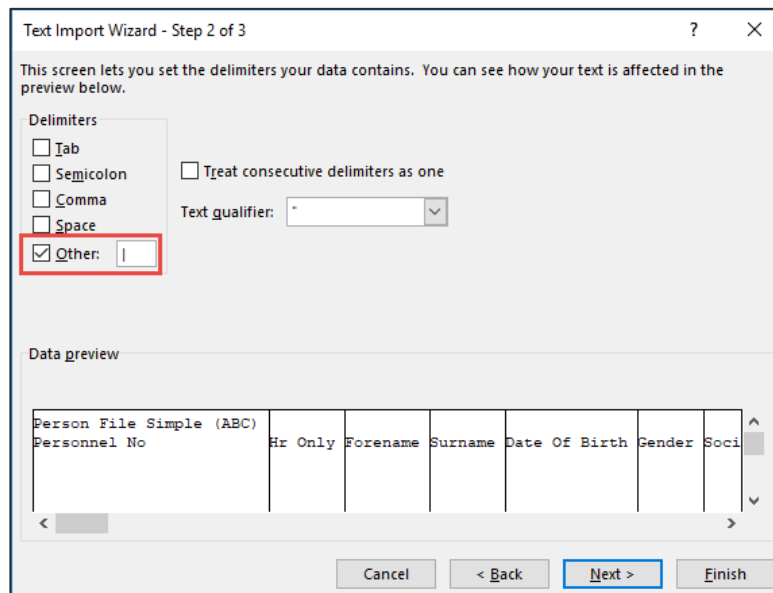

☐ My data has headers.

Preview of file C:\Users\deirdre.lonergan\Downloads\Person File Simple (ABC).

1	Person File Simple (ABC)
2	Personnel No Hr Only Forename Surname Date Of Birth Gender Social Security
3	
4	
5	

Cancel < Back Next > Finish

4. Then click Next and select **Other** and enter "|" (pipe character).

Text Import Wizard - Step 2 of 3

This screen lets you set the delimiters your data contains. You can see how your text is affected in the preview below.

Delimiters

- ☐ Tab
- ☐ Semicolon
- ☐ Comma
- ☐ Space
- ☒ Other: |

☐ Treat consecutive delimiters as one

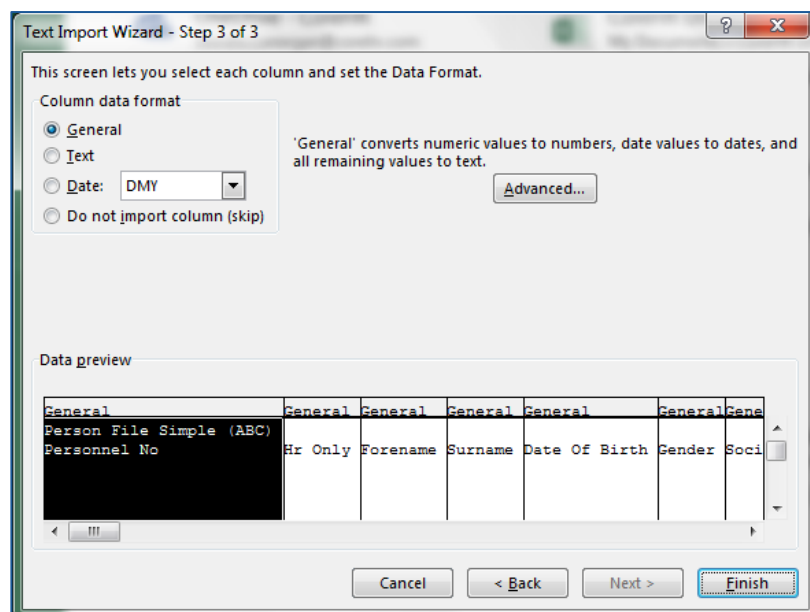

Text qualifier: "

Data preview

Person File Simple (ABC)						
Personnel No	Hr Only	Forename	Surname	Date Of Birth	Gender	Soci

Cancel < Back Next > Finish

5. Click Next and apply default settings, if required, then click **Finish**.
6. The template should open with two rows:
- Row 1 Template Name.
 - Row 2 Individual columns for each data element.

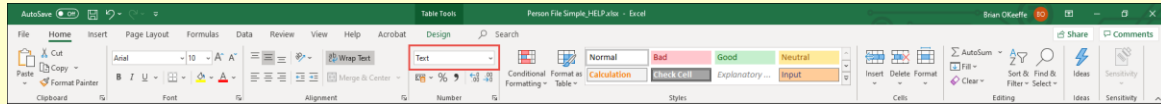

Note: Do not update the first two rows of the template. These rows are critical to the upload process. Any changes to these 2 rows will result in an error when attempting to upload the file to XD.

- **Row 1:** The template type, e.g. "Person File Simple (*hierarchy name*)".
- **Row 2:** These are the column headers. During upload, the system maps these to the required element. The system uses the column headers to understand what template file is being uploaded.

3.2.5. Complete the Data Migration Template

Add the required records to the *Data Migration Template File*. Each row of the *Data Migration Template File* represents an individual record, e.g. an employee, a contract etc. Refer to [The Data Migration Template Helper File](#) for guidance on how to complete each record.

Note: It is recommended to select all columns and update the type from "General" to "Text." This ensures that any data fields that require a leading zero are not automatically updated by MS Excel. For example, if this update isn't applied and a Personnel Number of "000321" is entered, Excel automatically removes the leading zeros and update the data to "321"

3.2.6. Save Completed Template as .CSV file format.

To save a completed *Data Migration Template File* in Excel to be uploaded to XD:

1. Ensure your computer is configured to use the Pipe "|" as a List Delimiter before saving as CSV. See the section [Configure PC Settings to use Pipe List Separator](#).
2. In Excel, go to **File**, then select **Save As**.
3. Enter a name for the file and select the **CSV (Comma delimited) (*.csv)** format.
4. Click **Save**.

Note:

- Only a .CSV file format is recognised when uploading.
- It is important to save the file using the *File > Save As* option and selecting .CSV file type each time the file is amended. This ensures the file saves in the correct format.
- The name of the file is not important. The file can be saved using any name required. The system identifies the file using the template name in row 1.

Using Pipe "|" Delimiter for CSV Files

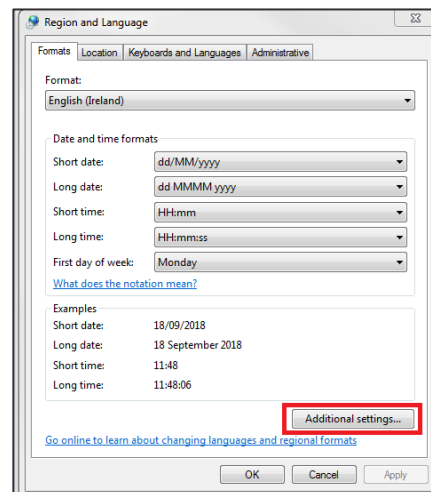

The Data Migration Tool uses Pipe Delimited CSV files only. Files uploaded to the Data Migration Tool must be Pipe Delimited. It is essential to configure your PC to create CSV files using the "|" separator and not a comma. If not done, the Data Migration Tool does not recognise the Data Migration Template File, and it will fail to upload.

Data Migration: Data Migration Tool - User Guide

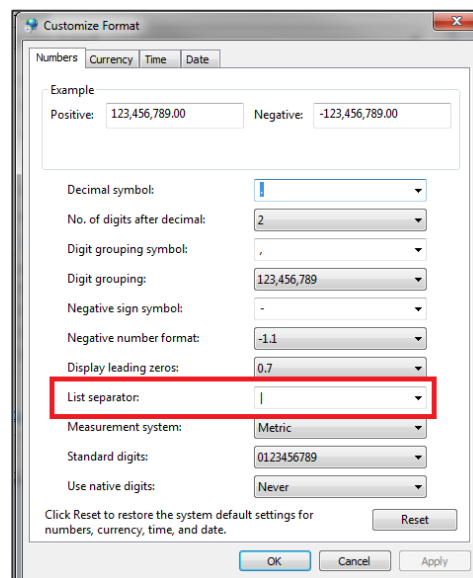

Configure PC Settings to use Pipe List Separator

This only needs to be completed once to configure your computer's settings to ensure that the "|" character is used as a list separator when you create a CSV file. To do this:

1. Open the Control Panel.
2. Search for and select *Region and Language*.
3. Click the **Additional Settings** button.

4. Update the *List Separator* field to "|", i.e. pipe. If the "|" is already there, no action is required.

5. Click **Apply**, then **OK** and exit the Control Panel.

4. Data Migration File Upload Process

4.1. Prerequisite Configuration

The following configuration must first be completed on XD before uploading *Data Migration Files*:

Prerequisite Configuration	Why?
Org Structure Levels Defined	The Org Structure is linked to the employees' contracts. - This must be configured before any employee records can be loaded using the <i>Person File Simple</i> or <i>Person File Complete</i> file templates. - When downloading a template, the Org Structure must be provided so that the template directly reflects the Org Structure elements and linked hierarchy that has been defined. - The hierarchy does not have to be defined on XD. Branches of the hierarchy will be created when processing the person or additional contract files if they don't already exist.
Post Profiles Created	Every employee contract is linked to a <i>Post Profile</i>. - The corresponding <i>Post Number</i> is a required item on the <i>Person File Simple</i> or <i>Person File Complete</i> file templates. - These must exist on the system to correctly generate the Contract IDs (Appointment IDs).
Company Created	Company is a required element for the employee's HR contract record and payroll setup. - Default companies are preconfigured for the UK and Ireland. - These should be reviewed to ensure they suit the organisation's requirements. - These codes should be referenced on the required files. Company reference data will not be created automatically during the upload process.
Pay Groups Created	Pay Group is a mandatory element on the <i>Person File Simple</i> or <i>Person File Complete</i> templates.

Prerequisite Configuration	Why?
	- Baseline <i>Pay Groups</i> are preconfigured on XD. These should be reviewed to ensure they suit the organisation's requirements. - These codes should be referenced on the required files. <i>Pay Group</i> reference data will not be created automatically during the upload process.
Pay Codes Created	These must exist on the system to create employee salaries, allowances, balances etc. - Baseline <i>Pay Codes</i> are preconfigured on XD. These should be reviewed to ensure that they suit the organisation's requirements. - These pay codes should be referenced on the required files. <i>Pay Code</i> reference data will not be created automatically during the upload process.
Reports to Manager Rule Configured	This rule is preconfigured on XD. This should be reviewed to ensure it suits the organisation's requirements.
UDFs	If loading UDF records for an employee / contract, the corresponding <i>User Defined Object</i> needs to be set up on XD first. These will not be created automatically during the upload process.

4.2. Data Migration File Upload Order

Once all prerequisite configuration has been completed, it is possible to start uploading the *Data Migration Files*. Files should be uploaded in a specified order. Many *Data Migration Files* depend on records to have been created during an earlier load, e.g. the employee records need to be uploaded so that other files can be loaded for these employees.

Order	Template Name	Why?
1	Position Rate Details	Should be loaded first if the customer is using pay scales. Ensures reference data is available to assign to an employee record.
	Pay Scale Point	Should be loaded first if the customer is using pay scales. Ensures reference data is available to assign to an employee record.
	Shift Types	Should be loaded before <i>Work Group</i> file, <i>Shift Types</i> can be specified on <i>Work Group</i> records.
	Work Groups	Ensures reference data is available to assign to an employee record.
2	Person File Simple / Person File Complete	It creates the employee records and substantive contracts and sets them up on Payroll (if a payroll employee).
	Additional Contract Simple / Additional Contract Complete	It creates any additional non-substantive contracts for an employee. Upload additional contracts for employees. Includes Post Validation, the file now validates the information in the file against the locked/linked levels specified on the post profile definition.  Note: • This complete version includes columns for both code and description for all reference data elements. • This should not be used to load an employee's substantive contract (catered for in the Person Simple file or Person Complete File). • Many fields are defaulted on upload. See helper file for full list.
	Cumulative IRL AND Cumulative UK file	Employee cumulative / year to date figures for payroll calculations

Order	Template Name	Why?
3	NI Letter History	Only applicable to the UK.
4	Pay History	Optional.
5	Allowances	These are pay affecting files.
	Deductions	These are pay affecting files.
	Pensions	These are pay affecting files.
	RTI	These are pay affecting files.
	Occupational Load	These are pay affecting files.
	Auto Enrolment History	These are pay affecting files.
	Benefit in Kind	These are pay affecting files.
	Cost Allocation	These are pay affecting files.
	Statutory Pay Profile	These are pay affecting files.
6	User Defined Fields	n/a
	Balance Assignments	n/a

	Next of Kin	n/a
	Qualifications	n/a

4.3. Post Validation for People Management

The *Person* and *Additional Contract Data Migration Files* now validate the information against the locked/linked levels specified on the *Post Profile Definition*. This helps maintain the integrity of the data loaded into XD.

Example 1: If a *Post Profile* is locked to a *Department*, and a different *Department* is specified on the *Person File*, then the record fails validation.

Active	Effective Date	Post Number	Post Title
Active	01-Apr-2017	502248	Operations
Organisational Structure	Structure *	ABC Solutions	
Post Details	Company *	ABC Solutions	
Cost Allocations	Division	Shared Services	
Pension Schemes	Management Unit	Human Resources	
FTE Maintenance	Department	HR3 - Training	
View Appointments	Cost Centre	Cost Centre	
Terms And Conditions	Location	Location	
Certificate Of Sponsorship	Work Group	Work Group	

The *Person File* can overwrite other levels against the *Post Profile*, so validation will not apply.

Example 2: The *Company* and *Management Unit* are locked/linked levels on the *Post Profile Definition*, and the *Person File* specifies the *Company*, the *Management Unit* and the *Location*.

- The *Person File* fails if the *Company* or *Management Unit* do not match the *Company* or *Management Unit* on the *Post Profile Definition*.
- However, if the *Company* or *Management Unit* on the *Person File* does match, and the *Location* does not match the *Location* on the *Post Profile Definition* – No error generates, the *Person File* creates the employee with the *Location* specified.

5. The Data Migration Options Widget

The *Data Migration Options Widget* displays all *Data Migration Templates* files. The widget displays files previously uploaded, files in the process of being uploaded, and files you attempted to upload but have the incorrect file format.

Data Migration Options

LOAD FILE

Search

Open

Uploaded On	File Name	Template	File Summary	Status
19-Dec-2025	TemplatePersonFileSimple.csv Private ID: 2025121977614937	Person File Simple	Ready 0 Failed 0 Complete 1	Complete
15-Dec-2025	Person File Complete (7212).c... Private ID: 2025121577256680	Person File Compl...	Ready 0 Failed 0 Complete 8	Complete
15-Dec-2025	Person File Complete (7212) (... Private ID: 2025121577257163			Invalid

The widget can be filtered using the following options:

Option	Details
Search	Use the search feature to find a specific template by <i>Data Migration File</i> name.
Filter	Use the filter button to refine your search. You can filter by the following to refine the results by status. - Open - Archived - Complete - Failed - Invalid - Ready - All - Cleared Down - Error - In Progress - Processing - Uploading

The **Data Migration Options** widget contains the following fields:

Column	Description
Uploaded On	This column displays the 'Uploaded On' date. Files are listed with the most recently uploaded <i>Data Migration File</i> at the top of the list.
File Name	This column displays the <i>File Name</i> , includes <i>Private/Public Status</i> and <i>File ID</i> described later.
Template	Displays the name of the template used.
File Summary	This column displays the <i>File Summary</i>. This allows you to see how many records in the <i>Data Migration File</i> are 'Ready', 'Complete' or 'Failed'.  Note: The <i>File Summary</i> is only displayed for files processed after the <i>Data Migration Enhancements</i> (introduced in January 2021) have been released.
Status	This column displays the file Status described later.

5.1.1. Review of Data Migration History

The *Data Migration Options Widget* provides a full list of all *Data Migration Files* uploaded to XD, including the [Data Migration File Status](#). For files that are "Complete" or "Cleared Down" it is not possible to view the actual records. Details displayed are:

- Uploaded On (date).
- File Name.
- Template.
- File Summary.
- Status.

5.1.2. Data Migration File Status

The *Data Migration Options Widget* displays the current *Status* of each of the *Data Migration Files*. Available statuses are listed in the below table:

Status	Description
Open	The uploaded files are pre-filtered by default to display 'Open' files. Open files are files with a status of 'Ready', 'In-Progress', 'Failed', 'Complete', 'Processing', 'Uploading', 'Invalid' or 'Error'.

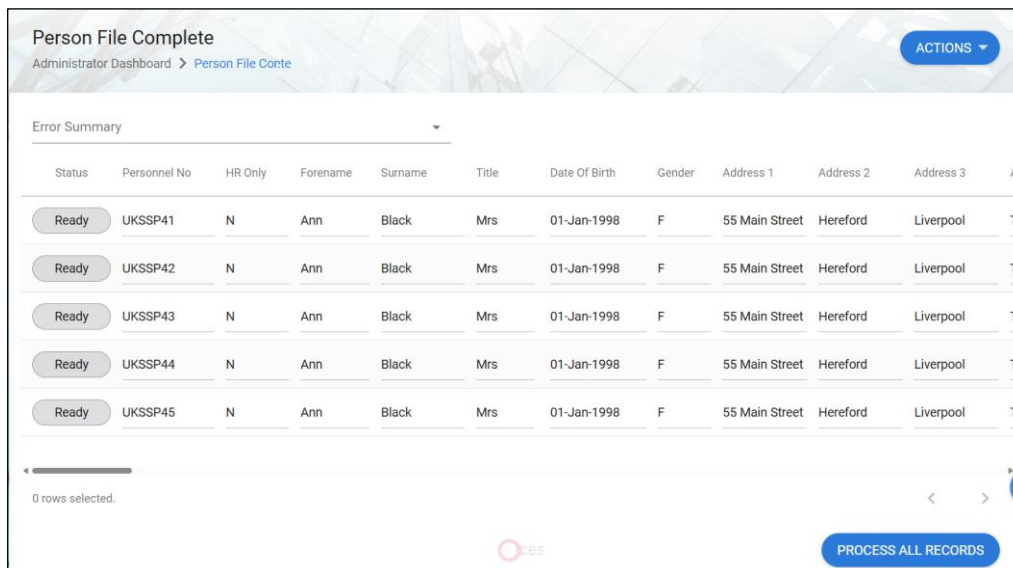

Status	Description
All	This option displays all uploaded files, including files which have been <i>Cleared Down</i> or <i>Archived</i> .
Archived	The <i>Data Migration File</i> has been archived by a system user. The file may be unarchived by a super user with the correct security permissions.
Cleared Down	The <i>Data Migration File</i> has been cleared down from People XD. The contents of this file can no longer be accessed, but a record of <i>Data Migration File</i> upload retained on the <i>Data Migrations Option Widget</i> .
Complete	Every record in the uploaded <i>Data Migration File</i> is processed. Applicable record status = Complete.
Error	An unexpected <i>Error</i> occurred when the <i>Data Migration File</i> was processed; contact a People XD consultant or customer support for assistance. Applicable record status = Ready.
Failed	The <i>Data Migration File</i> has been partially processed, but at least one record has failed. Applicable record status = Ready, Complete, Failed.
Ready	The <i>Data Migration File</i> is ready to process. The <i>Status</i> of every single record in the <i>Data Migration File</i> is set to 'Ready'.
In Progress	The <i>Data Migration File</i> has been uploaded to XD and is currently being processed. Not all records have been data migrated, i.e. some or all records are still "Ready." Applicable record status = Ready, Complete. The <i>Data Migration File</i> will remain in this <i>Status</i> until all records have been processed, i.e. - Complete: All records are "Complete." - Failed: One or more records have "Failed."
Invalid	The uploaded <i>Data Migration File</i> has an unrecognised template, or an invalid line or character is in the <i>Data Migration File</i> .
Processing (New)	The uploaded <i>Data Migration File</i> contains records which are still being processed. For example, the user opted to 'Process All Records', which takes time to run. Once finished, the <i>Status</i> updates to 'Complete' or 'Failed.' Applicable record status = Ready, Complete, Failed.
Ready	The uploaded <i>Data Migration File</i> is ready to be processed, but <i>Processing</i> is not started.

Status	Description
Uploading	The Data Migration file is still uploading and is not yet ready to be processed. Once this step is finished the <i>Status</i> of the <i>Data Migration File</i> will change to 'Ready'.
Complete	Every record has been processed, and the Data Migration process is 'Complete.'

5.2. Upload Data Migration Files

Complete the following steps to upload a completed *Data Migration Template File* to XD:

1. On the *Data Migration Options* widget, click **Load File**.
2. In the *Upload* screen either:
 - Drag and drop the completed *Data Migration Template File*.
 - Browse for the completed *Data Migration Template File*.
3. Click **OK**.
4. Once uploaded, the *Processing* screen appears with the contents of the uploaded File. All records will have an initial status of "Ready."

Person File Complete											
Administrator Dashboard > Person File Conte											
Error Summary											
Status	Personnel No	HR Only	Forename	Surname	Title	Date Of Birth	Gender	Address 1	Address 2	Address 3	P
Ready	UKSSP41	N	Ann	Black	Mrs	01-Jan-1998	F	55 Main Street	Hereford	Liverpool	T
Ready	UKSSP42	N	Ann	Black	Mrs	01-Jan-1998	F	55 Main Street	Hereford	Liverpool	T
Ready	UKSSP43	N	Ann	Black	Mrs	01-Jan-1998	F	55 Main Street	Hereford	Liverpool	T
Ready	UKSSP44	N	Ann	Black	Mrs	01-Jan-1998	F	55 Main Street	Hereford	Liverpool	T
Ready	UKSSP45	N	Ann	Black	Mrs	01-Jan-1998	F	55 Main Street	Hereford	Liverpool	T
0 rows selected.											
PROCESS ALL RECORDS											

At this stage, you can begin to process the records. See section [Process the Uploaded Records](#) or exit the screen and returning to the *Administrator Dashboard*.

Note: For files with fewer than 300 records, the **File Detail/Edit** screen displays as soon as the file finishes loading. If you close the **File Detail/Edit** screen without processing records, the file status displays as 'Ready' in the **Data Migration Options Widget**.

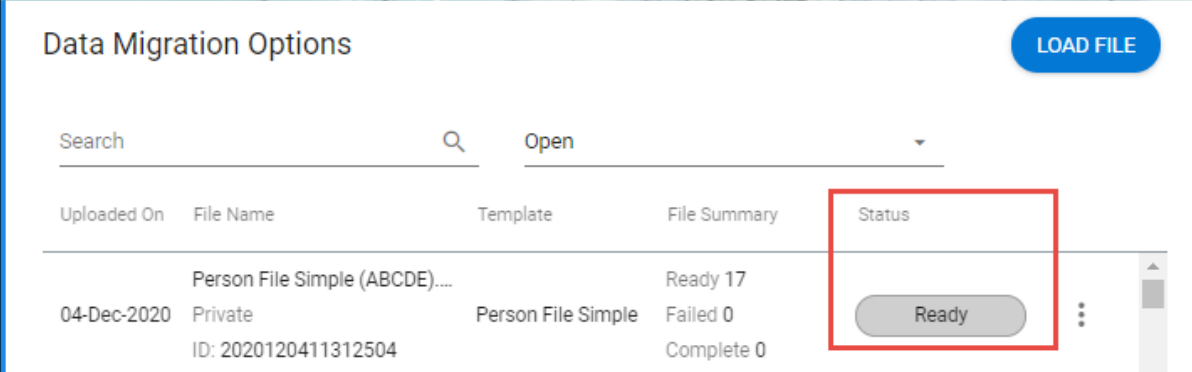

For files with more than 300 records, PeopleXD redirects you to the **Data Migration Options Widget** to prevent timeout during upload.

The file progresses through these stages:

- The file displays with an 'Uploading' status in the **Data Migration Options Widget**. You can't interact with files during this stage.
- Once PeopleXD finishes uploading/parsing the file, the status changes to 'Ready'.
- When the status changes to 'Ready', click **Edit** in the file menu to open the **File Detail/Edit** screen.

If the file returns an invalid error message, check for formatting issues or incorrect templates. See section [Uploading Data Migration Files Error Messages](#).

The *Data Migration File* is now available on the *Data Migration Options* widget, with a status of "Ready."

Data Migration Options					LOAD FILE
Search		Q	Open		
Uploaded On	File Name	Template	File Summary	Status	
04-Dec-2020	Person File Simple (ABCDE).... Private ID: 2020120411312504	Person File Simple	Ready 17 Failed 0 Complete 0	Ready	

Note: Existing records which were uploaded using the old template, before the *Data Migration File Enhancements (introduced in January 2021)*, can continue to be processed. The *File Detail* screen displays the additional fields as empty. [Download](#) the file to view records in the new template.

5.2.1. Invalid Template Error Messages

If a Data Migration File is uploaded in an incorrect format, or an incorrect *Data Migration Template File* is used, an error message displays on the screen. Templates are regularly improved it is important to use the latest version available, see [The Data Migration Template Widget](#).

The Data Migration File displays with a status of **Invalid**. You can view the Invalid file error message by:

1. Expanding the 3-dot menu and selecting **View Error**.

The screenshot shows the 'Data Migration Options' interface. At the top right is a 'LOAD FILE' button. Below it is a search bar and a filter dropdown set to 'Invalid'. The main area is a table with columns: 'Uploaded On', 'File Name', 'Template', 'File Summary', and 'Status'. There are three rows of data, all with a status of 'Invalid'. A context menu is open for the second row, showing options: 'Delete', 'View Error' (highlighted), 'Set Public', and 'View Details'.

Uploaded On	File Name	Template	File Summary	Status
15-Dec-2025	Person File Complete (7212) (...) Private ID: 2025121577257163			Invalid
15-Dec-2025	Person File Complete (7212) (...) Private ID: 2025121577256677			Invalid
27-Nov-2025	PersonPayrollFile_FC.txt Private ID: 2025112775604720			Invalid

2. The error message will display.

The error message dialog box is titled 'Error'. The text inside reads: 'Invalid File Template. Please download the latest template from the Data Migration Template widget.' There is an 'OK' button at the bottom right.

Example of insufficient privileges Errors:

- The user does not have the 'create' menu security (e.g. 'create cumulative UK') for the data.
 - The user will be able to upload the *Data Migration File* (assuming format is ok). Processing screen will be displayed.

Data Migration: Data Migration Tool - User Guide

- The user will not be able to 'process record'. 'Access Denied' message will be displayed on the screen.
- The user does not have the 'delete' menu security (e.g. 'delete cumulative UK') for the data.
 - The user will not be able to 'cleardown' the *Data Migration File*. 'Access Denied' message will be displayed on the screen.

Note: For a full list of invalid file format error messages, see section [Uploading Data Migration Files Error Messages](#).

5.2.2. Automatic Removal of Leading and Trailing Spaces

Leading and trailing spaces are automatically removed when you upload a *Data Migration Template File*. This stops the creation of duplicate reference data. Examples include:

.csv file viewed in Excel:

Post Profile File (9990)											
Post Number	Post Setting	Post Type Code	Post Type Description	Post Title Code	Post Title Description	Job Description	Company Code	Company Description	Management Unit Code	Management Unit Description	
999001	AC				Engineer E		6503			Engineering E	
999002	AC				Engineer E		6503			Engineering E	
999003	AC				Support Analyst SA		6503			Customer Support	

.csv file viewed withing XD

Post Profile File											
People Management > Post Profile File											
Error Summary											
Status	Post Number	Post Setting	Post Type Code	Post Type Description	Post Title Code	Post Title Description	Job Description	Company Code	Company Description	Management Unit Code	Management Unit Description
Ready	999001	AC				Engineer E		6503			Engineering E
Ready	999002	AC				Engineer E		6503			Engineering E
Ready	999003	AC				Support Analyst SA		6503			Customer Support

5.3. Edit an Uploaded Data Migration File

To open the *Data Migration File* and access the records for *Processing*:

1. For the Data Migration Template you want to edit.
2. Expand the 3-dot menu and select **Edit**.
3. The *File Processing* screen opens.
7. To edit any element of a record click the field, apply the change and then click/tab out of the field.

Data Migration: Data Migration Tool - User Guide

Status	Personnel No	Hi Only	Forename	Surname	Title	Middle Name	Known As	Date Of Birth	Gender	Social Security Number	Address 1	Address 2	Address 3	Address 4	Post Code Prefix	Poi
Ready	000365		Jake	Pratt	Mr				F	YK904356D	101 The Green	York	UK		YO17	SM
Ready	000366		Michael	White	Mr				F	YK904356B	100 The Green	York	UK		YO17	SM

Note:

- All records that have been uploaded to XD can be edited on screen, before they are processed.
- File edits made within the *Data Migration Tool* are automatically saved, i.e. you can close *File Processing* screen and return to continue editing the file at a later time.

5.3.1. Rectify All

It is possible to edit multiple records at the same time. For example, change the Work Group field for all records. To do this:

1. When in the *File Processing* screen, change a field for one record.
2. A prompt will display.
3. Confirm if the change should be applied to all records or just this one.

Rectify All

Change 1 other Reports To Manager fields from
'146'
to
'000146'?

NO YES

4. Click **Yes** to update all records or **No** to update just the single record.

Note: The '*Rectify All*' prompt does not appear when updating every field on a file. This only appears for fields where the system identifies that it may be useful to bulk update the data to a matching value.

Data Migration: Data Migration Tool - User Guide

To prevent the 'Rectify All' prompt from appearing:

1. From the *File Processing* screen, select **Actions**.
2. Click **Settings**.
3. Update the *Check duplicate fields on edit* toggle.
 - **Off**: The prompt will not appear.
 - **On**: The prompt will appear (as per screenshot).
4. Click **OK** to save.

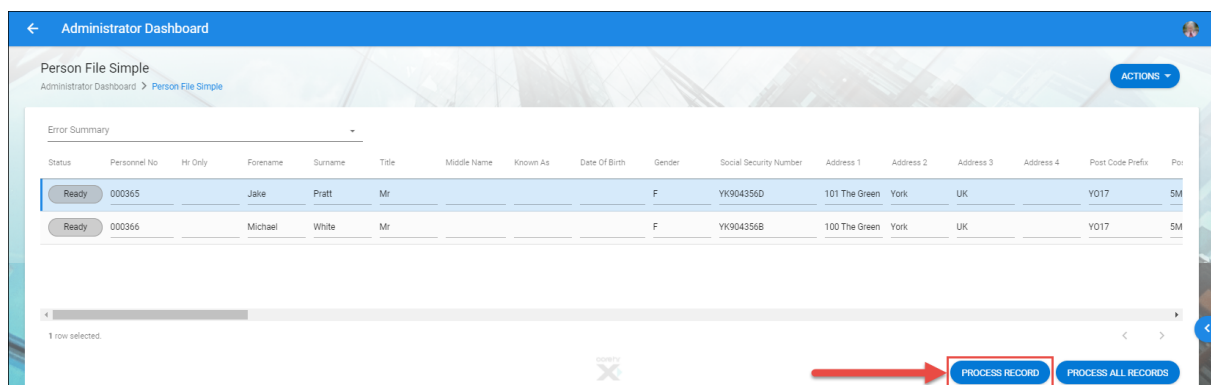

Note: Rectify All defaults to **On**. Changes made are saved for the current update only and resets on exiting out of the screen.

5.4. Process the Uploaded Records

From the *File Processing* screen you can *Process All Records* on the screen or choose to *Process a Single Record*.

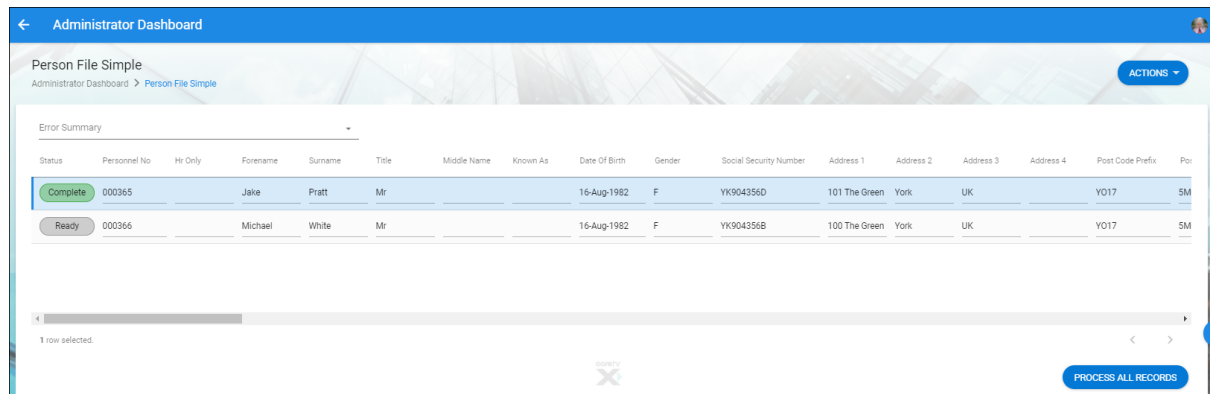

To process a single record:

1. Select the record on the screen and click the **Process Record** button.

2. The single record updates to a *Status* of *Processing*, and then *Complete*.

PROCESS ALL RECORDS

- The *Data Migration Option Widget* displays the relevant *Data Migration File* with a status of *Processing*.

Data Migration Options					LOAD FILE
Search		Q	Open		
Uploaded On	File Name	Template	File Summary	Status	
04-Dec-2020	Person File Simple (ABCDE).... Private ID: 2020120411312504	Person File Simple	Ready 17 Failed 0 Complete 0	Processing	
03-Dec-2020	Person File Simple (ABCD).c... Private ID: 2020120311300098	Person File Simple	Ready 0 Failed 0 Complete 1	Complete	

! **Background Processing:**

When *Process All Records* is selected on the *File Detail/Edit* screen, the screen closes, and a background job kicks off.

! **Note:**

- This background job speeds up *Data Migration Processing*.
- Single row processing continues to happen on screen.
- You cannot *Edit* records while the *Data Migration File* is *Processing*.
- You are no longer confined to the *Data Migration Tool* while the *Data Migration File* is *Processing*, i.e. you are free to do other work on People XD.
- While the *Data Migration File* is *Processing*, the *Status* of the *Data Migration File* displays as 'Processing.'
- While the *Data Migration File* is *Processing*, it is not possible to interact with the *Data Migration File*.
- Once the job finishes, the *Status* of the *Data Migration File* updates to either 'Complete' or 'Failed.'
 - Failed: At least one record in the file has failed to migrate into XD.
 - Complete: All records in the file have successfully migrated into XD.
- Once *Processing* is 'Complete,' it is no longer possible to review the individual file records. The records have now been created on XD and are available to view on the corresponding screens.

5.4.1. Ignore Errors

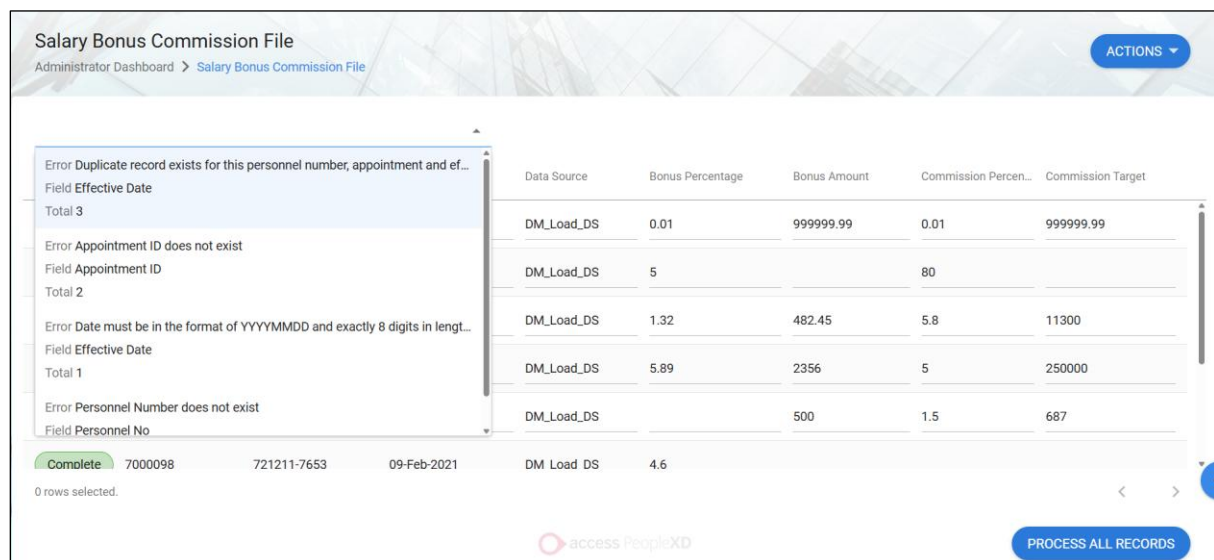

Users have the option to ignore all *Errors* in the *Data Migration File* to reprocess. This is useful in scenarios where:

- The same item caused lots of records to fail (e.g. Pay Group not set up in advance). Once the item is fixed, all *Errors* can be ignored, and the *Data Migration File* is reprocessed.
- Multi-line validation is applicable (e.g. cost allocation file).

5.5. Resolve / Ignore Errors in Records

From the *File Processing* screen the **Error Summary** drop-down displays a list of the types of *Errors* found for a processed file. It includes the field where the *Error* occurred and the number of records affected. The Error Summary only populated if there are "*Failed*" records for this *Data Migration File*.

You can click on a message to display all records that have the same error. This can be a good first step in resolving the same *Error* for multiple records at once.

5.5.1. Resolving an Error for Multiple Records

It is possible to resolve an Error for multiple records. This is only applicable:

Data Migration: Data Migration Tool - User Guide

- where more than one record has failed to process for the same reason.
AND
- the same value should be applied to the erroneous field for that set of records.

To do this:

1. From the *File Processing* screen use the Error Summary to filter the list.
2. Click the Error summary failed records you'd like to resolve.
3. Click a single record, then click **Display Errors**.
4. The *Row Errors* screen will display all *Errors* for that record, not just the *Error* selected on the *Error Summary* list.
5. For a common *Error*, resolve this for the record by providing a new value in *Updated Value*.
6. Click **Yes** on the *Rectify All* prompt to ensure the same change is applied to all records failing for the same reason that require the same value.

 **Note:** This will update the field to the same data provided in *Updated Value* for all similar records. However, those records may still be "Failed" for another reason. Use the *Error Summary* to continue to filter the list to isolate "Failed" records, using the **Display Errors** button to resolve each record as required.
To download a full list of Errors to a CSV file, see section [Download Errors](#).

5.5.2. Fix Errors for a Single Record

When uploading the Data Migration file, the system processes one record at a time. If an *Error* is found with a record in the *Data Migration File*:

- This is flagged with a status of 'Failed.'
- This will not be processed.
- The system will move on to upload the next record.

Data Migration: Data Migration Tool - User Guide

Status	Personnel No	Hr Only	Forename	Surname	Title	Middle Name	Known As	Date Of Birth	Gender	Social Security Number	Address 1	Address 2	Address 3	Address 4	Post Code Prefix	Post Code Suffix	Country Description	Nationality
Failed	0003702		Ann	White	Mrs				F	SE533608C	157 The Green	York			YO17	SMC	UK	British
Complete	000371		Joan	Shields	Mrs				F	BB533608C	257 The Green	York			YO17	SMC	UK	British

Note: Not all errors may be found when the record is first processed. The system will validate for fields that are mandatory or conditional first. If any errors are found and resolved, the system may identify new errors during when it is reprocessing the updated record.

To review and resolve any *Errors* for a failed record:

1. Click on the Failed record.
2. Click **Display Errors**.
 - This only displays when a record has been selected, as Errors are only displayed for a single record on the *Row Errors* screen.

Status	Personnel No	Appointment ID	Effective Date	Data Source	Bonus Percentage	Bonus Amount	Commission Percen...	Commission Target
Failed	7000094	721211-7649	27-Jan-2021	DM_Load_DS	0.01	99999999.99	0.01	99999999.99

Commission Target	Commission target cannot exceed 999999.99	9999999.99

access PeopleXD

APPLY CHANGES IGNORE ERRORS

The **Row Error** screen contains the following fields:

Column	Description
Field	The <i>Data Migration File</i> column on which the <i>Error</i> was found.
Description	The <i>Error</i> message, i.e. the reason that the record failed to process.
Value	The invalid value currently held in that field. This data is causing the <i>Error</i> .

- Fix any *Errors* found by inputting valid data in the *Value* field, for each *Error*.

Note: Clicking **Ignore Errors** allows you to exit the screen and clear the error / "Failed" status.

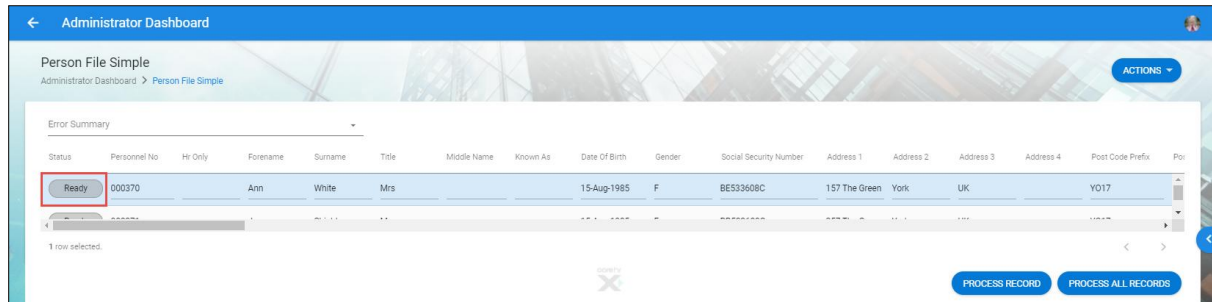

- Click **Apply Changes**.

Note: If there is more than one record that has failed for the same reason, the *Rectify All* prompt appears. This will copy the new value to that column for all other records with the same error and same "Current Value."

- Click **Yes** if this is suitable, e.g. an update to Work Group.
- Click **No** if this isn't required, e.g. Date of Birth which could be different for each record.

- The Status will return to "Ready." This can now be processed again.

Data Migration: Data Migration Tool - User Guide

7. If all *Errors* have been resolved, the record should successfully be migrated to XD.

If *Errors* are found, and the record is "Failed" again, repeat the steps to display *Errors* and resolve.

5.6. Action Data Migration Files

You can action *Data Migration Files* in the *Data Migration Options Widget*. The action options available are dependent on the *Status* of the *Data Migration Files*. To access the action options for a Data Migration File expand the 3-dot menu.

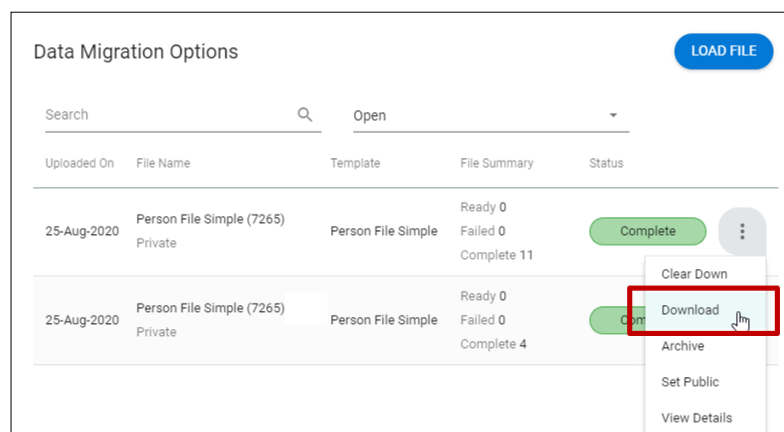

The table list all actions available. Depending on the status and security you will see all or some of these options:

Action	Description
Edit	You can edit a file where one or more records have failed during the processing procedure. See section Edit an Uploaded Data Migration File .
Clear Down	You can clear down a <i>Data Migration File</i> , see section Clear down Data Migration Files .
Download	You can Download a <i>Data Migration File</i> as a delimited CSV file. See section Download Uploaded Data Migration Files . This option is controlled by menu security, see the Configuring the Data Migration Tool user guide for further details.
Download Errors	An updated Data Migration File has a Failed Status; you can download the <i>Error</i> list to a CSV file. See section Download Errors . This option is controlled by menu security, see the Configuring the Data Migration Tool user guide for further details.

Action	Description
Archive	Archiving a file allows the locking these records from further action. <i>Superusers</i> can reverse the <i>Archive Status</i> if required and view or action all Private and Public files. See section Archiving Data Migration Files .
Unarchive	Where a Data Migration File has been archived, a user with appropriate menu security permissions may unarchive the file. See section Unarchiving Data Migration Files . This option is controlled by menu security, see the Configuring the Data Migration Tool user guide for further details.
Set Public/Private	The visibility of new files uploaded to the <i>Data Migration Tool</i> is restricted to <i>PRIVATE</i> . The Private/Public visibility is displayed under the <i>File Name</i> column. There is an option for the file owner to make a file 'Public'. Once enabled, <i>Superusers</i> can view <i>Private</i> files uploaded by other users. See section Set Private/Public .
View Details	You can view the File Details of any file. This includes the File ID and File Owner.
Delete	You can delete a File with a <i>Status</i> of <i>Invalid</i> .
View Error	Where a file has failed to upload correctly, you can view the upload <i>Error</i> , e.g. Invalid Template.

5.6.1. Download Uploaded Data Migration Files

Updated *Data Migration Files* can be downloaded from the *Data Migration Options Widget* for reference purposes or loading into another environment.

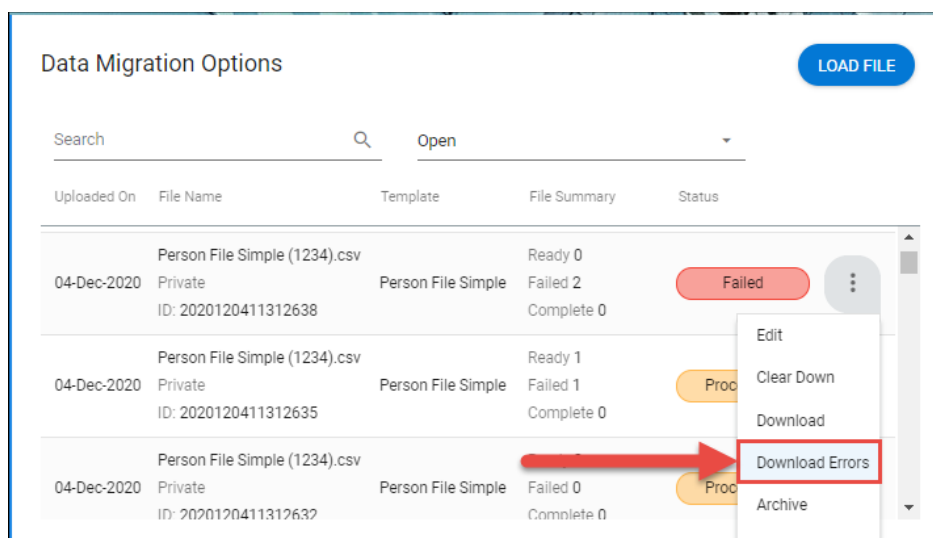

Note:

- The option to download from *Data Migration Files* is menu security controlled. This ensures that only authorised users can download data from the *Data Migration Tool*. See the [Configuring the Data Migration Tool](#) user guide.
- Templates are downloaded as pipe delimited CSVs.
- If any display issues occur, try using an alternative web browser, i.e. Google Chrome.

5.6.2. Download Errors

Where an updated Data Migration File has a Status of Failed, you can download the *Error* list to a CSV file. Once downloaded, the *Error* list can be shared with the appropriate person, e.g. HR, Finance.

The CSV file lists the following details of the *Errors* that caused the *Data Migration File* to Fail:

	A	B	C	D	E	F
1	Error Message	Field Name	Field Value	Personnel No		
2	Date must be in the format of YYYYMMDD and exactly 8 digits in length. 15081985	Date Of Birth	15081985	371		
3	Employee already exists on pay	Personnel No	370	370		
4	Personnel Number already exists	Personnel No	370	370		
5						
6						
7						

Note:

- The option to download errors from *Data Migration Files* is menu security controlled. This ensures that only authorised users can download data from the *Data Migration Tool*. See the [Configuring the Data Migration Tool](#) user guide.
- Templates are downloaded as pipe delimited CSVs.
- If any display issues occur, try using an alternative web browser, i.e. Google Chrome.

5.6.3. Archiving Data Migration Files

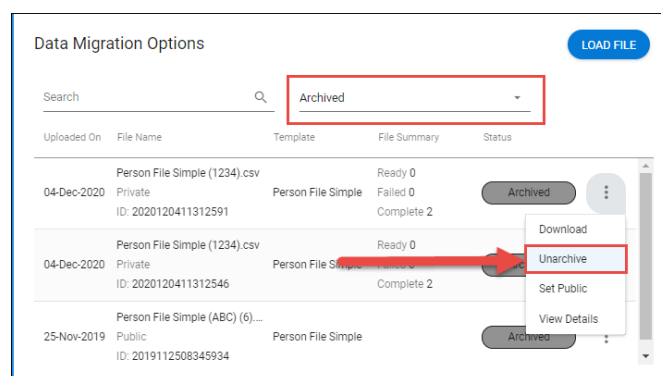

Archived files are 'locked' from a data migration perspective. Their contents cannot be viewed or actioned in any way, i.e. can't be edited, processed, downloaded or cleared down. This protects the confidentiality of the data in the file and the integrity of data already loaded into XD.

- Archived files are inactive from a Data Migration perspective and cannot be viewed, edited, processed, downloaded or cleared down regardless of security permissions.
- This protects the confidentiality in the *Data Migration File* and the integrity/availability of data already loaded.
- Super Users can access archived *Data Migration Files*.

Note: The option to archive *Data Migration Files* is menu security controlled. See the [Configuring the Data Migration Tool](#) user guide.

5.6.4. Unarchiving Data Migration Files

Where a *Data Migration File* has been archived, a user with appropriate menu security permissions may unarchive the file.

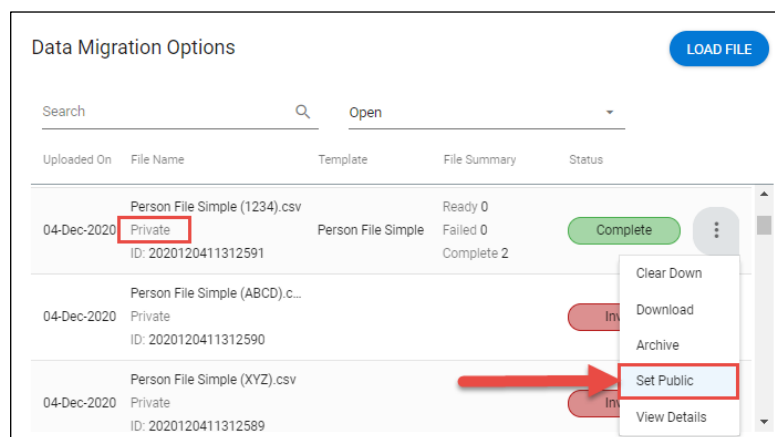

Note: The option to unarchive *Data Migration Files* is menu security controlled. See the [Configuring the Data Migration Tool](#) user guide.

5.6.5. Set Private/Public

By default, the visibility of new from *Data Migration Files* uploaded to the *Data Migration Tool* is restricted to the user who uploaded the *Data Migration Files*. This enhanced feature helps customers protect the confidentiality, availability and integrity of their data. There are two levels of file visibility:

- **Private:** By default, *Data Migration File* visibility is private, i.e. the *Data Migration File* is only visible to the user who uploaded it.
 - If required, the *Data Migration File* can be made public. Public files can be viewed by all users and actioned by users with the appropriate menu security.
 - Super Users can be given access to all *Data Migration Files*, including even private files. This access should be restricted and only used where required.
- **Public:** Any Data Migration user can view the *Data Migration File*, including the contents (Status permitting) and can action according to their security access (template level, user-level).

Note: If required, the user can make the file public. This means that the file, including its contents, can be viewed by all Data Migration users. Existing files, uploaded before these enhancements, will continue to be public. If required, the owner of the file or a super user can make the files private.

5.6.6. Cleardown Data Migration Files

Using the Cleardown facility is **not recommended** for live customers or the following reasons:

- It risks deleting data that is not backed up.
- This data may be required for data protection and GDPR.

In the circumstances where data needs to be omitted from a report, as it is not currently relevant but must be retained, it is recommended to change the Status to *Archived*.

Using the Cleardown facility reverses any data migration actions completed for that *Data Migration File*, including the removal of:

- Records that have been processed and are now on the XD database.
- Any reference data items that were dynamically created as part of the process, if they are not linked to any other non-data migration records.

 **Note:** Take care when clearing down records. For example, both *Person Simple File* and *Allowances File* are loaded for the same set of employees. If only the *Person Simple File* is cleared down, the allowance records remain in the system and you may experience issues with corrupt data, as the system is missing the master file.

The following files **CANNOT** be cleared down:

- Person Payroll File
- Balance Assignments File
- RTI File - Note that the RTI file load works like an update. It updates fields on the employee record (rather than inserting a new record). Therefore, to resolve incorrect RTI fields being loaded for an employee it is possible to upload a new RTI file for the employee and this will override the previous changes.

An example of what happens when a Data Migration file is Cleared down.

A 'Person Simple' File has been uploaded to XD and fully processed. 50 employees have been created on XD, and the file status is Complete. If the cleardown option is run for this file:

- The 50 employee records created on XD are deleted.

Data Migration: Data Migration Tool - User Guide

- Any reference data items that were automatically created during the load are deleted, e.g. a new Employee Status (provided no other record on XD is using that reference data).
- The file itself is deleted from the XD database.
- The file history remains on the *Data Migration Options Widget*.

To clear down a file:

1. From the *Data Migration Options Widget* for the file you'd like to clear down.
2. Expand the 3-dot menu and select **Clear Down**.
3. The *File Cleardown* prompt will appear.
 - This outlines the impact of action on the *Data Migration File*.

File Cleardown

Proceed With Caution. Clearing down this file will purge any data created by this file.If subsequent files are loaded these files will need to be cleared down individually.Are you sure you want to proceed?

NO YES

5. Click **Yes** to proceed or **No** to cancel.
4. Once the cleardown is complete, the *Data Migration File* is no longer displayed in the Open/default view but can be viewed if you change the filter to *Cleared Down*.

5.7. Insight Reporting

All reference data, including data uploaded through the Data Migration Tool, can be reported on through Insight. The view **Hr References (Data Validation)** will return the follow data for you to use when designing your reports:

- | | |
|--------------------|-------------------------|
| • Active Ind | • Core Id |
| • Core Reference | • Description |
| • Display Sequence | • Int Panel Member Type |
| • Reference Code | • Reference Type |
| • Secure Ind | • Sensitive Ind |

To create a report on migrated data, from the Insight Dashboard:

1. Select **Home**, then expand the Actions button and click **Create Report**.

Data Migration: Data Migration Tool - User Guide

2. Select the **Format** of your report and give it a **Name**, then click **OK**.
3. From *Select a Setting*, select **Columns**.
4. From *ADD*, select **Column**.
5. From *Filter Columns By View*, select **Hr References (Data Validation)**.
6. Select the required items to include in your report.
7. Once happy, click **OK**.
8. To display the report, click **Refresh Data** or enable the **Auto refresh on all changes** toggle.

For further guidance on how to use Insight, check [PeopleXD Insight User Guide Library](#).

6. Appendix:

6.1. List of all available Data Migration Template Files

The list of all available data migration template files has been broken down by category. Please note that some files appear in multiple categories.

6.1.1. People Management Files

File Name	Description
Additional Contract Complete	Upload additional contracts for employees. Includes Post Validation, see section Data Migration for People Management and Post Validation – New. The following fields have been added: • Category • Subcategory • Reason • Leaving Reason • Job Category  Note: • This complete version includes columns for both code and description for all reference data elements. • This should not be used to load an employee's substantive contract (catered for in the Person Simple file or Person Complete File). • Many fields are defaulted on upload. See helper file for full list.
Additional Contract Simple	Upload additional contracts for employees. Includes Post Validation, see section Data Migration for People Management and Post Validation – New. The following fields have been added: • Category

File Name	Description
	• Subcategory • Reason • Leaving Reason • Job Category  Note: • This complete version includes columns for both code and description for all reference data elements. • This should not be used to load an employee's substantive contract (catered for in the Person Simple file or Person Complete File). • Many fields are defaulted on upload. See helper file for full list.
Allowance File	Upload allowances associated with an employee's contract. The following field has been added: Reason Code - (this field is mandatory when People XD is configured to require a reason for Allowance/Salary changes).
Appointment History	Allows a user to load a contract history record for the employee.
Contracts	Upload contract details for employees.  Note: • Any contract type that has been set up on XD can be uploaded for an employee using this file. • Both the employee record and the contract type reference data must exist on XD, before records are uploaded.
Cost Allocation	Upload cost allocation details for an employee's contract. All cost allocation records must have a total of 100%.
Dependents	Upload employee dependant records.
Diversity Equality	Upload employee diversity and disability details.
Employee Performance	Allows a user to load employee performance details.

File Name	Description														
	 Note: The Performance Rating File must be loaded before the Employee Performance File.														
Next Of Kin	Upload employee next of kin information.														
Organisational Role	This is the Organisational Roles file. An employee's Reports to Manager is created as part of the Person Simple/Complete file.														
Performance Rating	Allows a user to load performance rating details.  Note: The Performance Rating File must be loaded before the Employee Performance File.														
Person File Complete	Post Validation has been added. This <i>Data Migration File</i> now validates information against the locked/linked levels specified on the Post Profile definition, see section Data Migration for People Management and Post Validation – New. This <i>Data Migration File</i> is used to create: • Employee records • Their substantive contract The following fields have been added: <table> <tr> <td>• Title</td><td>• Known as</td></tr> <tr> <td>• Middle name</td><td>• Category</td></tr> <tr> <td>• Subcategory</td><td>• Reason</td></tr> <tr> <td>• Leaving Reason</td><td>• Job Category</td></tr> <tr> <td>• Tupe Date</td><td>• Continuous Service</td></tr> <tr> <td>• Continuous Service</td><td>• Override End Date</td></tr> <tr> <td>• Override Start Date</td><td></td></tr> </table>	• Title	• Known as	• Middle name	• Category	• Subcategory	• Reason	• Leaving Reason	• Job Category	• Tupe Date	• Continuous Service	• Continuous Service	• Override End Date	• Override Start Date	
• Title	• Known as														
• Middle name	• Category														
• Subcategory	• Reason														
• Leaving Reason	• Job Category														
• Tupe Date	• Continuous Service														
• Continuous Service	• Override End Date														
• Override Start Date															

File Name	Description
	 Note: • If payroll details are provided, the employee will be set up on Payroll. • This file caters for one contract per employee. Do not provide multiple rows per employee. • This provides the same functionality as the 'Person File Simple.' However, this includes both 'Code' and 'Description' fields for reference data items. • Many fields are defaulted on upload. See helper file for full list.
Person File Simple	Post Validation has been added. This <i>Data Migration File</i> now validates information against the locked/linked levels specified on the Post Profile definition, see section Data Migration for People Management and Post Validation – New. This <i>Data Migration File</i> is used to create: • Employee records • Their substantive contract The following fields have been added: • Title • Middle name • Subcategory • Leaving Reason • Tupe Date • Continuous Service • Known as • Category • Reason • Job Category • Continuous Service • Override End Date • Override Start Date
Post Pension Details	Allows a user to associate a pension scheme with a post.
Post Profile	This is the Post Profile file. This <i>Data Migration File</i> is used to load Post Profile definitions.

File Name	Description
	This is a 'complete' file - for reference data the Customer can specify codes, descriptions or both. Reference data is created (and if applicable added to the Org Structure data tree) if it does not already exist. As with the Person file, Organisational Structure code must be specified before downloading the <i>Data Migration File</i>. The <i>Data Migration File</i> is then dynamically created based on the Organisational Structure code provided. It is currently not possible to link a Post Profile to T&Cs via the new <i>Data Migration Tool</i>. Prerequisites: The Org Structure hierarchy needs to be defined and pay positions (pay scales) need to be set up/loaded before using the Post Profiles DM file.
Qualification	The following fields have been added: • Roster Priority
Reference – BIC Reference	Bulk Uploading banking data, removing the need to set up manually and removing the possible <i>Errors</i> of duplicate sort code and BIC References. The following fields have been added: • Bank Reference • BIC Reference
Reference – Bank Reference	This is the Bank Reference file.
Reference – HR Reference	Allows a user to load reference data codes and description, e.g. Cost Centre reference data, Project reference data and Expense Code reference data.
Supplementary Addresses	This <i>Data Migration File</i> is used to load additional address information for an employee if required (e.g. interview panel address).

File Name	Description
	An employee's home address is loaded as part of the Person Simple/Complete file.
User Defined Fields	Upload employee / contract user defined field records.  Note: - The 'User Defined Object' must already be configured on XD before uploading. - The solution does not validate against the configuration of the UDF, i.e. if you have configured a field as a list item and you load in a non-list item, the data migration solution will still allow this. Please take note of the valid fields on the UDF before loading this file.

6.1.2. Payroll Files

File Name	Description
Allowance	Allows a user to load employee allowance information. Note that the solution does not validate the fields populated with the configuration of the pay code e.g. for an % allowance please ensure you only populate the Percentage field (if % not held on the pay code level), for a value allowance please ensure you only populate the value field, etc.
Auto Enrolment History	Upload employee auto-enrolment history. File caters for configuration at either contract or employee level.
Benefit In Kind	Upload employee benefit in kind assignments.
Cost Allocation	Upload cost allocation details for an employee's contract. All cost allocation records must have a total of 100%.
Cumulative IRL	Upload employee cumulative / year to date figures for payroll calculations.

File Name	Description
	 Note: - This should be used for ROI employees only. - The file automatically creates a history record for the following cumulative values: PAYE, USC, PRSI and if applicable ASC. For Customers going live mid-year, this means that the YTD value on the deduction section of the pay slip will be correct. Columns added: Previous ASC Earnings, Previous ASC.
Cumulative UK	 Note: This should be used for UK employees only. Upload employee cumulative / year to date figures for payroll calculations. The <i>Data Migration File</i> automatically creates a history record for the PAYE cumulative value. For Customers going live mid-year, this means that the YTD PAYE value on the payslip's deduction section will be correct. Columns added: Spbp To Date, Postgraduate Loan To Date, Postgraduate Loan Code, Taxable Redundancy/Sporting Testimonials Niable Pay, Taxable Redundancy/Sporting Testimonials NI Amount, Columns removed: St To Pt Ytd Now automatically creates a history record for the PAYE cumulative value. For Customers going live mid-year, the YTD PAYE value on the payslip's deduction section will be correct.

File Name	Description
	 Note: A new field added to the end of the file: 'P45 Earnings only.' NI Letter is now a mandatory field except for scenarios where the 'P45 Earnings only' indicator is set to Y. If an employee has multiple NI Letters, then 1. Their current NI Letter must be populated on the Cumulative file and 2. Their full NI Letter History for the current year including letter and contribution detail must be provided on the NI Letter History file. 3. New field added to the end of file: 'P45 Earnings only.'
Deductions	Upload employee deductions.  Note: The required pay code must already exist on XD before records can be loaded for employees.
Employee Wage Subsidy Scheme (EWSS)	Use this file to indicate which Employees an Employer is claiming the Employee Wage Subsidy Scheme (EWSS) payment for.
NI Letter	To supplement the UK Cumulative file. This <i>Data Migration File</i> is used to load NI Letter History for employees who have multiple NI Letters in the current tax year. For example, if an employee's NI Letter changed from M to A during the current tax year, use this <i>Data Migration File</i> to specify the cumulative information for NI Letter A (their current NI Letter) and the cumulative information for NI Letter M (their old NI Letter). A row per NI Letter is required. The sum of the 'Nlable Pay' values provided per NI Letter on this <i>Data Migration File</i> must match the 'Nlable To Date' value provided on the Cumulatives file.

File Name	Description
	Loading National Insurance Letter History for employees who have multiple National Insurance Letters in the current tax year.  Note: - Only applicable to UK Customers - Only applicable to employees who have had multiple NI Letters in the current Tax Year. If an employee has multiple NI Letters in the tax year, then their full NI letter history for the tax year must be provided here. - Must be used in conjunction with the UK Cumulative file. Loading the UK Cumulative file is a prerequisite to loading this file.
Occupational Load	Load employee occupational/attendance history. This should be used to supplement the occupational absence configuration. Any sickness schemes that provide entitlement to a number of days will be affected by what is migrated in this <i>Data Migration File</i>. Example: If an employee is entitled to 30 days of full pay and uses ten days of that entitlement, those ten days are recorded in this <i>Data Migration File</i>. In this <i>Data Migration File</i>, you will migrate one line of absence per employee per day.  Note: This file now supports migration into WFM-only Occupational Absence solution (where XD Payroll is not used).
Pay History	To supplement the UK & IRE Cumulative files. This <i>Data Migration File</i> is used to load Year-To-Date (YTD) information for specific pay codes, such as voluntary deductions (e.g. Sports & Social membership) or pension contributions. These YTD values are recorded as history items against the previous pay period.

File Name	Description
	If a Customer is going live mid-year, this information must be migrated to ensure that the YTD values on the deduction section of the payslip are correct. If required, this <i>Data Migration File</i> can also be used to load detailed payroll history for certain pay codes per pay period. History records for the following pay codes cannot be loaded via the Payroll History file as history records for these items are automatically created from the Cumulative <i>Data Migration File</i>: • PAYE • PRSI/NI • SSP/SMP/SAP/SPP/ASPP/SPBP/KIT Days • ASC • Student Loan/Postgraduate Loan
Pension Membership ID (PMID)	Allows a user to load employee pension membership ID.
Pensions	Allows a user to load employee pension details for auto enrolment pension schemes. The following fields have been added as they are applicable to Irish Customers using CorePension (and to employees on pre-2013 pension schemes): • Date Joined Dependents Scheme. • Members of S&C or W&O dependents scheme. • Original Date Joined Spouses & Children. • Original Date Joined Widows & Orphans.
Person Payroll	This <i>Data Migration File</i> is intended for use where Payroll is implemented after HR/People Management.

File Name	Description
	 Note: - This file updates the employee's HR record, it is not possible to clear this file down after loading. - This file should not be used when Payroll is implemented at the same time as HR/People Management. The Person files allow for both HR details and Payroll details to be loaded at the same time.
Post Pension Details	Upload employee pension details. File caters for configuration at either contract or employee level.
RTI	Upload details that are required for UK employees to ensure that records are complete with all details required for RTI submissions.
Reference - BIC Reference	Bulk Uploading banking data, removing the need to set up manually and removing the possible <i>Errors</i> of duplicate sort code and BIC References. The following fields have been added: - Bank Reference - BIC Reference
Reference -Bank Reference	This is the Bank Reference file.
Reference – HR Reference	Allows a user to load reference data codes and description, e.g. Cost Centre reference data, Project reference data and Expense Code reference data.
Reference – Pay Scale point	Upload pay scale point reference data.  Note: If using pay scales, this file should be uploaded first. See section The Data Migration File Upload and Prerequisite Configuration.
Reference – Position Rate Details	Upload position rate details data.

File Name	Description
	 Note: If using pay scales, this file should be uploaded first. See section The Data Migration File Upload and Prerequisite Configuration .
Statutory Pay Profile	Upload an employee's statutory pay profile. This is used to capture details of any statutory pay (particularly maternity) that has been recorded/paid in legacy systems, in the current tax year.
TPS Role ID	Allows a user to load employee role identifier values.

6.1.3. Reference

File Name	Description
Director NIC	Allows a user to load year to date figures for Directors to support the required Directors NIC calculation. Populate this file with the year-to-date values of the Director up to the latest period before testing/processing. Director NIC Year To Date Values are required to ensure a correct system Directors NIC Calculation.
Employee USC Rate	Allows a user to load the USC Rates to be applied for an Employee. Typically the latest Revenue Payroll Notification (RPN) would be used to get this instruction. However it may be required for on boarding sites as the parallel period may be in the past while the Revenue RPN instruction is always the latest. Meaning that there can sometimes be a requirement to load in the USC thresholds used on the other system to ensure matching system calculations when running in UAT or Parallel.
Reference - BIC Reference	Bulk Uploading banking data, removing the need to set up manually and removing the possible <i>Errors</i> of duplicate sort code and BIC References. The following fields have been added: • Bank Reference • BIC Reference

File Name	Description
Reference -Bank Reference	This is the Bank Reference file.
Reference – HR Reference	Allows a user to load reference data codes and description, e.g. Cost Centre reference data, Project reference data and Expense Code reference data.
Reference – Pay Scale point	Upload pay scale point reference data.  Note: If using pay scales, this file should be uploaded first. See section The Data Migration File Upload and Prerequisite Configuration.
Reference – Position Rate Details	Upload position rate details data.  Note: If using pay scales, this file should be uploaded first. See section The Data Migration File Upload and Prerequisite Configuration.
Reference - Roster Area Structure	This is the CoreRoster Area Structure file.
Reference – Shift Types	Upload shift-type reference data.  Note: This file should be one of the first loaded to XD. See section The Data Migration File Upload and Prerequisite
Reference WFM Reason Codes	Allows data load of WFM reason code reference data. WFM reason codes can be associated with Absences (A), Overtime (O) and Balance Adjustments (B). e.g. a reason of "Flu" could be selected when entering a "Sickness" absence code.
Reference – Work Groups	Work Group Reference Data, please see the helper file for details on the columns available and validation applied for uploading

File Name	Description
	Work Groups. 15 Fields are available for uploading Work Groups.  Note: In the helper file: - The Importance column identifies fields that are mandatory. - If migrating data for the Optional columns and the type is either reference or code, the relevant reference/code data needs to be set-up before importing. - Where no values are entered, defaulted values will be applied. For more details see either the Field Help Information column or the Defaulted Fields Sheet.
Shared Parental Pay	Allows a user to load in an employee's statutory pay profile. It is used to capture details of any statutory pay (particularly maternity) that has been recorded/paid in legacy system in the current tax year.
Staffing Rule Assignment	Allows a user to load Team Area Staffing Requirements rules.

6.1.4. WFM – Time Files

File Name	Description
Badge Assignment	This is the Badge Assignments file. The following additional fields were added: - Opening Accrued Entitlement - Accrued Entitlement Code - Opening Reserved Entitlement - Reserved Entitlement Code - Opening Balance - Balance Entitlement Code - Flexitime Indicator
Balance Adjustment	File to facilitate loading Balance Adjustments into XD WFM.

File Name	Description
Balance Assignments	Upload employee balance assignments. File caters for both multi-appointment and non-multi appointment.  Note: This is a brand-new file to facilitate loading Balance Adjustments into XD WFM The following additional fields were added: • Opening Accrued Entitlement • Accrued Entitlement Code • Opening Reserved Entitlement • Reserved Entitlement Code • Opening Balance • Balance Entitlement Code • Flexitime Indicator
Director NIC	Allows a user to load year to date figures for Directors to support the required Directors NIC calculation. Populate this file with the year-to-date values of the Director up to the latest period before testing/processing. Director NIC Year To Date Values are required to ensure a correct system Directors NIC Calculation.
Employee USC Rate	Allows a user to load the USC Rates to be applied for an Employee. Typically the latest Revenue Payroll Notification (RPN) would be used to get this instruction. However it may be required for on boarding sites as the parallel period may be in the past while the Revenue RPN instruction is always the latest. Meaning that there can sometimes be a requirement to load in the USC thresholds used on the other system to ensure matching system calculations when running in UAT or Parallel.
Menu Profile	Allow customers to load a file that will assign the specified menu profile(s) to all users on the file.
Occupational Load	Load employee occupational/attendance history.

File Name	Description
	This should be used to supplement the occupational absence configuration. Any sickness schemes that provide entitlement to a number of days will be affected by what is migrated in this <i>Data Migration File</i>. Example: If an employee is entitled to 30 days of full pay and uses ten days of that entitlement, those ten days are recorded in this <i>Data Migration File</i>. In this <i>Data Migration File</i>, you will migrate one line of absence per employee per day.  Note: This file now supports migration into WFM-only Occupational Absence solution (where XD Payroll is not used).
Reference – Shift Types	Upload shift-type reference data.  Note: This file should be one of the first loaded to XD. See section The Data Migration File Upload and Prerequisite
Reference – Work Groups	Work Group Reference Data, please see the helper file for details on the columns available and validation applied for uploading Work Groups. 15 Fields are available for uploading Work Groups.  Note: In the helper file: • The Importance column identifies fields that are mandatory. • If migrating data for the Optional columns and the type is either reference or code, the relevant reference/code data needs to be set-up before importing. • Where no values are entered, defaulted values will be applied. For more details see either the Field Help Information column or the Defaulted Fields Sheet.

File Name	Description
Shared Parental Pay	Allows a user to load in an employee's statutory pay profile. It is used to capture details of any statutory pay (particularly maternity) that has been recorded/paid in legacy system in the current tax year.
Shift Assignment	This is the Shift Assignments file.
WFM Pay Code	Allows a user to load pay code details.
Workgroup Assignment	Either the Work Group code or the Work Group description can be provided. - If only the Work Group code is provided, then the code must exist in before the <i>Data Migration File</i> is loaded. - Suppose only the Work Group description is provided. In that case, a new Work Group will be created if the description does not already exist as a Work Group (a unique code will be automatically assigned).

6.1.5. WFM – Roster Files

File Name	Description
Employee Roster Profile	This is the CoreRoster Employee Roster Profile file. The following improvements have been made: Appointment ID added to the <i>Data Migration File</i>. Status of the Availability record set to approve (rather than pending, ct_person_contract_override. Status).
Employee Team Area Assignments	This is the CoreRoster Area Assignment file.  Note: Appointment ID added to the file.
Menu Profile	Allow customers to load a file that will assign the specified menu profile(s) to all users on the file.
Recommended Teams	This is the CoreRoster Recommended Team Area file.

File Name	Description
Reference – Roster Area Structure	This is the CoreRoster Area Structure file.
Roster Area Access	This is the CoreRoster Area Access file.
Roster Rules	Replaced <i>Data Migration File</i> in v28 (January 2021), old CoreRoster Area Staffing Requirements file is no longer valid.
Staffing Rule Assignment	This is the CoreRoster Area Staffing Requirements file.
WFM Pay Code	Allows a user to load pay code details.

6.1.6. Training Files

File Name	Description
Course Profile	This is the Training Course Profile file.
Course Provider	This is the Training Course Providers file.
Provider Course-Linkage	This is the Provider Course-Linkage file.
Scheduled Training Courses	This is the Scheduled Training Courses file.
Training External Person	This is the External Person file.
Training History	This is the Training History file.
Training Providers	This is the Training Providers file.

6.2. Uploading Data Migration Files *Error Messages*

This section includes a list of invalid file format error messages that may occur during the upload of a data migration file and what may be the cause of the error.

Error Message	Cause
File name cannot exceed 100 characters	The name of the <i>Data Migration File</i> is too long.

Error Message	Cause
Invalid line on file	This <i>Error</i> displays if the number of pipes on the line does not match the number of pipes in the header.  Note: - The error includes the line number. The line number count includes the two header rows so matches back to the line number in excel. - The Upload/Parsing process stops and displays an error on the first invalid line it encounters, i.e. if there are multiple invalid lines on the file, you are only told about the first one it hits.
Double quotes not permitted in file	This <i>Error</i> will be displayed if the <i>Data Migration File</i> contains double quotes  Note: The Upload/Parsing process stops and displays an error when it encounters the first 'double quotes' error, i.e. if there are multiple instances of 'double quotes' you are only told about the first one
Character not permitted in file	This <i>Error</i> will be displayed if the <i>Data Migration File</i> contains an invalid character.  Note: The Upload/Parsing process will stop and display an error when it encounters the first 'invalid character' error i.e. if there are multiple instances of 'invalid character' you are only told about the first one it hits.
Invalid File Template. Please download the latest template from the Data Migration Templates widget	This <i>Error</i> will be displayed if: - It is an older version of the template - The file is a comma delimited as opposed to pipe delimited. - The File Name header row has been removed. - The Column header row has been removed. - A column is missing from the <i>Data Migration File</i>. - A column name has been changed

Error Message	Cause
	 Note: • Download the new template to prevent this error message. Other than Org. Structure driven files (e.g. Person, Post Profile & Additional Contract), the structure code is displayed in the File Name header. The text in the File Name header row is irrelevant – but the row still must exist. • For Org. Structure driven files, the Structure Code in the File Name header row is used to match the file back to the applicable Org. Structure. • The Column header is used work out what Template to which the file relates. To match the file back to the to the applicable Template Definition, the <i>Data Migration Tool</i> does the following: ○ Checks how many columns are in the Column header ○ Compares the text in the Column header to the text of all the Templates Definitions with the same number of columns.
