1.1. Releases and Timelines

What's included in the HESA 2023/24 Release and when will it be released?

Please refer to the PeopleXD People Management: HESA 2024/25 Release Notes for full details of the release.

Will the release move forward the HESA year?

Yes. The release will roll the year forward within your HESA module to reflect the current year 2024/25, this will by default copy your previous year's configuration e.g. mappings and rules.

1.2. Additional Assistance

I need additional assistance from Access. How can I request this?

If you encounter an issue applying the 2024/25 changes or generating your HESA return, please raise a Support case via the Customer Success Portal and one of the team will be happy to help you.

If your organisation needs HESA training or consultancy (e.g. require a custom SQL rule), please raise an Optimisation Services (OS) case via the Customer Success Portal. This is a chargeable service.

1.3. Rolling forward the HESA year to 2024/25

Do I need to copy the configuration for the new year and roll forward the HESA year?

No. This will happen automatically as part of the release. However, if you need to move into 2024/25 in advance of the release then you can do so. Please refer to the [HESA User Guide](#) for instructions on how to do this.

We have already moved the HESA year forward to 2023/24. Will this cause an issue for the release?

No. The release will recognise that the year has already been rolled forward and will not attempt to roll it forward again.

1.4. HESA Field label/description changes

How do I update these labels?

For each label change mandated by HESA, each HE Provider will need to:

1. Update the label within the PeopleXD HESA module. See [Update reference data descriptions](#) for HESA fields for further details.
2. If applicable, review the corresponding (capture) field within PeopleXD People Management, and the People Management > HESA mapping logic to understand if any further updates are needed.
