Version	Date	Author	Details
1.0	23 rd January 2020	Peter Travers	Published to Access LMS
1.1	9 th February 2023	Kat Murie	Added note about Assign Access guide, reformatted.

1. Overview

1.1. Purpose of the Guide

The purpose of this document is to provide guidance on how to manage the process of assigning security roles and privileges to joiner, movers and leavers (JMLs) in PeopleXD. It gives information on what can be carried out to make the JML process more efficient and clearer for both a HR administrator and system administrator.

This guide outlines configuration actions that need to be carried out to ensure any JML process can be rolled out quickly. It also explains how task lists work and how they can be used to copy a user and assign a menu profile to a number of users. The following tasks are explained throughout this document:

- **Joiner process** – through the task list you can copy an existing employee or assign a profile
- **Mover process (New Contract, Additional contract, Rehire)** – through the task list you can copy a user or assign a profile
- **Leaver** – through the task list you can assign a leaver profile
- **Ad-hoc changes** – through the actions list on the employee record
- **Bulk updates** – run a report to get a list of employees based on your criteria.

Note: This feature allows you to automate, re-assign, schedule and report on all aspects of security profiles within your business.

1.2. What is Security Management for JMLs?

This feature allows HR administrators to centrally assign and manage security privileges for employee PeopleXD accounts, directly from within People Management when managing employee contract updates as part of JML processes i.e. assign menu profiles, organisational roles and/or access to PeopleXD system data.

Access can be managed in a number of ways:

- Copy access from an existing similar employee.
- Assign access via a security profile.

XD Security: JML Roles & Privileges

- Assign specific access to the employee – either in addition to or instead of access granted via the first two options.

Joiner/Mover/Leaver (JML) processes in PeopleXD occur for the following tasks:

Process	PeopleXD Task
Joiner	New Starter
	Re-Hire
Mover	New Contract
	Additional Contract
Leaver	End All Contracts

Tasks can be added to the HR Task Lists associated with each JML process above. These are accessed directly on the employee record when the task list is launched.

Example: New Starter Process

1. A new employee joins the company and is created and given a contract via the New Starter process.
2. The New Starter HR Task List is launched.
3. A list of similar users with the same organisational attributes and contract attributes is shown on screen.
4. Options appear to copy certain security access and data access as this user to the new starter.

1.3. What Access Categories are Available?

The below categories / types of access are available to HR administrators during the JML Security Management process.

Category	Explanation
Menu Profiles	Menu profiles are used to control and restrict user's access to system functionality. Various elements of the system are controlled by menu options including: • Dashboards • Screens • Buttons • Widgets
Organisational Roles	Organisational roles (org roles) are assigned to users that have certain managerial or approval responsibilities for specific tasks, for example: • HR Salary Approver • Payroll Salary Approver Reports to (typically used for <i>Manager Dashboard</i> access)
User Data Access	This gives users access to employee data across different PeopleXD modules. E.g. HR System Users, Pay Users, Workgroup access, Recruitment access
Talent	Automatically updates when manager receives Line Manager org role.
Roster	This allows the user to assign or remove access to team areas.
Document	This allows the user to View, Edit or Delete access to document groups
Expenses	This allows the user to assign or remove access to expense information based on expense group and input location.
Time Privileges	Time privileges are assigned to users that have certain managerial or approval responsibilities for specific tasks in WFM Time & Attendance, for example: • Approving hours • Overriding leave requests • Viewing hidden balances

Roster Privileges

Roster privileges are assigned to users that have certain managerial or approval responsibilities for specific tasks in WFM roster management, for example:

- Updating closed roster periods
- Rostering non-staff
- Closing roster periods

2. How to Use

2.1. Assign User Access via the Task List

2.1.1. Overview

This section of the document provides guidance on how to assign user access, using the *Assign User Access* task in the HR Task list.

Note: This is applicable to the joiners and movers processes.

Title	Nominated Task Owner	Completed By	Date Completed	Status
Assign User Access				Outstanding START
Files				Outstanding START
CPD Information				Outstanding START
Allowances				Outstanding START

How is the task assigned?

Task lists are configured for the various contract assignment tasks on People Management i.e.

- New Starter
- Re-Hire
- New Contract
- Additional Contract

The *Assign User Task* is configured to one/all of those lists (see [3. Task List Configuration](#) for steps on how to add this task to each task list).

When the contract is assigned to the employee:

XD Security: JML Roles & Privileges

- The *Task List* is available on their employee record.
- The *Assign User Access* task is listed.

To access the task, click **Start**.

This task gives you the option to:

- Look up a set of similar employee records on the system, and copy their access to the new employee. This includes their menu profile assignments, org role assignments, and access to system data. The list is automatically generated based on an employee's contract attributes. E.g. Departments and Job Title.
- Assign a 'profile' of menu profiles to the employee.
- Further assign specific access to the employee, following the copy or profile assignment.

COPY ACCESS

2.1.2. Copy User Access – Full or Restricted Copy

There are 2 options available when copying user access:

Option	Description
Full Copy	Copies all of the access from the selected employee i.e. any menu profile, organisational roles or data access that they currently have.
Restricted Copy	Copies a reduced set of access from the selected employee i.e. only copies specific categories of access that have been flagged as <i>Restricted Copy</i>. See 3.3 Copy Access Configuration Settings for guidance on how to flag categories as restricted. This scenario may exist where HR have devolved some or all of the HR admin processes to line managers in your organisation. This allows the manager to copy the new starter however it restricts them from copying or amending payroll access of that employee.

Follow these steps to copy access for the employee from another employee on PeopleXD:

1. On the *Assign User Access* screen, select *Employees* from the drop-down list at the top of the screen. This is selected by default when you open the screen.
2. The screen displays a list of all employees on the system that have been identified as a close match to the employee.

The screenshot shows the 'Assign User Access' interface. At the top, there's a header for 'James Blake (000192)'. Below it, the 'Assign User Access' title is displayed. A search bar shows 'James Blake' and 'Hr Administrator'. A dropdown menu is open, showing 'Employees' selected. Below the dropdown, a table lists employees with columns: Name, Job Title, Department, Start Date, End Date, and Match. The table contains five entries: Sarah Taylor (100% match), Alice Jones (87.5%), Lorna Harrington (87.5%), John Tully (87.5%), and Janine Clarke (75%). On the right side, there's a section for 'Access for Selected Employee' with a 'Full Copy' button. At the bottom right, there's a green 'COPY ACCESS' button.

Name	Job Title	Department	Start Date	End Date	Match
Sarah Taylor 000026	Hr Administr...	Hr Admin	01-Jan-2012		100%
Alice Jones 000013	Hr Administr...	Hr Admin	01-Jan-2011		87.5%
Lorna Harrington 000050	Hr Administr...	Hr Admin	07-Jun-2017		87.5%
John Tully 000185	Hr Administr...	Hr Admin	10-Jun-2019		87.5%
Janine Clarke 000018	Hr Administr...	Compensatio...	02-May-2013		75%

3. Use the *Search* field to search for a specific employee, if you know exactly who you would like to copy access from.
4. Select the employee on the list.

The section on the right of the screen updates to display the access categories that are currently assigned to that employee.

The screenshot displays the 'Assign User Access' interface for James Blake (000192). The interface is divided into two main sections: a list of employees on the left and a detailed view of the selected employee on the right.

Employee List:

Name	Job Title	Department	Start Date	End Date	Match
Sarah Taylor 000026	Hr Administr...	Hr Admin	01-Jan-2012		100%
Alice Jones 000013	Hr Administr...	Hr Admin	01-Jan-2011		87.5%
Lorna Harrington 000050	Hr Administr...	Hr Admin	07-Jun-2017		87.5%
John Tully 000185	Hr Administr...	Hr Admin	10-Jun-2019		87.5%
Janine Clarke 000018	Hr Administr...	Compensatio...	02-May-2013		75%
Claire Jackson 000020	Hr Administr...	Compensatio...	12-Apr-2009		75%
Sam Gorman 000076	Recruitment ...	Hr Admin	31-Jul-2017		75%
Conor Roche 000085	Training Man...	Training	14-Aug-2017		75%

Selected Employee: Alice Jones (000013)

Access for Selected Employee:

- Menu Profiles
- Pay Users
- Org Roles
 - Payroll Salary Approver - Pay Group - Non Payroll
 - Payroll Salary Approver - Pay Group - Weekly Payroll
 - Payroll Salary Approver - Pay Group - Monthly Payroll (Uk)
 - Gdpr Organisation Role - Company - Abc Solutions
 - Payroll Salary Approver - Pay Group - Focus Payroll
 - Payroll Salary Approver - Pay Group - Monthly (Uk)

COPY ACCESS

5. Select the copy type from the drop-down list i.e. **Full Copy** or **Restricted Copy**.
6. Click **Copy Access**.
7. The *Assign Specific Access* prompt appears.

2.1.3. Assign Profile

The *Assign User Access* screen includes the option to assign a security profile to the employee.

The 'profile' is essentially a pre-defined set of Security Menu Profiles that have been grouped into one collection as a Security Profile.

HR Scenario	Example
Joiners & Movers	If all HR Administrators would typically have the same group of Menu Profiles assigned in Security, you could create a Profile called 'HR Administrator' and assign that to the employee instead.
Leavers	If the Assign Leaver Access screen is launched as part of the Leaver HR Task List, you can assign a Leaver Profile. This provides the employee with access to a set of menu profiles, for a specified period of time after the Date Left e.g. access for 14 days to access pay slips etc.

Assign Profile to Joiners & Movers

This section provides guidance on how to assign profiles via the *Assign User Access* screen, when it is launched via one of the following HR Task Lists:

- New Starter
- Re-Hire
- New Contract
- Additional Contract

To assign a profile via the *Assign User Access* screen:

1. On the *Assign User Access* screen, select *Profile* from the drop-down list at the top of the screen.
2. All of the profiles that have been configured on your environment are listed on screen.
See [3.2 Create Access Profiles](#) for guidance on how to set these up.
3. Select the required Profile. Menu Profiles that have been pre-configured appear on the right-hand side of the screen for display purposes only.

COPY ACCESS

4. Click **Copy Access**.

A message appears on screen to confirm that Access has been assigned correctly to the User in question.

Note: To assign specific data access, go to section [2.2 Assign Specific Access](#) for further guidance.

Assign Profile to Leavers

This section provides guidance on how to assign profiles via the *Assign User Access* screen, when it is launched via the Leaver HR Task List.

To assign a profile via the *Assign User Access* screen:

1. On the *Assign User Access* screen, all of the profiles that have been configured on your environment are listed on screen.
 - a. See [3.2 Create Access Profiles](#) for guidance on how to set these up.

2. Select the required Leaver Profile. Menu Profiles that have been pre-configured appear on the right-hand side of the screen for display purposes only

The screenshot shows the 'Assign Leaver Access' interface. At the top, a blue header bar contains a back arrow, the text 'Conor Murphy (000143)', and a 'SA' status indicator. Below the header, the main content area is titled 'Assign Leaver Access' with a breadcrumb trail: 'People Management > Employee Search* > Conor Murphy (000143)* > Assign Leaver Access'. The interface is divided into two main sections. The left section, titled 'Assign Leaver Menu Profile', displays the profile of the user being assigned: a purple circle with 'CM', Name 'Conor Murphy', and Job Title 'Administrator'. Below this is a search bar and a table of 'Leaver Profiles'. The table has two columns: 'Profile Name' and 'Expire Days'. One profile is listed: 'Leaver' with an expiry of '14' days. The right section displays the profile of the leaver: a red circle with 'LL', Name 'Leaver', and a search bar. Below this is a section titled 'Access for Selected Employee' with a dropdown menu for 'Menu Profiles'. A button labeled 'LEAVER MENU PROFILE ACCESS' is visible. At the bottom right, there is a green 'COPY ACCESS' button.

3. Click **Copy Access**.

Once the access has been assigned to the employee that is leaving the organisation, they get the new profile as of the effective date. This is then removed after that time period. As part of this process, when the expiry date arrives, the account is also de-activated.

2.2. Assign Specific Access

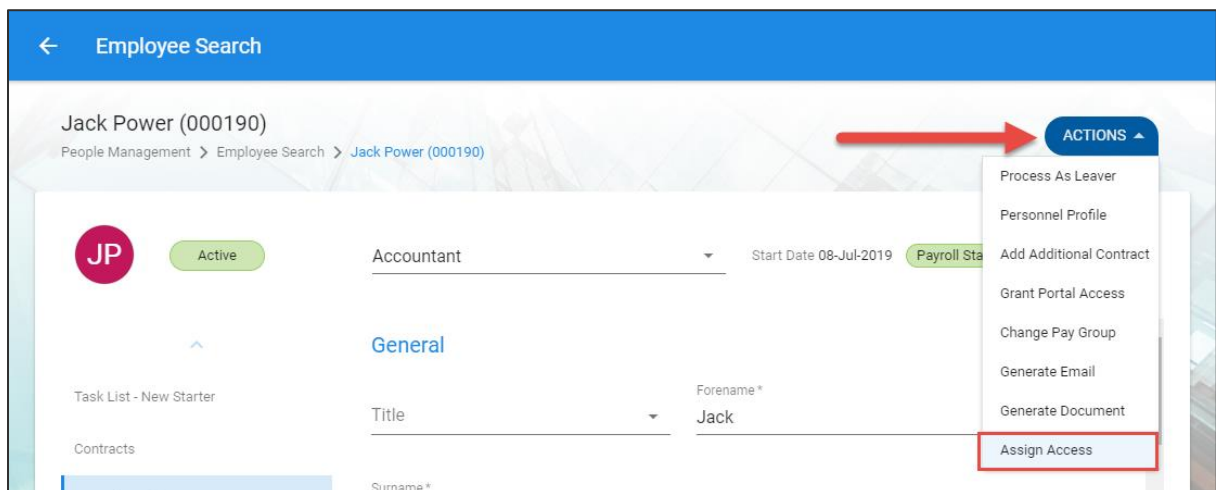

2.2.1. Overview

The *Assign Specific Access* screen is used to centrally manage the employee's security privileges, without copying from another employee or profile.

This screen provides you with a list of all of the available security categories from which you can select and define the access required for that employee.

There are two ways to access this screen:

1. When you complete the full/restricted copy or profile copy for the employee, the *Assign Specific Access* prompt appears.
 - This is an optional step and allows you to complete additional security configuration for your employee if required. For example, if you complete a restricted copy that excluded data access, you can use this option to go ahead and assign the data access that they require.
 - Click **Yes** to access the screen.
2. On the employee record, click **Actions** and select **Assign Access**.

2.2.2. Assign / Update Specific User Access

Follow these steps to assign/update the user's security on PeopleXD.

1. Select the *Access Category* on the left-hand side of the screen.

This is a list of all of the security categories that are available to manage centrally for the employee.

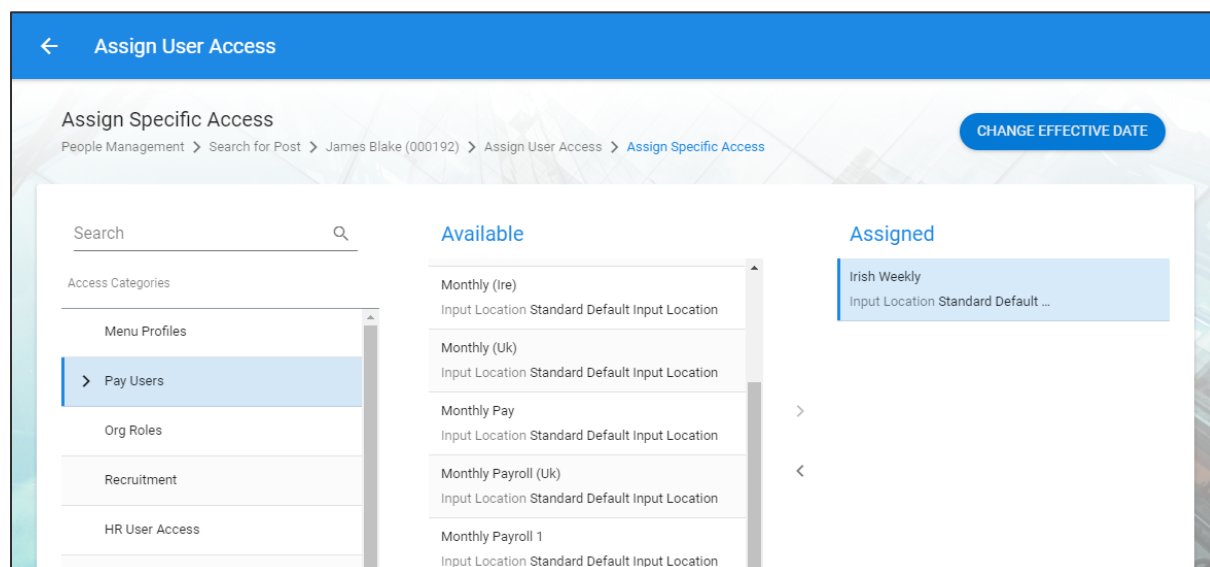

For example:

- To assign Menu Profiles, select **Menu Profiles**.
- To update access to data on People Management, select **HR User Access**.

Once selected, the screen update to display the options specific to that category.

2. Select the required access privilege(s) from the *Available* list and add to the *Assigned* list using the designated arrows.

For example, to update and manage payroll access, select *Pay Users*, then select the required Pay Group(s) on the *Available* list and add to the *Assigned* list.

3. To apply the changes from a specific date, click the Change Effective Date button at the top right of the screen and update the date.

Note: For more information, see the **Assign Access** user guide.

2.3. Assign / Remove Bulk User Access

The *Bulk Assign Access* screen allows you to assign or remove security privileges to a group of users in bulk.

Firstly, the system needs to know what employee records to update. This is identified using an Insight report. The report runs from the *Bulk Assign Access* screen and return the required employees on screen, ready to be updated.

Note:

It is only possible to update records that you currently have access to on the system. When the Insight report is generated, records appear based on your *System Users (Data)* access e.g. if you don't have access to the employee / contract in People Management / Payroll etc, you won't have access to it here.

Follow these steps to update access for a group of employees in bulk.

1. Create a report in *Insight* to retrieve the list of employees to be updated.
 - a. Person Reference (Employee ID) must be included in the report.
 - b. Any other columns that you add to the report are not displayed in the Bulk Assign Access screen, but may be useful to you to add to the report to ensure that the correct set of data is being retrieved e.g. name, department etc.
2. Go to *Data Centre > Bulk Assign Access*.

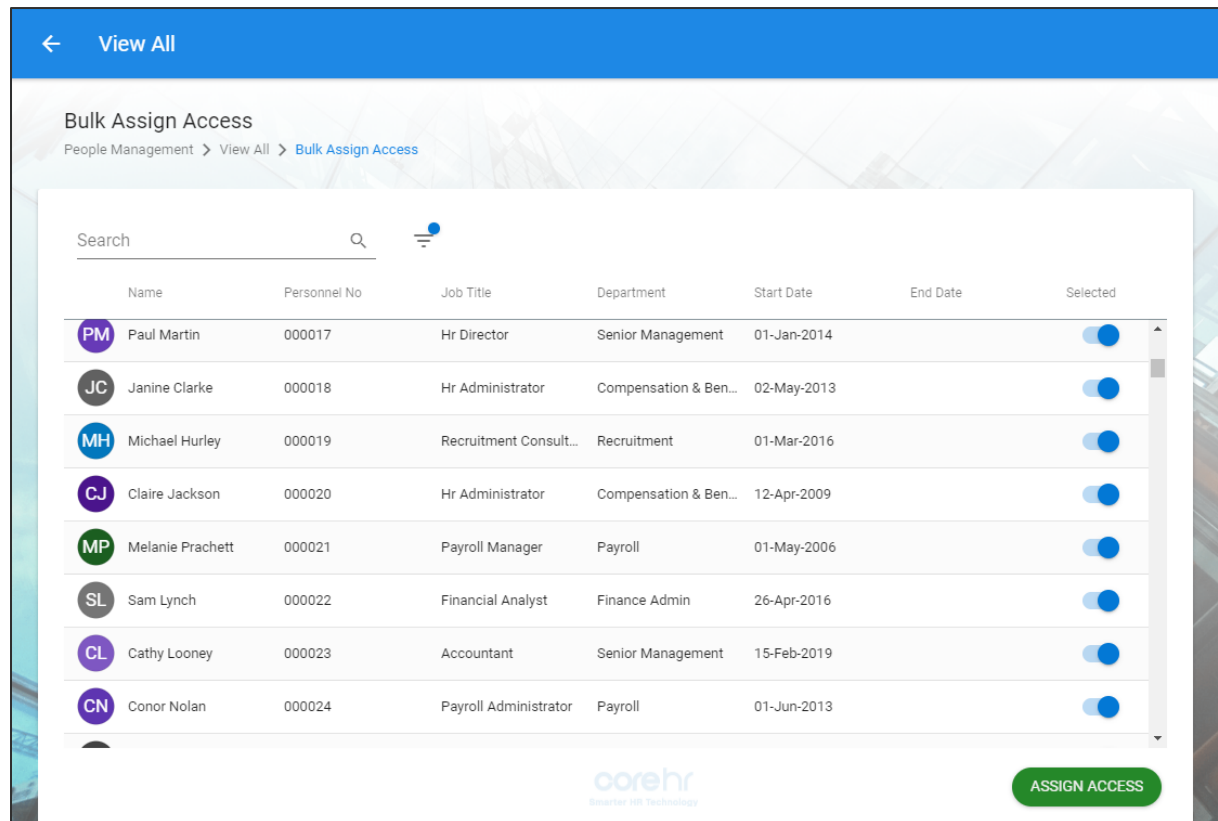

The *Insight Report* pop up appears.
3. Select the required Insight report from the Reports drop-down list.
4. Click **Apply**.

The screen updates to display the employees in the report.

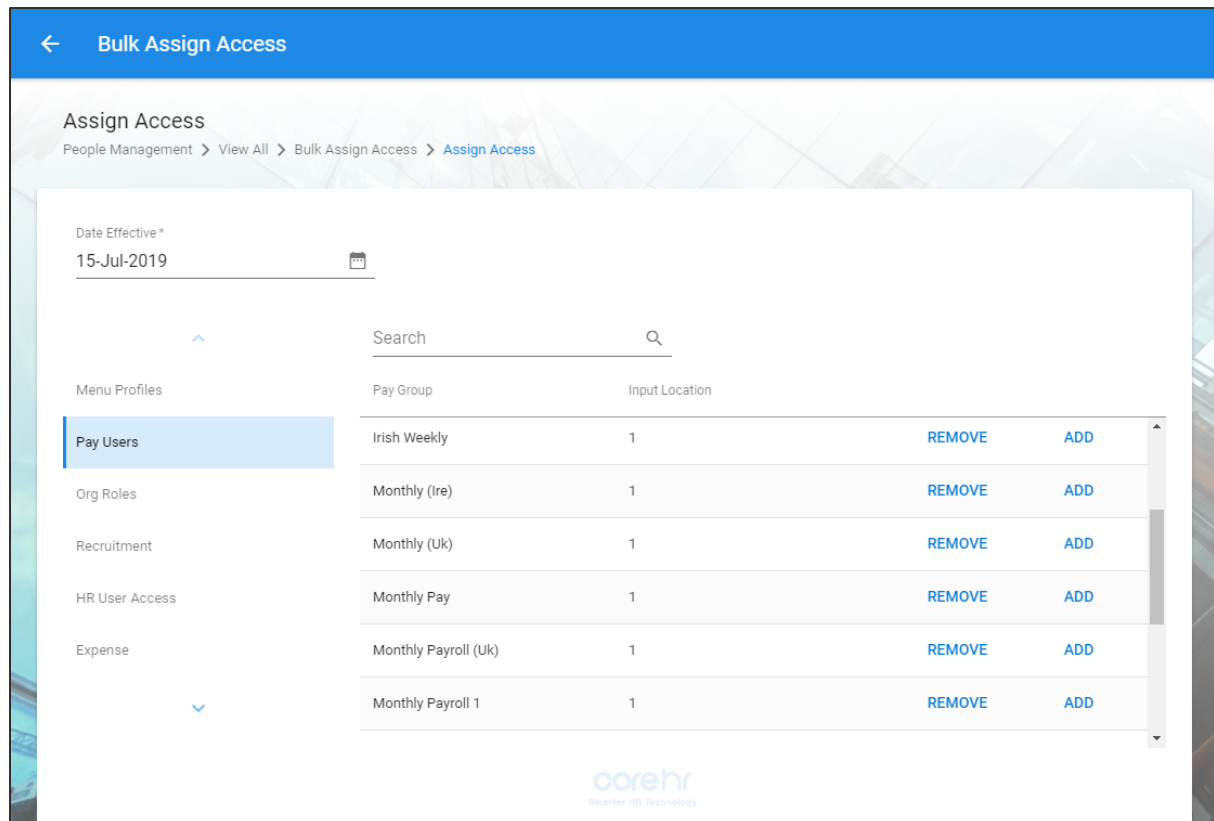

Note:

The screen does not display the full report data. The columns displayed on the screen are fixed. The Insight report is only used to confirm what employee records display.

5. Update the **Selected** indicator for the employees that you want to include in the bulk update.
6. Click **Assign Access**.
The *Assign Access* screen opens.
7. Select the *Date Effective* that access is to be granted from.
8. Select the access category from the list available on the left-hand side of the screen.
Once selected, the screen updates to display the options specific to that category.
9. Add/remove the access as required.

- Click **Add** to assign access to the whole group.
- Click **Remove** to revoke access to that option for the whole group.

All access categories include the Add or Remove options as per the screenshot above, with the exception of the Org Roles option.

To add an org role:

- Click **Add Org Role**.
- Provide the details of the org role to be assigned.
- Click **OK**.

The screenshot shows the 'Bulk Assign Access' dialog box in the XD Security interface. The dialog is titled 'Add Org Role' and contains the following fields:

- Structure* (dropdown)
- Role* (dropdown)
- Org Group* (dropdown)
- Org Item* (dropdown)
- Date From* (calendar icon)
- Date To (calendar icon)

At the bottom of the dialog are 'CANCEL' and 'OK' buttons. The background shows a sidebar with 'Org Roles' selected and a main area with 'Assign Access' and 'Bulk Assign Access' tabs. The 'Assign Access' tab is active, showing a list of roles and a 'Date Effective' field set to '15-Jul-2019'. The 'Bulk Assign Access' tab is also visible, showing a list of roles and a 'Date To' field.

To remove an org role:

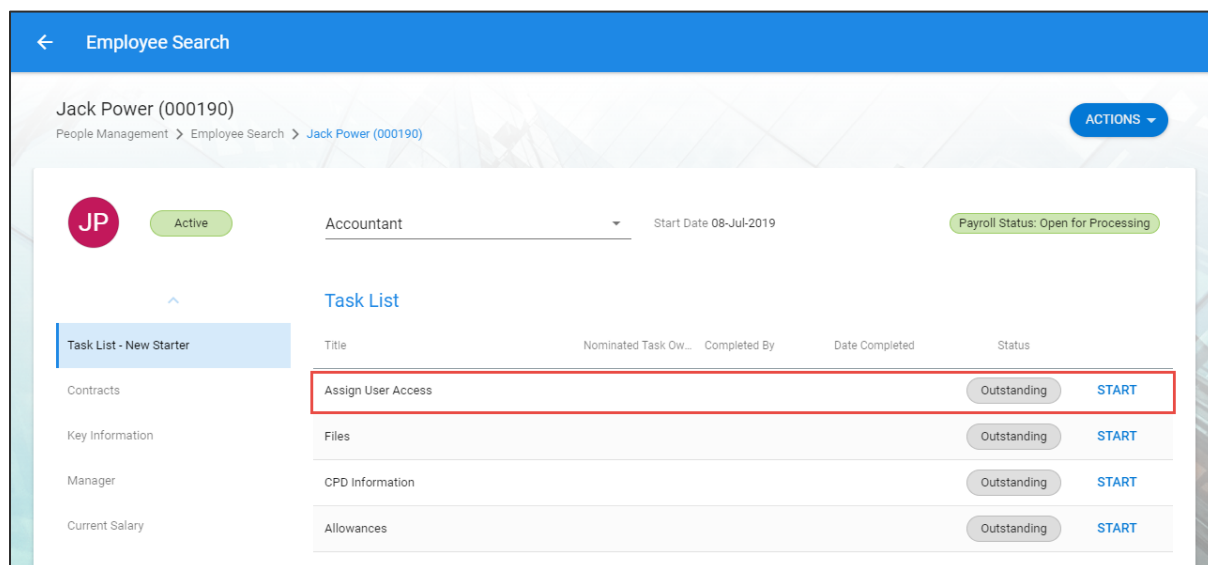

- Click **Remove Org Role**.
- A similar screen to above appears, requiring you to specify the full details of the org role to be revoked.

3. Configuration

3.1. User Access

3.1.1. Access to Assign User Access

The following menu options are required to manage the user's access via the *Assign User Access* and *Assign Leaver Access* tasks i.e.:

System	Menu Option
People Management	Copy User Access
People Management	Assign Specific Access

The following menu option is required to access the Assign Specific Access screen for an employee either via:

- The Assign Specific Access prompt that appears after the Copy Access process.
- **Or**
- The **Actions > Assign User Access** option on the employee record.

System	Menu Option
People Management	Assign Specific Access

Finally, for all user access processes, the following Web Services menu options are also required. Enabling the 2 menu options listed in the table below, enables all sub-menu options for these which are also required.

System	Menu Option
Web Services	System
Web Services	People

3.1.2. Access to Bulk User Access Assignment

The following menu option is required to access the *Bulk User Access* option in the *Data Centre*.

System	Menu Option
People Management	Bulk Assign Access

3.1.3. Access to Create Access Profiles

The following menu option is required to access the *Access Profile Configuration* option in the *Data Centre*.

System	Menu Option
People Management	Access Profile Configuration

3.1.4. Access to Manage Copy Access Configuration

The following menu option is required to access the *Copy Access Configuration* option in the *Data Centre*.

System	Menu Option
People Management	Copy Access Configuration

3.1.5. Default Menu Profiles

The following two menu profiles have been created on the system by default to include the above menu options. Once assigned to a user, the user has access to these menu options automatically.

Profile	Description
JML_ACCESS	This gives you all privileges to assign remove copy access for all different areas.
JML_ACCESS_CONFIG	This gives you access to configure the deep shallow copy and create profiles.

3.2. Create Access Profiles

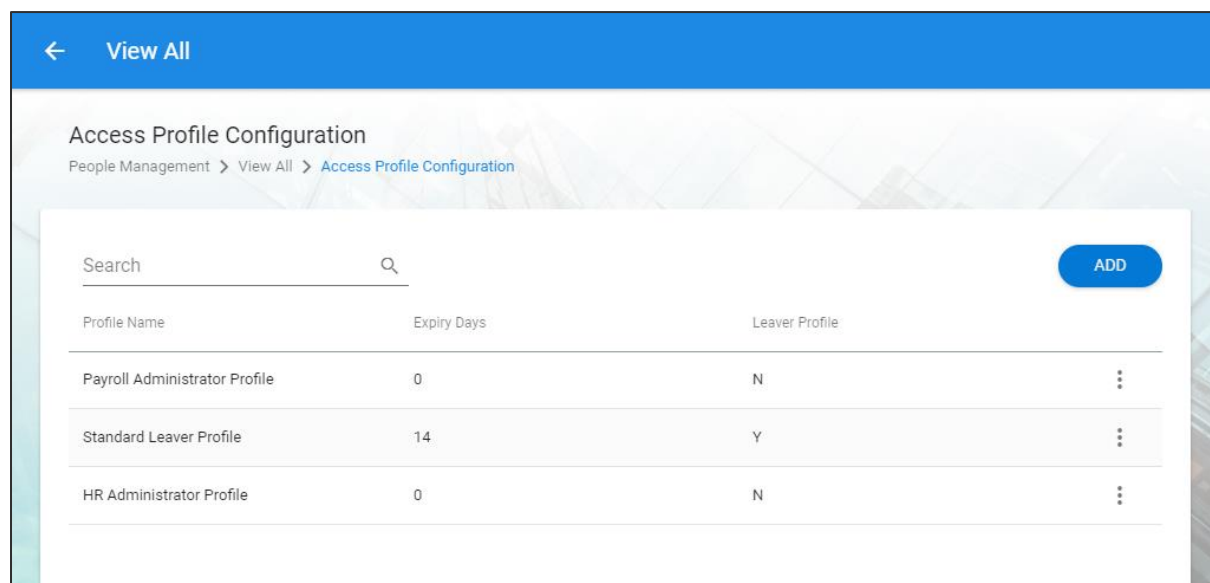

There are 2 types of profiles:

Profile	Description
Access Profile	A collection of menu profiles that give the user access to various parts of the PeopleXD system. Generally used for joiners and movers.
Leaver Profile	1 or many menu profiles that are given to the user as part of the leaver process, which controls what they have access to on Portal after their Date Left.

Follow these steps to configure the Access Profiles that are available on the *Assign User Access* and *Assign Leaver Access* task screens:

1. Quick jump to the *Data Centre* widget.
2. Click **View All**.
3. Search for and select **Access Profile Configuration**.

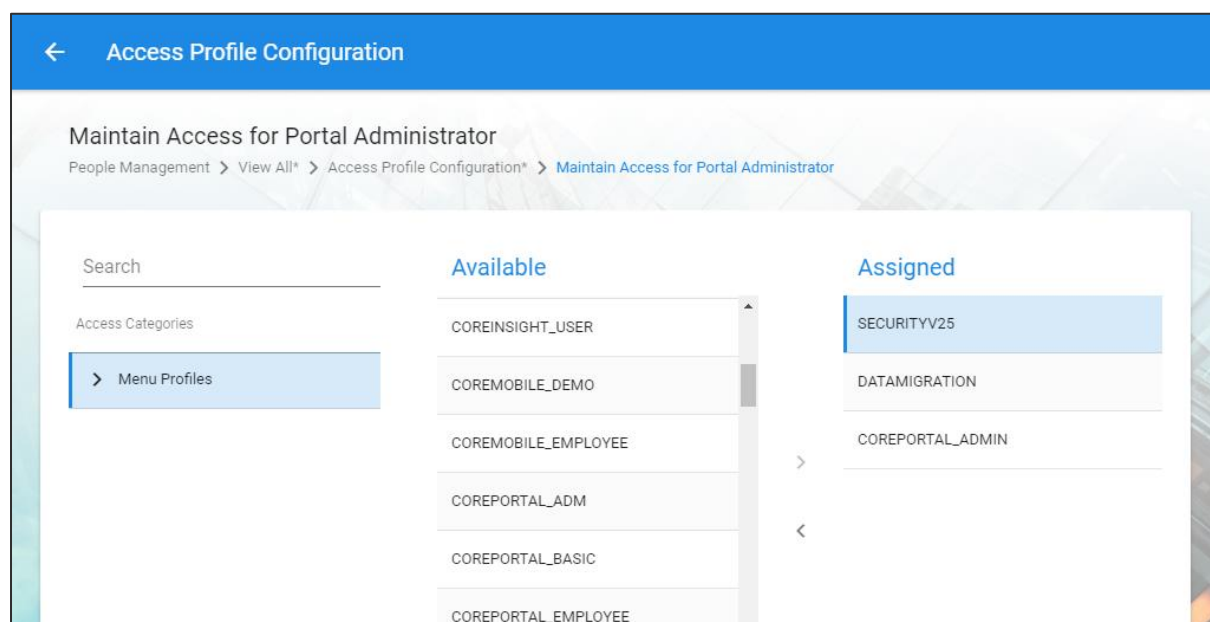

The screen lists all profiles that are currently configured for your organisation. This is blank if you have not configured any profiles.

To add a new Access Profile:

1. Click **Add**.
2. Provide a *Profile Name*.
3. Click **OK**.
4. Select the required menu profiles from the Available list and add to the Assigned list.

Changes are saved automatically.

To add a new Leaver Profile:

1. Click **Add**.

2. Provide a *Profile Name*.
3. Select the **Leaver Profile** indicator.
4. Provide the Expiry Days.
 - a. This is the number of days after the employee's end date that access to CoreHR is still provided. After this, access is revoked. As part of this, when the expiry times arrives, the account is de-activated.
5. Click **OK**.
6. Select the required menu profiles from the Available list and add to the Assigned list.

Changes are saved automatically.

To update an existing profile:

1. Click the three dot menu.
2. Select the required options:

Option	Explanation
Edit Access	Allows you to add / remove menu profiles.
Edit Profile	Allows you to update the <i>Profile Name</i> , <i>Leaver Profile</i> indicator and <i>Expiry Days</i> .
Delete	Deletes the profile.

3.3. Copy Access Configuration Settings

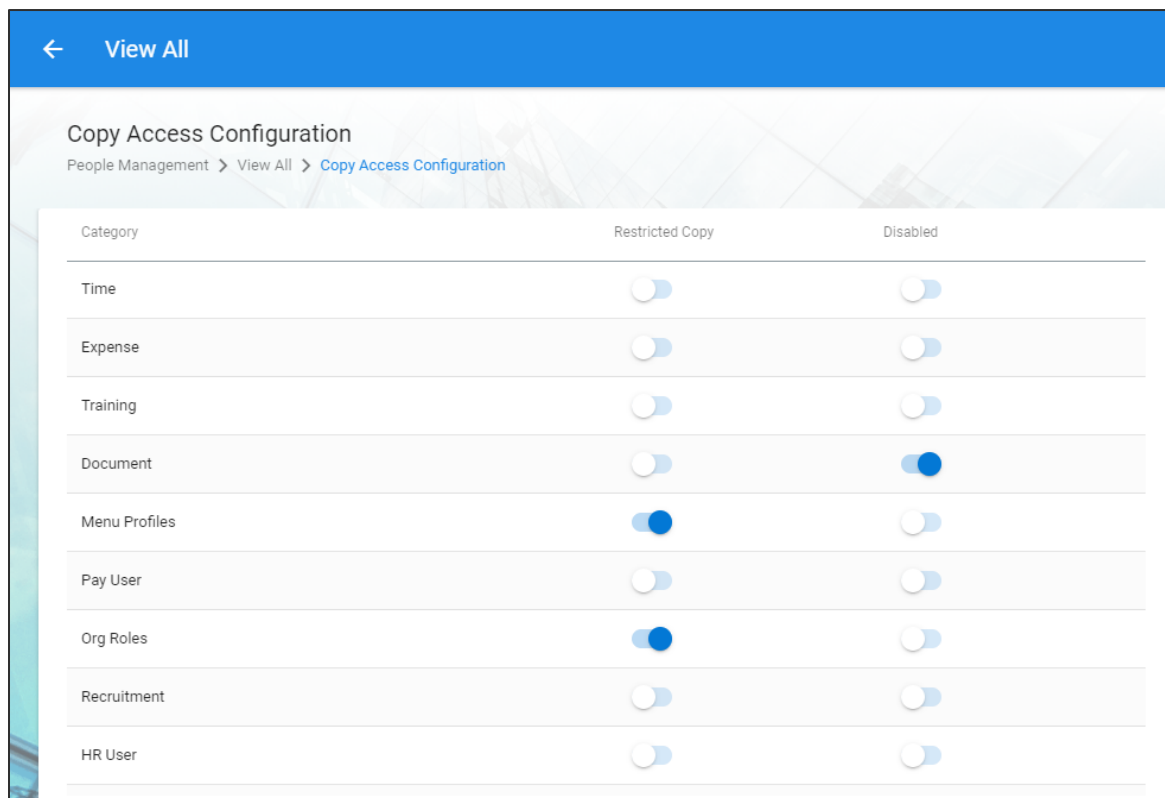

It is possible to define what security items are to be included in the Copy Access process. There are 2 configuration options for this:

- Exclude items from both full and restricted copy.
- Flag items to be included in the restricted copy only.

Follow these steps to configure the items to be included in the Copy Access process:

1. Quick jump to the *Data Centre* widget.
2. Click **View All**.
3. Search for and select **Copy Access Configuration**.

The Copy Access Configuration screen opens with a list of all of the security categories.

Category	Restricted Copy	Disabled
Time	☐	☐
Expense	☐	☐
Training	☐	☐
Document	☐	☒
Menu Profiles	☒	☐
Pay User	☐	☐
Org Roles	☒	☐
Recruitment	☐	☐
HR User	☐	☐

4. To prevent a category from being included in both copy types i.e. for Full Copy and Restricted Copy, switch on the **Disabled** indicator.

 Note:

- Changes are saved automatically.
- These categories will never be included in the copy processes.

5. To flag an item to be included in the *Restricted Copy* process, switch on the **Restricted Copy** indicator.

 Note:

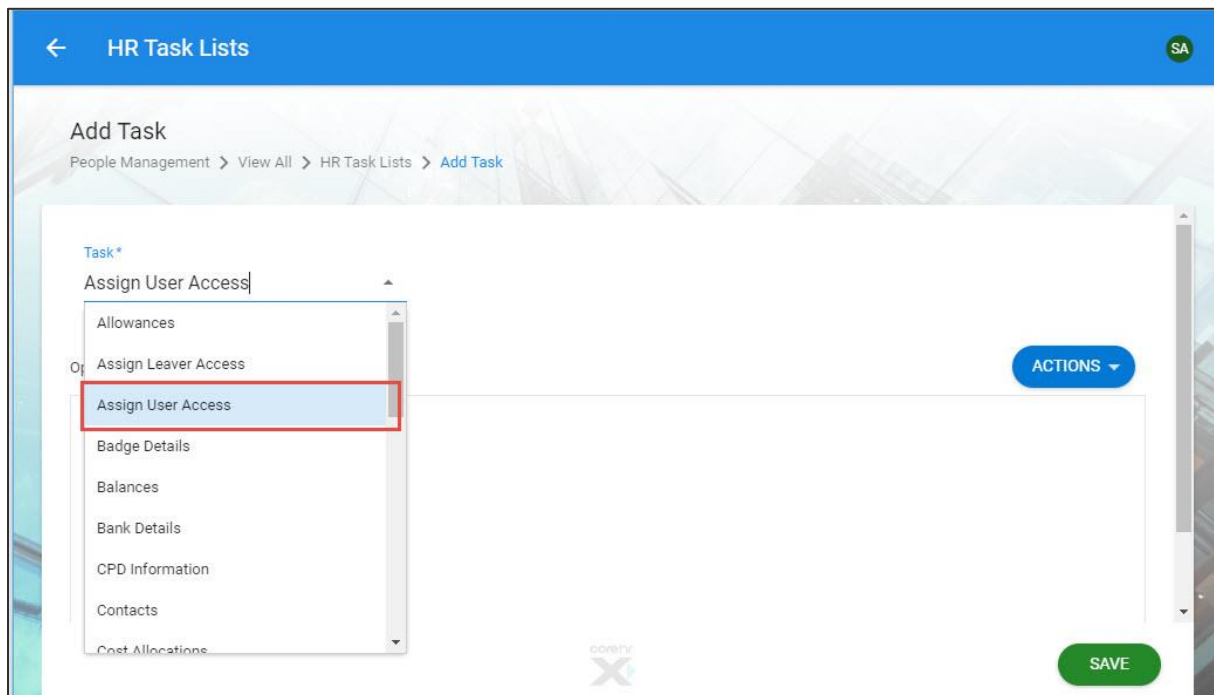

- Changes are saved automatically.
- When using the *Restricted Copy* process, only items with this indicator on are included.

3.4. Task List Configuration

The *Assign User Access* and *Assign Leaver Access* tasks must be added to the required HR Task Lists, in order for these to be available to update for the employee via People Management.

Follow these steps, to update the configuration of the HR Tasks Lists:

1. Quick jump to the *Data Centre* widget.
2. Click **View All**.
3. Search for and select **HR Task Lists**.
4. To add a new task item to a task list:
 - a. Select the task list from the tabs at the top of the screen.
 - b. Click **Add**.
 - c. Select the task from the drop-down list.
 - d. Click **Save**.

For joiners and movers, the *Assign User Access* task can be added to the following task lists, as required:

- New Starter

- Re-Hire
- New Contract
- Additional Contract

It is not recommended to add this task to the Leaver task list.

For leavers, the *Assign Leaver Access* task can be added to the Leaver task.

Note:

For further information on configuring Task Lists, refer to the [Configuring Task Lists - User Guide](#), which includes details on:

- Task Owners
- Restricting Access
- Notifications
