1. Overview

1.1. Purpose of the Guide

The purpose of this document is to provide guidance on the *Language Pack* in CorePortal. This includes the following:

- What is the Language Pack?
- How to update a Language Pack label.
- What is the Enable Language Pack option?
- How to set a language preference.
- Configuring user access to the Language Pack.

1.2. What is the Language Pack?

The *Language Pack* provides a library of all labels/phrases on CorePortal. Users with access to this screen can update the labels that are displayed on the CorePortal screens.

Multiple languages are supported on CorePortal.

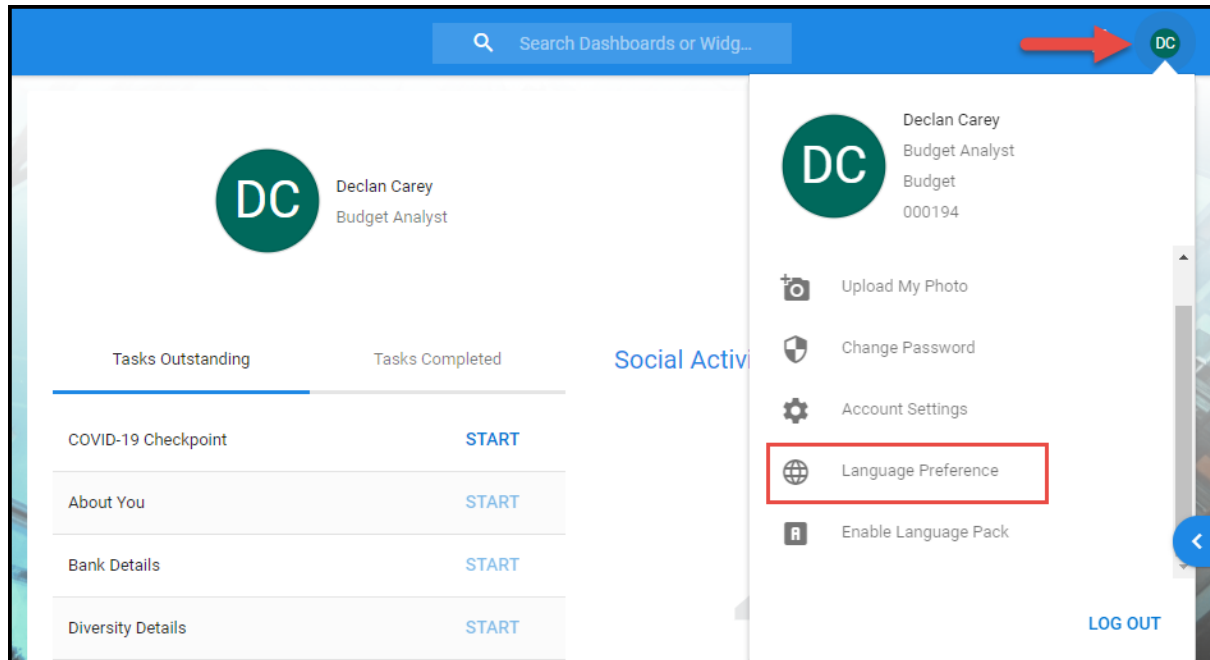

- These are managed by CoreHR and made available to all customers on the *Language Pack* screen. See [2.2 Searching for Language](#) for guidance on what languages are available.
- Customers cannot create new languages. However, you can update the default labels supplied for any of the languages supplied by CoreHR,

1.3. Updating Language Preference

All users of XD Portal have the option to update their language preference.

To do this:

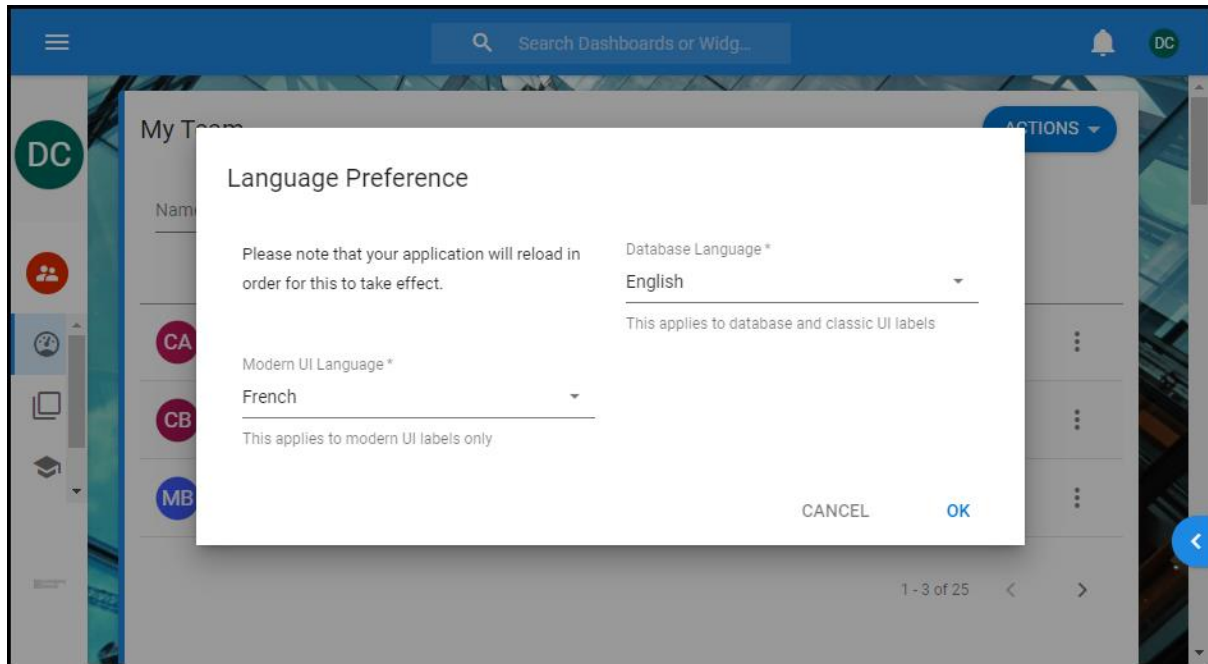

1. Click the user profile menu and selecting **Language Preference**.

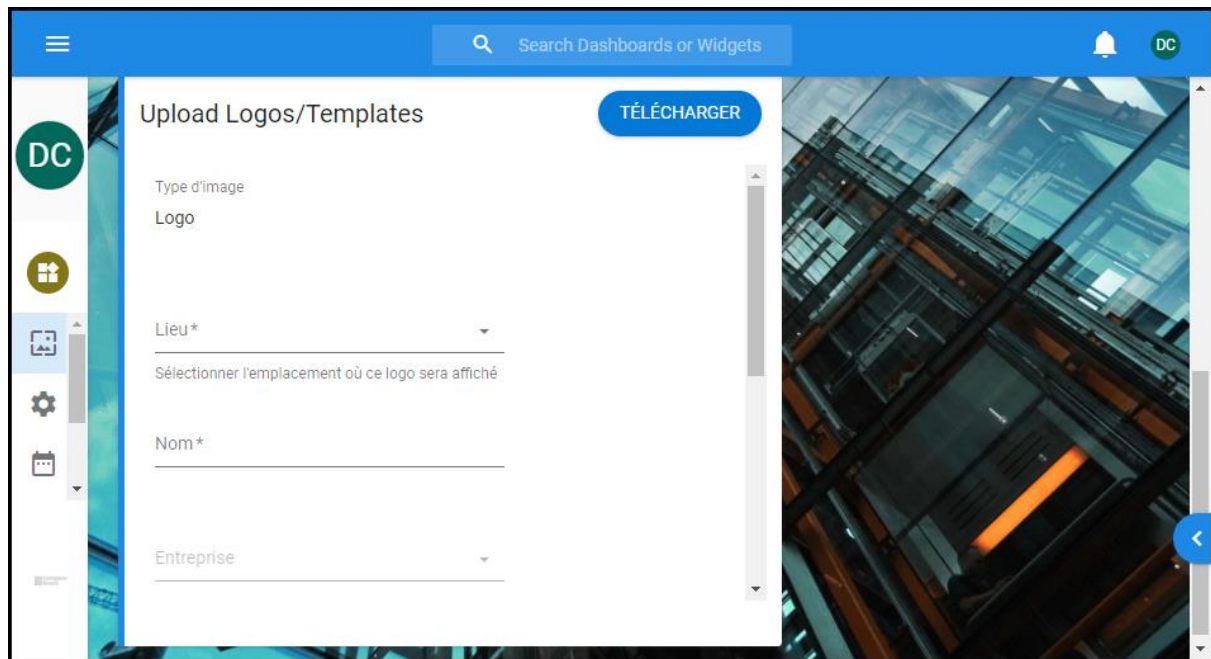

2. Select your language on the *Language Preference* screen:

- a. Select the language from the *Modern UI Language* list.

This is the list of languages that are configured for the Modern UI, and corresponds to the list that as an admin you can configure on the Site Manager > Language Pack screen, as seen in section [2.2 Searching for Language](#).

- b. The *Database Language* drop-down list is related to the Classic UI language pack. You can select an option here, but it will not update the language of the labels for any of the Modern UI screens.
3. Click **OK**.
 - a. The language is automatically applied. XD Portal reloads with the new language, see image below.

Note: Your language preference is saved for your account. If you log out and log back in at a later stage, the language will reflect your most recent selection for *Language Preference*.

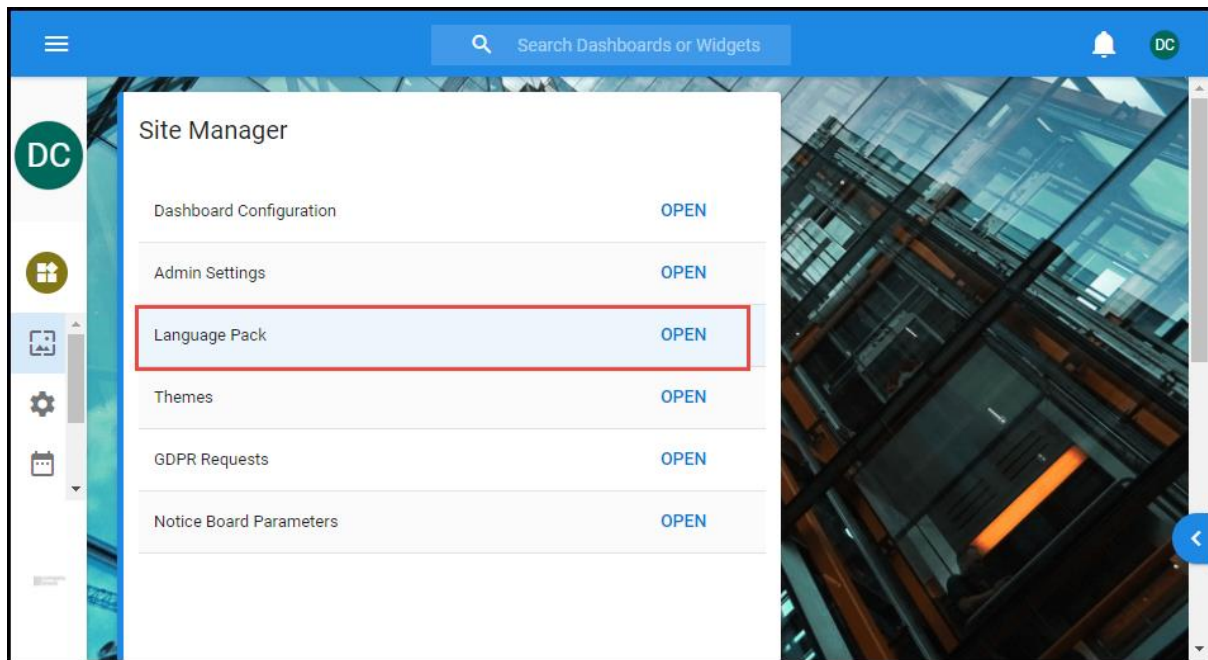

2. Using the Language Pack

2.1. Language Pack Overview

2.1.1. Accessing the Language Pack

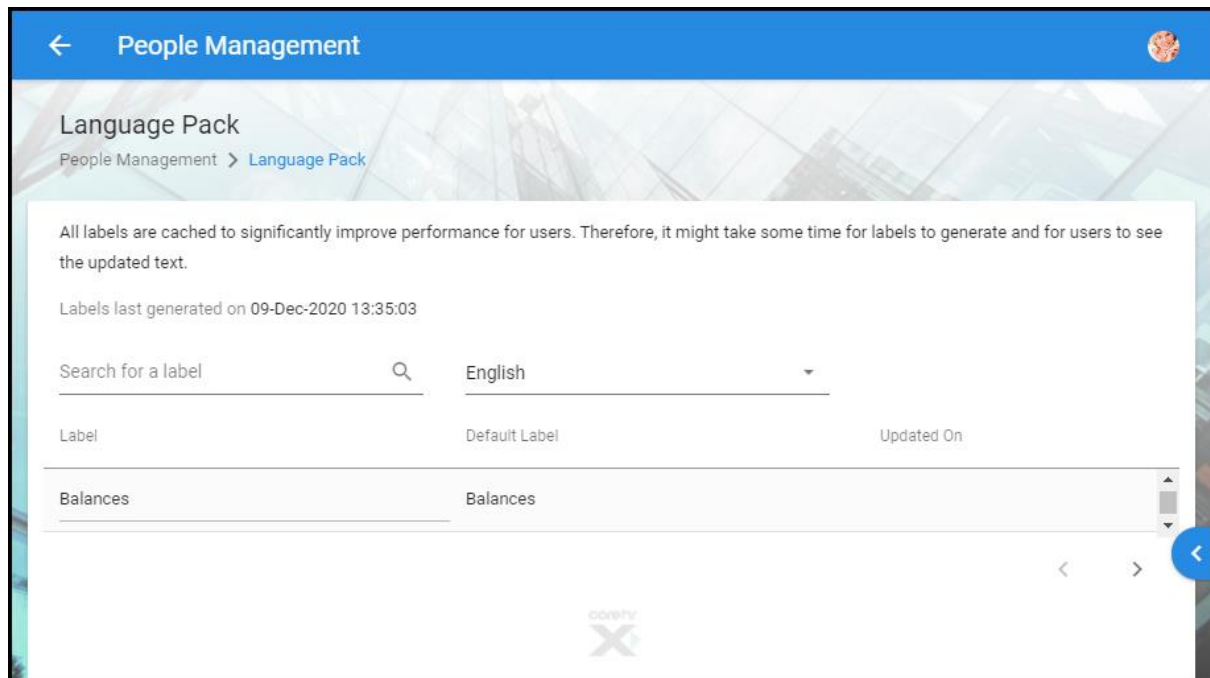

Follow these steps to access the *Language Pack*:

1. Quick jump to the *Site Manager* widget.
2. Click **Open**, for the *Language Pack* option.

2.1.2. Screen Overview

This section provides an overview of the *Language Pack* screen i.e.

This screen allows you to search through all language packed labels/text on CorePortal and update any text as required.

Field	Description
Label	This is the text that is currently used for that phrase.
Default Label	This is the default text used for that label on install of CoreHR.
Updated On	This is the most recent date that the label was updated on your instance of CoreHR. If this is blank, this means the label has not been updated and the default label is still in use.

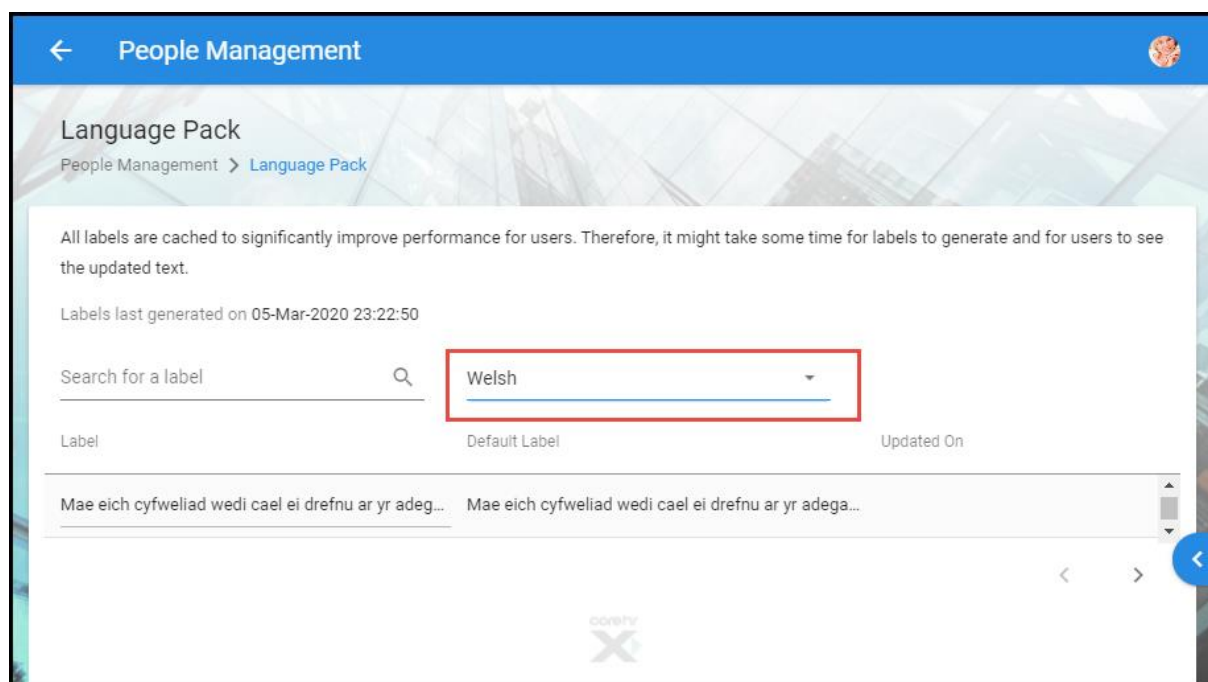

2.2. Searching for a Language

CoreHR provides the following language packs i.e. pre-configured label translations for the following languages:

- English
- French
- Gaeilge
- Welsh

Follow these steps, if you wish to view/update the labels for these languages.

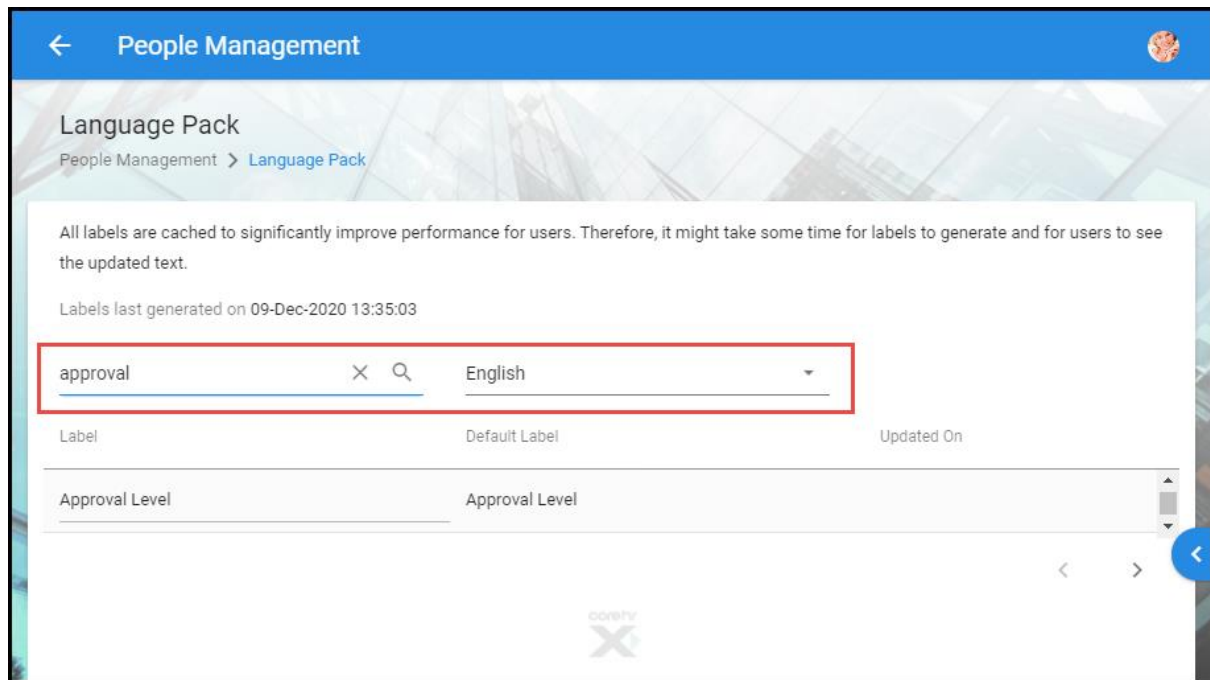

1. Quick jump to the *Site Manager* widget.
2. Click **Open**, for the *Language Pack* option.
3. Select the required language from the drop-down list.
4. The screen automatically updates to show the labels for that language. From here you can search for an update the labels for that language only.

2.3. Searching for a Label

Follow these steps to search for a label:

1. *Optional:* Select a language from the drop-down menu. This is defaulted to “English”.
2. Enter the text to be searched in the search box and hit return.
 - a. This searches text in both the *Label* and the *Default Label* fields.
 - b. The screen updates to display all labels that include the key word searched.

For example, searching for the word “applicant” returns all labels on CorePortal that include that text e.g. “Applicant”, “Applicant Activity”, “Applicant Assessment” etc.

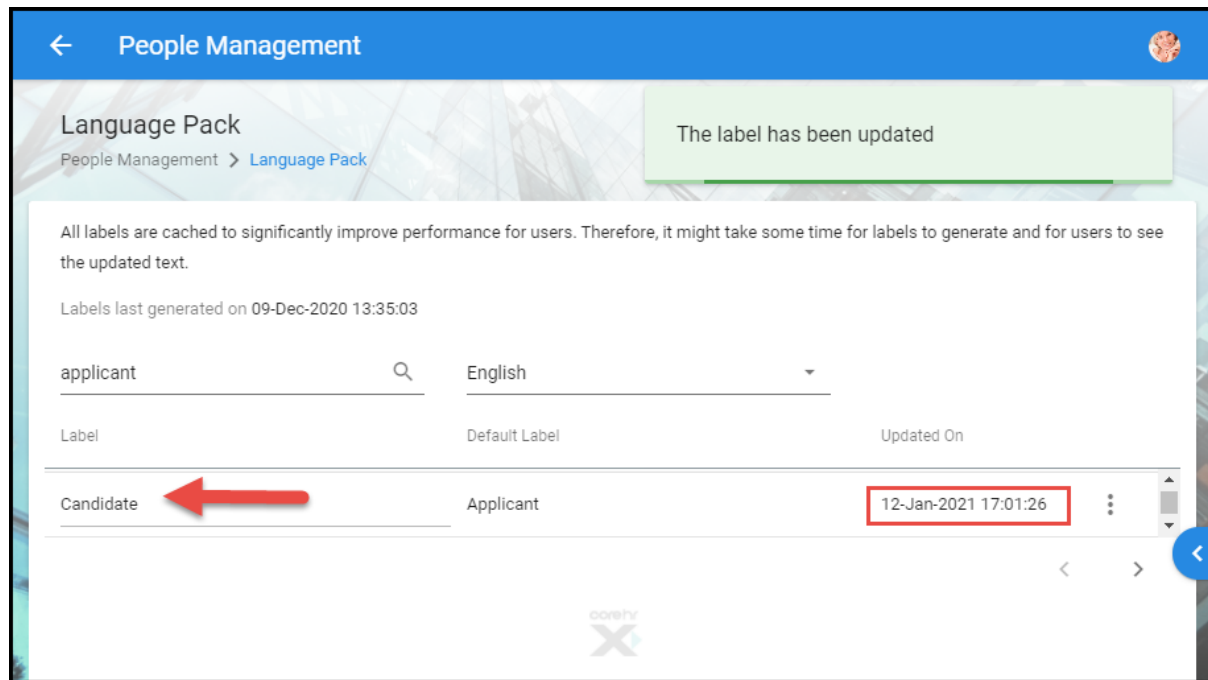

2.4. Update a Language Packed Label

Follow these steps to update a label:

1. Search for the label text e.g. “Applicant”.

The screen updates to display all labels that include the keyword searched.
2. For the required label, click into the Label field and overwrite the text.

Enter the new text required in the *New Phrase* field e.g. “Candidate”.

Changes are saved automatically.

- The label is updated for all instances e.g. if there are 8 instances of the *Applicant* label.
- The *Updated On* field displays the date and time that the label was updated.
- The *Default Label* is still displayed i.e. "Applicants". This is useful for future reference, to identify what the CoreHR default text is for this label.
- This label will return in searches using either the text for the current updated label (e.g. "Candidate") or the default label (e.g. "Applicant").

Note: In order to see the changes applied to CorePortal, you will need to log out of CorePortal and log back in. The labels are linked to your current session. This is cleared when you log out. When you log back in, you will see the changes applied.

2.5. Change a Label Back to the Default Value

Follow these steps to update a label to the original default value:

1. Search for the label text e.g. "Candidate".
The screen updates to display all labels that include the keyword searched. Take note of the default value for the label e.g. "Applicant".
2. Overwrite the *Label*. Enter the new text required e.g. "Applicant".
 - Changes are saved automatically.
 - The label is updated for all instances.

 **Note:** In order to see the changes applied to CorePortal, you will need to log out of CorePortal and log back in. The labels are linked to your current session. This is cleared when you log out. When you log back in, you will see the changes applied.

2.6. Enable Language Pack Mode

If you have access to the *Language Pack* on the *Site Manager* widget, you have access to the *Language Pack Mode* feature. Enabling language pack mode refreshes the CorePortal screen to highlight all labels that are language packed and available to update. This allows you to directly update the label on the screen, without needing to go to the *Language Pack* screen to do this.

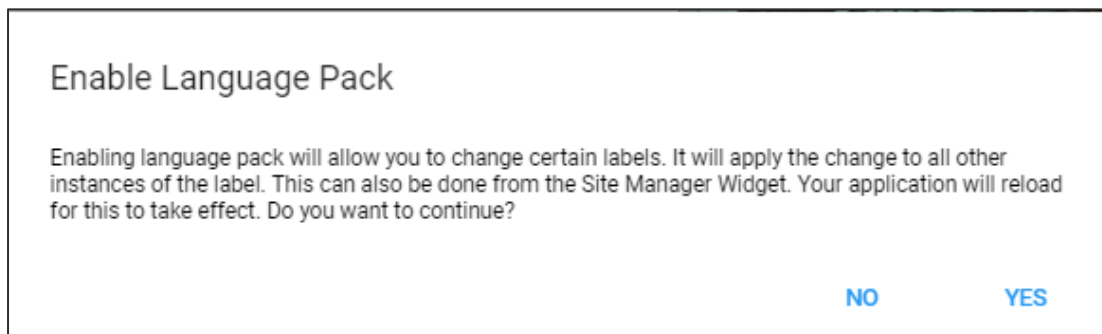

Follow these steps to edit a label in language pack mode:

1. Click the user profile menu and select **Enable Language Pack**.

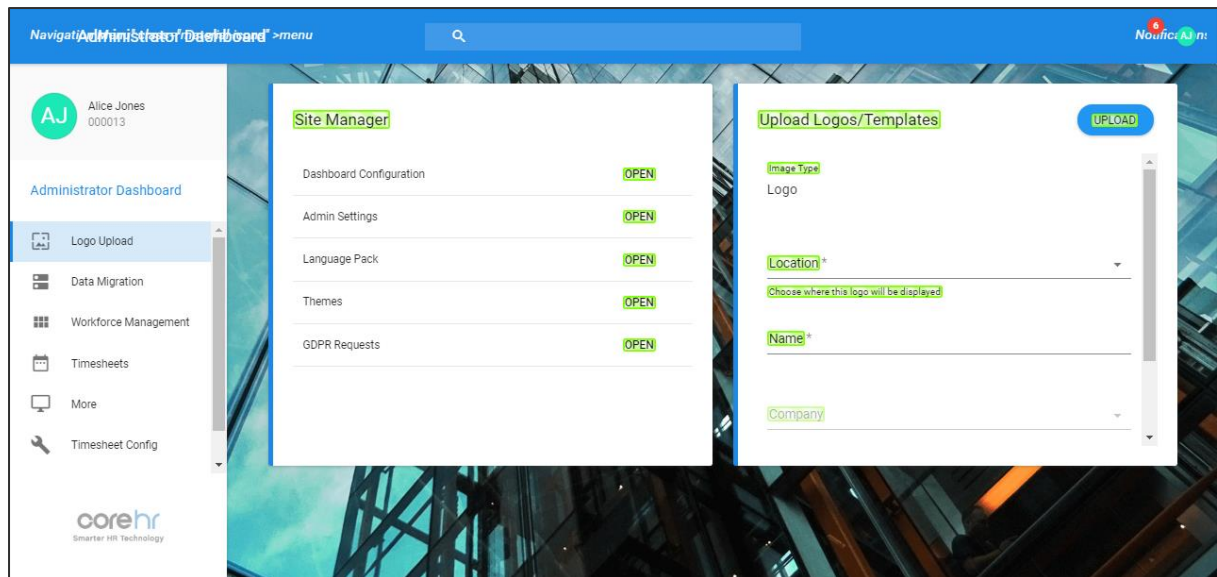

A pop-up message appears to confirm the impact of this.

- a. Click **No** to cancel.
- b. Click **Yes** to continue.

The screen reloads.

All labels that can be updated directly on screen are highlighted in green (see screenshot on the next page).

2. To update a label:

- a. Click the highlighted label e.g. "Site Manager". A pop-up appears, to provide the following details:
 - i. **Default Phrase** i.e. the CoreHR default. If the label has been updated before, this may be different to the label currently in use.
 - ii. **How often this phrase appears** i.e. if this appears more than once on CorePortal
- b. On the pop-up window, enter the *New Phrase* and click save.

Site Manager

Default phrase: Site Manager

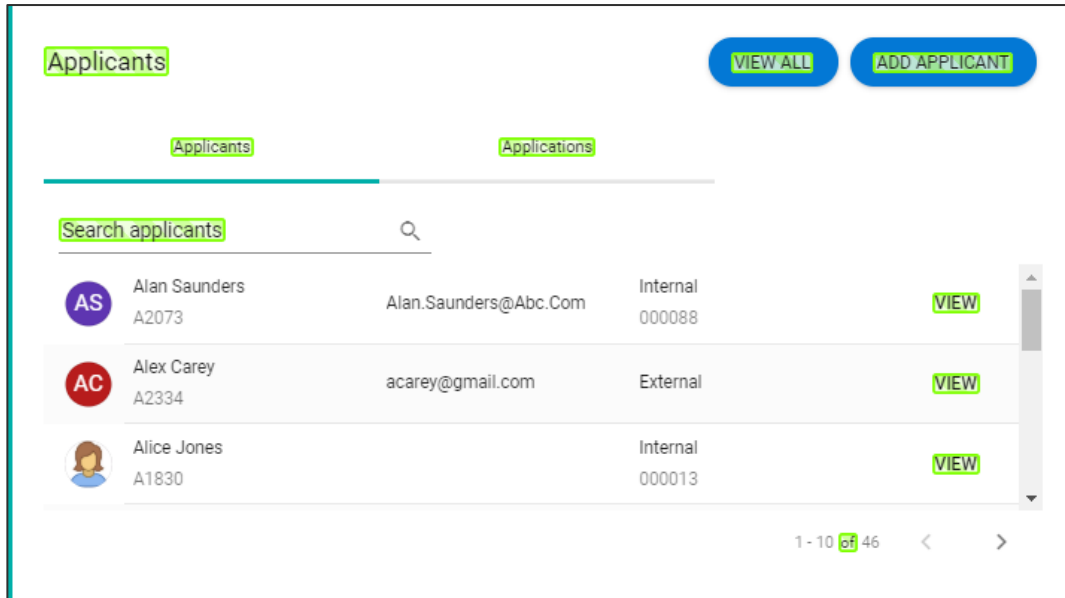

How often this phrase appears: 2

New Phrase

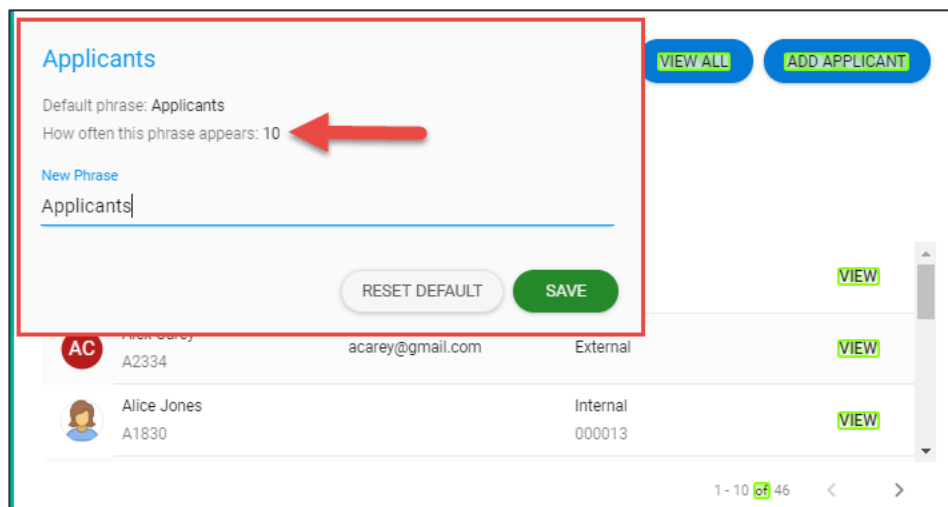

Site Manager

RESET DEFAULTSAVE

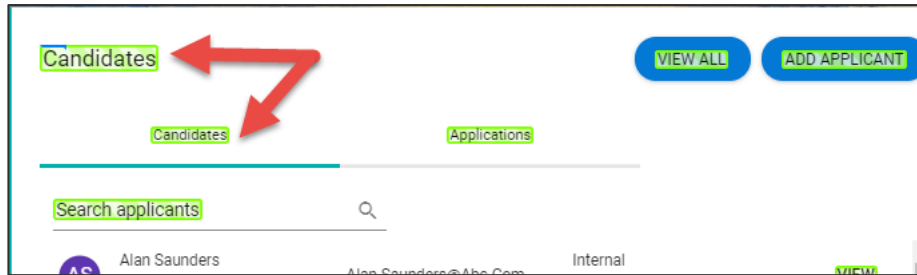

Similar to the *Language Pack* screen, it is possible to update all instances of a label at once. For example, see the *Applicants* widget (next page):

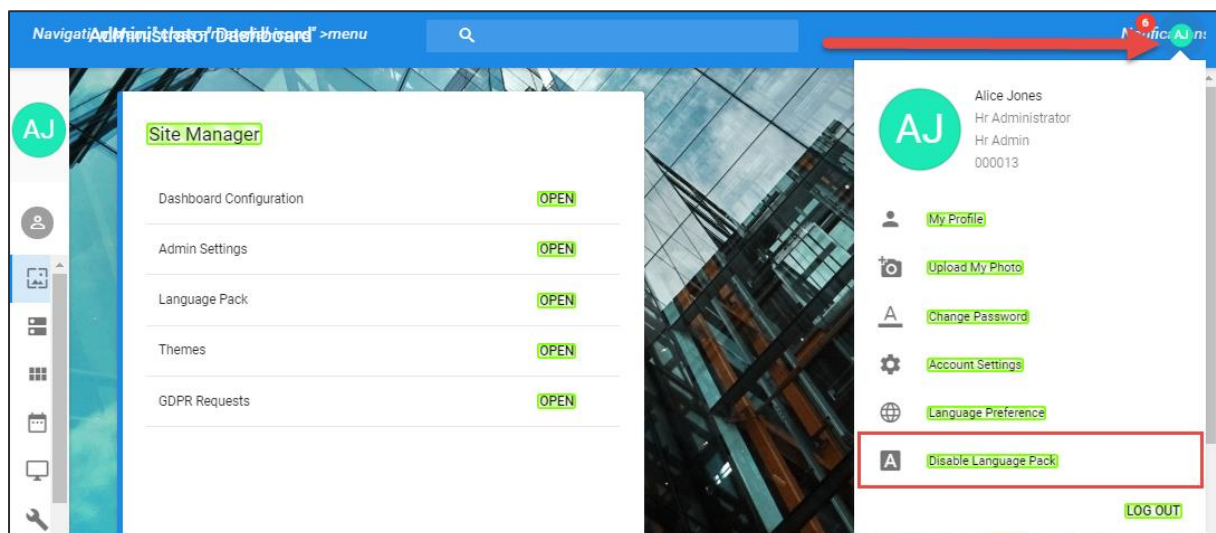

Clicking on the *Applicants* phrase, indicates that there are 10 instances of that label on the system. Any changes made to that label will be updated on all instances at once.

For example, see the 2 (of the 10 total) instances on that widget that were updated by this one action.

- c. While you are in *Language Pack Mode*, you can navigate through the full system (to all screens that you have access to) and make any required updates.
3. When finished with the required updates, disable the language pack mode by clicking the user profile menu and selecting **Disable Language Pack**.

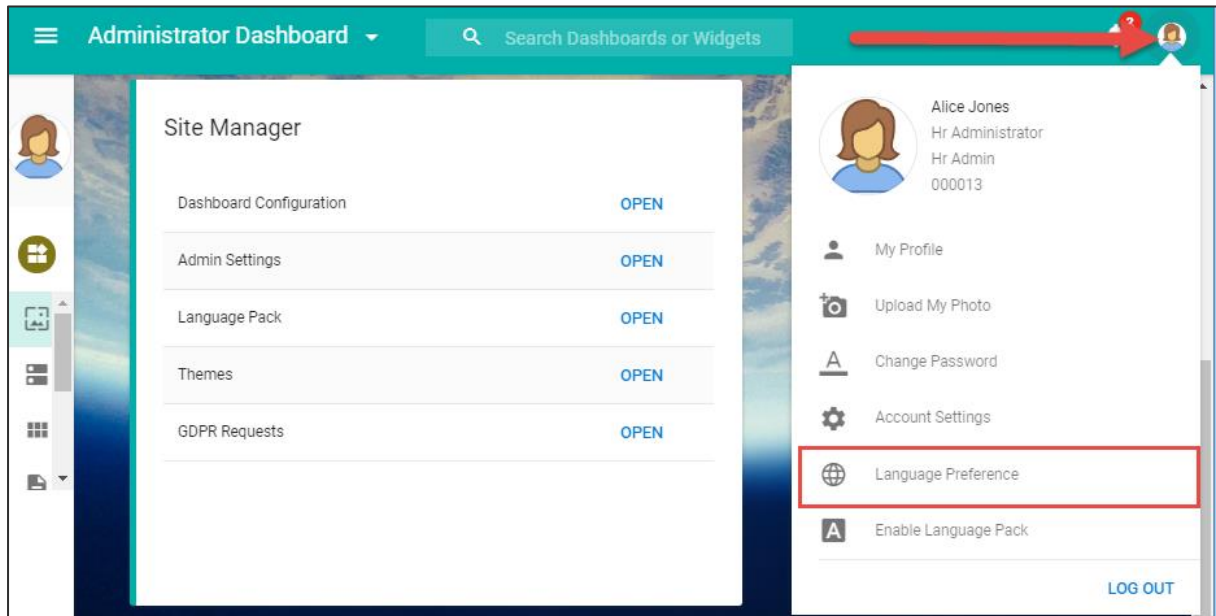

The screen reloads in normal mode.

Note: In order to see the changes applied to XD Portal, you will need to log out of XD Portal and log back in. The labels are linked to your current session. This is cleared when you log out. When you log back in, you will see the changes applied.

2.7. Update the Label for Dashboard Tabs

Dashboard tab names are not included in the language pack. However, it is possible to update these, for each language. To do this:

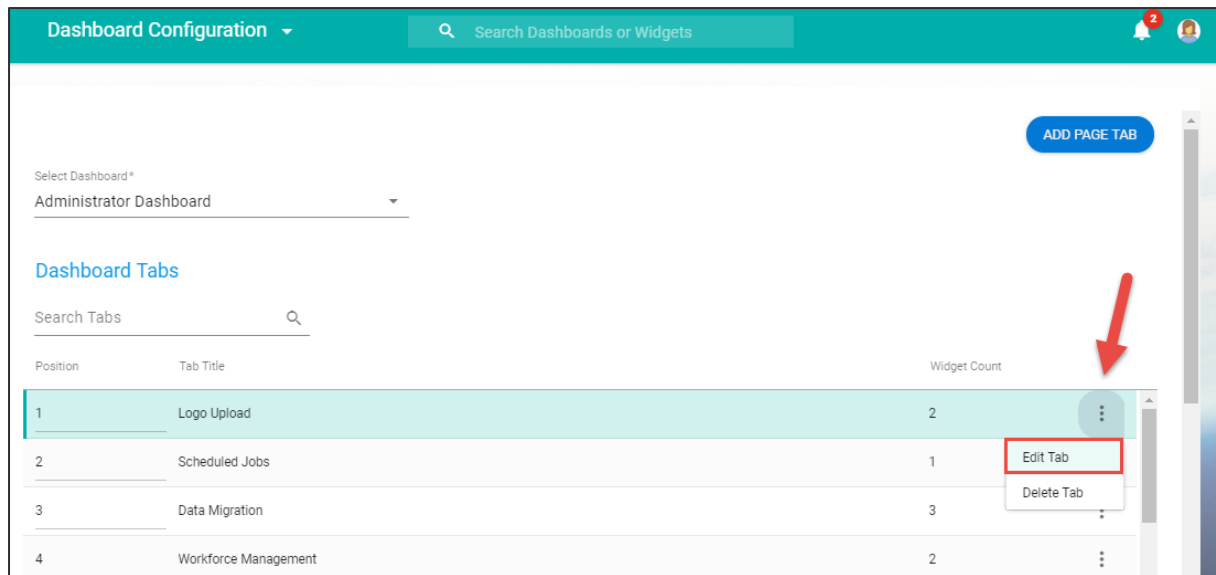

1. Click the user profile menu and selecting **Language Preference**.

2. Select the required language from Modern UI Language.
3. Click Ok.

The screen reloads in the selected language.

4. Quick jump to the Dashboard Configuration screen.
5. Select the dashboard from the *Select Dashboard* list.
6. Click the  button for the tab and select **Edit Tab**.

7. Update the *Title* with the new text required.

This change is applied for the Dashboard Tab label in the current language only.

The 'Edit tab' dialog box contains the following fields and controls:

- Title***: A text input field containing 'Logo Upload', highlighted with a red box.
- Name***: A text input field containing 'LogoUpload'.
- Phrase Code***: A text input field containing 'logo'.
- Icon***: A dropdown menu with 'icon-picture' selected.
- Position***: A numeric input field with '1' and up/down arrows.
- Display on CoreMobile**: A toggle switch that is currently turned on.
- CANCEL** and **OK** buttons at the bottom right.

For example, if you wish to update the tab name to a Welsh label:

- a. Update your language preference to Welsh.
 - b. Go to the Dashboard Configuration screen and change the dashboard tab label, to the required Welsh phrase.
8. Click **OK** to save.

Note: The screenshots provided are for illustrative purposes only. If you have selected a language other than English, the screens will reflect the chosen language.

3. User Access to Language Pack Screens

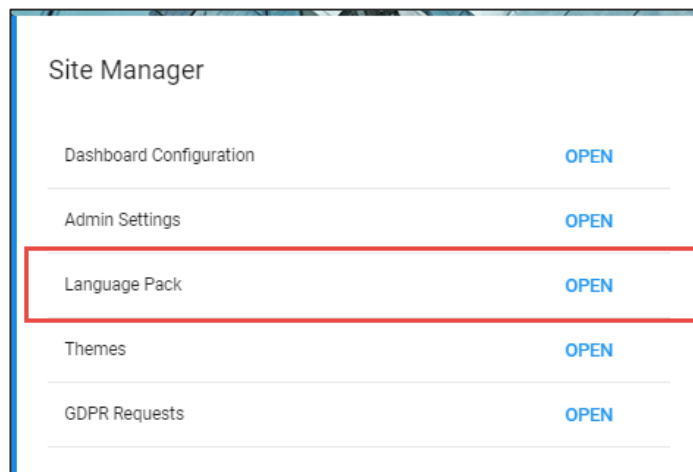

3.1. Administrator Access to the Language Pack

The following menu option is required for administrators to access the *Language Pack* configuration screens.

System	Menu Option
CorePortal	Core Portal Administration - Language Pack

This is required to see the following two *Language Pack* options available to the user:

- **Site Manager > Language Pack**

- **Enable Language Pack Option**
