1 Overview

1.1. Purpose of the Guide

The purpose of this document is to provide guidance on how use the Oracle Discoverer BI Report Importer tool in CoreInsight.

This includes:

- Preparing a report in CoreBI (Discoverer) for importing.
- Importing the report to CoreInsight.
- Viewing the imported report.
- Configuring access to the Tool

1.2. What is the Discoverer Importer Tool?

This tool allows you to import reports to CoreInsight that you have previously created and used in CoreBI (Oracle Discoverer). This is a quick way to get the report set up in CoreInsight, rather than recreating it from scratch.

This is particularly useful to customers upgrading to the latest version of CoreHR, where you have used CoreBI exclusively for reporting and wish to migrate these to CoreInsight.

1.3. Are There Any Restrictions?

The following cannot be migrated:

- Cross-tabular reports.
- Charts

The following CoreInsight tasks cannot be applied to imported reports:

- They cannot be edited
- They cannot be cloned
- They cannot be uploaded to the Report Store.

Workarounds for these tasks are provided in this user guide.

2. Import a CoreBI Report to CoreInsight

2.1. Prepare the Report for Migration in CoreBI

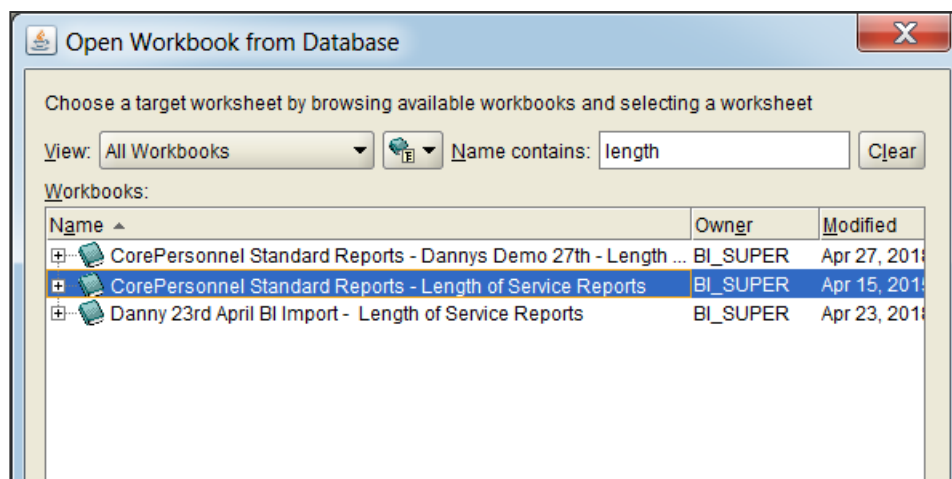

The first step in the import process is to prepare the report in CoreBI for migration.

Note:

By default, in CoreBI, your reports are not automatically available for importing into CoreInsight. Only newly created reports are available in the Discoverer Importer tool. To make sure existing reports are available for import in the, you must first save a new version of the report.

Follow these steps to prepare a report for migration:

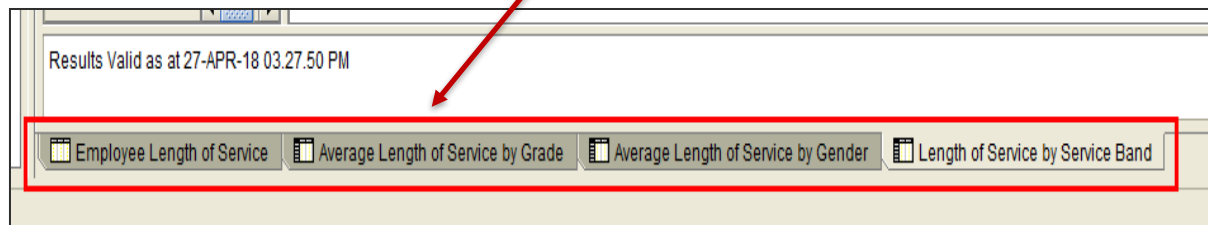

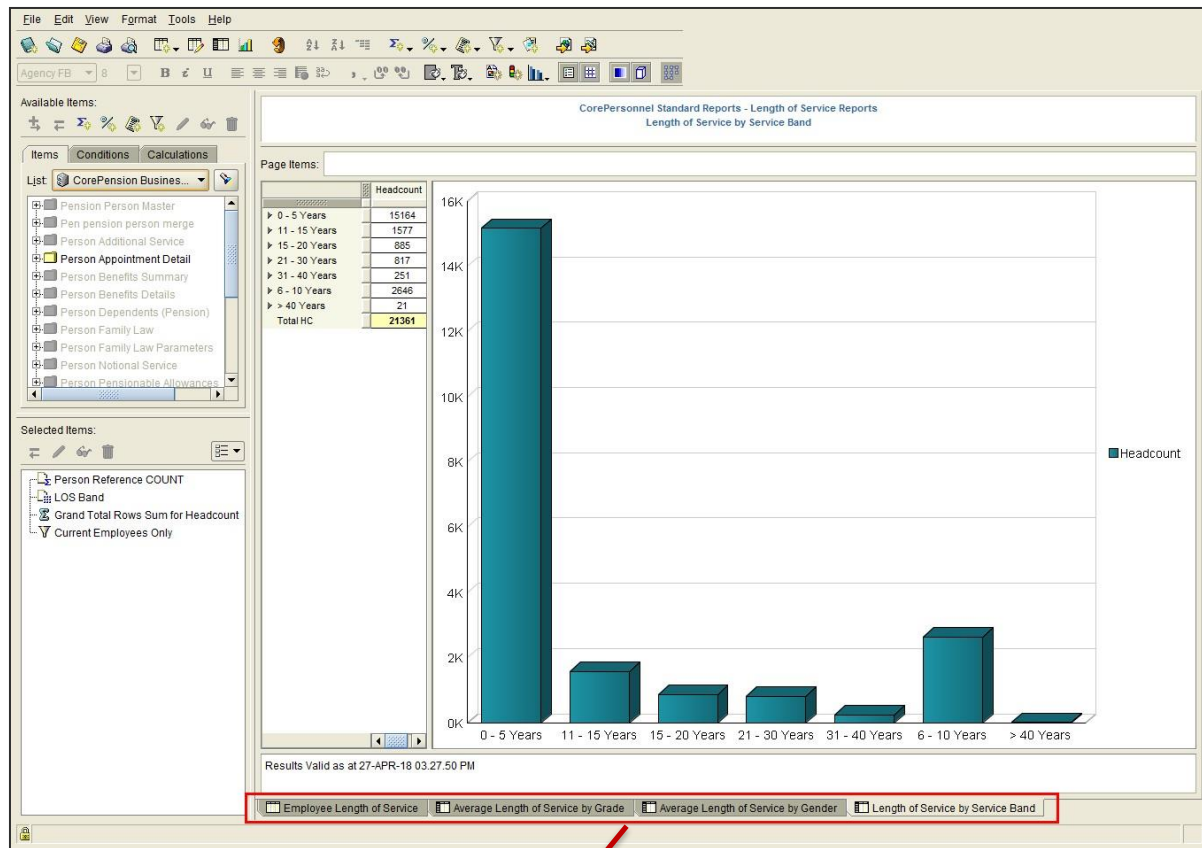

1. Open CoreBI (Oracle Discoverer)
2. Browse for and open report that you wish to migrate.

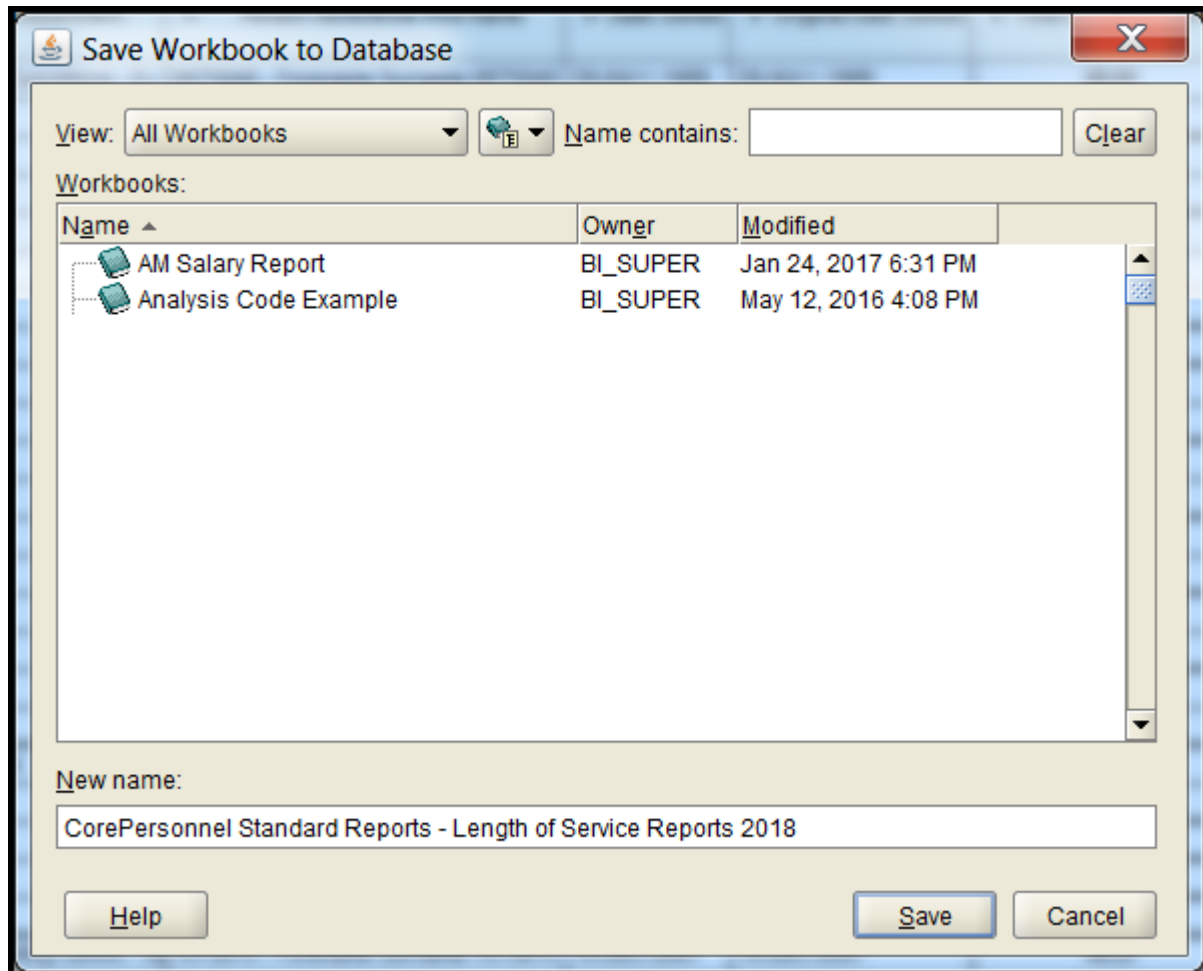

Note:

This workbook includes 4 tabs at the bottom (each tab is an individual report), 3 of which contain cross tab reports. This procedure only supports standard tab reports, so when importing the report later, the user should import only the relevant report.

XD Reporting: Oracle Discoverer BI Report Importer - User Guide

3. Save the report under a new name.

Once saved, the report will be available in the CoreInsight > Discover Importer screen in CorePortal. See section [2.2 Import the Report](#) for further information on where to find this.

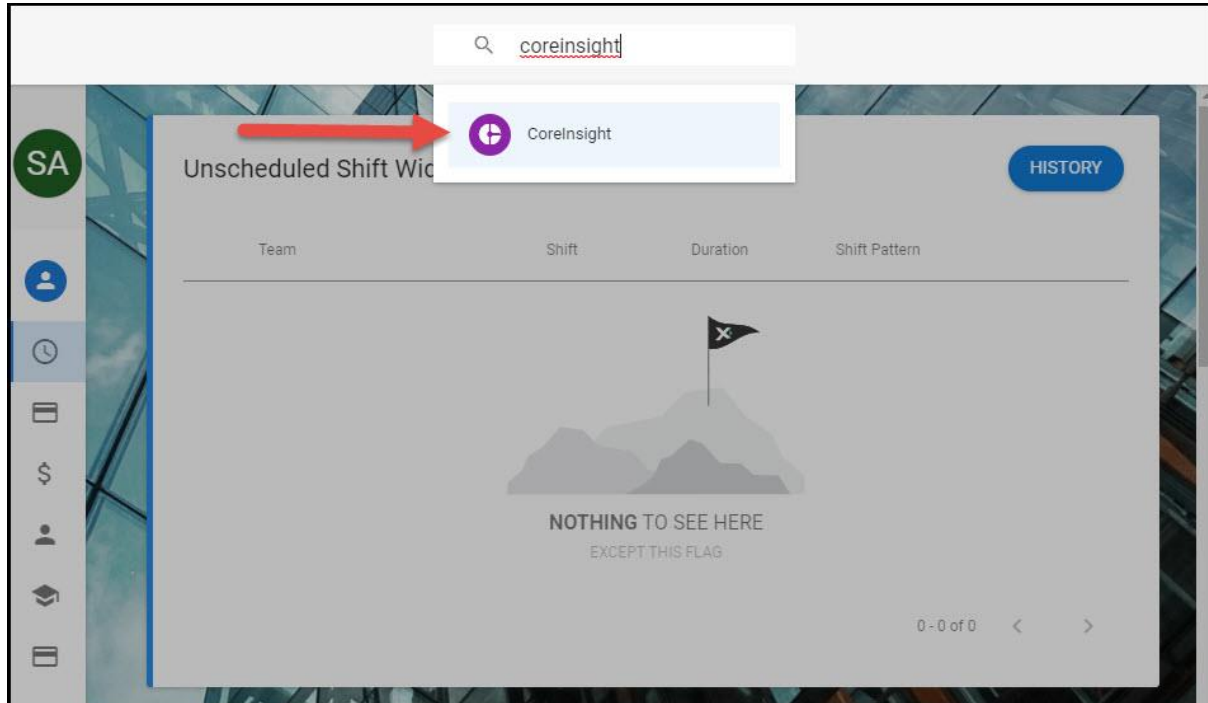

Important Considerations

- Cross tab reports cannot be imported.
- If your report includes multiple tabs, using a mix of tabular and cross tabular, only the tabular ones are included in the export.

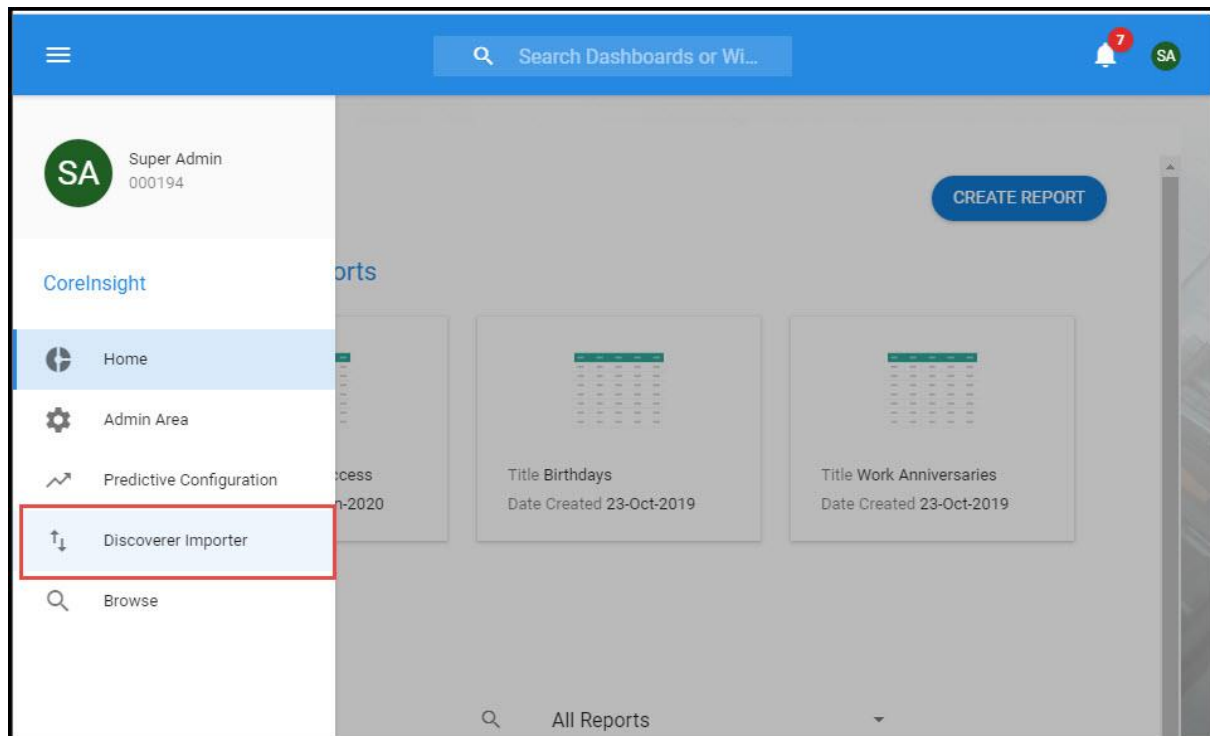

2.2. Import the Report

Follow these steps to import a CoreBI report:

1. Quick Jump to CoreInsight.

2. Go to *Discoverer Importer*.

Only reports that have been prepared as advised in [2.1 Prepare the Report for Migration in CoreBI](#) are available here. All prepared reports are displayed here i.e. both “Imported” and “Unimported”.

The screenshot shows the 'Discoverer Importer' page. It features a search bar and a filter dropdown. Below, a table lists reports with columns for Report Name, Workbook Name, Status, and a View link. The status is indicated by a colored pill: red for 'Unimported' and green for 'Imported'.

Report Name	Workbook Name	Status	View
1. Employees with A Middle Name	CorePay RTI Validation Reports	Unimported	VIEW
1. Employees with A Middle Name	CorePay RTI Validation Reports	Imported	VIEW
1. Employees with A Middle Name	CorePay Standard Reports - RTI Validation Reports	Unimported	VIEW
10. Employee with no Date Of Birth	CorePay RTI Validation Reports	Unimported	VIEW
10. Employee with no Date Of Birth	CorePay Standard Reports - RTI Validation Reports	Unimported	VIEW
10. Employee with no Date Of Birth	CorePay RTI Validation Reports	Unimported	VIEW
11. Employee with Age under Minimum or over Maximum	CorePay RTI Validation Reports	Unimported	VIEW
11. Employee with Age under Minimum or over Maximum	CorePay Standard Reports - RTI Validation Reports	Unimported	VIEW

3. Search for the report.

Use the search field to search based on the report name or work book name.

The status of your report is “Unimported”.

4. Click **View** for the required report.

This displays the list of columns that make up the report.

Item	Description
Position	Columns can be re-ordered. Either drag the field to its new desired position or enter in the new position manually by clicking on the number.
Column Name	This is the original CoreBI column name.
New Column Name	This is what the imported column name is and what it is shown as in CoreInsight once imported.

The screenshot shows the 'CoreInsight' application interface. At the top, there is a blue header bar with a back arrow, the text 'CoreInsight', and a user profile icon labeled 'SA'. Below the header, a message states: 'Import: 4. Post Code Suffix populated but Prefix blank (and vice versa)'. Underneath this message is a breadcrumb trail: 'CoreInsight > Import: 4. Post Code Suffix populated but Prefix bl...'. The main content area features a 'Search Columns' search bar with a magnifying glass icon. Below the search bar is a table with three columns: 'Position', 'Column Name', and 'New Column Name'. The table contains five rows of data, each with a menu icon to the left of the position number. The rows are: 1. Position 1, Column Name 'FORENAME', New Column Name 'Forename'; 2. Position 2, Column Name 'PERSON_REFERENCE', New Column Name 'Employee Number'; 3. Position 3, Column Name 'SURNAME', New Column Name 'Surname'; 4. Position 4, Column Name 'POST_CODE_PREFIX', New Column Name 'Post Code Prefix'; 5. Position 5, Column Name 'POST_CODE_SUFFIX', New Column Name 'Post Code Suffix'. At the bottom right of the table area is a green 'IMPORT' button. A 'coreity' logo is visible at the bottom center of the interface.

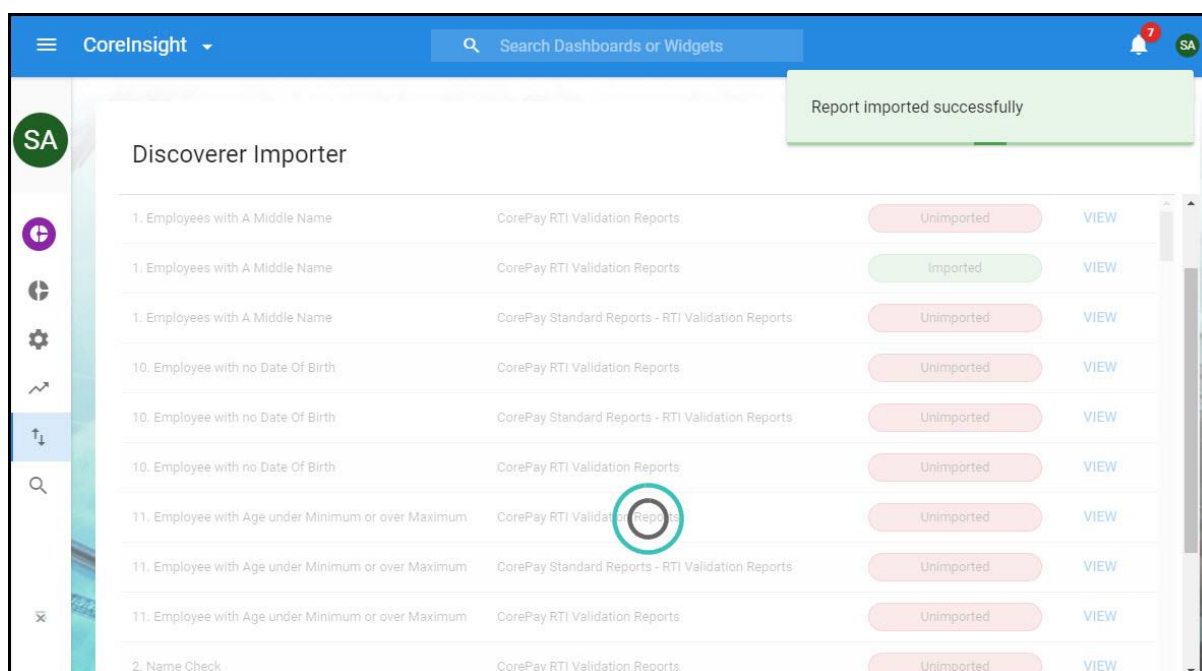

Position	Column Name	New Column Name
1	FORENAME	Forename
2	PERSON_REFERENCE	Employee Number
3	SURNAME	Surname
4	POST_CODE_PREFIX	Post Code Prefix
5	POST_CODE_SUFFIX	Post Code Suffix

Note:

In some cases, the original data may have been encrypted, and as such the column name may display the SQL script for that data. In this case the user should do a compare and contrast with the original BI Discoverer report and rename the 'New Column Name' to match what it displays in the original BI Discover report. I.e. In the screenshot above, you can rename Person_Reference to be "Employee Number". (Maximum of 30 character allowed)

5. Click **Import**

A message confirms that the report has been successfully imported.

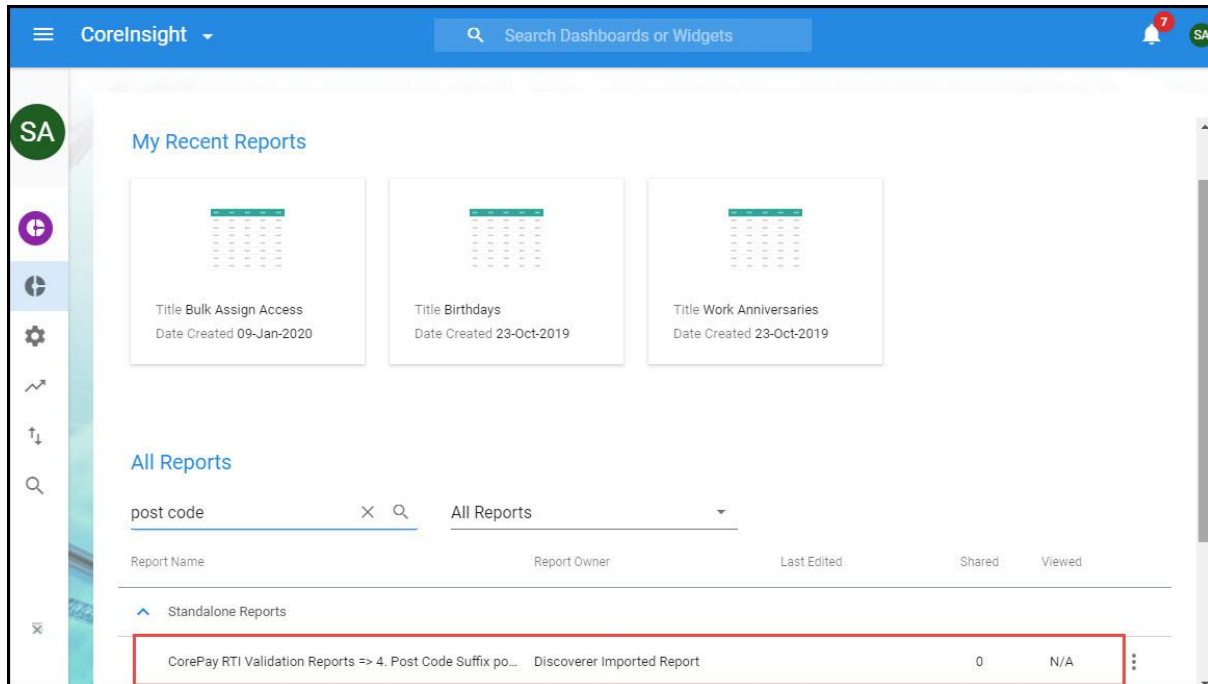

The status of the report is then updated to "Imported".

2.3. View the Imported Report

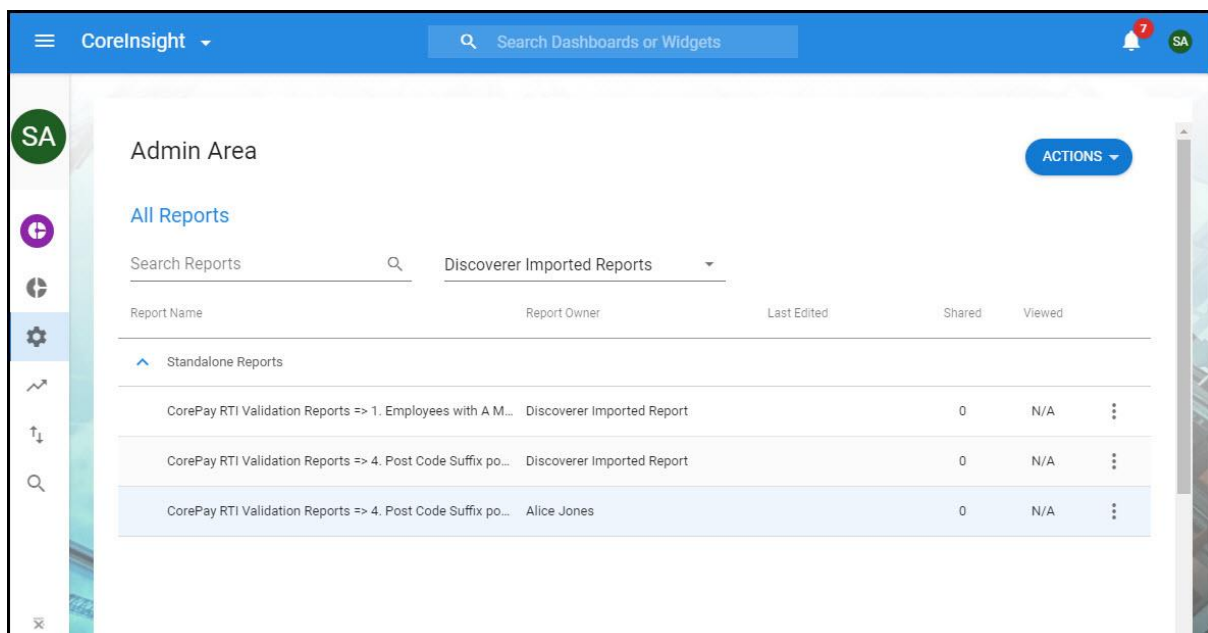

Imported Discoverer BI reports are available to view in 2 places.

1. If you are the user that imported the report, this is listed on the *CoreInsight > Home* screen *All Reports* list. The *Report Owner* is "Discoverer Imported Report".

2. The reports are also listed on the *CoreInsight > Admin Area* screen.

- Filter on the “Discoverer Imported Reports” option
- The *Report Owner* is “Discoverer Imported Report”.

The list of actions you can take for imported reports is restricted to the following:

- **View:** Run the report.
- **Delete:** Delete the report.
- **Change Owner:** Assign ownership of the report to another CoreInsight user. This provides access to other users that may need to re-run or edit the report in question

3. Configuration

3.1. User Access to the Oracle Discoverer Report Importer Screen

This menu option controls access to the **Discover Importer** tab and screen.

System	Menu Option
