# Access Evo & Access Button

## What is Access Evo?

Access Evo is the evolution of Access Workspace, incorporating AI features and functionality and an upgrade in the user experience of our software. Building upon Access Workspace and its vision to create an ecosystem which runs all the Access software an organisation might need, we have incorporated AI technology to achieve the following:

- A single experience to combine intelligent alerts into one interface and one generative AI assistant irrespective of how many Access products you use.
- Bring new capabilities to users that AI can provide.
- Speed up the integration of value-add features into all our key and strategy products.
- Speed up our deployment of all products onto the platform.
- Further enhance the user experience of our software in line with our brand promise of “Freedom to do More”.

## What is the difference between Access Workspace and Access Evo?

Access Evo is the next generation of Access Workspace.

- As of 31<sup>st</sup> March 2025, the Access Workspace platform is now referred to as the Access Evo platform.
- If you already use the Access Evo platform, you already have the Access Button. You will now see the additional capabilities become available under the Access Button including Copilot, Feed and Spaces.
- If you don't already have Access Workspace in use today, PeopleXD Evo means we will connect your PeopleXD instance to Access Workspace, to give you the benefits of Access Evo.

## How is Access Evo made available for PeopleXD?

People XD is updated to appear in the Access Evo platform. This involves

- A new URL and login via Access Identity Authentication
- A new main menu experience using the Access Button to launch your People XD Dashboards in an Evo “tab”.
- A multi-tab experience – using multiple People XD dashboards side-by-side

For PeopleXD Evo, the Access Button provides additional capabilities to support employees, managers and administrators via the following features:

| Feature                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Copilot</b>          | Copilot acts as a confidential personal assistant which sits within Access Button, providing answers to day-to-day queries using open AI, as well as retrieving data from PeopleXD using the following PeopleXD skills: <ul style="list-style-type: none"><li>• <b>HR Documents:</b> Query ‘policy’ type documents stored in PeopleXD</li><li>• <b>XD Assistant:</b> Allows users to query certain information against their own record on XD such as balance and payslip information</li></ul> |
| <b>Feed</b>             | The Feed is a common notification hub across Access products. PeopleXD can deliver personalised prompts and reminders through the Feed to individual users about actions and tasks they may need to complete. Prompts in the Feed can suggest the use of Copilot to complete required tasks.                                                                                                                                                                                                    |
| <b>People Analytics</b> | This is an out-of-the-box analytics solution embedded in PeopleXD. It contains a library of pre-built business metrics to explore and help you in understanding your people data.                                                                                                                                                                                                                                                                                                               |

## Will this impact any of the bespoke integrations that we have set up for PeopleXD today?

No.

Any bespoke integrations you have for PeopleXD with another product will be unaffected by the Access Evo integration or the upgrade to PeopleXD Evo.

**Access Learning:** If you are using a legacy version of PeopleXD and Access Learning integration outside of Access Evo, this will be upgraded when we deliver PeopleXD Evo.

Will the look and feel of how we use PeopleXD today change for our users?

Yes. This is described in the table below.

| What's Changing                                                                                                                                                                                                                                                  | Change Management Guidance                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------|
| <b>New Login</b><br>PeopleXD login screen and URL are retired, and a permanent redirect put in place to Access Evo.                                                                                                                                              | Configure the new Landing Page for Access Identity                            |
| <b>New User Management</b><br>Access Identity takes over as the authentication provider and should be configured according to your organisation's requirements.                                                                                                  | Set up Access Identity for user management, and define any MFA / SSO set up   |
| <b>New PeopleXD experience</b><br>PeopleXD dashboards open in an Access Evo tab. Many dashboards can be open concurrently.<br><br><b>New main menu</b><br>The PeopleXD Dashboard menu is retired. Dashboards are relocated to the Access Button > Products menu. | Brief your users on navigation change.                                        |
| <b>New features</b><br>New features are unlocked in the Access Button: Copilot with PeopleXD HR Assistant; Feed; People Analytics Standard                                                                                                                       | Decide how your organisation will adopt the new capability and for what users |

## Is Access Evo or the Access Button available in the People XD Mobile App?

No.

- The Access Button is not available in the People XD native app.
- When launching People XD in a mobile browser, the Access Button is not available.

## What is the Help and Support option in the Access Button?

The Help and Support option is an in-application way for users to access some of their most commonly used Customer Support option.

Options available today are:

- **Get Help**
  - This opens the Customer Success Portal directly from the product, getting quick access to Knowledge Base articles.
  - This option will appear to all users and cannot be turned off. However, users will only be able to access the underlying Customer Portal capability if they have access to it already.

# Access PeopleXD in a Tab

## What is PeopleXD in a Tab?

PeopleXD is update to reside within the Access Evo platform, which involves a change for how users will access it.

The principle of Access Evo is that all Access Group products are connected in one place. Therefore, this means we plug into the existing Access Evo organisation.

Key features:

- Users log in to Access Evo using a new URL and new login details.
- PeopleXD Dashboards are available in the Access Button > Products menu.
- When you open a PeopleXD dashboard, this launches in an Access Evo tab.
- New options available are Copilot, Feed and Spaces.
- New product available is People Analytics.

## How do my users log in to PeopleXD in a Tab?

### **Already using Access Evo?**

Once we upgrade you to PeopleXD Evo, this will be accessible via your existing Access Evo login. There is no change to how you login.

### **New to Access Evo?**

As part of the PeopleXD Evo upgrade, your PeopleXD instance will be synced with a new Access Evo instance.

- A new URL will be provided.
- A redirect will be put in place on the old PeopleXD direct login.

## How are my users accounts managed?

User management is updated when PeopleXD is delivered within Access Evo.

- Employee is created in PeopleXD and automatically synced to Access Evo if they have an email address assigned on PeopleXD
- An invite is then triggered by Access Evo to complete the account setup.
- If an email address has not been supplied for the employee when they are setup as an employee on PeopleXD, they will be set up as a “username” account and will need to be manually provided a password to login. We strongly recommend ensuring the email contact is provided on the employee record.
- After their first login to Access Evo, their auto-assigned PeopleXD menu profiles are assigned to their record.

## I already have an Access Evo org for another Access Group product, can I plug PeopleXD into that?

Absolutely!

One of the primary goals of Access Evo, is to simplify how you access your Access Group products. This means that we will connect all of your products to a single instance of Access Evo.

### Key Considerations

1. **User management for Access Evo is controlled by PeopleXD.**  
That means that when you add a new employee, update their details or make them a leaver, Access evo > Members is automatically updated for this.
2. **Administration / ownership for Access Evo should be reviewed once PeopleXD has been plugged in.**  
It may be that the administrator is currently the owner of another product that is already connected to Access Evo, and it might not be considered appropriate for that to continue when PeopleXD is in place.

As part of the upgrade a checklist is provided to guide you through some key focus areas and decisions to be made about the impact of plugging PeopleXD into Access Evo.

We recommend that you include the existing Access Evo Admin users in the upgrade project to ensure full alignment.

## I don't want PeopleXD connected to my existing Access Evo org, can I have PeopleXD Evo without this?

### **We do not recommend this.**

One of the primary goals of Access Evo, is to simplify how you access your Access Group products. This means that we will connect all of your products to a single instance of Access Evo.

Multiple Access Evo instances can create user experience issues.

- There is a single Access Evo URL, that when used will log the user back into the last Org they were in.
- It is not flagged on login that you are a member of multiple Access Evo orgs. To see this, the user must select the organisation instance name at the top of the screen, which will include a downward arrow symbol alongside it if there are multiple available.
- Users may think that they have lost access to particular products, not realising that they need to switch organisations.
- Ongoing management of multiple sites is subject to risk e.g. new products adopted could be enabled on the wrong instance.

We encourage you to work with us to understand why this is a concern for your organisation.

## Who will manage the Access Evo Org when PeopleXD is connected to it?

Depending on how many products you have on Access Evo, we advise that you ensure that you have agreed in your organisation who is the right person, people or team to take the responsibility for the Access Evo Administrator role.

## What can the Access Evo Administrator do?

### 1. View and Manage Access Evo Members

Members gives a view of all of the users that are set up on Access Evo. This defaults to show "Active" users, but also allows you to lookup "Inactive" or "Added" users.

An Administrator user has the following options:

| Capability                  | Recommended Use                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Add Member</b>           | <p>Members are created by default for employees from PeopleXD.</p> <ul style="list-style-type: none"> <li>This option should not be used to set up any users that are already set up as employees on PeopleXD.</li> <li>This can be used if you need to set up non-employee users to access other Access Evo products.</li> </ul>                                                                                                                                                                     |
| <b>Make Member Inactive</b> | <p>Members are made inactive by default when the associated employee record is made a Leaver on PeopleXD.</p> <ul style="list-style-type: none"> <li>This option should not be used for any synced employee records.</li> </ul>                                                                                                                                                                                                                                                                       |
| <b>Update Members</b>       | <p>Certain items are synced by default from the employee record and should not be updated for synced records.</p> <ul style="list-style-type: none"> <li>Forename</li> <li>Surname</li> <li>Email Address Reports to Manager</li> <li>Job Title</li> <li>Department</li> <li>Location</li> <li>Status i.e. Active or Inactive</li> </ul>                                                                                                                                                              |
| <b>Assign Roles</b>         | <p>Admins are responsible for granting permissions for other Access Evo products.</p> <ul style="list-style-type: none"> <li>This is via the Members &gt; Manage Roles feature.</li> <li>While some roles are default assigned to users when synced from PeopleXD, these can be updated by the administrator for users that require an enhanced level of access.</li> <li>Where a product role is not defaulted from PeopleXD, this must be directly managed in Members &gt; Manage Roles.</li> </ul> |

## 2. Update Access Evo Settings

The Administrator has access to update the configuration settings for the Access Evo organization.

| Category               | Description                                                                                                                                                                                                                                                                       |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>General</b>         | Update settings including: <ul style="list-style-type: none"><li>• Organisation Name</li><li>• Top Bar Logo</li><li>• Top Bar Colour</li></ul>                                                                                                                                    |
| <b>Members Options</b> | Configure settings that control how your users interact with the Members feature e.g. <ul style="list-style-type: none"><li>• Show / Hide Members for Users</li><li>• How Manager Relationships</li><li>• Allow users to edit their name</li><li>• Hide email addresses</li></ul> |
| <b>Tags</b>            | View the tags that are already setup for your organisation. This includes the Tags that are defaulted from PeopleXD (Department, Location, Job Title). You can add additional Tags, which can be managed directly in Access Evo and assigned to the Member records.               |
| <b>Groups</b>          | Manage groups of Member records on Access Evo. This is not updated via integration with PeopleXD. See this <a href="#">article</a> for further guidance on Groups.                                                                                                                |

### ***Who should be your Administrator?***

Who you should give the responsibility for the Access Evo Administrator role to is a decision for your organisation to make. This really depends on the applications that you have setup in Access Evo, and how system access is typically managed for your company. Our recommendation is that you should only assign this access to the people that you are comfortable with having the access to view and update users and settings as described above.

For example, in some organisations this may be:

- Your IT administrator
- An Office Manager
- Company owner / Managing Director
- HR Manager
- Operations Manager

## What do I need to tell my colleagues that already use Access Evo?

Where you have many products in your organisation that are powered by Access Evo, it is important that you ensure that the owners or admins for those products are aware of the changes that are about to be made when PeopleXD becomes integrated. We recommend that you include them in the PeopleXD Evo upgrade project, and share training materials with them, so that they understand what the impact will be to them and their use of Access Evo.

For example:

- They should no longer add employees via the Members screen, these will be synced from PeopleXD, and they should now use Members to simply grant access to the product in question to the user.
- They no longer need to revoke access for employees that leave; these will be synced from PeopleXD as inactive.
- They should not update Tags that are synced from PeopleXD i.e. Department, Job Title, Location and these changes should instead be made in PeopleXD.
- They can continue to add or update other Tags that are not synced from PeopleXD

## Can I brand the Access Evo organisation?

**Yes.** See article [here](#) for more information. for more information.

## What will the Access Evo admin users be able to see on PeopleXD?

PeopleXD access is fully controlled within PeopleXD Security i.e. what dashboards you can see and what data you have access to.

- The Access Evo Administrator will only have access to PeopleXD based on how their access has been configured withing PeopleXD e.g. as an employee, a manager or a HR / Payroll user for example.
- Within Access Evo, it is not possible for the Evo Administrator to amend their PeopleXD access.

## What will the PeopleXD admin users be able to control on Access Evo?

In order to control the Access Evo settings or Access Evo Members access, a user must be set up as an Access Evo Administrator.

- No user is defaulted as an Access Evo Administrator.
- If a PeopleXD admin user will also be an Access Evo Administrator, that must be updated manually via Access Evo Members. The PeopleXD Evo upgrade team will support this.

# Overview of the Access Button

## What is the Access Button in PeopleXD Evo?

The Access Button is brought into PeopleXD as your refreshed main menu / navigation, replacing in the “Dashboard Menu” at the top left of the screen.

Key features:

- The PeopleXD dashboards are listed under Access Button > Products.
- Any other Access Group products that a user has access to also appear under Access Button > Products.
- New options available are Copilot, Feed and Spaces.
- New product available is People Analytics.

## Who will see the Access Button?

All users of PeopleXD will see the new Access Button once the update is applied. This becomes the main point of navigation to access their PeopleXD dashboards.

Once enabled the Access Button is made available to all users. It is not possible to show this for some users and not for others.

## How can I find my PeopleXD Dashboards in the Access Button?

These are all available in the Access Button.

1. Click **Access Button**.
2. Select **Products**.

## Can I control what users have access to in the Access Button?

**Yes.** See table below for further details, per Access Button item.

| Access Button Item | Managing User Access                                                                                                                                                                                                                                                                                                                                      |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Products</b>    | <b>PeopleXD Dashboards</b><br><br>No change to how access is managed via PeopleXD Security.                                                                                                                                                                                                                                                               |
|                    | <b>Access Evo Products</b><br><br>Items will appear in the Products menu, based on access managed directly in Access Evo > Members. In many cases, those products have additional layers of user security managed directly in the product.<br><br>For example, if you already have access to Access Learning, then this will appear in the Products list. |
| <b>Copilot</b>     | Using Access Evo > Members, you can control which user has access to the Copilot feature in the Access Button menu.<br><br>If “no access”, this means that Copilot does not show for the user.                                                                                                                                                            |
| <b>Feed</b>        | Using Access Evo > Members, you can control which user has access to the Feed item in the Access Button menu.<br><br>If “no access”, this means that Feed does not show for the user.                                                                                                                                                                     |
| <b>Spaces</b>      | It is not possible to control access for end users. Once the Access Button is enabled, Spaces appears by default.                                                                                                                                                                                                                                         |

## Can I change the name of the Access Button?

**No.** This is not possible.

## Can I remove the Access Button?

**No.** This is not possible.

The Access Button is now the default method of navigation within PeopleXD Evo, and your other Access Evo enabled products.

## Can I have multiple instances of People XD Evo open at the same time?

Yes. PeopleXD dashboards can be opened in multiple browser tabs.

- If you were previously in Access Evo, this will launch on whatever your last tab was.
- If you haven't yet opened Access Evo from within People XD Evo, then this will open on the default "My Dashboard" Tab.

# Copilot

## General

### ***What is Copilot?***

Copilot acts as a confidential personal assistant which sits within Access Button, providing answers to day-to-day queries using open AI, as well as retrieving data from PeopleXD using the following PeopleXD skills:

- **HR Documents:** Query Policy type documents stored in PeopleXD
- **XD Assistant:** Allows users to query certain information against their own record on XD such as balance and payslip information

### ***What is a Copilot skill?***

An “Evo Skill” is a way to ask Copilot a question that will provide a more focussed response. Skills are created to filter the queries to a particular Evo product or part of an Evo product, ensuring that the response is compiled using actual system data.

### ***How does Copilot work with PeopleXD?***

#### **Copilot Core**

Use the generative AI capability to ask Copilot a question to help you as part of your day-to-day to engagement with PeopleXD. Copilot will source a response for you using the underlying large language model using information publicly available on the internet e.g.

- What is the Bradford Factor?
- What are the UK Public Holidays in 2025?

It can also be used to help streamline your daily activities e.g.

- Help draft a job specification for a new role
- Summarise the key points of an update you need to share with an employee

When you ask Copilot to assist with a query or task, without first selecting the PeopleXD Skills option, the response will not include any underlying PeopleXD data. The skill must be selected to ensure that your PeopleXD data or documents are included in the response.

### **PeopleXD Skills**

Select the **PeopleXD Skills** skill on Copilot, to ask Copilot a question specifically about the PeopleXD data.

| Skill               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

### ***What PeopleXD Data is available to Copilot?***

Currently the following data is available to Copilot to search for and include in responses to user queries.

| User Type | Data                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Employee  | <ul style="list-style-type: none"><li>• List of Team members and job titles (Co-Workers)</li><li>• Co-workers leave</li><li>• Balance details/values</li><li>• Leave request details</li><li>• Employee's Bio from their profile</li><li>• Address</li><li>• Bank details</li><li>• Contacts</li><li>• Onboarding tasks</li><li>• Payslip summary</li><li>• Event diary</li><li>• XD Expense reports</li><li>• Shifts</li><li>• Profile summary – reports to manager, start date with company, job title, department, location</li></ul> |
| Manager   | <ul style="list-style-type: none"><li>• Reports to absences</li><li>• Reports to shifts</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                        |

### ***Is there a user query limit to using Copilot?***

Yes. The following limits apply to each user:

- 20 messages per conversation
- 400 messages a month - not enforced but educated
- 4000-character limit per message

### ***Can you provide some examples of how my business may use Copilot?***

| Plugin       | Area    | Question                                 |
|--------------|---------|------------------------------------------|
| XD Assistant | Profile | Who is on my team?                       |
|              |         | What address is against my record on XD? |

|                      |                 |                                                                                          |
|----------------------|-----------------|------------------------------------------------------------------------------------------|
|                      |                 | What bank account is my salary paid to?                                                  |
|                      |                 | What is my personal email address on XD?                                                 |
|                      |                 | Show me a summary of the bio I completed about myself                                    |
|                      |                 | Do I have onboarding left to complete?                                                   |
|                      | Leave Requests  | What's my annual leave balance?                                                          |
|                      |                 | How many days did I carry forward this year?                                             |
|                      |                 | How many days annual leave have I taken this year?                                       |
|                      |                 | How many holiday hours have I accrued?                                                   |
|                      | Payslip Summary | Show me my payslip from May 2024                                                         |
|                      |                 | Give me a summary of my latest payslip.                                                  |
|                      |                 | What was the difference between my net pay in April 2024 and May 2024?                   |
|                      |                 |                                                                                          |
| <b>Documents</b>     |                 | Can I buy extra holiday and how would I arrange it?                                      |
|                      |                 | How many times can I be off sick?                                                        |
|                      |                 | When does my holiday balance refresh?                                                    |
|                      |                 | I've just got married, how do I change my name?                                          |
|                      |                 | What is my notice period?                                                                |
|                      |                 | What is our maternity policy?                                                            |
| <b>Co-Pilot Core</b> |                 | I need to make a redundancy, what are the key things that I should consider?             |
|                      |                 | How can I measure employee turnover to ensure that we are improving our retention rates? |
|                      |                 | How do I lead a workshop to prioritize our skills strategy?                              |
|                      |                 | How can I build a leadership program that focuses on human-centred leadership?           |
|                      |                 | What are the top best practices for pay equality?                                        |

### ***Can I use Copilot Skills for PeopleXD but turn off Copilot Core?***

This is not possible.

Copilot Core i.e. asking Copilot a question without selecting a skill, is the foundation on which the skills are delivered. The GPT-4o Large Language Model (LLM) capabilities are used to interpret the question provided in the user's natural language. These are in turn used to compile the response by summarising information and producing the output as per the customer's request.

They cannot be separated, and users cannot be prevented from asking a question directly to Copilot Core.

***Can I limit the access to Copilot for my company?***

Yes.

This is possible to update for users (individually or in bulk) by using the Access Evo > Members > Manage Features option.

***Can we roll this out in our non-production instance before enabling on Production (Live)?***

Yes. The standard upgrade approach is to enable PeopleXD Evo, including Copilot, on the non-production instance first, ahead of the roll out to your live instance.

***How up to date is Copilot? Can I ask questions about current legislation?***

Copilot uses the LLM GPT-4o. Each LLM model is trained up to a certain point in time. Currently (as of Jan 2025) the model is trained to October 2023.

We do not recommend that you use this to ask queries about current legislation or anything that cannot be answered based on dates stored in PeopleXD records or documents.

***What are the Thumbs Up and Thumbs Down on Copilot used for?***

These are for Access Group to understand the effectiveness of the Copilot responses for our customers. We have telemetry in place to track where a Thumbs Up or Thumbs Down response is provided and monitor this on an ongoing basis. This is not used to train the LLM.

***Can I limit the documents that are searched in Copilot, based on specific groups of users?***

Yes. A “Policy Group” can be assigned to a Policy Document that has been loaded into People XD. This means that you define a set of attributes for the policy, and ensure that the policy is only referenced by Copilot PXD Assistant, where the employee shares those attributes

For example, a Policy with a Policy Group of “London Office” Location, will only show to clients with that Location on their record. If a user has “Birmingham” as their Location, they will not see that policy.

For more information refer to the Policy Documents section of the [Evo guide](#)

## Copilot and AI

### ***Is this an AI tool?***

Yes. Copilot uses the GPT-4o Large Language Model (LLM) and natural language processing to provide answers to questions.

### ***Is there a specific way I should ask Copilot a question?***

No. Questions can be phrased in any way, just like in a normal conversation. To get the most out of Copilot, try to keep your questions as concise and relevant as possible, and remember to choose a skill if you need a response focussed on a particular area of the system

### ***How accurate are the responses provided by Copilot?***

Copilot always tries to give the best answer it can, using the context that it has available to it i.e. your question; the data in the large language model (LLM) and the data in PeopleXD that it has access to (if you use a PeopleXD Skill). It then uses these collectively to respond with how it can best meet the user's intent.

To get the most accurate responses from Copilot, be specific and provide context in your question. Clear, detailed prompts help the model understand exactly what you're looking for. If you're unsure of the answer provided, you can ask Copilot to tell you how it sourced that answer.

### ***Will Copilot always give me the same answer?***

Not necessarily. Copilot is powered by a large language model (LLM) that mimics how a human brain works and responds based on the available context. It therefore may respond differently to the same or similar questions, just as a human brain would.

***Will our queries be used to train your AI model?***

Your data – both queries that you ask Copilot and the underlying PeopleXD system records – are not being used to train the AI model.

***Is this the same as Microsoft's Copilot feature?***

No. Copilot is the generative AI capability delivered directly within Access Evo and configured to work directly with Access Evo enabled products i.e. enabling you to ask questions directly based on your PeopleXD documents and employee records. This is powered by the Access Group's private instance of GPT-4o.

Microsoft Copilot is not in any way connected to Copilot, or our system data. Whilst we use the Microsoft technical capabilities, Access Copilot is exclusive to us and is being embedded within the Access Evo portfolio of products, whilst Microsoft Copilot is embedded within Microsoft products. Microsoft have a partnership with OpenAI and use their technology to power their AI Capabilities especially for Chat GPT, we use GPT-4o to power our solution.

***My company already has an AI strategy and tool employed, why do I need this in PeopleXD?***

With PeopleXD Evo, Copilot is directly plugged into your PeopleXD records with no additional configuration required by you. Once you give your users access to it, they can start asking questions straight away, getting responses that are directly informed by your data.

Additionally, with the PeopleXD Evo Copilot plugins, you can tailor your queries directly based on your system data and policy documents, ensuring the conversation and responses consider your organisation specifically.

Furthermore, when you use Copilot, you are doing so on a private basis. You are not exposing your PeopleXD data or sensitive queries to another tool, public or otherwise. This PeopleXD data never leaves your Access Evo domain, and your prompts and responses are based on the internal security of what your existing users already have access to.

## Copilot & Data Security

### ***What technology underpins the Copilot Generative AI capability?***

Copilot is delivered using the GPT-4o Large Language Model (LLM).

### ***How can I trust that Copilot will not share my data?***

Data privacy and security are extremely important to Access. In the specific instance of Copilot, data that is shared with the model is only used for the purpose of that query and then discarded, unlike other providers of this capability.

The questions associated with the responses are secure and handled within the Access Group's private security instance of GPT-4o. No data is shared the underlying AI model; inputs and outputs are not used to train the model. Once the request is resolved, the data is no longer available to the underlying AI model.

### ***What level of access does Copilot have to PeopleXD.***

When asking Copilot a question using the PeopleXD skills, the responses returned only reflect the data that you have access to in the system e.g.

- **Employee** Your own employee record
- **Manager** Your own team, but only the data you would currently have access to via the Manager Dashboard

### ***Does Copilot store any data?***

Copilot stores conversation data, to provide 30-day history per user. Data is stored as per the Access Evo product factsheet. Data is stored on the same database but logically separated by Organisation ID (unique to the customer account and integrated with PeopleXD) and User ID.

### ***How is security handled in Copilot?***

At Access we believe that we must keep our customers' data safe, secure and confidential, whatever technology we use.

We have created a 3-tier security model which ensures that:

1. Your data is secure
2. Existing permission structures are adhered to
3. The use is kept personally private

To read more about how we manage our customers' data here are some key resources

- **[AI and security first thinking](#)** – The Access Groups stance on AI and security
- **[Privacy Policy](#)** – the legal document that outlines how we collect, use, manage and protect the personal data of our customers
- **[Copilot Terms of Use](#)** – the legal document that outlines the rules and guidelines that customers and their users must agree to and follow when accessing or using Copilot.
- **[Access Evo Core Product Factsheet](#)** – The document we use to give our customers information about our products, in this case Access Evo (which contains Copilot). This includes information sub-processing of data.
- **[PeopleXD Product Factsheet](#)** – Information on the PeopleXD Skills plugin of Copilot.
- **[People Analytics Product Factsheet](#)** – Information on the People Analytics product.

### ***What are the Copilot Terms of Use?***

The Copilot Terms of Use are available [here](#).

These are also linked directly in the Access Button > Copilot screen.

### ***Is there a Copilot Privacy Statement?***

Yes. Copilot is covered under the Access Group [Privacy Notice for Access Products](#).

This is also available to access directly in the Access Button > Copilot screen.

# Feed

## What is Feed?

The Feed is a common notification hub across Access Group products. PeopleXD Evo can deliver personalised prompts and reminders through the Feed to individual users about actions and tasks they may need to complete.

## How does the Feed work with PeopleXD iCues?

iCue alerts can be customised so that the alerts they trigger appear in the Feed, rather than in the PeopleXD Notification Centre.

When triggered to the Feed, they can be configured to include a prompt to use Copilot to complete an associated activity.

For example: *Employees with large annual leave balances remaining at end of year.*

- Trigger an alert to the manager when they have an annual leave balance greater than X on 30<sup>th</sup> September.
- Suggest prompt to Copilot “How much holiday leave can I carry forward to next year?”

## Will all of my XD Notifications now appear in the Access Button Feed?

No. Only iCues that you configure specifically to have alerts triggered to the Access Button Feed will appear there. Those alerts will no longer appear in the XD Notification Centre.

## What alerts should I trigger to the Access Button Feed?

The benefit of the Access Button Feed notifications is that they can be triggered to include a Copilot prompt.

- **Already using iCues?** Consider the messages that you are sharing with the recipient of the alert and if you are asking them to complete an action as a result. Could that action be supported by Copilot?
- **Not using iCues?** Review the list of suggestions provided and consider if these are areas that would be useful to implement in your organisation.

iCues are created using XD Insight reports to surface the triggering data point. Therefore, do not be limited by the alerts you already have, but also consider other data points that you regularly track and are trying to improve for your own organisation.

## I'm not using iCues today. Can I still use the Feed?

Of course. iCues are available as standard in XD Insight to all PeopleXD customers.

To start using these, we recommend that you review the user guides linked below:

- The [PeopleXD Insight iCues – User Guide](#) provides full guidance on the use of iCues
- The [PeopleXD Evo User Guide](#) provides guidance on how iCues can be configured for Feed

## I already have iCues configured to send alerts via the XD notification centre and email, why would I change to use Access Button Feed?

When not connected to the Feed, the iCue notification via email / the PeopleXD Notification centre will alert the user and can suggest a next step to address.

However, if using the Feed, you can prompt the user to actually complete part or all of that next step via Copilot.

## Do users have to login to PeopleXD Evo to be alerted to Feed notifications.

ICues can be configured to trigger the alert to send as both an email and Feed notification item. Therefore, a user may receive an email and a notification in the Feed. The Feed notification can be configured to suggest a Copilot prompt to further support the user to the recommended next steps.

# Spaces

## What is Spaces?

“Spaces” is a collection of your Access Evo Dashboards. Dashboards are a curated collection of Access Evo Apps, to provide a landing space for your users to access a set of activities, processes or updates from their Access Group products.

### Space Types:

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Shared Spaces</b>   | <p>These dashboards (Tabs) are set up and shared by an Access Evo Administrator.</p> <ul style="list-style-type: none"><li>• <b>Product Dashboards:</b> Typically, these are setup with support from Access Group and delivered when onboarding a product e.g. Access Learning is set up with pre-configured Dashboards with a collection of Access Learning Apps.</li><li>• <b>“My Dashboard”:</b> When Access Evo is first setup, there is a default “My Dashboard” tab that includes 2 apps<ul style="list-style-type: none"><li>○ <b>Colleagues:</b> a list of all Members set up on Access Evo</li><li>○ <b>Sticky Note</b></li></ul></li></ul> |
| <b>Personal Spaces</b> | <p>Access Evo users can create their own Personal tabs, with collections of apps, based on how they use Access Evo.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## What spaces are available for PeopleXD Evo?

There are no predefined Spaces delivered for specifically PeopleXD Evo.

### New to Access Evo?

All users will see “My Dashboard” under Shared Spaces.

### Already using Access Evo?

- Any Shared or Personal Dashboards that are already available on your Access Evo org, are listed in the Spaces menu.
- The “My Dashboard” option is listed as a Shared Dashboard. In this case, your users will likely also have a 3<sup>rd</sup> App “Noticeboard” on this tab.

## Can I create Spaces for my teams?

**Yes.** Access Evo Admin users can create and publish Shared Spaces (Dashboards).

Guidance on how to do this is available in [this article](#).

## Can I delete the “My Dashboard” Space for my organisation?

**No.** This cannot be deleted.

If already set up for your users (already using Access Evo), the Noticeboard app can be amended by an Administrator to provide your organisation’s specific content. See [this article](#) for guidance on how to do this.

## Can we turn off Spaces as we don't have any Shared Dashboards?

Spaces cannot be turned off.

Access Evo Administrators can create Shared Dashboards and publish to all or groups of users (based on Member tags). This could be a useful option for your organisation to surface updates to your employees e.g. using the Noticeboard app, and your company's Twitter feed.

# People Analytics Standard

## General

### ***What is People Analytics?***

It is an out of the box analytics solution embedded in PeopleXD. It contains a library of pre-built business metrics to explore and help you in understanding your people data. There are two tiers of People Analytics available:

- People Analytics Standard - included in the Evo solution.
- People Analytics Premium - optional add-on that may have been purchased.

### ***What is included in the People Analytics Standard?***

People Analytics Standard is included in the Evo solution and features a subset of pre-configured dashboards for each product area with organisation level KPIs.

The KPIs included per product area are detailed in the user guide available [here](#).

The data presented to users is aggregated, meaning that no personal, sensitive, or employee-level information is accessible. End users have access to see organisation wide KPI's i.e. not tailored to their functional areas and not linked to security data access as defined in XD. For example, a user will be able to view the headcount for the entire organisation, not just the department that they manage. Users will have access to standard features including the use of filters and time sliders and user in app presentation mode.

### ***How do I access People Analytics Standard?***

People Analytics is available under the Products area within the Access Button.

### ***What configuration is involved in setting up People Analytics?***

The key configuration elements are outlined in the configuration guide linked [here](#).

This document provides guidance on:

- Granting user access to the People Analytics dashboard in User Management
- Assigning users to the relevant User Groups
- Activating the required menu options in PeopleXD Security
- Mapping specific PeopleXD data so it appears correctly in People Analytics
- Setting a default currency and adding exchange rates for conversions to other currencies
- Additional information on Pay Types that require data mapping.

### ***How do I control access to People Analytics Standard in my organisation?***

Section 2 and 3 of the [configuration guide](#) explains how to manage access to People Analytics Standard. This details:

- User Management – how to grant access to People Analytics
- User Groups – how to assign a user a user group

### ***What products are available in People Analytics?***

People Management and Payroll are currently available in People Analytics.

Further products will be available in the coming months.

### ***What users will get access to People Analytics in my organisation?***

The solution can be made available to users who can be provided with organisation wide KPIs for your organisation. This may include CHRO/ HR Leader, CFO, HR Business Partners, Finance Director, HRIS Manager / People Operations Manager, HR Admins / People Operations or Payroll Managers.

## ***What is the difference between the Standard and Premium tiers of People Analytics?***

The **Standard tier** of People Analytics features a subset of pre-configured dashboards for each product area with organisation level KPIs. The **Premium tier** of People Analytics provides a comprehensive array of analytics for each product area, along with an extensive list of features for you to review and utilise in creating your own analyses. Analytics data is driven by XD HR security.

For a full listing of features available in each tier below table:

| Category                      | Feature                                                     | Standard | Premium |
|-------------------------------|-------------------------------------------------------------|----------|---------|
| <b>Insights</b>               | Predefined Standard KPIs Dashboards                         | ✓        | ✓       |
|                               | Out of the Box Deep Dives (in-app & via email)              |          | ✓       |
|                               | Out of the Box Dashboards (in-app & via email)              |          | ✓       |
| <b>Explore Data</b>           | Filters and Time Sliders                                    | ✓        | ✓       |
|                               | Ad-Hoc Analysis (Explore Rooms)                             |          | ✓       |
|                               | Compare Individuals and Groups (Compare Rooms)              |          | ✓       |
|                               | Data Exports - Connect out to other Analytics Tools (Excel) |          | ✓       |
| <b>Share and Present</b>      | In-App Presentation Mode                                    | ✓        | ✓       |
|                               | Share & Schedule Analysis                                   |          | ✓       |
|                               | Data & Analysis Exports (PPT, PDF)                          | ✓        | ✓       |
|                               | Capture Visuals you create (Capture Rooms)                  |          | ✓       |
|                               | User Create/Edit Analysis                                   |          | ✓       |
| <b>AI, Prescribe, Predict</b> | Data Monitoring – AI and Metric Trigger Email Analyses      |          | ✓       |
|                               | Interactive what-if models and pipeline forecasting         |          | ✓       |
|                               | Interactive Career Path and Source Path Tools               |          | ✓       |
| <b>Data View and Access</b>   | Aggregated Views of Data                                    | ✓        | ✓       |
|                               | Full View of Source Data – Employee Information             |          | ✓       |
|                               | Analytical Data Driven by XD HR Security                    |          | ✓       |

## ***How do I know if I have Standard or Premium People Analytics?***

The Standard tier is included with the upgrade to the Evo solution. The Premium tier may have been purchased as an optional add on. If unsure, please check your PeopleXD contract for details on the tier you purchased.

***I've purchased Premium People Analytics, when will this be available?***

For customers who have opted for the Premium tier of People Analytics, you will initially be onboarded to the Standard tier as part of the Evo upgrade. Our Professional Services team will then upgrade you to the Premium tier of People Analytics after the go-live to Evo.

## Data Protection and Security

***Where is the data hosted for People Analytics?***

By default, data is stored in Germany (People Analytics solution) and routed through the UK (Azure staging area).

For EU customers requiring this setup, data is stored in Germany (People Analytics solution) and routed through Sweden (Azure staging area).

***How much data is available in People Analytics?***

When People Analytics is first provisioned, 3 years of historical data is available. From that point forward, data accumulates, so after one month, you will have 3 years plus one month of data available and after 1 year you will have 4 years of data available.

***What access does Visier have to my data?***

A very limited number of personnel from Visier's Customer Success and Customer Support teams have access to customer data. These teams require access to customer data to support and manage customer requested changes. Access to customer data must be requested, reviewed, and approved by management per Visier's change management process. Access is based on approved Access Profiles (Roles) that incorporate the principles of least privilege and segregation of duties (SOD). Authorized staff undergo additional background checks, as well as enhanced data privacy and customer data access training, prior to being granted access.

***Is my organisation's data held in a shared database with other client's data?***

This is a multi-tenanted solution. Client data resides on a file system or loaded in member and is segregated by tenant by folder, with no cross-folder access available.

# Access Evo FAQs

## Members Sync

### ***What is a Member?***

A Member is the term used for an Access Evo user. This is the account that is used to login to Access Evo.

### ***How and when are Members created / updated?***

With PeopleXD Evo, Members are created by syncing PeopleXD with Access Evo i.e. when an employee is created on PeopleXD, updated or made a leaver, those changes are synced to Access Evo.

The following actions will result in Members being created or updated in real time when PeopleXD is in an Access Evo Tab:

- New starter created in PeopleXD (including future hires), is automatically created in Access Evo.
- When the email address is changed in PeopleXD (via the PeopleXD > Employee Profile > Contacts screen, not data migration)

The following actions will result in Members being created or updated in real time when the Access Button is in XD:

- Portal account created for a new starter in PeopleXD (including future hires), will automatically be created in Access Evo.
- When the email address is changed in PeopleXD (via the PeopleXD > Employee Profile > Contacts screen, not data migration)
- When the email address has been verified in PeopleXD.

A nightly sync runs and updates as follows:

- Any of the synced fields have been updated since the last sync
- If a non-synced field is updated e.g. Category, this will not trigger an overall record sync

### ***Can I give access to Access Evo for a person that is not set up on PeopleXD?***

**Yes.** If you require access to Access Evo for non-employees, then this can be managed directly on Access Evo > Members.

That user does not get access to PeopleXD. Use Access Evo > Members > Assign Roles, to grant access to whatever Access Evo products the user requires.

### ***What does PeopleXD as “Source of Truth” mean?***

This term is used to describe when PeopleXD is synced with Access Evo i.e. Members are created from PeopleXD.

### ***What data is synced from PeopleXD to Access Evo Members?***

The following items are synced from PeopleXD to Access Evo Members.

- Email
- Forename
- Surname
- Reports to Manager
- Job Title
- Department
- Location

These items should not be updated directly in Access Evo for a Member record. If they should be changed, that should be handled directly in PeopleXD and will be synced with Members.

***Can I add additional items to be synced from PeopleXD?***

**No.** This is not currently available. Please suggest your feedback for fields you would like to be synced through the Ideas Portal.

***What can I update in Access Evo for a Member record?***

Depending on your use of Access Evo, you may wish to further update the Member records.

| Item                                                 | Guidance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Tags</b><br><br><b>(not synced from PeopleXD)</b> | <p>Tags are a useful way to categorise member record. These can be particularly useful if adopting the Access Engage feature, where capabilities can be driven based on Tag assignment.</p> <p>Do not update the Tags created in XD as this will cause the records to go out of sync, and the record won't be resynced until an event is triggered in PeopleXD to do that. That is for</p> <ul style="list-style-type: none"><li>• Job Title</li><li>• Department</li><li>• Location</li></ul> |
| <b>Groups</b>                                        | <p>Similar to Tags, this is another useful way to categorise your Member records.</p> <p>This doesn't drive any capability on PeopleXD and cannot be synced from PeopleXD.</p>                                                                                                                                                                                                                                                                                                                 |
| <b>User access for Access Evo products</b>           | <p>This will be the most common reason to update a Member record.</p> <p>For the PeopleXD Evo solution this applies to</p> <ul style="list-style-type: none"><li>• Copilot</li><li>• Feed</li><li>• Learning (if you have purchased Access LMS)</li><li>• Engage (if you have purchase Access Engage)</li></ul>                                                                                                                                                                                |

***Will Leavers be synced to Access Evo?***

**No.** See details below per PeopleXD Evo solution.

|                                  |                                                                                                                        |
|----------------------------------|------------------------------------------------------------------------------------------------------------------------|
| <b>PeopleXD in a Tab</b>         | Only active <u>employee</u> records are synced to Access Evo.<br><br>Dormant (inactive leaver) records are not synced. |
| <b>Access Button in PeopleXD</b> | only active <u>portal accounts</u> will be synced to Access Evo                                                        |

When an employee has been synced and then later made a leaver, they will exist as a synced inactive Member on Access Evo.

***Will Future Hires be synced to Access Evo?***

**Yes.** See details below per PeopleXD Evo solution

|                                  |                                                                                                                                                             |
|----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>PeopleXD in a Tab</b>         | Future hires are synced to Access Evo once their HR record is created in People Management (assuming they have an email address or are a username account). |
| <b>Access Button in PeopleXD</b> | Future hires will be synced to Access Evo once a portal account has been created in XD for the user.                                                        |

## Data Protection & Security

### ***Are there changes to how my PeopleXD data is hosted?***

There are no changes to how the PeopleXD application itself is hosted.

However, when you upgrade to PeopleXD Evo the additional capability we deliver does include new hosting configuration.

The table below provides a direct link to the Customer Portal KB article that holds the latest published Product Factsheet, which is the primary reference point for all data hosting, security and GDPR **information for Access** Group products.

| Feature / Product       | Link to Product Factsheet  |
|-------------------------|----------------------------|
| Access Evo Core         | <a href="#">Click here</a> |
| Access PeopleXD         | <a href="#">Click here</a> |
| Access People Analytics | <a href="#">Click here</a> |
| Access Learning         | <a href="#">Click here</a> |
| Access Engage           | <a href="#">Click here</a> |

### ***Where is Access Evo hosted?***

See table above. Every Product Factsheet provides detailed guidance on the hosting for each.
