1.7	02.07.2025	Isabelle Grey	T&A guidebook guidance added to sections 4 and 11.

1. Overview

The purpose of this document is to provide guidance on how to use People Analytics for PeopleXD. People Analytics is an embedded solution that gives you access to instant, actionable people insights with in-built metrics and off-the-shelf guidebooks.

This guide includes:

- Accessing the People Analytics screens
- Home
- Guidebooks
- Explore
- Captures
- Analyses
- Compare
- Search
- Data Exports

Note:

- This guide covers functionality available for Premium People Analytics.
- The data in People Analytics is displayed on an employee level rather than a contract level, therefore only job data relating to the substantive post is shown. However, elements such as the FTE and salary will be rolled up so that the value for the employee represents all contracts.
- The data available to users is based on People Management Access only.
- Where data cleansing/data improvements have been made in the solution e.g. consolidating Job Titles, it will not impact data where an employee has been made a leaver in PeopleXD.
- Up to 3 years of PeopleXD data is available in People Analytics when it is first provisioned. The amount of data available will continue to accumulate over time.

Note: Non-Post Management is supported in People Management Analytics.

Key differences for the Premium tier are:

- **Data Security and Access:** Access to data is restricted based on People Management Department permissions only. Users will see company-wide analytics, but the employee data behind those analytics will be filtered according to their department access. For example:
 - Mary has access only to Department A, which includes 20 employees, so she will only see analytics for those 20 employees.
 - John has access to both Department A and B, which together have 50 employees (20 from A and 30 from B), so he will see analytics for all 50 employees.
- **Hierarchy Drilldown:** Direct drilldowns into hierarchy levels are not available. However, users can apply filters to drill down into specific areas of the organisation (e.g., by department, division, job title, location, management unit, etc.).

2. Accessing the People Analytics screens

To access People Analytics within PeopleXD, open the dashboard menu and click **People Analytics**. The table below outlines the areas available in the People Analytics navigation bar:

Area	Icon	Description
Home		This shows the People Analytics analysis you have set to be your home dashboard. If this has not been set it, it will provide you with a shortcut to the Guidebook area.
Guidebooks		View and drilldown on prebuilt out of the box analyses to get insight into your key business questions. People Management and Payroll Guidebooks area available by default.
Explore		Conduct ad hoc analysis on any metric in the solution. Explore the data and customise charts to suit your needs.
Captures		View your saved analyses.
Analyses		Allows you to turn the out of the box analytics available in Guidebooks into a bespoke dashboard you can share with stakeholders. Captures are used to create these dashboards.
Compare		Compare employees' side by side in a comparison grid.
Search		Quickly find metrics, analysis, and employees that you have access to.
Data Exports		Allow you to access People Analytics metrics and data so that you can embed it in portals, perform additional analysis in other BI solutions, or feed data and metrics to another data store. Data Exports can be used to access record level data, as well as pre-calculated metric values (for example, Headcount, Voluntary Turnover, and Total Cost of Workforce).
Preferences		Allows you change the language in People Analytics, update the display currency, and change chart preferences. Updating the display currency will override the admin option set in configuration settings – it will use the exchange rate set in the PeopleXD configuration area.

Note: Access to individual tabs cannot be granted/revoked via menu options.

3. Home

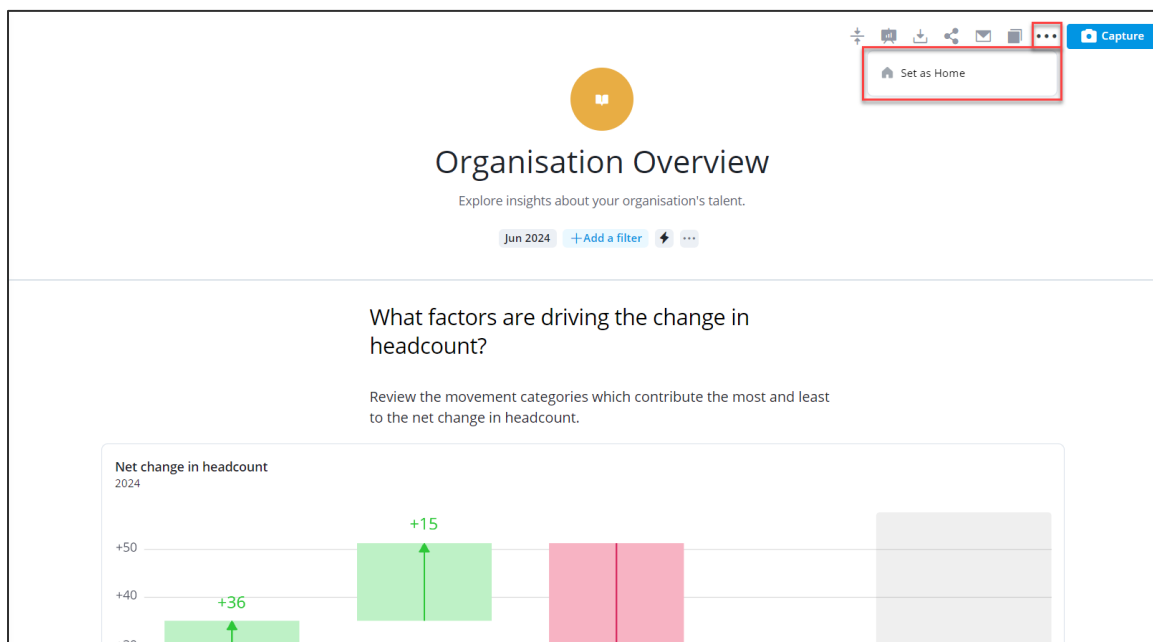

3.1. Overview

This shows the People Analytics analysis you have set to be your home dashboard. If you have not set your home dashboard yet, this will be blank, with a shortcut to the Guidebook area.

3.2. Set the Home Dashboard

To set your dashboard to one of the out-of-the-box dashboards, follow the below steps:

1. Click **Guidebooks** from the navigation bar.
2. Select the relevant dashboard. For example, navigate to the People Management Guidebook and select the Organisation Overview topic.
3. Click the ellipsis, then click **Set as Home**.

This People Analytics dashboard will now appear on your home dashboard.

You can also do this for any bespoke dashboard that you create in the Analyses area.

1. Click **Analyses** from the navigation bar.
2. Select the relevant Analyses.
3. Click the ellipsis, then click **Set as Home**.

3.3. Clear the Home Dashboard

To clear the home dashboard, follow the below steps:

1. Click **Preferences** from the navigation bar.
2. Click **Analyses**.
3. Click **Clear Home analysis**.

4. Guidebooks

4.1. Overview

The Guidebook area is where you can view prebuilt out-of-the-box People Analytics dashboards. The content within a guidebook is a collection of related topics and analyses that provide insight into business questions and workforce data.

The Guidebooks available are:

- Standard Dashboards
- People Management
- Payroll
- Time & Attendance
- Manager Dashboard
- Data Validation

4.2. Topics

Once you click into a Guidebook, you will see a list of related topics. Topics are categories used to organise a collection of analyses. Each topic contains at least one analysis.

4.3. Analyses

The analyses in the topics of the Guidebooks are designed to answer complex business questions by telling viewers a story with data visualisations. A typical analysis is made up of business questions (headers), charts, text, and links to other analyses.

4.3.1. Tools

The table below outlines the key functionality available within an analysis dashboard:

Item	Icon	Description
Collapsed View		Used to present the key themes or heading of an analysis.

Item	Icon	Description
Present analysis		You can present your analysis to stakeholders within the application. Your analysis is converted into a slideshow. Each individual slide corresponds to a Header (business question) and a row in the analysis layout. The charts are interactive, so hover over data points to get more information on chart items and metric values. You can also conduct ad hoc analysis by clicking a chart. This allows you to answer any questions that may come up during your presentation.
Download		Allows you to export the analysis as a PDF or PPT file.
Share		Allows you to share an analysis within your organisation.
Schedule email delivery		Deliver analyses straight to an individual's inbox. Add a schedule name, select a delivery frequency, add subject line, message and select recipients.
More Items		• Copy to Analyses - This copies the analysis to the Analyses area. • Delete - This delete an analysis from the Analyses list • Set as Home - This will set the dashboard as your home dashboard in Home area.
Capture		Add the analysis to the Captures area. This can be used to create a bespoke analysis in Analyses.

4.3.2. Analysis Context

The Analysis Context allows you to filter your guidebook content to the different populations that you're interested in. You can change the time picker, or you can apply any of the filters you have available based on your security.

To add a filter, follow the below steps:

1. On the Analysis Context toolbar, click **Add a Filter**.

2. Select one of the suggested attributes, or click **See all filters** to open the Filter picker in full screen.
3. Select one of the following:
 - a. An attribute from the suggested list
 - b. A Key Group
 - c. A category from the Categories column, for example, Location. You may need to click **All** to find the relevant category.
 - i. Then, select the attribute values you want to include or exclude. For example, North America.
 - ii. When finished, click **Apply**.
4. To add more filters, repeat steps 1 to 3.

4.3.3. Explore an Analysis

Select a chart to open and further analyse the data. For further information on how to use an individual analysis, [see section 6. Explore](#).

4.4. Standard Dashboard Guidebook

The standard dashboard includes pre-defined KPIs from your Organisation's People Data and is broken down into the following 2 topics:

- HR Dashboard – includes People Management KPIs.
- Payroll Dashboard – includes Compensation and Cost KPIs.
- Time & Attendance Dashboard – includes Time and Attendance Hours KPIs.

Aggregated data view is presented to end users i.e. no personal data, sensitive data, or employee level data is available. Users who have access to this dashboard see organisational wide KPIs i.e. access is not tailored access defined in PeopleXD.

Access to this screen is available when a user has been assigned the Standard Users User Group access in People Analytics Configuration area. Users who have been provided Standard Users access only to People Analytics will have the following features available:

- Use of filters and time sliders
- Use of in-app presentation mode
- Ability to share and schedule analysis

- Complete data and analysis exports.

Note: Users with access to Premium security e.g. Premium HR Users (Detailed), will have the ability to drilldown on standard dashboards.

Details of what analysis is available in the Standard Dashboard is detailed in the [Appendix](#).

4.5. People Management Guidebook

The People Management guidebook allows you to explore key HR metrics across your organisation. It includes the following key topics:

Name	Description
Key HR Metrics	Focuses on how some of the key HR metrics are calculated and leveraged in People Analytics e.g. Headcount trend, projections, etc.
Organisation Overview	Explores how your organisation's workforce is distributed e.g. age profile, what are the factors driving headcount changes, etc.
Attrition Overview	Monitors turnover and retention in your organisation e.g. what is the trend of exits and how many are due to voluntary/involuntary/retirement reasons
Attrition Deep Dive	Provides insights into how organisational attrition is driven e.g. rate of attrition by department, location, role, etc.
Employee Diversity Deep Dive	Provides insights into your diversity and inclusion practices e.g. ratio of women as % of overall headcount.
Career Mobility & Promotions Deep Dive	Explores the effects of internal movement on your organisation e.g. comparison of movement in and out of the organisation.
Employee Starts & Headcount Deep Dive	Provides guided insights into employee starts e.g. how do employee starts impact the headcount.
Headcount Forecasting Deep Dive	Explores the impact of changing assumptions on employee starts and exit rates on future headcount e.g. projected headcount, etc.

Note: Unknown values may appear in certain visualisations related to the organisational hierarchy because the historical data for the hierarchy over the past three years is not loaded into People Analytics (only data from the date of initial provisioning onward is available). As a result, if an individual was part of an organisation that existed last month but no longer exists today, it will be displayed as "unknown."

Access to this guidebook is available when a user has been assigned the Premium HR Users (Aggregated) or the Premium HR Users (Detailed) access in People Analytics Configuration.

Note: The data you see is based on your PeopleXD People Management access.

- Aggregated Access: Users cannot see the underlying employee data that makes up the analysis they are viewing.
- Detailed Access: Users can drilldown on an analysis to see the underlying employee data that makes up the analysis they are viewing.

4.6. Payroll Guidebook

The Payroll Management guidebook allows you to explore key HR metrics across your organisation. It includes the following key topics:

Name	Description
Learn About Payroll Metrics	Focuses on how some of the key payroll metrics are calculated and leveraged in People Analytics e.g. budgeted total rewards, breakdown, etc.
Payroll Overview for HR BPs	Explores how your organisations workforce is distributed e.g. actual total rewards by organisation and compensation type.
Actual Payroll Overview	Monitors turnover and retention in your organisation e.g. total cost of your workforce.
Budgeted Payroll Overview	Provides insights into how organisational attrition is driven e.g. budgeted direct compensation by FTE by Tenure
Benefits Overview	Provides insights into your diversity and inclusion practices e.g. what part of the organisations has increased benefit costs, etc.

Name	Description
Total Rewards Deep Dive	Explores the effects of internal movement on your organisation e.g. actual versus budgeted rewards.
Pay Equity Deep Dive	Provides guided insights into employee starts e.g. how do employee starts impact the headcount.
Payroll Planning Deep Dive	Explores the impact of changing assumptions on employee starts and exit rates on future headcount e.g. projected budgeted total rewards.

Access to this guidebook is available when a user has been assigned the Premium Payroll Users (Aggregated) or the Premium Payroll Users (Detailed) access in People Analytics Configuration.

 **Note:** The data you see is based on your PeopleXD People Management access.

- Aggregated Access: Users cannot see the underlying employee data that makes up the analysis they are viewing.
- Detailed Access: Users can drilldown on an analysis to see the underlying employee data that makes up the analysis they are viewing.

4.7. Time & Attendance Guidebook

The Time & Attendance allows you to explore key WFM metrics across your organisation. It includes the following key topics:

Name	Description
Learn About T&A Metrics	Learn about the different types of time & attendance metrics in People Analytics e.g. overtime in T&A versus Payroll, timesheet hours, absences, etc
Overtime Overview	Monitor the detailed overtime performance at one particular location, department, or business unit.
Absence Overview	Monitor the detailed absences at one particular location, department or business unit.
Staff Deployment Overview	Investigate whether an appropriate mix of staff are deployed to work at all times.

Name	Description
Understanding Overtime Impact	Explore the immediate and root causes of overtime and identify possible solutions to reduce labour costs in your organisation.
Absence and Paid Time-Off	Explore the effects of time-off on broader teams and business result
Monitor Time & Attendance	Monitor overtime and absenteeism results for the past month. This is available as a dashboard within the following topics: • Overtime Overview • Absence Overview

Access to this guidebook is available when a user has been assigned the XD Premium T&A Users (Aggregated) or the XD Premium T&A Users (Detailed) access in People Analytics Configuration.

Note: The data you see is based on your PeopleXD People Management access.

- Aggregated Access: Users cannot see the underlying employee data that makes up the analysis they are viewing.
- Detailed Access: Users can drilldown on an analysis to see the underlying employee data that makes up the analysis they are viewing.

4.8. Manager Dashboard

The Manager dashboard allows managers to explore key insights across their team. It is broken down into the following topics:

- HR Insights – includes People Management KPIs.
- Payroll Insights – includes Compensation and Cost KPIs.

Aggregated data is presented to users i.e. no personal data, sensitive data, or employee level data is available. Managers will see data of their direct and indirect reports using their reporting lines in PeopleXD. Managers with indirect reports can apply a filter to only show their direct reports.

Note: Where manager is also a People Analytics admin the dashboard only shows their reports as the “My Reports” filter is automatically applied.

Access to this screen is available when a user has been assigned the Manager User Group. This grants them access to the guidebook and Standard User functionality.

4.9. Data Validation

The Data Validation guidebook allows you to validate HR & Payroll information in People Analytics and the mappings that drive Analyses in People Analytics. Data Validation areas are available for:

- People Management
- Payroll
- Time & Attendance

Access to the Data Validation Guidebook is available to users who are assigned the following User Groups:

- XD HR Super User
- XD System Super User

The guidebook includes the following topics:

Name	Description
People Management Data Validation	Use to validate: • Hierarchy and Headcount - that employees are placed in the correct place within the organisation • Employee Attributes - that the basic attributes of employees, such as demographics, are reflected correctly • Employee Starts - the configuration and counts for employee starts is correct • Employee Exits - the configuration and counts for employee exits is correct

Name	Description
	• Diversity and Inclusion - the configuration and counts for diversity data is correct
Payroll Data Validation	Use to validate: • Budgeted Compensation data • Actual Compensation data • That employee compensation files and exchange rates are reflected correctly
Time & attendance Data Validation	Use to validate: • Time & Attendance data • Total hours recorded and configuration in the time & attendance area

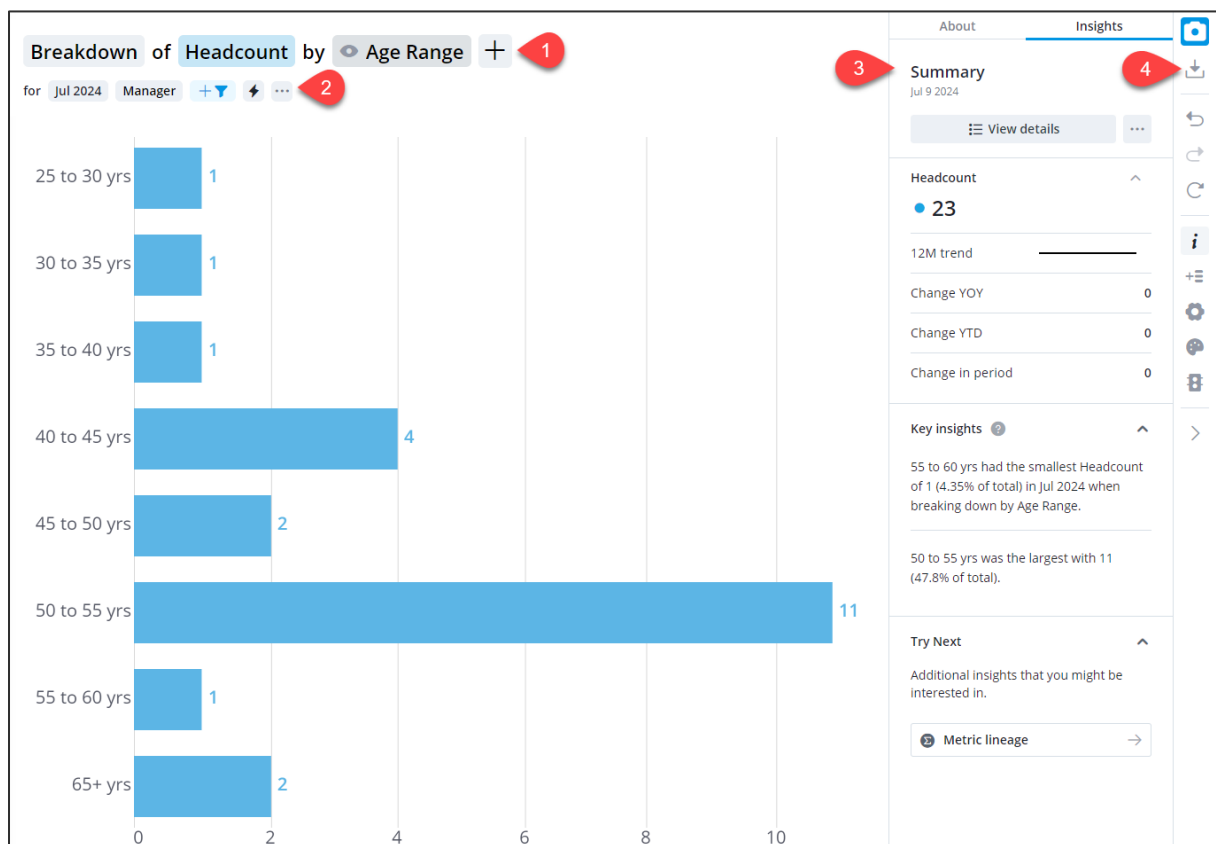

5. Explore

5.1. Overview

Explore is where you can conduct most of your ad hoc analysis. You can also access the Explore workflow (in full screen) by selecting a chart in an analysis.

5.2. Navigating the Explore screen/an Analysis

The table below outlines the key functionality available within the Explore screen/or an individual analysis:

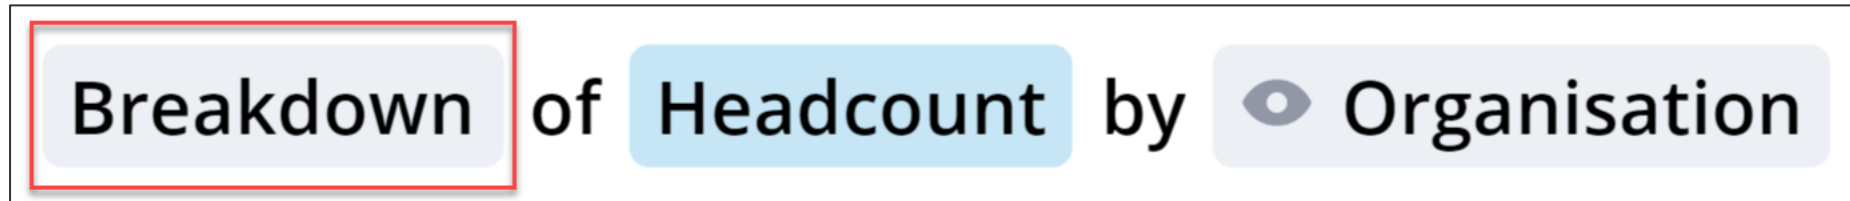

Item	Name	Description
1	Visual Title	For this to appear on an analysis, you will need to click the arrow next to the Chart Title – this allows you to see how the chart is constructed.

Item	Name	Description
2	Analysis Context Toolbar	Narrow down data with filters and apply time ranges.
3	Info Panel	View contextual information about selected metrics and data points, customise the appearance of your chart, and change chart configurations.
4	Visual Actions menu	Use these quick access buttons to perform chart actions and open chart configuration options in the Side panel.

5.2.1. Visual Title

This section covers the elements in the Visual Title.

Visual Picker

This determines the type of chart that is displayed. The visual types that are available depend on the metric selected. The Visual Types available are as follows:

Name	Description
Breakdown	A horizontal bar chart that uses bars to compare a specific measure across a series of groups. The vertical axis shows the groups being compared, and the horizontal axis represents a value scale.
Trend	A line chart showing changes in a metric over time. The vertical axis represents a value scale, and the horizontal axis represents units of time. Individual data points are plotted on the visual and connected with lines to show the trend.
Trend Breakdown	A bar chart plotted over time. The length of each bar is proportional to the value of the metric at a point in time. Metric values are visualised starting from zero to emphasise absolute magnitude. If a group by-attribute is selected, the chart turns into a stacked bar chart where each bar is divided into segments that represent different parts of the whole. The bar segments are determined by the selected group by attribute.
Table	Presents large amounts of information in a tabular format.

Premium People Analytics - User Guide

Name	Description
Bubble Grid	Used to explore the intersection of two attributes, and shows the pattern of metric values across a set of groups. An attribute is plotted on each axis and data points are represented as bubbles.
Movement Breakdown	Shows how a metric, for example, Headcount is affected by a series of positive and negative values. The visual breaks down a metric into its individual components and shows how they positively or negatively contributed to the net change of the metric value.
Movement Summary	Shows how a specific group or population has changed over the selected period. The inner circle represents the analysis population. The visual highlights the movements of subject members, such as employees and requisitions, into, out of, and within the group.
Quadrant	A scatter plot divided into four quadrants to form a 2x2 matrix. Each item on the visual represents a group. Use this visual to see how individual groups are classified into four categories (four quadrant analysis), find common attributes between groups, and identify outliers in the data. This visual supports up to three metrics. By adding a third metric, the data points are replaced with bubbles and an additional dimension of the data is added. The size of the bubble reflects the magnitude of the third metric value, so you can easily identify the differences between groups.
Relationship	Used to explore the relationship between metrics. A metric is plotted on each axis and each item on the visual represents a group. The nature of the relationship between the selected metrics is determined by how the data points are distributed across the chart.
Distribution	Shows groups of numeric values sorted from lowest to highest distributed across a range. The horizontal bar is made up of segments that represent 25 percent of the values for the group. The leftmost value is the minimum for the group and the rightmost value is the maximum. The median is the middle value in the distribution. This means half the values are above the median and half the values fall below. The mean is the average value of the distribution.

Access Limited Distribution

Premium People Analytics - User Guide

Name	Description
Sourcing Paths	Helps you identify quality internal candidates for open positions. The visual is generated from the internal job histories and movement of your employees throughout your organisation. By loading this data, you'll be able to select a target job and see the most common paths that employees took to that job.
Career Paths	Shows the natural movement of an employee through their career in your organisation. The Career Paths visual allows you to identify an employee's opportunities and the time to progress to new roles based on their current position.
Organisation	A hierarchical diagram that illustrates the structure of an organisation and the relationships and relative ranks of its employees and departments. You can zoom out and take a comprehensive view of a complete organisation, explore the chain of command within it, and use metrics to evaluate the organisation on a granular level. The thickness of each line between individuals is proportional to the size of the metric value that exists between them. The thicker the line, the greater the value.
Drivers	Shows the groups in the organisation that have the greatest influence in driving a particular metric up or down. This visual will help you discover which groups to focus on to make the largest business impact. Each arrow on the visual represents a group, which is defined by a specific attribute, such as Tenure or Job Family. Groups on the left decrease the overall metric value, and groups on the right increase the overall metric value. The length of the arrow represents the magnitude of impact of that group. The groups are listed in descending order based on their drivers score, which is the extent to which they influence the overall metric. Groups that have the greatest positive or negative impact are listed first.
Pipeline Funnel	Shows the volume of subject members that are at or past different stages of a process. Subject members can be individual people (for example, applicants) or things (for example, requisitions).
Pipeline Trend	Shows the movement of subjects through multiple stages of a process over time. Subjects can include people (for example, applicants) or things (for example, requisitions).

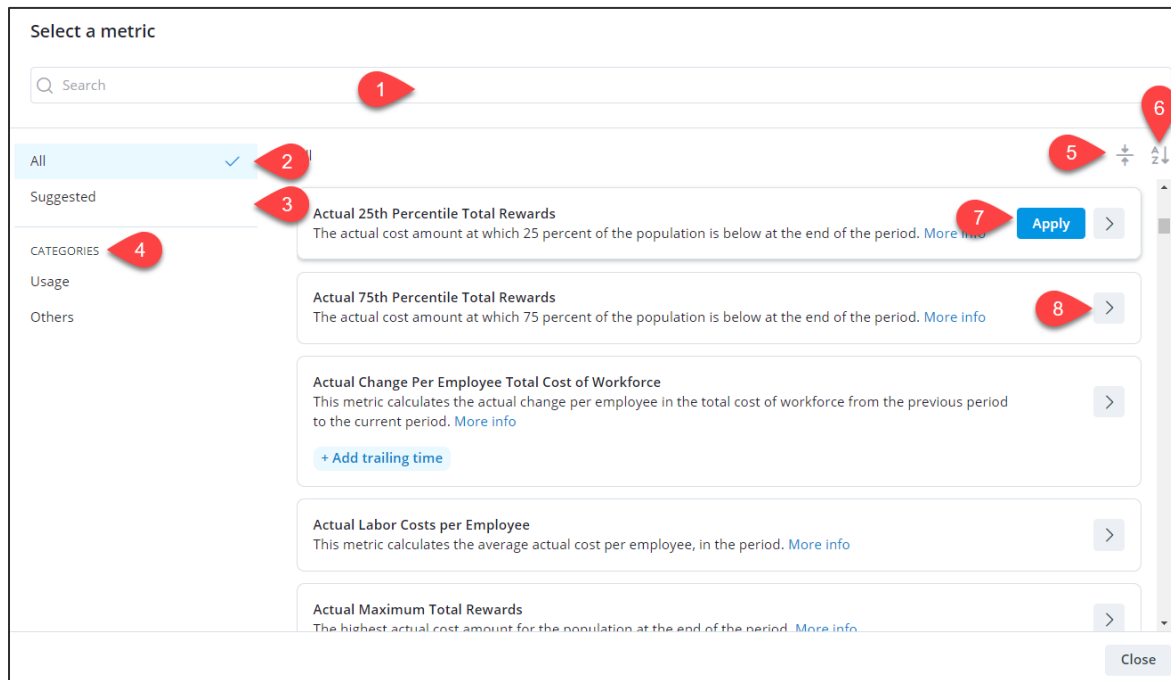

Premium People Analytics - User Guide

Name	Description
Pipeline Flow	Shows the path of each applicant as they go through the hiring process. You can use this chart to see how applicants are progressing through your pipeline and identify any bottlenecks within the hiring process.
Contribution	A pie chart that shows how a group contributes to a whole. The visual is a circle that is divided into slices, where each slice represents a different group that makes up the whole. The size of each slice is proportional to its share in the overall metric value. The bigger the slice, the higher the percentage of the whole it represents.

Metric Picker

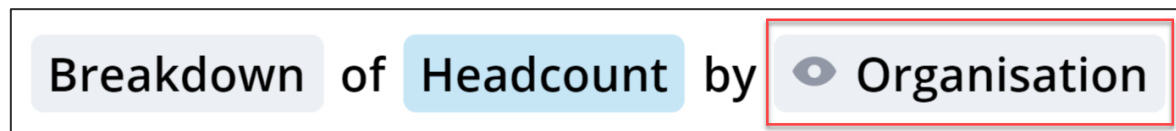

Use the Metric picker in the visual title to change the selected metric. Click **See all metrics...** to access the following options:

Item	Name	Description
1	Search	Returns complete, partial, and case-insensitive matches in the metric names.
2	All	The complete list of available metrics.
3	Suggested	A list of related metrics to the metric that currently selected in the visual title.
4	Categories pane	Select a category to see a list of metrics available for that category.
5	Expand/Collapse	Show or hide metric descriptions.
6	Sort	Sort metrics alphabetically in ascending or descending order.
7	Apply	Hover over the metric and click Apply to select it.

Item	Name	Description
8	Drill down	Metrics and models can be organised in a hierarchy. For example, the Total Cost of Workforce metrics have multiple levels. Drill down to view metrics at the next level of the hierarchy.

Group By

This allows you to select the attribute that is used to organise the data in your visualisation. Group by is an action that subdivides the data (subject members or events) by an attribute. For example, Turnover Rate can be grouped by Tenure, allowing you to see the percentage of employees who left the organisation across the tenure ranges.

To change the Group By attribute:

1. Click the **Group By** picker
2. Search for and select an attribute.

Attribute values can be arranged in multiple levels. For example, the Organisational Hierarchy may contain the following levels: Company, Department, Sub-Department, and Region. By default, the visual will show groupings and attribute values from the top level.

To change the level of the Group By attribute:

1. Ensure your visualisation is grouped by an attribute that has more than one level such as Organisational Hierarchy.
2. Click the **Group By picker** in the visual title and click **Select level of**.
3. Select the level of the attribute you want to group by.

5.2.2. Info Panel

The Info panel is located on the right side of the chart as part of the Side panel. The Info panel is made up of two tabs:

- About - provides supporting information that will help you understand what that you're seeing in the visualisation
- Insights - provides a high level summary of the data.

About Tab

The About tab can be divided into the following sections:

- **Notes.** This contains additional information that will help you understand what you're seeing. This section may contain information about hidden chart items, exchange rates, and guidance on how to use a visual.
- **Descriptions.** This contains descriptions/help information for the metrics, group by attribute, and visual that have been selected in the visual title. When comparing metrics, the descriptions for any applied filters will also appear.

Insights Tab

The Info panel can be divided into the following sections:

- **Summary information.** This shows values for the selected metrics or data points. You'll also find actions that will allow you to discover more detail about your selection.
 - When a visualisation has a hierarchy, you can drill down or up to navigate and view data for the different levels of the hierarchy. The drill path is part of the analysis context, so it acts as a filter that allows you to narrow down the data to a specific population.
 - To drill down, double-click a chart item or select a chart item then click **Drill down** Insights tab of the Info panel.
 - To drill up, Select a chart item then click **Drill up** on the Insights tab of the Info panel.
 - Click  **Detailed View** to see a list of subject members or event occurrences that make up a given population.
- **Related metrics.** This highlights metrics that will help you understand how your selected metric or data point is calculated and metrics that you should explore next.
 - The list of related metrics depends on the selected visual and metric. For example, if you're looking at a derived metric like Resignation Rate, you'll see the base metrics that are used in the calculation: Resignation Count (numerator) and Average Headcount (denominator).
- **Key insights.** This provides insights generated from your visual. Key insights are generated based on interesting data in the visual, for example, which department had the highest turnover rate.

Note: Key insights are not supported in the following visuals: Distribution, History, Organisation, Pipeline Diversity, Pipeline Trend & Sourcing Paths.

- **Try next.** This provides suggestions on additional insights that might interest you, such as what visual you should use in the next step of your analysis.

5.2.3. Visual Actions menu

The following table describes the actions that are available:

Note: The actions available will vary between visual types.

Item	Icon	Description
Add Comparison		Add an individual subject (such as employee, candidate, or requisition) or group to the comparison grid. For more information, see Compare.
Annotate		Add annotations to your visualisation to provide additional context to the data.
Capture		Create a capture of your chart. For more information, see Captures.
Compare to		Compare metrics over time, across different populations, or against other metrics. This is useful for questions like: • how does this metric compare over time? • how does this group compare to the overall? • how do these two metrics compare to each other?
Download visual		Export visualisations as a PNG, PPTX, or XLSX file to share or edit outside of the solution.
Find on chart		Find a specific employee in the Organisation visual.
Forecast		Generate a forecast in the Pipeline Trend visual to predict when subjects will successfully complete a process.
Info		Show or hide the Info panel.

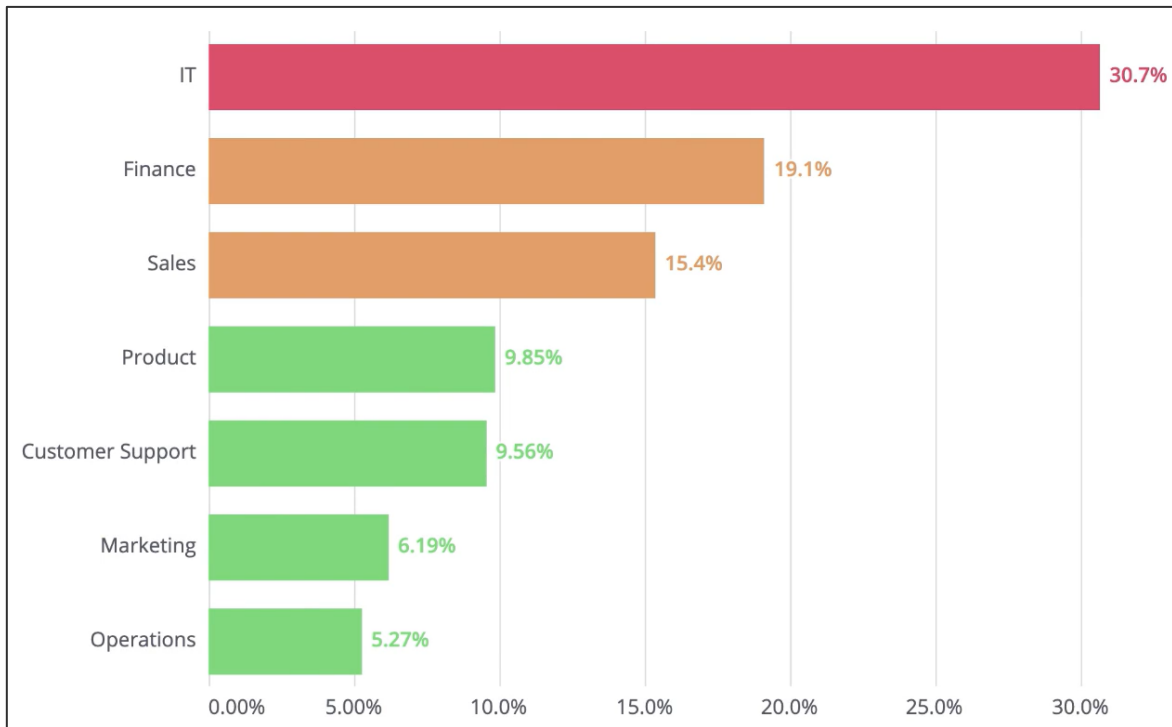

Item	Icon	Description
Redo		Redo an action that you've undone when building or viewing a visual.
Reset		Clear all actions that you've made to the visual and start over.
Settings		Configure options such as setting the maximum number of data items.
Show paths to job		Select a target job in the Career Paths visual to view the fastest and likeliest routes an employee can take to move to another job.
Table Settings		Adjust the data that appears in rows and columns for the Table visual.
Traffic Light		Apply conditional formatting to a chart to quickly highlight metric values of interest. For more information, see Traffic Lighting .
Undo		Undo an action that you made when viewing or building a visual.

5.2.4. Traffic Lighting

Traffic lighting is a monitoring system that uses the colours red, amber, and green to indicate the performance of a metric against set targets. You set targets by applying conditional formatting rules to the chart so that the metric appears:

- **Green** - indicates good performance i.e. the metric is on or above target.
- **Amber** - indicates concerning performance i.e. the metric is off target but in an acceptable range.
- **Red** - indicates bad performance i.e. the metric is off target and in a range that requires attention.

For example, the following illustration shows a Breakdown of Voluntary Turnover Rate grouped by Organisation Hierarchy:

Traffic lighting rules can be set by comparing a metric to one of the following:

Rule Type	Description	Explanation
Metric Value	The metric value for each visual item is compared to a target value	Rule: If the metric value is less than 250, traffic light as Bad. For example, the Headcount for Sales is compared to the target value of 250 in the selected period. If the Headcount value for Sales is less than 250, the visual item will be highlighted in red.
Change in Metric Value	The metric value for each visual item in the selected time period is compared to the metric value from a previous time period.	Rule: If the change from February 2020 is less than 5%, traffic light as Good. For example, the Headcount for Marketing is compared to the Headcount for Marketing in February 2020. If the percentage change from the previous time period is less than 5%, the visual item will be highlighted in green.

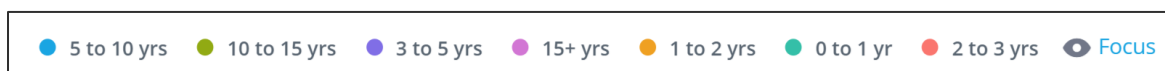

Rule Type	Description	Explanation
Difference from group	The metric value for each visual item is compared to the metric value of another population.	Rule: If the difference from Women is greater than 20%, traffic light as Bad. For example, the Headcount for Marketing is compared to the Headcount for Women in Marketing. If the percentage change from the other population is greater than 20%, the visual item will be highlighted in red.
Difference from another metric	The metric value for each visual item is compared to another metric.	Rule: If the difference from Employee Exit Count is greater than 500%, traffic light as Bad. For example, the Headcount for Finance is compared to the Employee Exit Count for Finance. If the percentage change from the other metric is greater than 500%, the visual item will be highlighted in red.
Difference from metric overall	The metric value for each visual item is compared to the overall value of another metric.	Rule: If the difference from Employee Exit Count is greater than 200%, traffic light as Concerning. For example, the Headcount for Finance is compared to the Employee Exit Count for the entire organisation. If the percentage change from the overall value of the other metric is greater than 200%, the visual item will be highlighted in amber.

Traffic lighting can be added to the following visual types:

- Breakdown
- Trend (with no groupings)
- Trend breakdown (with no groupings)
- Table (with one metric)

5.2.5. Chart Legend

When there is a need for additional contextual information, a legend will appear at the bottom of the chart:

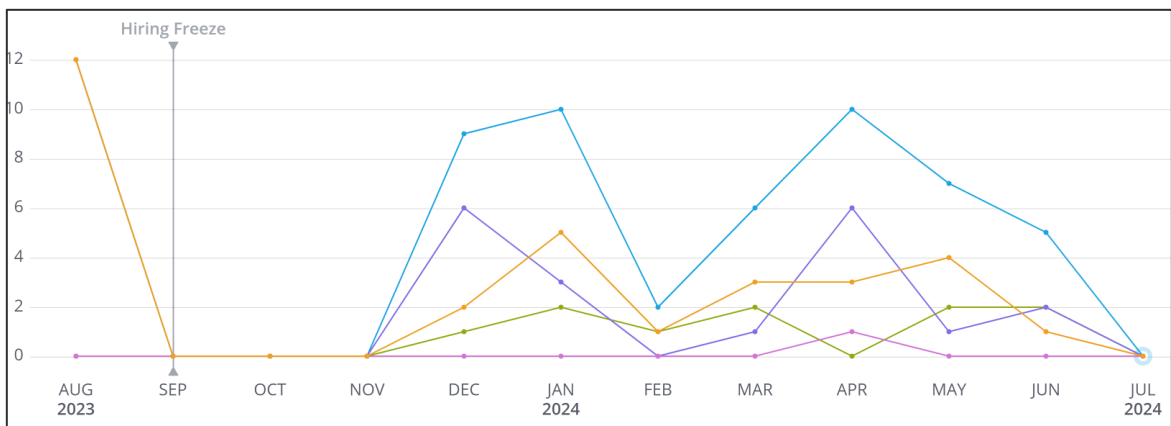

The legend identifies the different colours, shapes, or patterns that are being used in the chart. Legends will display the first 14 attribute values based on the visual sort order. Any selected value that exceeds the limit will be included in the Others data item. To manage the selected values, click **Focus**.

Note: The legend for the Organisation visual will display a maximum of 10 attribute values.

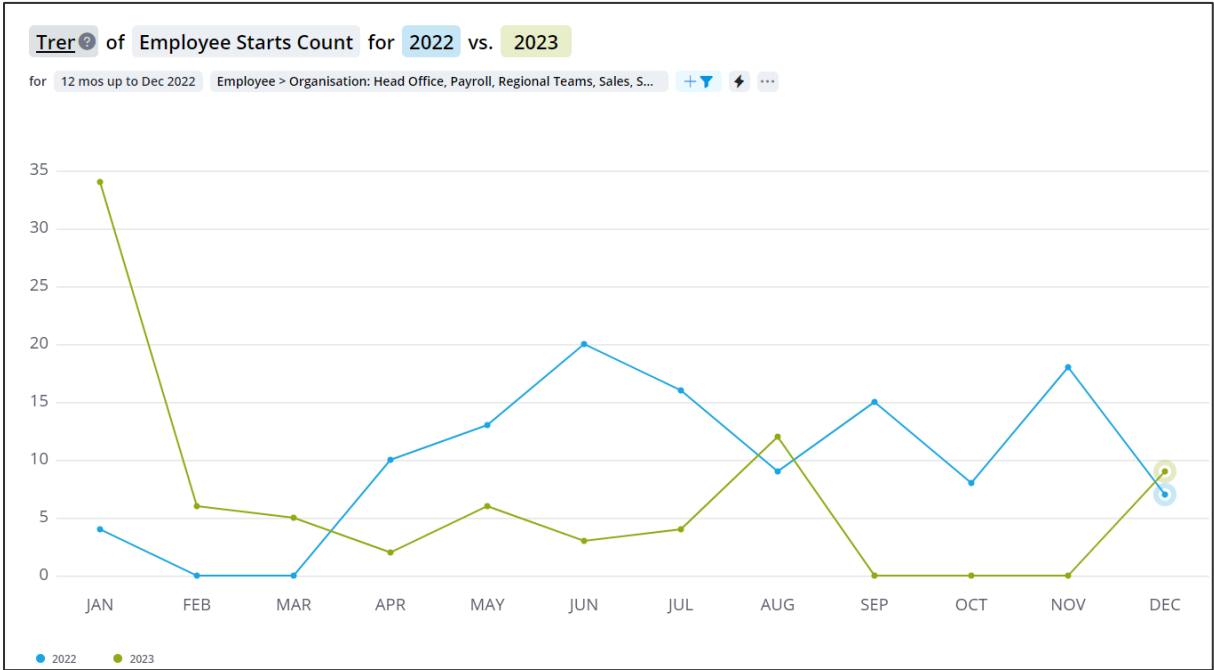

5.3. Build an Analysis

To create a new analysis using Explore, follow the below steps:

1. Select a Visual from the Visual Title e.g. Trend
2. Select a Metric from the Visual Title e.g. Employee Start Count
3. Select a Group By from the Visual Title e.g. Location
4. If required, edit the Time Period e.g. 12 months
5. If required, add filters e.g. by Department such as Payroll or Sales
6. If required, annotate by right clicking and adding an event e.g. hiring freeze in Sept 2023. This is only available in certain chart types.

7. If required, click  Compare To to understand the difference between other groups and metrics.

6. Captures

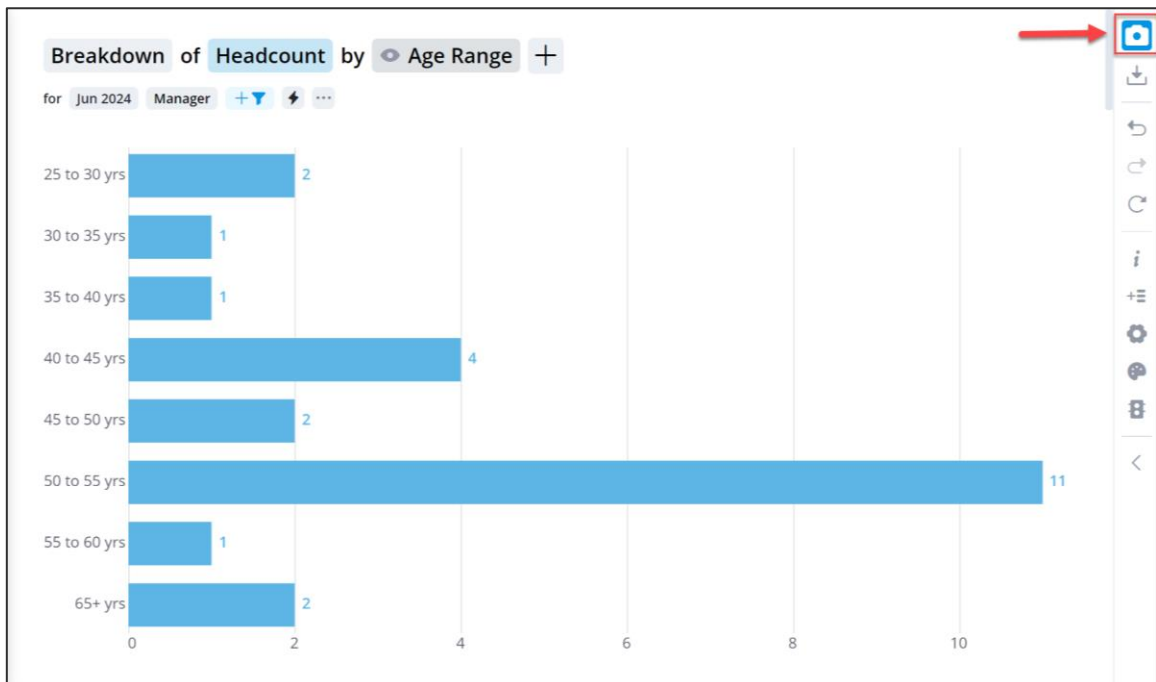

6.1. Overview

You can save the charts that you see in any analysis by creating a capture. When you create a capture, the analysis context is static, but chart data is always based on the latest data version.

6.2. Add a Capture

To capture a chart in Explore or when viewing a chart in full screen, click  **Capture** on the Visual Actions menu.

To capture a chart in an analysis, click  **Capture** then select the chart you want to capture.

The capture will then be displayed in the Captures tab.

6.3. View Captures

To view a capture, follow the below steps:

1. On the navigation bar, click **Captures** . Your most recently saved captures will appear first.
2. Use the advanced filters to find captures based on:

- a. Time - the time they were saved.
- b. Visual - the visual type of the capture.
- c. Metric - a metric used in the capture.

 **Note:** The maximum number of captures is 100. If the limit is reached, only the most recent captures will be displayed.

6.4. Delete a Capture

To delete a capture, follow the below steps:

1. Hover over the capture you want to delete and select the tick icon.
2. Click **Delete selected**.

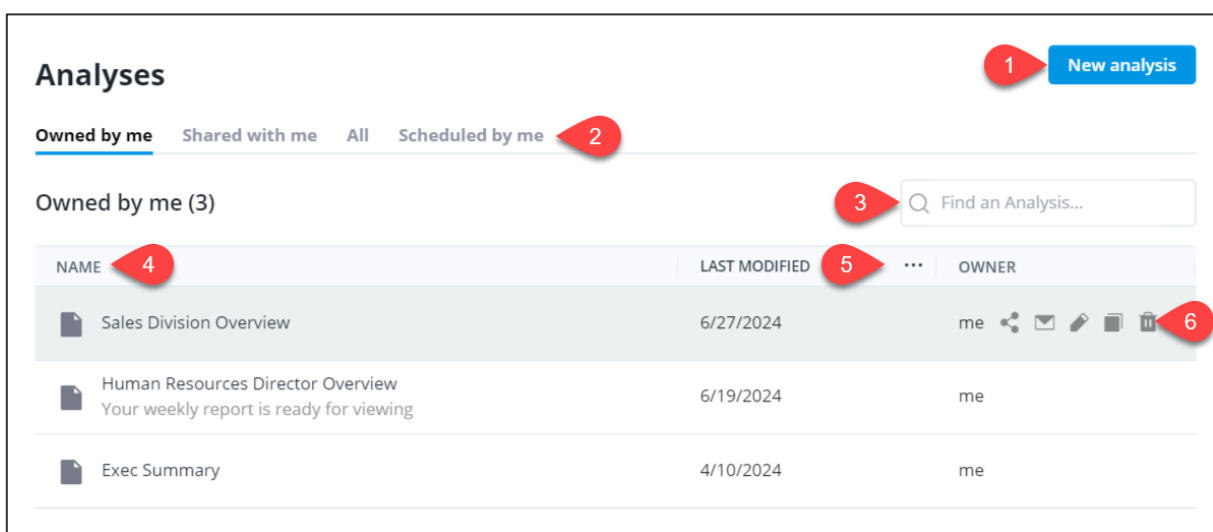

7. Analyses

7.1. Overview

Analyses allows you to turn the out-of-the-box analytics available in Guidebooks into a bespoke dashboard you can share with stakeholders. You can also create your own analyses from scratch to then add to your Home dashboard or share with stakeholders.

7.2. Using the Analyses screen

The table below outlines the key functionality available within the Analyses screen:

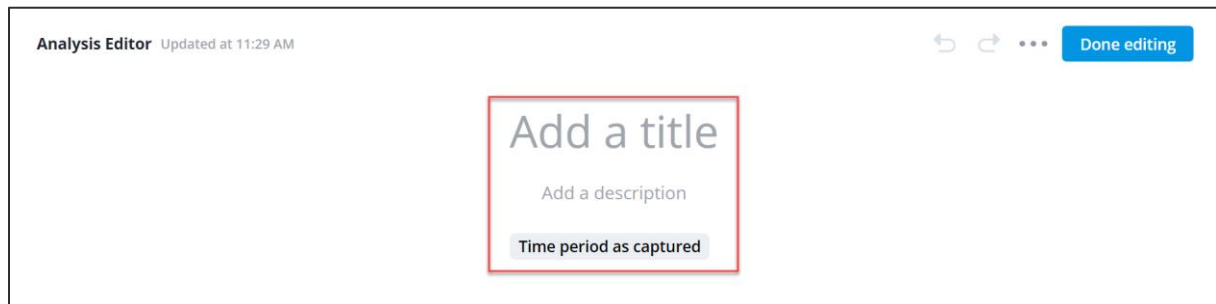

Item	Name	Description
1	New Analysis	Open the Analysis Editor to create a new analysis.
2	List view options	Switch between the tabs to view a list of analyses that are owned by you, analyses that have been shared with you, all analyses you have access to, and analyses you've scheduled to send via email.
3	Search	Find an analysis by typing the analysis name or the owner's name.
4	Column headers	Click the headers to sort analyses in ascending or descending order by the analysis name, date, or owner's name.
5	Date options	Select the information displayed in the Date column. You can show the last modified, last opened, or created date.
6	Quick actions toolbar	Hover over an analysis to reveal options to share, schedule, edit, copy, and delete the analysis.

7.3. Create an Analysis

To create a new analysis from scratch, follow the below steps:

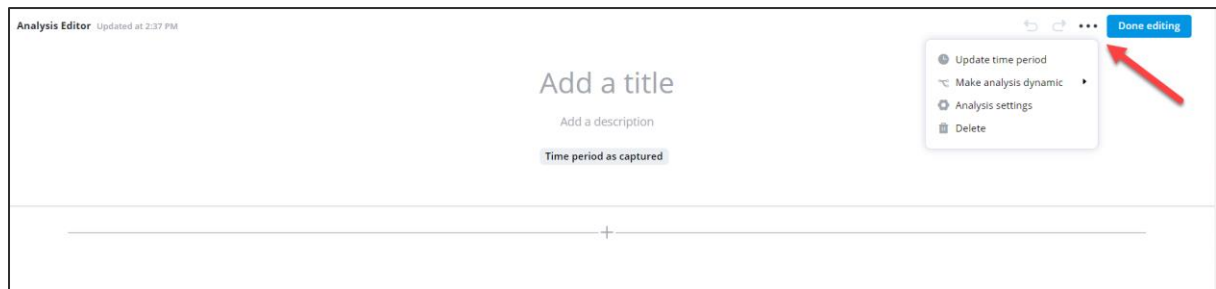

1. Click **Analyses** from the navigation bar. From within here you will be able to see any analyses you have already created or shared with you.
2. Click **New Analysis** and add a Name, Description and Time Period as appropriate.
3. In the Title box, type a title for your analysis. This will appear in search results and analysis links.
4. In the Description box, type a subtitle or description for your analysis.

7.3.1. Choose a layout mode

To choose the layout mode, follow the below steps.

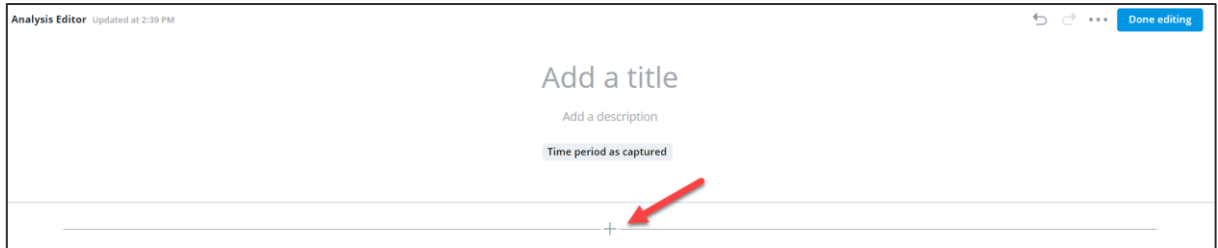

1. In the Analysis Editor, expand the three dot menu and select **Analysis Settings**.

2. Select a layout mode:
 - a. Narrative for a narrower layout. This is useful for analyses that tell a story, with lots of text describing the data, metrics, and visuals you're presenting.
 - b. Dashboard for a condensed layout. This contains less white space, allowing you to fit more data on the screen.
3. Click **Apply**.

7.3.2. Add Content

Click **Insert**  to insert a card in a new row. This displays the toolbar allowing you to build content in your analysis e.g. Heading, Text, Chart, Carousel, Image, Link.

Additional cards can be inserted to create a new row or new column within the existing row. After adding all relevant content, click **Done Editing**.

Header

Header cards act as section dividers for your analysis. In collapsed view, content is hidden under each header, and when presenting or exporting the analysis, headers will appear on a separate slide. To insert a header card, follow the below steps:

1. From the  toolbar, click  **Header**.
2. Type the relevant text in the box.

 **Note:** Subheadings can be added by inserting a Text card and applying an H2 paragraph style to the text.

Text

You can insert text cards anywhere in your analysis to describe and provide guidance for your charts. To insert a text card, follow the below steps:

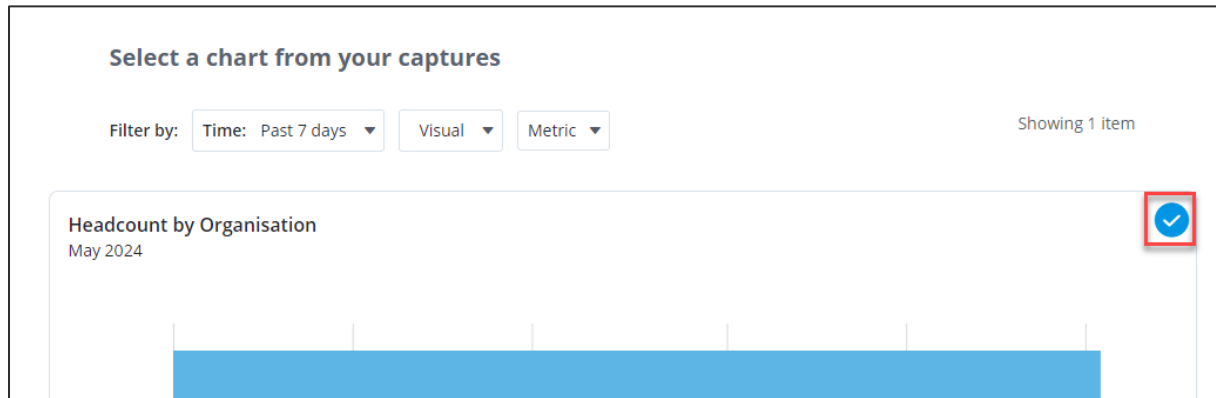

1. From the  toolbar, click  **Text**.
2. Type your text into the box and apply any editing, for example:
 - a. Bold, italicize, and underline text.
 - b. Insert inline links to an analysis or external webpage.
 - c. Create bulleted and numbered lists.
 - d. Apply paragraph or H2 styling.

Chart

To add a chart to your analysis, follow the below steps:

1. From the  toolbar, click  **Chart** .
 - a. To add a chart you have captured before, select the tick icon, then click **Add**.

Captures are inserted to the analysis in the order that they were selected.

- b. Alternatively you can create a chart from scratch click **Create new chart**. Build your chart by:
 - i. Selecting the visual type, metrics, and group by attribute for your chart.
 - ii. Changing the analysis context.
 - iii. Customising the chart appearance and settings in the Side panel.
 - iv. Adding a title
 - v. Adding a description for your chart in the About tab of the Info panel.
 - b. When finished click **Add and Close**.

After a chart has been added to an analysis, you can access the following options by hovering over the chart:

- Change the chart title, description, and analysis context token.
- From the toolbar:
 - Display as metrics
 - Display as visuals
 - Edit card appearance
 - Show Description. To provide viewers with additional guidance, you can show the chart description on the card. The description can be displayed above or below the visual or metric summary.

- Show sparkline. For Trend charts, sparklines (tiny line graphs that illustrate a data trend) appear by default when they are set to show a metric summary.
- Show key insights. Key insights can be displayed above or below the visual or metric summary.

Carousel

The Carousel card to display two or more chart cards in a slideshow format. To insert a carousel, follow the below steps:

1. From the  toolbar, click  **Carousel**.
2. Select previously saved charts from your captures, or create new charts.
3. When finished, click **Add**.

To add or edit the cards in a carousel, click **Add card** in the upper-left corner of the Carousel card.

Link

You can link to other analyses or external webpages that contain related content by inserting a link card. To insert a link, follow the below steps:

1. From the  toolbar, click  **Link**.
2. Enter the name of the analysis you want to link to or the URL of the webpage.
3. Enter the display text.
4. When finished, click **Add Link**.

Image

You can add a JPG, PNG, or GIF image, such as your company logo, to your analysis by inserting an image card.

 **Note:** Images must be smaller than 5 MB.

To insert an image, follow the below steps:

1. From the  toolbar, click  **Image**.
2. Select an image to upload.
3. Enter alternative text that describes the image for visually-impaired users. (Optional)

4. Click **Add image**.

After an image has been added to an analysis, you can access the following options by hovering over it:

- Adjust the width between  **Half width** or  **Full width**.
- From  **Edit**, you can  **Delete** the image and upload a new one.

7.4. Copy an Analysis

You can use an existing analysis as a template, or make changes to a shared analysis by making a copy. To do this, from the analysis list hover over the relevant analysis and click  **Copy**.

7.5. Download an Analysis

You can export an analysis to share or edit outside of the solution. To do this, follow the below steps.

2. From the Analyses list, select the analysis you want to export.
3. Click  **Download**.
4. Select the relevant download type:
 - a. **Download analysis as PDF** - downloads the entire analysis as a PDF file, including all headers, text, visuals, and links. The default orientation is landscape.
 - b. **Download analysis as PowerPoint** - downloads the entire analysis as a PPTX file, including all headers, text, visuals, and links. Text included in the visual title, analysis context, and Info panel can be edited in the file.
 - c. **Download visuals as PowerPoint** - downloads the visuals in an analysis as a PPTX file. Text included in the visual title, analysis context, and Info panel can be edited in the file.

Note: It's recommend to remain in this tab while the file finishes downloading.

7.6. Edit an Analysis

You can make changes to an analysis that you own, or to an analysis that has been shared with you to edit. To do this, follow the below steps:

1. From the Analyses list, select the analysis you want to edit.
2. Click  **Edit**.

 **Note:** If another user is editing a shared analysis, the shared analysis is locked for editing and the lock icon  will be displayed.

4. Make your changes in the Analysis Editor.
5. When you are finished, click **Done editing**.

7.7. Share an Analysis

You can share your analysis with specific users, or create a link to your analysis that you can share. The following options are available:

- Share with specific users using a name or email address.
- Share with a group of users via User Groups.
- Create a shared link and distribute your analysis outside of the solution. Any user with the link can view your analysis.

For analyses that you own, you can set how specific users interact with the analysis that you are sharing. You can choose from the following options:

- Viewer: Users will be given view-only access to your analysis. They cannot edit, share, or delete your analysis.
- Editor: Users will be given edit access to your analysis. They can edit your analysis, but do not have the ability to share or delete the analysis.

To share an analysis, follow the below steps:

1. Click  **Share**.
2. In the Share Analysis dialog, do one of the following:

- a. To share an analysis with specific users or a group of users, type the username, email address, or name of the user group in the search box, and select individual users and groups from the search results.
 - i. Select/Deselect the relevant settings, and add a note if required. The content that is included in the email will be based on the recipient's security settings, applied default context, dynamic filters, and user preferences such as display currency. They will only see the data that they are allowed to see.
 - ii. If you want to give specific users edit access to your analysis, click the **Viewer** drop-down and select **Editor**.
 - iii. When you've finished adding users, click **Share**.
- b. To generate a link that you can share with other users, click **Copy link**.

After you have shared an analysis, you can update the sharing access. To do this, follow the below steps:

1. Click  **Share**.
 - a. To stop sharing with a specific user or user group, click the **Viewer** box on the relevant row, then select **Remove**.
 - b. To set what type of access the user should have to the analysis, click the **Editor or Viewer** box on the right side of the user you want to edit access for, and then select the access type.

7.8. Schedule an Analysis

You can deliver analyses to others via email once or on a recurring basis.

Note:

- A recipient will see content that is based on their security settings, applied default context, and dynamic filters. They will only see the data that they are allowed to see.
- The maximum number of recipients is 1000. Analyses will not be sent if this limit is exceeded.

To do schedule an analysis, follow the below steps:

1. From the Analyses list, hover over the analysis you want to send and click  Add Schedule. Alternatively, from within an analysis click  Schedule email delivery.
2. Enter a name for the schedule.
3. In the Delivery box, select the delivery schedule:
 - a. Select Deliver now to immediately send the analysis to users.
 - b. Select Recurrent and set the frequency (weekly or monthly) that the analysis will be sent to user
 - c. Select Custom and select the specific dates that the analysis will be sent to users.
4. If required, set a conditional delivery rule. Emails will only be sent if the rule is met.
 - a. In the **Rule type** list, select one of the following rule types:

Rule	Description	Example
Metric Value	Send an analysis email based on a target value.	If the Turnover Rate is Greater than 20%, send the analysis email.
Change in metric value	Send an analysis email based on the percentage change in a metric over time.	If the percentage change in the Turnover Rate is Greater than 5% from the previous period, send the analysis email.
Difference from group	Send an analysis email based on the percentage change in a metric for a specific population.	If the percentage change between the Turnover Rate and the Turnover Rate for Women is Greater than 10%, send the analysis email
Difference from metric overall	Send an analysis email based on the percentage change between two metrics. The reference metric value is evaluated against the overall value of the comparison metric.	If the percentage change between the Minority Ratio in US and the Minority Ratio - My EEOC Benchmark is Greater than 10%, send the analysis email.

- b. Depending on the rule type you selected, do the following:

Rule	Steps
Metric Value	Select the metric that will be evaluated by clicking Select metric.
Change in metric value	1. Select the metric that will be evaluated by clicking Select metric. 2. Select a time period from the dropdown menu to set the time period for comparison.
Difference from group	1. Select the metric that will be evaluated by clicking Select metric. 2. Click Add filter and select the attribute values that define the population for comparison. 3. Repeat step 2 to add additional filters.
Difference from metric overall	Select the reference and comparison metrics. The reference metric will be evaluated against the comparison metric.

- c. In the Rule details list, select the condition and then type the target value. For example, Less than 50, Between 40% and 50%, or Greater than 20%

5. Under Email details, set up and compose the email:

- a. Enter a subject line and message that will accompany the analysis.

 **Tip:** Use the following tags to insert dynamic text in the subject line or body of the email.

Ensure the tags are written in all uppercase letters.

- [ANALYSIS] inserts the name of the analysis.
- [RECIPIENT] inserts the recipient's user name.
- [SCHEDULE] inserts the name of the schedule.

- b. In the Reply-to email box, type an email address to which you want to receive replies.

6. Under Recipients, select the user or user groups you want to send the analysis to.
7. When finished, click **Schedule**.

7.9. Amend a Scheduled Analysis

1. From the Analyss list, click the **Scheduled by me** tab.
2. Expand the schedule analysis by clicking  **the arrow icon**.

- a. To edit, next to the relevant schedule, expand the three dot menu and click **Edit**. Then, update the schedule details.
- b. To delete, next to the relevant schedule, expand the three dot menu and click **Delete**. Then, click **Delete** to confirm.

8. Compare

8.1. Overview

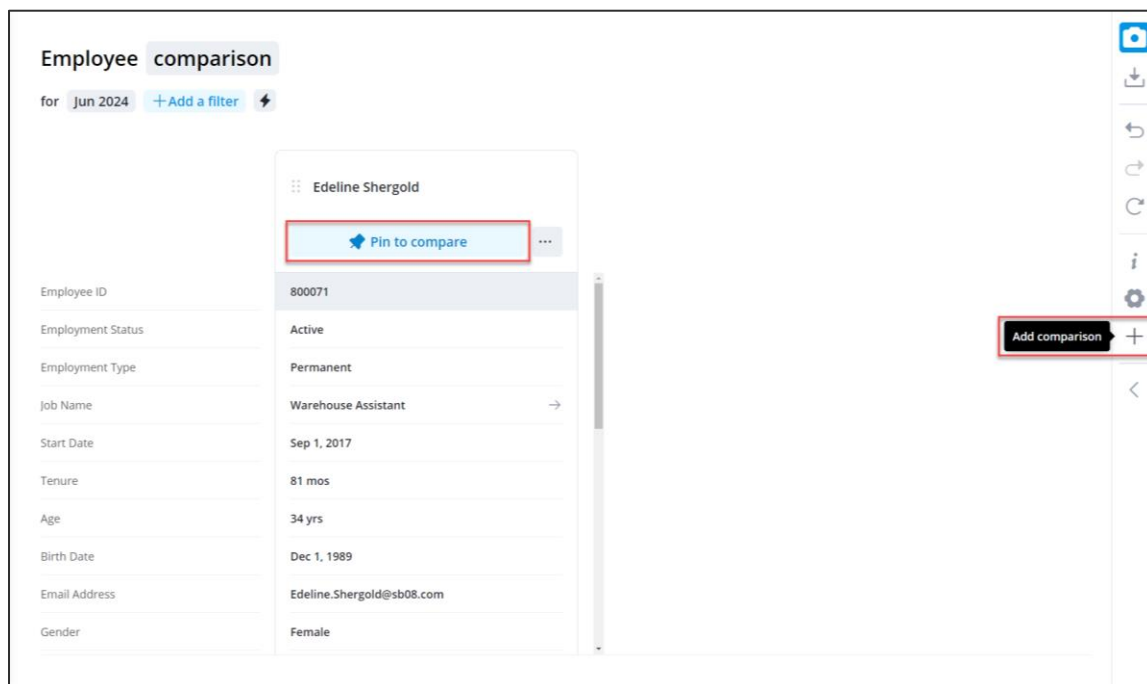

Compare allows you to view detailed data for employees and provides a comparison grid to support you answering questions such as:

- Should I make a counter offer to keep an employee from leaving?
- Who is the best internal candidate to fill a new leadership position?

8.2. Compare Employees

To compare employees, follow the below steps:

1. Click **Compare** from the navigation bar.
2. Select **Employee** from the dropdown list.
3. In the Search box, type a name or employee ID and select the employee from the search results. By default, only active employees will be included in the search results. If you want to analyse a former employee, click **Active Employees** and select **All**.
4. To use this employee as the master for comparison, click **Pin to compare**.

5. To add another employee to the comparison grid, click **+ Add comparison** on the Visual Actions menu.

6. In the Compare to panel, enter a name or employee ID in the Search box and select the employee from the search results. You can continue to add other employees to this compare grid as required.
7. To remove an employee, in their column header, expand the three dot menu  click **Remove**.
8. Click  **Reset** to start over.

9. Search

Use the search to quickly find metrics, analyses, and employees. The solution searches for complete, partial, and case-insensitive matches in the following places:

- Metrics names
- Analysis titles
- Employee names
- Employee IDs

10. Data Exports

10.1. Overview

Data Exports allows you to access People Analytics metrics and data from outside the solution, so that you can embed it in portals, perform additional analysis in other solutions, or feed data to another data store. Data Exports can be used to access cleansed record level data (for example, cleansed employee or exit event data) as well as pre-calculated metric values (for example, Headcount, Voluntary Turnover, and Total Cost of Workforce).

There are two types of Data Exports to choose from:

- Aggregated Data Export: Retrieve data containing metric values. For example, Headcount and Resignation Rate.
- Detailed Data Export: Retrieve data containing attribute values for individual subjects (such as employees, candidates, and requisitions) and events (such as starts, exits, and pay changes).

Note: Data Export limits:

- An Aggregated Data Export can contain up to 300,000 cells. The application provides a preview of the first 100,000 cells.
- A Detailed Data Export can contain up to 7.5 million cells. The application provides a preview of the first 100 rows.

10.2. Using the Data Exports screen

To access Data Exports, on the navigation bar, click **Data Exports**.

Data Exports

Find a data export

1

3

New data export

All

Owned by me

Shared with me

Published2

DATA EXPORT NAME	TIME PERIOD	LAST MODIFIED ↓	OWNER
Detailed Data Report - Employee Details & Job Details	Latest month	2024-08-12	me
Aggregated Export - Headcount by Resignation rate by Comp by Employee Ratio	Latest month	2024-07-31	4

The following functionality is available:

Item	Name	Description
1	Search	Find a Data Export by typing the Data Export name, description, or owner's name.
2	List view options	Click each tab to view a list of: - all Data Exports you have access to - Data Exports that are owned by you - Data Exports that have been shared with you - Data Exports that are published to production.
3	New Data Export	Create a new Data Export from scratch.
4	Quick Actions toolbar	Hover over a Data Export to copy, link and share, download, edit, duplicate, and delete.

10.3. Create an Aggregated Data Export

To create an aggregated data export, follow the below steps:

1. Click **New Data Export**.
3. Enter a title and description for your Data Export.
4. In the visual title, click the **Data Export** picker and select Aggregated Data Export.
5. Build a Data Table that includes the metric data that needs to be leveraged.
6. Click the **Time** picker to set the time window and time context. If you want the Data Export to continuously display the latest data, select the **Update automatically** to checkbox and select a time period option.
7. When finished, click **Save and Close**.

-  **Note:** When consuming an Aggregated Data Export, you may notice differences in how the data is structured in People Analytics and PeopleXD:
- Hierarchy structures will not be preserved.
 - The hierarchical information used to show the relationship between data will not be included.
 - Columns that contain mixed data types will be exported as strings. For example, if a column in the Aggregated Data Export contains strings (Exceptional, Good, Poor) and numbers (10.3% 39.0%, 89.7%). The data type for this column will be string.
 - Currency codes and percentage symbols will not be included.

10.4. Create a Detailed Data Export

To create a detailed data export, follow the below steps:

1. Click **New Data Export**.
2. Enter a title and description for your Data Export.
3. In the visual title, click the **Data Export** picker and select **Detailed Data Export**.
4. In the visual title, select the subject or event you want to analyse.
5. Build a Data Table that includes the attribute data that needs to be leveraged. Click  **Table Settings** to add or remove attributes in the Side panel.
6. Click the **Time** picker to set the time window and time context. If you want the Data Export to continuously display the latest data, select the **Update automatically** **to** check box and select a time period option.
7. When you're finished, click **Save and Close**.

10.5. Share a Data Export

To share a data export with another user, follow the below steps:

1. In the Data Exports area, hover over the relevant data export and click  **Share**.
2. Select the users or user groups to give Viewer access to the Data Export.
3. Click **Share**.

11. Appendix

This section details the analytics available within each Guidebook and Topic.

11.1. Standard Dashboards Guidebook

The Standard Dashboard Guidebook contains the following topics and analysis:

Topic	Analysis
HR Dashboard	KPIs automatically update to reflect the current month. 1. Headcount 2. New Starters 3. Leavers 4. Headcount Change – Now versus Last month close 5. Trend of Employee Exit Types (All trailing 12 months) 6. Headcount, Starts and Turnover by Organisation 7. Starts vs Turnover (Trailing 12 months) 8. Breakdown of Headcount by Age Range & Organisation 9. Breakdown of Headcount by Job Name & Employment Type
Payroll Dashboard	All KPIs reflect previous month close. 1. Budgeted Costs 2. Actual Costs 3. Actual Total Costs per FTE 4. Base Pay and Benefits by Organisation
Time and Attendance Dashboard	KPIs automatically update to reflect the current month. 1. Worked Hours Recorded 2. Regular Hours Recorded 3. Absence Hours 4. Overtime Hours 5. Absence Hours by Pay Code 6. Absence Hours by Pay Code Group 7. Absence Hours Current v Previous Month 8. Sickness Hours by Reason

Topic	Analysis
	9. Sickness Hours Current v Previous Month 10. Annual Leave Hours by Organisation 11. Annual Leave Hours Current v Previous Month 12. Worked Hours Current v Previous Month 13. Regular Hours Current v Previous Month 14. Overtime Hours by Pay Code 15. Overtime Hours by Reason 16. Overtime Hours Current v Previous Month

11.2. People Management Guidebook

The People Management Guidebook contains the following Topics:

Topic	Analysis
Key HR Metrics	1. Headcount by Organisation 2. Headcount Trend 3. Headcount Percent of Total by Organisation 4. Headcount by Location 5. Breakdown of Headcount by Job Name & Employment Type 6. Trend of Female Managers 7. Headcount by Tenure 8. Breakdown of Headcount by Standard Ethnicity 9. Proportion of Female Employees 10. Projected Headcount
Organisation Overview	1. Net Change in Headcount 2. Comparison of Employee Starts and Exits 3. YoY change in average age. 4. YoY change in budgeted base pay
Attrition Overview	1. Trend of Employee Exit Types 2. YoY Change in Turnover Rate (TTM) by Supervisor 3. YoY Change in Turnover Rate (TTM) by Tenure 4. YoY Change in Turnover Rate (TTM) by Employee Type

Topic	Analysis
	- YoY Change in Turnover Rate (TTM) by Location - YoY Change in Turnover Rate (TTM) for Ethnicity
Attrition Deep Dive	- Exit Rate by Organisation, by Job Name, by Tenure, by Location - Change in Exit Rate (Current Vs Previous Period) by Organisation - Trend of Employee Exit Rate vs. Involuntary Turnover Rate vs. Voluntary Turnover Rate vs. Retirement Rate - Trend of Employee Exit Rate vs. Employee Starts Rate - Resignation Rate by Tenure - Drivers of Predicted Resignation Rate
Employee Diversity Deep Dive	- Women Ratio - Breakdown of Women Ratio by Location, By Tenure, By Age, by Supervisory Hierarchy - Trend of Women Ratio by Location, by Tenure, by Age, by Supervisory Hierarchy - Locations Highlighting a Decrease in Women Ratio, Tenure Groups, Age Groups, and Supervisory Hierarchies - Overall Employee Starts Rate (TTM) - Women Employee Starts Rate (TTM) - Overall Resignation Rate (TTM) - Women Resignation Rate (TTM) - Starts Rate for Women vs Overall (TTM), Resignation Rate for Women vs Overall (TTM), Women Starts Rate vs Resignation Rate (TTM)
Career Mobility & Promotions Deep Dive	- Comparison of movements in and out of the organisation - YoY change in internal movements by Organisation. - Movement Summary of Employee Movement showing Headcount
Employee Starts & Headcount Deep Dive	- Employee Starts Count - Employee Starts Count (Women) - Employee Starts Count (Men) - Employee Starts by Job Name vs. Previous Period, by Location, by Employment Type, by Supervisor Hierarchy.

Topic	Analysis
	- Trend of Employee Starts by Job Name, by Location, by Employment Type, by Supervisory Hierarchy. - Employee Starts by Gender vs Previous Period, by Generation - Trend of Employee Starts by Gender, by Generation. - Bubble Grid of Employee Starts Rate by Employee > Supervisory Hierarchy & Employee > Employment Type, Bubble Grid of Employee Starts Rate by Employee > Supervisory Hierarchy & Employee > Location. - Trend of Employee Starts vs Employee Exits vs Headcount. - Movement Breakdown of Employee Movement showing Headcount.
Headcount Forecasting Deep Dive	- Trend of projected headcount - Trend of employee start rate. - Trend of employee resignation rate - Trend of retirement rate - Trend of involuntary turnover rate - Trend of other exit rate

11.3. Payroll Guidebook

The Payroll Guidebook contains the following Topics:

Topic	Analysis
Learn About Payroll Metrics	- Budgeted Total Rewards - Breakdown of Budgeted Total Rewards - Budgeted Base Pay Change Metrics by Organisation - Projected Budgeted Total Rewards
Payroll Overview of HR BPs	- YoY comparison of budgeted direct compensation by organisation - Breakdown of budgeted direct compensation per FTE by organisation
Budgeted Payroll Overview	- Budgeted Total Rewards - Budgeted Total Rewards by Year - Trend of Budgeted Total Labour Costs by Has Employee Compensation Items > Compensation Item

Topic	Analysis
	- Budgeted Direct Compensation per FTE by Organisation (YoY Comp.) - Budgeted Direct Compensation per FTE by Tenure (YoY Comparison) - Budgeted Direct Compensation per FTE by Gender - Budgeted Direct Compensation per FTE by Generation (YoY Comparison)
Total Rewards Deep Dive	- Budgeted Compensation by Organisation and Payout Type - YoY Comparison of Budgeted Direct Compensation by Organisation - Projected Budget Total Rewards by Organisation
Pay Equity Deep Dive	Median Gender Pay Gap by Organisation & Job Family
Payroll Planning Deep Dive	- Projected Budgeted Total Rewards - Final Compensation Assumptions - Trend of Full-Time Equivalents (FTE) - Month-to-Month Change in Headcount - Trend of Change in Budgeted Base Pay - Trend of Change in Budgeted Supplemental Pay

11.4. Time & Attendance Guidebook

The Time & Attendance Guidebook contains the following Topics:

Topic	Analysis
Learn About T&A Metrics	- Overtime in Time & Attendance vs Payroll by Location - Timekeeping Hours Recorded by Full Name and Pay Code - Worked Hours Recorded Metrics - Non-Worked Hours Recorded Metrics - Overtime by Location TTM - Absences by Location TTM - Absence vs Overtime by Date
Overtime Overview	- Overtime Hours (YTD) - Overtime Ratio (YTD) - Overtime Hours (Month-over-Month) - Overtime Ratio (Month-over-Month)

Topic	Analysis
	- Overtime Hours and Ratio Monthly Trend - Employees with the Most Worked Hours - Overtime Ratio by Organisation - Overtime Ratio by Occupation - Overtime Ratio by Tenure (Seniority) - Overtime Drivers
Absence Overview	- Absence Hours (YTD) - Absence Ratio (YTD) - Absence Hours (Month-over-Month) - Absence Ratio (Month-over-Month) - Absence Hours and Ratio Monthly Trend - Employees with the Most Absence Hours - Absence Ratio by Organisation - Absence Ratio by Occupation - Absence Ratio by Tenure (Seniority) - Absence Drivers
Staff Deployment Overview	- Worked hours by day of week and job family - Trend breakdown of occupation mix per day - Worked hours by day of week and tenure
Understanding Overtime Impact	- Overtime Hours - Overtime Ratio - Overtime Ratio by Organisation - Overtime Ratio by Location - Overtime Ratio by Occupation - Overtime Shift Length - Overtime and Absence Hours by Day - Absence Hours by Code - Exit Rate - Headcount and Regular Hours by Employment Type
Absence and Paid Time-Off	- Total Absence Hours by Organisation and Job Family - Total Sick Leave Hours by Organisation and Job Family

Topic	Analysis
	3. Total Annual Leave Hours by Organisation and Job Family 4. Total Cost of Absence by Organisation and Job Family 5. Trend of Absence Hours by Organisation 6. Trend of Absence Hours by Reason 7. Drivers of Absence to Worked Hours Ratio 8. Overtime vs Absence vs Headcount Projected Absence Hours by Organisation
Monitor Time & Attendance	1. Overtime to Regular Hours Ratio 2. Overtime Hours 3. Overtime by Location, Highlighting a 10% Increase Month-over-Month 4. Overtime by Job Family, Highlighting a 10% Increase Month-over-Month 5. Absence to Worked Hours Ratio 6. Absence Hours 7. Absence by Location, Highlighting a 10% Increase Month-over-Month 8. Absence by Job Family, Highlighting a 10% Increase Month-over-Month

11.5. Manager Dashboard Guidebook

The Manage Dashboard Guidebook contains the following topics:

Topic	Analysis
HR Insights	1. Headcount 2. Turnover 3. Workforce composition 4. Span of Control
Payroll Insights	1. Actual and Budgeted Total Rewards 2. Actual and Budgeted Rewards by Job Title 3. Actual to Budgeted Benefits Differential by Location and Job 4. YOY Comparison of Budgeted Direct Compensation by Location 5. Trend of Change in Budgeted Base Pay

Topic	Analysis
	6. Changes to Actual Pay per Employee (Base vs Variable vs Overtime) by Location 7. Trend Breakdown of Actual Total Labor Costs by Payout Item
