1. Overview

1.1. Purpose of the Guide

This document provides guidance on the enhancements which have been made to PeopleXD Security. This allows administrators and employees more visibility and pro-active control when managing user security within Portal.

1.2. What changes will I see?

All existing Security functionality will continue to be available. This document will highlight the changes completed as part of the update.

The following enhancements are covered in this guide:

1.2.1. Admin User Enhancements

- Specify Reuse Password rule configuration (how many changes before you can reuse a password)
- Forced password reset (Bulk or Single User)
- Forced logout of the Native App (Bulk or Single User)
- Consolidated Security question configuration screen.

1.2.2. Employee User Enhancements

- Visibility of any active devices, and ability to log out of the session via the Portal

1.3. Configuration

For new functionality, we endeavour to turn on the required menu options as part of the initial install. However, if you encounter any errors, such as *Access Denied*, or if you are setting up new menu profiles, please ensure that the following menu options are enabled for administrators:

System	Menu Option
Web Services	Get security native devices loggedin
Web Services	Get security native devices loggedin Proxy (Entire Organization)

System	Menu Option
Web Services	Delete security native devices loggedin
Web Services	Delete security native devices loggedin Proxy (Entire Organization)
Web Services	Get security settings questions
Web Services	Update security management users password
Web Services	Update security management users password all
Web Services	Delete security native devices loggedin all

The ability to perform a targeted clear down via criteria groups is controlled by the following menu options:

System	Menu Option
CorePortal	CorePortal - Security Manage Criteria Groups
Web Services	Get security criteriagroup global
Web Services	Delete security native devices loggedin criteriagroup
Web Services	Get security criteriagroup employee
Web Services	Update security management users password criteriagroup

The ability to clear all user's passwords in bulk is controlled by the following menu option:

System	Menu Option
CorePortal	CorePortal - Clear all users passwords

The ability to log all users out of the Native App is controlled by the following menu option:

System	Menu Option
CorePortal	CorePortal - Clear all users passwords

2. Administrator User Enhancements

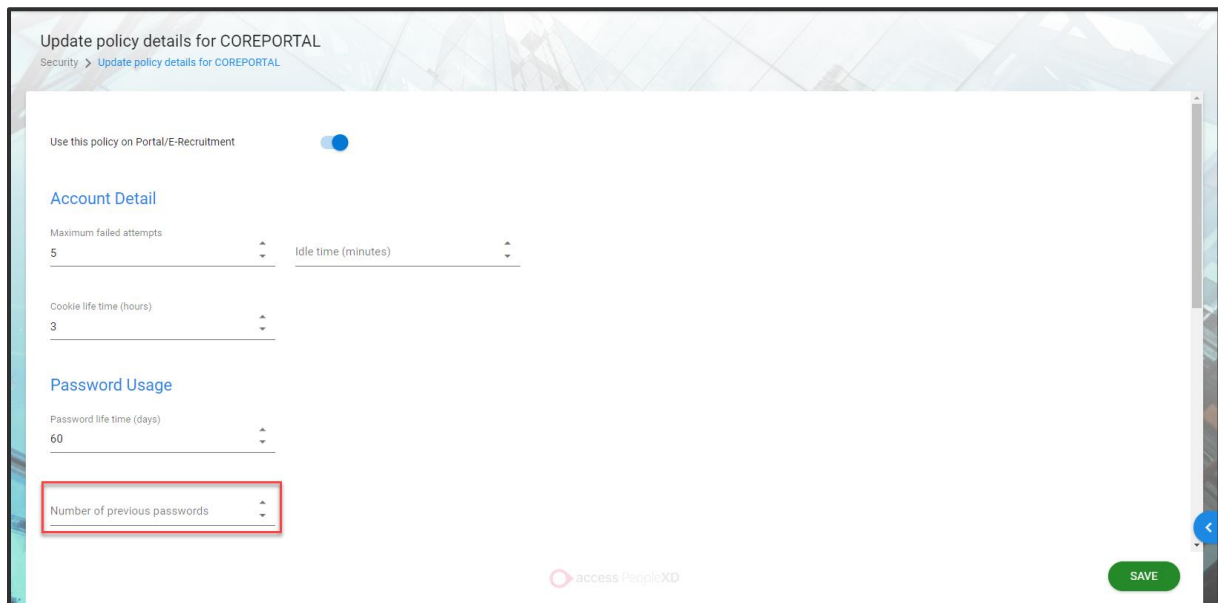

2.1. Reuse Password Configuration

Administrators can now specify the number of password changes required before a password can be reused. For example, if this was set to 10, users wouldn't be able to reuse any of the previous 10 passwords.

Note: This feature is only available on the *CorePortal* password policy profile.

To configure this, follow the below steps:

1. Navigate to the Security Dashboard
2. Click the Password Policy tab
3. Click **Actions** on the relevant profile, then click **Policy Details**.
4. In the Password Usage section, complete the *Number of previous passwords* field

5. Click **Save**

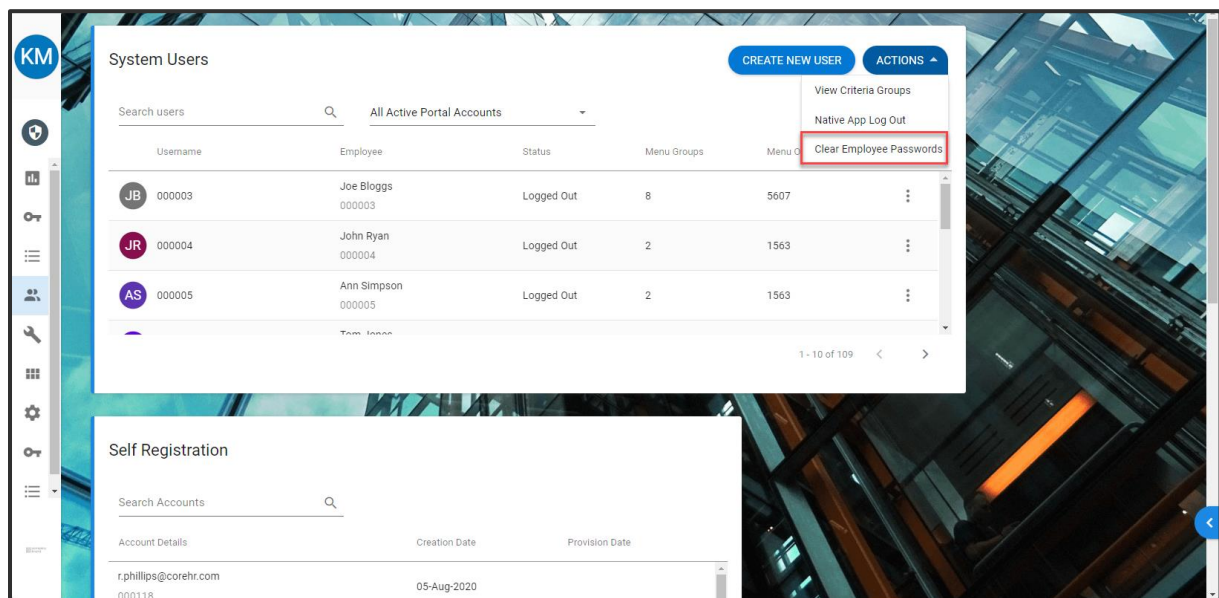

2.2. Clear passwords

The clear password action results in a user's password being cleared from the system, so they will no longer be able to log in. In order to regain access, they are required to reset their password upon next login.

2.2.1. Clear Passwords for all users

Administrators can now clear passwords for all users in bulk. To do this, follow the below steps:

1. Navigate to the Security Dashboard
2. Click the User Management tab
3. On the System Users widget, click **Actions**, then click **Clear Employee Passwords**

4. Click **Yes** to confirm

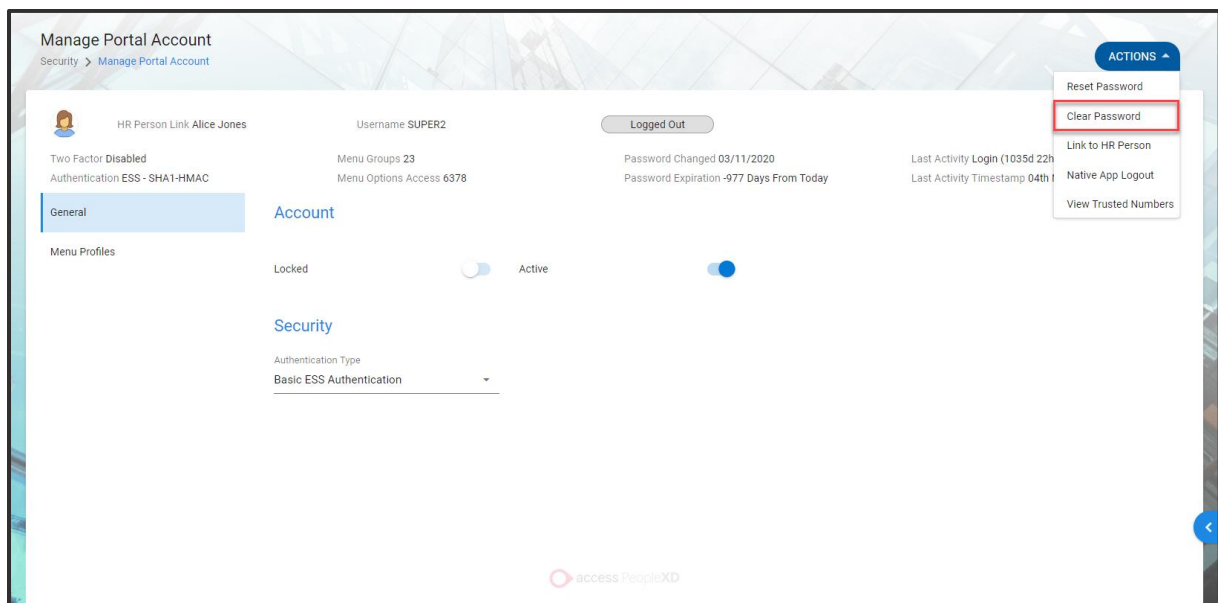

Note: Clearing passwords for your whole user base is an exceptional activity. Access should only be given to the intended administrator, and they should understand that this action will effect the every user. See section 1.3 for details on the menu profile required.

2.2.2. Clear passwords for individual users

Administrators can now clear a password for a single user. This is a quicker process than having to reset a user's password.

To do this, follow the below steps:

1. Navigate to the Security Dashboard
2. Click the User Management tab
3. Click the three dot menu on the relevant user, then click **Manage Account**
4. Click **Actions**, then click **Clear Password**

5. Click **Yes** to confirm

2.2.3. Clear passwords for a criteria group

Administrators can now clear passwords via criteria groups. This allows you to select a targeted group of users, rather than clearing all user's passwords. To do this, follow the below steps:

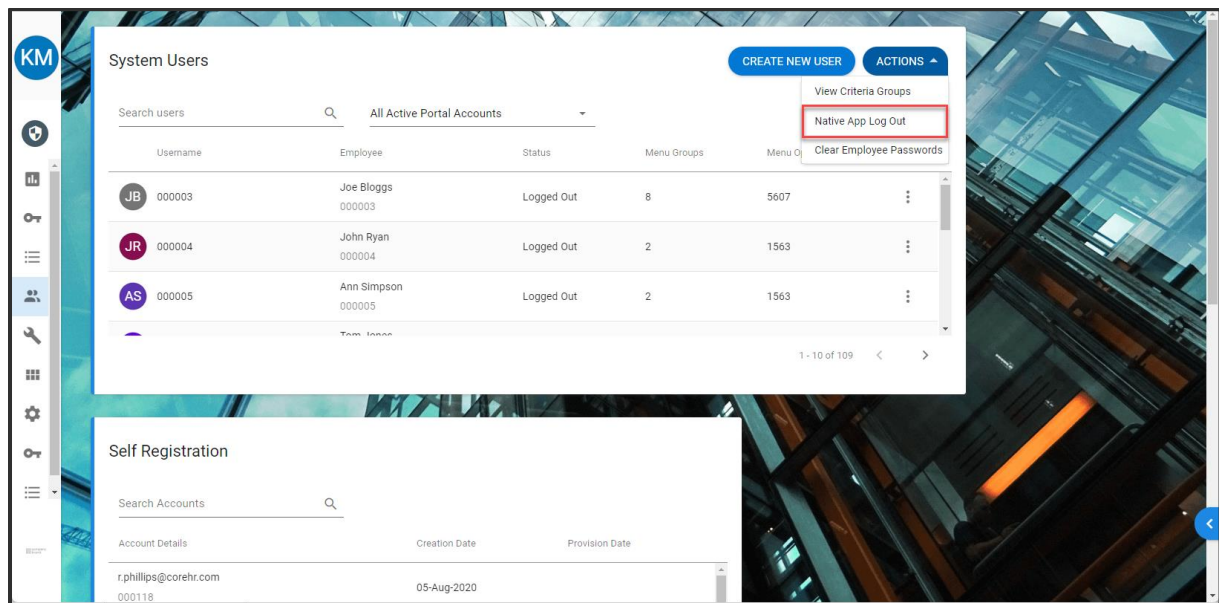

1. Navigate to the Security Dashboard
2. Click the User Management tab
3. On the System Users widget, click **Actions**, then click **View Criteria Groups**
4. Click the three dot menu on the relevant criteria group, and click **Clear Employee Passwords**
5. Click **Yes** to confirm

2.3. Log users out of Native App

2.3.1. Log all users out of Native App

Administrators can now log all users out of the Native App in bulk. To do this, follow the below steps:

1. Navigate to the Security Dashboard
2. Click the User Management tab
3. On the System Users widget, click **Actions**, then click **Native App Log Out**

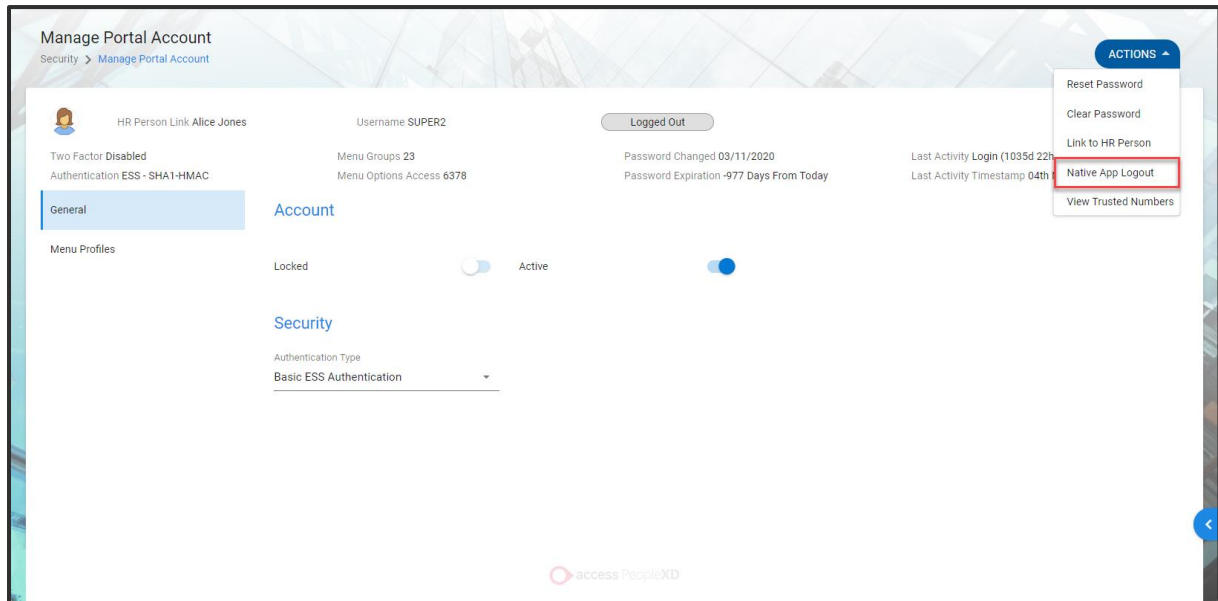

4. Click **Yes** to confirm

2.3.2. Log individual users out of Native App

Administrators can now initiate a logout of the Native App for a single user. To do this, follow the below steps:

1. Navigate to the Security Dashboard
2. Click the User Management tab
3. Click the three dot menu on the relevant user, then click **Manage Account**
4. Click **Actions**, then click **Native App Logout**

5. Click **Yes** to confirm

2.3.3. Log users in a criteria group out of the Native App

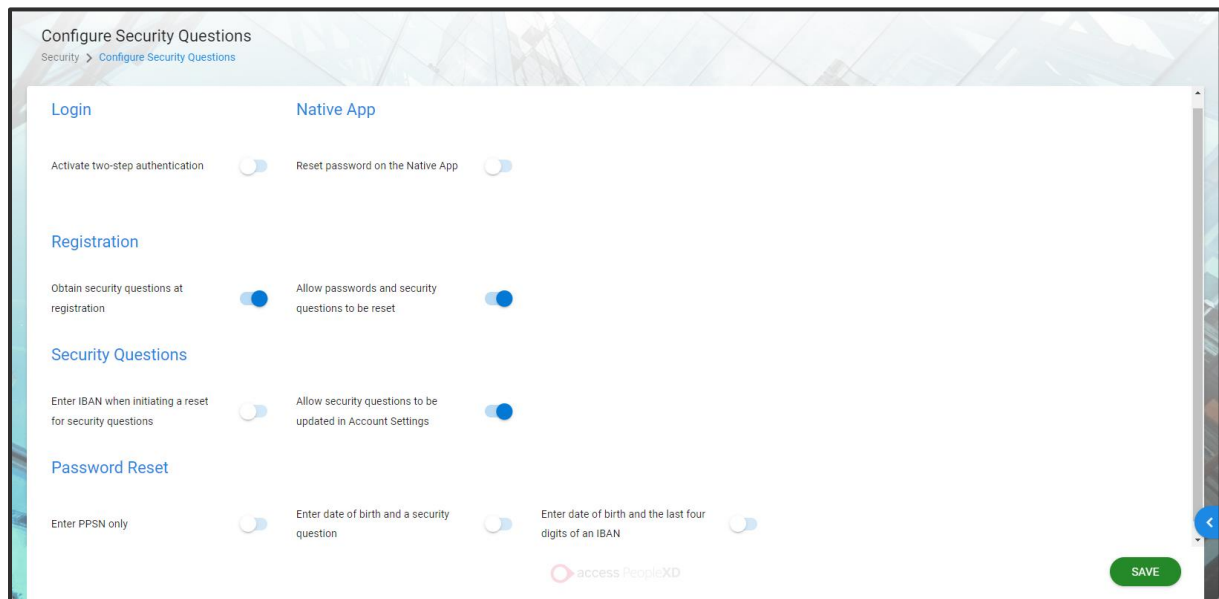

Administrators can now log users out via criteria groups. This allows you to select a targeted group of users, rather than logging all users out. To do this, follow the below steps:

1. Navigate to the Security Dashboard
2. Click the User Management tab
3. On the System Users widget, click **Actions**, then click **View Criteria Groups**
4. Click the three dot menu on the relevant criteria group, and click **Native App Log Out**
5. Click **Yes** to confirm

2.4. Consolidated Security Question configuration

For ease of configuration, administrators can now manage all the existing parameters associated with security question configuration on a single screen. To access this, follow the below steps:

1. Navigate to the Security Dashboard
2. Click the Password Policy tab
3. Click **Configure Security Questions**

4. Enable or disable the toggles to configure the settings.

Note: In the *Password Reset* section, only one toggle can be enabled at a time.

5. Click **Save**

2.5. Manage criteria groups

Administrators can now manage criteria groups from the Security dashboard. These can be used to select a targeted group of users when performing actions, see [2.2.3. Clear passwords for a criteria group](#) and [2.3.3. Log users in a criteria group out of the Native App](#) for more detail.

To manage criteria groups, follow the below steps:

1. Navigate to the Security Dashboard
2. Click the User Management tab
3. On the System Users widget, click **Actions**, then click **View Criteria Groups**

4. This will launch the *Criteria Groups* screen, which displays the criteria groups that already exist, and the number of employees included in the group

 **Note:** Other areas of PeopleXD use criteria groups, and the list will display groups created in all parts of the system.

5. Click **Manage Criteria Groups**
6. To create a new criteria group, click **Add**
7. Input a name for the group and select the Type
8. Click **OK**
9. Click on your required reference data from the left hand menu (e.g. Department, Location)
10. Select the relevant attributes and use the arrow to move it to the *Assigned* column. The list is automatically saved
11. Return to the *Manage Criteria Groups* screen by clicking on the breadcrumb navigation. From here, you can edit or delete groups by clicking on the three dot menu.

3. Employee Enhancements

3.1. View and log out of devices

Employees can now review any logged in Native/web app devices, and log out of any or all of these sessions.

Employees can view a list of their authenticated devices, showing the device name and the date it was last logged in on. They can then remove individual devices, or log out all devices at once.

To manage this, follow the below steps:

1. Click on the profile menu in the top right corner of the screen
2. Click **Account Settings**
3. Click **Open** on Logged In Devices
4. Click **Log Out** next to the relevant device, or click **Log Out Of All Devices** to perform the action in bulk.
