1.0	16/09/2024	Kat Murie	Initial Version Created
1.2	12/12/2024	Kat Murie	Note on unknown values added to section 3.1.1.
1.3	26/02/2025	Isabelle Grey	Note explaining up to 3 years of data is available added to section 1.
1.4.	02.07.2025	Isabelle Grey	Time and Attendance Dashboard added to section 3.1.3.

1. Overview

The purpose of this document is to provide guidance on how to use Standard People Analytics for PeopleXD, which is available as part of the Evo solution. People Analytics is an embedded solution that gives you access to instant, actionable people insights with in-built metrics and off-the-shelf guidebooks.

This guide includes:

- Accessing the People Analytics screens
- Using Standard Dashboards Guidebooks
- Setting a dashboard as your Home dashboard

Note:

- The data in People Analytics is displayed on an employee level rather than a contract level, therefore only job data relating to the substantive post is shown. However, elements such as the FTE and salary will be rolled up so that the value for the employee represents all contracts.
- The data available to users is not subject to security i.e. all standard users see organisational wide data, but the data is aggregated.
- Where data cleansing/data improvements have been made in the solution e.g. consolidating Job Titles, it will not impact data where an employee has been made a leaver in PeopleXD.
- Up to 3 years of PeopleXD data is available in People Analytics when it is first provisioned. The amount of data available will continue to accumulate over time.

1. Accessing the People Analytics screens

To access People Analytics within PeopleXD, open the dashboard menu and click **People Analytics**. The table below outlines the areas available within the People Analytics navigation bar:

Area	Icon	Description
Home		This shows the guidebook you have set to be your home dashboard. If this has not been set it, it will provide you with a shortcut to the Guidebook area.
Guidebooks		View and drilldown on standard out-of-the-box analyses to get insight into your key business questions. Within the Standard Dashboard guidebook are two topics: • HR Dashboard • Payroll Dashboard

 **Note:** Access to individual tabs or functionality cannot be granted/revoked via menu options.

2. Home

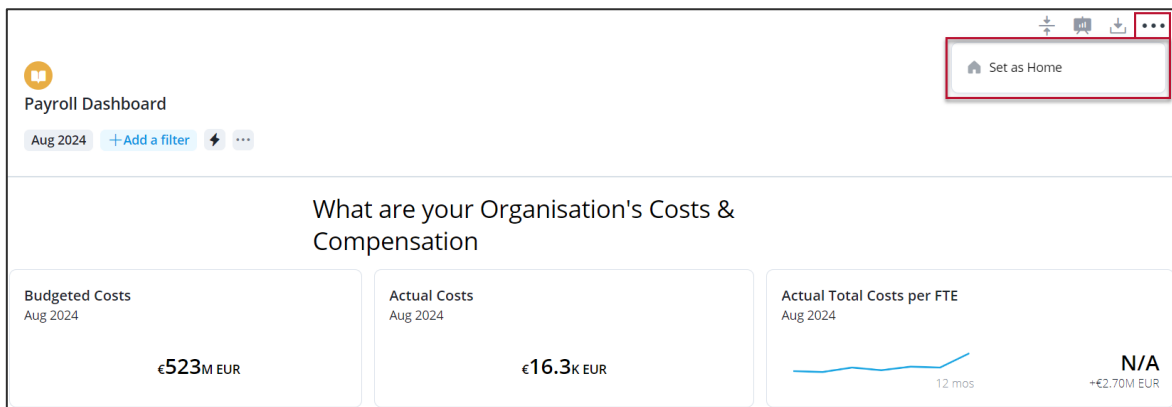

2.1. Overview

This shows the guidebook you have set to be your home dashboard. If you have not set your home dashboard yet, this will be blank, with a shortcut to the Guidebook area.

2.2. Set the Home Dashboard

To set your dashboard to one of the out-of-the-box dashboards, follow the below steps:

1. Click **Guidebooks** from the navigation bar.
2. Select the relevant dashboard.
3. Click the ellipsis, then click **Set as Home**.

This guidebook will now appear on your home dashboard.

2.3. Clear the Home Dashboard

To clear the home dashboard, follow the below steps:

1. Click **Preferences** from the navigation bar.
2. Click **Analyses**.
3. Click **Clear Home analysis**.

3. Guidebooks

3.1. Overview

The Guidebook area is where you can view out-of-the-box Standard People Analytics dashboards. The content within a guidebook is a collection of related topics and analyses that provide insight into business questions and workforce data. There is one Guidebook available:

- Standard Dashboards Guidebook

The Standard Dashboard includes pre-defined KPIs from your organisation's people data and is broken down into the following two topics:

- HR Dashboard – includes People Management KPIs.
- Payroll Dashboard – includes Compensation and Cost KPIs.

Note: Aggregated data view is presented to users i.e. no personal data, sensitive data, or employee level data is available. Users who have access to this dashboard see organisational wide KPIs i.e. their access is not determined by their PeopleXD access.

Access to this screen is available when a user has been assigned the Standard Users User Group access in People Analytics Configuration area. Users who have only been provided with Standard Users access to People Analytics will have the following features available:

- Use of filters and time sliders
- Use of in-app presentation mode

3.1.1. HR Dashboard

KPIs automatically update to reflect the current month. Key analyses are grouped as follows:

What is the current headcount and how is it changing?

- Headcount
- New Starters
- Leavers
- Headcount Change – Now versus Last month close

Turnover Trends, Comparisons, Headcount Groupings

- Trend of Employee Exit Types (All trailing 12 months)
- Headcount, Starts and Turnover by Organisation

- Starts vs Turnover (Trailing 12 months)
- Breakdown of Headcount by Age Range & Organisation
- Breakdown of Headcount by Job Name & Employment Type

Clicking into any of these charts allows you to see further information on the metrics.

Note: Unknown values may appear in certain visualisations related to the organisational hierarchy because the historical data for the hierarchy over the past three years is not loaded into People Analytics (only data from the date of initial provisioning onward is available). As a result, if an individual was part of an organisation that existed last month but no longer exists today, it will be displayed as "unknown."

3.1.2. Payroll Dashboard

All payroll KPIs reflect previous month close. Key analyses are grouped as follows:

What are your Organisation's Costs & Compensation

- Budgeted Costs
 - based on planned HR salary and allowance information
- Actual Costs
 - based on actual payroll history
- Actual Total Costs per FTE
- Base Pay and Benefits by Organisation

Clicking into any of these charts allows you to see further information on the metrics.

3.1.3. Time and Attendance Dashboard

The dashboard's KPIs are automatically updated to reflect data for the current month. Key analyses are organised into the following categories:

Key Hours Metrics for Your Organisation:

- Worked Hours
- Regular Hours
- Absence Hours

- Overtime Hours
- Absence Hours Overview
- Sickness Hours Overview
- Annual Leave Hours Overview
- Worked & Regular hours – current versus previous month
- Overtime Hours Overview

Clicking into any of these charts allows you to see further information on the metrics.

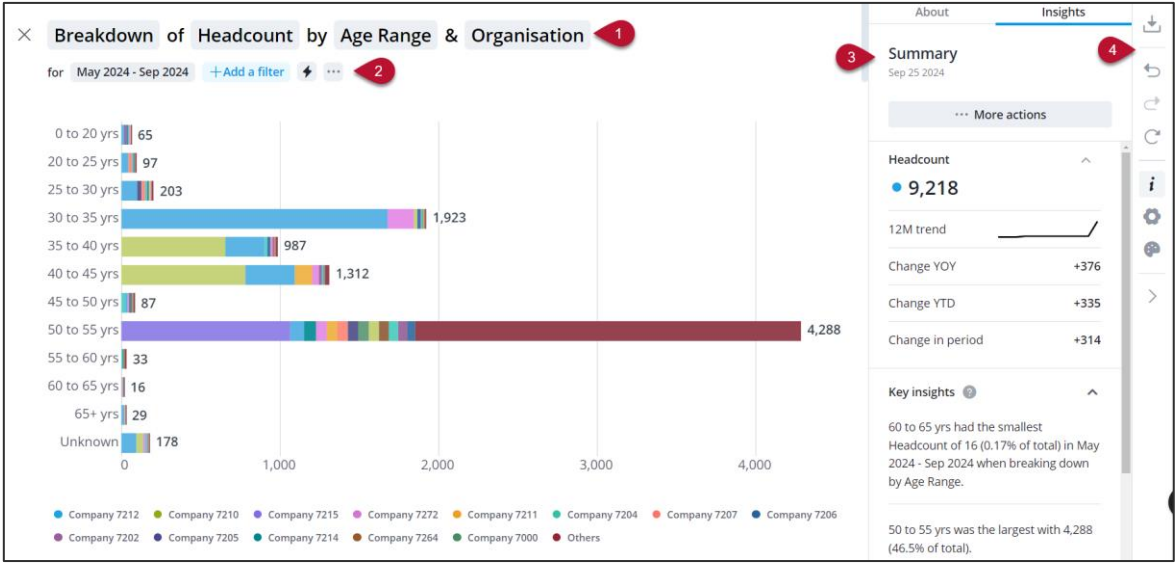

3.1.4. Tools

The table below outlines the key functionality available within this analysis dashboard:

Item	Icon	Description
Collapsed View		Used to present the key themes or heading of an analysis.
Present analysis		You can present your analysis to stakeholders within the application. Your analysis is converted into a slideshow. Each individual slide corresponds to a Header (business question) and a row in the analysis layout. The charts are interactive, so hover over data points to get more information on chart items and metric values.
Download		Allows you to export the analysis as a PDF or PPT file.
More Items	...	Set as Home - This will set the dashboard as your home dashboard in Home area.

3.2. Navigating an Analysis

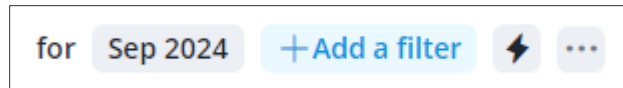

Clicking into any of the visualisations available on the dashboards allows you to see further information on what the visual is made up of. The table below outlines the key functionality available within an individual analysis:

Item	Name	Description
1	Visual Title	Shows the chart type e.g. Breakdown, metric e.g. Headcount and group by e.g. Organisation for the analysis. For Standard Users, this is read-only.
2	Analysis Context Toolbar	Narrow down data with filters and apply time ranges.
3	Info Panel	View contextual information about selected metrics and data points.
4	Visual Actions menu	Use these quick access buttons to perform chart actions and open chart configuration options in the Side panel.

3.2.1. Analysis Context

The Analysis Context allows you to filter your guidebook content to the different populations that you're interested in. You can change the time picker, or you can apply any of the filters you have available based on your security.

To change the time period, follow the below steps:

1. Select the date picker from the dashboard
2. Select the timeline frequency e.g. Years
3. Use the slider to select the relevant period.
4. When finished, click **Apply**.

To add a filter, follow the below steps:

1. On the Analysis Context toolbar, click **Add a Filter**.
2. Select one of the suggested attributes, or click **See all filters** to open the Filter picker in full screen.
3. Select one of the following:
 - a. An attribute from the suggested list
 - b. A Key Group
 - c. A category from the Categories column, for example, Location. You may need to click **All** to find the relevant category.
 - i. Then, select the attribute values you want to include or exclude. For example, North America.
 - ii. When finished, click **Apply**.
4. To add more filters, repeat steps 1 to 3.

3.2.2. Info Panel

The Info panel is located on the right side of the chart as part of the Side panel. The Info panel is made up of two tabs:

- **About** - provides supporting information that will help you understand what that you're seeing in the visualisation
- **Insights** - provides a high level summary of the data.

About Tab

The About tab contains descriptions/help information for the metrics, group by attribute, and visual in the visual title.

Insights Tab

The Info panel contains the Summary information section. This shows values for the selected metrics or data points. You'll also find actions that will allow you to discover more detail about your selection. When a visualisation has a hierarchy, you can drill down or up to navigate and view data for the different hierarchy levels. The drill path is part of the analysis context, so it acts as a filter that allows you to narrow down the data to a specific population.

- To drill down, double-click a chart item or select a chart item then click **Drill down** Insights tab of the Info panel.
- To drill up, select a chart item then click **Drill up** on the Insights tab.

3.2.3. Visual Actions menu

The following table describes the actions that are available:

 **Note:** The actions available will vary between visual types.

Item	Icon	Description
Download visual		Export visualisations as a PNG, PPTX, or XLSX file to share or edit outside of the solution.
Info		Show or hide the Info panel.
Redo		Redo an action that you've undone when building or viewing a visual.
Reset		Clear all actions that you've made to the visual and start over.
Settings		Configure options such as setting the max. number of data items.

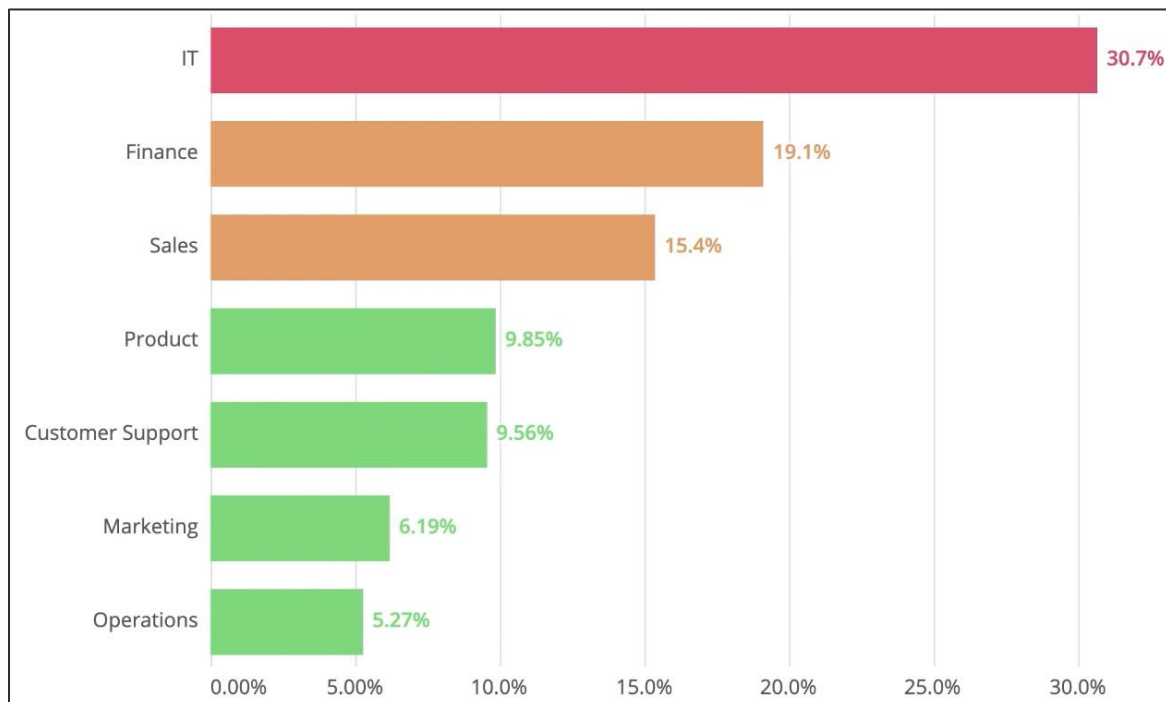

Item	Icon	Description
Traffic Light		Apply conditional formatting to a chart to quickly highlight metric values of interest. For more information, see Traffic Lighting .
Undo		Undo an action that you made when viewing or building a visual.

3.2.4. Traffic Lighting

Traffic lighting is a monitoring system that uses red, amber, and green colouring to indicate a metric's performance against set targets. You set targets by applying conditional formatting rules to the chart so that the metric appears:

- **Green** - good performance i.e. the metric is on or above target.
- **Amber** - concerning performance i.e. the metric is off target but in acceptable range.
- **Red** - bad performance i.e. the metric is off target and in a range that requires attention.

For example, the following illustration shows a Breakdown of Voluntary Turnover Rate grouped by Organisation Hierarchy:

Traffic lighting rules can be set by comparing a metric to one of the following:

Rule Type	Description	Explanation
Metric Value	The metric value for each visual item is compared to a target value	Rule: If the metric value is less than 250, traffic light as Bad. For example, the Headcount for Sales is compared to the target value of 250 in the selected period. If the Headcount value for Sales is less than 250, the visual item will be highlighted in red.
Change in Metric Value	The metric value for each visual item in the selected time period is compared to the metric value from a previous time period.	Rule: If the change from February 2020 is less than 5%, traffic light as Good. For example, the Headcount for Marketing is compared to the Headcount for Marketing in February 2020. If the percentage change from the previous time period is less than 5%, the visual item will be highlighted in green.
Difference from group	The metric value for each visual item is compared to the metric value of another population.	Rule: If the difference from Women is greater than 20%, traffic light as Bad. For example, the Headcount for Marketing is compared to the Headcount for Women in Marketing. If the percentage change from the other population is greater than 20%, the visual item will be highlighted in red.
Difference from another metric	The metric value for each visual item is compared to another metric.	Rule: If the difference from Employee Exit Count is greater than 500%, traffic light as Bad. For example, the Headcount for Finance is compared to the Employee Exit Count for Finance. If the percentage change from the other metric is greater than 500%, then the visual item will be highlighted in red.
Difference from metric overall	The metric value for each visual item is compared to the	Rule: If the difference from Employee Exit Count is greater than 200%, traffic light as Concerning. For example, the Headcount for Finance is compared to the Employee Exit Count for the

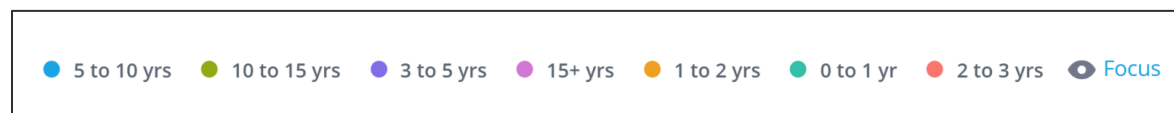

Rule Type	Description	Explanation
	overall value of another metric.	entire organization. If the percentage change from the overall value of the other metric is greater than 200%, the visual item will be highlighted in amber.

Traffic lighting can be added to the following visual types:

- Breakdown
- Trend (with no groupings)
- Trend breakdown (with no groupings)
- Table (with one metric)

3.2.5. Chart Legend

When there is a need for additional contextual information, a legend will appear at the bottom of the chart:

The legend identifies the different colours, shapes, or patterns that are being used in the chart. Legends will display the first 14 attribute values based on the visual sort order. Any selected value that exceeds the limit will be included in the Others data item. To manage the selected values, click **Focus**.

 **Note:** The legend for the Organisation visual will display a maximum of 10 attribute values.
