1. Overview

1.1. Purpose of the Guide

The purpose of this document is to allow users to be able to view, edit and access XD Insight, and have the access to create and run reports with the correct data access assigned to their profile.

2. User Access to Report Options and Processes

2.1. Overview

All users who require access to XD Insight, must be granted access to the required XD Portal menu options. These options control access to the Reports option on the XD Portal quick jump menu and the ability to view, create, clone, or delete reports. For example, you need to give users permission via Menu Profiles and Menu Options to see:

- **Insight** in the quick jump menu.
- The **Create Report** button the Home screen.
- The **Report Store** screen.

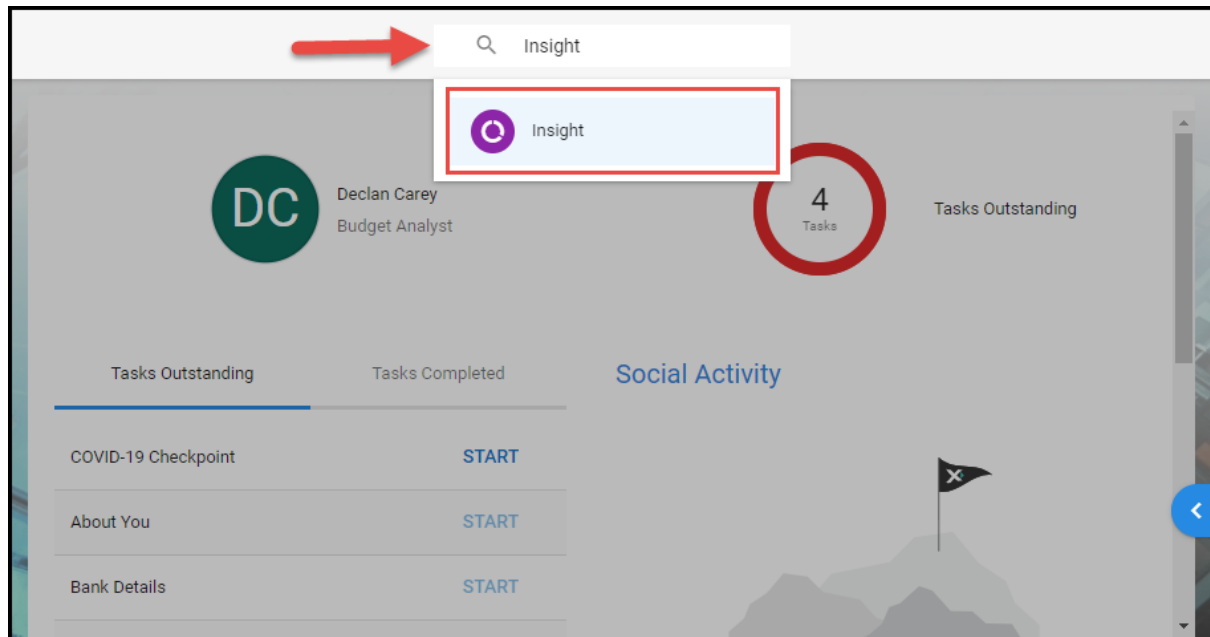

This section does not outline the steps required to carry out the changes, however the following Menu Profiles are the default Menu Profiles assigned to Users on XD Portal:

1. CorePortal_Employee
2. CorePortal_Manager
3. CorePortal_Insight

2.2. Access to the Insight Dashboard

The following menu options control access to the Insight Dashboard on XD Portal, which is highlighted in the image below.

System	Menu Option	Description
CorePortal	Insight	This enables the Insight Dashboard to be accessible on XD Portal.

2.3. Access to View Reports

The following menu option controls the display of the **View Report** option against every report.

System	Menu Option	Description
CorePortal	Insight View Reports	This enables a user to view a report on Insight.

2.4. Access to Create Reports

The following menu option controls the display of the Create Report option on the Insight Dashboard.

System	Menu Option	Description
CorePortal	Insight Create Reports	This enables a user to view a report on Insight.

2.5. Access to Manage / Edit Reports

The following menu options controls a user's access to manage a report once created on the Insight Dashboard.

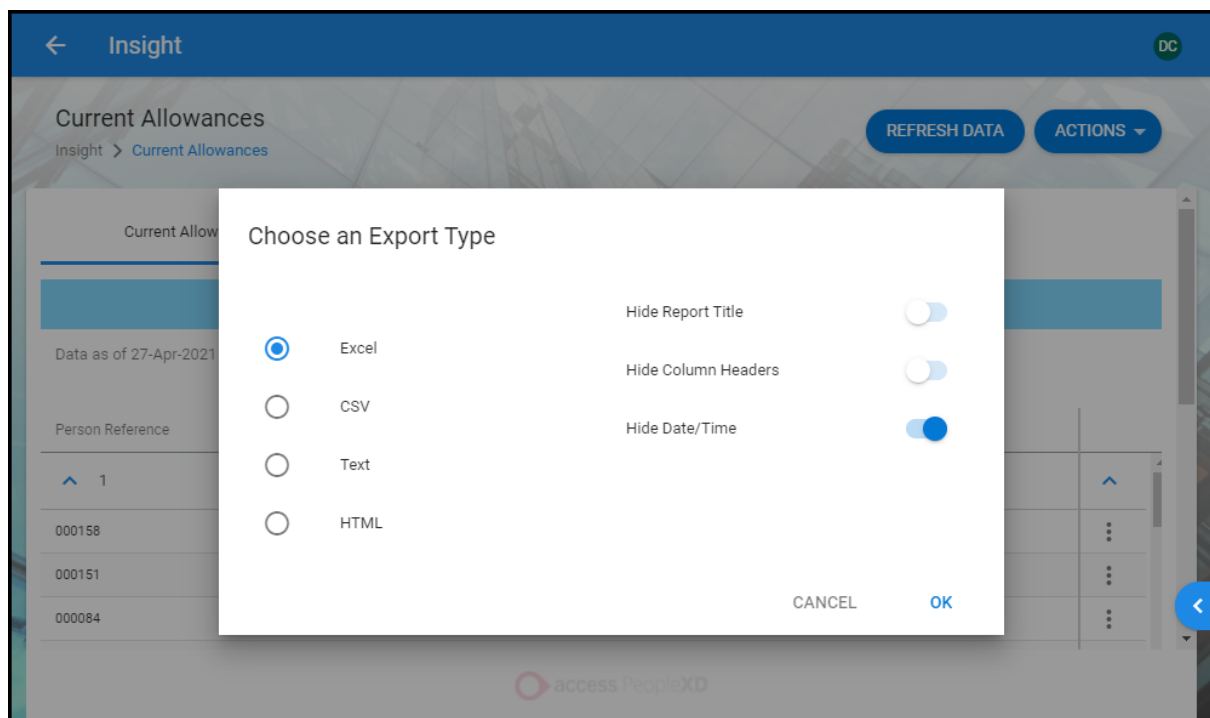

System	Menu Option	Description
CorePortal	Insight Edit Reports	This enables a user to edit a report on Insight.
CorePortal	Insight Delete Reports	This enables a user to delete a report.
CorePortal	Insight Clone Reports	This enables a user to clone (copy) a report.

2.6. Access to Exporting Data Reports

The following menu options controls a user's access to export a report once created on the Insight Dashboard.

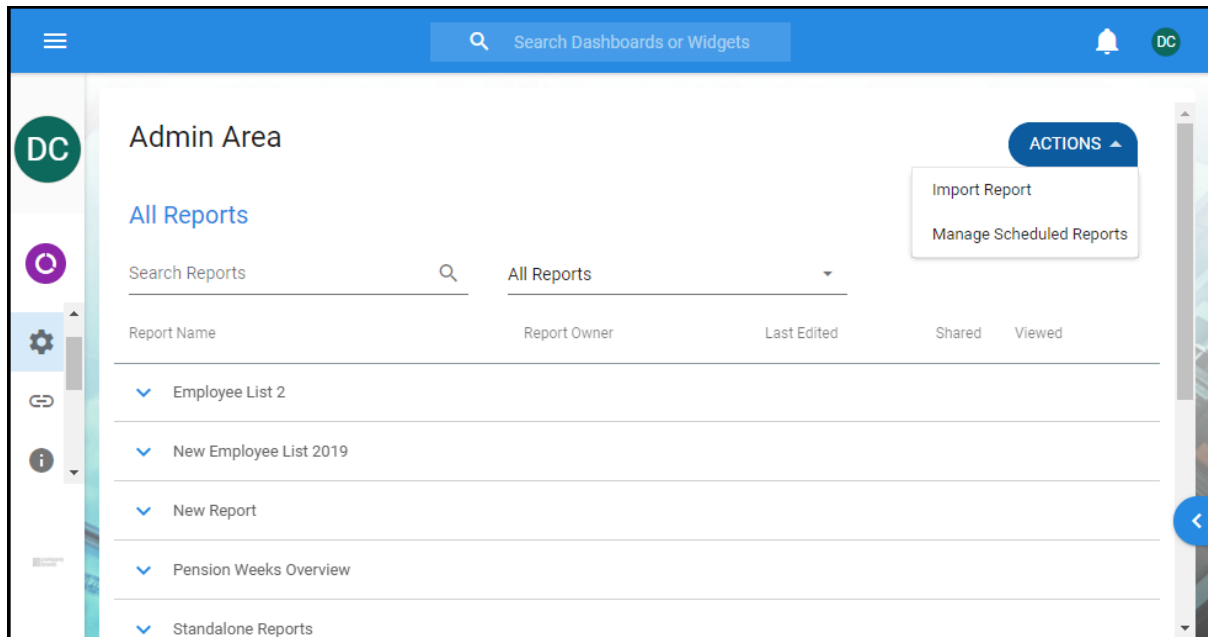

System	Menu Option	Description
CorePortal	Insight Hide Export Report Data	This hides the Export Data option on a report when enabled.

The following image show the Export Types for a report when enabled.

2.7. Access to the Insight Admin Area tab

The following image shows what the Insight Admin Area consists of.

The following menu option control access to this tab.

System	Menu Option	Description
CorePortal	Insight Admin	This enables the Admin Area tab on the Insight Dashboard.

2.8. Access to Import & Export Reports

The following menu option controls the display of the **Import Button** and the **Export** option on a report.

System	Menu Option	Description
CorePortal	Import/Export Reports	This enables a user to import existing reports or export a report from the Insight Dashboard.

2.9. Access to the Report Store

The following menu option controls access to the *Report Store* tab on the Insight Dashboard.

System	Menu Option	Description
CorePortal	Insight Report Store	This enables the Report Store tab on the Insight Dashboard.

2.10. Access to the BI Reports Importer

This following menu option controls access to the Discoverer Importer tab on the Insight Dashboard.

System	Menu Option	Description
CorePortal	BI Reports Importer	This enables the Discoverer Importer tab on the Insight Dashboard.

2.11. Access to Predictive Analytics

The following menu option controls access to the Predictive Analytics tab on the Insight Dashboard.

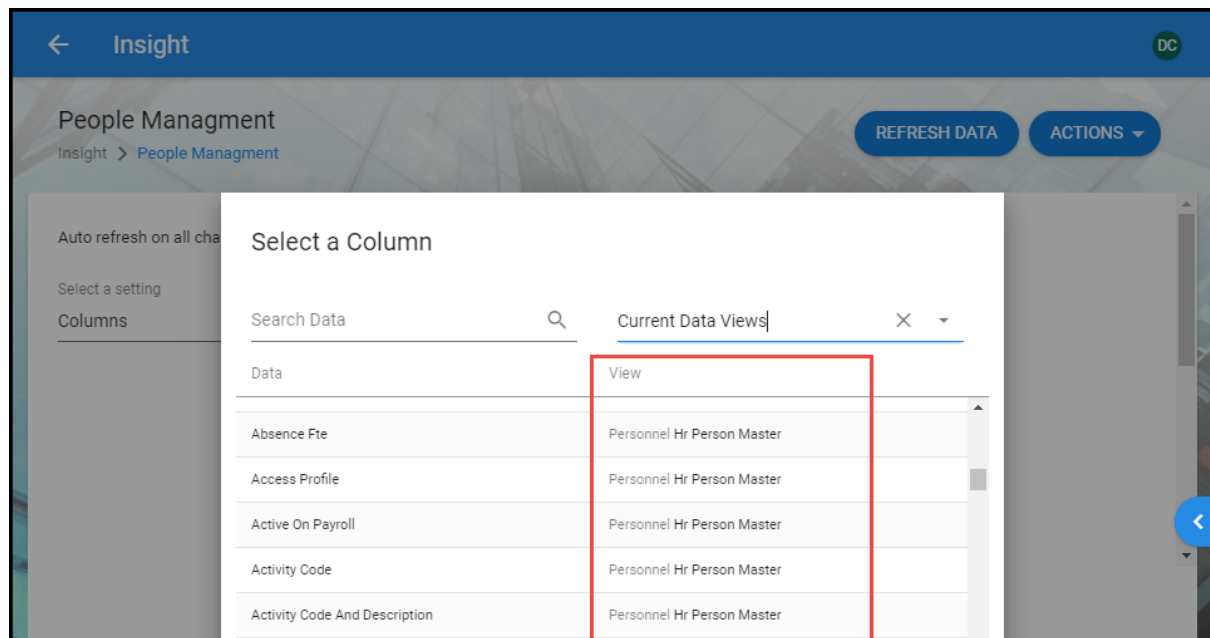

System	Menu Option	Description
CorePortal	Predictive Analytics Configuration	This enables the Predictive Analytics tab on the Insight Dashboard.

3. User Access to Business Areas

3.1. Overview

Menu options are also used to control access to the Business Areas that you can report on. Each Business Area has a corresponding menu option. If you do not have the corresponding menu option enabled, the Business Area is not listed on the *Current Data Views* filter when creating / editing a Report.

There are no further permissions required for the corresponding views i.e. if you give a user access to the CorePersonnel Business Area, they have access to all views in that area. The only exception to this is if the view is an 'LOV' view (see [section 3.3 Access to LOV Views](#))

Note: This access is only required for users that are creating or editing reports. If a user is running a report only, they do not need the Business Area access to do this i.e. you can view any report shared with you, once you have the underlying data access as detailed in [section 4. Report Data Access](#).

3.2. Access to Business Areas

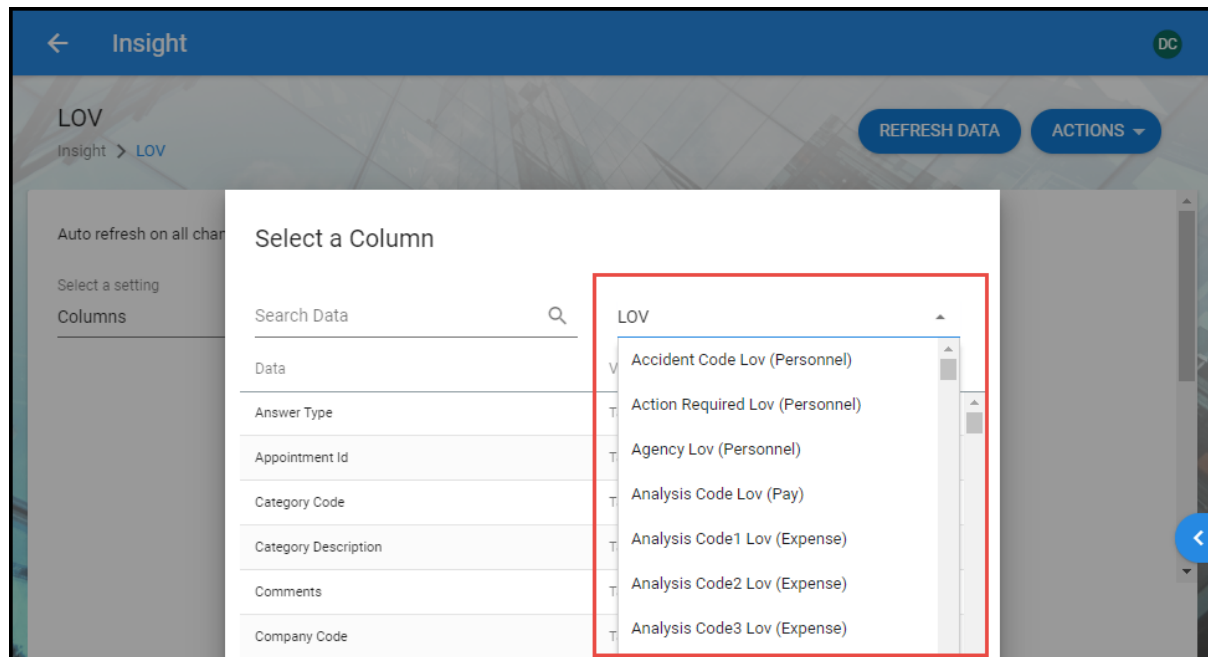

The table below is a list of all available business areas and the corresponding menu option controlling its access.

Business Area	Menu Option
CoreAMS	Coreportal - Insight Area Core AMS
CoreBudget	Coreportal - Insight Area Core Budget
CoreCSO	Coreportal - Insight Area Core CSO
CoreData Validation	Coreportal - Insight Area Core Data Validation
CoreExpense	Coreportal - Insight Area Core Expense
CoreGDPR	Coreportal - Insight Area Core GDPR
CoreHESA	Coreportal - Insight Area Core HESA
CoreHealth and Safety	Coreportal - Insight Area Core Health and Safety
CoreMedical Welfare	Coreportal - Insight Area Core Medical Welfare
CorePay	Coreportal - Insight Area Core Pay
CorePension	Coreportal - Insight Area Core Pension
CorePersonnel	Coreportal - Insight Area Core Personnel
CorePrediction	Coreportal - Insight Area Core Prediction
CoreRecruitment	Coreportal - Insight Area Core Recruitment
CoreStatistics	Coreportal - Insight Area Core Statistics
CoreTalent	Coreportal - Insight Area Core Talent
CoreTime	Coreportal - Insight Area Core Time
CoreTraining	Coreportal - Insight Area Core Training

3.3. Access to LOV Views

A number of business areas include LOV views. These are used to create a list of values reports for reference data items for the corresponding product. These views are not available by default. An additional menu option is required for you to see these. Once you have this menu option, you have access to all LOV views for all business areas that you have access to.

System	Menu Option	Description
CorePortal	Insight Area LOV Selection Allowed	This enables the LOV views when creating an Insight report.

4. Report Data Access

When you run a report on Insight it is important that you can only see records that you have been given access to see on PeopleXD i.e. if you cannot see the record elsewhere in PeopleXD, then you cannot see it in Insight.

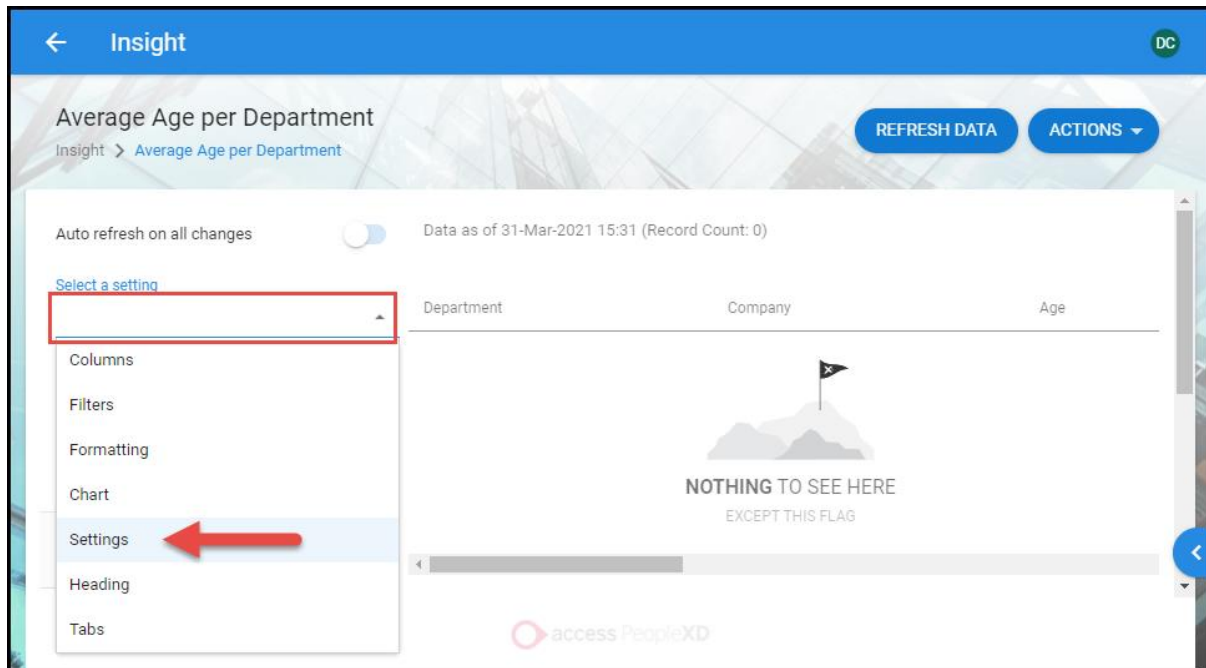

Your existing access defined for the other PeopleXD products is used in Insight, so this is not an additional configuration step. Reports can be configured to use three different report access types. Depending on what is set here, this informs what you see when you run the report.

Access Type	Description
Administrator	This report is for administrators to view e.g. hr administrators, payroll administrators etc. Report data is displayed based on your system users access e.g. • HR System Users • Pay System Users
Manager All Reports	This returns all data for anyone sitting beneath the manager in the company's hierarchy.
Manager Direct Reports	This report is for managers to run. Report data is displayed based on your team only. Team access is derived based on the following CorePortal parameters: • Cp_team_org_group • Cp_Team_org_role  Note: This does not apply to Payroll reports. Administrator access is required to run reports on the Payroll business area. If you have Manager access only, you are unable to run reports for Payroll.
Employee	This report is for the employee to run. The report data is based on your own employee record.

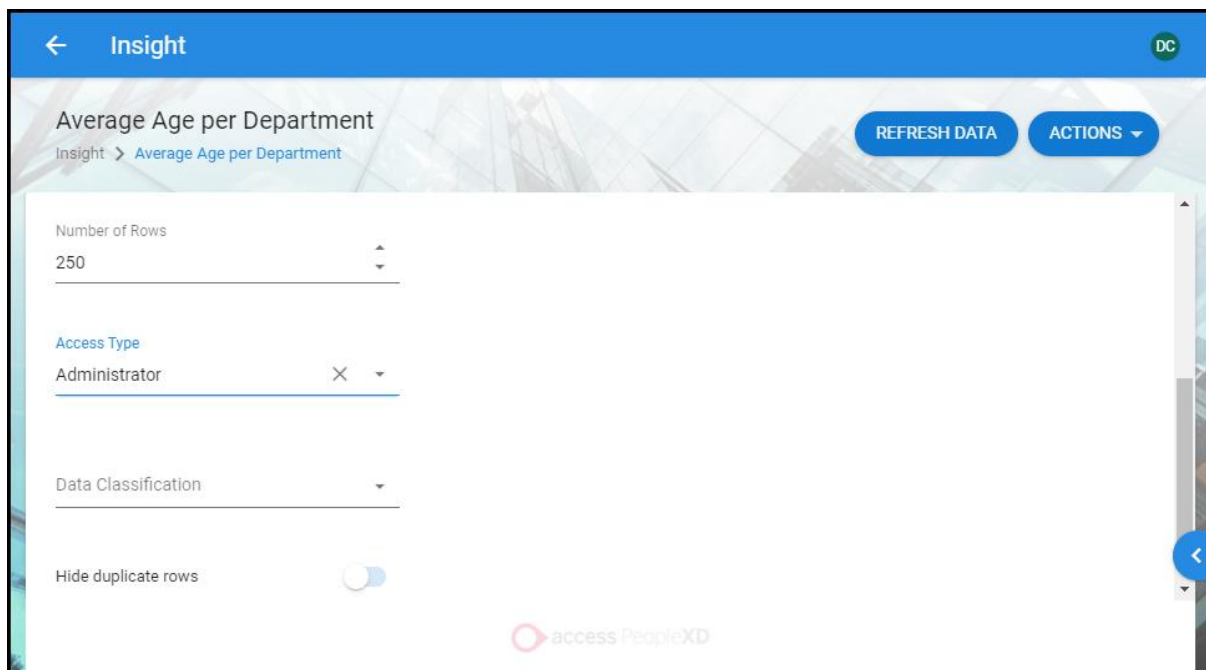

XD Reporting: Insight User Security

The steps below outline how to configure this access per Report.

1. Within the *Edit Mode* of a Report, to open the Filters setting.

2. The Settings area opens on screen, showing the existing Report settings.

5. Insight Super User

5.1. Overview

The Security widget on the Insight dashboard allows administrators to assign 'Super User' access across the Insight product. Users who are assigned 'Super User' access have full access to all Insight views and data without having to manually amend the access per product. This means that once the 'Super User' access has been enabled for a user; no data security is applied when an Insight report is run.

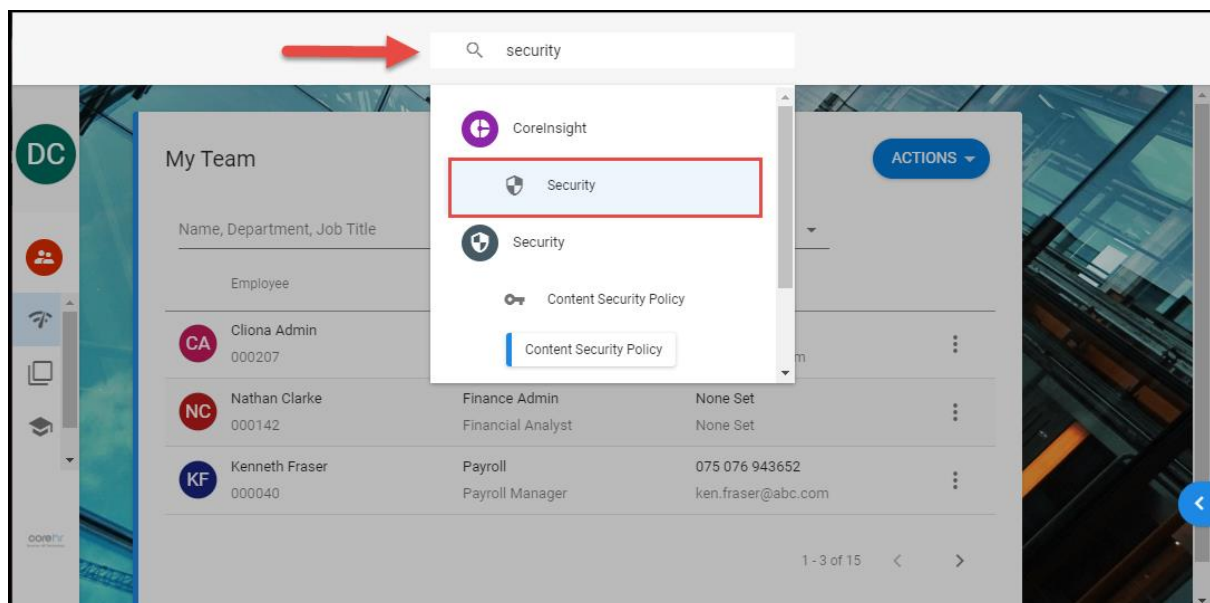

The following menu option is available to allow this new security widget to become available within Insight.

System	Menu Option	Description
CorePortal	Insight Security Admin	This enables the security widget to become available with the Insight dashboard.

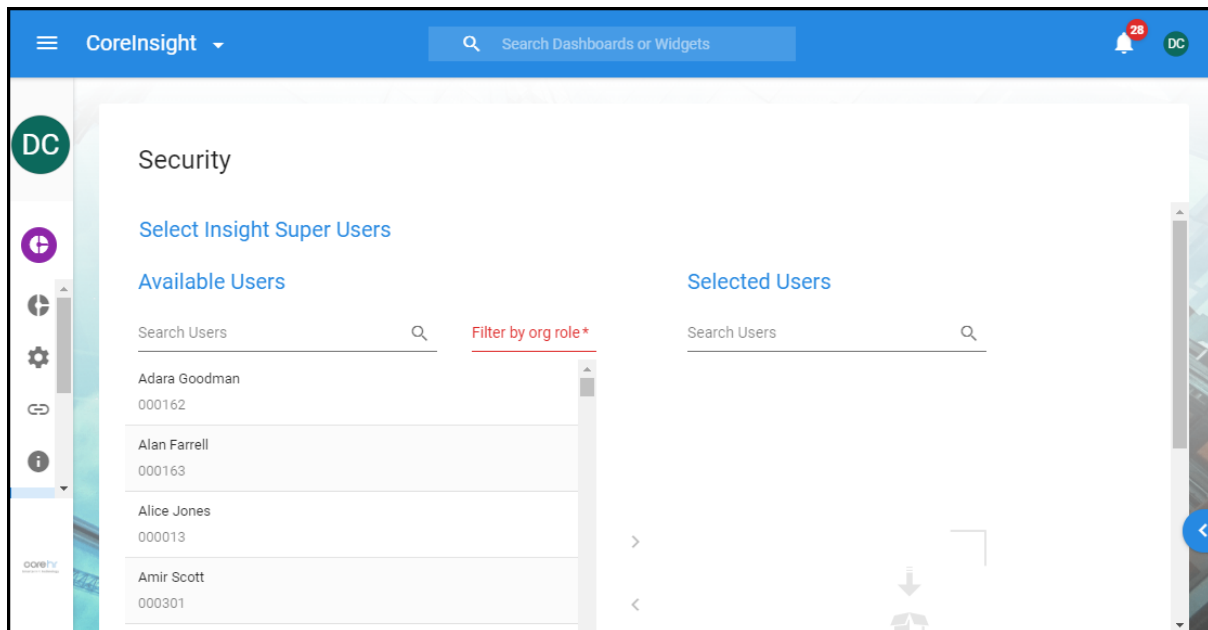

5.2. Creating an Insight Super User

To enable the Superuser access once the widget is enabled:

1. Quick Jump to the Security tab in Insight.

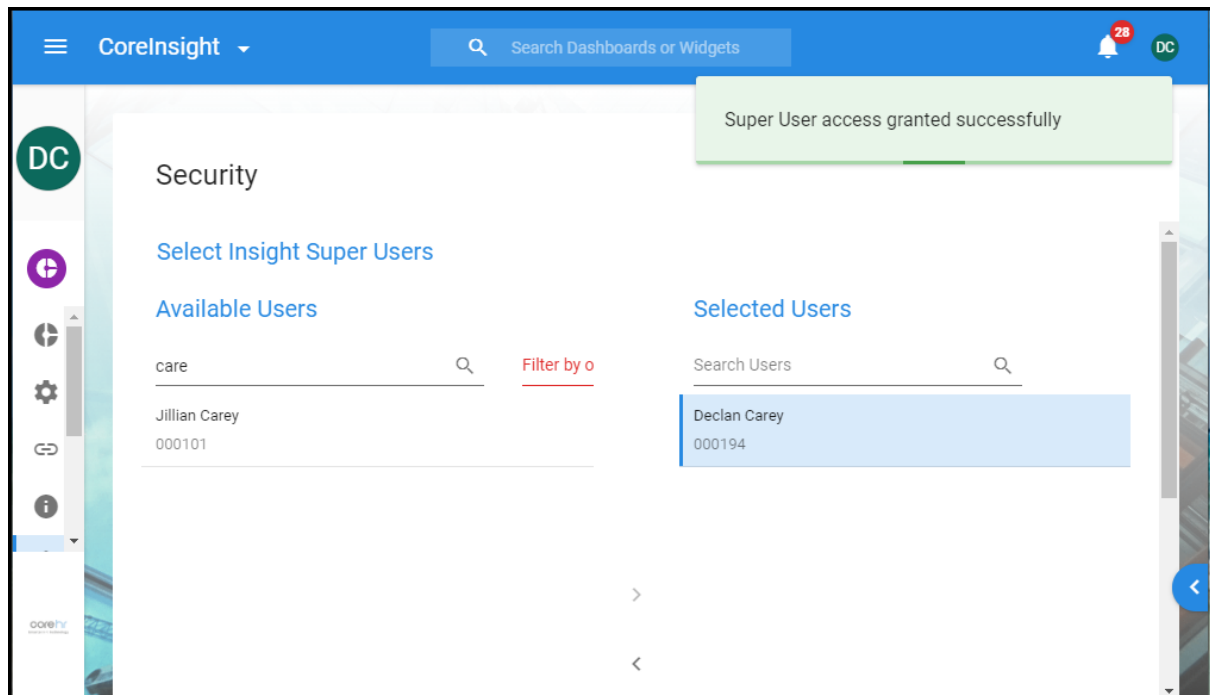

- The security Super User screen appears on screen:

- The table below outlines the items shown.

Item	Description
Available Users	This is a list of users that can be given the super user access in Insight.
Selected Users	This is a list of the users that already have the super user access assigned to them.
Search Users	This allows you to search existing users based on their forename and surname.
Filter by Org Role	This allows you to filter a group of users based on their assigned Org Role in the system.

- Select one or more users to assign the super user access to.
- Use the   buttons to move users across to the selected list of users.
- Click the **Save** button
- Super User access is assigned successfully.

5.3. Benefits of Insight Super User

5.3.1. Reduced Configuration Requirement

For super users you do not have to setup their data access such as pay group access or module access. This can be time consuming and requires configuration and validation.

5.3.2. Performance Improvement

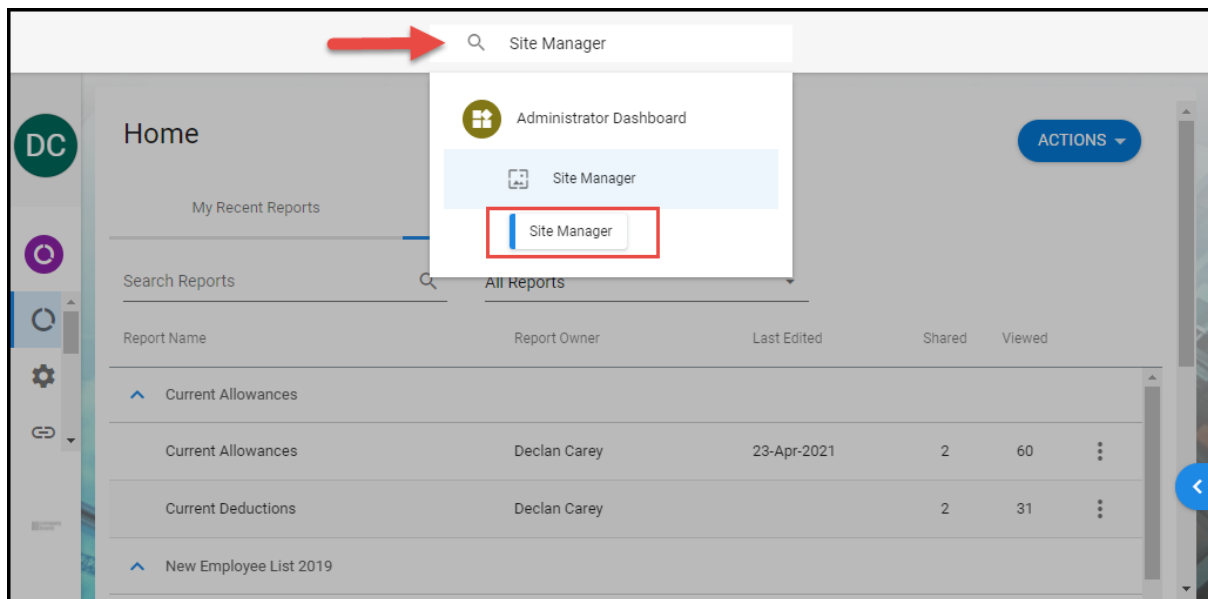

Users see a significant performance improvement as the system does not perform checks on access privileges. On a system level, Insight does not query the security views to check if restrictions are applied.

5.4. Admin Server URL for Scheduled Reports

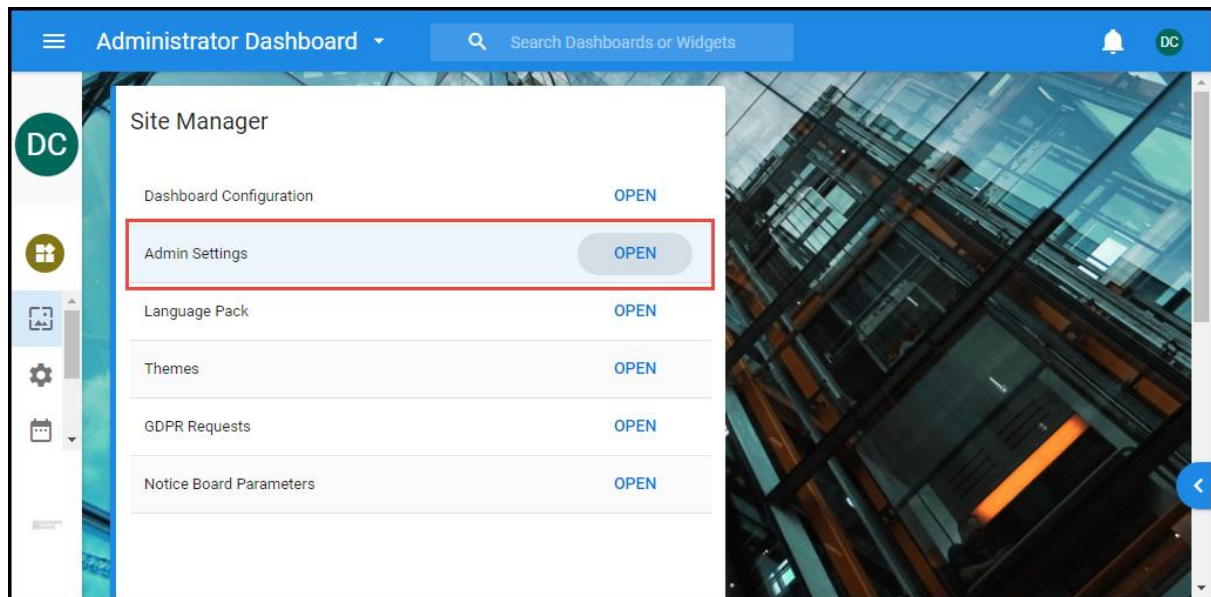

There is a parameter which needs to be updated in the Administrator Dashboard. This only needs to be updated if your organisation is not using the Self Registration product as this is also the parameter used to update the link send to new joiners for Self Registration.

To carry this out:

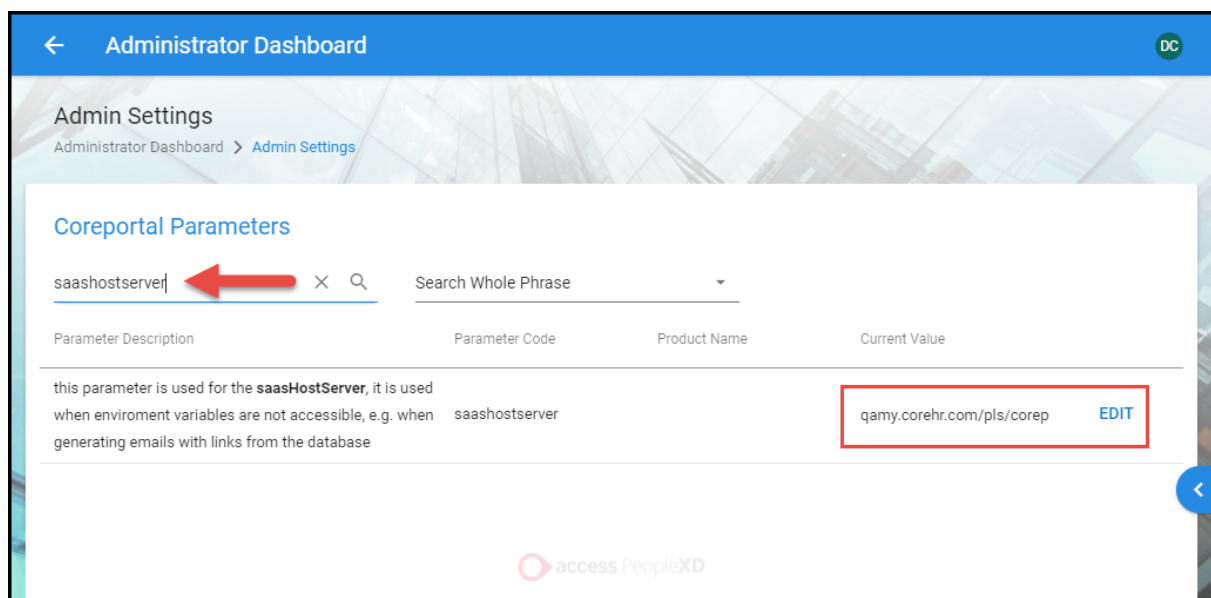

1. Quick Jump to Site Manager on the Administrator Dashboard.

2. Open the Admin Settings option.

3. Search for saashostserver parameter and update this to your environment details.

6. Data Sensitivity Classification

6.1. Overview

A Data Classification setting can be applied to all Insight reports. This is displayed when the report is viewed in Insight but also on all exported formats of the report including:

- View Report Screen
- Excel
- CSV
- TXT
- HTML
- Print Friendly view
- Shared Reports
- Scheduled Reports

You can select from a list of available sensitivity classifications and this information is displayed:

- At the top left of the report on screen.
- In the header / footer of the report when exported / printed.

This classification appears to all users that run the report e.g. if the report is shared with another user or email via the report scheduler etc.

6.2. Configuration

The following classifications are available on the list as standard:

- High Sensitivity
- Medium Sensitivity
- Low Sensitivity

These can be added to / amended as required.

1. Quick jump to *People Management* > *Data Centre* widget.
2. Open the *Reference Data* option.
3. Search for and select "Other References".
4. Select *Reference Type* = "Data Classification" (DATAACL).
5. Update as required.

6. Click **Save** to save changes.

Other References

People Management > View All > Other References

Reference Type

Reference Type: DATAACL Description: Data Classification

Reference Codes

Code	Description
H	High Sensitivity
L	Low Sensitivity
M	Medium Sensitivity

Cancel Add Save

6.3. Updating a Report's Sensitivity

To set the sensitivity classification on a report:

1. On the *Manage Report* screen, select **Settings**.
2. Select from a list of options on the **Data Classification** list.

Insight

Path To Great Report

Insight > Path To Great Report

REFRESH DATA ACTIONS

Access Type: Administrator

Data Classification

- High Sensitivity
- Low Sensitivity
- Medium Sensitivity

access PeopleXD

3. Click **Save**.
4. Click **Run Report**.
 - The Data Classification is displayed at the top left of the report.

Person Reference	X Value	Y Value	Published Date	Published Indicator	Saved Date
000203	4	3	09-Apr-2021	Y	09-Apr-2021
000203	6	5	09-Apr-2021	Y	09-Apr-2021
000203	4	7	09-Apr-2021	Y	09-Apr-2021
