1 DOCUMENT CONTROL

1.1 DOCUMENT SIGN-OFF

Refer to the document cover sheet for official signatories.

1.2 VERSION HISTORY

Initial internal drafts are versioned 0.0.z (e.g. 0.0.1) and are increased to 0.y.0 (e.g. 0.1.0) when internally approved and ready for issue to the client project team where applicable. When the document is approved by all of the following, the version number increases to x.0.0 (e.g. 1.0.0):

- Client Project Team; and
- CoreHR

Version	Date	Author	Details
0.0.1	20 Feb 2014	CoreHR	Initial Draft
1.0.0	21 Oct 2014	CoreHR	Final Version
1.0.3	17 Feb 2014	CoreHR	Update of UK Expense Items on Car Widget, Multi Appointment, Generate Timesheets, Trip Allowances, Overnights/Mileage message.
1.0.4	24-Aug-2016	CoreHR	Updated to include V23 items.
1.0.5	10-Apr-2017	Core Expense Product Team	Updated document to include section on Pre-Approval process included in V24. Also

			added facility to control addresses on Remittance Slip from V23+.
1.0.6	30-Jun-2017	Core Expense Product Team	Updated document to include section on Configuring the VAT facility.
1.0.7	28 Nov 2017	Core Expense Product Team	Updated document to include Travel Methodologies at company level.
1.0.8	29 Nov 2017	Core Expense Product Team	Updates to include V25 Key items e.g. approvals from notification centre, Travel facility enhancements.

2 INTRODUCTION

The purpose of this document is to:

- Introduce the primary features available in the system
- Provide instructions on to how to use this system
- Outline the benefits gained from use of the features

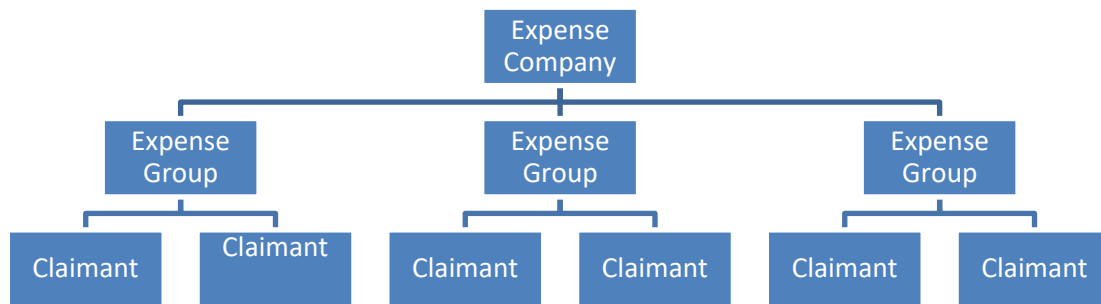

The document will:

- Outline the Main Configuration Options
- Describe the Current Processes

This document may make reference to “Configuration:” throughout the document which points the reader to specific functionality within Core’s software. For the purpose of this document, unless specified, Configuration is pointing to CoreExpense Back Office software

Images are also used throughout the document for illustration purposes only. Differences may exist between the image used and the user’s software.

3 CORE | EXPENSE STRUCTURE

3.1 EXPENSE COMPANY

The highest level in the structure is the Expense Company- the tax registered entity. This can be a different company to the one used to reflect the employees position in the organisational structure/ pay structure.

The Company holds key data such as Name, Address, EFT detail, expense year definition, kilometre/mileage year definition.

Configuration: Reference → Reference C-C → Company Code

You will find an example of a completed Expense Company below

Company

Company Code: 1

Name: COMPANY A

Address: STREET B
DUBLIN 8

Expense Year Start Date: 01-JAN-2013

Kilometres Year Start Date: 01-JAN-2013

Car Allowance Accrued Message: Y

Vote / Dept. No: 301

3.2 EXPENSE GROUPS

The expense group is a logical grouping of claimants with a common pay frequency. All claimants in an expense group are processed together for payment. Each Expense Group is associated with an Expense Company.

Configuration: Reference → Reference D-L → Expense Group

The screenshot shows the 'Expense Group Maintenance' window with the following fields and values:

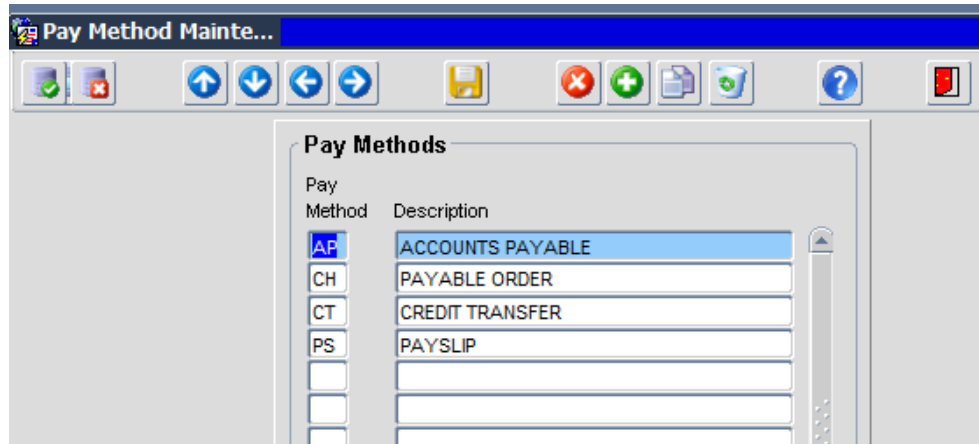

- Group Code: 1
- Company Code: 1
- Pay Method: CT
- Location Code: IRL
- Currency Code: EUR
- Claim Status (ESS Interface): HO
- Trip Status (Admin): New
- Advance Type: AC
- Max Claim Amount:
- Run Number: 060004
- Mgmt. Expense Group: N
- Cheque Date: 01-JUN-2011
- Default Trip Description:
- Default From Location:
- Default To Location:
- Online Remittance Image: corehr.jpg
- ESS Default Foreign From Location:
- ESS Default Foreign To Location:
- ESS Allow Future Dates: ☐

Additional sections include:

- CorePay Timesheets Level Of Detail:**
 - Home Cost Centre: ☒
 - Trav Type: ☐
 - Cost Centre: ☐
 - Pay Code: ☐
- SIAT Related Controls:**
 - Disable Header Dates: ☐

- **Group Code** - the Expense Group Code specified when setting up the Expense Group.
- **Company Code** - any currently set-up Expense Companies can be chosen
- **Pay Method** - This is the method of payment that will be used to pay the Expenses of the Expense Group. CT- Credit transfer is the most commonly used.

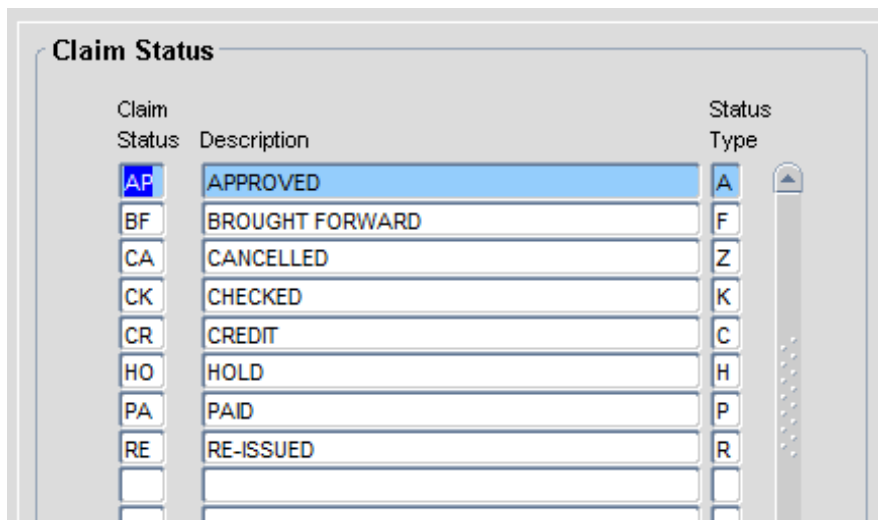

Configuration: Reference → Reference M-R → Pay Method

- **Location** – This should be selected from the list. For Irish clients IRL
- **Currency** – This should be selected from the list. For Irish clients EUR etc
- **Claim Status (ESS Interface)** – This allows the facility to choose if the Expense Group should have one or two levels of approval in the Back Office (please see approval section for more details).

To select two levels of approval in the back office Claim Status "HO" should be selected.

To select a single level of approval in CorePortal/ Back Office, Claim Status "AP" should be selected.

- **Trip Status** – this identifies the trip status that will be applied to all back office expense trips entered by claimants in this Expense Group. There are three options in the dropdown list- New, Submitted, Approved.

- **Advance Type-** Any currently configured Advance Types can be selected from the dropdown.

Configuration: Reference → Reference A-B → Advance Types

Additional Advance Types can be set-up here.

- **Run Number-** Current Run Number that this Expense Group is on. This facilitates ensuring that an Expense Run has been successful (see Expense Run section)
- **Mgmt. Expense Group-** This should be set to N.
- **Cheque Date-** Most recent cheque date. This is automatically populated
- **Max Claim Amount-** This is redundant
- **Default Trip Description:** This is redundant
- **Default From Location:** This is redundant
- **Default To Location:** This is redundant
- **Online Remittance Image:** This is redundant
- **ESS Default Foreign From Location:** This is redundant
- **ESS Default Foreign To Location:** This is redundant
- **ESS Allow Future Dates-** This allows claimants to enter Expense Trips on CorePortal for future dates

ESS Allow Future Dates

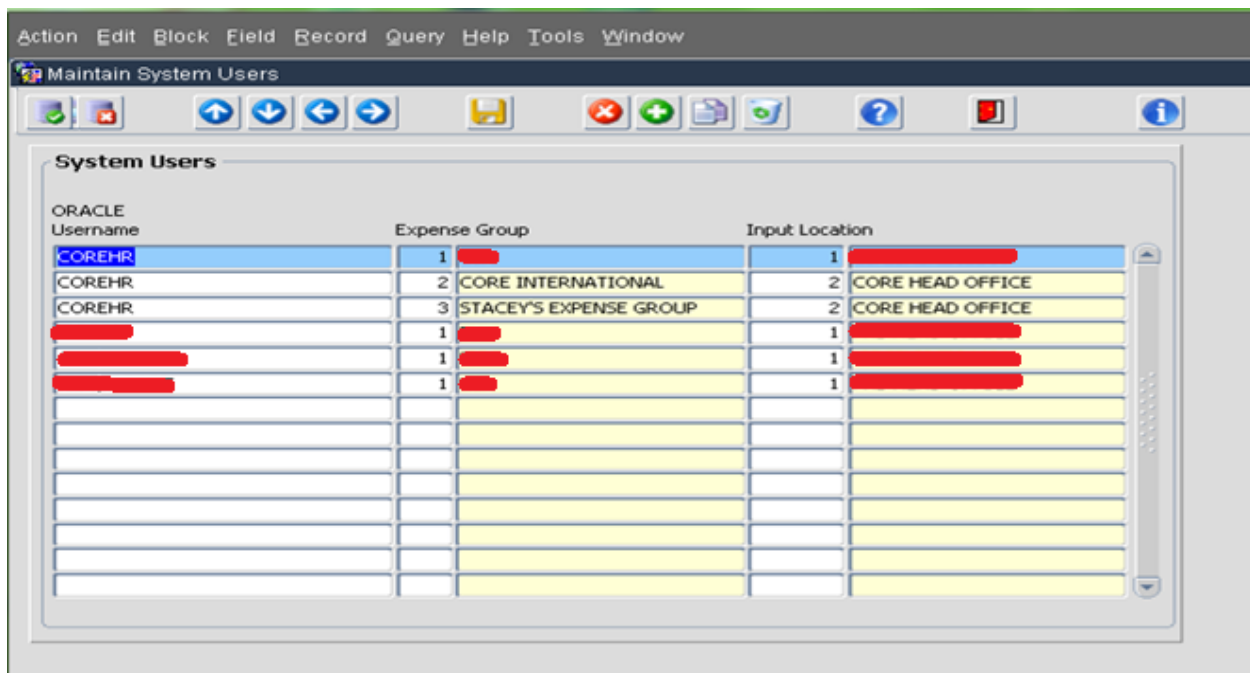

3.3 INPUT LOCATION

Input locations are attached to claimant's records when they are set up in CoreExpense. A Claimant's Input location is used to filter which users can access the employee in the Back Office. If the Input location you require is not on the dropdown list you can add more Input Locations.

Configuration: Reference → Reference D-L → Input location

3.3.1 FILTERING ACCESS BASED ON INPUT LOCATION

Configuration: Reference → References S-Z → System Users

ORACLE Username	Expense Group	Input Location
COREHR	1	1
COREHR	2	2
COREHR	3	2
	1	1
	1	1
	1	1

System Users- Provides the means of giving access to Users based on Expense Group and Input Location.

Data fields available for entry are as follows:

- **Oracle Username** of the person you wish to give access to.
- **Expense Group** that this person will have access to view.

- **Input Location** that this person will have access to view.

3.4 CLAIMANTS

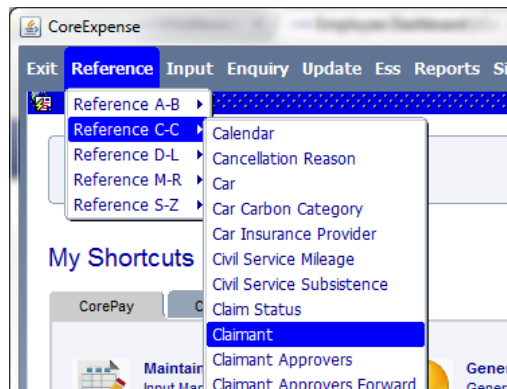

There are two different types of Claimants in CoreExpense

- Regular claimants (employees)
- External claimants (non-employees)

3.4.1 CLAIMANTS (REGULAR)

To set-up a Claimant

1. **Configuration:** Reference → Reference C-C → Claimant

2. Click on the cancel query button.

2. Exit the query screen by clicking on 
3. Enter a Claimant number. This must start with a "C"
4. The following fields are mandatory
 - Address
 - Name
 - Surname
 - Scale Code
 - Expense Location
 - Input Location
 - Cost Centre
 - Pay Method
 - Sort Code & Account No / BIC & IBAN

5. Ensure that the Status is "S"
6. Press Save
7. If mileage is going to be claimed, car details should be recorded in

Configuration: Reference → Reference C-C → Car

3.4.3 PROXY CLAIMANTS

Proxy Claimants are Claimants whose claims are entered for them by a third party. For example, CEO of a company may get their secretary to enter the details of their claims on their behalf. The third party may do so however the Claimant actually claiming the expenses will need to log onto their CorePortal account to submit the claims themselves.

3.4.3.1 CONFIGURING PROXY CLAIMANTS - ORG ROLES & GROUPS

Go to Core Portal/ Admin Settings search "exptr_org_" and configure per the client's approval requirements

Org Group for Expense Proxy Claimant Trip Recording (uses Personnel default roles if none selected).	CoreExpense	WRKGRP
Parameter Code exptr_org_group		
Org role for Expense Proxy Claimant Trip Recording (uses Personnel default roles if none selected).	CoreExpense	RT
Parameter Code exptr_org_role		

Org Roles must be configured in portal portal paramaters in line with the proxy role type created in the Back office (see below)

3.4.3.2 CONFIGURING PROXY CLAIMANTS – CORE|PERSONNEL

Create a new Org Role for the expense proxy user as seen below in “Maintain Org Roles Types”

Configuration: Core Personnel → Reference → Reference K-P → Org Roles Types (this step is only necessary if there is no existing expense proxy user currently set-up).

Navigate to Reference → Maintain Org Roles by Person to assign the relevant role to the approver's profile.

Personnel No.	Person Name	Structure	Role	Org Group	Date From	Date To	Org Group Item
000544	Ivan Drago	Default Standard Structure	Proxy Administrator	Department	03-DEC-2013		XE Human Resources
			Overtime Approver 1	Department	03-DEC-2013		XE Human Resources
			Expense Trip Proxy/Recording	Department	19-DEC-2013		XE

3.4.3.3 CONFIGURING PROXY CLAIMANTS - MENU PROFILES

Set up a new menu profile with the following three parameters selected (CorePortal)

The screenshot shows the 'Menu Profile' configuration window. The 'Profile' field is set to 'COREPORTAL_PROXY'. The 'User' and 'Group' fields are empty. The 'Installed Systems' list includes CoreHR Web ESS, CoreMobile, CorePay, CorePension, CorePersonnel, and CorePortal (highlighted). The 'CorePortal Main Menu' section lists 12 items, with the first and last items selected in the 'Select' column.

The 'Installed Systems' list includes CoreHR Web ESS, CoreMobile, CorePay, CorePension, CorePersonnel, and CorePortal (highlighted). The 'CorePortal Main Menu' section lists one item, which is selected in the 'Select' column.

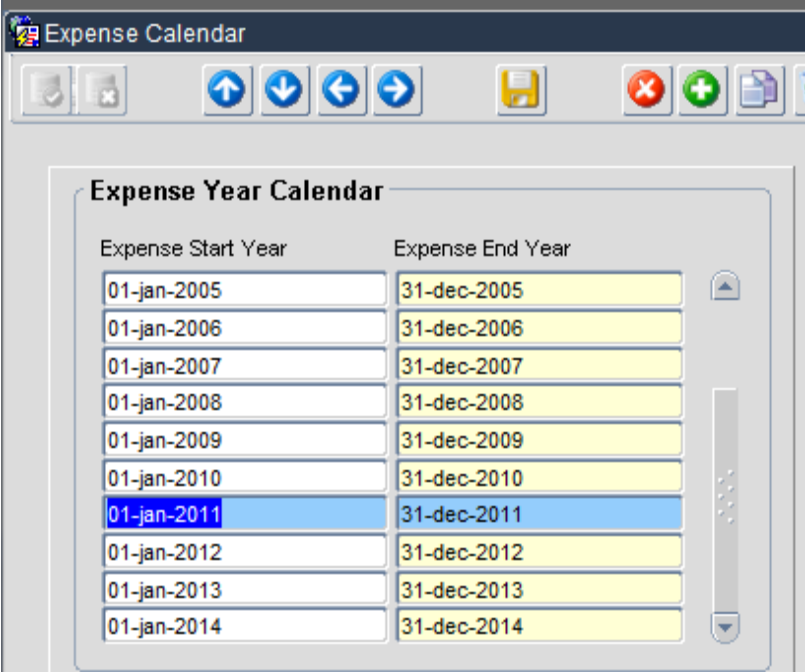

Menu Item	Select
Coreportal - Employee Expense Update	☒

4 CALENDARS

There are two types of Calendars that need to be set-up on CoreExpense. The calendars identify when the Expense and Mileage Year restarts.

4.1 EXPENSE CALENDAR

Configuration: Reference → Reference D-L → Expense Calendar

Expense Start Year	Expense End Year
01-jan-2005	31-dec-2005
01-jan-2006	31-dec-2006
01-jan-2007	31-dec-2007
01-jan-2008	31-dec-2008
01-jan-2009	31-dec-2009
01-jan-2010	31-dec-2010
01-jan-2011	31-dec-2011
01-jan-2012	31-dec-2012
01-jan-2013	31-dec-2013
01-jan-2014	31-dec-2014

A new year can be added in at any time.

4.1.1 VALIDATION OF CLAIMS ACROSS EXPENSE YEARS

V20.0.1

Functionality has been included to prohibit the submission of claims across Expense Years. In this case, two separate trips must be submitted.

4.2 MILEAGE CALENDAR

Configuration: Reference → Reference M-R → Mileage Calendar

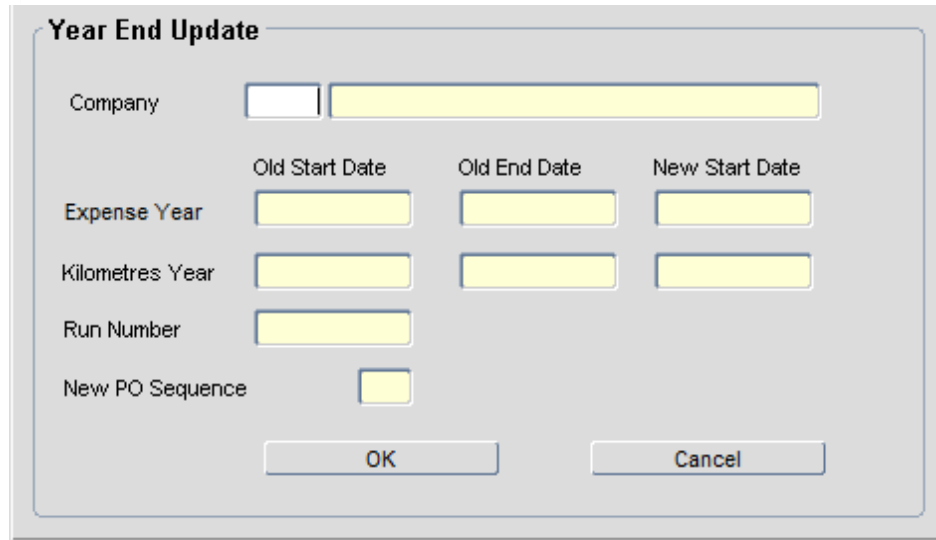

Start Year	End Year
01-jan-2001	31-dec-2001
01-jan-2002	31-dec-2002
01-jan-2003	31-dec-2003
01-jan-2004	31-dec-2004
01-jan-2005	31-dec-2005
01-jan-2006	31-dec-2006
01-jan-2007	31-dec-2007
01-jan-2008	31-dec-2008
01-jan-2009	31-dec-2009
01-jan-2010	31-dec-2010

The Mileage Calendar is used to calculate the Claimant's annual number of miles claimed as part of expenses and indicates to the system when the maximum no of miles for a particular rate has been reached. It then applies the correct rate dependant on the number of miles travelled that year (as per the expense policy/ configuration).

4.3 YEAR END FUNCTIONALITY

The year-end process in CoreExpense consists of:

- changing the mileage and expense calendars
- updating the Mileage and Expense Year dates in the Expense Company Screens
- There is an optional step to update the Expense run number i.e. all 2014 claims are prefixed with '14'. This can be updated to '15' for 2015 claims in CoreExpense/ Update/ Year End Processing

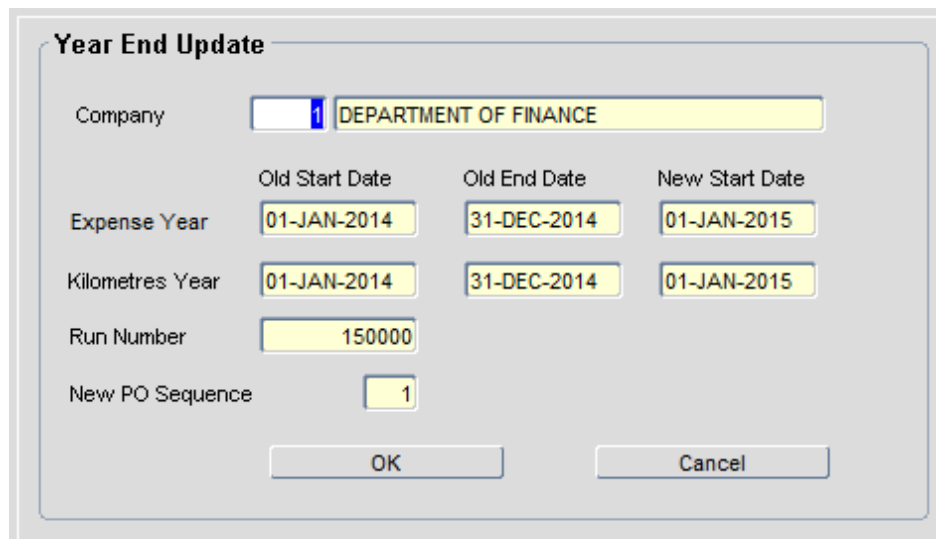

Year End Update

Company

	Old Start Date	Old End Date	New Start Date
Expense Year			
Kilometres Year			
Run Number			
New PO Sequence			

Once an Expense Company is selected the screen looks as below

Year End Update

Company

	Old Start Date	Old End Date	New Start Date
Expense Year	01-JAN-2014	31-DEC-2014	01-JAN-2015
Kilometres Year	01-JAN-2014	31-DEC-2014	01-JAN-2015
Run Number	150000		
New PO Sequence	1		

Pressing ok will complete the update.

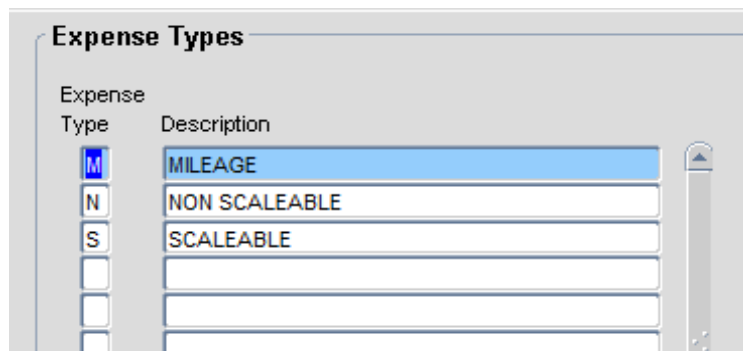

5 EXPENSE CODES

Every transaction in CoreExpense will be written out to history against a relevant expense code.

5.1 TYPES OF EXPENSE CODE

There are three categories of Expense Codes

- Mileage
- Scalable (Subsistence)
- Non-Scalable

5.2 EXPENSE CODE- CONFIGURATION

Configuration: Reference → Reference D-L → Expense Code

5.2.1 CONFIGURATION OF A MILEAGE EXPENSE CODE

The screenshot below is an example of an existing Mileage Code.

- **Expense Type-** M for Mileage
- **Multiplier-** should be left blank or 1.
- **From Location Mandatory-** if this is selected on it is mandatory for a Claimant to enter a “From Location” when entering an expense trip.
- **To Location Mandatory-** if this is selected on it is mandatory for a Claimant to enter a “To Location” when entering an expense trip.
- **Is Time Required-** if this is selected on it is mandatory for a Claimant to enter Times when entering an expense trip.
- **Maximum Amount-** This field is not relevant as it is only used for functional for receipted items.
- **Analysis Codes-** This is no longer relevant as the Analysis Codes are selected in the Trip Header before the Expense codes are chosen.
- **Expense Pay Code-** while the information in this cell is not used; it is necessary to ensure that it is completed so the Expense Code can be used to generate an Expense.
- **GL Expense Code-** this field is where the Nominal Code from the Client’s FMS system should be entered. This will be used to generate the Expenses GL Interface file.

Expense Code

☐ Exclude Hard Copy Receipt	☐ Receipt Items Pop Up Message
☐ Activate Travel Reasons	

The screen below is an example of an existing Non-Scalable Expense Code.

- **Expense Type-** N for Non-Saleable
- **Units Required-** should be unselected
- **On Line Receipted Expense-** Should be selected

5.2.4 GENERAL CONFIGURATION OF EXPENSE CODES

Carbon Footprint

Should clients wish to note carbon footprint details they can either chose the optional or mandatory option. **Note** it is only possible to record carbon footprint detail when entering trips in the back office.

Additional Information

Should clients wish to record additional details in relation to expenses accrued, they can make the additional information button mandatory.

- **Configuration-** Business Meals must be selected as the Additional Information option and **Mandatory** must also be selected. This allows the following details to be recorded:

Add Additional Info

Date From	30/01/2014	Date To	30/01/2014
Location		Purpose	
Attendee		Position	
Client			

Save Close

The client field may be selected from a list or added as free text.

List of Clients:

☒ Company Representation FreeText Field

If this parameter is unselected the claimant will be able to select from a list of clients.

If it is selected the Claimant will be able to enter the required information as free text.

Expense Location

Expense Codes can be marked as Home/ Foreign/ Both.

Configuration:

- Marking an Expense Code as “Home” ensures that this Expense Code will only be available for domestic trips.
- Marking an Expense Code as “Foreign” ensures that this Expense Code will only be available for foreign trips.
- Marking an Expense Code as “Both” or blank ensures that this Expense Code will be available for Foreign and Domestic trips.

The screenshot displays the CoreExpense 19.0.0 application window. The title bar reads "CoreExpense 19.0.0". The menu bar includes "Action", "Edit", "Block", "Field", "Record", "Query", "Help", "Tools", and "Window". The main window is titled "Expense Code" and features a toolbar with various icons for navigation and actions.

The "Expense Code" section contains the following fields:

- Expense Code:
- Name:
- Short Name:
- Payslip Description:
- Expense Type:
- Maximum Amount:
- Multiplier:
- ☐ From Location Mandatory
- ☐ To Location Mandatory
- ☐ Is Time Required
- ☐ Trip Allowance [Allowances](#)
- [Payment Schedule](#)

Below these fields are four tabs: "Codes", "Settings", "Miscellaneous Settings", and "Client Specific Settings". The "Settings" tab is currently selected, showing the "Settings Parameters" section with the following checkboxes:

- ☐ Online Indicator
- ☐ Allowance Ind
- ☐ Upper Limit
- ☐ Change Value
- ☐ Cancellation Expense
- ☐ ESS Item Description Required
- ☐ Exclude Hard Copy Receipt
- ☐ Activate Travel Reasons
- ☐ Retrospection Ind
- ☐ Units Required
- ☐ Overwrite Subsistence
- ☐ On Line Receipted Expense
- ☐ Back Office Receipt
- ☐ Back Office Item Description Required
- ☐ Receipt Items Pop Up Message

Below the checkboxes are two dropdown menus:

- Carbon Footprint:
- Additional Information:

At the bottom, there is a checkbox for "Mandatory" and a red-bordered box containing the "Expense Location" dropdown menu, which is currently set to "HOME". The dropdown menu options are:

- HOME
- FOREIGN
- BOTH

Expense Code Pop-Up Message

It is possible to configure messages per Expense Code which will appear on CorePortal when that expense code is selected. For example, when choosing the Expense Code Mileage, a message can be configured to appear to state that “the departure distance claimed must be the shorter of home or normal place of work”.

Configuration: Reference → References D-L → Expense Code

Go to the Settings tab and enter the relevant message in the free text field. This message will appear in CorePortal once the Claimant selects the relevant Expense Code.

The screenshot displays the 'Expense Code' configuration window. The 'Settings' tab is selected, showing various parameters for the 'MILEAGE' expense code. A red circle highlights the 'Receipt Items Pop Up Message' checkbox, which is checked, and the text field below it containing the message: 'This is the mileage pop up message'.

5.3 EXPENSE PARAMETERS

Once the Expense Codes are set-up, the Expense Parameters need to be configured per Expense Company.

Configuration: Reference → Reference D-L → Expense Parameters

The screenshot shows the 'Expense Parameter Maintenance' window. The 'Company Code' is set to '1' and the company name is 'PRESIDENT'S ESTABLISHMENT'. The following fields are highlighted with red circles:

- Advance Expense Code: 20 (Description: OUTSTANDING IMPREST)
- Kilometres Expense Code: 15 (Description: MILEAGE)
- Overnight Code: 1 (Description: OVERNIGHT RATE)
- Five Hour Code: 5 (Description: 5 HOUR RATE)
- Ten Hour Code: 10 (Description: 10 HOUR RATE)
- Advance Payment Code: 21 (Description: PAYMENT OF IMPREST)
- Advance Repayment Code: 22 (Description: REFUND OF IMPREST)

Other visible fields include Car Loan Expense Code (9999, NOT IN USE), Lunch Expense Code (9999, NOT IN USE), Tea Expense Code (9999, NOT IN USE), Lunch & Tea Code (9999, NOT IN USE), Car Allowance, Taxable Allowance, Non Taxable Deduction, Non Taxable Allowance, Non Taxable Miles, Advances Pay Code, Loans Pay Code, Claims Pay Code, Car Allowance Pay Code, Advance Cost Centre, Travel Control Cost Centre, Travel Control Account, Withholding Tax A/C, and Withholding Tax % (20.00).

It is imperative that the highlighted expense codes are filled in per Expense Company.

Operational Rules:

Below outlines some of the key rules supported by description and notes

Item	Description	Note
Travel Distance	Organization can specify travel unit at company level. There are three settings available, Miles, Kilometers and Blank. When Blank the configuration at system level will be used. See system parameters. The car widget references Mileage or KM for the current year. Remittance report will reference if it's a mileage of KM remittance	Available from V23.0.14 Not displayed in illustration above

	report. When creating a mileage of Km expense report it will also reference if it will be a KM or Miles report. User is now informed the expense report is incomplete on submitting expense BY km or Mileage	
EX_VEH_MILES_IC	Language pack parameter on Travel Distance	

This functionality refers to the ability to exclude expense items from appearing in the drop down list based on the claimant or their expense group.

“Online Indicator” must be selected on.

SIAT Expense Exclusion

☒ Turn on Expense Exclusion

☐ Turn on SIAT Interface

☐ Additional SIAT Case Related Controls

SIAT Case Control Navigation Message

[illegible]

6 ADVANCES

Advances are not processed as trips in CoreExpense; they are processed with their own unique number i.e. not a “TripID” number. Core will output the unique number for each advance. In the next Expense Run, all advances which are approved will be paid to the relevant claimants providing the necessary steps were carried out (in the Expense Run).

6.1 ADVANCE TYPES

Advance Types provide for the recording of the types of advances that can be used in CoreExpense.

Typical Advance Types would include:

- Credit Transfer
- Advance Cheque
- Country Currency
- Traveller’s Cheques.

The screenshot shows a software window titled "Advance Type Maintenance". It contains a table with three columns: "Advance Type", "Description", and "Payment Type". The first row is highlighted in blue and contains the values "CT", "CREDIT TRANSFER", and "Automatic". There are several empty rows below it. The window has a standard toolbar with icons for save, delete, add, and other functions.

Advance Type	Description	Payment Type
CT	CREDIT TRANSFER	Automatic

- **Advance Type**- A code that will be associated with this type of Advance
- **Description**- of this Advance Type

- **Payment Type-** Select from the drop down list available. The options are Automatic and Manual and are used as follows:
 - Automatic = If a payment is to be generated by the system for an Advance then “Automatic” should be selected.
 - Manual = If a manual payment/cheque will be given to the Claimant for the Advance then “Manual” should be selected.

6.2 ADVANCE CONFIGURATION

An advance is setup using Two Expense Codes (Non-Scalable and should not have the “Online Indicator” selected on). One Expense Code is represents “Advance Payment” and the other represents “Advance Repayment”. The GL Expense Code that will need to be configured will depend on the Client’s FMS system.

6.3 ENTERING ADVANCE BALANCES AS AT GO-LIVE DATE

Outstanding advances at go-live date can be added to the Claimant’s profile in:

Configuration: Input→Enter Advance Detail

Advance Detail Maintenance

Claimant

Claimant No. Advance Date

Name Time

Address Username

Advance Details

Advance No. Date Input

Date From Payment Value

Date To Local Value

Currency Code Date Paid

Advance Type Travel Date

Payment Type Approved By

Advance Reference

Claimant No, Advance Date, Date From, Date To, Payment Value, Local Value, Currency Code, Advance Type, Travel Date, Approved By and Reference should be entered. Payment type should be specified as "Manual" so the advance is not paid to the Claimant in error.

7 SUBSISTENCE

Subsistence expense codes provide a method of payment to employees based on the number of hours they spend away from their normal place of work, typically Five Hour, Ten Hour and Overnight Rates.

7.1 SUBSISTENCE RULES OVERVIEW

When establishing subsistence, the following is a guideline on the system rules exercised.

- Subsistence facility will examine the expense report based on dates and times entered by the claimant. Note: location is not considered.
- The subsistence facility caters for two types of allowances
 - Overnight allowance - covers an overnight absence of up to 24 hours. Examination will use midnight as the overnight indicator. Distance from home is not considered.
 - Normal Rate is for absences up to 14 nights.
 - Reduced Rate covers the next 14 nights.
 - Detention Rate covers each of the next 28 nights.
 - For absences over 56 nights, you should refer to Revenue.
 - Day Allowances - There are two categories, five to ten hours and over ten hours absence. Distance from home is not considered.
- Examination will attempt to provide subsistence payments on a sliding scale from the overnight allowance, through ten hours to five hours allowance.
- An overnight allowance will be generated where the claim spans midnight.
- A ten-hour allowance will be provided where there is no overnight and the time away from home are greater than ten hours
- A five-hour allowance will be provided where there is no overnight and the time away from home is less than ten hours but more than five.
- A ten-hour allowance and a five-hour allowance cannot be provided for the same day i.e. only one occurrence of a day allowance.
- A maximum of N+2 units of allowances can be provided to the employee where N is the number of overnights e.g.
 - employee is away for 3 nights. System will generate 3 overnights. Employee could also claim 10 or five-hour either side of trip depending on times giving a total of 5 units i.e. 3 +2. The employee cannot claim for 10 or 5 hour allowances mid expense report.
 - employee is away for 1 nights. System will generate 1 overnight. Employee could also claim 10 or five-hour either side of trip depending on times giving a total of 3 units i.e. 1 +2.
 - Where trip does not span midnight, employee will be provided with 10 or five-hour allowance based on times. Employee can only claim either ten-hour or five-hour. Only 1 unit can be allowed in this case.

7.2 SUBSISTENCE RATES CONFIGURATION

Subsistence Rates Configuration provides the means of recording and maintaining Subsistence Rates that are to be used in the system.

Configuration: Reference → References S-Z → Subsistence

Data fields available for entry are as follows:

Exception Ind:

Code for the Indicator, 1 character long

Description:

Description for the Indicator

From Position:

From Scale Code/Scale Class for which this Subsistence Indicator will be valid

To Position:

To Scale Code/Scale Class to which this Subsistence Indicator will be valid

Check Sub:

Check on for Yes, off for No. If "Yes" then the Subsistence Screen will be checked for the value of this Subsistence Indicator.

Amount:

Redundant

Amount Due:

Redundant

7.4 SUBSISTENCE LOAD

Department of Finance rates can be uploaded in

Configuration: Reference → References S-Z → Subsistence Load

Prior to this load, scripts need to be run to format the file and prepare it for upload. Scripts and process documentation available at:

objects (naskilk (NASKILK)) ▶ Documentation ▶ CoreExpense ▶ CoreExpense Internal Documents ▶ Subsistence Loading ▶

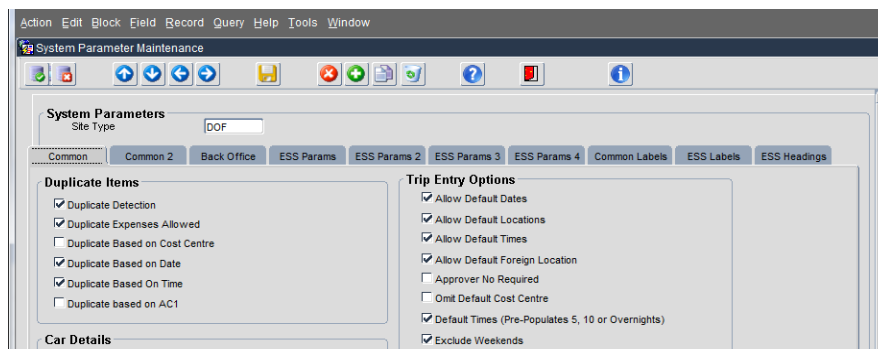

7.5 GENERATE DEFAULT SUBSISTENCE

This functionality allows for the default generation of subsistence claims based on the dates and times entered by the Claimant.

The parameter is switched on/off in CoreExpense Back Office:

Configuration: Reference → Reference S – Z → System Parameters

Default Times (pre-populates, 5, 10 or Overnight rates) should be selected on.

It is also necessary to verify in Core Expense.

Configuration: Reference → Reference D–L → Expense Code

Verify that the 5 hour, 10 hour and overnight codes all have “Is Time Required” unselected.

In addition, the Expense Parameters should be checked to ensure that the Subsistence Expense Codes are set-up correctly.

Configuration: Reference → Reference D-L → Expense Parameters

Example

- On Line indicator is active.

7.6 CLAIMS SPANNING NEW EFFECTIVE DATES

Note: Should rates change and a claimant attempt to submit a claim which spans the effective date of the new rate, this claim will be calculated at the old rate. In the example below, a new rate came into effect on April 1st but the trip took place from 26th Mar-04th Apr. In this circumstance, the claimant can split the claim in two(pre and post rate change claims).

Expense Type	Date From	Date To	From	To	Units	Value	Actions
Overnight	Thu 26th Mar 2015	Sat 04th Apr 2015	Ireland	Australia Hobart	9	2,223.71	
10 Hour	Thu 26th Mar 2015	Sat 04th Apr 2015	Ireland	Australia Hobart	1	82.36	

7.7 SUBSISTENCE- RESTRICTIONS ON ENTITLEMENTS

This prevents claimants from being able to increase their subsistence units; for 24hour/Overnight, 10 hour and 5 hour subsistence rates, above the default amount for the entered dates and times.

The parameter is switched on/off in CorePortal under Admin Settings:

“ex_subs_restrict_unit” should be set to “Y” to turn on the parameter, “N” to turn it off.

7.8 SUBSISTENCE- WEEKEND’S EXCLUDED

It is possible to exclude Weekends from Subsistence claims.

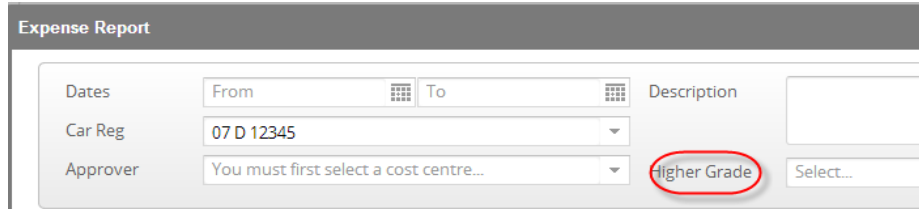

Configuration: System Parameters → Common Tab → Select “Exclude Weekends”

The screenshot shows the 'System Parameters' configuration page. At the top, there's a 'Site Type' dropdown set to 'DOF'. Below this are several tabs: 'Common', 'Common 2', 'Back Office', 'ESS Params', 'ESS Params 2', 'ESS Params 3', 'ESS Params 4', and 'Common Labels'. The 'Common' tab is active. The page is divided into two main sections: 'Duplicate Items' on the left and 'Trip Entry Options' on the right. In the 'Duplicate Items' section, there are six checkboxes: 'Duplicate Detection' (checked), 'Duplicate Expenses Allowed' (checked), 'Duplicate Based on Cost Centre' (unchecked), 'Duplicate Based on Date' (checked), 'Duplicate Based On Time' (checked), and 'Duplicate based on AC1' (unchecked). In the 'Trip Entry Options' section, there are eight checkboxes: 'Allow Default Dates' (checked), 'Allow Default Locations' (checked), 'Allow Default Times' (checked), 'Allow Default Foreign Location' (checked), 'Approver No Required' (unchecked), 'Omit Default Cost Centre' (unchecked), 'Default Times (Pre-Populates 5, 10 or Overnights)' (checked), and 'Exclude Weekends' (checked). The 'Exclude Weekends' checkbox is circled in red.

7.9 SUBSISTENCE- TRAVEL WITH HIGHER GRADE

V19.0.0

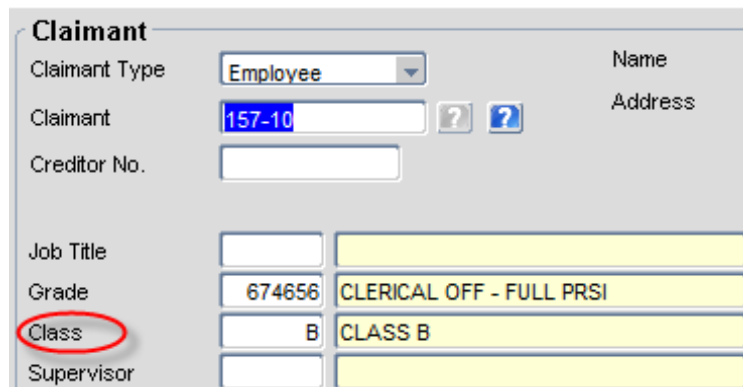

This functionality allows CorePortal Expense claimants to indicate that they have travelled with a Higher Grade Employee in order to receive equal rates to those received by the higher grade employee.

Expense Report

Dates	From	To	Description
Car Reg	07 D 12345		
Approver	You must first select a cost centre...		Higher Grade Select...

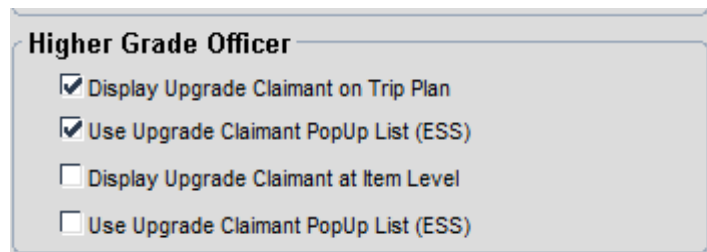

Only Higher Grade Employees will appear on this list. Subsistence will be paid at the rate of the Higher Grade Employee. Higher Grade is based on Scale Class.

This is a message to the claimant of up to 1500 characters relating to this Expense Code

To claim mileage, a Claimant must have a car approved against their profile.

8.1 CLAIMANT CARS

This functionality provides for the means of recording and maintaining details of cars that each Claimant may use to claim mileage against.

8.1.1 MAINTAINING CARS IN BACK OFFICE

Configuration: Reference → Reference C-C → Car

There is no restriction on the number of cars per claimant on the Claimant Car screen.

[illegible]

- **Claimant No.:** Enter the Claimant No. The Claimant Name will be displayed. Valid values can be displayed by clicking F9.
- **Car Registration:** Car Registration of the Claimant's Car.

- **Model:** Model of the Claimant's Car.
- **Engine CC:** Engine Capacity of the Claimant's Car.
- **Insurance Expiry Date:** Insurance expiry date on the claimant's car
- **Status:** To claim mileage expenses a claimant must have a car with Status="Approved". This status can be maintained in the car Screen.

8.1.2 MAINTAINING CARS IN CORE|PORTAL

Car Details are entered in the CorePortal Screen and sent to an employee's approver for approval (refer to Core| Expense Process Document).

The screenshot shows the 'Car Details' form in the CorePortal. The form is divided into several sections. The top section contains fields for 'Reg #', 'Date First Registered', 'Make/Model', 'Engine CC', 'Approver', and 'Type'. Below this is a section with tabs for 'Licence', 'Insurance', 'NCT', 'Odometer', and 'Tax'. The 'Tax' tab is currently selected, showing fields for 'CO2 Category', 'Tax Month', and 'Tax Year'. A 'Save' button is located at the bottom right of the form.

8.1.3 MAINTAINING CAR CARBON CATEGORY

Car Carbon Categories are maintained in the following location

Configuration: Reference → Reference C-C → Car Carbon Category

This list is used when the Claimant is filling in their Car's Tax details on CorePortal.

[illegible]

8.1.4 MAINTAINING INSURANCE PROVIDER

A list of valid Car Insurance companies can be maintained on this screen so claimants can pick an Insurance Provider when entering their car details on the CorePortal (when 'Display in ESS' is selected so that Insurance Provider is viewable on CorePortal).

The Car Insurance Provider Screen is available in

Configuration: Reference → Reference C-C → Car Insurance Provider

8.2 MILEAGE CALENDAR

Configuration: Reference → Reference M-R → Mileage Calendar

Start Year	End Year
01-jan-2001	31-dec-2001
01-jan-2002	31-dec-2002
01-jan-2003	31-dec-2003
01-jan-2004	31-dec-2004
01-jan-2005	31-dec-2005
01-jan-2006	31-dec-2006
01-jan-2007	31-dec-2007
01-jan-2008	31-dec-2008
01-jan-2009	31-dec-2009
01-jan-2010	31-dec-2010

The Mileage Calendar is used to calculate the Claimant's annual number of miles claimed as part of expenses and indicates to the system when the maximum number of miles for a particular rate has been reached. It then applies the correct rate dependant on the number of miles travelled that year (as per the expense policy/ configuration).

8.3 MILEAGE RATES CONFIGURATION

The organisation can configure mileage rates based on a series of rules. See below screen shot for illustration purposes.

The screenshot shows the 'Kilometres Maintenance' application window. It features a search bar at the top with 'Company Code' set to 'ALL COMPANIES'. Below the search bar is a table with the following columns: Company Code, Scale Code, Name, Company Car, Vehicle Type, Mileage Fuel Type, Engine (From To), Capacity, Date Effective, Kilometres Threshold, Kilometres Rate, and F.C.A. Ind. The table contains 15 rows of data, with the first row highlighted in blue. The data is as follows:

Company Code	Scale Code	Name	Company Car	Vehicle Type	Mileage Fuel Type	Engine (From To)	Capacity	Date Effective	Kilometres Threshold	Kilometres Rate	F.C.A. Ind.
ALL COMPANIES						1201 1500	9999	01-JAN-2003	160898	3031	
ALL COMPANIES						1501 9999	9999	01-JAN-2003	6437	7234	
ALL COMPANIES						1501 9999	9999	01-JAN-2003	160898	3375	
ALL COMPANIES						1 1200	1200	01-JUL-2005	6437	5216	
ALL COMPANIES						1 1200	1200	01-JUL-2005	160898	2640	
ALL COMPANIES						1201 1500	9999	01-JUL-2005	6437	6085	
ALL COMPANIES						1201 1500	9999	01-JUL-2005	160898	3031	
ALL COMPANIES						1501 9999	9999	01-JUL-2005	6437	7721	
ALL COMPANIES						1501 9999	9999	01-JUL-2005	160898	3567	
ALL COMPANIES			Private Car	Car		1 1200	1200	05-MAR-2009	99999	3413	
ALL COMPANIES						1201 1500	9999	05-MAR-2009	4000	7442	
ALL COMPANIES						1201 1500	9999	05-MAR-2009	99999	3800	
ALL COMPANIES						1501 99999	99999	05-MAR-2009	4000	9505	
ALL COMPANIES						1501 99999	99999	05-MAR-2009	99999	4579	

Configuration: Reference → Reference M-R → Mileage

Operational Rules:

Below outlines some of the key rules supported by description and notes

Item	Description	Note
Company Code	Rates can be configured and assigned at expense company level. Leave blank to apply rates at enterprise level	Available from V23
Scale Code		
Company Car	Can specify rates based on company or private car usage.	Available from V25
Vehicle Type	Vehicle Type list can be dynamically created and assigned to vehicles and travel rates. Original scope would include Car & Vans, Motorcycles and Bikes.	Available from V25
Mileage Fuel Type	Contains a predefined list of fuel types.	Available from V25
Engine Capacity	Configure rates based on Engine Capacity or CC's range.	
Date Effective	Provide effective date of rates.	
Kilometers Threshold	Configure rates based on kilometers threshold traveled.	

F.C.A Ind.	If a Fixed Car Allowance Indicator is entered here, the Mileage Rate is the rate that will apply for that Allowance.	
------------	--	--

8.4 MILEAGE YEAR TO DATE LOAD

Mileage Year to date figures can be loaded into

Configuration: Reference → Reference M-R → Mileage Load

“TO DATE” should be a date prior to parallel running/go live i.e. it should be prior to the dates that will be used on the expense trips being entered in the new environment.

8.5 MILEAGE CALCULATION – CORE|PORTAL

The link to the AA Route Planner on CorePortal is configured in Admin Settings

8.6 MILEAGE TRIANGULATION – CORE|PORTAL

V23.0.0

The Mileage Triangulation facility will record mileage claims based on post code recognition. The facility will capture and process mileage information based on the rules of mileage triangulation. Triangulation is the name given to the practice whereby employers will only reimburse the cost of business travel by reference to the lower of:-

- The journey between the permanent and temporary workplace; and
- The journey between the colleague's home and the temporary workplace.

Operational Prerequisites

- A valid car, including all necessary car information must be recorded and approved for the claimant before they can claim mileage in CoreExpense.
- The employee's home address and post code must be recorded against their profile in CoreHR
- The employee's work address and post code must be recorded against their profile in CoreHR

Solution Overview

- Allows the Organisation to triangulate multiple journeys and use the lesser journey to create a mileage expense claim
- Triangulation is based on Home post code, Work post code and Temporary visit post code.
- Ensures only valid post codes are used.
- Detailed results are displayed on a single interface.
- Chosen journey is display on Google maps
- Configuration allows Organisation to override distance travelled where policy allows.

Portal Parameters

The following control must be reviewed and configured appropriately.

8.7 HMRC ADVISORY FUEL RATES – CORE|PORTAL

V23.0.0

The HMRC update their Advisory Mileage Rates on an almost quarterly basis.

The rates apply when you reimburse employees for business travel in their company cars

You must not use these rates in any other circumstances. If you use them correctly, you will not need to apply for a dispensation to cover the payments you make.

Calculation Routine

Perform calculations using the existing mileage calculation routine but apply additional conditions
If

- The Company car indicator is active. (EX_CLAIMANT_CAR.LEASED_CAR='Y')
- The advisory rate fuel type is not null on mileage table (EX_MILEAGE_SCALE.FUEL_TYPE)

Get

- The claimants vehicle
- engine size CC (engine size)
- Advisory Rate Fuel Type populated against the Vehicle (EX_CLAIMANT_CAR.AD_RATE_FUEL)
- Mileage on the claim

(BAU calculation) Apply that information to the mileage table using

- Most effective date
- The Advisory Rate fuel type must have a rate associated with it. (Mileage

- The Approved vehicle associated with the claim must have a CC (engine size)
- Rates for HMRC Advisory Fuel Types should be stored in the following location [table.column]
- Calculation should follow

Calculation Logic		
Company Car Ind	Advisory Fuel Type populated on Vehicle	Rate to Use on Mileage Table
If = 'Y'	Populated	Advisory Fuel Rates
If = 'Y'	Not Populated	BAU Fuel Rates Calc
If = 'N'	Populated	BAU Fuel Rates Calc
If = 'N'	Not Populated	BAU Fuel Rates Calc

8.8 FIXED CAR ALLOWANCE

Fixed Car Allowance provides the means of recording Fixed Car Allowances that are to be used in the system.

Data fields available for entry are as follows:

F.C.A. Type	Description	Y / N	Amount	Date Effective
A	TEST FIXED CAR ALLOWANCE	☒	.35	01-OCT-2012
		☐		
		☐		

F.C.A. Type: Fixed Car Allowance Type (i.e. 'H', 'L', 'P'). Once this Type is defined, it becomes an F.C.A. Type that can be used throughout the system.

Description: Name of the Fixed Car Allowance Type.

Amount: Leave Blank (Rate is currently taken from Mileage Calendar)

Value Y/N: Y or N

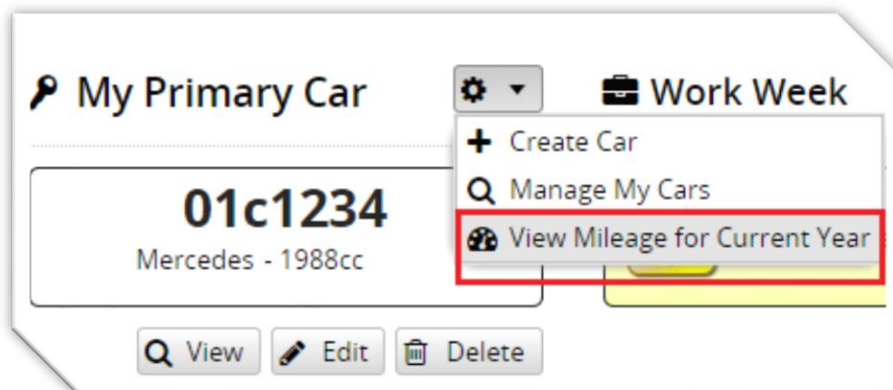

Date Effective: Date from which the allowance is effective.

8.9 VIEW MILEAGE FOR CURRENT YEAR (ESS)

V20.0.1

This feature can be located on “My Primary Car” widget in ESS

Click on the cog and the option to “View Mileage for Current Year” will display.

After selecting the drop down, the following screen will be displayed showing the current mileage for that car.

Kilometres Details

Kilometres Year 01-JAN-14 - 31-DEC-14

Type	Units
Kilometres Paid	1010
Kilometres Approved/Submitted	0
Kilometres New/Saved	1679
Kilometres Transferred	0
Kilometres Total	2689

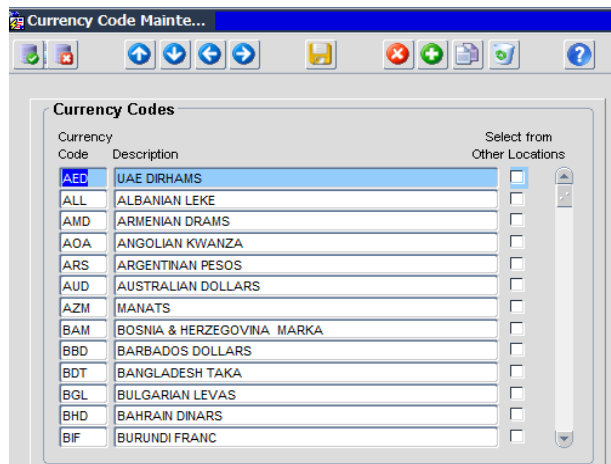

9 CURRENCY

9.1 CURRENCY CODE

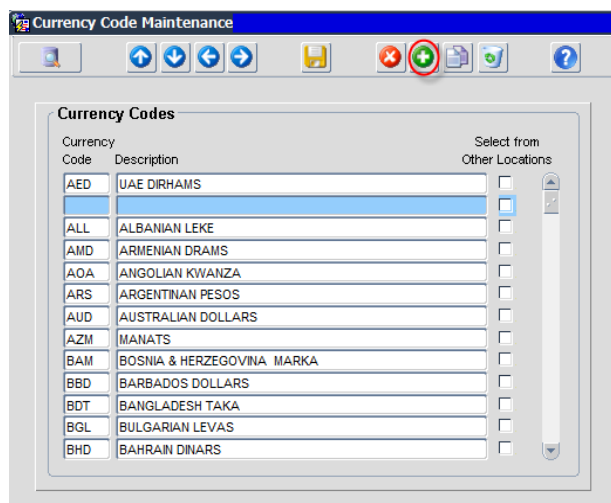

Currency codes are maintained in the Currency Code Reference Screen.

Configuration: Reference → Reference C-C → Currency Mapping

9.1.1 ADDING NEW CURRENCY CODES

Click on the green plus sign as highlighted below

Enter the relevant Code and description and press Save

9.2 CURRENCY MAPPING

Some Currency Codes may differ to those on the ECB file and may need to be mapped.

To map currency codes:

Configuration: Reference → Reference C-C → Currency Mapping

Please ensure that the ECB Currency Rates are filled in for all codes that you will be uploading. They should match the codes in the ECB currency file. For example, currently the Bulgarian Lev (BGL) needs to be mapped to “BGN”, whereas all the other currencies’ existing codes can be filled in the ECB Currency cell as in the screenshot below. Mapping is relevant when changes to existing currency take place.

ECB Currency Mapping

Company: 

Filename:

File Location:

Currency Code	Currency Description	ECB Currency
ALL	ALBANIAN LEKE	ALL
DZD	ALGERIAN DINARS	DZD
USD	AMERICAN DOLLARS	USD
AOA	ANGOLIAN KWANZA	AOA
XCD	ANTIGUA & BARBUDA DOLLARS	XCD
ARS	ARGENTINIAN PESOS	ARS
AMD	ARMENIAN DRAMS	AMD
AUD	AUSTRALIAN DOLLARS	AUD
BHD	BAHRAIN DINARS	BHD
BDT	BANGLADESH TAKA	BDT
BBD	BARBADOS DOLLARS	BBD
BYR	BELARUS RUBLES	BYR
BMD	BERMUDA DOLLARS	BMD
BOB	BOLIVIAN BOLIVIANOS	BOB

9.3 CURRENCY LOAD

Configuration: Reference → Reference C-C → Currency Load

The European Central Bank Rates can be downloaded from the ECB website and uploaded through this facility. Please review the Process documentation for a step to step guide.

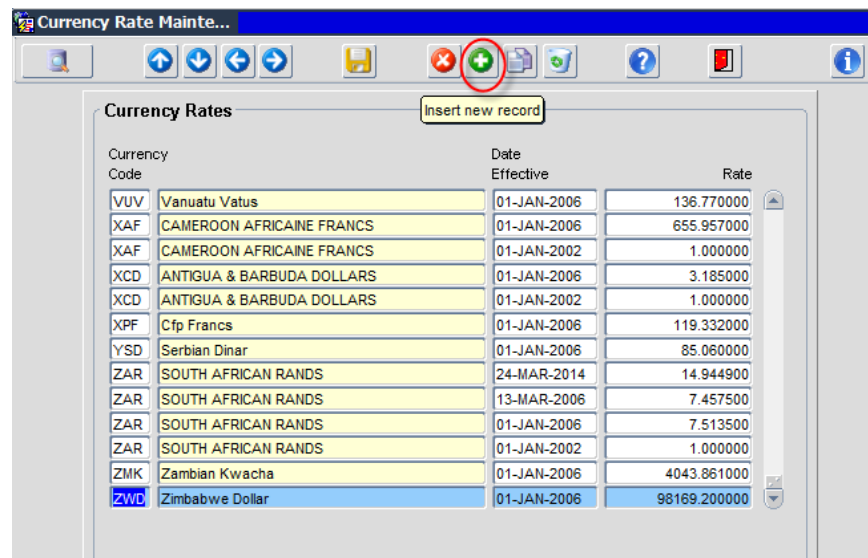

9.4 CURRENCY RATE

Configuration: Reference → Reference C-C → Currency Rate

Rates can also be manually input in the Currency Rate Screen:

9.4.1 CREATE A NEW CURRENCY RATE LINE

To create a new currency rate click on the Green Plus sign as highlighted below.

9.5 SUPPOURT MULTI HOME CURRENCY RATES

V23.0.0

CoreExpense was enhanced to cater for multiple home currencies in the same environment e.g. ability to record foreign expense claims and convert back to home currency. This facility will support organisations who operate companies across multiple currency jurisdictions. The system structure change allows currency rates to be held at company level in CoreExpense. This allows the client to set up a structure in CoreExpense for each home currency required.

Administration Parameters:

The following areas are affected if a multi currency jurisdiction is required. The information that is relevant to that organisations must be specified against the organisation. Leaving the company code blank, will as a default, ensure the rates specified will apply to all companies in the environment. Once rates are configured against a company then rates must be configured against all companies to complete a setup profile. The following areas should be configured.

Configuration: Reference → Reference D-L → Expense Calendar

Configuration: Reference → Reference M-R → Mileage Calendar

Configuration: Reference → Reference M-R → Mileage

Configuration: Reference → Reference C-C → Civil Service Mileage

Configuration: Reference → Reference S-Z → Subsistence

Configuration: Reference → Reference C-C → Currency Rate

9.5.1 INPUTING DETAILS

Input the **Currency Code**, **Date Effective** and **Rate** in the blank cells and Press Save.

Currency Rate Maintenance

Currency Rates

Currency Code		Date Effective	Rate
AED	Uae Dirhams	02-JAN-2006	4.349000
ALL	ALBANIAN LEKE	01-JAN-2006	122.890000
ALL	ALBANIAN LEKE	01-JAN-2002	1.000000
AMD	ARMENIAN DRAMS	01-JAN-2006	999999.000000
AMD	ARMENIAN DRAMS	01-JAN-2002	1.000000
AOA	ANGOLIAN KWANZA	01-JAN-2006	105.926000
AOA	ANGOLIAN KWANZA	01-JAN-2002	1.000000
ARS	ARGENTINIAN PESOS	01-JAN-2006	3.589000
ARS	ARGENTINIAN PESOS	01-JAN-2002	1.000000
AUD	AUSTRALIAN DOLLARS	24-MAR-2014	1.509100
AUD	AUSTRALIAN DOLLARS	13-MAR-2006	1.628400
AUD	AUSTRALIAN DOLLARS	01-JAN-2006	1.617780

The screenshot shows a software window titled "Currency Rate Maintenance". Inside, there is a table with columns "Currency Code", "Date Effective", and "Rate". The table lists various currencies and their rates as of January 1, 2006. The last row in the table is highlighted in blue, and its cells are circled in red, indicating where new data should be entered. The "Currency Code" column has a dropdown menu, and the "Date Effective" and "Rate" columns have text input fields.

10 GENERAL LEDGER

Core Expense has now developed functionality to allow integration with the standard general ledger journal requirements.

Standard General Ledger Requirements

- Ledger Value

- GL/Nominal Code

10.1 GL PARAMETERS

Configuration: Reference → Reference D-L → GL Parameters

The GL Parameters screen has the following subsections

- File Definition
- File Associations
- Expense Control Accounts
- Matrix Classifications v.20+
- Company Level Matrix v.20+

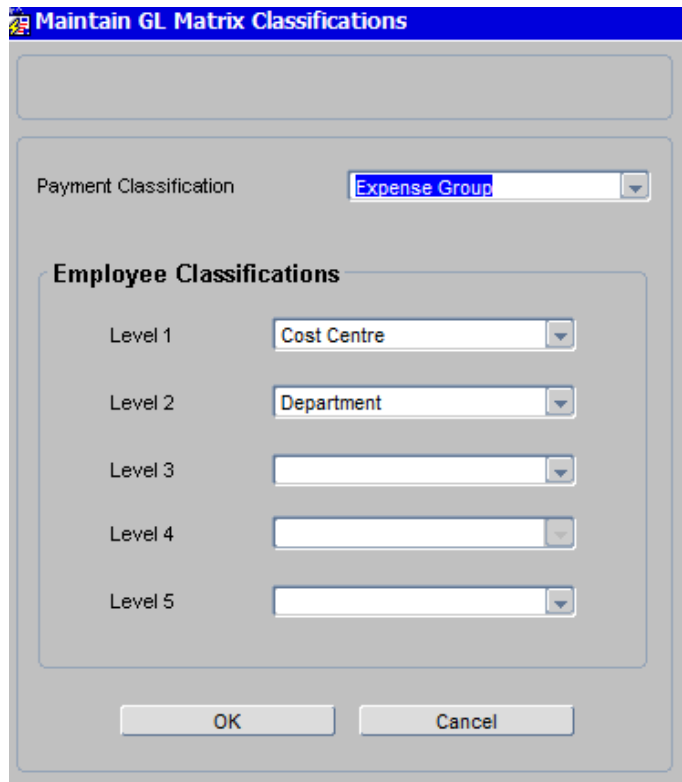

Select Detail→ File Definitions

[illegible]

Contra Entry					
Expense Group	Cost Centre	Category	GL Expense Code	Project	
1	FAS	1	A	800	

OK Cancel

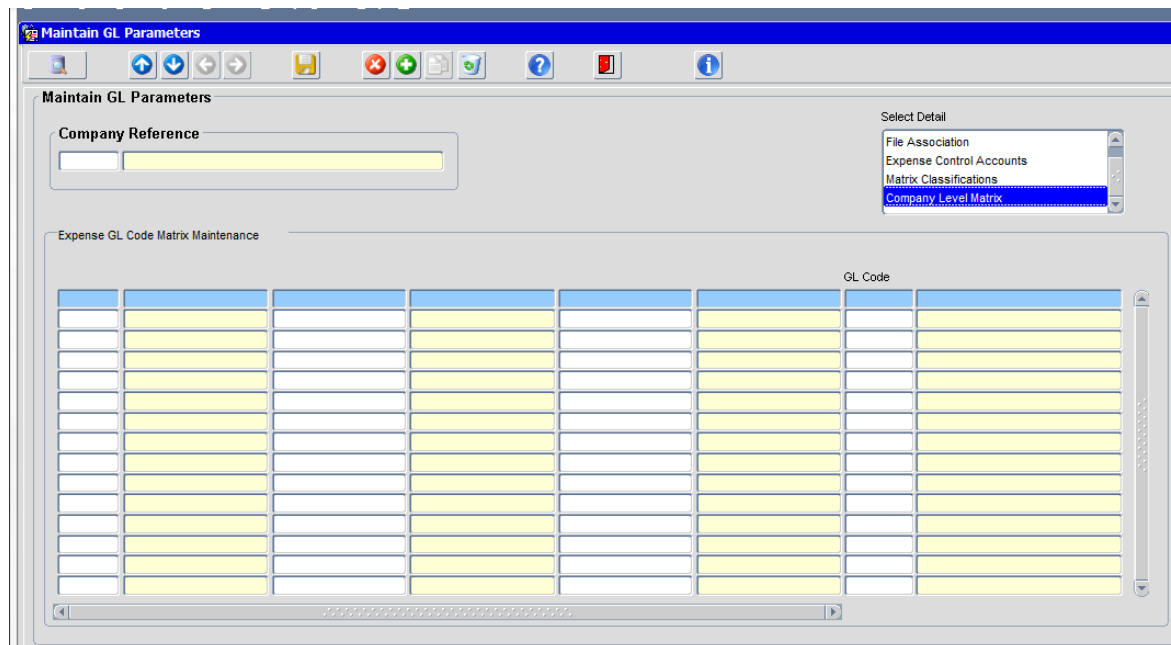

Select Detail → Matrix Classifications

The dialog box titled "Maintain GL Matrix Classifications" features a "Payment Classification" dropdown menu set to "Expense Group". Below this is a section titled "Employee Classifications" containing five levels, each with a dropdown menu. Level 1 is set to "Cost Centre", Level 2 is set to "Department", and Levels 3, 4, and 5 are currently blank. At the bottom of the dialog are "OK" and "Cancel" buttons.

Level	Classification
Level 1	Cost Centre
Level 2	Department
Level 3	
Level 4	
Level 5	

Select Detail → Company Level Matrix

The "Maintain GL Parameters" dialog box includes a "Company Reference" field with a yellow highlight. On the right, a "Select Detail" list shows "Company Level Matrix" selected. The main area, titled "Expense GL Code Matrix Maintenance", contains a large table with 8 columns and 15 rows. The first four columns are labeled "GL Code". The table is currently empty, with yellow highlights on the first four columns of each row.

GL Code							

Type in the company Number (Under Company Reference)

Maintain GL Matrix Classifications

Payment Classification: Expense Group

Employee Classifications

Level 1: Expense Code

Level 2: Analysis Code 1

Level 3: Work Group, Cost Centre, Project, Position, Expense Code, Analysis Code 1, **Analysis Code 2**, Analysis Code 3

OK Cancel

Note: If analysis codes are being used, they need to be made mandatory for completion by the claimant in expense trips in core portal. When you press ok, this changes the column headings on the GL matrix to what you have selected on the dropdowns.

10.2 GL INTERFACE BATCH PROCESSING

Configuration: Update → GL Interface Batch Processing

11 ANALYSIS CODES

It is possible to have visibility of four analysis codes on demand in CorePortal when entering Expense Trips. The visibility of all four codes on Portal may be switched off.

The individual codes for each category can then be viewed/set-up on Reference A-B/ Analysis Code 1-4 screens. If the Analysis Code values are to be stored on ex_ref2 then the values can be entered on this screen. If the values are to be stored on either of the hr_reference tables then the values must be entered on the appropriate CorePersonnel screen, for example, if you set up an Analysis Code with a Reference Type of PROJ and a Reference Table of Reference 2 then this means that you want to see all Project codes from CorePersonnel.

11.1 ANALYSIS CODE CONFIGURATION

Configuration: Reference → References A-B → Analysis Code Maintenance.

To restrict the visibility of the codes on CorePortal, unselect the “Trip Header” Indicator.

Analysis Codes	Reference Type	Description	Reference Table	Column Length	Trip Header Ind	Mandatory Trip Header	Trip Summary Ind	Mandatory Trip Summary	Trip Detail Ind	Mandatory Trip Detail	Claim Detail Ind	Trip Detail Expense Analysis Code
1	SH	OBJECT ACCOUNT	Expenses Reference		☒	☒	☐	☐	☐	☐	☒	☐
2	SP	TRAVEL TYPE	Expenses Reference		☒	☒	☐	☐	☐	☐	☒	☐
3	TM	THEME	Expenses Reference		☐	☐	☐	☐	☐	☐	☒	☐
4	VTY	VEHICLE TYPE	Expenses Reference		☐	☐	☐	☐	☐	☐	☐	☐

Click on “Trip Header Ind” to give visibility of Analysis Code in CorePortal. To make completion of Analysis Code compulsory, select “Mandatory Trip Header”.

On this screen the Reference Type and Reference Table are the important fields as these fields define where the data is read from.

- If ‘Expenses Reference’ is selected as the Reference Table then all of these codes will be stored on ex_ref2.
- If ‘Reference 1’ is selected as the Reference Table then all of the codes will be stored on hr_reference1.
- If ‘Reference 2’ is selected as the Reference Table then all of the codes will be stored on hr_reference2.

11.2 ANALYSIS CODE MAINTENANCE

Analysis Codes are maintained in

Configuration: Reference → References A-B → Analysis Code 1-4

11.2.1 ANALYSIS CODES EXCLUSION AT COMPANY LEVEL

Functionality: The ability to control what analysis codes a claimant can see based on their company. This facility is available for analysis codes 1-4.

Configuration: Reference → Reference A-B → Analysis Code 1-4

The screenshot shows a software interface titled "Maintain VEHICLE TYPE". It features a table with columns: "VEHICLE TYPE Code", "Description", "Additional Description 1", "Additional Description 4 (SAP Company)", "Analysis Code", "Company", and "Overnight Ind. Mandator". The first four rows of the table are populated with "CAR", "BIKE", "MOTORBIKE", and "IFFP". An "Enter Company Codes" dialog box is open in the foreground, displaying a sub-table with "Code" and "Company Code" columns. The dialog box has a title bar with standard window controls and a close button.

If a record is entered on the Company sub screen then all members of that company will have access to this analysis code. If there are no records on the company sub screen then this analysis code is accessible to all claimants.

If there are multiple companies and this facility is operational then the profile must be completed for each analysis code and company in scope. Absence of a company record from an analysis code in scope indicates that members of that company do not have access to the analysis code.

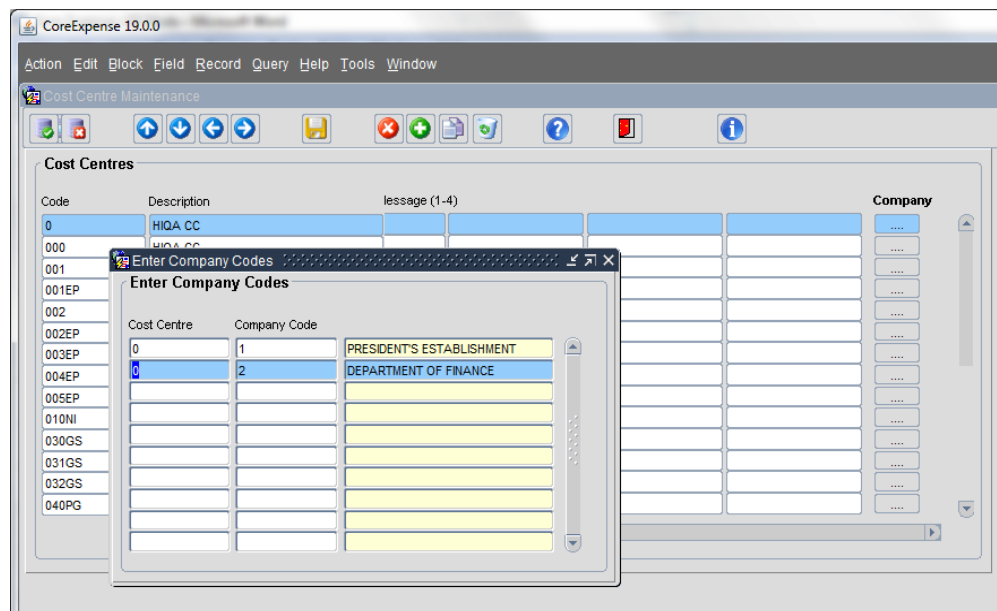

11.3 ANALYSIS CODE ONE READ ONLY

This functionality allows Analysis Code One to be set as a read-only field. This functionality is configured in CorePortal. Go to Admin Settings and search for the Parameter = ex_input_ro_AC1.

Cost Centres in CoreExpense are a view of the CorePay Reference Data. To enter new Cost Centres navigate to CorePay/Reference/Corporate Menu/Cost Centres.

Cost Centres are controllable at Company Level. When activated the Cost Centre dropdown should filter the cost centres to only display the Claimant's Company cost centres.

The functionality is activated once a company is recorded against a cost centre i.e. it is inactive if there are no company records set-up against any of the cost centres. In such cases employees can see all cost centres. Once activated the full profile must be complete i.e. for each cost centre list the companies that have access to that cost centre. Absence of a company from the list signifies that employees in this company do not have access to the cost centre.

12.2 COST CENTRE- READ ONLY IN CORE|PORTAL

To make cost centres read only when entering Expense Trips in CorePortal set “ex_input_ro_cc” to Y from CorePortal Admin Settings. Set the parameter to “N” to allow changes to Cost Centres.

12.3 COST CENTRE- HIDDEN IN CORE|PORTAL

To hide Cost Centres when entering Expense Trips in Portal set “ex_hide_cost_centre_list” to Y from CorePortal Admin Settings. Set the parameter to “N” to allow visibility of Cost Centres.

13 APPROVAL

13.1 APPROVAL TYPES ON CORE PORTAL

There are five options for CorePortal Expense Approval

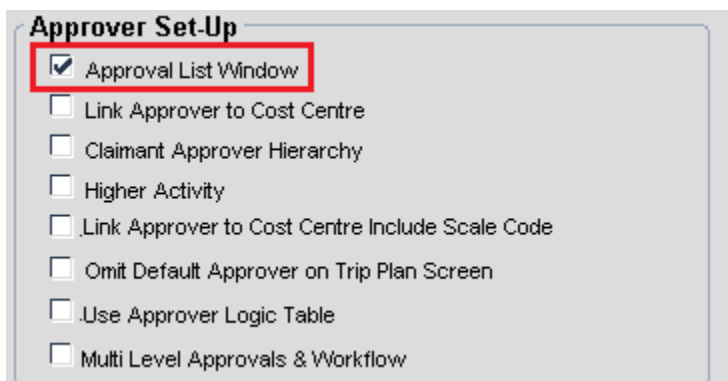

- Approval List
- Approval based on Cost Centre and Scale Code.
- Approval based on Cost Centre and Claimant Hierarchy.
- Approval based on Organisation Roles and Groups.
- Approval based on all Active Approvers.
- Approvals based on Workflow

13.1.1 APPROVAL LIST WINDOW

V20.0.1

Functionality: When active, all employees which are in Approvers List with an Active Indicator will appear as an approver.

Select the flag indicated in the screenshot below.

The screenshot shows a window titled "Approver Set-Up" with a list of checkboxes. The first checkbox, "Approval List Window", is checked and highlighted with a red rectangle. The other checkboxes are unchecked.

Checkbox	Status
☒ Approval List Window	Checked
☐ Link Approver to Cost Centre	Unchecked
☐ Claimant Approver Hierarchy	Unchecked
☐ Higher Activity	Unchecked
☐ Link Approver to Cost Centre Include Scale Code	Unchecked
☐ Omit Default Approver on Trip Plan Screen	Unchecked
☐ Use Approver Logic Table	Unchecked
☐ Multi Level Approvals & Workflow	Unchecked

Configuration: Reference → Reference S-Z → System Parameters → ESS Params

13.1.2 APPROVAL BASED ON COST CENTRE AND SCALE CODE

Functionality: Expense Trip approval is based on cost centre and scale code; Approvers assigned to Cost Centres may be selected as an approver for expense trips input by claimants of a lower Scale Code. Scale Codes (Positions) are ranked by Activity Codes; claimants with activity codes lower than those of the claimants can be an approver of their claims.

Configuration: Reference → Reference S-Z → System Parameters

Select the flag indicated in the screenshot below.

The screenshot shows the 'System Parameter Maintenance' window for 'CoreExpense 19.0.0'. The 'ESS Params' tab is active. In the 'Approver Set-Up' section, the checkbox 'Link Approver to Cost Centre Include Scale Code' is checked and highlighted with a red circle. Other visible options include 'Display Items', 'Forward Approver Set-Up', 'Currency Details', and 'Car Details'.

For each expense group all approvers will need to be set-up in the following screen and the “Approver Ind” will need to be selected.

Configuration: Reference → Reference C-C → Claimant Approvers.

10634	PRINCIPAL COMMITTEE CLERK	A	Class A
10642	PRINCIPAL LEGAL EXECUTIVE	A	Class A

To facilitate employees in CorePay being set-up in CoreExpense, their CorePay Position References must exist in CoreExpense.

Configuration: Reference → References S-Z → Scale Codes

(Position References in CorePay = Scale Codes in CoreExpense).

When inputting Scale Codes in CoreExpense each one must be assigned a Scale Class and an Activity Code. Scale Classes are relevant if defining Subsistence or mileage claims based on the class of a Claimant e.g. a claimant in Class A gets 50c per mile whereas a claimant in Class B may get 40c per mile. The activity code is used to identify the position of the claimant in an approval hierarchy when using approval by cost centre and scale code. If not using mileage/subsistence rates based on Scale Class or not using Approval by Cost Centre and Scale Code, the Scale Class and Activity Code fields can be set to a common data item e.g. Scale Class A and Activity Code 1.

13.1.3 APPROVAL BASED ON COST CENTRE AND CLAIMANT HIERARCHY V22.0.9

Functionality: Expense Trip approval is based on cost centre and Claimant Hierarchy;

Screens involved to configure this are:

1. Reference/ Cost Centre - Approver: here approvers are linked to the cost centres they have access to approve.
2. Reference/ Claimant - Hierarchy Level field: each individual claimant has been assigned a number which is meant to indicate where they rank in the org. structure.

Example of how this works:

Claimant who has a hierarchy of 50 enters a trip, selecting cost centre 0301. Only approvers who are set up to approve cost centre 0301 and who have a hierarchy of less than 50 will appear in the list (the approver must have a hierarchy themselves on the claimant screen of less than 50 - if equal to or greater than 50 they won't appear).

Configuration: Reference → Reference S-Z → System Parameters

Select the flags indicated in the screenshot below.

The screenshot shows the 'System Parameter Maintenance' window for 'CORE'. The 'Display Items' section has the following checked items: Display Outstanding Advance, Display Position on Enquiry Screen, Display Scale Class on Enquiry Screen, Return Trip Option, and Expand Car Details. The 'Approver Set-Up' section, highlighted with a red box, has 'Link Approver to Cost Centre' and 'Claimant Approver Hierarchy' checked. Other sections include 'Forward Approver Set-Up', 'Currency Details', and 'Car Details'.

For each expense group all approvers will need to be set-up in the following screen and the “Approver Ind” will need to be selected.

Configuration: Reference → Reference C-C → Claimant Approvers.

Configuration: Reference → Reference C-C → Cost Centre Approver.

Select the approvers you want for each cost centre and press save.

Next navigate to Reference → Reference C-C → Claimant.

The screenshot displays the 'Claimant Detail Maintenance' window in the CoreExpense v23_BETA application. The window is divided into several sections for data entry. On the left, there are fields for 'Claimant Type', 'Claimant', 'Creditor No.', 'Job Title', 'Grade', 'Class', 'Supervisor', 'Department', 'Expense Group', 'Input Location', 'Car Reg', 'Model', 'Mileage YDT', 'Pay Method', 'Sort Code', 'Account No.', 'BIC', 'IBAN', 'Message', 'Budget', 'Remaining', 'Building Society', and 'Reference'. The 'Budget' field shows a value of '.00'. In the center, there are fields for 'Name', 'Address', 'NI Number', 'Cost Centres', 'Engine CC', 'Hierarchy Level' (which is highlighted with a red rectangular box), 'F.C.A. Ind.', 'F.C.A. Start Date', 'F.C.A. End Date', 'F.C.A. Type', 'Old F.C.A.', and 'Status'. On the right, there are checkboxes for 'Exclude Print EFT', 'Block Trip Creation', 'Analysis Indicator', 'Withholding Tax Applicable', and 'SAP Employee'. There are also buttons for 'Address Detail', 'Contact Details', 'Detail', and a 'Detail' button next to the 'Remaining' field.

13.1.4 APPROVAL BASED ON ORGANISATION ROLES AND GROUPS

Using this functionality approvers are assigned based on an Organisation Role (e.g. ESS Expense Approver) and can be nominated as the Approver for a specific Organisation Group (e.g. Cost Centre or Department). This method of Approval can be set-up for Expense Trips and Car Approval. To use this approval method you need to ensure that Approval by cost centre and scale code is unselected

User Field 2					☐	☐

User defined fields configured in the organisational hierarchy may also be used as Organisation Groups.

13.1.4.2 ORGANISATION ROLE

Organisation Roles are maintained in CorePersonnel/Reference/Reference K-P/Organisation Role Types

Maintain Organisational Role Types

Role Type	Description	Approval Process	Approval Group	Approval Sequence	Active	ESS Approver	Questionnaire Access
DG	Expense Approver - Delegation	☒	☒ HR ☐ Payroll		☒	☒	☐ Edit ☐ View ☒ None
RT	Expense Approver - Reports To	☒	☒ HR ☐ Payroll		☒	☒	☐ Edit ☐ View ☒ None

Any existing Roles configured here can be used in the Organisation Role parameter in CorePortal, if they are selected “Active” and “ESS Approver” as highlighted above.

Additional roles can also be added to this screen by clicking on the Green Plus sign.

Maintain Organisational Role Types

Toolbar: [Icons for navigation and actions, including a green plus sign circled in red]

Role Type	Description	Approval Process	Approval Group	Approval Sequence	Active	ESS Approver	Questionnaire Access
DG	Expense Approver - Delegation	☐	☒ HR ☐ Payroll		☒	☒	☐ Edit ☐ View ☒ None
RT	Expense Approver - Reports To	☐	☒ HR ☐ Payroll		☒	☒	☐ Edit ☐ View ☒ None

Enter a type and description, click Approval Process, Active and ESS Approver then press SAVE.

To assign Organisation Roles to specific employees there are two options:

1. Go to CorePersonnel → Reference → Maintain Organisational Roles

Select the relevant Organisation Group. Next click on the relevant Organisation Group Item, select the relevant Role from the Role drop-down list and finally select the Person who you want to assign the role to.

Organisational Role Maintenance

Structure: Default Standard Structure

Organisation Group: Cost Centre

Search: [] Find

Group Item: L00 D MC CARTHY - CLOSED DOT

Role: Expense Approver - Report... Date From: 26-MAR-2014 Date To: [] Person: 0956546 JOHN AHERN

2. Go to Core | Personnel/Reference/Maintain Organisation Roles by Person

Enter the relevant Employee Number. Select the role you want to assign to the employee, select the relevant Organisation Group (e.g. cost centre) and the Organisation Group Item (specific cost centre).

13.1.5 APPROVAL BASED ON ALL ACTIVE APPROVERS

Using this functionality, approvers are assigned based on the approver indicator being selected for an individual approver. To use this approval method you need to ensure that Approval List Window is selected. See screen shot below for illustration purposes.

Configuration: CoreExpense → Reference → Reference S-Z → System Parameters → ESS Params

Steps:

- Enter system parameters screen and activate facility as outlined above
- Enter the claimant approver's facility and create list of claimants indicating in each case which claimant has the ability to approve claims. To add an approver to those visible, ensure that the "Approver Ind" checkbox is selected beside the relevant claimant. See below screen shot for illustration purposes.

In order to learn more about Workflow configuration, please consult with the workflow manual.

Updates:

Below outlines some key updates to workflow facilities.

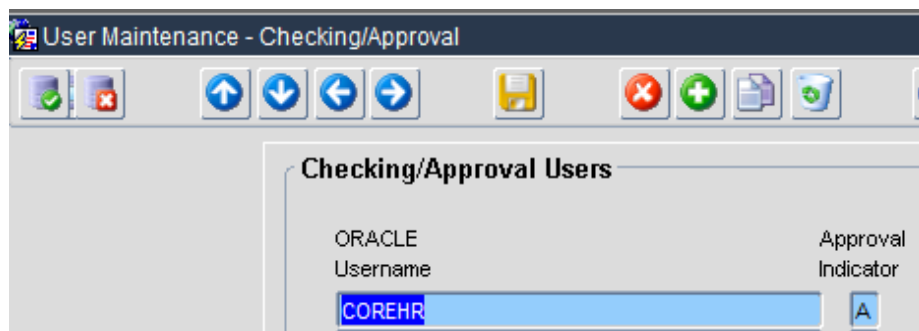

Item	Description	Note
ex_workflow_self_approve	This is a portal parameter configured at enterprise level. When set to N approvers cannot approve their own expense items. The items will appear for approval to another approver at that level when configured.	Available from V 24.0.7
cp_approve_own_expense	This is a portal parameter configured at enterprise level. It contains the message text displayed when approver attempts to approve own expenses. See sample default text "Unable to approve this item as it was created by the same person, Alternative approver required".	Available from V 24.0.7

13.2 BACK OFFICE APPROVERS

Expense Trips can also be approved in the Back Office.

13.2.1 SETTING UP BACK OFFICE APPROVERS

Configuration: Reference → Reference S-Z → User Maintenance

Populate the relevant Oracle Username and set the “Approver Indicator” to “A”.

All employees who are to be set as approvers also need to be pulled into Approver Link

Configuration: Reference/Reference M-R/Oracle User/Approver Link

The Super User select box should also be selected.

Trips Approved Trips Approved Value

Total Number of Trips Total Value of Trips

[Trip Detail](#)

Select the relevant expense group, ensure that the status “Submitted” and “Re-submitted” are selected and press the right arrow.

This will give you a list of all expenses that have been submitted but not approved. To view CorePortal receipts in this screen, the ‘Display Back Office Claims Only’ checkbox needs to be unselected.

At this stage you can either select “Bulk Approval” (which will approve all the Expense Trips in the list) or you can approve or reject expense trips on a line by line basis.

To review attached receipts select on the relevant trip and select trip detail.

Note: Additional receipts cannot be uploaded at this stage.

13.3 SECOND LEVEL APPROVAL IN BACK OFFICE (CLAIM APPROVAL)

If second level approval in the Back Office is switched on (i.e. in Expense Group the Claim Status (ESS Interface) is set to HO as opposed to AP); all Claims must be approved in the back office.

Note: This is only relevant after trips have become claims when the Generate Payment Claims process has been completed.

The screenshot shows the 'Expense Group Maintenance' window with the following fields and values:

Expense Group	
Group Code	
Company Code	1
Pay Method	CT
Location Code	IRL
Currency Code	EUR
Claim Status (ESS Interface)	HO

The 'Claim Status (ESS Interface)' field is circled in red. To the right of the 'Company Code' field, there are several dropdown menus with question mark icons, showing options like 'CREDIT TRANSFER', 'IRELAND', 'EURO', and 'HOLD'.

13.3.1 APPROVING CLAIMS IN THE BACK OFFICE

Configuration: Input → Approval Processing

Select the relevant expense group, ensure that status on hold is selected and press the right arrow.

Claims may be bulk approved or approved on a line by line basis.

The following parameter needs to be switched **off** in CorePortal

13.5 PRE-APPROVAL V24.0.0

The Pre Approval facility allows the entry of a trip's estimated costs. The trip's estimated value is then approved. If the actual value of the trip matches the estimated cost, or is within a specified range, then the trip can be submitted for payment. If the trip has exceeded the estimated range then it must be re-submitted for approval.

13.5.1 PRE-APPROVAL CONFIGURATION

The pre approval facility can be activated/deactivated and configured using a number of controls. These controls currently exist and are found in the option Reference – Reference S-Z – System Parameters – ESS Params 2. Each control has defined functionality which is outlined below.

See below screen shot of configuration section.

System Parameters
Site Type: FAS

Common Common 2 Back Office ESS Params ESS Params 2 ESS Params 3 ESS Params 4 Common Labels ESS Labels ESS Headings

Pre-Approval

☒ Pre-Approval % Variation Allowed Value Variation Allowed

☐ Associate Advance by Date Maximum % of Trip Total for Advances Default % of Trip Total for Advances

☒ Trips with Receipts Require Reapproval ☐ Allow Automatic Generation of Advance from Trip

Control	Description
Pre-Approval:	Tick this on for the Pre-Approval functionality to be enabled.
% Variation Allowed:	- When a trip is entered for pre-approval an estimated value is entered. The trip's estimated value is then approved. - If the actual value of the trip matches the estimated cost, or is within a specified range then the trip can be submitted for payment without being approved again. If the trip has exceeded the estimated range then it must be re-submitted for approval. - The range that is allowed can be determined here as a percentage figure. Alternatively it can be determined as a value in the 'Value Variation Allowed' figure below.

	Example: If the '% Variation Allowed' is 10% and a trip is pre-approved for €1000, the actual value spent on the trip can be up to €1100 without having to get the trip approved a second time.
Value Variation Allowed:	Example: If the 'Value Variation Allowed' is €200 and a trip is pre-approved for €1000, the actual value spent on the trip can be up to €1200 without having to get the trip approved a second time.
Associate Advance by Date:	- This parameter can only be turned off when the Pre-Approval functionality is on. - If this parameter is turned on then when a trip is submitted for payment the system will check for advances associated with that trip and also any advances that were not associated with any trips. - If there are advances that were not associated with any trips it will check the repayment dates on these. If the repayment date is less than or equal to the travel dates on the current trip the advance will be recouped.
Maximum % of Trip Total for Advances:	- When a Claimant is requesting an advance they must indicate what trip they need the advance for. A percentage figure can be indicated here as to how much of an estimated trip total should be given as an advance. - Example: If the 'Maximum % of Trip Total for Advances' is 80% and a trip is pre-approved for €1000, the maximum amount that can be given as an advance is €800.

Default % of Trip Total for Advances:	Can create an advance upto a ceiling amount which is % of total expense claim.
Trips with receipts require approval	If active then the trip must be approved again when receipts have been added.
Allow automatic generation of advance from Trip:	If active generates an advance on trip approval.

13.5.2 CONSTRAINTS

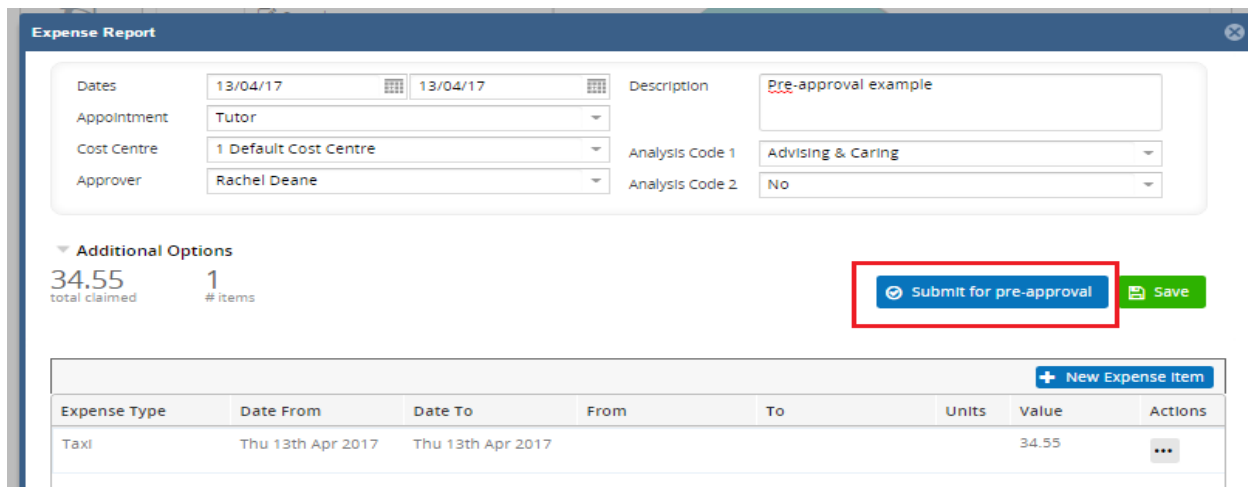

- Once the pre approval facility is activated all expense submissions and approvals must adhere to the pre approval process and controls outlined in this section.
- All standard ESS and MSS expense portal screens are used as per normal process.

13.5.3 PROCESS FLOW CHART

13.5.4 PROCESS FLOW EXAMPLE

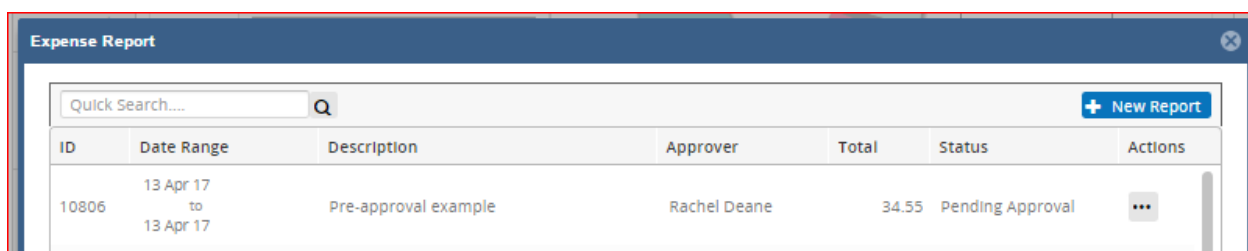

Claimant – creates an expense reimbursement request and submits to approver for pre-approval.

The screenshot shows the 'Expense Report' form. At the top, there are fields for Dates (13/04/17), Appointment (Tutor), Cost Centre (1 Default Cost Centre), Approver (Rachel Deane), Description (Pre-approval example), Analysis Code 1 (Advising & Caring), and Analysis Code 2 (No). Below these fields, there is a section for 'Additional Options' showing a total claimed of 34.55 and 1 item. To the right of this section, there are two buttons: 'Submit for pre-approval' (highlighted with a red box) and 'Save' (green button). Below the buttons, there is a table with columns: Expense Type, Date From, Date To, From, To, Units, Value, and Actions. The table contains one row for 'Taxi' with a value of 34.55.

Expense Type	Date From	Date To	From	To	Units	Value	Actions
Taxi	Thu 13th Apr 2017	Thu 13th Apr 2017				34.55	...

Claimant – can see status of request through report management facility.

The screenshot shows the 'Expense Report' management table. It has a search bar at the top and a '+ New Report' button. The table has columns: ID, Date Range, Description, Approver, Total, Status, and Actions. There is one row for ID 10806, with a date range of 13 Apr 17 to 13 Apr 17, description 'Pre-approval example', approver 'Rachel Deane', total '34.55', and status 'Pending Approval'.

ID	Date Range	Description	Approver	Total	Status	Actions
10806	13 Apr 17 to 13 Apr 17	Pre-approval example	Rachel Deane	34.55	Pending Approval	...

Approver – will see request in their approvals area. Actions available are Reject or Pre-Approve.

Item	Description
Advance No	Allows claimant to make association with pre approved trip. Select from the list available. Only Pre-Approved trips are displayed in the list.
Trip ID	This is automatically populated with ID of trip
Trip Date From	This is automatically populated with From date entered on Trip
Trip Date To	This is automatically populated with To date entered on Trip
Trip Total Value	This is automatically populated with Total value recorded by claimant against the trip
Value	The maximum amount of an advance that can be claimed is displayed. A lower figure can be entered but no higher amount can be requested. This figure is a

	certain percentage of the trip total. The percentage allowed is defined in the Back Office.

13.6 APPROVAL IN NOTIFICATION CENTRE V25.0.0

Approvers can review and action items through the Core Notification Centre on Portal. Item types include expense trips, vehicles and advance claims. See below for an illustration of each type.

13.6.1 EXPENSE TRIPS

Expense Approvals now available in CoreHR Notification Centre. Key Information is available for immediate viewing on the landing page. Data fields not populated, will not appear, aiding de-clutter principles. A scroll facility is available to access additional key information on the landing page. "All Receipts" option allows approver to view all receipts without individual investigation on each item. Detailed information is available on each item if required e.g. Approver can see what claimant recorded viewing same U.I. See below screen shot for illustration purposes.

The screenshot displays the CoreHR system interface. On the left, a sidebar shows a list of notifications under the 'Approvals' tab. The notifications include:

- Travel Claim Approval Request Notification** (15:10)
- Annual Leave** (11:37)
- Pre-Approved Travel Claim Reapproval** (Yesterday)
- Pre-Approved Travel Claim Reapproval** (Yesterday)
- Travel Claim Approval Request Notification** (Yesterday)
- Pre-Approved Travel Claim Submitted For** (01 Nov)

The main content area shows the details of a selected notification: **Travel Claim Approval Request Notification** for Ben Galvin Test (5300227) on 14 Nov 2017 15:10.

14 EMAILS

14.1 STORING EMAILS IN COREEXPENSE

Employee emails need to be configured separately in CoreExpense (even if they have already been configured in another Core module). A script is available to bring CorePersonnel email addresses into CoreExpense on initial set-up, however any new starters need to have their email address updated as part of the initial set-up

Configuration: ESS→Claimant Username Email

14.2 EMAIL NOTIFICATION FROM CENTRAL EMAIL V23.0.0

CorePortal emails get generated when an expenses trips, cars are submitted, approved, rejected etc.

By default, the emails are sent from the system with a from email address, which is the person who is logged in to the Portal when the notification is sent.

This will cause an issue with some client email servers i.e. rejecting emails generated from a third party server with their email root based on security protocols. For example, an email issuing from another mail server using the email address JoeBloggs@abc.ie, the justice email server did not allow this as no one only it can send emails with a from email address ending in abc.ie

Portal Parameters:

Active facility using parameter outlined below.

Coreportal 2.0 Parameters

Keyword Search ☐ Search each individual word

(enter a keyword search term above and select search button or simply hit return to begin searching)

Clear Keyword **Start Searching**

Your search returned 1 results.

Parameter Description	Product Name	Current Value	Action
If set to Y, then the admin email address will be used to send emails to the approver, otherwise emails will be sent from the claimant to the central email and the approver Parameter Code ex_set_admin_to_sender	CoreExpense	N	

Admin Parameters:

Specify central “From” email address in this field.

Configuration: CoreHR → Event Management → EMS Parameter Maintenance

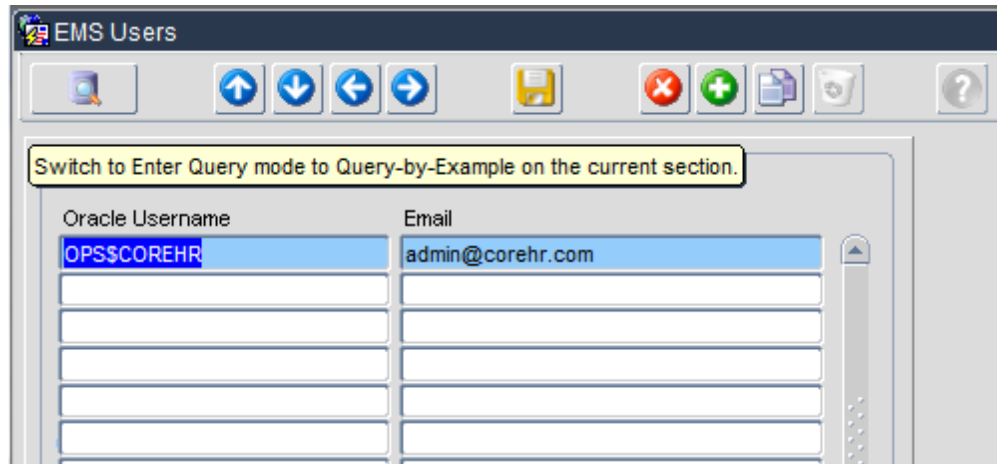

Administrator Email

14.3 SETTING UP EMAILS FOR BACK OFFICE USERS

Back Office user email addresses need to be set-up in the back Office

Configuration: Reference → Reference M-R → Oracle Username/Email Addresses

Type in the relevant username and email address and press SAVE.

The screenshot shows a web application window titled "EMS Users". At the top, there is a toolbar with icons for navigation (up, down, left, right arrows), a save icon (floppy disk), a delete icon (red X), a plus icon (green +), a document icon, a trash icon, and a help icon (question mark). Below the toolbar, a yellow message box states: "Switch to Enter Query mode to Query-by-Example on the current section." The main content area contains a table with two columns: "Oracle Username" and "Email". The first row of the table is highlighted in blue and contains the text "OPSS\$COREHR" in the "Oracle Username" column and "admin@corehr.com" in the "Email" column. There are five empty rows below the first row. A vertical scrollbar is visible on the right side of the table.

Oracle Username	Email
OPSS\$COREHR	admin@corehr.com

14.4 CUSTOMISATION OF EMAILS THROUGH CORE EXPENSE

Below is the list in detail of every default email setup. Each email can be turned on or off simply by a check box. If selected it is turned on. In order to turn off or on emails

Configuration: ESS → Online Mail Type

14.4.1 ADVANCE REJECTED

The first default email setup is *Advance Rejected*.

This email will automatically be sent to a claimant if the advance they submitted was rejected by the Approver.

Message Type	Message Status	Email Subject / Body	Central Email	On / Off
ADVANCE	REJECTED	Travel Advance Rejection Notification Your recent advance request has been refused, check your on-line advances for details.		☐

14.4.2 ADVANCE RESUBMITTED (APPROVER)

The second email setup is *Advance Resubmitted*.

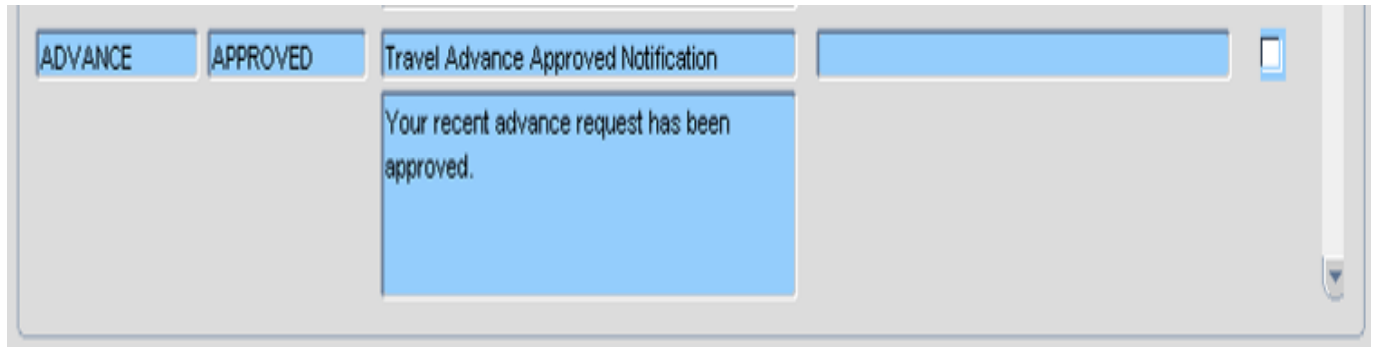

This email will be sent to an approver after the claimant has resubmitted the rejected Advance.

ADVANCE	RESUBMITTED	Advance Approval Notification You have outstanding advances that require approval.		☐
---------	-------------	---	--	--------------------------

14.4.3 ADVANCE APPROVED

The third email setup is *Advance Approved*.

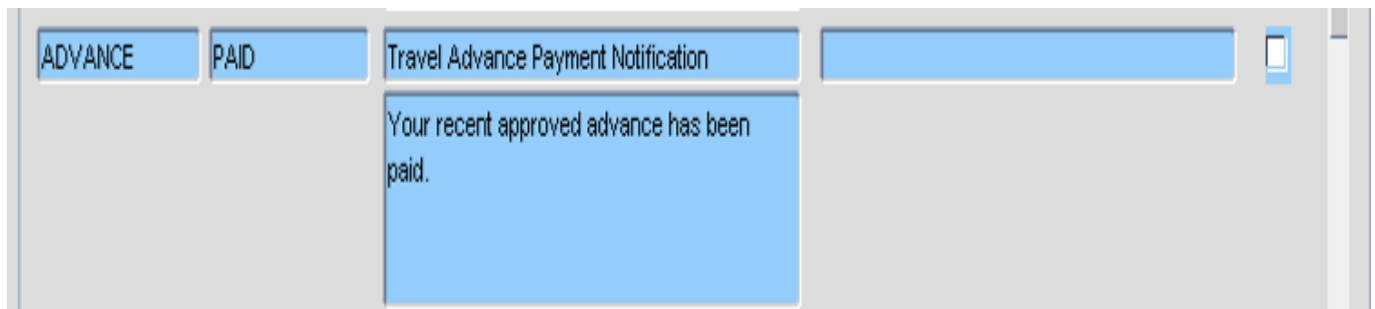

This email will be sent to the Claimant once the Approver has approved the Advance.

14.4.4 ADVANCE PAID

The fourth email is *Advance Paid*.

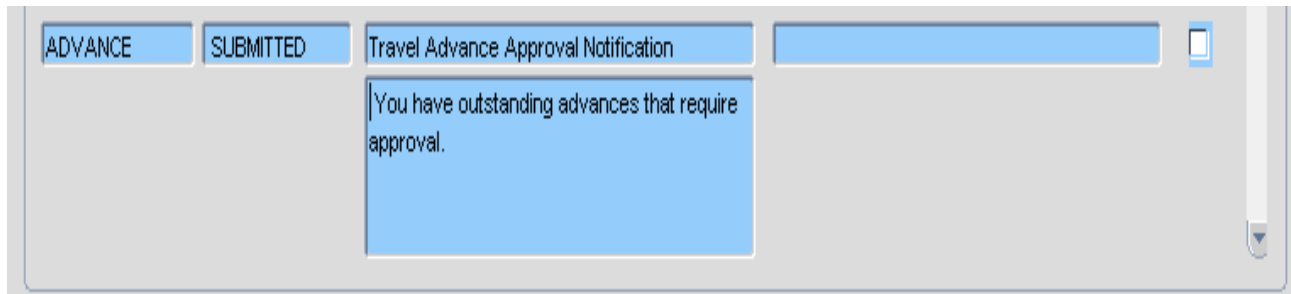

This email is again sent to the Claimant once the Advance has been paid.

14.4.5 ADVANCE SUBMITTED (APPROVER)

The next email setup is *Advance Submitted*.

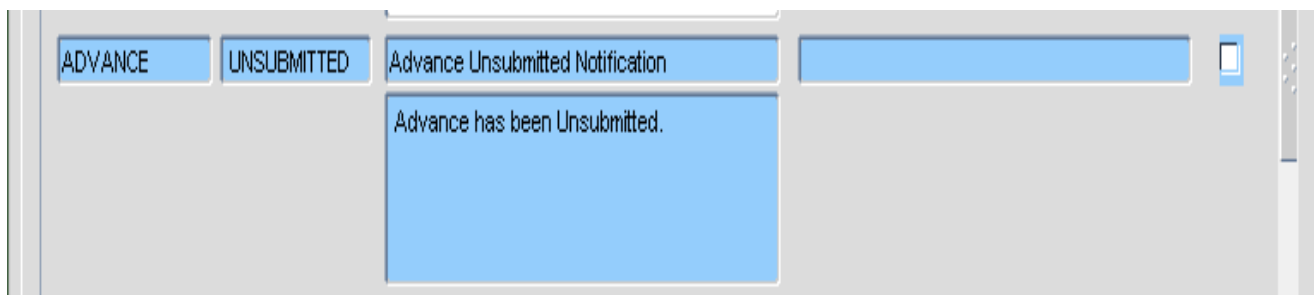

This email is sent to Approvers reminding them they have outstanding Advances to Approve.

14.4.6 ADVANCE UNSUBMITTED

The next default email is *Advance Unsubmitted*.

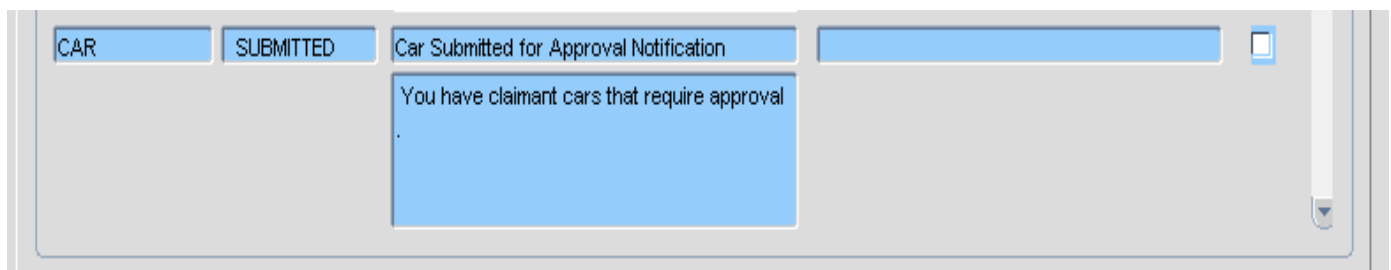

This is sent to the Claimant when an advance is unsubmitted.

14.4.7 CAR SUBMITTED (APPROVER)

The next default email is *Car Submitted*.

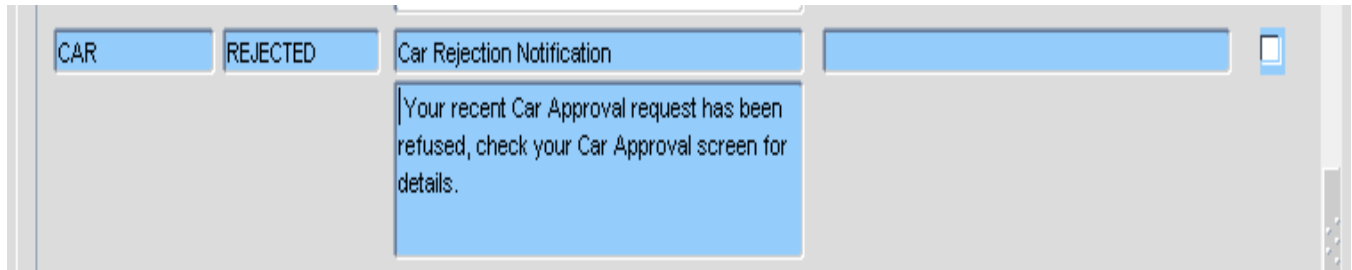

This email is sent to Approvers reminding them that they have Claimant cars which need to be approved.

14.4.8 CAR REJECTED

The next default email is *Car Rejected*.

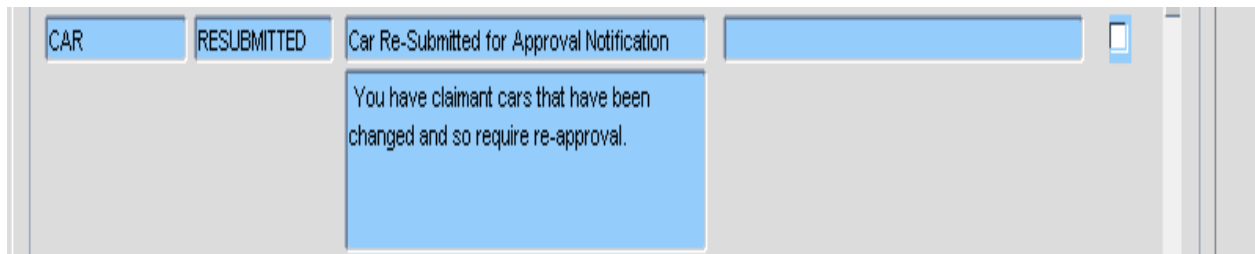

This email is sent to the Claimant if a car they submitted for Approval was rejected.

14.4.9 CAR RESUBMITTED (APPROVERS)

The next default email is *Car ReSubmitted*.

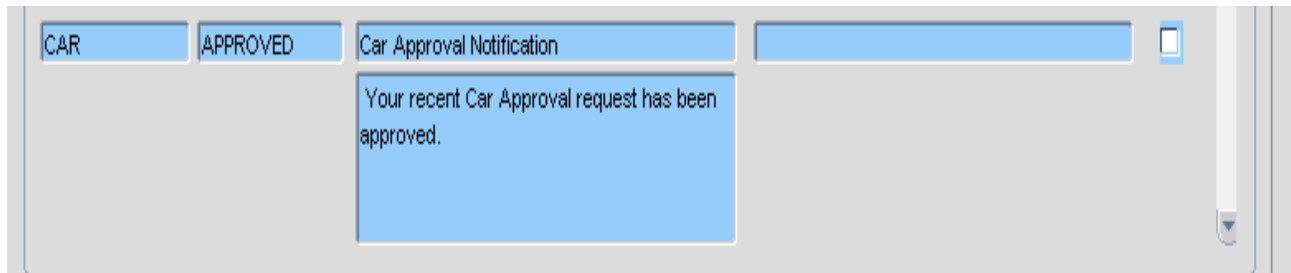

This email is sent to Approvers once the Claimant has resubmitted the Car.

14.4.10 CAR APPROVED

The next default email is *Car Approved*.

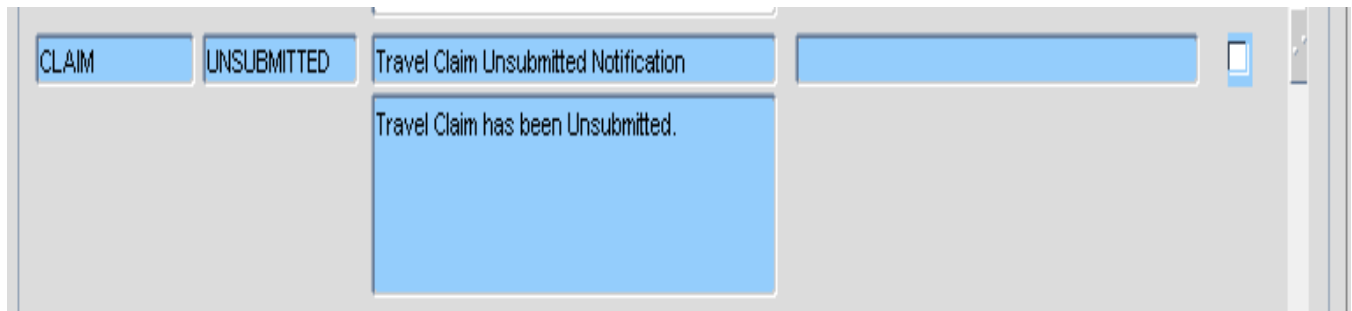

This email is sent to the Claimant after the Car submitted was approved.

14.4.11 CLAIM UNSUBMITTED

The next default email is *Claim Unsubmitted*.

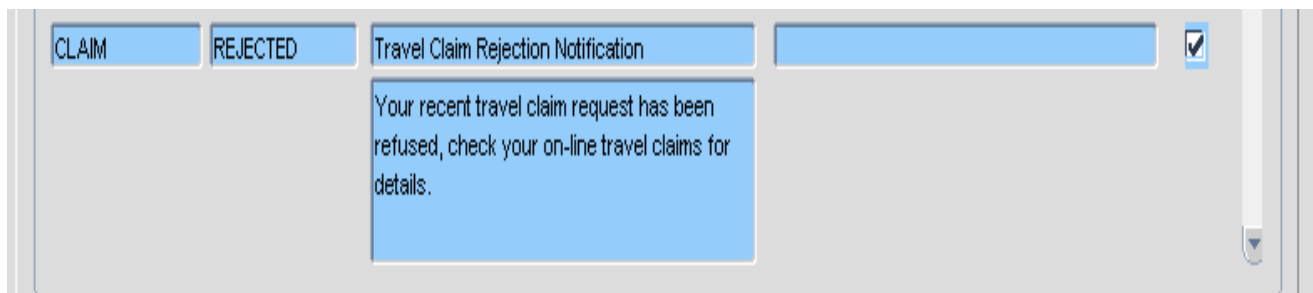

This email is sent to a Claimant after a trip has been Unsubmitted.

14.4.12 CLAIM REJECTED

The next default email is *Claim Rejected*.

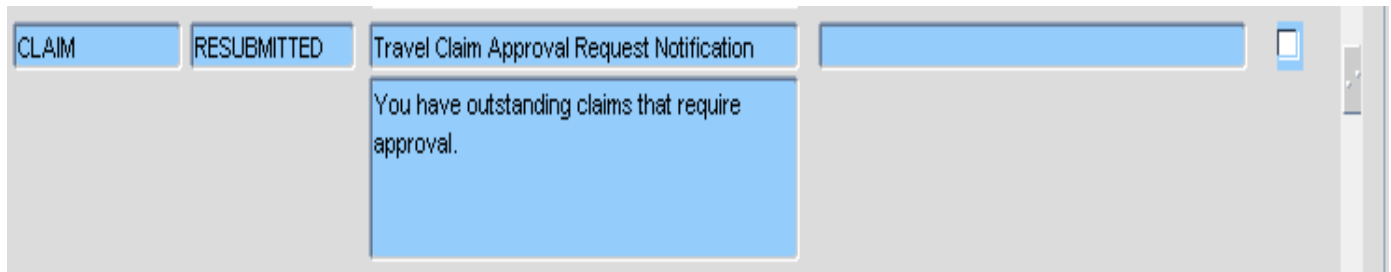

This email is sent to the claimant if an Approver rejects their Claim.

14.4.13 CLAIM RESUBMITTED (APPROVERS)

The next default email is *Claim Resubmitted*.

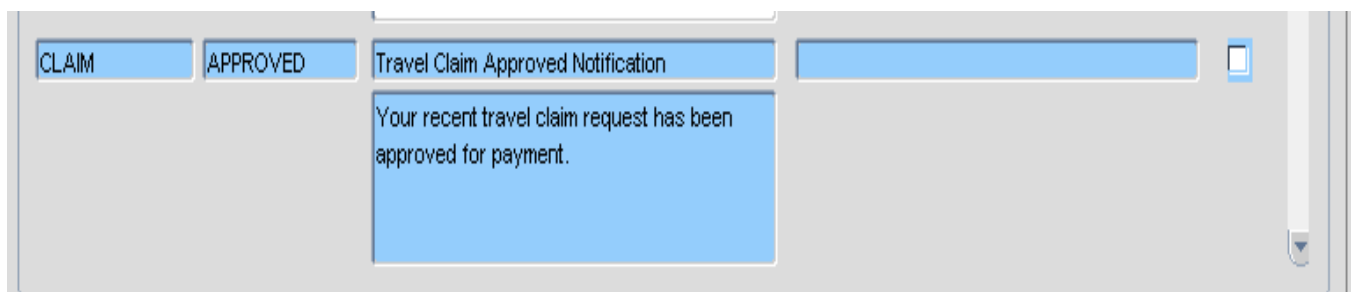

This email is sent to the approver reminding them that they have outstanding claims that require approval.

14.4.14 CLAIM APPROVED

The next default email is *Claim Approved*.

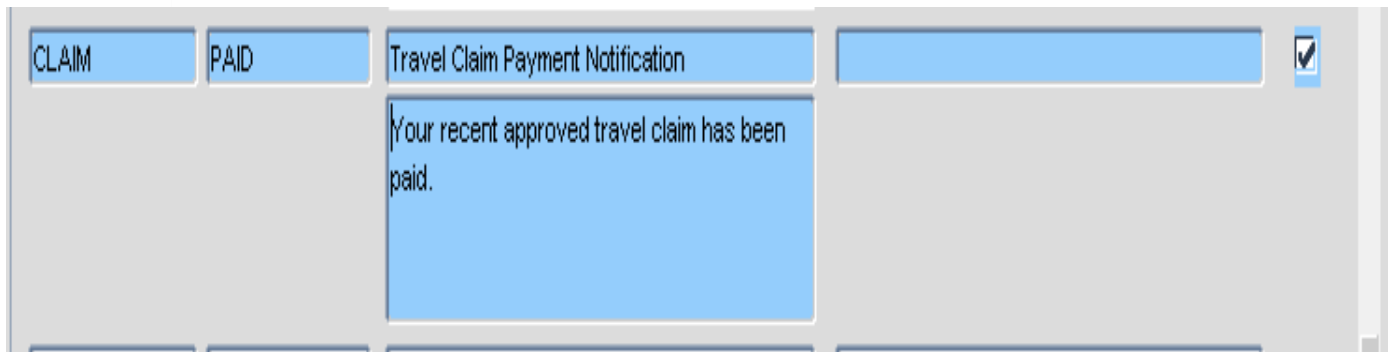

This email is sent to the Claimant once the Trip is approved.

14.4.15 CLAIM PAID

The next default email is *Claim Paid*.

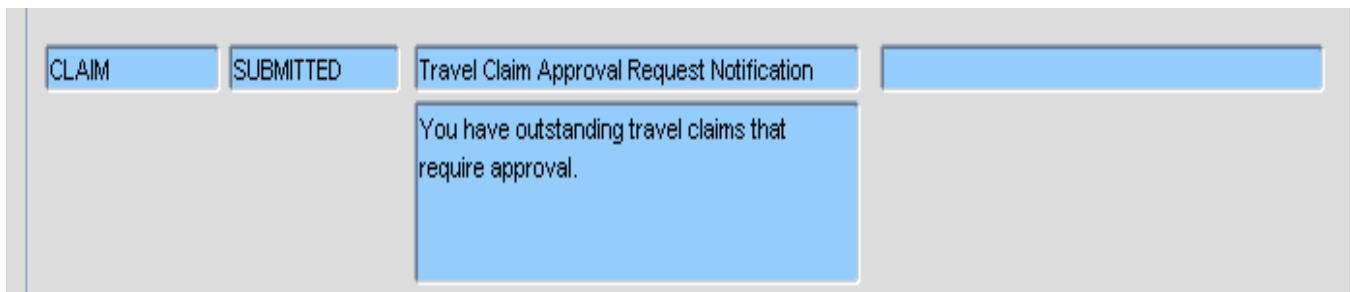

This email is sent to the Claimant once they have been paid.

14.4.16 CLAIM SUBMITTED (APPROVERS)

The next default email is *Claim Submitted*.

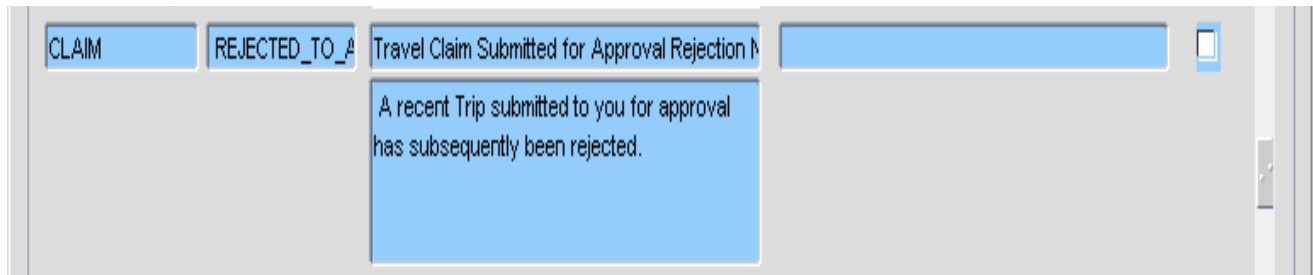

This email is sent to the approver reminding them they have claims which require approval.

14.4.17 CLAIM REJECTED (APPROVERS)

The next default email is *Claim Rejected to Approver*.

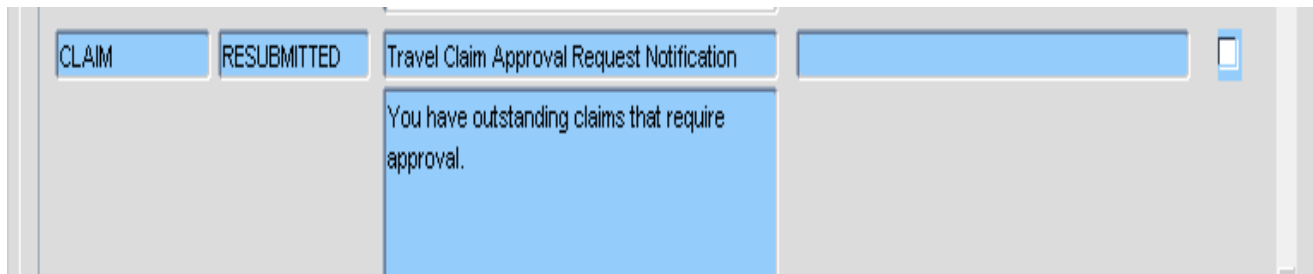

This email is sent to the Approver letting them know a trip submitted to them for Approval has been rejected.

14.4.18 CLAIM RESUBMITTED (APPROVERS)

The next default email is Claim Resubmitted

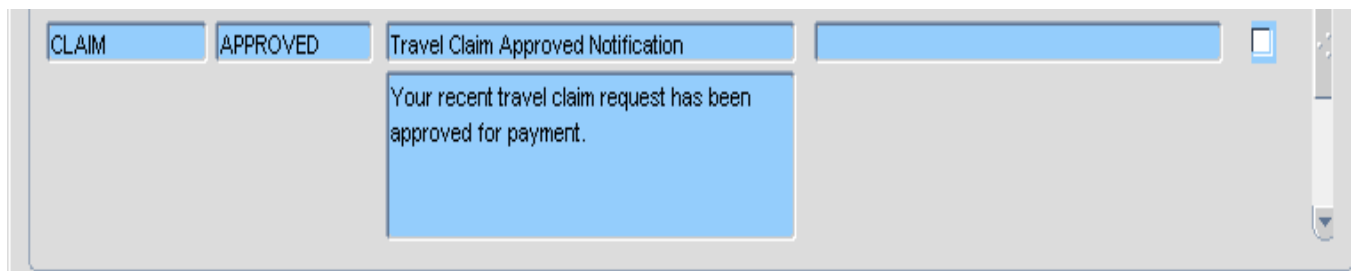

This email is sent to Approvers letting them know they have outstanding claims which need Approval.

14.4.19 CLAIM APPROVED

The next default email is *Claim Approved*

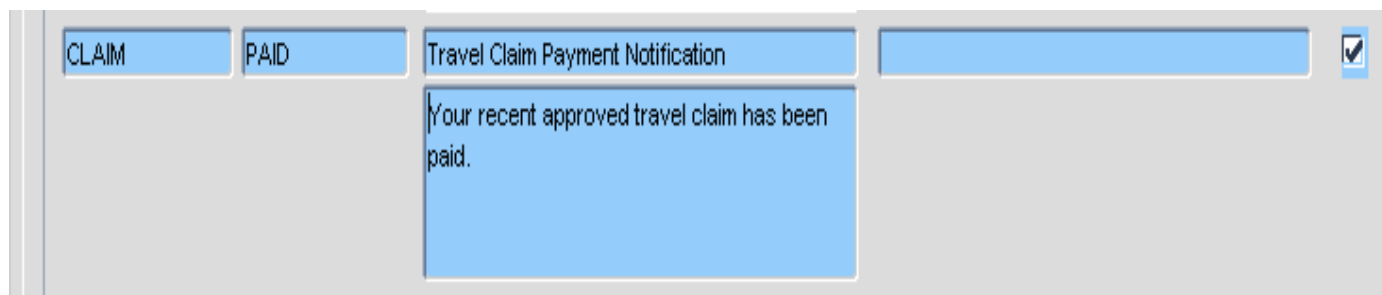

This email is sent to the Claimant notifying them that a recent travel claim has been approved for payment.

14.4.20 CLAIM PAID

The next default email is *Claim Paid*

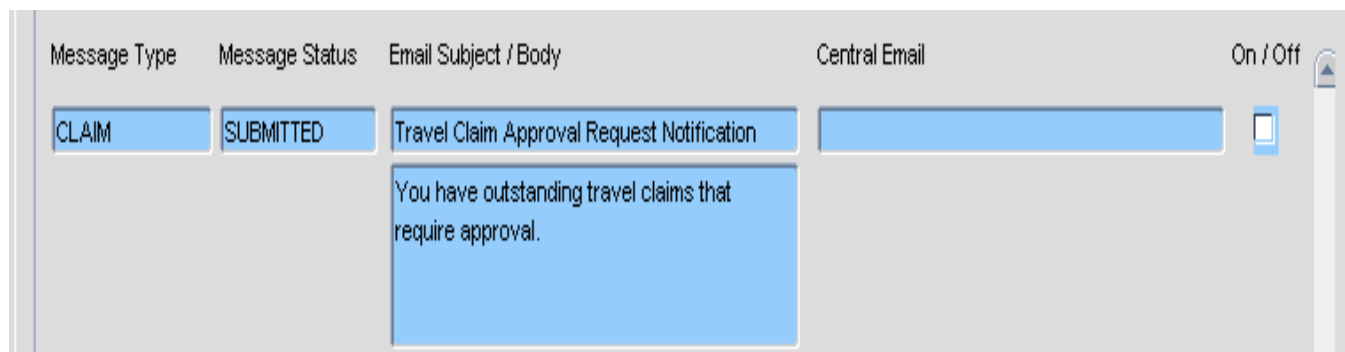

This email is sent to claimants notifying them that approved claims have now been paid.

14.4.21 CLAIM SUBMITTED (APPROVERS)

The next default email is *Claim Submitted*

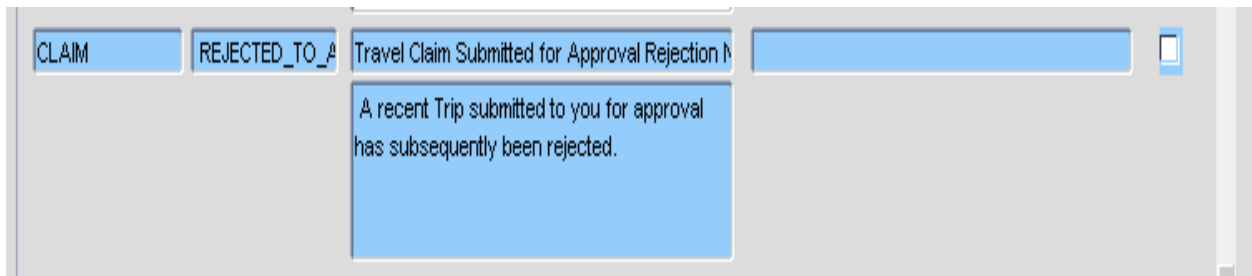

This email is sent to approvers reminding them that they have claims which require approval.

14.4.22 CLAIM REJECTED (APPROVERS)

The next default email is *Claim rejected to Approver*

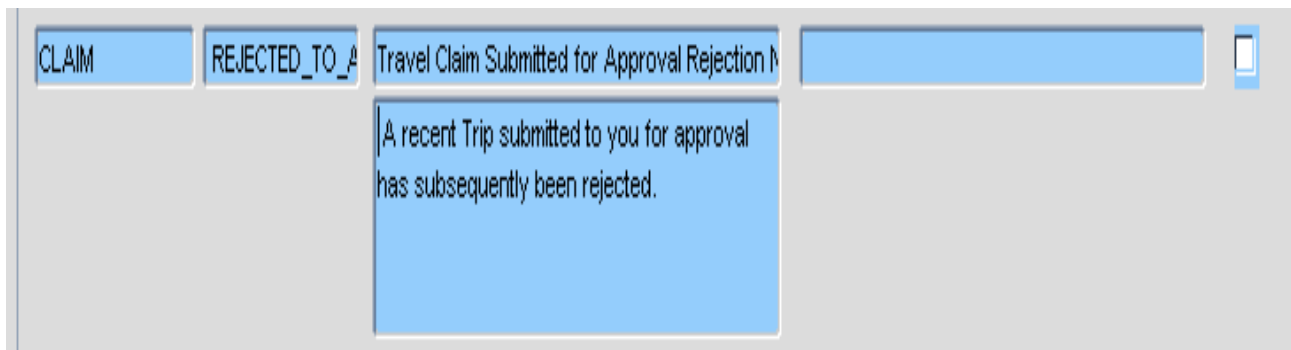

This email notifies the approver that a claim submitted to them has subsequently been rejected.

14.4.23 CLAIM FORWARDED (APPROVERS)

The next default email is *Claim Forwarded*.

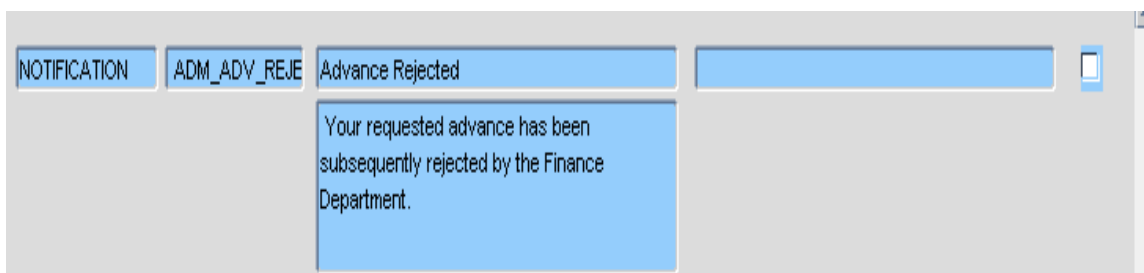

This notifies an approver informing them that they have outstanding claims forwarded to them which require their approval.

14.4.24 NOTIFICATION ADVANCE REJECTED

The next default email is *Notification Advance Rejected*.

This email is sent to a claimant if an advance has been rejected by the Finance Department.

14.5 CHANGING EMAILS

You can change the body of each email; however the status and time it is sent cannot be changed. The only option users have is to either change the body of the email or else turn the email on/off.

To change the body of the email navigate to CoreExpense → ESS → On Line Mail Type

If you wish to setup an email different from the list provided above, changes must be made to the database so you will require assistance from Core.

14.6 EMAIL QUEUE

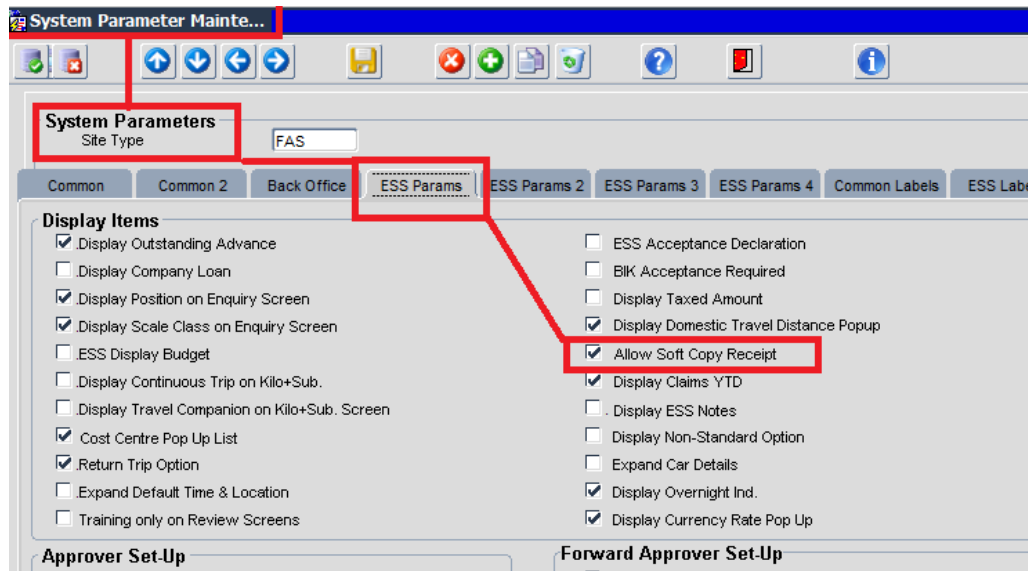

The email queue is visible in CoreExpense → ESS → Email Queue

15 ADDITIONAL FUNCTIONALITY IN SYSTEM PARAMETERS

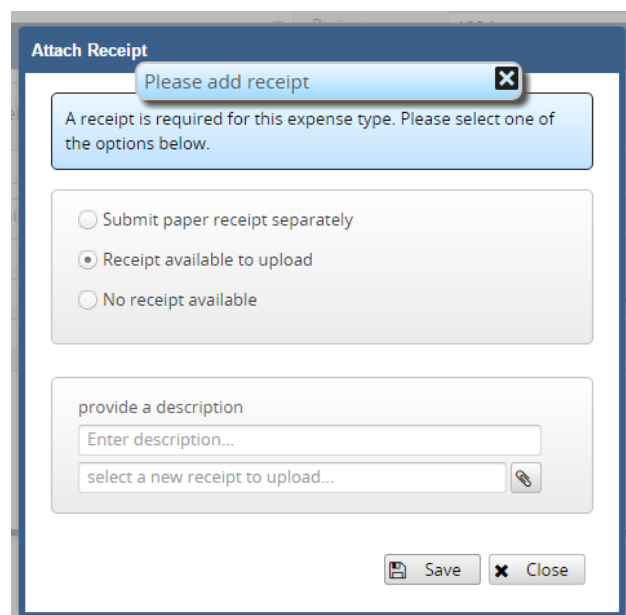

15.1 ATTACHING RECEIPTS

Core Expense supports the attaching of soft copy receipts to claims

Configuration: System Parameters → ESS Params → Select “Allow Soft Copy Receipt”

Below is the pop up which is presented in Portal for the creation of a receipted Expense code item.

Users are required to choose one of the following options prior to submission being permitted.

- 1) Submit paper receipt separately
- 2) Receipt available for upload- A description will be provided and the user will browse to the receipt image before saving
- 3) Choose No Receipt – The user must provide a reason as to why the receipt is missing

15.2 TRIP ALLOWANCE V21.0.0

A change has been made to the system to allow administrators to set up Defined Trip rates. These rates are value based as opposed to the normal mileage.

This facility allows administration to define a list of set journeys from a location to a location and assign an allowance rate for that set journey. When the claimant chooses the trip allowance expense type they will be presented with this list from which they must choose the relevant trip. The value and description of that trip are then assigned to the expense item

For example, instead of claiming for 70 miles from Kilkenny to Dublin, a predefined list of approved trips will appear to the claimant. Should Kilkenny – Dublin appear in the drop down, the claimant can select this to claim a pre-approved amount for that journey.

Back Office Configuration

This functionality is activated at Expense Code level. The required configuration is as follows.

- Assign an expense code as the Trip Allowance. Only one expense code is active as a Trip Allowance
- The Trip Allowance indicator is ON
- The Expense Type is Non Scalable (N)
- Settings Tab – Units required is OFF

Configuration

CoreExpense→Reference→Reference D-L→Expense Code

Populating the Approved Allowance List

- Pressing the Allowances button
- Assign a Trip Number
- Enter a Trip Description
- Enter the Approved Value for that Trip

The screenshot shows the 'Expense Code' configuration screen. The 'Expense Code' is set to '1', 'Name' is 'TRIP ALLOWANCE', 'Short Name' is 'TRP', 'Payslip Description' is 'TRIP ALLOW', 'Expense Type' is 'N', and 'Maximum Amount' is empty. The 'Multiplier' is '1'. There are checkboxes for 'From Location Mandatory', 'To Location Mandatory', and 'Is Time Required', all of which are unchecked. The 'Trip Allowance' checkbox is checked. The 'Allowances' button is highlighted with a red box. A red arrow points from the 'Allowances' button to the 'Enter Trip Allowances' dialog box. The dialog box has a title bar 'Enter Trip Allowances' and a table with the following data:

Trip Number	Trip Description	Value
1	Dublin - Carlow	30
2	Carlow - Dublin	35
3	Carlow - Kilkenny	10
4	Kilkenny - Carlow	10
5	Dublin - Cork	50
6	Kilkenny - Cork	100

- Press Save and Exit

Portal Impact

When a claimant selects Trip Allowance as the expense code in Portal, the approved trip list will pop up with the following screen.

The screenshot shows the Core Expense Management interface. A modal window titled "Trip Allowances" is open, displaying a table of trip details. The background form is partially visible, showing fields for Expense Type, Dates, and Location. The modal table lists the following trips and their values:

Description	Value
Dublin - Carlow	30
Carlow - Dublin	35
Carlow - Kilkenny	10
Kilkenny - Carlow	10
Dublin - Cork	50
Kilkenny - Cork	100

On the right side of the background form, the summary shows: 0.00 total claimed and 0 # items. The bottom of the form indicates "No data to display".

When the claimant selects a trip it populates the expense item screen. The value of the trip cannot be over written.

The screenshot shows the "Expense Details" form in the Core Expense Management interface. The form is populated with data from the selected trip. The "Expense Type" is "Trip Allowance" and the "Value" is 35. The "Location" is "Carlow - Dublin". The "Dates" are 04/09/2014 to 18/09/2014. The "Payment By" is set to "Me". The "Cost Centre & Analysis Codes" section is collapsed. The summary shows: 0.00 total claimed and 0 # items.

Dates: 04/09/2014 to 18/09/2014

Cost Centre & Analysis Codes:

0.00 total claimed 0 # items

15.3 NO RECEIPT REQUIRED

Functionality exists whereby a client may configure Core Expense to permit a claimant to enter a non-scaled expense item without having to provide a receipt for it. For example some clients may wish to allow their employees to claim for toll charges but they do not enforce receipts to be included for this type of expense.

This is configured at Expense Code level.

15.3.1 CONFIGURATION

In order to activate the feature, certain items must be selected in the Expense Code for that particular item. These are:

- Expense Type
- Units Required
- Exclude Hard Copy Receipt
- Online Receipted Expense

15.4 DUPLICATE EXPENSE DETECTION

RELEASE 20.0.3+

When the 'Duplicate Expenses Allowed' parameter is ticked on, a user is required to enter a reason if a duplicate trip item is being submitted.

The approver should be able to view this message on the approval screen.

The screenshot shows the 'System Parameter Maintenance' window. The 'System Parameters' section has 'Site Type' set to 'FAS'. The 'Common' tab is selected, and the 'Duplicate Items' section is highlighted with a red box. This section contains the following options:

- ☒ Duplicate Detection
- ☒ Duplicate Expenses Allowed
- ☐ Duplicate Based on Cost Centre
- ☒ Duplicate Based on Date
- ☐ Duplicate Based On Time
- ☐ Duplicate based on AC1

Other sections visible in the window include:

- Trip Entry Options:**
 - ☒ Allow Default Dates
 - ☒ Allow Default Locations
 - ☒ Allow Default Times
 - ☒ Allow Default Foreign Location
 - ☐ Approver No Required
 - ☐ Omit Default Cost Centre
 - ☒ Default Times (Pre-Populates 5, 10 or Overnights)

Duplicate Detection

Duplicate Items

- ☒ Duplicate Detection
- ☒ Duplicate Expenses Allowed
- ☐ Duplicate Based on Cost Centre
- ☒ Duplicate Based on Date
- ☐ Duplicate Based On Time
- ☐ Duplicate based on AC1

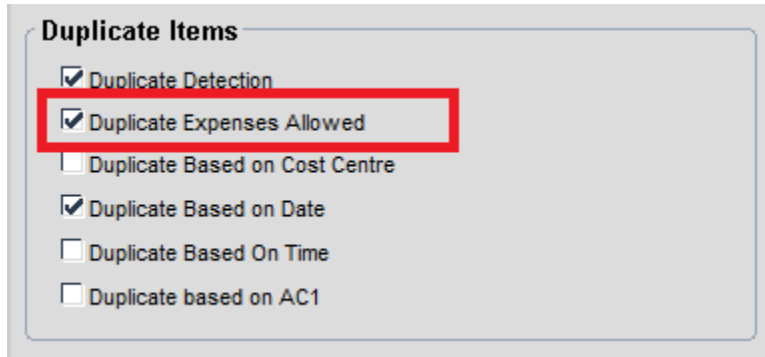

Checks for duplicates is enabled when active.

Parameter 1 needs to be ticked on for any of the other parameters to take effect. It could be possible to tick on all 6 options at the same time (rare but possible).

All parameters reside on ex_site.

Checking “Duplicate Detection” automatically checks duplicate based on date

Duplicate Expenses Allowed

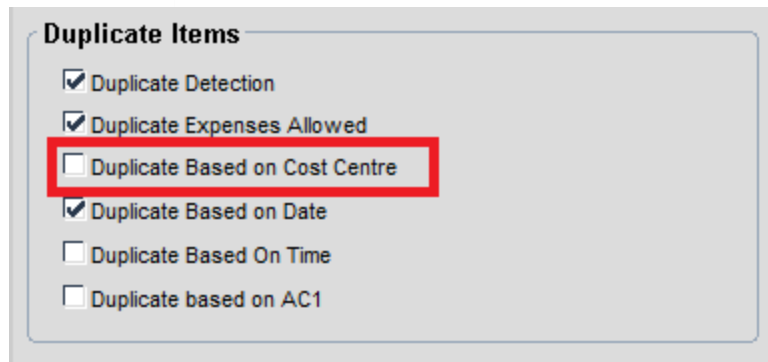

Duplicate Items

- ☒ Duplicate Detection
- ☒ Duplicate Expenses Allowed
- ☐ Duplicate Based on Cost Centre
- ☒ Duplicate Based on Date
- ☐ Duplicate Based On Time
- ☐ Duplicate based on AC1

Allows user to enter duplicates but must provide a reason on screen when active.

If set to N then users cannot enter a duplicate (as the system is at the moment).

Duplicate Based on Cost Centre

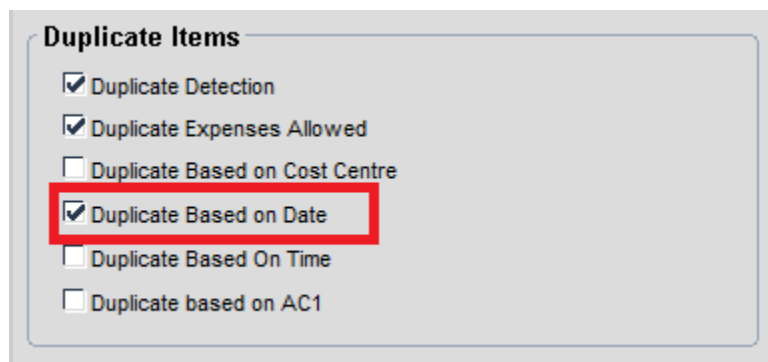

Duplicate Items

- ☒ Duplicate Detection
- ☒ Duplicate Expenses Allowed
- ☐ Duplicate Based on Cost Centre
- ☒ Duplicate Based on Date
- ☐ Duplicate Based On Time
- ☐ Duplicate based on AC1

Checks if the dates, expense code and cost centre are all identical on more than one trip item line.

Duplicate Based on Dates

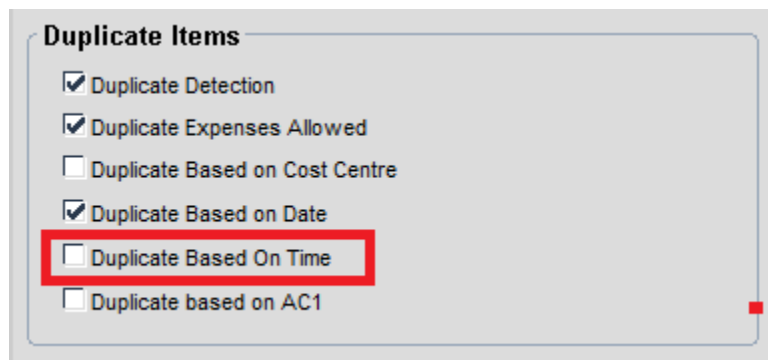

Duplicate Items

- ☒ Duplicate Detection
- ☒ Duplicate Expenses Allowed
- ☐ Duplicate Based on Cost Centre
- ☒ Duplicate Based on Date
- ☐ Duplicate Based On Time
- ☐ Duplicate based on AC1

Checks if the dates and expense code are identical on more than one trip item line for the current claimant.

Duplicate Based on Time

Duplicate Items

- ☒ Duplicate Detection
- ☒ Duplicate Expenses Allowed
- ☐ Duplicate Based on Cost Centre
- ☒ Duplicate Based on Date
- ☐ Duplicate Based On Time
- ☐ Duplicate based on AC1

Checks if the dates, expense code and times are identical on more than one trip item line for the current claimant.

Duplicate Based on AC1

Duplicate Items

- ☒ Duplicate Detection
- ☒ Duplicate Expenses Allowed
- ☐ Duplicate Based on Cost Centre
- ☒ Duplicate Based on Date
- ☐ Duplicate Based On Time
- ☐ Duplicate based on AC1

Checks if the dates, expense code and analysis code 1 are identical on more than one trip item line for the current claimant.

15.5 LOGIC AND CONFIGURATION IN DETECTING DUPLICATES

Duplicates detected on Date

Duplicate based on Date	= 'Y'
Duplicate based on time	= 'N'

Duplicate based on AC1	= 'Y'

Duplicates detected on Analysis Code 1 and Duplicates Based on Cost Centre

Duplicate based on Date	= 'Y'
Duplicate based on time	= 'Y'
Duplicate based on Cost Centre	= 'Y'
Duplicate based on AC1	= 'Y'

Portal Impact

If duplicate expense is allowed is turned on:

1. Show the text field below however a person does not need to enter anything into the field.
2. When the user hits the save button display an error message and pop the field in to where it exists on the screenshot (similar to 'overnight type' when overnight is chosen)
3. When the user hits the save button display an error message and have a new window pop up asking for a duplicate reason (similar to currency code when currency code is mandatory)

15.6 REASON FOR TRAVEL

V19.0.0

Where an expense type is Travel, a defined list of reason codes can be created as reference data.

Reason Code	Description	Additional Description 1	Additional Description 4 (SAP Company)	Cost Centre	Analysis Code	Overnight Ind. Mandatory	Display In ESS	Display In Admin	Position Required

Forward to Approve Reject

15.14 APPROVAL DELEGATION

V.19.0.5

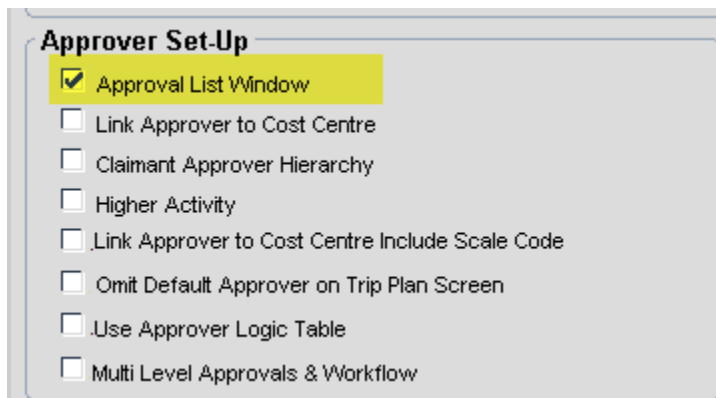

Allows the Approver to delegate their approval authority to other approver(s) for a specific period of time. The approval delegation list can be based on either one of two methods which are

- Approval by Cost centre including Scale Code
- Approval by Org Role and Org Group.

If “Link Approver to Cost Centre Include Scale Code” approval method is switched on in back office then that will take precedent and the approvers returned will be linked to cost centre and scale code.

The Approver Delegation facility does not have to be aligned with the claims approval facility e.g. the claims approver list can be based on the “Approval List Window” while approval delegation can be based on Org Role and Org Group. See below sample screen shot for illustration purposes.

Configuration: Reference → Reference S-Z → System Parameters → ESS Params

Approver Set-Up

- ☒ Approval List Window
- ☐ Link Approver to Cost Centre
- ☐ Claimant Approver Hierarchy
- ☐ Higher Activity
- ☐ Link Approver to Cost Centre Include Scale Code
- ☐ Omit Default Approver on Trip Plan Screen
- ☐ Use Approver Logic Table
- ☐ Multi Level Approvals & Workflow

If choosing Org Role & Org Group then the Approver can forward approval rights to any layer in the org structure. Once the layer is specified all people in that layer become available in the list. The Hierarchy level must be specified in the portal parameters as outlined below.

CorePortal 2.0 - Parameter Screen

From Date:

To Date:

Reason:

☒ I authorise this individual to approve on my behalf

When approval delegation is complete, trip can be approved by Home approver and delegated approvers for specified duration.

To delegate approval for Expense and Time requests a delegate entry must be recorded for each type i.e. create two entries in the delegate approval area.

15.15 ACTIVATE MULTI APPOINTMENT

V.20.0.0

CoreExpense has been enhanced to operate in a multi appointment environment. This will allow organisations to switch on/off expense recording by appointment for both Expenses and Advances if they so wish.

A control parameter was introduced as part of the development to activate or deactivate the functionality based on the client's requirements.

15.15.1 BACK OFFICE SYSTEM PARAMETERS

The CoreExpense Multi Appointment functionality is activated/deactivated based activating the following Back office parameter

The screenshot shows the 'Back Office' tab selected in the system parameters configuration. The 'Multiple Appointments' checkbox under the 'Miscellaneous' section is checked and highlighted with a red box. A red arrow points from the 'Back Office' tab to this checkbox.

The appointment will be displayed in the Print Friendly Receipt.

NOTE:

Recording and maintain cars and advances are not affected by multi appointment functionality.

15.16 HIDE/SHOW “PRINT FRIENDLY”

This is the parameter to allow the turning on/off the Print Friendly option in Core Expense. This parameter is modified within Core Portal.

Parameter Description

The core portal parameter for controlling “Turn on/off View Print Friendly” is EXP_VIEW_PRINT_BTN

The screenshot shows the 'Coreportal 2.0 Parameters' interface. At the top, there is a navigation bar with 'Home' and 'Recruitment' links. Below the navigation bar, the title 'CorePortal 2.0 - Parameter Screen' is displayed. The main content area has a dark header 'Coreportal 2.0 Parameters'. Below this, there is a 'Keyword Search' section with a text input field containing 'Exp_view_print_btn'. Below the input field, there is a hint: '(enter a keyword search term above and select search button or simply hit return to begin searching)'. To the right of the input field are two buttons: 'Clear Keyword' and 'Start Searching'. Below the search section, it says 'Your search returned 1 results.' and displays a table with the following data:

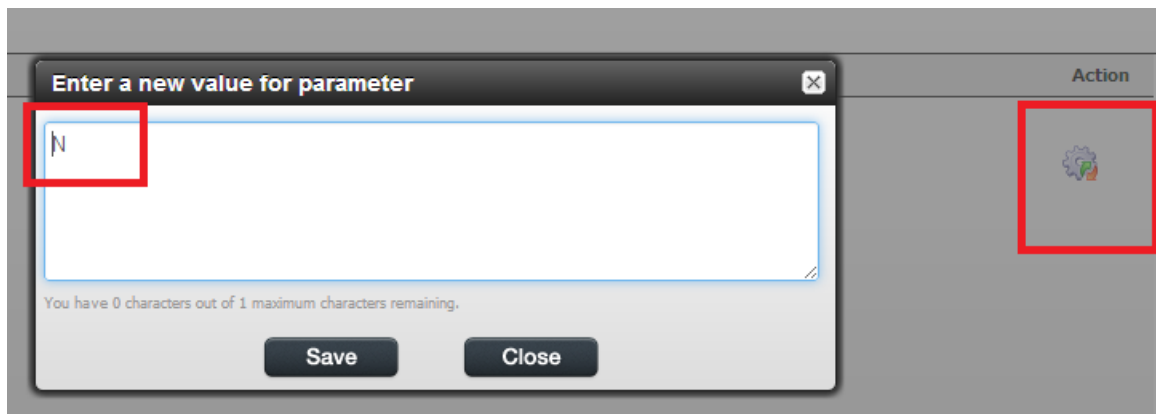

Parameter Description	Product Name	Current
Parameter to switch on/off VIEW PRINT FRIENDLY button on Expenses Print Claim Form	CorePay	N

Below the table, it says 'Parameter Code | exp_view_print_btn'.

Configuration

- Enter Core Portal
- Click on User in top right of the window
- Enter Admin Settings

- Enter the Parameter : EXP_VIEW_PRINT_BTN
- Press the gear icon to change the setting as desired.

In order to view the option, set the parameter to Y and Press Save

15.17 CAR WIDGET TERMS AND CONDITIONS

Terms and Conditions are being added to the Car Widget which must be accepted by the user, prior to submission. While this functionality was previously controlled from within the Back Office System Parameters, this is now defunct.

Defunct Functionality

The following Functionality is defunct from Core Expense Back Office

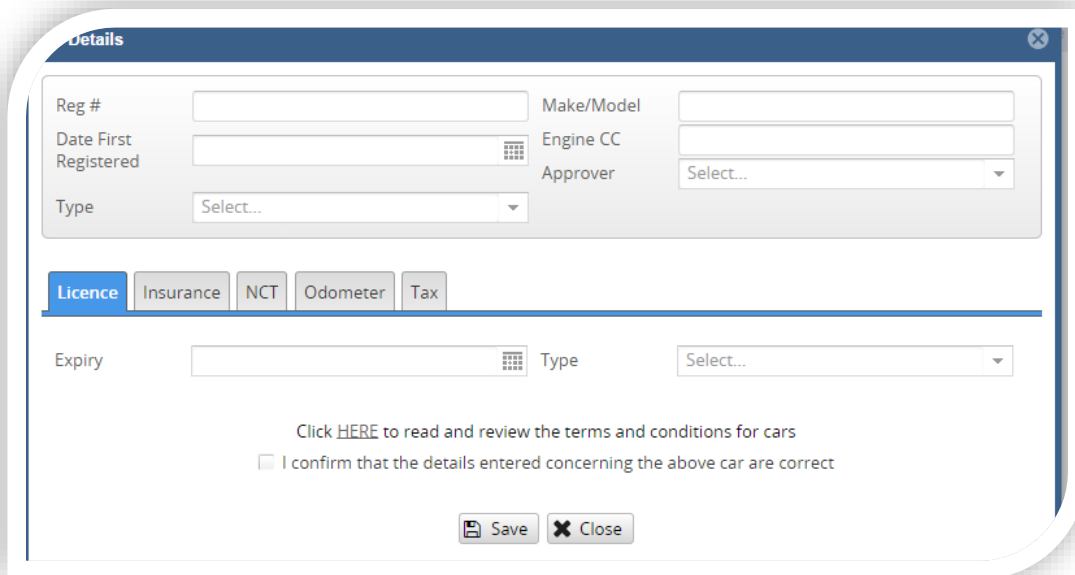

The screenshot displays the 'System Parameter Maintenance' window with the 'ESS Labels' tab selected. The 'Car Declaration' section, which includes a checkbox for 'Car Acceptance Message', is highlighted with a red rectangular box. Other visible sections include 'ESS System Message', 'Acceptance Declaration', 'Five Hour', 'Twenty Four Hour', 'Payment Run', 'Imprest Balance', 'Ten Hour', 'Claimant No.', 'Trip Plan', 'Cost Analysis Label', 'Receipted Items Label', 'Transition to Print Screen Message', 'Benefit in Kind', 'Bank Declaration', and 'Claimant Car Labels'.

Navigation

Configuration: Reference → Reference S-Z → System Parameters (ESS Labels) → Car Declaration Section

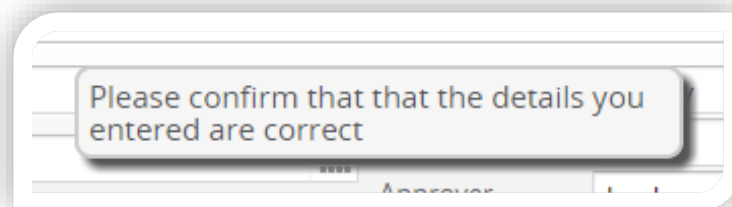

Process

As part of the Car Input Widget, a link is presented pointing to T's & C's. The user can view the terms and conditions via a hyperlink.

The screenshot shows a 'Details' form window. It contains several input fields: 'Reg #' (text), 'Date First Registered' (calendar icon), 'Type' (dropdown), 'Make/Model' (text), 'Engine CC' (text), 'Approver' (dropdown), 'Licence' (tab), 'Insurance' (tab), 'NCT' (tab), 'Odometer' (tab), 'Tax' (tab), 'Expiry' (calendar icon), and 'Type' (dropdown). Below the tabs, there is a link 'Click [HERE](#) to read and review the terms and conditions for cars'. Below the link, there is a checkbox 'I confirm that the details entered concerning the above car are correct'. At the bottom, there are 'Save' and 'Close' buttons.

Terms and Conditions must be accepted before saving. This is done via a checkbox. Failure to check the tick box will result in the following message.

[Analysis suggested that a new T&C will need to be created for cars. It was also suggested that this could not be released to previous versions due to the significance of the change.]e.

15.18 CLAIM CEILING BREACH

Functionality exists within Core Expense whereby an organisation can set a ceiling on the value that can be submitted by a claimant within a set period of time.

E.g. A claimant cannot submit more than €100 in 5 days

Should the ceiling be breached, the claimant will be presented with a message informing them of the breach. An email will also be triggered to the claimant's approver informing them of the breach.

A breach of the ceiling will not prohibit the claim from progressing.

Configuration

The ceiling is defined with Core Expense System parameters.

15.20 FOREIGN TRAVEL RESTRICTION

Portal allows the restriction of the list of foreign locations shown to Portal claimants based on their Expense Group.

Configuration

Restrictions are enforced through Expense Exclusion

Back Office Parameters

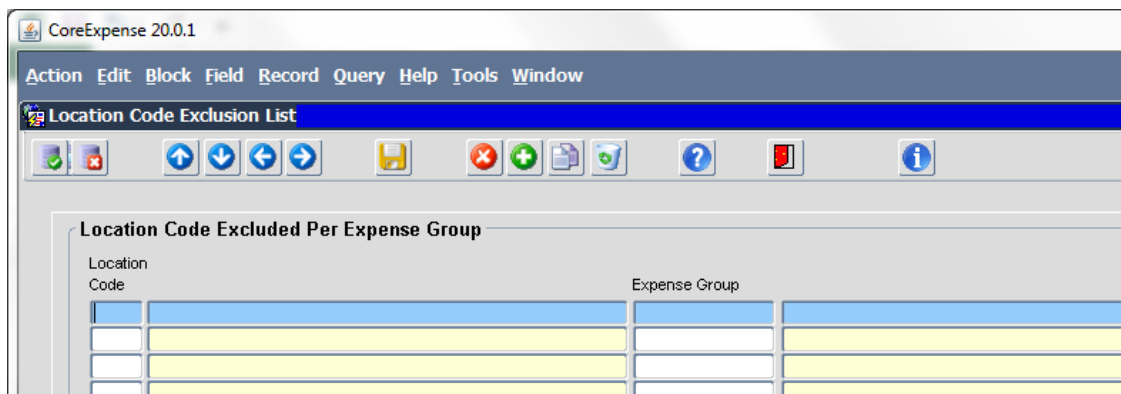

Navigation

Configuration: Reference → Reference D-L → Location Exclusion

Current Process

Navigate to the Exclusion Screen

- Enter the Location you wish to exclude (A list of values can be accessed by using the question mark on the menu bar)

- Enter the Expense Group you wish the exclusion to affect.
- Save the changes

16 PORTAL (ESS) FUNCTIONALITY AND PARAMETERS

16.1 TRIP DESCRIPTION

While creating an Expense trip, the claimant will see a description box in the Trip header.

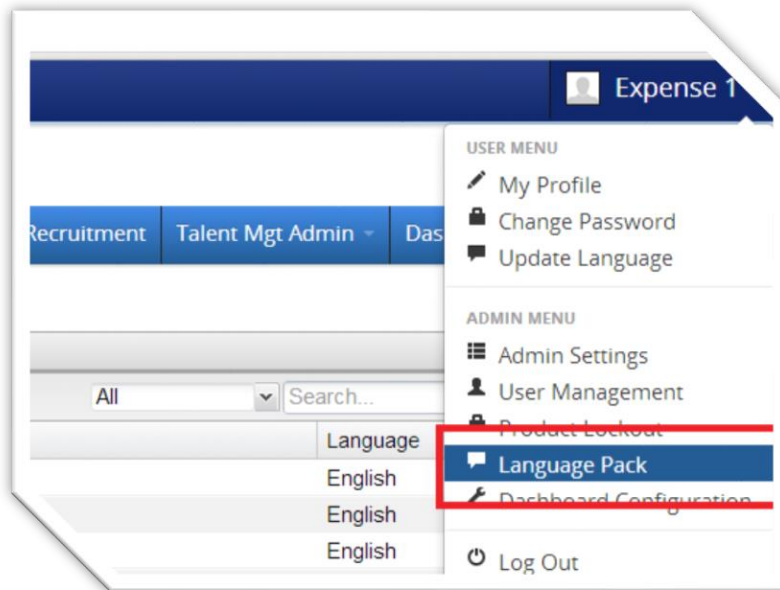

The screenshot shows the 'Expense Report' form in the Core Portal. The form is titled 'Expense Report' and has a close button (X) in the top right corner. The form contains several fields:

- Dates:** From (calendar icon) To (calendar icon)
- Cost Centre:** Abc123 (dropdown menu)
- Approver:** Expense 2 (dropdown menu)
- Description:** Enter Description...hereeeeeeeeeeeeeeeee (text input field, highlighted with a red box)
- Project:** None Selected (dropdown menu)
- Analysis Co...:** Select... (dropdown menu)

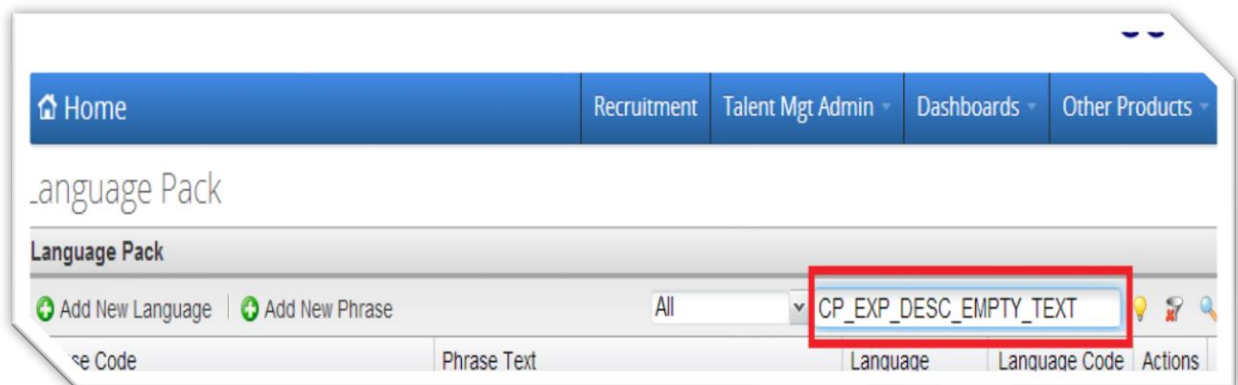

The portal administrator can amend the claimant facing instruction message text making it more specific. This is done via Language packs.

Configuration

- Enter Core Portal as an administrator
- Click on User`name in top right of the portal window
- Chose Language Pack from the drop down

- In the search box, enter CP_EXP_DESC_EMPTY_TEXT and enter

- The language pack will appear allowing you to edit the text

Language Pack

Language Pack

+ Add New Language | + Add New Phrase

All | CP_EXP_DESC_EMPTY_TEXT

Phrase Code	Phrase Text	Language	Language Code
CP_EXP_DESC_EMPTY_TEXT	Enter Description...hereeeeeeeeeeeeeeeeeee	English	EN
CP_EXP_DESC_EMPTY_TEXT	Enter i	Welsh	WS

Update Cancel

- Amend the Phrase Text as desired and press “Update” to save

When the user re-enters the new expense claim screen, the updated claimant facing instruction will be displayed in the description field

Expense Report

16.2 DECLARATION DOCUMENTS

Ensure the parameter “ex_submit_trip_decl_doc” is set to “/coredocs/accepteddeclaration.pdf”.

Note: The first character must be a forward slash. If you omit this forward slash, the application will not pick up on virtual directories.

Expense Trip Acceptance Declaration Document	CoreExpense
Parameter Code ex_submit_trip_decl_doc	

Filename for documentation on used for My Approval Expense Advance widget.	CorePay
Parameter Code cp_my_apptermis_doc_adv	

Filename for documentation on used for My Approval Car and Vehide widget.	CorePay
Parameter Code cp_my_apptermis_doc_car	

16.3 REMITTANCE ADVICE

16.3.1 ENABLE PRINT BUTTON ON REMITTANCE ADVICE (PRINT FRIENDLY)

To enable the print button on remittance advices set the relevant parameter to “Y”.

Enable Print button on Expenses Remittance Advice	CoreExpense
Parameter Code ex_rem_print	

16.3.2 SHOW REMITTANCE SLIPS FROM DATE

VERSION 22+

A parameter is available to allow the administrator to Only show remittance slips from an effective date onwards

Keyword Search

(enter a keyword search term above and select search button or simply hit return to begin searching)

Clear Keyword **Start Searching**

Your search returned 1 results.

Parameter Description	Product Name	Current
Only show remittances from this date onwards	CoreExpense	01-Feb-2015
Parameter Code ex_remit_strtdate		

Paramater: EX_REMIT_STRTDATE

Click on the gear and add date in the format of DD-MMM-YYYY

16.3.3 ADDRESS DISPLAYED ON REMITTANCE SLIP

VERSION 23+

The type of address available for display on the expense remittance slip can now be configured e.g. home address, work address, default address. This setting is available at system level which means one simple configuration change ensures the rule is applied across all organisations in the domain. Valid values are Address Type Codes configured in Personnel e.g. B (Business), DEFADD (Default Address), HOME (Home Address). See facility in Personnel for complete list. When the parameter is set to WORK or left blank it will display the work address. If there is no Row on the view an error message will be presented.

Paramater: remittance_address_param

16.4 HIDE COST CENTRE

V19.0.0

Clients may wish to set the parameter where Cost Centres can only be viewed on the Trip Header and the claimant cannot select an alternative Cost Centre.

Portal Parameters

ex_hide_cost_center - which hides the cost center

ex_input_ro_cc - Sets cost center as read only

16.5 EXPENSE TRIP ADDITIONAL INFORMATION

When submitting expenses, a claimant may add additional information to a particular expense item

The screenshot shows the 'System Parameter Maintenance' window with the 'Common 2' tab selected. The 'Company Representation Parameters' section is highlighted with a red box. It contains the following fields:

- ☐ All fields mandatory (and display custom labels below)
- Venue Label: Location of Entertainment
- Purpose Label: Description of Entertainment
- Client Label: Client Name
- Attendee Label: Additional Employees
- Position Label: Client Position
- ☒ Company Representation FreeText Field

Other sections visible include:

- Email Parameter:** ☐ Use "<" brackets for email address
- SIAT Expense Exclusion:** ☐ Turn on Expense Exclusion, ☐ Turn on SIAT Interface, ☐ Additional SIAT Case Related Controls, SIAT Case Control Navigation Message
- SIAT Outstanding Case e-mail Notification:** ☐ No. of cases per claimant for e-mail reminder, ☐ No. of additional cases per claimant for email re-send
- Back Office Reporting Restrictions:** ☐ Restrict Report based on Back Office Users Cost Centre
- ESS Subsistence Restriction:** ☐ Prevent increase in 5/10 hours
- Default VAT Code for Current VAT Rate:** Default VAT Code to look up when retrieving current VAT rate
- Default PRSI Code for Current PRSI Rate:** Default PRSI Code to look up when retrieving current PRSI rate
- Default PSMT Code for Current PSMT Rate:**

Configuration: Reference → Reference S-Z (Common 2)

The following labels with back office system parameters are no longer in use as they are now language packed within portal:

- Venue Label
- Purpose Label
- Client Label
- Attendee Label
- Position Label

New Process

The claimant creates an Expense report and adds an expense item to that report

Expense Report (Item: 2683)

Dates: 04/08/2014 to 04/08/2014 | Description: Business Entertainment

Appointment: Station Officer | Cost Centre: 1 Default Cost Centre | Project: Apel | Approver: Rachel Deane | Training: No

Back Office System Parameters

The only active parameter on the System Parameter screen is “Company Representation FreeText Field”.

Checking this box on or off, toggles the data entry mode on the Client field within Add Additional Info.

In a “ticked on” state, the Client field will be free text

 A screenshot of a web form titled "Add Additional Info". The form contains several input fields: "Date From" (04/08/2014), "Date To" (04/08/2014), "Location" (Dublin), "Purpose" (Sales), "Attendee" (John), "Position" (CEO), and "Client" (1234567890AB). At the bottom right, there are two buttons: "Save" and "Close". The "Save" button is highlighted with a red rectangular box.

In a “ticked off” state, the field will be a dropdown List of Value

The screenshot shows the 'Add Additional Info' dialog box in SAP. The dialog is open, and the 'Client1' dropdown menu is selected, displaying a list of client codes and names. The list includes:

- Select...
- 1234567890ab
- Code: 6602
- 123456789a123
- Code: 6599
- 007651221
- Code: 6600
- Abcdefghijklm
- Code: 6601
- Client
- Code: 6597
- Dsad
- Code: 6598
- Dsgfdgdfgdfg

Client List of Values Maintenance (Exp501)

Configuration: Reference → Reference C-C → Company/Client

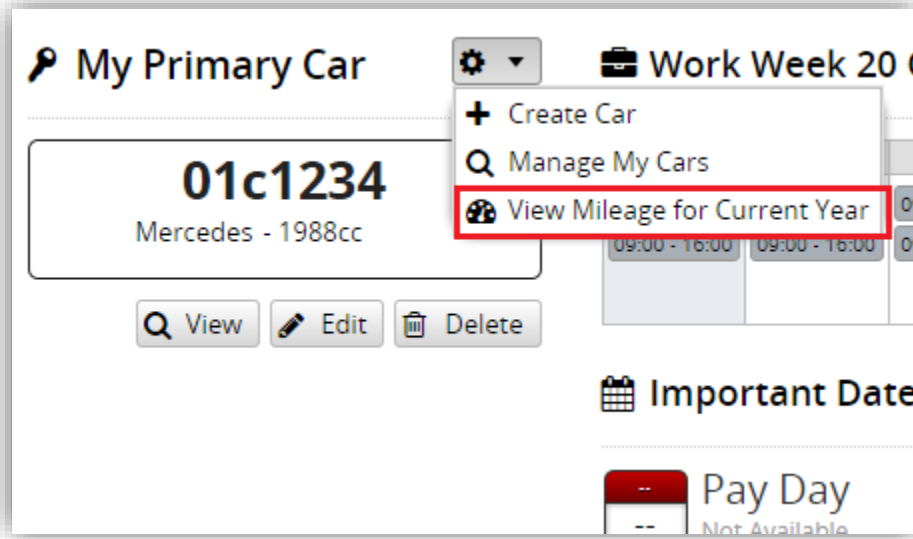

[illegible]

Data contained on this table will be available in the Client dropdown if that functionality is active and “Display in ESS is active.

16.6 MILEAGE YEAR TO DATE DISPLAY

V19.0.5

To view a claimants current miles for the year to date, navigate to the Primary Car widget

Click on the gear symbol and choose “View Mileage for Current Year”

Kilometres Details

Kilometres Year 01-JAN-14 - 31-DEC-14

Type	Units
Kilometres Paid	1375
Kilometres Approved/Submitted	0
Kilometres New/Saved	1679
Kilometres Transferred	0
Kilometres Total	3054

The resulting scheme will give a breakdown on the mileage for the year to date

16.7 EXPENSE TRIP DECLARATIONS

In order to edit the expense trip acceptance declaration message, refer to the Core | Portal Admin Settings as described in the screenshot below.

Expense Trip Acceptance Declaration		
Message	CoreExpense	I confirm that all items claimed relate to required business travel and that I possess valid car insurance for any kilometers claimed.
Parameter Code ex_submit_trip_decl_bt		

16.8 VEHICLE EXPENSE ITEMS

VERSION 20.0.9+

CoreHR have enhanced the car details area so that the claimant can provide car fuel type and insurance class when recording car details online via Portal. The same information will be available for the approver to review. The Car widget allows amendments to the properties of Fuel Type and Insurance Class. The options provided are in line with UK legislation.

Fuel Type

- E "Zero emission cars (including electric cars)",
- D "Diesel cars (all Euro Standards)" and
- A "All other Cars"

Car Insurance Class

- Social, Domestic and Pleasure,
- Commuting,
- Business use - class 1,
- Business use - class 2,
- Business use - class 3 and
- Commercial.

Note: The dropdown options (above) are hardcoded and cannot be amended.

Portal Parameters

The Portal parameters can be used to change the characteristics to:

- Hidden or Visible
- Set selection to Mandatory or Optional

In order to edit Vehicle expense trip item characteristics, the following parameters are available.

To Hide or Display Vehicle Expense Items

Insurance Class: EX_VEH_HIDE_INS_CLASS

Make insurance class a mandatory field on the vehicle screen		
	CoreExpense	Y
Parameter Code ex_veh_mand_ins_class		

The resulting change will display the dropdown option on the Insurance tab.

Car Details: 01c1234

Reporting – BI views and DB structures

```
select insurance_class_code, Fuel_type_code from ex_claimant_car
```

The following views will pull the data back from ex_ref2:

```
select * from ex_fuel_type  
select * from ex_car_insurance_class
```

(CIC is the code for insurance class, FTYPE is the code for fuel type)

To pull back the correct name when the code is passed in call the following procedures
(can be used in a view for BI)

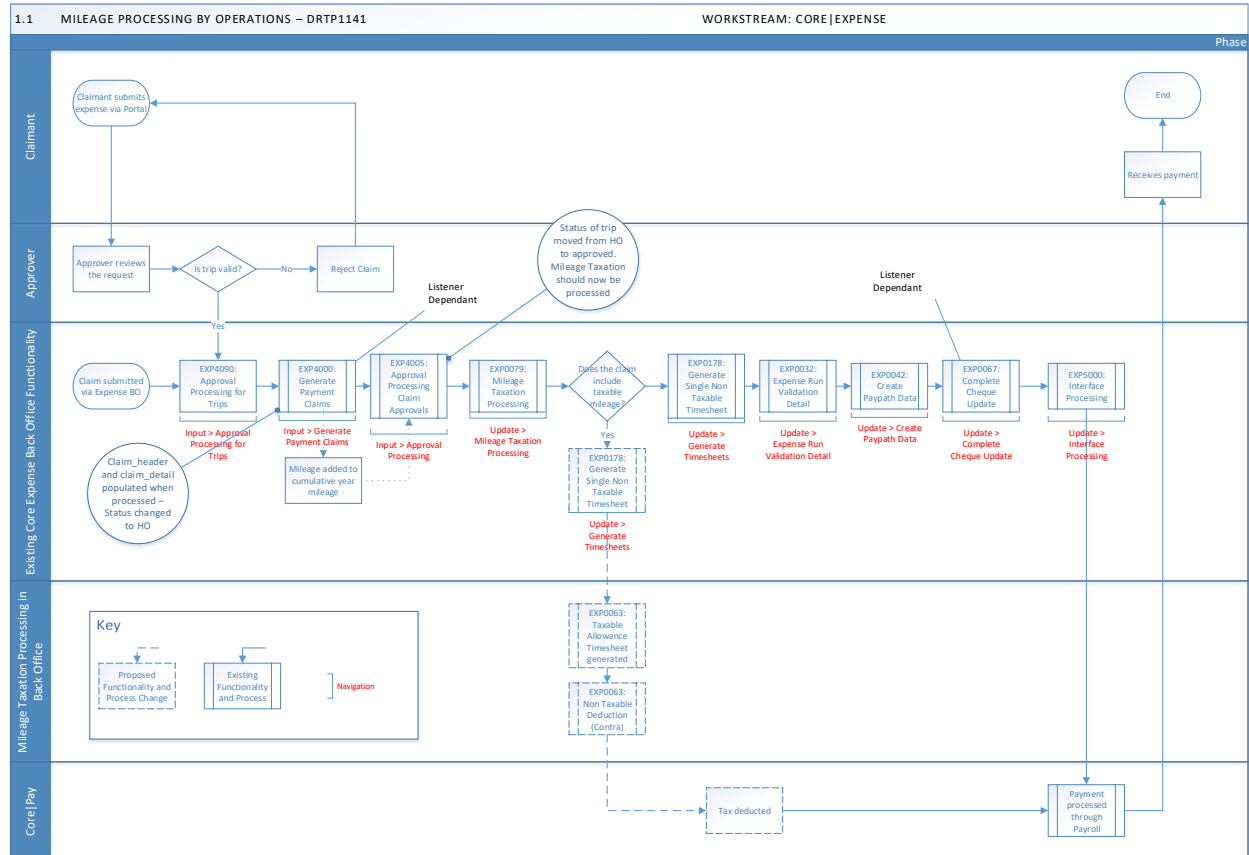

```
cp_exp_vehicle_api.get_fuel_type_desc(fuel_type_code)  
cp_exp_vehicle_api.get_insurance_class_desc(insurance_class_code)
```

17 EXPENSE CLAIM PROCESSING

There are a number of steps required to process an expense claim.

This section will explain some of the functionality which can be used by an organisation in the course of that process. Depending on how their environment is configured and how they wish to use the software will determine the steps that they take in processing an expense run. Not all steps are mandatory.

Below is a sample expense run process which includes some of the CoreExpense functionality which could be used in the processing of Taxable Mileage.

17.1 APPROVAL PROCESSING FOR TRIPS

[illegible]

- Select the relevant expense group, ensure that the status “Submitted” and “Re-submitted” are selected and press the right arrow.
- This will give you a list of all expenses that have been submitted but not approved. To view CorePortal receipts in this screen, the ‘Display Back Office Claims Only’ checkbox needs to be unselected.
- At this stage you can either select “Bulk Approval” (which will approve all the Expense Trips in the list) or you can approve or reject expense trips on a line by line basis.
- To review attached receipts select on the relevant trip and select trip detail.

17.2 GENERATE PAYMENT CLAIMS

Configuration: Input → Generate Payment Claims

Expense Group						
Expense	Group	Run No.	Run Validation Completed	Already Submitted	Submit Update	
1	Expense Group ABC	150010	☐	☐	☐	
			☐	☐	☐	
			☐	☐	☐	
			☐	☐	☐	
			☐	☐	☐	
			☐	☐	☐	
			☐	☐	☐	
			☐	☐	☐	
			☐	☐	☐	

- The generate payment claims is required to prepare and group individual trips into one expense run and claims.
- Claims are changed into a Status of “HO” (i.e On Hold)

Prerequisites

The following prerequisites are required prior to running “Generate Payment Claims”.

- “Approval Processing” must be complete
- Expense Run Validation has not already been completed

17.3 GENERATE TIMESHEETS V20.0.10

Expense Claims can be passed to Payroll as Timesheets. System configuration can control amount of timesheets per claim e.g. a timesheet per claim or timesheet per expense item in the claim. A report is generated for user to review and approve before timesheets are generated to live payroll.

Configuration Update → Generate Timesheets

Expense Group	Pay Date	Run Number	Validation Complete	Already Submitted	Rollback	Submit
1235 test expense group	27-JAN-2015	150000	☐	☐	☐	☐
1 EXPENSE GROUP	13-FEB-2015	150002	☐	☐	☐	☐
2 EXPENSE GROUP 2	27-JAN-2015	150000	☐	☐	☐	☐
3 EXPENSE GROUP 3	27-JAN-2015	150000	☐	☐	☐	☐
22 EXPENSE GROUP 22	27-JAN-2015	150000	☐	☐	☐	☐
33 EXPENSE GROUP22	27-JAN-2015	150000	☐	☐	☐	☐

Timesheets Processed 0% 50% 100% Timesheets To Process

OK Close Generate Report

Prerequisites

The following prerequisites are required prior to running “Generate Timesheets”.

- Expense Run Validation must be complete
- Only transactions with a pay method of ‘SP’ are processed
(See Reference → Reference D-L → Expense Group)

Expense Group

Group Code: 1 FAS

Company Code: 1 ? FAS

Pay Method: SP ? SALARIES

Location Code: IRL ? IRELAND

Currency Code: EUR ? Euro

- Only transactions valid in the current expense run will be processed

Report

- To preview a copy (see sample below) of the data which is to be passed to Payroll, Press the “Generate Report” button
- To send the timesheet to payroll, click on submit against the relevant Expense Group and press OK.

EXP0178 CoreExpense 20.0.10 Date:10-FEB-2015 14:36 Page: 1

Generate Timesheet to CorePay

User: COREHR Expense Group 1

Expense Group	1 Name Expense Group Abc	Expense Run Number 150009	Level Of Detail	PAY_CODE	Input Date	10-FEB-15		
Claim No	Claimant No	Claimant Name	Period	Appointment ID	Pay Code	Cost Centre	GL Code	Claim Value

Totals								
Total Claim Value for Expense Group								163.13

***** END OF REPORT *****

Configuration Logic

--Group by Taxable/Non-Taxable PayCode of Expense Item.

--1) For Non-Receipted expense codes use the Non-Taxable Pay Code for the Expense Code.

--2) For Receipted Expense codes

-- a) If Exclude Hard Copy Receipt Indicator is 'Y' then use non-taxable pay code for expense code (i.e. a receipt is not required for this receipted type of expense).

-- b) If Exclude Hard Copy Receipt Indicator is 'N' then check if a hard copy or soft copy receipt has been attached. If attached then use the non-taxable pay code. If NOT attached then use taxable pay code.

--N.B.

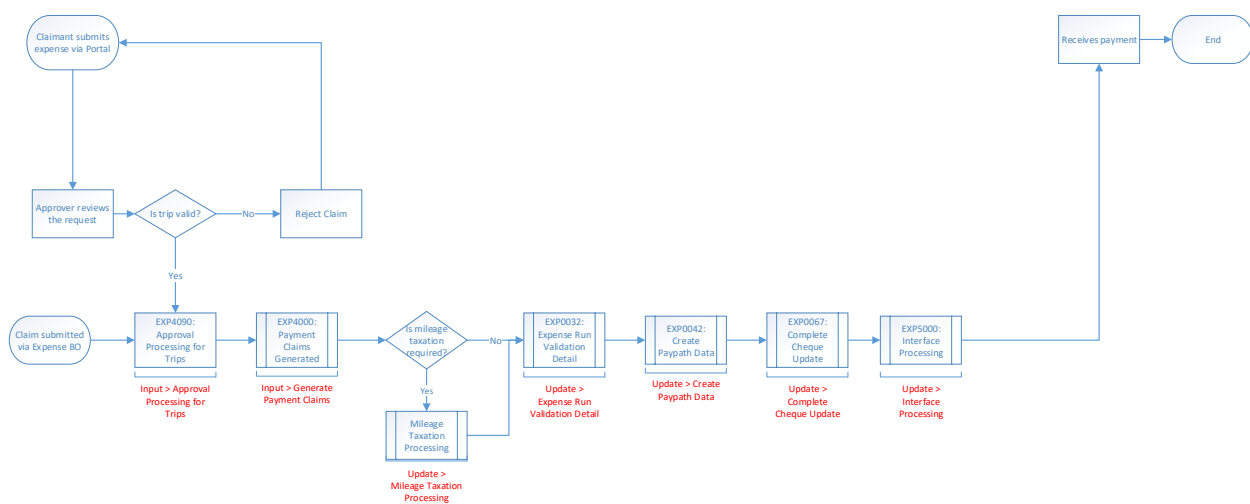

For all of above if Tax codes not set then defaults to the Default Non-Taxable Allowance Code set up for the Pay Group.

18 TAXABLE MILEAGE

V19.0.9

Core have developed functionality with the Core|Expense module to monitor company and legislative mileage thresholds and apply the appropriate actions to the employees claim should those thresholds be exceeded.

18.1 PROCESS CHART

18.2 SYSTEM PARAMETERS

When implementing Mileage Taxation Processing in Core|Expense a series of system parameters are installed which control the manipulation of data specifically for mileage taxation processing.

18.2.1 MILEAGE CALENDAR

Before mileage thresholds can be enforced, they must be able to refer to a populated Mileage Calendar to compare applicable time ranges. The screen below must be populated with a year start date and year end date for each applicable year. Cumulative mileage will be recorded against this date range. In the example below, the claimant's total mileage for the year to date will return to zero after the 31st December each year.

Configuration: Core|Expense→Reference→Reference M-R→Mileage Calendar

Start Year	End Year
01-jan-2003	31-dec-2003
01-jan-2004	31-dec-2004
01-jan-2005	31-dec-2005
01-jan-2006	31-dec-2006
01-jan-2007	31-dec-2007
01-jan-2008	31-dec-2008
01-jan-2009	31-dec-2009
01-jan-2010	31-dec-2010
01-jan-2011	31-dec-2011
01-jan-2012	31-dec-2012

Field	Data
Start Year	Enter start date of mileage year
End Year	Enter end date of mileage year

Action

Ensure that the mileage calendar is populated correctly and up to date

18.2.2 EXPENSE CALENDAR

For existing Core|Expense clients, the expense calendar should already be configured.

Configuration: Core|Expense→Reference→Reference D-L→Expense Calendar

Expense Start Year	Expense End Year
01-jan-2005	31-dec-2005
01-jan-2006	31-dec-2006
01-jan-2007	31-dec-2007
01-jan-2008	31-dec-2008
01-jan-2009	31-dec-2009
01-jan-2010	31-dec-2010
01-jan-2011	31-dec-2011
01-jan-2012	31-dec-2012
01-jan-2013	31-dec-2013
01-jan-2014	31-dec-2014

Field	Data
Start Year	Enter start date of expense year
End Year	Enter end date of expense year

Action

Ensure that the calendar will be up to date

18.2.3 EXPENSE CODE

In order to be able to reference the taxable mileage threshold table, the client's software will require an expense code specific to Mileage configured.

Configuration: Core|Expense→Reference→Reference D-L→Expense Code

Expense Code – “Codes” Tab Configuration

Expense Code

Expense Code: Multiplier:

Expense Code – “Setting” Tab Configuration

The settings tab of the expense code also needs to be configured. Please ignore the subsequent two tabs.

The screenshot shows the 'Expense Code' configuration window with the 'Settings' tab selected. The 'Expense Code' field is set to '3'. The 'Name' is 'MOTOR TRAVEL (KM)', 'Short Name' is 'KMS', and 'Payslip Description' is 'MOTOR TRAVEL (KM)'. The 'Expense Type' is 'M' with a dropdown showing 'MILEAGE'. The 'Maximum Amount' field is empty. The 'Multiplier' is set to '1'. There are checkboxes for 'From Location Mandatory', 'To Location Mandatory', 'Is Time Required', 'Trip Allowance', and 'Payment Schedule'. The 'Settings Parameters' section contains checkboxes for 'Online Indicator' (checked), 'Allowance Ind', 'Upper Limit', 'Change Value', 'Cancellation Expense', 'ESS Item Description Required', 'Exclude Hard Copy Receipt', 'Activate Travel Reasons', 'Retrospection Ind', 'Units Required' (checked), 'Overwrite Subsistence', 'On Line Receipted Expense', 'Back Office Receipt', 'Back Office Item Description Required', and 'Receipt Items Pop Up Message'. There is a text input field for 'Receipt Items Pop Up Message'. At the bottom, there are dropdowns for 'Carbon Footprint', 'Additional Information', and 'Expense Location', along with a 'Mandatory' checkbox.

Field

Data

Online Indicator	Check this box to allow the mileage expense code appear in Portal
Units Required	Check this box to allow the claimant enter the number of miles

Action

Ensure that the expense code is configured as per configuration guide

18.2.4 TAXABLE AND NON TAXABLE PAY CODE

In order to populate timesheets and calculate taxable mileage, create taxable and non-taxable pay codes. This is done through Core|Pay.

Maintain Pay Codes

Pay Code ? Description
As Gaelige

Field	Data
Company Code	Enter Company Code and Press "Enter"
Kilometre Expense Code	Enter Kilometre (Mileage)Expense Code
Taxable Allowance	Enter Taxable Mileage Paycode
Non Taxable Deduction	Enter Non Taxable Mileage Paycode

Once populated, Press Save

Action

Ensure that the expense parameter screen is populated with the previously created expense code, mileage taxable allowance pay code and non-taxable pay code.

18.2.6 CLIENT SPECIFIC MILEAGE

These thresholds refer to those which are imposed by the client.

Kilometres							
Scale Code	Name	Engine <---- From To ---->	Capacity	Date Effective	Kilometres Threshold	Kilometres Rate	F.C.A. Ind.
		1	1200	01-JAN-2003	6437	.5216	
		1	1200	01-JAN-2003	160898	.2640	
		1201	1500	01-JAN-2003	6437	.6085	
		1201	1500	01-JAN-2003	160898	.3031	
		1501	9999	01-JAN-2003	6437	.7234	
		1501	9999	01-JAN-2003	160898	.3375	
		1	1200	01-JUL-2005	6437	.5216	
		1	1200	01-JUL-2005	160898	.2640	
		1201	1500	01-JUL-2005	6437	.6085	
		1201	1500	01-JUL-2005	160898	.3031	
		1501	9999	01-JUL-2005	6437	.7721	
		1501	9999	01-JUL-2005	160898	.3567	
		1	1200	05-MAR-2009	4000	.6294	
		1	1200	05-MAR-2009	99999	.3413	
		1201	1500	05-MAR-2009	4000	.7442	

Configuration: Reference->Reference M-R->Mileage

Field	Data
Engine Capacity From	Enter the low range of mileage band
Engine Capacity To	Enter the high range of mileage band
Date Effective	
Kilometres Threshold	Enter the applicable mileage distance

Kilometre Rate	Enter the applicable mileage rate
F.C.A ind.	Leave blank

Action

Populate the table with information mileage rates set by the company

18.2.7 CIVIL SERVICE MILEAGE

In order to maintain taxable mileage thresholds, the following form must be populated.

Civil Service Kilometres Maintenance

Search
Company Code: ALL COMPANIES

Company Code	Company Car	Vehicle Type	Mileage Fuel Type	Engine Capacity <--From To-->	Expense Code	Description	Date Effective	Kilometres Threshold	Rate	
ALL COMPANIES				1	1138	2100	CAR TRAVEL MILEAGE	01-JAN-1998	6000	.2944
ALL COMPANIES				1	1138	2100	CAR TRAVEL MILEAGE	01-JAN-1998	8000	.2774
ALL COMPANIES				1	1138	2100	CAR TRAVEL MILEAGE	01-JAN-1998	12000	.2433

Configuration: Reference->Reference C-C->Civil Service Mileage

Operational Rules:

Below outlines some of the key rules supported by description and notes

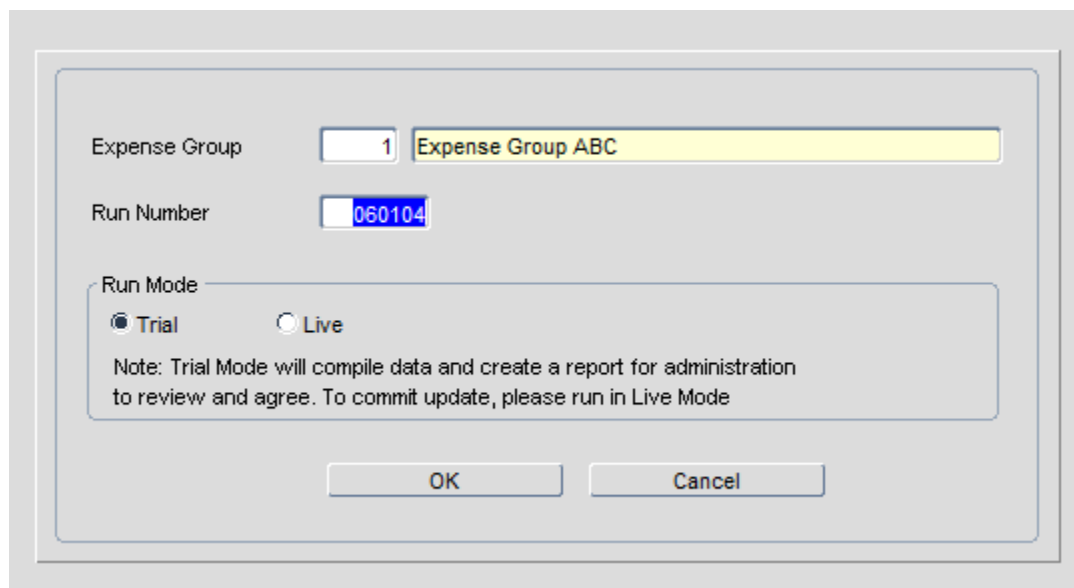

Item	Description	Note
Company Code	Rates can be configured and assigned at expense company level. Leave blank to apply rates at enterprise level	Available from V23
Company Car	Can specify rates based on company or private car usage.	Available from V25
Vehicle Type	Vehicle Type list can be dynamically created and assigned to vehicles and travel rates. Original scope would include Car & Vans, Motorcycles and Bikes.	Available from V25
Mileage Fuel Type	Contains a predefined list of fuel types.	Available from V25
Engine Capacity	Configure rates based on Engine Capacity or CC's range.	
Expense Code		
Date Effective	Provide effective date of rates.	
Kilometers Threshold	Configure rates based on kilometers threshold traveled.	
Rate	Specify rate to 4 decimal places	

Action

Ensure the form populated correctly and up to date with government issued civil service mileage information. Standard mileage and civil service mileage rates facility must be kept in sync for all scenarios otherwise discrepancies will occur in taxable mileage calculations.

18.3 MILEAGE TAXATION PROCESSING

Once the payment claims have been processed and approved the mileage taxation data can be generated for review. The data can be processed in Trial mode first which allows the administrator to review the data before the Live option is taken and timesheets are generated to payroll. See below a screen shot for illustration purposes.

The screenshot shows a dialog box titled "Mileage Taxation Processing". It contains the following fields and options:

- Expense Group:** A text box containing the number "1" and a dropdown menu showing "Expense Group ABC".
- Run Number:** A text box containing the number "060104".
- Run Mode:** Two radio buttons, "Trial" (selected) and "Live".
- Note:** A text box containing the message: "Note: Trial Mode will compile data and create a report for administration to review and agree. To commit update, please run in Live Mode".
- Buttons:** "OK" and "Cancel".

Configuration: Update->Mileage Taxation Processing

Action

- Enter the expense group and press return. The current open run number will then be displayed.
- Generate the data in trial mode first and review the report output. Trial mode can be taken many times.
- Generate the data in "Live" mode and review the report output. Once Live mode is taken the data is finalised, taxation mileage cumulative are updated and timesheets are sent to payroll. Live mode can only be taken once.

See below a screen shot of the report output for illustration purposes.

EXP0079		CoreExpense 20.0.7						05 DEC 2014		Page 1

18.4 WORKED EXAMPLES

Example 1

The approved mileage allowance that can be paid by an employer free of tax in the current tax year.

First 10,000 miles	Above 10,000 miles
45p per mile	25p per mile

Michael is employed by the ACME Company in Manchester and uses his car for business travel. The company has agreed to pay 40p per mile to John in the current tax year.

During his first 6 months of the year, Michael travels 7,000 miles.

Michael after 7000 miles		
Michaels mileage to date	7,000	
Multiplied by company rate per mile	40p	
Total paid by company to Michael by ACME		£2,800

AMAP rate <10,000 miles	45p	
HRMC Approved		£3,150

Therefore, Michael has been paid $7,000 \times 40p = £2,800$. The AMAP rate is set at 45p per mile for mileage below 10,000 miles. Therefore Michael has an approved mileage allowance of $7000 \times 45p = £3150$. He has not exceed this limit and therefore will not be subject to tax on his mileage to date.

During his last 6 months of the year, Michael travels an additional 9,000 miles to bring his total to 16,000 miles for the current tax year.

Michael after 16000 miles		Approved
Michaels mileage to date	16,000	
Company rate per mile	40p	
Total paid by company to Michael	£6,400	
AMAP Rate <10,000 miles	45p	£4,500
AMAP Rate >10,000 miles	25p	£1,500
Total Approved		£6,000

In the current tax year, Michael has been paid $16,000 \text{ miles} \times 40p = £6,400$. Therefore Michael has an approved mileage allowance of $10,000 \text{ miles} \times 45p = £4500$ and $6000 \text{ miles} \times 25p = £1,500$; a total of £6,000.

Michael after 16000 miles

Total Paid by company to Michael	£6400
Less Total Approved	£6000
Taxable Portion	£400

As his payments of £6,400 have exceed his tax free mileage allowance of £6,000, the taxable portion is £400.

Example 2

Jane is employed by the EMCA Company. The company has agreed to pay her 60p per mile. Jane travels 4,000 miles.

Jane after 4,000 miles

Jane's mileage to date	4,000	
Multiplied by Company Rate per mile	60p	
Total Paid by company to Jane by EMCA		£2,400
AMAP Rate <10,000 miles	45p	
HRMC Approved		£1,800

Therefore, Jane has been paid 4,000 miles x 60p = £2,400. The AMAP rate is set at 45p per mile for mileage below 10,000 miles. Therefore Jane has an approved mileage allowance of 4000 x 45p = £1,800. As the company are paying more than they approved rate

Jane after 4000 miles	
Total Paid by company to Jane	£2400
Less Total Approved	£1800
Taxable Portion	£600

As her payments of £2,400 has exceed her tax free mileage allowance of £1,800, the taxable portion is £600.

18.5 CLAIM PAYMENT TIMESHEET MANIFESTATION

Taking Jane from Example 2 above to demonstrate the manifestation of her payment through CoreExpense and CorePay and its associated timesheets. Assuming that all of Jane's mileage was being processed in one Expense run, the following scenario will play out.

Jane's taxable portion	
Total Paid by company to Jane	£2,400
Approved Mileage	£1,800
Taxable Portion	£600

Scenario A: Jane paid and mileage taxation processed via CorePay

Three timesheets are generated and sent to CorePay

Process		Amount	Description of Process
Mileage Taxation Processing	Taxable Allowance timesheet to CorePay	£600	The taxable mileage portion of the £2400 is sent to CorePay. Tax is placed on this amount and deducted on the payslip
	Non Taxable Deduction timesheet to CorePay	£600	Once taxation has been applied to the Taxable Allowance, remove the taxable allowance using a deduction
Claim Payment	Non Taxable Timesheet to CorePay	£2,400	Total value of the claim sent to CorePay for payment (Generation Timesheet process)

Scenario B: Jane paid via Core|Expense and mileage taxation processed in Core|Pay

Two timesheets are sent to Core|Pay

Process		Amount	Description of Process
Mileage Taxation Processing	Taxable Allowance timesheet to CorePay	£600	The taxable mileage portion of the £2400 is sent to CorePay. Tax is placed on this amount and deducted on the payslip
	Non Taxable Deduction timesheet to CorePay	£600	Once taxation has been applied to the Taxable Allowance, remove the taxable allowance using a deduction
Claim Payment	CoreExpense Payment	£2,400	Total value of the claim processed CoreExpense for payment through preferred method of pay (Cheque, Credit Transfer etc)

Scenario C: Claim paid via CoreExpense without Taxation

If Jane had only submitted mileage which was within the threshold and wasn't taxable, no timesheets are required (Neither "Mileage Taxation Processing" or "Generate Timesheet" Functionality used in Expense Run Process)

Scenario D: Claim paid via CorePay without Taxable Mileage

If Jane had only submitted mileage which was within the threshold and wasn't taxable and was being paid through CorePay, only one timesheet would be sent to payroll from "Generate Timesheets" process completing total payment of the claim.

18.6 MID-YEAR IMPLEMENTATION OF TAXABLE MILEAGE

In order to facilitate a mid-tax year implementation, the following fields will need to be populated with cumulative processed data recorded up to the implementation date.

Table	Column_Name	Notes
Ex_week_mileage_cum	WEEK_NO	Enter any week number prior to the current run
Ex_week_mileage_cum	PERIOD_445	Enter same value as Week_No
Ex_week_mileage_cum	CLAIMANT_NO	Enter Claimant Number
Ex_week_mileage_cum	CLAIM_NO	Enter a Claim Number prior to the current one
Ex_week_mileage_cum	THIS_MONTH_MILES	Enter the total miles this year

Ex_week_mileage_cum	THIS_MONTH_COST	Enter total cost of miles today based on company rate
Ex_week_mileage_cum	MILES_YTD_COST	Enter total cost of miles to date based on company rate
Ex_week_mileage_cum	CS_COST_YTD	Enter total cost of miles to date based on government rate
Ex_week_mileage_cum	TAX_TO_DATE	Subtract CS_COST_YTD from MILES_YTD_COST and Enter here
Ex_week_mileage_cum	TAX_THIS_MONTH	Enter same value as TAX_TO_DATE
Ex_week_mileage_cum	PREV_TAX	Enter 0
Ex_week_mileage_cum	TAXED_AMOUNT	Leave blank
Ex_week_mileage_cum	NO_OF_FCA	Leave blank

Example

WEEK_NO	PERIOD_445	CLAIMANT_NO	CLAIM_NO	THIS_MONTH_MILES	THIS_MONTH_COST	MILES_YTD_COST	CS_COST_YTD	TAX_TO_DATE	TAX_THIS_MONTH	PREV_TAX	TAXED_AMOUNT	NO_OF_FCA
60055	60055	000117	4391	3291	3128.1	3128.1	2369.52	758.58	758.58	0	(null)	(null)
60056	60056	000117	4399	500	475.25	3603.35	2729.52	873.83	115.25	758.58	(null)	(null)

The business may require its employees to record the VAT amount associated with expense items when claiming expenses. This section will outline the system configuration and features that are required to record and report on VAT information. The facility is addressed taking multiple personas into account i.e.

- Claimant
- Proxy Claimant
- Approver
- Administration

The claimant should be aware of the rules for recording VAT when making relevant expense claims. The claimant will have access to a link opening a file which will give the claimant an overview of VAT and how to complete this section. On approving the VAT information, the approver will have visibility of the data before they can review and accept the claim. The VAT information will be available for reporting to accounts through the GL and also through business intelligence.

19.1 CONFIGURATION STEPS

The following steps must be followed to complete the VAT configuration.

19.1.1 CREATE A VAT CODE

Create a VAT Code and assign a description. Indicate if the VAT percentage calculation should be performed by default when claimant is recording an expense claim. Otherwise the claimant will be required to key in the Vat amount. See below for detail on rule base.

% calculation on:

VAT value will be calculated as percentage of expense value as contained on VAT code.

See sample calculation rule below.

If the vat is 23% then divide the gross amount (entered on portal) by 1.23 to get the net value. The gross -net = vat which should calculate in the VAT field.

Example:

VAT is 20%

Claim Value is £6.60

$$6.60 / 1.20 = 5.50 - 6.60 = 1.10$$

VAT = **1.10**

% calculation off:

VAT value will default to same value as expense value.

Configuration: Core|Expense→Reference→Reference S-Z→Vat Code

19.1.2 ASSIGN A VAT RATE

Assign a rate to the VAT code. This rate is the percentage of VAT calculated on the expense item.

Provide a date effective outlining when this rate will become effective.

Configuration: Core|Expense→Reference→Reference S-Z→Vat Rate

19.1.3 ASSIGN VAT CODE TO EXPENSE CODES

Assign a VAT code to the Expense code/type. All expenses claimed using this Expense Code/type will use the characteristics associated with the VAT code.

Configuration: Core|Expense→Reference→Reference D-L→Expense Code

19.1.4 ASSIGN A DOCUMENT TO VAT HELP LINK.

The business can provide the claimant with a Guide on VAT via a link on portal when recording expense items. The source information must be recorded on a vat.pdf and stored in the Coredocs folder on the file server. See below portal parameter configuration.

Description: File Path and document Name for document used for **VAT** explanation.

Parameter: Parameter Code | cp_my_vat_doc

See link below for sample.

<https://coresaasp3.corehr.com/coredocs/vat.pdf>

19.2 PORTAL USAGE

Once the configuration is complete, claimant and approvers will have the ability to record and approve VAT amounts where appropriate and per operational rules.

19.2.1 CLAIMANT

When recording an expense item that attracts VAT relevant fields will become available to the claimant for use. See below a sample screen shot for illustration purposes.

Expense Details

☐ Is this an expense item with foreign details?

Expense Type	Business Entertainment	200	Value
VAT	18.18	Is the Vat Correct ?	
Dates	21/06/2017	21/06/2017	
Times	From	To	
Higher Grade	Select...		
Location	From	To	
Description	Enter Description...		

▼ Cost Centre & Analysis Codes

0.00

total claimed

0

items

Value

- contains the expense item amount.

VAT

- contains the VAT amount calculated by the system or manually entered by the claimant. See configuration rules earlier in the chapter.
- If for the Expense Type, receipt is mandatory and an expense code is assigned but no receipt is supplied then the VAT field will be displayed but the amount cannot be entered and will contain a 0 as default. Otherwise, if a receipt is attached then it will default to the claim value enter or a % of the claim value. See rules of configuration. The value will be displayed and updateable.

Help link

- Provides a guide to the claimant when recording VAT. The content and storage of the document are controlled by the business. The link terminology is language packed so can be controlled by the organisation.

19.2.2 PROXY

The behaviour and user interface for the proxy claimant will replicate that of the claimant so same characteristics of the previous section can be applied.

19.2.3 APPROVER

Once the VAT is recorded against a claim the approver will have the ability to view the VAT amount, review and action the request as per normal process i.e. accept or reject.

19.3 ADMINISTRATION

The administration department will have the ability maintain and report VAT information

19.3.1 MAINTAIN VAT DATA

The admin department will also have the ability view and enter VAT against expense items. See below screen shot for illustration purpose.

Configuration: Core|Expense→Input→Create\Maintain Expense Items

19.3.2 BUSINESS INTELLIGENCE REPORTING

EXBI_TRIP_DETAIL	
EXBI_CLAIM_DETAILS	
EXBI CLAIM HISTORY DETAILS	

The General ledger facility will allow the admin department to include the VAT amount when reporting to third party accounts. Before this can happen the GL facility must be updated to include the Vat field for reporting. See below screen shot for illustration purposes.

Configuration: Core|Expense→Reference→Reference D-L \GL Parameters

A separate Contra entry may be required for reporting on the total VAT. The Vat Expense Control Accounts facility can be used to configure this requirement. See below screen shot for illustration purposes.

The screenshot shows the 'Maintain GL Parameters' window. At the top, there is a toolbar with icons for navigation and actions. Below the toolbar, the 'Maintain GL Parameters' title is displayed. On the right side, there is a 'Select Detail' dropdown menu with the following options: 'Expense Control Accounts', 'Matrix Classifications', 'Company Level Matrix', and 'VAT Expense Control Accounts'. The 'VAT Expense Control Accounts' option is currently selected.

The main area of the window is titled 'Expense GL Code Matrix Maintenance'. It contains a table with columns for 'Expense Group', 'Category', 'Sub Category', and 'GL Code'. The table is currently empty.

Overlaid on the main window is a dialog box titled 'VAT Contra Entry'. This dialog box contains a table with the following columns: 'Expense Group', 'Cost Centre', 'Category', 'GL Expense Code', 'Analysis code 1', 'Analysis code 2', 'Analysis code 3', and 'Project'. The first row of the table is populated with the following data: '100' for Expense Group, 'EXPENSE GROUP (UK)' for Cost Centre, 'DF01' for Category, 'ST_P' for GL Expense Code, and '16906' for Analysis code 1. The remaining rows are empty.

At the bottom of the dialog box, there are 'OK' and 'Cancel' buttons.

19.3.4 AUDITING

The Audit facility will provide for this field in its audit when relevant data item is activated. See below for details.

Table Name	Insert	Update	Delete
ex_claim_detail	Y	Y	Y

20 SYSTEM PARAMETER REFERENCE MATRIX

20.1 PARAMETERS

The following matrix is a quick reference guide to commonly used parameters which alter the functionality within the CoreExpense back office and portal module.

Tab and (Sub Section)	Parameter Name	Description	Relationship/Dependency
<i>Common()</i>	NA	<i>No configuration required</i>	NA
Common2 (Trip Description Message)	Display Trip Description Message	Display trip description message in Portal	None
Common2 (ESS Subsistence Restriction)	Prevent increase in 5/10 Hours	Prohibit claimants from amending system calculated 5/10/24 hour subsistence rates due.	None
<i>Back Office()</i>	NA	<i>No configuration required</i>	NA
ESS Params (Approver Set Up)	Approval List Window	If active, all active (ticked) approvers will be available to the claimant in approver drop down option in Portal	NA
ESS Params (Approver Set Up)	Link Approver to Cost Centre	If active, the approval method that the claimant is subject to will be based on what Cost Centre they are associated with. Only relevant Approvers will be available to the Claimant	
ESS Params (Approver Set Up)	Link Approver to Cost Centre link Scale Code	If active, the approval method that the claimant is subject to will be based on the Cost Centre/Scale Code they are associated with. Only relevant Approvers will be available to the Claimant	
ESS Params (Approver Set Up) V20.0.0	Multi-Level Approvals and Workflow	If active, the Approval method will be linked to the Event Management Processes created by the client in CoreHR. The approval path will be dependent on the clients own set up.	CoreHR Event Management Set Up

ESS Params (Client Specific)	Link Cost Centre to Agresso	Enables Agresso feed to being primary source of relationship between cost centre and role -	Agresso File Feed in place API configured in CORE Personnel
ESS Params (Display Items)	Display Outstanding Advance	If active, show the claimant the amount outstanding from previous advance received	None
ESS Params (Display Items)	Return Trip Option		
ESS Params (Display Items)	Display Claims YTD	If active, show the claimant the total sum of claims in the current calendar year	
ESS Params (Display Items)	Allow Soft Copy Receipt	If selected the claimant will be permitted to attach a soft copy receipt	
ESS Params (Display Items)	Display Overnight Ind.		
ESS Params (Display Items)	Display Currency Rate Pop Up		
ESS Params (Forward Approver Set Up)	Forward Approval Indicator V20.0.1	If active, approvers will have the option to manually divert claims to a different approver. Only those set up as active approvers in Claimant Approvers will appear in the list.	
ESS Params (Forward Approver Set Up)	Forward Approval Window		
ESS Params (Currency Details)	Currency Rates Mandatory	If active, the system will force the claimant to input currency rates for the trip (Foreign Travel only)	
ESS Params (Car Details)	Car Validation	If active, the claimant must have their car approved by an approver	

ESS Params (Car Details)	ESS Car Insurance Validation	If active, the claimant must have their car insurance details approved by an approver	"Car Validation" parameter must be active
ESS Params 2 (Display Approver Number/Claimant Number)	Turn off Claimant and Approver Number	If selected, disable the displaying of employee numbers when displaying employee name in dropdown lists.	None
ESS Params 2 (Overnight Plus Additional Amount Message)	Display Overnight Plus Messages [free text field]		
ESS Params 2 (Claimant Car insurance Expiry Reminder)	Reminder when insurance expiry date is 1 month or less [free text reminder message]	If selected, the claimant will be informed when submitting a claim of the impending insurance expiry
