1.2	11 th February 2022	Isabelle Grey	Addition of Secure Distribution Settings

1. Overview

1.1. Purpose of the Guide

The purpose of this document is to provide guidance on how to define the file name format of the bank files for a company.

Items covered include:

- How to add a Bank File setting
- How to edit a Bank File setting
- How to delete a Bank File setting
- How to send a Bank File to a secure server location
- How to configure SFTP

1.2. What Bank File Settings can be Configured

A bank file is the instruction sent to the bank to pay employees, this can be in varying formats. The Bank File is used to select the type of file generated, as each bank has different file requirements.

When a bank file is generated at the end of each payroll period 3 files are created:

1. PDF
2. CSV
3. File to send to the bank

The new bank file settings functionality allows a user to customise the file sent to the bank and the .csv. It does not customise the .pdf file. It customises:

1. File Name (bank file and .csv).
2. File extension (bank file).

Note:

SEPA configuration is currently not included in this new feature and the file name and extension cannot be amended at this time.

3. Location of bank file (report centre or server location).
 - The server location requires DBA set up and incurs costs.
 - Customers can configure only one server location.

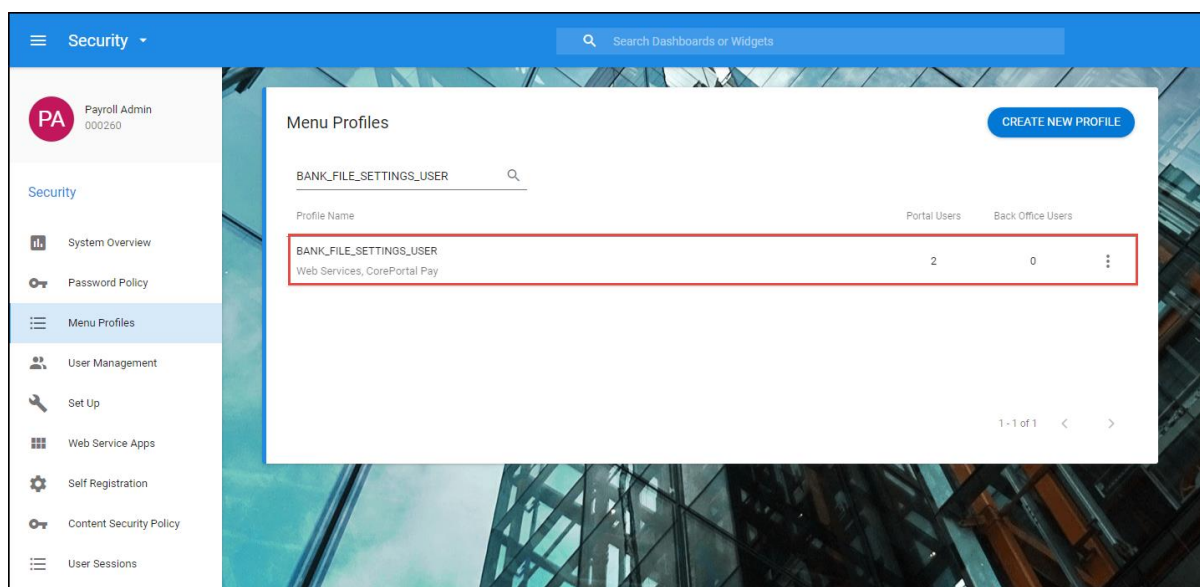

2. Provide Access to Bank File Settings Configuration

2.1. Menu Profile Access

The below Menu Profile enables all available menu options by default. The menu profile can be edited to remove options not required for your organisation. Alternatively, you can create a new Menu Profile from scratch or copy and edit the below.

System	Menu Profile
CorePortal Pay	BANK_FILE_SETTINGS_USER

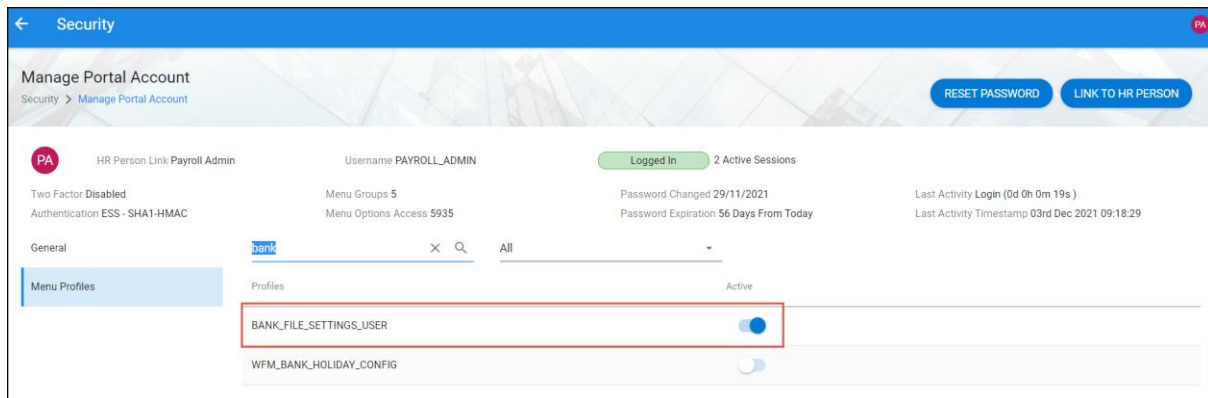

The below screenshot shows this Menu Profile in Security.

Status	Impact
Enabled	The user will have full view and edit access to the Bank File Setting screen
Disabled	The user can still access the screen, but 'You do not have access to this screen' message will be displayed.

Payroll: Bank File Naming & Secure Distribution Settings

The below screenshot shows the bank file settings Menu Profile enabled on a user's Portal account.

2.2. Menu Options Required

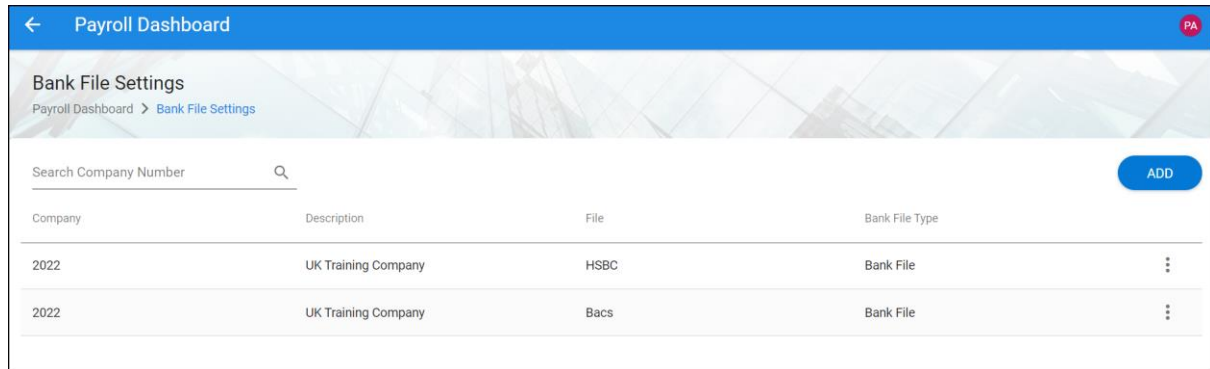

Menu Options Required – Bank File Settings Screen

Menu Option	Description	System
Settings – Bank File Settings	MAIN MENU - Settings > Settings – Bank File Settings	CorePortal Pay
Create settings outputfiles	Payroll > Create settings outputfiles	Web Services
Delete settings outputfiles	Payroll > Delete settings outputfiles	Web Services
Get settings outputfiles	Payroll > Get settings outputfiles	Web Services
Update settings outputfiles	Payroll > Update settings outputfiles	Web Services

3. Maintain Bank File Settings

To add, edit or delete a Bank File Setting: Go to:

Payroll Dashboard > Settings > General > Bank File Settings

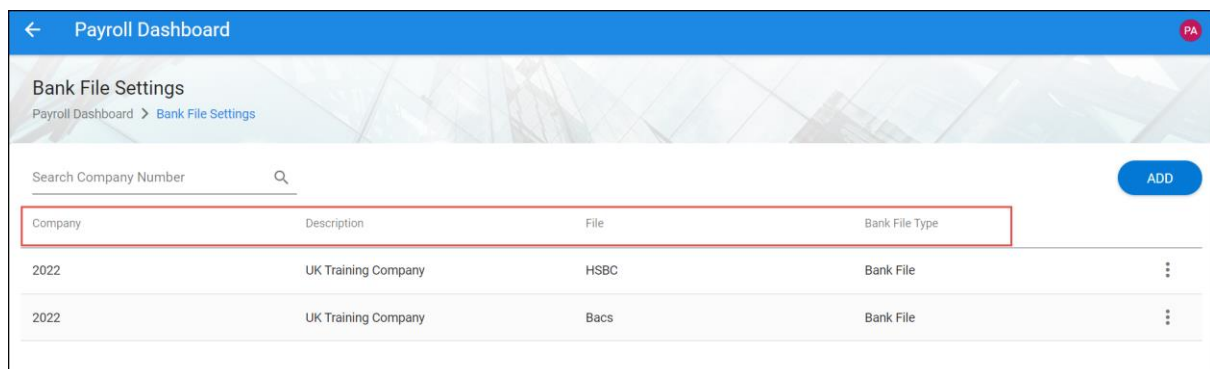

Company	Description	File	Bank File Type	
2022	UK Training Company	HSBC	Bank File	⋮
2022	UK Training Company	Bacs	Bank File	⋮

A client may have different Bank File Settings per company and can choose to configure as many as is required. The default for a bank file is a PDF, CSV and DAT file sent to the bank.

The Bank File Settings screen displays all currently configured settings which can be added to, edited or deleted. Each code consists of:

- Company
- Description
- File
- Bank File Type

Company	Description	File	Bank File Type	
2022	UK Training Company	HSBC	Bank File	⋮
2022	UK Training Company	Bacs	Bank File	⋮

3.1. Add a Bank File Setting

To add a new Bank File Setting:

1. Go to: *Settings > General > Bank File Settings*
2. Click the blue **Add** button.

Payroll Dashboard

Bank File Settings

Payroll Dashboard > Bank File Settings

Search Company Number

ADD

Company	Description	File	Bank File Type
2022	UK Training Company	HSBC	Bank File
2022	UK Training Company	Bacs	Bank File

3. Enter Output File Details

Add Bank File

Payroll Dashboard > Bank File Settings > Add Bank File

Output File Details

Company* Bank File Type* Bank File File Type*

File Name Format

Field 1* Field 2* Field 3* Field 4*

Field 5*

Extension*

Field	Description
Company (mandatory)	Select the company from the drop down
Bank File Type (mandatory)	Bank File prepopulated
File Type (mandatory)	Select the file type from the drop down

4. Enter File Name Format

Add Bank File
Payroll Dashboard > Bank File Settings > Add Bank File

Output File Details

Company*

Bank File Type*
Bank File

File Type*

File Name Format

Field 1*

Field 2

Field 3

Field 4

Field 5

Extension*

Field	Drop Down Option	Description
Field 1 (mandatory)	Date Format	<i>Date format</i> field appears - Select date format from drop down menu
	Pay Group	Pay group code will be used
	Period	Payroll Period will be used where the payroll period is the same for all pay groups generated
	Period and Run Number	Payroll Period and the supplementary run number (UK only)
	Sequence	Versioning
	Text	<i>File name text</i> field appears - Free text box
Field 2-5	Same options as <i>Field 1</i>	Optional additional fields
Extension (mandatory)		Free text field max 9 characters

Note:

Field options can be selected multiple times. Any combination of field types can be used in any order. Fields are separated by an underscore in the file name.

5. Enter File Attributes

Field	Drop Down Option	Description
Location Type (mandatory)	Sever Location	This option is set up by DBA and is a chargeable feature
	Report Centre	Default setting

6. Click Save

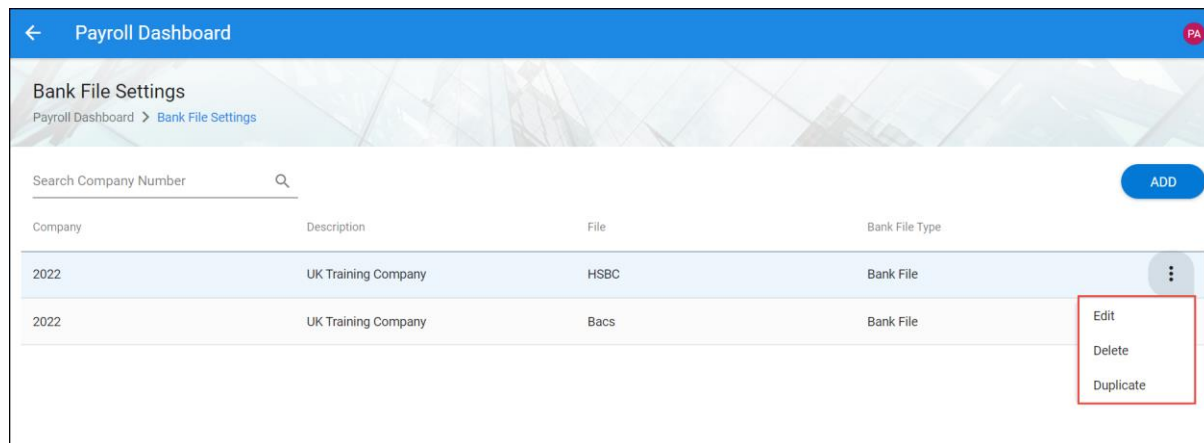

The screenshots below show a selected bank file setting and how this displays in the report centre.

Report Centre

▶ Bank File (ABC Company)							OPEN ALL

3.2. Edit/Delete a Bank File Setting

To edit a Bank File Setting:

1. Click the  button
2. Click **Edit or Delete**

3. To Edit overwrite the relevant data on the *Bank File Setting* screen
4. Click **Save**

4. Configuring Secure File Transfer Protocol

SFTP, or Secure File Transfer Protocol, is a secure file transfer protocol that uses secure shell encryption to provide a high level of security for sending and receiving file transfers.

4.1. Configure SFTP

To configure these you will need to liaise with your account manager who will contact the DBA:

Parameter Code	Parameter Description	Current Value
py_sftp_dba_log_email	DBA Email to send transfer/SFTP/SSH success/fail logs to.	Email for notifications
py_sftp_enc_key	Whether encryption is used or not.	Must be set up by DBA
py_sftp_username	Username used for SFTP/SSH transfer of bankfile. Default is corehr_user.	User name required
py_sftp_ip_address	IP Address to transfer/SFTP/SSH bankfile output.	IP Address
py_sftp_folder	Folder location on destination IP for transfer/SFTP/SSH bankfile output.	Folder in secure location
py_sftp_client_log_email	Client Email to send transfer/SFTP/SSH success/fail logs to.	Email for notifications

 Note:

This will need to be set up and linked by DBA. With the exception of the client log email which can be configured.

 Note:

If DBA log email is left blank this will default to client log email. Which can result in duplicate email notifications.

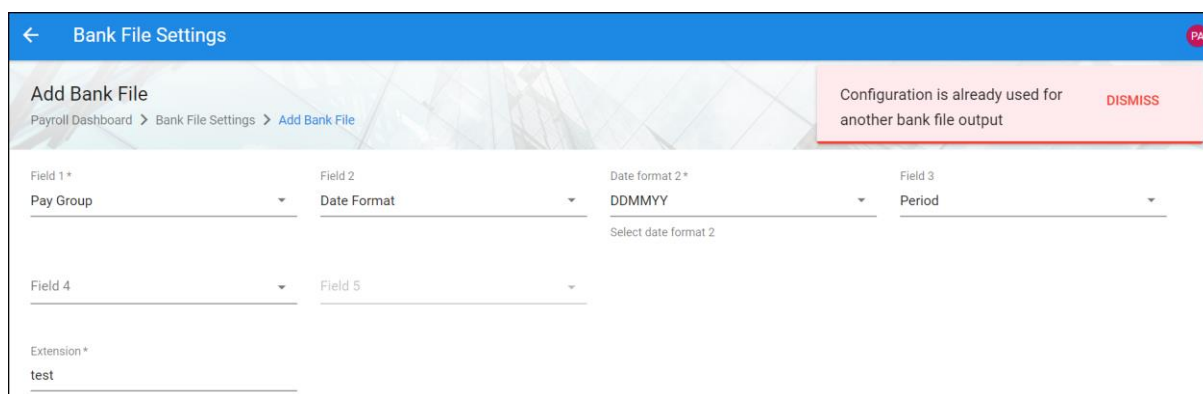

4.1.1. Configure SFTP Email

1. Go to: *Administrator Dashboard > Site Manager > Admin Settings*
2. Search for *py_sftp_client_log_email*
3. Click **Edit**
4. Enter an email address into the value field
5. Click **OK**

5. Frequently Asked Questions

5.1. Error Message - Configuration is Already Used for Another Bank File Output

A company needs the 3 fields in the output file details section to be unique. This error message will appear if the details are not unique:

The screenshot shows the 'Bank File Settings' interface. At the top, there's a blue header with a back arrow and the title 'Bank File Settings'. Below the header, the main content area is titled 'Add Bank File' with a breadcrumb trail: 'Payroll Dashboard > Bank File Settings > Add Bank File'. A red error message box is displayed at the top right, stating 'Configuration is already used for another bank file output' with a 'DISMISS' button. The form contains several fields: 'Field 1*' (Pay Group), 'Field 2' (Date Format), 'Date format 2*' (DDMMYY), 'Field 3' (Period), 'Field 4', 'Field 5', and 'Extension*' (test). There is also a 'Select date format 2' dropdown.

5.2. SEPA

When a company has been configured to use SEPA, changing the bank file settings using this new feature will not be taken into account when the bank file is generated. SEPA bank files will remain as SEPA.XML.
