1. Overview

1.1. Purpose of the Guide

The purpose of this document is to provide guidance on how to configure the absence pay parameters relating to the occupational absence module in Payroll.

These parameters allow you to configure:

- General Parameters.
- Absence Types.
- Absence Rules.
- Absence Categories – and associate absence rules to absence categories.
- Absence Pay Codes.

Note:

- The occupational absence module is highly configurable and customised to individual customer requirements at the implementation stage.
- It is advisable to seek consolation before updating any absence pay parameters in Payroll, as any updates may have unintended consequences on payroll absence calculations.

1.2. What is the Occupational Absence Module?

The Occupational Absence module allows organisations to set up their occupational absence (absenteeism) policies so that pay can be assigned to employee absences per the organisation's requirements.

Example:

The Occupational Absence module can be configured to ensure that full-time permanent workers who have taken over 30 sick leave days during a 12-month period, only receive half pay for the next sick leave day taken.

Note the following points:

- An organisation may have different absence procedures for different profiles of employees, such as:

Employee Category	Entitlement
Permanent Employees	Entitled to 30 days sick leave at full pay over a 12-month period.
Fixed-Term Employees	Entitled to 21 days sick leave at full pay over a 12-month period.

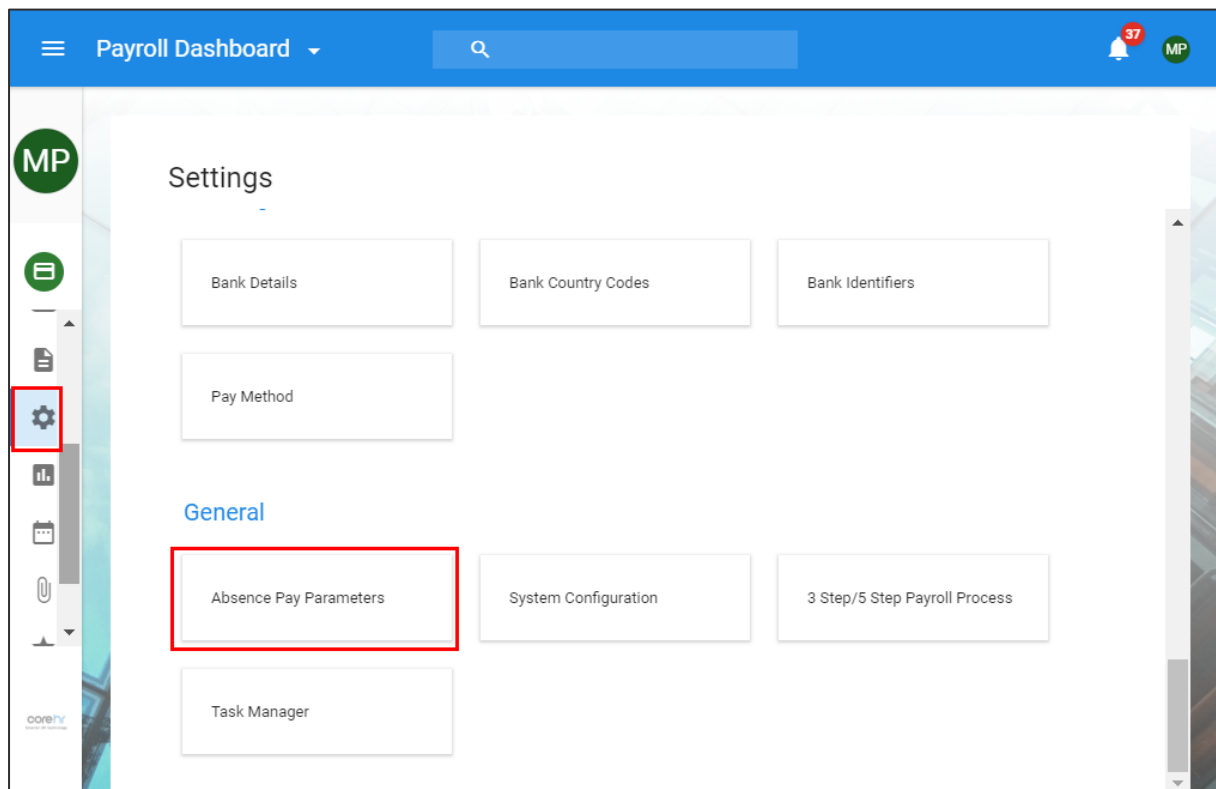

- An employee's [Absence Category](#) determines which absence rule (absence policy) applies to them, and can be used to calculate the employee's occupational pay per absence day/hour.
- Multiple Absence Leave schemes may apply to the same employee. For example, different maternity schemes may apply depending on whether the employee is returning to work, or the employee may be able to choose between two different schemes. The pay code used to record the leave controls which scheme is applied.
- The Occupational Absence module is generally implemented in conjunction with the Statutory Payments Feature (UK Only) so that an employee's pay for an absence taken is calculated per the organisation's occupational absence policies and UK Statutory policies.
- Occupational Absences may be recorded by:
 - A manager using the *Team Schedule* widget.
 - An administrator using *Workforce Management*.
 - An administrator using the *Payroll – Go to Payroll Dashboard > Employee > View > Absence Entry*.

2. Configure Absence Pay Parameters

2.1. Access to Absence Pay Parameters on the Settings Tab

The following menu option is required for an employee to access the *Absence Pay Parameters* screens from the *Settings* tab.

System	Menu Option
CorePortal Pay	Settings - Absence Pay Parameters

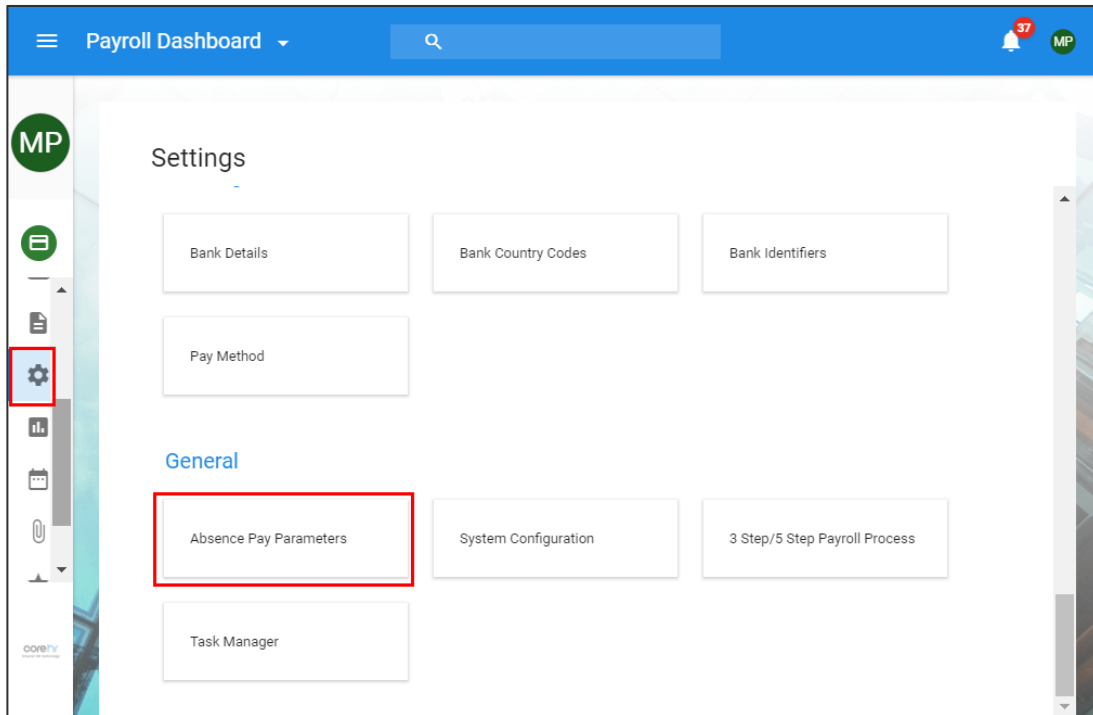

Status	Impact
Enabled	The user has a full view and edit access to the <i>Absence Pay Parameters</i> screen.
Disabled	The user can still access the screen, but a 'You do not have access to this screen' message is displayed.

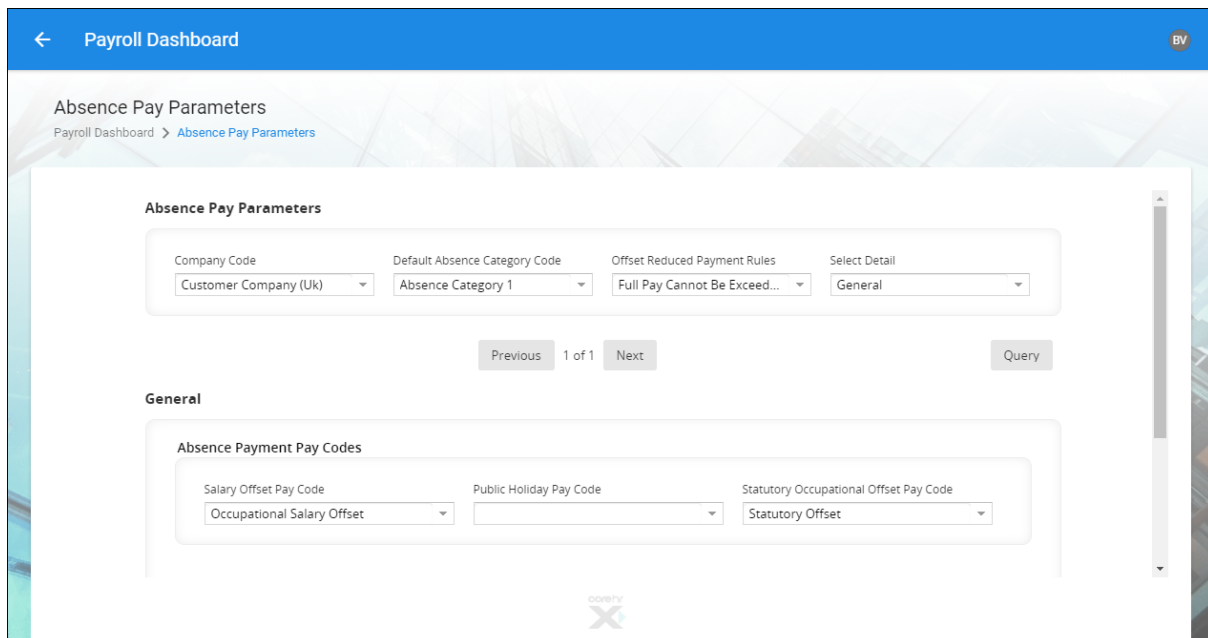

2.2. Configure the Absence Pay Parameters

Absence parameters are configured at company level. To do this:

1. Go to *Settings > UK Tax Rates > General > Absence Pay Parameters*.

2. Select a company from the *Company Code* drop-down menu.

3. Select a *Default Absence Category Code* from the drop-down menu. This will be the default sickness / absence category code assigned to all employees in the selected company.

**Note:**

- For employees who do not use this default absence category, assign an individual absence category at the employee level – *Payroll Dashboard > Employee > View > Sundry Profile*.
- If a small number of employees exist in the company who have no company sick entitlement, then you should set up a Dummy Absence Category, with no active rules and assign this to those employees.

4. Select the relevant option from the *Offset Reduced Payment Rules* drop-down menu. The options are:

Offset Reduced Payment Rules	Description
Reduced Pay Cannot be Exceeded	The employee's total statutory pay plus the occupational pay cannot exceed the employee's actual/reduced pay (Daily Rate * Their Occupational Entitlement Multiplier). Example: If an employee is on £1,000 full-time pay and £500 when on a multiplier of 0.5, the Statutory Pay plus the Occupational Pay cannot exceed £500. Therefore, the full statutory payment should offset.
Full Pay Cannot be Exceeded	The employee's total statutory pay plus the occupational pay cannot exceed the employee's FTE (Daily Rate). Example: If an employee is on £1,000 full-time pay, and £500 when on a multiplier of 0.5, the Statutory Pay plus the occupational pay cannot exceed £1000. Therefore, the full statutory payment may not offset.

Payroll: Configuring Absence Pay Parameters

5. Select an option from the *Select Detail* drop-down menu.

Cancel Add Save

There are no mandatory fields on this screen. Complete the fields as required:

Field	Description
Salary Offset Pay Code	For any employee receiving a salary or basic pay, and occupational absence pay, the occupational absence module generates a salary offset to negate the salary paid for absence days. This ensures the employee is not overpaid when absent. The amount offset is posted to the salary offset pay code .

Field	Description
Public Holiday Pay Code (Optional)	The public holiday pay code may be used to pay absences which occur on public holidays. The payment rate for sickness on a public holiday may differ from the payment rate for an absence on a day which is not a public holiday. Example: If an employee was sick from the 1st of Jan (public holiday) to the 10th of Jan, the employee could get paid: • One day @ Public Holiday pay code • Nine days @ Sick pay code
Statutory Occupational Offset Pay Code (UK)	A Statutory Offset Pay Code must be created to be used to offset statutory pay when an employee's occupational and statutory pay combined exceeds their normal basic pay.
Rounding Basis	Enter a rounding basis from the drop-down menu for entitlements affected by FTE. The options are: • Up to the nearest • Down to the nearest • To the nearest • To the nearest (favourable)
Rounding Days	Enter a value (in Days) to which to round.
Derive Rest Days for Occupational & Statutory Offsetting	Enable this indicator if rest day values are to be derived for occupational and statutory offsetting. Example: Statutory SMP is paid over seven days; the employee is paid over five days. Notional salary and occupational pay is derived for rest days, i.e. Saturday and Sunday.

2.4. Absence Types

Select Absence Types from the *Select Detail* drop-down menu.

There are 4 absence types preconfigured as part of the software delivery:

- Adoption
- Maternity
- Paternity
- Sick

2.4.1. Add Absence Type

To add a new absence type:

1. Click the blue **Add** button. This creates a new blank row.
2. Add an *Absence Type* code.
3. Add a description for the *Absence Type*.
4. Select an [Absence Payment Pay Code](#) from the drop-down menu for the absence type.
5. Select a *Statutory Type* from the drop-down menu to link the absence type to a statutory type.
6. (Optional) Select an Assumed Pensionable Pay (APP) Rule from the drop-down menu, if applicable. This impacts on employer pension calculations.

- Reduced and Nil Pay
- Reduced Only

 Note:

- APP is a notional pensionable pay figure. It is used to ensure that employees' pensions are not affected by any reduction in, or suspension of, pensionable pay due to a period of sickness or injury, or any reduction due to relevant child related leave or reserve forces leave.
- The APP is calculated as the average of 12 weeks' or three months' pay (in complete pay periods) before the date when the individual went onto the reduced or no pay.

7. (Optional) Enable this indicator if when calculating the average rate of pay for Holiday Pay, you may wish to exclude periods where absences were recorded.

 Note:

This allows the system to skip this period and go back further to include relevant periods when calculating the average. See the [Payroll V28: Holiday Pay User Guide](#).

8. Click the green **Save** button.
9. Repeat for all required absence types.

2.4.2. Delete/Duplicate an Absence

To Duplicate or Delete an Absence Type:

1. Select the Further Options  next to an Absence Type.
2. Select **Delete** or **Duplicate**.

Payroll: Configuring Absence Pay Parameters

To add new absence Rule:

1. Click the blue **Add** button. This creates a new blank row.

Payroll: Configuring Absence Pay Parameters

Populate the following fields:

Field	Description									
Rule ID	Enter a rule ID which will be used to reference the absence rule.									
Description	Enter a description to describe the absence rule.									
Priority	Enter a priority for the absence rule. Note the following: - The priority determines the order in which the calculation is performed. This field is only relevant if two schemes of the same absence type are defined on the one absence category, i.e. two absence rules which contain the same Time & Attendance pay code. - Rule priority 1 calculates first – Rule priority 2 calculates second. Example: Each day of an employee’s absence is checked against two absence sick rules: <table><tr><th>Priority</th><th>Rule</th><th>Description</th></tr><tr><td>1</td><td>Certified Sick Leave</td><td>50 days on full pay – after which the employee goes on half pay.</td></tr><tr><td>2</td><td>Certified/Uncertified Sick Rule</td><td>55 days on full pay</td></tr></table> To date, the employee has 48 certified sick days and 8 uncertified sick days taken, i.e. 56 days taken in total. Note the following: - If the employee takes another certified sick day, the certified sick rule is calculated first, and under this rule, the employee would receive full pay. - The combined rule is calculated second, and under this rule, the employee would receive half pay. It is the lower value for the occupational pay that is applied, i.e. half-pay under the Certified/Uncertified Sick Rule.	Priority	Rule	Description	1	Certified Sick Leave	50 days on full pay – after which the employee goes on half pay.	2	Certified/Uncertified Sick Rule	55 days on full pay
Priority	Rule	Description								
1	Certified Sick Leave	50 days on full pay – after which the employee goes on half pay.								
2	Certified/Uncertified Sick Rule	55 days on full pay								
Calendar Basis	Enter a calendar basis. The calendar basis can be defined as Rolling or Fixed:									

Field	Description
	Fixed: A fixed calendar is used if the absence rule applies to a fixed period. This is only an option for clients who use WFM. Example: A fixed calendar is used to consider the number of sick days an employee has taken between 1st January and 31st December. Rolling: A rolling calendar would be used if the absence rule considers a rolling period, e.g. 12 months. Example: A rolling calendar is used to consider the number of sick days an employee has taken from the first day of their illness, rolling back over the previous 12 months. If an absence is recorded from the 5-Jan-2020 to 7-Jan-2020, the period checked is from the 5-Jan-2019 to 4-Jan-2020.
Rolling Periods	The <i>Rolling Periods</i> field needs to be defined if the calendar basis is selected as "Rolling." The value set corresponds to the number of months considered as the rolling period.
Calendar	If the Calendar Basis is set to 'Fixed,' a balance calendar must be created in WFM. To set up a balance calendar – go to <i>CoreTime > System Params > Balance > Calendars</i> .
Consec. Occur.	The "Consec. Occur." field defines the maximum number of consecutive days an employee can take under this rule. In general, this rule is only used for an uncertified sick rule which has an entitlement "calculation basis" in days. If the consecutive number of absences taken by an employee under this rule exceed the "Consec. Occur" number of days; the employee does not receive

Payroll: Configuring Absence Pay Parameters

Field	Description
	any occupational pay for absences beyond this number. Example: Under an Uncertified Sick Leave Rule – an employee can take seven uncertified sick leave days in a rolling 12 months. In any absence instance, the employee cannot take any more than two consecutive days. If the employee has three consecutive uncertified sick days recorded, the employee gets paid for the first 2. They get zero pay for the 3rd day onwards where they remain absent consecutively.

2. Repeat for all required absence types.

2.5.1. Entitlements

The *Absence Rule Entitlements* determine how much occupational absence pay an employee receives. The amount paid depends on the length of service and the number of absences taken.

To define the occupational pay entitlements for a specific absence rule:

1. Select the Further Options  next to an Absence Rule.
2. Select **Entitlements**.

Absence Rules								
Rule Id	Description	Priority	Calendar Basis	Rolling Periods	Calendar	Description	Consec. Occur.

From Months	To Months	From Day	To Day	Pay Multiplier	Divisor	Pay Code																																																																																					
.00	9999999.00	.00	20.00	1.00				☐	...																																																																																		
.00	9999999.00	20.00	40.00	.50				☐	...																																																																																		
.00	9999999.00	40.00	9999999.00	.00				☐	...																																																																																		
Benefit Range	The benefit range determines the occupational pay multiplier applied for a specific number of absence days or hours taken. Enter a value in the 'From Day/Hour' field and the 'To Day/Hour' fields.																																																																																										

Field	Description																																																		
	<u>Example:</u> An employee receives full pay for the first 20 days taken, half-day for the next 20 days taken, and no pay for any subsequent days taken. <u>Note:</u> The 'To Day/Hour' value entered in an additional row must match the 'From Days/Hour' value in the preceding row.																																																		
Pay Multiplier	The pay multiplier determines the amount of occupational pay an employee receives: • If the pay multiplier is 1.0, the occupational rate of pay matches the basic rate of pay. • If the pay multiplier is 0.5, the occupational rate of pay is half the basic rate of pay, etc.																																																		
Entitlement Divisor	<u>Advanced feature:</u> Leave blank to apply benefit range based on service range. Populate if your organisation requires the number of sick days to which an employee is entitled to be a divisor of their length of service, i.e. full pay, half-pay, and no pay is calculated as a divisor of their length of service. The total number of sick days at full pay/half-pay etc. however, can be capped; this is determined by the "To Day" field in the benefit range. <table><tr><th colspan="2">Service Range</th><th colspan="3">--Benefit Range In Days--</th><th>Entitleme...</th><th>CoreTime Only</th><th>Name</th><th>Top-Up</th><th></th></tr><tr><th>From Months</th><th>To Months</th><th>From Day</th><th>To Day</th><th>Pay Multiplier</th><th>Divisor</th><th>Pay Code</th><th></th><th></th><th></th></tr><tr><td>.00</td><td>9999999.00</td><td>.00</td><td>182.00</td><td>1.00</td><td>5.00</td><td></td><td></td><td>☐</td><td>...</td></tr><tr><td>.00</td><td>9999999.00</td><td>182.00</td><td>365.00</td><td>.50</td><td>5.00</td><td></td><td></td><td>☐</td><td>...</td></tr><tr><td>.00</td><td>9999999.00</td><td>365.00</td><td>9999999.00</td><td>.00</td><td>5.00</td><td></td><td></td><td>☐</td><td>...</td></tr></table>	Service Range		--Benefit Range In Days--			Entitleme... Field	Description
	Example 3: If the employee has taken 101 days under this absence rule, for the next absence day the employee takes under this scheme the rate of pay will be 0.5 (pay multiplier) * 90 (rate of pay) = 45. 

2.5.2. Linking Pay Codes

The pay codes used to record absences in WFM must be linked to an absence rule to determine how an employee is paid for the absences recorded – see section [3.1.1. Absence Recording Pay Codes](#).

To define the pay codes which trigger the absence rule:

1. Select the Further Options  next to an Absence Rule.
2. Select **Pay Codes**.

Payroll: Configuring Absence Pay Parameters

Absence Rules							
Rule Id	Description	Priority	Calendar Basis	Rolling Periods	Calendar	Description	Consec. Occur.
A1	Adoption Scheme	1	Rolling	12			
M1	Maternity Scheme	1	Rolling	12			
P1	Ord. Paternity Scheme	1	Rolling	12			
S1	Sick Scheme	1	Rolling	12			
S22	BOK UK Sick	1	Rolling	12			
SICK1	Sickness Scheme FT	1	Rolling	12			
UP1	Unpaid Leave	1	Rolling	12

The *Absence Pay Codes* screen opens.

Absence Pay Codes for BOK UK Sick

Pay Code		Effect Ent. on Rest Day	Value on Rest Day	
3710	SICK LEAVE 3710	☐	☐	...

Cancel

Add

Save

- Click **Add**, to add a new pay code.

Indicator	Description
Effect	Enable for absences recorded using this pay code on employees' rest days to impact the number of absence days/hours taken calculation. By default, this indicator is off.
Entitlement on Rest Day	
Value on Rest Day	Enable if absences recorded against this pay code on rest days are paid per the absence rule.

Indicator	Description
	 Note: • The 'Value On Rest Day' indicator may only be enabled if the "Effect Ent. On Rest Day" indicator is enabled. • If 'Value On Rest Day' indicator is not enabled but the 'Effect Ent. On Rest Day' is enabled, the absence taken on a rest day count towards the number of absence days taken by the employee, but does not generate any occupational pay.

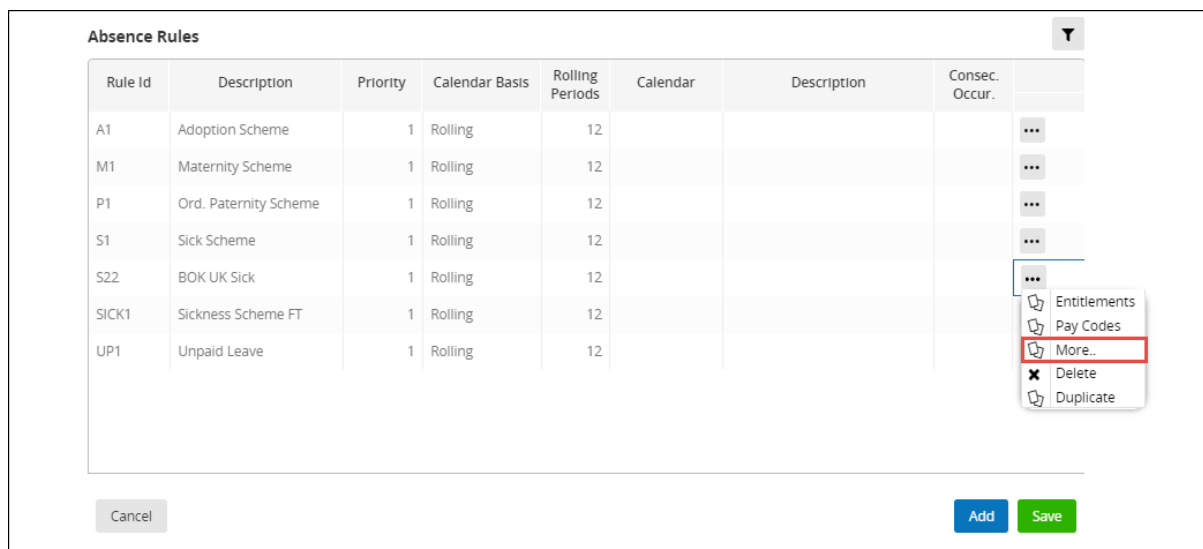

-  **Note:**
- Any number of pay codes can be linked to a rule.
 - Every time you set up a new absence pay code, consider if the pay code should link an absence rule.

Payroll: Configuring Absence Pay Parameters

2.5.3. More Rules

To define the More Rules:

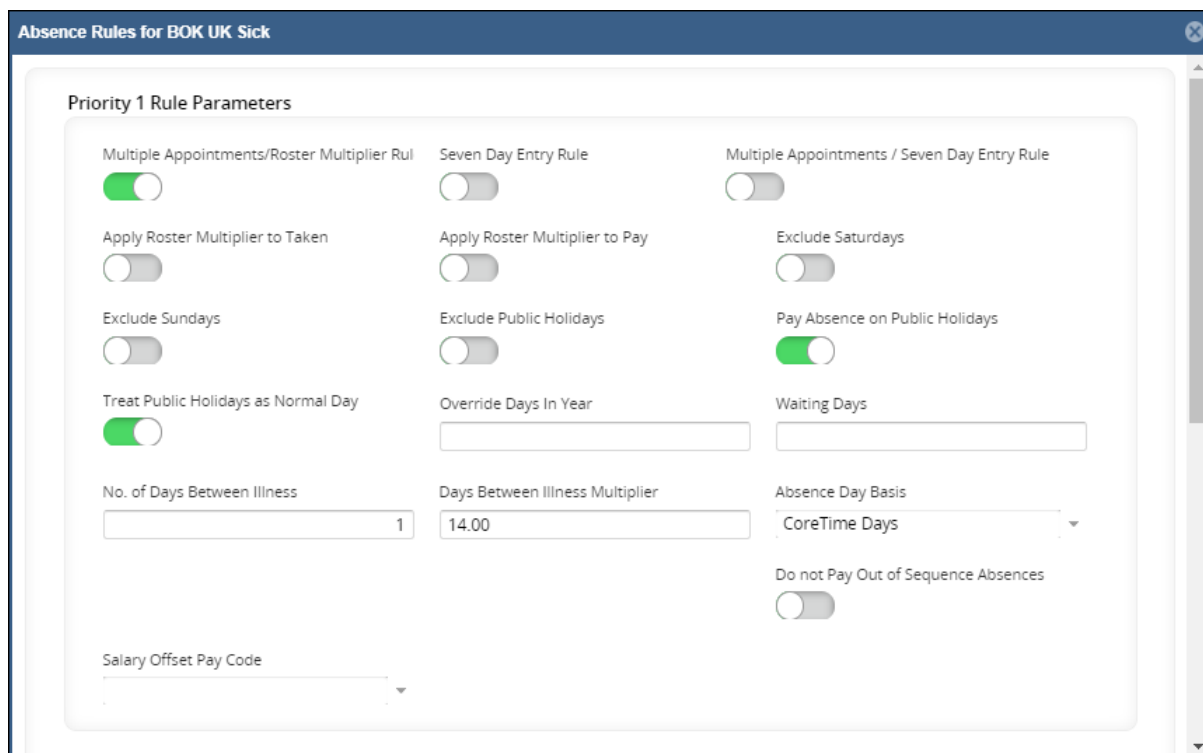

1. Select the Further Options  next to an Absence Rule.
2. Select **More**.

The screenshot shows a table titled "Absence Rules" with the following columns: Rule Id, Description, Priority, Calendar Basis, Rolling Periods, Calendar, Description, and Consec. Occur. The table lists several rules, including A1, M1, P1, S1, S22, SICK1, and UP1. A context menu is open for rule S22, showing options: Entitlements, Pay Codes, More.. (highlighted with a red box), Delete, and Duplicate. At the bottom of the table are buttons for Cancel, Add, and Save.

Rule Id	Description	Priority	Calendar Basis	Rolling Periods	Calendar	Description	Consec. Occur.
A1	Adoption Scheme	1	Rolling	12			...
M1	Maternity Scheme	1	Rolling	12			...
P1	Ord. Paternity Scheme	1	Rolling	12			...

- Absence Day Basis:
- Do not Pay Out of Sequence Absences: ☐

Priority 1 Rule Parameters

Field/Indicator	Description
Multiple Appointments / Roster Multiplier Rule	 Note: • Enable if this indicator is to handle Multiple Appointment employees with a Roster Multiplier applied. • The WFM shift types contain the number of working days and total days in cycle. • The occupational absence calculation uses the WFM shifts to pro-rata days taken based on the roster multiplier (Days in Cycle/ Workdays).

Field/Indicator	Description																												
	Example: - Days in Cycle = 7 - Workdays = 5 - As the absence is tracked over seven days each day, is represents by 7.00/5.00 = 1.40. - The (absence recorded daily value) multiplied by (1.4) and divided by (total of the Employee FTEs) = Taken Value.																												
	<table><tr><th>Absence Value Recorded</th><th>Weighting</th><th>Sum of FTE's</th><th>Taken Value Taken</th></tr><tr><td>7.00 hrs (1 day)</td><td>1.4</td><td>1.00 (One appointment FTE 1.00).</td><td>1.4</td></tr><tr><td>3.5 hrs (0.5 days)</td><td>1.4</td><td>1.00 (One appointment FTE 1.00).</td><td>0.70</td></tr><tr><td>3.5 hrs (0.5 days)</td><td>1.4</td><td>0.50 (One appointment FTE 0.50).</td><td>0.35</td></tr><tr><td>7.00 hrs (1 day)</td><td>1.4</td><td>0.50 (One appointment FTE 0.50).</td><td>2.8</td></tr><tr><td>7.00 hrs (1 day)</td><td>1.4</td><td>1.00 (Two appointments FTE 0.50 and FTE 0.50)</td><td>1.4</td></tr><tr><td>3.5 hrs (0.5 days)</td><td>1.4</td><td>1.00 (Two appointments FTE 0.50 and FTE 0.50)</td><td>0.70</td></tr></table>	Absence Value Recorded	Weighting	Sum of FTE's	Taken Value Taken	7.00 hrs (1 day)	1.4	1.00 (One appointment FTE 1.00).	1.4	3.5 hrs (0.5 days)	1.4	1.00 (One appointment FTE 1.00).	0.70	3.5 hrs (0.5 days)	1.4	0.50 (One appointment FTE 0.50).	0.35	7.00 hrs (1 day)	1.4	0.50 (One appointment FTE 0.50).	2.8	7.00 hrs (1 day)	1.4	1.00 (Two appointments FTE 0.50 and FTE 0.50)	1.4	3.5 hrs (0.5 days)	1.4	1.00 (Two appointments FTE 0.50 and FTE 0.50)	0.70
	Absence Value Recorded	Weighting	Sum of FTE's	Taken Value Taken																									
	7.00 hrs (1 day)	1.4	1.00 (One appointment FTE 1.00).	1.4

3.5 hrs (0.5 days)	1.4	1.00 (Two appointments FTE 0.50 and FTE 0.50)	0.70																										
Seven Day Entry Rule	Enable if this rule is to handle seven-day entry of absences with no roster multiplier to be applied.																												

Field/Indicator	Description
	 Note: - Generally used for Maternity and Adoption leave as these calculate over a seven-day basis. - Consider using the Effect Entitlement on Rest Day and Value on Rest Days, see section 2.5.2. Linking Pay Codes.
Multiple Appointments / Seven Day Entry Rule	 Note: - Enable if this rule is to handle multiple appointment employees with a seven-day entry of absences with no roster multiplier to be applied. - Generally used for Maternity and Adoption leave as these calculate over a seven-day basis.
Apply Roster Multiplier to Taken	Enable the <i>Apply Roster Multiplier to Taken</i> where occupational absences are not entered over as seven-day period.  Note: - The WFM shift types contain the number of working days and total days in cycle. - The occupational absence calculation uses the WFM shifts to pro-rata days taken based on the roster multiplier (Days in Cycle/ Workdays). - Shift overrides are factored in when determining 'working' days. - Consider using 'Override Days in Year' as an alternative solution. <u>Full-Time Employees</u> A full-time employee scheduled to work five days over a seven-day Time & Attendance shift cycle:

Field/Indicator	Description
	<u>Examples:</u> <u>The employee is off sick one day:</u> This results in a calculation of 1.40 absence days taken, i.e. 1 day's sick * 7 days (shift cycle) / 5 (workdays in cycle) = 1.40 days, each day absence equates to 1.40 days. <u>The employee is off sick five days:</u> This results in a calculation of 7.00 absence days taken, i.e. 5 days sick * 7 (shift cycle) / 5 (workdays in cycle) = 7.00 days, each day absence equates to 1.40 days.
	<u>Part-Time Employees</u> A part-time employee scheduled to work three days over a seven-day Time & Attendance shift cycle:
	<u>Example 1:</u> <u>The employee is off sick one day:</u> This results in a calculation of 2.33 absence days taken, i.e. 1 day's sick * 7 days (shift cycle) / 3 (workdays in cycle) = 2.33 days, each day absence equates to 2.33 days.
	A part-time employee is scheduled to work three days in week 1, and two days week 2, i.e. the shift cycle is 14 days.
	<u>Example 2:</u> <u>The employee is off sick two days:</u> This results in a calculation of 5.6 absence days taken, i.e. 2 day's sick * 14 days (shift cycle) / 5 (workdays in cycle) = 5.6 days, each day absence equates to 2.8 days.

Field/Indicator	Description
	<u>Multi-Appointment Employees</u> In a multi-appointment environment, where employees operate separate shifts per appointment, the roster multiplier is calculated by 'max' total days in all cycles divided by the total working days in a cycle. <u>Example 1:</u> <u>The employee has two shifts:</u> - Shift A: Works 3 days a week over a 7-day cycle. - Shift B: Works 2 days a week over a 7-day cycle. Therefore: - The max total days in cycles is 7. - The total working days is 5 (3 from shift A and 2 from shift B). <u>Example 2:</u> <u>The employee has overlapping shifts, e.g. AM and PM shifts:</u> If an employee has two shifts: - Shift A ½ days AM 5 days a week over a 7-day cycle. - Shift B ½ days PM 5 days a week over a 7-day cycle. <u>Therefore:</u> - The max total days in cycles is 7. - The total working days is 5 (overlaps count as on day).
Apply Roster Multiplier to Pay	Enable this indicator to use the roster multiplier calculated for the day value and apply this multiplier to the employees' daily rate value. <u>Full-Time Employees</u> A full-time employee is scheduled to work five days over a seven-day cycle.

Field/Indicator	Description
	<u>Example:</u> <u>The employee is off sick one day:</u> One day sick results in a 1.40 (roster multiplier) days taken, i.e. 1 day sick * 7 total days in cycle / 5 workdays in cycle. If the employee's daily rate was 100.00, the daily rate is multiplied by 1.4, giving an occupational absence payment of 140.00 per day.
	<u>Part-Time Employees</u> A part-time employee is scheduled to work 2.5 days over a seven-day cycle.
	<u>Example:</u> <u>The employee is off sick one day:</u> One day sick results in a 2.8 (roster multiplier) days taken, i.e. 1 day sick * 7 total days in cycle / 2.5 workdays in cycle. If the employee's daily rate was 50.00, the daily rate is multiplied by 2.8, giving an occupational absence payment of 140.00 per day.
	<u>Note:</u> - Generally, where employees are working part-time, their employee salary pay rate is reduced by the pay multiplier. - Where roster multiplier is deployed entitlements are not reduced, i.e. all staff have same entitlement.
Exclude Saturdays/ Exclude Sundays/ Exclude Public Holidays	Enable the 'Exclude Saturday,' 'Exclude Sunday,' and 'Exclude Public Holidays;' if these days are not to be included in the count of days between absences. These indicators are only applicable if: - The "No. of days between Illness" field is populated - If the value of the 'Absence Status Basis' field is 'Sickness History' and not 'CoreTime Roster Sickness History.'

Field/Indicator	Description
Pay Absences on Public Holidays	Enable the <i>Pay Absence on Public Holidays</i> indicator if employees are to be paid for absences taken on public holidays.  Note: - If the absence day is a Public Holiday, the pay calculation pays at the normal basic rate (not the occupational rate of pay), but the payment is posted to a separate Public Holiday Pay Code. - This option pays the Public Holiday at full rate regardless of the Occupational Sick Rules. - The public holiday is configured in WFM public holidays calendar. - Pay Absence on Public Holidays is enabled. - Exclude Public Holidays is not enabled. Example: Where Maternity Leave is recorded on a public holiday, the employee receives their full rate of pay regardless of whether their occupational absence entitlement has been exceeded.
Treat Public Holidays as Normal Days	Enable the <i>Treat Public Holidays as Normal Days</i> indicator to pay absences on public holidays. This indicator works like the <i>Pay Absences on Public Holidays</i> indicator. However, instead of getting paid at the normal basic rate of pay, the employee is paid at the relevant occupational rate, i.e. the pay multiplier on the absence rule applied.  Note: Ensure the <i>Pay Absence on Public Holiday</i> is also enabled.
Override Days in Year	Entering an <i>Override Days in Year</i> figure eliminates the need to use a roster multiplier when calculating absences taken and absence daily/hourly rates.

Field/Indicator	Description
	Note: - Populating this field overrides the <i>Days in Year</i> figure held at pay group level. - The 'override days in year' at rule level enables the occupational absence module support tracking and payments of absences over a 5-day and 7-day basis. Example: Occupational absence for maternity leave is recorded and paid over a 7 day basis, whereas sickness is tracked and paid over 5 day basis.
Waiting Days	Populate this field if waiting days apply to the absence rule. Example: If a value of 3 is entered, then the employee must be absent for more than three days before they receive an occupational payment for an absence.
No. of Days Between Illness	Enter the number of days which must exist between absences for the absence to be considered a new absence, and not part of the existing absence. Note: - This impacts the number of absence days taken calculation, as the start date look back is either: - the start of the existing absence. - the start date or the new absence. - The reference period depends on the "calendar basis" and the rolling/fixed period basis values. - This indicator is also linked to the <i>Absence Status Basis</i> to determine if the number of days is based on Schedule days (i.e. WFM Rosters) or all days.

Field/Indicator	Description
	<u>Scenario:</u> If the calendar basis is 'rolling,' the rolling periods is 12 months, and the rolling period basis is <i>Original Absence Start Date Back</i>. • If an employee is sick from 01/11/2019 to 26/11/2019, then works on the 27th and 28th, but is out sick again on the 29/11/2019. During the employee's first absence, i.e. 1st Nov to 26th Nov, the system calculates the total number of sick days taken from 01/11/2019 back to 02/11/2018 (12 months) to determine the absence pay rate, i.e. full, half or zero. • If the field "No. of days between absences" is set to 1, then the absence day recorded on the 29th Nov is a new illness, and the system calculates the total number of sick days taken so far from the 29/11/2019 back to 30/11/2018. • If the field "No. of days between absences" is set to 4, then the absence day on the 29/11/2019 is a part of the existing illness, and the system calculates the total number of sick days taken from the 01/11/2019 back to 02/11/2018, i.e. the start date of the first absence.

Field/Indicator	Description
	 Note 1: The day's value entered is matched to "Absence Status Basis" to determine if the 'number of days between illness' is based on scheduled days or all days. • CoreTime Roster/Sick History: The number of days is matched to the person rostered working days (including override & alternatives). If a value of 2 days is entered, then if two or more "working days" exist between the absences then it's deemed to be a separate absence. • Sickness History: The number of days is matched to the person sick history. If a value of 2 days is entered, then if two or more "days" exist between the absences then it's deemed to be a separate absence. If recording 7-day absence the Absence status basis should be set to 'Sickness History'.  Note 2: If a value for the waiting days is defined, this field also determines if the waiting days apply: • Existing illness – no waiting days will apply. • New illness – waiting days apply.
Days Between Illness Multiplier	This indicator only applies if the <i>No. of Days Between Illness</i> field is populated. The <i>Days Between Illness Multiplier</i> is used for short-cutting look back calculations which must be performed in certain cases where there is a long gap between illnesses.

Field/Indicator	Description
	 Note: If the last time an employee was sick was six months ago, and if a value for this field was not defined, the program will have to check the employee's roster for every day over the last six months. The countback in days is the <i>No. of Days Between Illness</i> multiplied by the <i>Days Between Illness Multiplier</i>. It is recommended that this field is set to a value of 14 or 21.
	 Examples: • If the <i>Days Between Illness Multiplier</i> is set to 14 and the <i>No. of Days Between Illness</i> field is set to 1, the employee roster checks back 14 days, and if an illness is not retrieved, the current absence is considered a new absence. This speeds up the programs. • If the <i>Days Between Illness Multiplier</i> is set to 14 and the <i>No. of Days Between Illness</i> field is set to 2, the module counts back 28 days.
	 Note: Do not set the <i>Days Between Illness Multiplier</i> as 1 if the <i>Days Between Illness</i> field is 1. As the module will only go back one day, and if a gap occurs, it is deemed a new absence – this could be a rest day.
Absence Day Basis	Choose an Absence Day Basis from the <i>Absence Day Basis</i> drop-down menu: • Occurrences: Select if no matter how many absent hours are recorded on a working day, the day is treated as one whole occurrence in terms of establishing the employee's absence taken figure.

Field/Indicator	Description
	 Example: If an employee takes 1-hour sick but was scheduled to work 8 hours – this is recorded as one occurrence. • CoreTime Days: Select if absences are derived from hours recorded versus the default hours on the employee's work pattern to determine the fraction of a day worked. The fraction of a day is then assigned as an absence. Example: • If an employee takes 4 hours sick but was scheduled to work 8 hours, the absence is recorded as 0.5 days. • If an employee takes 1 hours sick but was scheduled to work 1 hour, the absence is recorded as 1.00 day. • CoreTime Hours: Chosen if absences are to be derived from hours recorded. Example: If an employee is scheduled to work 8 hours and takes 4 hours absence, the absence is recorded as 4 hours.
Do not Pay Out of Sequence Absences	Enable the <i>Do not Pay Out of Sequence Absences</i> indicator if the employee is not to be paid for out of sequence absences. Example: If an employee had an absence recorded and paid in a previous payroll period (e.g. 01/11/2019 to the 10/11/2019), and an absence is then recorded for an earlier date (e.g. 29/10/19): • The absence on the 29/10/2019 is considered an 'out of sequence absence.' • The employee doesn't receive occupational pay for the absence. • The absence still counts towards the overall absence history and is therefore included in their "taken" absences.

Field/Indicator	Description
	 Note: • The count Days/Hours taken to date includes the later absence recorded – taking the absence recorded 29/10/2019 and count back is set as Absence Start Date and 12 months rolling. • The reference starts from 29/10/2018 to 28/10/2019, but this also includes the absences from 01/11/2019 to the 10/11/2019 in the count of days.
Salary Offset Pay Code	Select a pay code from the drop-down <i>Salary Offset Pay Code</i> menu to override the salary offset pay code at the rule level. If no pay code is selected here, the salary offset pay code selected on the General Parameters screen is used for this absence rule.

Other Absence Rules

Entitlement Basis All Appointments Combined	Fixed Period Basis 	Entitlement Rounding Days
Absence Status Basis CoreTime Roster/Sickness Hist	Rolling Period Basis Original Absence Date Back	Entitlement Rounding Basis
Length of Service Basis Original Start Date	Use Payment Multiplier to get Taken 	Length of Service Method Default
Length of Service End Date 	Part Time Multiplier 	Length of Service End Date Reduction Days
Use Payment Multiplier to get total taken for a Continuous Absence 		

Field/Indicator	Description							
Entitlement Basis	Select one of the following values from the <i>Entitlement Basis</i> drop-down menu:							
	Current Appointment							
	The absence module only considers the employees' current appointment FTE when calculating the employees' absence entitlement.							
	Example:							
	<table><tr><th>Description</th><th>Value</th></tr><tr><td>Current Appointment</td><td>FTE 0.50</td></tr><tr><td>Full Sickness Entitlement</td><td>24.00 days</td></tr><tr><td>24 days * 0.50 FTE</td><td>12 days</td></tr></table>	Description	Value	Current Appointment	FTE 0.50	Full Sickness Entitlement	24.00 days	24 days * 0.50 FTE
Description	Value							
Current Appointment	FTE 0.50							
Full Sickness Entitlement	24.00 days							
24 days * 0.50 FTE	12 days							
	 Note: Where a break/gap in service exists, the absence module reduces the employee's entitlement using the following formula: (Days entitlement / Days in year) * (Break/Gap Days * FTE).							

Field/Indicator	Description																	
	Current Appointment/ Current Gaps: Use only the employees' current appointment FTE when calculating the employees' absence entitlement. Example: <table><tr><th>Description</th><th>Value</th></tr><tr><td>Current Appointment</td><td>FTE 0.50</td></tr><tr><td>Full Sickness Entitlement</td><td>24.00 days</td></tr><tr><td>24 days * 0.50 FTE</td><td>12 days</td></tr></table>  Note: Where a break/gag in service exists, the absence module does not reduce the employee's entitlement. All Substantive Appointments: Uses only the Substantive Appointment's FTE when calculating employees' absence entitlement to calculate the employee's annual entitlement, the occupational absence module first calculates the per day entitlement: Example: Full Entitlement 24 days, or 0.066 (24/365) per day: <table><tr><th>Service</th><th>FTE</th><th>Entitlement</th></tr><tr><td>7 months (212 days)</td><td>1.00</td><td>13.99</td></tr><tr><td>4 months (122 days)</td><td>0.5</td><td>4.02</td></tr></table> Therefore, the employee's full entitlement is 16 days.  Note: Where a break/gap in service exists, the absence module reduces the employee's entitlement using the following formula: (Days entitlement / Days in year) * (Break/Gap Days * FTE).	Description	Value	Current Appointment	FTE 0.50	Full Sickness Entitlement	24.00 days	24 days * 0.50 FTE	12 days	Service	FTE	Entitlement	7 months (212 days)	1.00	13.99	4 months (122 days)	0.5	4.02
Description	Value																	
Current Appointment	FTE 0.50																	
Full Sickness Entitlement	24.00 days																	
24 days * 0.50 FTE	12 days																	
Service	FTE	Entitlement																
7 months (212 days)	1.00	13.99																
4 months (122 days)	0.5	4.02																

Field/Indicator	Description									
	All Substantive Appointments/Current Gaps: Use only the Substantive Appointment's FTE when calculating employees' absence entitlement to calculate the employee's annual entitlement, the occupational absence module first calculates the per day entitlement: Example: Full Entitlement 24 days, or 0.066 (24/365) per day: <table><tr><th>Service</th><th>FTE</th><th>Entitlement</th></tr><tr><td>7 months (212 days)</td><td>1.00</td><td>13.99</td></tr><tr><td>4 months (122 days)</td><td>0.5</td><td>4.02</td></tr></table> The employee's full entitlement is therefore 16 days.  Note: Where a break/gap in service exists, the absence module does not reduce the employee's entitlement. Service Divisor Calculation  Note: This is an advanced setting and should only be used in conjunction with the Entitlement Divisor. When calculating an employee's entitlement, the absence module ignores the employee's FTE and only looks at the employee's length of service. The length of service as derived by using the original start date, latest start date or continuous service date (see <i>Length of Service Basis</i> field); then dividing this by the <i>Entitlement Divisor</i> on the <i>Entitlement</i> Screen.	Service	FTE	Entitlement	7 months (212 days)	1.00	13.99	4 months (122 days)	0.5	4.02
Service	FTE	Entitlement								
7 months (212 days)	1.00	13.99								
4 months (122 days)	0.5	4.02								

Field/Indicator	Description									
	All Appointments Combined (Multi-Appointment Environments) Where an employee works two appointments simultaneously, the employee's combined FTE is used when calculating their absence entitlement. Example: Full Entitlement 24 days, or 0.066 (24/365) per day: <table><tr><th>Service</th><th>FTE</th><th>Entitlement</th></tr><tr><td>9 months (273 days)</td><td>0.5</td><td>9.00</td></tr><tr><td>3 months (92 days)</td><td>0.75 (two appointments combined FTE)</td><td>4.55</td></tr></table> The employee's full entitlement is therefore 13.50 days.	Service	FTE	Entitlement	9 months (273 days)	0.5	9.00	3 months (92 days)	0.75 (two appointments combined FTE)	4.55
Service	FTE	Entitlement								
9 months (273 days)	0.5	9.00								
3 months (92 days)	0.75 (two appointments combined FTE)	4.55								
Fixed Period Basis	 Note: Used in conjunction with 'Calendar Basis Fixed,' see section 2.5 Absence Rules. Select one of the following values from the Fixed Period Basis drop-down menu: - Absence Date - Original Absence Date The field will determine which fixed calendar to use if an absence is spread across two fixed calendars.									

Field/Indicator	Description
	Example: If a 'fixed' absence calendar is running from January to December annually and an absence spreads over two fixed period calendars, e.g. an employee is absent from the 10th December 2018 to the 10th January 2019. Should the entitlement exceeded 'countback' start from January (new calendar year start) or December (old calendar year start). If this field has a value of: • Absence Date: the calendar for 2019 is used (9 days taken in 2019 from 1st January to the 9th January inclusive) • Original Absence Date: the calendar for 2018 is used (taken includes all absence recorded from 1st January 2019 to the 9th January 2019). The 'New Year' calendar entitlements start when the employee returns to work.
Absence Status Basis	Select an Absence Status Basis from the <i>Absence Status Basis</i> drop-down menu. Note: • Use this drop-down menu in conjunction with the <i>No. of Days Between Absence</i> field. • The Absence Status Basis helps determine if an absence is new or continuous and is only relevant if '<i>No of Days Between Illness</i>' is applied. Sickness History When performing the count between illnesses, if a person was rostered off certain days of the week, for example: • Monday/Tuesday/Wednesday – Workdays • Thursday/Friday/Saturday/Sunday – Rest Days The rest days are included in the count between illnesses.

Field/Indicator	Description
	<u>Recommended:</u> Use this option when tracking absences on a 7-day basis. CoreTime Roster/Sickness History When performing the count between illnesses, the absence ignores employees' rest days when calculating days between illnesses, for example: - Monday/Tuesday/Wednesday – Workdays - Thursday/Friday/Saturday/Sunday – Rest Days If the employee is out sick for two weeks the absence module excludes the rest days when determining the start date of the absence; thus, it will return the Monday of week one as the original start date. <u>Recommended:</u> Use this option when not tracking absences on a 7-day basis.
Rolling Period Basis	Select a Rolling Period Basis from the <i>Rolling Period Basis</i> drop-down menu. - Original Absence Date Back - End Date of Absence Back - End Date of Previous Period Back - Original Absence Date Forward. See section 4.1. Rolling Period Basis for further information.
Length of Service Basis	Select a Length of Service Basis from the <i>Length of Service Basis</i> drop-down menu. Original Start Date The employee's "Original Start Date" refers to the date the organisation first employed the employee. Latest Start Date The "Latest Start Date" refers to the latest start date of the employee. For example, if an employee was employed in an organisation on 1st June 2010,

Field/Indicator	Description
	then later left the organisation in 1st July 2012, then restarted 1st December 2012, the Original Start Date would be 1st June 2010; the Latest Start Date would be 1st December 2012. Continuance Date The "Continuance Date" is only relevant if the organisation is using the <i>Continuous Service</i> functionality in People Management. This returns the employee's continuous service start date, depending on the continuous service rules set up by the organisation, the employee's Continuance Date in the above example could be either June 2010 or December 2012.
Use Payment Multiplier to Get Taken	Select the <i>Match Against Range Multiplier</i> from the <i>Use Payment Multiplier to get Taken</i> drop-down menu where applicable.  Note: • By default, this indicator is off. • Only select this indicator if there are at least two entitlement ranges on the absence rule. • In most organisations, once an employee exceeds the number of day's entitlement at full/half-pay, they move to the next line on the entitlement range and the associated pay multiplier. • In some organisations, the policy is first to count the number of absences taken at full pay and attempt to pay at full pay where possible. <u>How this Indicator Works:</u> The Payroll transaction history table records which pay multiplier was used to pay the relevant absent day. When the <i>Use Payment Multiplier to Get Taken</i> indicator is enabled, the absence module counts the number of days paid at each multiplier. If there is a balance against the entitlement range with the highest multiplier, then it tries to pay at this multiplier.

Field/Indicator	Description																		
	If an employee was on half-pay as a result of the 'Relevant Period' being changed due of a new illness, the absence module counts the sum of days paid at the multiplier of 1, rather than the total number of absent days taken. The absence module then pays at full pay if the number of days taken at full pay is less than the entitlement limit. Example: An employee takes multiple absences: <table> <tr> <th>Absence Sequence</th><th>Dates</th></tr> <tr> <td>First absence</td><td>1st Jan 2019 to 2nd May 2019</td></tr> <tr> <td>Second absence</td><td>1st Jan 2020 to 10th Jan 2020</td></tr> <tr> <td>Third absence</td><td>12th Jan 2020 to 14th Jan 2020.</td></tr> </table> If the absence rule is: <table> <tr> <th>Absence Rules</th><th>Dates</th></tr> <tr> <td>Full Pay</td><td>120 days</td></tr> <tr> <td>Half Pay</td><td>120 days</td></tr> <tr> <td>Fixed / Rolling Calendar</td><td>12 months rolling</td></tr> <tr> <td>Rolling Period Basis</td><td>Original Absence Date Back</td></tr> </table> Use Payment Multiplier to get Taken not enabled If on 1st January 2020, the absent days taken count is 121 days: - Absence 1st January 2020 to 10th January 2020 is paid at half pay (the rolling period is 1st January 2019 to 31st December 2019). On 12th January 2020, the absent day's count is 120 - Absence 12th January 2020 to 14th January 2020 is paid at half pay (the rolling period is 12th January 2019 to 11th January 2020). Use Payment Multiplier to get Taken is enabled On the 12th January 2020, the count of absent days taken is considered in two separate categories: 10 days at half pay	Absence Sequence	Dates	First absence	1 st Jan 2019 to 2 nd May 2019	Second absence	1 st Jan 2020 to 10 th Jan 2020	Third absence	12 th Jan 2020 to 14 th Jan 2020.	Absence Rules	Dates	Full Pay	120 days	Half Pay	120 days	Fixed / Rolling Calendar	12 months rolling	Rolling Period Basis	Original Absence Date Back
Absence Sequence	Dates																		
First absence	1 st Jan 2019 to 2 nd May 2019																		
Second absence	1 st Jan 2020 to 10 th Jan 2020																		
Third absence	12 th Jan 2020 to 14 th Jan 2020.																		
Absence Rules	Dates																		
Full Pay	120 days																		
Half Pay	120 days																		
Fixed / Rolling Calendar	12 months rolling																		
Rolling Period Basis	Original Absence Date Back																		

Field/Indicator	Description														
	110 days at full pay. In this case, for the absence on the 12th January 2020, the employee will receive full pay.														
Length of Service Method	Select a Length of Service Method from the <i>Length of Service Method</i> drop-down menu.  Note: - The Length of Service Method determines the employee's length of service calculation. - See the Rolling Period Basis within the Appendix section of this document. Example: <table> <tr> <th>Rule</th><th>Selection</th></tr> <tr> <td>Length of Service Basis</td><td>Original Start Date</td></tr> <tr> <td>Rolling Period Basic</td><td>Original Absence Date Back</td></tr> </table> Employee is sick from 01-May-19 to 30-May-19. Therefore: <table> <tr> <th>Service</th><th>Date/Total</th></tr> <tr> <td>Length of Service End (date before sick starts)</td><td>30th Apr 2019</td></tr> <tr> <td>Length of Service Start (date joined company)</td><td>1st Apr 2013</td></tr> <tr> <td>Length of Service Months/Weeks/Days</td><td>72.94 / 317.14 / 2220</td></tr> </table>	Rule	Selection	Length of Service Basis	Original Start Date	Rolling Period Basic	Original Absence Date Back	Service	Date/Total	Length of Service End (date before sick starts)	30 th Apr 2019	Length of Service Start (date joined company)	1 st Apr 2013	Length of Service Months/Weeks/Days	72.94 / 317.14 / 2220
Rule	Selection														
Length of Service Basis	Original Start Date														
Rolling Period Basic	Original Absence Date Back														
Service	Date/Total														
Length of Service End (date before sick starts)	30 th Apr 2019														
Length of Service Start (date joined company)	1 st Apr 2013														
Length of Service Months/Weeks/Days	72.94 / 317.14 / 2220														

Field/Indicator	Description
	Default (Days Between) Length of service looks at the employee's start date (as determined by the "length of service basis" value).  Note: No breaks in service are deducted from the length of service. Appointment History This option ensures that any gaps in the employee's appointment history are deducted from the length of service calculation.  Note: This includes the following gaps/breaks in service: - Employee leaving and re-joining date (if Length of Service Basis = 'Original Start Date'). - An employee has appointments marked as non-serviceable. - Where no appointments exist. The duration of the gap is deducted from the length of service.
Length of Service End Date	 Note: - This is an advance setting. - This is not recommended as standard configuration. The <i>Length of Service End Date</i> is used for Maternity/Adoptive Length of Service and is based on a date in the future. Use where an employees' length of service is calculated into the future for maternity/adoptive leave. - Baby Due Date. - Week of Baby Due Date. - Adoption Date. - Week of Adoption Matched Date.
Part Time Multiplier	This field impacts the entitlement calculation value for employees who have an FTE of less than 1.

Field/Indicator	Description
	(Optional) If populated, it overrides the calculation of an employee's entitlement as a factor of their FTE, e.g. employees with an FTE of 0.5 has half the defined entitlement. Use in cases where all employees with an FTE of less than 1 are treated the same, whereby their entitlement is calculated by dividing the standard entitlement by this part-time multiplier.
Use Payment Multiplier to get total taken for a Continuous Absence	 Note: - This is an advance setting. - By default, this indicator is not enabled. This option is relevant to employees who are out on long term sick. The Payroll transaction history table records what pay multiplier was used to pay the relevant absent day from the original start date of the illness. When the <i>Use Payment Multiplier to get total taken for a Continuous Absence</i> indicator is enabled, the absence module counts the number of days paid at each multiplier above zero from the original start date of the illness. If these exceed the combined days at non-zero payment multipliers on the entitlement range, then the payment stops. Example: If an entitlement rule reads 182.5 days at full pay, and 182.5 days at half pay, then once more than 365 days have been counted for this continued illness the payment is ceased.
Length of Service End Date Reduction Days	 Note: - This is an advance setting. - Use in conjunction with the "Length of Service End Date" setting. - Use this nominal value to reduce the end date. - This is not recommended as standard configuration.

Field/Indicator	Description
	Example: If the 'Baby Due date' was selected, and 7 entered into this column, the length of service end date is 'baby due date' recorded in payroll minus 7 days.
Entitlement Rounding Basis	Note: This is a General Parameter that may be set at absence rule level. Enter a rounding basis from the drop-down menu for entitlements affected by FTE. The options are: • Up to the nearest • Down to the nearest • To the nearest • To the nearest (favourable)
Entitlement Rounding Days	Note: This is a General Parameter that may be set at rule level. Enter a value (in Days) to which to round.

2.5.4. Delete/Duplicate Absence Rule

To Duplicate or Delete an Absence Rule:

1. Select the Further Options  next to an Absence Rule.
2. Select **Delete** or **Duplicate**.

Absence Rules

Rules for Category ABSENCE CATEGORY 1

Rule Id	Description	Active
---------	-------------	--------

To configure the absence categories required:

1. Click the blue **Add** button. This creates a new blank row.
2. Add an *Absence Category* code.
3. Add a description for the *Absence Category*.
4. Add the number of weeks allowed between absences before the employee reverts to full pay.

Note:

The *No. of Weeks Between Absences* field is no longer applicable as calendars are now used.

5. Repeat to add all required categories.
6. Enable the **Salary** indicator if this category is to apply to salary employee.
7. Click **Save**.

Note:

Separate absence categories need to be set-up for Positive Input and Salary employees.

2.6.2. Delete/Duplicate an Absence Category

To Duplicate or Delete an Absence Category:

1. Select the Further Options  next to an Absence Category.
2. Select **Delete** or **Duplicate**.

Maintain Absence Categories 

Category	Description	No of Weeks between Absences	Salary	
1	Absence Category 1			
 Delete  Duplicate				

2.6.3. Associate Absence Rules with an Absence Category

To associate absence rules with an Absence Category.

1. Select a *Category*.
2. Scroll to the end of the screen under *Rules for Category* and click the blue **Add** button. This creates a new blank row.

Maintain Absence Categories

Payroll: Configuring Absence Pay Parameters

There are no mandatory fields on this screen. Complete the fields as required; see the table below for more information.

Field	Description
Apply Retirement Date	Enable this if retirement dates are to be applied.
Generate Occupational Absences in a CoreTime only site	Used for CoreTime only sites.
Apply a single OSP Payment per Pay Code	Enable this (where multi-appointments are used) to apply a single OSP payment per pay code rather than a payment per appointment.
Apply Acting Grades	Enable this indicator where acting grades are to be applied.
Apply a Single Salary Offset	Enable this (where multi-appointments are used) to apply a single salary offset rather than an offset per appointment.
Acting Category	Select an acting category from the drop-down menu.
Always Use Default FTE	Enable this indicator to always to use the default FTE.
Apply FTE Exceptions	Enable this indicator to allow the FTE Exceptions listed to be applied.
View FTE Exceptions	Click this button to view the FTE Exceptions.
Apply Zero FTE	Enable this if Zero FTE values are used. Disable it if Zero FTE values should be ignored.
Exclude FTE from Daily Rate	Enable this indicator to exclude FTE from the Daily Rate.
Ignore Leave Dates	Configure a list by Employee Status from whom to ignore Leave Dates.
Days to Exclude	Turning on the indicators excludes those days.

3. Absence Pay Codes

3.1. Recording Absence Pay Code Configuration

3.1.1. Absence Recording Pay Code

Create a pay code for each type of occupational absence to be handled by the Occupational Absence module, i.e. each type of absence for which a company policy exists, such as:

- Sick
- Maternity
- Adoption
- Paternity

These pay codes can be broken down as required by your organisation. For instance, if certified sick leave and uncertified sick leave are treated separately, then two sick leave pay codes should be set-up rather than one.

Rules	Description
Hours/Days/Units/Value	Select either Hours or Days, depending on the method used to record absences.
Multiplier	Set absence management recording pay codes to a Multiplier of 0.
Analysis Code	Select the 'Absence Management' analysis code. If required, another analysis code may be used, but it must be set-up with Analysis Type' GP'.
General Absence Type	Associate the pay code with the general absence type, e.g. Sick. This links the WFM recording pay code to the Payroll pay code which pays the absence.
SSP (UK Only)	Switch On, if this WFM recording absence pay code is used for recording sick pay.

3.1.2. Absence Payment Pay Code

Set up a payment absence pay code for each absence type defined in your environment.

Rules	Description
Hours/Days/Units/Value	Select Value.
Multiplier	Set absence paying pay codes to a Multiplier of 1.

Analysis Code	Select the 'Absence Management' analysis code. If required, another analysis code may be used, but it must be set-up with Analysis Type' GP'.
----------------------	---

3.1.3. Salary Offset Pay Code

For any employee receiving a salary or basic pay, and occupational absence pay, payroll generates a salary offset to negate the salary paid for absence days.

This ensures the employee is not overpaid when absent. The amount offset is posted to the salary offset pay code.

Rules	Description
Hours/Days/Units/Value	Select Value.
Multiplier	Set salary offset pay code to a Multiplier of 1.
Analysis Code	Select a 'basic pay' analysis code. If required, another analysis code may be used, but it must be set-up with Analysis Type' GP'.

3.1.4. Public Holiday Pay Code (Optional)

The Public Holiday pay code may be used to pay absences which occur on public holidays.

The payment rate for sickness on a public holiday may differ from the payment rate for an absence on a day which is not a public holiday. For example, if an employee was sick from 1st January (public holiday) to 10th January, the employee could get paid:

- 1 day @ Public Holiday pay code
- 9 days @ Sick pay code

Rules	Description
Hours/Days/Units/Value	Select Value.
Multiplier	Set public holiday pay code to a Multiplier of 1.
Analysis Code	Select a 'basic pay' analysis code. If required, another analysis code may be used, but it must be set-up with Analysis Type' GP'.

3.1.5. Qualify Allowance Pay Code

A qualifying allowance pay code is included when determining a person's daily/hourly rate of pay.

Rules	Description
-------	-------------

Qualifying Basic Pay Code	Enable if this pay code should be reckonable for the occupational basic rate calculation.  Note: This indicator is not applicable to the period daily rate calculation.
----------------------------------	---

3.1.6. Statutory Offset Pay Codes (UK Only)

A statutory offset pay code must be created to be used to offset statutory pay when an employee's occupational and statutory pay combined exceeds their normal basic pay.

Rules	Description
Hours/Days/Units/Value	Select Value.
Multiplier	Set statutory offset pay code to a Multiplier of 1.
Analysis Code	Select a 'statutory pay' analysis code. If required, another analysis code may be used, but it must be set-up with Analysis Type 'GP'.

4. Appendix

4.1. Rolling Period Basis

The following tables describe the various possible values for the rolling period basis field on the absence rule.

4.1.1. Original Absence Date Back

 Note: Most commonly used option.

Used to determine an employee's absences taken to date. The absence module uses the start date of the current absence episode and rolls back the number of months specified within the rolling periods.

Employee	Rolling Period (set at)	Date of Illness	Count back 'From Date'	Count back 'To Date'
Example 1: Joe Bloggs sick from the 16 th September to 19 th September inclusive.				
Joe Bloggs	48 months	16 th September 2019	15 th September 2019	16 th September 2015

Joe Bloggs	48 months	17 th September 2019	15 th September 2019	16 th September 2015
Joe Bloggs	48 months	18 th September 2019	15 th September 2019	16 th September 2015
Joe Bloggs	48 months	19 th September 2019	15 th September 2019	16 th September 2015
Example 2: John Doe sick from the 10th February to 13th February inclusive.				
John Doe	12 months	10 th February 2019	9 th February 2019	10 th February 2018
John Doe	12 months	11 th February 2019	9 th February 2019	10 th February 2018
John Doe	12 months	12 th February 2019	9 th February 2019	10 th February 2018
John Doe	12 months	13 th February 2019	9 th February 2019	10 th February 2018

Note:

If an employee has an occupational absence entered on the 'Count back to date', i.e. 16th Sep 2015 or 10th Feb 2018 above – the system counts back to the start date of that absence episode to determine the days taken. Using example 2 above, if the person had an absence recorded from 21st Jan 2019 to 28th Feb 2019 (spans the 10th Feb 2019), the 'count back to date' and taken will be to the 21st Jan 2019.

4.1.2. End Date of Absence Back

Used to determine an employee's absences taken to date. The absence module uses the end date of the current absence episode and rolls back the number of months specified within the rolling periods.

Employee	Rolling Period (set at)	Start Date of Absence	End Date of Absence	Count back 'From Date'	Count back 'To Date'
Example 1: Joe Bloggs sick from the 20 th January to 31 th Jan inclusive.					
Joe Bloggs	12 months	20 th January 2019	31 st January 2019	31 st January 2019	1 st February 2018
Joe Bloggs	12 months	1 st February 2019	7 th February 2019	7 th February 2019	8 th February 2018
Joe Bloggs	12 months	20 th February 2019	28 th February 2019	28 th February 2019	1 st March 2018

Note:

In the table above, the two February illnesses are not one continuous illness. If they were, then they would be deemed to be a single episode/instance and the rolling period would be from 1st March 2018 to 28th February 2019.

4.1.3. End Date of Previous Period Back

Used to determine an employee's absences taken to date. The absence module uses the end date of the previous payroll period and rolls back the number of months specified within the rolling periods.

Employee	Rolling Period	Current Open Payroll Period	Date of Illness	Count back 'From Date'	Count back 'To Date'
Example 1: Joe Bloggs sick from the 1 st July to 31 st July inclusive.					
Joe Bloggs	12 months	201907	1 st July 2019	30 th June 2019	1 st July 2018
Joe Bloggs	12 months	201907	2 nd July 2019	30 th June 2019	1 st July 2018
Joe Bloggs	12 months	201907	3 rd July 2019	30 th June 2019	1 st July 2018
Joe Bloggs	12 months	201907	4 th July 2019	30 th June 2019	1 st July 2018

**Note:**

If the employee has taken 25 days between 30th Jun 2019 and 01st Jul 2018, the absence recorded on the 01st July would be the 26th day taken, i.e. (25 +1), and the absence recorded on the 2nd July would be the 27th day etc...

4.1.4. Original Absence Date Forward

**Note:**

Most commonly used for occupational maternity leave.

Used to determine an employee's absences taken to date. The absence module projects forward from the first day of the original absence recorded forward and does not go back into the history to determine absence days/hours taken.

Example: Maternity Leave employees are entitled to 20 days paid maternity leave – Service calculation is based on:

Employee	Rolling Period	Current Open Payroll Period (201907 – 01 st Jul-19 to 31 st July 2019)	Date of Illness	Count back 'From Date'	Count back 'To Date'
Example 1: Joe Bloggs sick from the 1 st July to 31 st July inclusive.					
Mary Bloggs	12 months	201907	1 st July 2019	30 th June 2019	1 st July 2018
Mary Bloggs	12 months	201907	2 nd July 2019	30 th June 2019	1 st July 2018
Mary Bloggs	12 months	201907	3 rd July 2019	30 th June 2019	1 st July 2018
Mary Bloggs	12 months	201907	4 th July 2019	30 th June 2019	1 st July 2018
