Version	Date	Author	Details
1.0	29 th Nov 2023	Isabelle Grey	Published to Customer Success Portal.
1.1	4 th Dec 2023	Isabelle Grey	Update based on feedback.
1.2	13 th Mar 2024	James Martin	Updated section Can I Pay Expense Advances?

1. Solution Delivery, Training and Consultancy

When will the ERR solution be available?

The Irish Year End and ERR software will be generally available from Automatic Patch Release 28.0.93:

- Non-Production Release Date: 29 Nov 2023
- Production Release Date: 06 Dec 2023

As the Revenue plan to have the Revenue Payroll Notifications (RPNs) for 2024 available in early December 2023, our timelines are in line with the Revenue's. Requesting a Revenue Payroll Notification (RPN) for 2024

Do I need to specifically request this software or will it be automatically delivered?

The Irish Year End and ERR software will be automatically delivered as part of the standard Automatic Patch Release process.

Why is the release later than previous years?

This year's release is more complex for two main reasons:

1. It includes Enhanced Reporting Requirements (ERR) Phase 1 which is significant piece of work and impacts on both PeopleXD Payroll and PeopleXD Expense.
2. Some of the Year End items were only confirmed by Revenue at the end of October 2023.

The Year End and ERR software will be validated with a pilot Customer in advance of general release.

Will there be any Customer information sessions covering ERR?

Yes. ERR was covered in the [Irish Year End & ERR Webinar](#).

Will there be any Consultancy/Training packages available?

Yes, please see [Select your package](#)

When will the user guides be available?

[ERR user guides](#) are now available.

What guidance is available from the Revenue?

- [Enhanced Reporting Requirements \(ERR\) Announcement](#)
- For more guidance from Revenue around Enhanced Reporting Requirements (ERR) please take time to review this Tax and Duty Manual (TDM): [Tax and Duty Manual \(TDM\) Part 38-03-33 Returns by Employers in Relation to Reportable Benefits – Enhanced Reporting Requirements](#)
- **€3.20 remote working allowance:** [TDM Part 05-02-13 Remote Working Relief](#)
- **Travel and subsistence payments:** [TDM Part 05-01-06 Tax treatment of the reimbursement of expenses of travel and subsistence to office holders and employees](#)
- **The small benefit exemption:** [TDM Part 05-01-01e -The small benefit exemption](#)
- [Guidance for employers on aligning pay dates and end of year issues](#)
- [Requesting a Revenue Payroll Notification \(RPN\) for 2024](#)
- <https://www.revenue.ie/en/tax-professionals/tdm/income-tax-capital-gains-tax-corporation-tax/part-38/38-03-33.pdf>.

What other changes are being introduced for Tax Year 2024?

See the [Irish Year End and Enhanced Reporting Requirements \(ERR\) update](#).

2. ERR Solution and Functionality

2.1. When ERR is required

What payments are included in ERR Phase 1?

ERR Phase 1 includes the following three types of payments:

1. **€3.20 remote working allowance:** Revenue operates an administrative practice which allows an employer to make payments up to €3.20 to employees, for each day worked from home, subject to certain conditions being satisfied, without the need to deduct PAYE, PRSI or USC. Guidance for this measure is available in [Tax and Duty Manual \(TDM\) Part 05-02-13 Remote Working Relief](#).
2. **Travel and subsistence payments:** Where an office holder or employee, in the performance of the duties of his/her office or employment, incurs expenses of travel and subsistence, such amounts can, subject to conditions, be reimbursed without deduction of PAYE, PRSI and USC. Guidance for this measure is available in [TDM Part 05-01-06 Tax treatment of the reimbursement of expenses of travel and subsistence to office holders and employees](#).
3. **The small benefit exemption:** The small benefit exemption provides that employers may make tax-free benefits to employees in the form of vouchers or other benefits within the remit of section 112B TCA 1997. Guidance on this measure is available in [TDM Part 05-01-01e -The small benefit exemption](#).

If benefits are paid by company credit card is it correct that we don't have to file an ERR return?

Yes, Revenue have clarified that there is no requirement to file an ERR where benefits are paid via Company Credit card. This is as the employee is not being directly reimbursed.

If expenses are identified that should have been treated as taxable but were paid tax free, should they be reported? And do you have any solutions for retrospective grossing up required based on the above?

ERR is the reporting of non-taxable benefit payments. As such taxable expense payments would not be reported. If payments were reported incorrectly then a cancel/manual payment would be

required to correct the payment value reported. There is no grossing up recalculation available for previous periods.

We handful of students who are not on payroll but they get paid expenses for travel.

In this case if the students are not employees of the company there is no obligation to report then under ERR reporting.

Can I pay expense advances?

Revenue has clarified that non-taxable advances will be allowed in certain scenarios. This change is being implemented following feedback on the ERR release in relation to advanced not being allowed.

Irish Revenue will introduce an optional administrative practice allowing the processing of non-taxable advances under certain conditions.

Further guidance is covered in the [Revenue Tax Duty Manual \(TDM\) part 38-03-33](#).

Note:

Revenue have not yet released the method to process non-taxable advances. Until this is released it is not possible to process advances.

Employers deciding to operate advances must report all advance travel and subsistence payments under ERR once their chosen reporting mechanism becomes available. For further information please see the [Processing Non-Taxable Advances](#) guide.

Are external claimants included?

External Claimants are automatically excluded from ERR Files generated. This is as they are not employees of the employer and therefore are not required to be returned. The system identifies based on the C prefix of the claimant employee number. The C Prefix is automatically added by the system when a user sets up an external claimant.

What is the difference between Travel Vouched and Travel Unvouched?

See the Revenue guidance:

- <https://www.revenue.ie/en/tax-professionals/tdm/income-tax-capital-gains-tax-corporation-tax/part-05/05-01-06.pdf>

- <https://www.revenue.ie/en/tax-professionals/tdm/income-tax-capital-gains-tax-corporation-tax/part-38/38-03-33.pdf>

What kind of items would fall under Travel and subsistence for reporting?

See the Revenue guidance:

- <https://www.revenue.ie/en/tax-professionals/tdm/income-tax-capital-gains-tax-corporation-tax/part-05/05-01-06.pdf>
- <https://www.revenue.ie/en/tax-professionals/tdm/income-tax-capital-gains-tax-corporation-tax/part-38/38-03-33.pdf>

Is an eating on site allowance to be reported on?

Yes. See Revenue guidance <https://www.revenue.ie/en/employing-people/becoming-an-employer-and-ongoing-obligations/reporting-jan-2024/index.aspx>;

Are we required to report on taxable travel and subsistence payments?

Enhanced Reporting Requirements (ERR) only relates to the non-taxable portion of benefits. Any taxable payments would already be reported to Revenue via the Payroll Submission Return (PSR) (PAYE Mod).

What guidance are Revenue referring to when they say advance expense payments are not supported under current legislation?

In discussions with Revenue they have advised this is not new for ERR but has just come to light during the project that payments of expense advances is happening and Revenue are advising expense advances is not an allowed practice.

The following is the Revenue link to the TDM that outlines the position on advance payments: <https://www.revenue.ie/en/taxprofessionals/tdm/income-taxcapital-gains-tax-corporationtax/part-05/05-01-06.pdf> Section 3.3 specifically calls out the issue with "Round Sum" payments.

To get around advances, can we pay vouched future dated hotel bills

If the employee is not being directly reimbursed by the employer then there is no ERR reporting requirement. Therefore finding a solution that pays the expense without the employee needing to

be reimbursed is the best way to get around the need for ERR reporting requirements. For example, third party travel agencies, company credit cards etc... These come with their own costs/challenges though so they are considerations not recommendations as what is the best approach is something that should be assessed by each site individually.

Eating on site is a non taxable pay and is currently paid through People XD Payroll with submission files uploaded prior to payment - is this sufficient to meet the new revenue ERR?

Non taxable payments do not output in the Payroll Submission Return (PSR – PAYE Mod) file. So in this scenario, yes it's perfectly fine to continue paying eating on site via payroll. What will change however is now users will, after the complete update, need to generate and transfer an ERR file from the People XD Payroll System to Revenue.

2.2. Processing ERR

Can you make these payments and returns via the People XD payroll section or do you need the expense module?

The ERR return will be made from the system used to make the payment. For example, you may pay some elements via the Payroll run and in that case you will, once the payroll is completed, be required to generate and transfer an ERR file from the payroll system to Revenue. The other payments you may make from the expense system and in that case you will, once the expense run is completed, be required to generate and transfer an ERR file from the expense system to Revenue. These are independent files generated and returned each time a payment is made.

Are the new screens required going to be on back office and portal?

For Payroll, the new ERR screens are available on back office and portal. For Expense, the new screens are available on back office only as the expense admin screens have not yet been migrated to portal.

If sites moved employees to a new payroll tax registration company then would the expense groups need to connect to the new payroll companies (for their tax reg) as the expense groups are still linked to the old payroll companies (as they use the payroll calendars)

The system will seek to derive the payroll tax reg number where the payroll and expense are on the same database but users will be asked to assign the Tax Registration company of a claimant in

expense via a new field as part of the solution roll out or to populate that new field where they have exceptions.

How much manual intervention is required when reporting ERR from a non payroll system such as Expense?

Non Payroll systems are not generally set up to report like a payroll system to Revenue. This presents a challenge and as such while we have attempted to automate the ERR process for expense system users there will be occurrences where [manual intervention will be required](#).

What happens if employee has to change pay group between a travel payment and payroll payment?

From January 2024, because of the Revenue reporting requirement, it will be required that you complete any ERR return to Revenue before being able to move the employee in to a new payroll company.

If I do a Supplementary run for additional expense payments, can you do a second run for the ERR with a new run number.

The ERR return is per run. If doing a supplementary run which contains payments for ERR pay codes then a return is required before you can do the next supplementary run or payroll however once you have made that return then yes you can run the next supplementary run or next payroll making new payments for ERR pay codes. If no err pay codes are used in the payment run then you can run the next run as normal (provided the Payroll Submission Return (PSR) return has been completed of course).

How are External Claimants to be excluded on the system?

External Claimants are automatically excluded from ERR expense returns as we can identify them based on the C prefix of the claimant number. So there is no action from a user perspective we automatically identify and exclude the external claimants when generating an ERR file in an expense run.

For cancel/manual of previous expense payments, is there a process for ERR returns for previous periods?

This works the same as PAYE Mod. i.e. when recording a cancel or manual payment the user can generate a submission and then send to Revenue. This is only required where an ERR relevant payment is involved.

For example: If a record a manual payment today, I would then go in to the Generate ERR screen and Generate an ERR file for that pay group which would pick up the manual payment. This can then be transferred to Revenue. This is because of the on or before reporting requirement. You don't wait until the next payroll period to report it.

Is there a Revenue bulk upload option if I want to make a manual return outside of the system?

We recommend sending files directly from the People XD Payroll or People XD Expense system directly to Revenue. However where manual returns are required then yes, there is also a Revenue upload option but the only file formats available from Revenue for that upload are JSON or XML. There is no Excel/CSV file upload option available from Revenue.

- Therefore options for manual reporting information outside of the Access systems to Revenue are:
 - (a) Manual Employee by Employee entry using ROS screens
 - (b) JSON or XML file upload using ROS screens

How will the payslip look? will it be one line item for the main category or will each sub category appear?

There is no change to the payslip in relation to ERR. Payslips will show each pay code separately but can be grouped using the payslip pay code grouping functionality.

We complete our December Expense run in January 2024, will this need to be included in ERR?

Payment date will determine this. It doesn't matter when the expenses relate to but when the payment is made. If the payment is made in 2024 then yes Revenue expect an ERR return so one is required.

Please confirm we cannot pay trips taken up to 31st Dec 2023 in 2024.

Expenses from December 2023 can be paid in 2024 if that's when they are submitted / processed but if they are paid in 2024 then they will require an Enhanced Reporting Requirement (ERR) return for any elements that fall in to one of the Revenue Reporting categories (i.e. (a) Small Benefit Exemption, (b) Remote working relief or (c) Travel & Subsistence)

Is there an issue using Expense on Back office?

The admin screens for People XD Expense are on back office only currently so this is fine and the ERR screens for People XD Expense are all back office screens also.

Is there an easy JSON file reader that can be accessed?

A JSON file can be opened with word, text document or notepad. We're not able to recommend a specific JSON file reader.

Is RPN generated only in core pay and not in core expenses? if we have both

Yes, RPN (Revenue Payroll Notification) is specific to payroll. It only applies to payroll.

With ERR – Enhanced Reporting Requirements – this introduces a similar style Revenue connection called an ERN – Enhanced Reporting Notification. The purpose of that ERN is to allow non Payroll systems get from Revenue the Revenue Employment ID value. The ERN only needs to be used by People XD Expense sites where People XD payroll and People XD expense do not exist on the same database.

Do we have to do a claimant EPN upload before each payment run?/Before we run an expenses run, do we then need to run the load claimant ERN as standard?

The ERN only needs to be run by sites NOT using PeopleXD Payroll or it is not on the same database as expense.

For those sites, the ERN can be run before each payment run and the system will bring back employment IDs held by Revenue for all employees in that payroll tax registered number. Please note there is no date last retrieved so running this job makes a request for all employees each time it is run. Therefore if users wish they can also run this job just for specific employees as well.

We have one company but have two expense groups - how do you submit the file?

Assuming you are using People XD Payroll and People XD Expense and if one payroll company but two expense groups then

- From payroll – a file is generated and transferred after every payroll complete update.
- From expense – a file is generated and transferred after every expense validation run. This is because of the on or before reporting requirement.

Is there a specific report format that Revenue require for this data to be reported?

Yes, the ERR has a very specific file format. Where using People XD Payroll we produce the file in that required file format automatically when you generate the ERR file and the file can be transferred directly from the People XD database to Revenue.

If seeking to use the Revenue manual upload option then Revenue allow a JSON or XML file format. The Revenue schema guidance is available on their github page: <https://revenue-ie.github.io/payee-employers-documentation/>

We process our expense claims in the Core expense module, then transfer the approved expense claims and pay them via Core pay. in this case, do we generate//transfer the ERR submission via Core Expense or Core pay?

It sounds like the physical payment of these items is being made using the Payroll module in this scenario? If that is the case then the Generate/Transfer ERR would be from payroll.

Can the ERR Payroll Validation check be turned off at pay group level?

The ERR Payroll validation check is there to ensure that if an ERR payment was made in the previous payroll run that the ERR File has been return to Revenue before we run the next payroll.

- It only applies on production environments from the second payroll run of 2024 and works by checking if any of the ERR pay codes configured were used to make a payment in the previous payroll run.
- This only applies to Irish payrolls.

There is an option to disable this validation at a pay group level but access to that option is restricted to access group staff so as to prevent the accidental moving on of payrolls before this statutory return has been successfully completed. This was a decision taken based on PAYE Mod experiences.

When setting up the ERR pay code how would we enter value for a easter egg when we will not be making this as a payment so don't what it paid to the employee?

This would require a double entry. One for the payment value to be reported and one to negate it so that the employee doesn't get double paid the benefit.

How are changes/corrections made when validation and bank file are created if you have an ERR transmission error?

- For Payroll – cancel / manual payments can be recorded and an updated ERR file generated/transferred with the corrected information to Revenue.
- For Expense – There is no equivalent cancel/manual payment screen. Any corrections in expense if processed in a future expense run are reported as part of that run or if manual adjustment is done to that expense run outside of the system then a manual Revenue adjustment would be required also using Revenue ROS screens.

Can you please confirm we pay a monthly payroll on the 12th of the month. We have a weekly expense run can we submit these weekly or do we have to wait until after the 12th every month after we send the bank file

The expense runs would be submitted weekly in this case. o The best way of thinking of this is every time I send an expense bank file I also need to send an expense ERR file and similarly every time I send the payroll bank file I also need to send a Payroll ERR file

(Note: this is assuming there is a relevant payment in that expense or payroll that requires reporting as if no relevant payments there is nothing to report to Revenue so no return is required)

2.3. ERR Configuration

Is the ERN mandatory if you are using PeopleXD payroll but an separate expense system. Would it be possible to download the Employee ID field from PeopleXD to the 3rd part expense system?

In such a set up, you will need to speak to the vendor of that separate expense system to see what they are advising regarding how to manage ERR reporting from their system. However from an employer perspective you are required to report any relevant payments made via that system on

or before payment to employee(s) and that return needs to include the Revenue employment ID number.

No, data protection reasons mean that it would not be suitable to try to connect (manually or automatically) the different payroll and expense systems from different vendors to try and have them share the employment ID to be used for reporting benefits. The employment ID to be used must come from Revenue in that case.

When configuring the pay codes in payroll and expense is there a chance of duplication reporting?

The payroll ERR return is based on what was paid (i.e. what's on day history) and similar for the expense run based on what's paid in expense so there shouldn't be an issue if the same pay codes are shared between payroll and expense provided the payment is only being processed through one of the systems.

How will this impact on sites with multiple Tax Reg Numbers that may not align on non payroll systems e.g. I can have one expense company but that expense company may be based on employees in more than one payroll company.

If there is more than one tax registered number involved then this is one of the areas that has a major process impact, particular on non payroll systems, and internal processes need to be reviewed to control timing of outstanding claims requiring ERR return vs when you move an EE between companies.

- For non payroll systems, you'll need to check with each non payroll vendor independently to see what they are doing as we can only advise on Access Group products.
- From an Access Group People XD Payroll and People XD Expense perspective:
 - We have sought to try to automate this where possible.
 - However that requires People XD Payroll and Expense sits on the same DB.
 - In that case we use the current payroll company and Revenue employment ID and automatically create a file per payroll company when you generate an expense group.
 - This does require the expenses are claimed before employees move in to a new company.

- If after the move expense are claimed for the old company a manual override is needed to inform the system that this information is returned under an old company tax reg and Employment ID and then removed after the return has been successfully completed.
- Where People XD Expense doesn't sit on the same DB as People XD Payroll then
 - it will require a mapping in expense is set up first at either the Expense Company or Expense Claimant level to tell the expense system.
 - This is required also for the ERN to be used as the Payroll Revenue Employment ID doesn't exist on the system and needs to be linked before payment can be reported to Revenue.
 - EE movement between payroll tax companies will then also have to be managed in your non payroll systems to ensure you are aligned and updating the employees link to ensure they are being returned in the correct payroll tax Reg company and Revenue Payroll Employment ID.

Further detail on this is covered in the year end webinar and user guide.

We are part of a shared service, will they be managing the set up of this for us?

Please reach out to the shared service provider to discuss how they intend on managing this project with you.

Can a payment made to an employee, not made in the system (such as a voucher), somehow be recorded in the system for reporting purposes?

Yes new pay codes could be set up to process payments for ERR reporting but there are several items to consider to decide if this is feasible. For example:

- On or before reporting requirement: if the benefit is given to the employee before the payroll payment date then it would not be suitable to process via Payroll as you would be failing the Revenue on or before reporting requirement. In this case either the process would need to be amended to align the date the employee gets the benefit with the payroll payment date or the ERR return would need to be made outside of the system.
- Employee Impact: If the employee has already received the benefit then you'll need dual entry pay codes (one positive for the value to be reported under ERR and one negative to reduce the employees pay back down so that they're not getting the benefit on the double).

Can you connect 3 different payroll companies & Different reg numbers to one company in Expense? (On same database)

This answer assumes the user is using People XD Expense. If using another expense product please clarify with that vendor how they handle this scenario.

If using People XD Payroll on the same database.

- The system will automatically create an ERR file per payroll tax reg company.
- This is based on the employees current payroll tax registered number.
- So you do not need to create any additional mapping on the expense side in this case UNLESS the employee needs to be returned under a company different than his/her current payroll company. In that case the payroll tax reg company / Revenue employment ID can be overridden in Expense using the claimant parameters screen.

If not* using People XD Payroll on the same database then the different payroll tax registered companies can be set on either:

- Expense Company level – only suitable where there's a one to one relationship of Expense company to payroll company.

Or

- Claimant level – used where there's more than one payroll tax reg number represented in an expense company.

Note: *As not using People XD Payroll on the same DB this set up is required and the Enhanced Reporting Notification job must be run as well to bring back the Revenue Employment ID.

Is expense back office and core portal different databases

They could be the same database or different databases.

With regards to companies who only have PeopleXD and who currently pay all expenses through the Payroll system only, if we need to setup new pay codes to facilitate the new ERR i.e. separate pay codes for travel vouched, travel unvouched etc.?

The Revenue requirements are that items must be reported at the sub category level outlined in the presentation (see user guide if more information needed). Therefore yes potentially new pay

codes may be required as you do need to ensure that you are splitting the transactions against different pay codes for each of the sub category items.

Do we have to set up the new pay codes if so how should these be set up?

New pay codes may be required to be set up but the requirements for what new pay codes are needed and how they should be configured will vary by requirement. Any new benefit codes set up though would be non-taxable.

What happens if the company uses a completely different system for expense, do we need to adopt Back office or an API can be used to link the system to Back Office.

You'll need to discuss with that Expense vendor if they are planning to support ERR and if so how they will be handling it in their system. If they are not providing an in system solution then you would have to use the Revenue ROS screens to report the information every time a relevant payment is being made. Keeping in mind that the on or before payment reporting requirement is a deadline set by Revenue that you must report by.

Is there a list of the pay codes to add to PeopleXD?

The requirements for what pay codes need to be set up will vary per site. If additional guidance or assistance is required on doing so then please reach out to our professional services team.

is it possible to configure so payroll and ERR are submitted to revenue at the same time ? or is it two routines?

The Revenue design of ERR is that it is a standalone independent file. Therefore, yes it is two independent generate/transfer processes that have to be followed after each run. An ERR return is only required though where a relevant payment is made that requires reporting i.e. (a) Small Benefit Exemption, (b) Remote Working Allowance or (c) Travel & Subsistence).

Do we add the company Tax Reg Numbers to Access Expense? We have 3 in Payroll with claimants going through Expense for all 3 companies. We currently only have one company in Expense.

- If using People XD Expense
 - You only need to add company tax reg numbers in People XD Expense where NOT using People XD Payroll on the same database

OR

- Where you want to override the claimant to report them under a payroll company that is different to their current People XD payroll company.
- If using Access Expense
There is no connection between Access Expense and PeopleXD Payroll or PeopleXD Expense. As such, any payments made using Access Expense would have to be manually reported to Revenue.

Are the digital certs the same ones we use for PMOD/Is there a separate digital certificate required for ERR?

The answer to this varies depending on circumstances however regardless of if a new cert is required or the same cert applies, users will still need to load in that cert against the ERR load digital certificates.

- Revenue have updated Employer certs to automatically have ERR permissions. However if you are using a sub cert then an updated cert with ERR permissions has to be requested.
- Similar for agents, Financial agents have automatically been given ERR permissions, however for payroll agents an updated cert with ERR Permissions has to be requested.
- If requesting a cert with updated permissions its important to be careful of timing as that invalidates the current cert.
- Again, once you have a cert with the ERR Permissions you must load that cert in to the People XD system.
 - If using People XD Payroll you only need to load the ERR digital cert against each payroll company.
 - If using PeopleXD Expense you only need to load the ERR digit cert against any tax registered numbers set up on expense (i.e. if you are expense stand alone).
 - If using both PeopleXD Payroll and PeopleXD Expense on the same database there is no requirement to load digital certs via expense unless there is a Tax Registered Company in Expense that doesn't exist in Payroll. In which case for that Tax Reg only, the cert will need to be loaded in Expense.

Note: if users have had to request a new cert (invalidating the current cert) then users will also need to load the cert against the PAYE Mod Load Digital cert option.

As we have already load the digital Cert for PAYE Mod do we also have to upload the cert for ERR?

Yes, users still need to load a digital cert for ERR even if it's the same cert as used for PAYE Mod currently.

We have upload the digital cert in Payroll, do we still have to upload the cert in Expense?

If using People XD Payroll and Expense on the same database then you only need to load the digital certs against the payroll companies unless there is a Tax Registered Company in Expense that doesn't exist in Payroll. In which case for that Tax Reg only, the cert will need to be loaded in Expense.

How do you configure pay codes for recording small exemption benefit on payroll for including on reporting

This will vary per benefit but all benefit pay codes falling under ERR reporting requirements would be Non-Taxable.

As a financial (and payroll) agent for our clients - do i need to update each tax cert for each company for ERR purposes, their ERR payments will be through payroll only not expense.

Yes the certs will need to be loaded in the system for ERR once available. Revenue are automatically granting ERR permissions to financial agents. However for payroll agents – a new request has to be made for the ERR permissions.

Can I check for companies who only use the People XD Payroll system and who do not have an expense system if we are recommending that we setup pay codes on the Payroll system to facilitate reporting small benefits if these are not currently processed through the payroll system?

This is a local choice. Per question above though please ensure to consider the on or before reporting requirement and employee payment/costing impact to consider if this is appropriate. If you decide its not (for example it would fail the on or before reporting requirement) then either a process change should be considered or alternatively the payment would have to be reported manually to Revenue using the Revenue ROS screens. These can be grouped on the payslip output using the payslip pay code functionality.

For sites who use Pay and Expense modules on XD. A number of sites have a new tax reg which they want to use in expenses. In payroll company 1 has the old tax reg and company 2 in payroll has the new tax reg (company 1 is not used in payroll anymore). The employees in expenses are in company 1. We want to know how to ensure they use the new tax reg in expenses.

In this scenario, as the correct Payroll Tax Reg does not exist on people XD payroll on the same database then the link must be created in people expense. This is done at one of two points either

- Expense Company level – if everyone in an expense company belongs to the same payroll tax reg then record that value here.
- If there is a mixture of payroll tax reg companies for employees in the same expense company though then a mapping has to be recorded at the claimant level to say which claimant belongs to which payroll tax reg company.

Please note, in addition:

- The digital cert for ERR has to be loaded through the Expense Load Digital Cert screen for these companies.
- If the payroll on this database isn't active/up to date then the ERN process is required in this scenario to pull back from Revenue the employment IDs as this environment does not have the up to date payroll records so is effectively an expense standalone environment. We therefore need the Revenue source of what the right Revenue Employment IDs are.

2.4. Employee Data

In Payroll your employee id could be your person reference_payroll period rejoin e.g. 1234567_202302 and in expense they would be a claimant no would be 1234567, how will this work with Revenue?

There is no field in the Revenue file for Person Reference or Claimant ID. The ERR return to Revenue is reported using the Revenue Employment ID only. So when a return is being made from the expense system it'll have to be reported using the 1234567_202302 number in the example provided. In the case where that employee is on both the People XD Payroll and Expense system on the same database the system will be able to automatically identify and report that number.

However where not using the same payroll & expense system the Employment ID has to come from Revenue.

Is the Revenue employment ID simply the PPS no. of the employee?

Generally no, the employment ID is a unique identifier per employment that is generated by the payroll system. How that ID is created may differ from vendor to vendor so another vendor may have decided to make a decision to create it based on using the PPSN however none of the Access Group payroll systems would use the PPSN when creating the unique Revenue employment ID.

Is the Employment ID available on Back office (we are payroll portal but back office for expenses)

There is no concept of a Revenue employment ID in Expenses currently. For sites that are using People XD Payroll and People XD Expense we can automatically derive the Revenue Employment ID to use based on linking the Claimant number back to the employees payroll record. This is regardless of if you are on payroll back office or payroll portal so either set up is perfectly fine.

However where a site is not using the people XD payroll product or holds the people XD payroll on a different database then the employment ID will have to come from Revenue.

What is the importance of the Employee Address for ERR reporting

This is used as part of the Employee matching process where this is no PPSN.

if an employee is ceased, and expenses are due to be paid after the fact what happens with the employment ID

The employee will still be reported with that employment ID. Revenue allow reporting of payments after leaving so that's a normal scenario that can occur but is allowed.

The Employee Reference used in People XD payroll may not be the same as the Claimant ID used in People XD Expense for all of our Employees. Would this cause a problem when retrieving the Revenue Employment ID or is this retrieved based on PPS number / Date of Birth.

The ERN request is based on the PPSN.
