1. Overview

1.1. Purpose of the Guide

The purpose of this document is to provide guidance on how PeopleXD posts payroll transactions into a General Ledger for integrating data into your Financial Management System (FMS).

This guide includes the following:

- Standard General Ledger (GL) principles.
- The costing hierarchy within PeopleXD.
- The main integration points between PeopleXD and your FMS.
- How to develop an interface, to transfer all necessary financial data (GL), from PeopleXD into your FMS.

Where applicable, the above will be supported by flowcharts, detailed steps and screenshots.

1.2. What is the PeopleXD FMS Integration?

PeopleXD facilitates posting of payroll transactions to third party Financial Management Systems (FMS). This is achieved in PeopleXD by creating a General Ledger for payroll transactions.

1.3. What is the General Ledger?

The General Ledger is the main accounting record for a company or organisation.

 **Note 1:** A company's FMS may be referenced to as a General Ledger, so for this guide all references to the General Ledger will exclusively mean the General Ledger (GL) produced in PeopleXD.

 **Note 2:** The GL in PeopleXD is a record of payroll transactions that uses double entry accounting rules.

2. General Ledger Principles

2.1. General Ledger Terminology

Every transaction in double-entry accounting affects at least two accounts. The double-entry has two equal and corresponding sides known as “Debit” and “Credit”.

Note: In double-entry accounting the total value of Debits and the total value Credits will always equal. Therefore, the GL should always balance.

2.1.1. What are Debits and Credits?

Accountancy/payroll transactions are recorded in terms of Debits and Credits.

The below table contains the basic rules that dictate whether a posting is a Debit or Credit:

Debit (Dr)	Credit (Cr)
To increase an Asset	To decrease an Asset
To increase an Expense/Cost	To decrease an Expense/Cost
To decrease a Liability	To increase a Liability
To decrease Earnings/Income	To increase Earnings/Income

Note: A payroll transaction will generally involve increasing a cost/expense in the P&L (Debit) and increasing a liability in the Balance Sheet (Credit).

What is the difference between an “Expense” and a “Liability”?

Expense/Cost	Cost incurred by the business, e.g. gross pay to an employee, overtime, employer pension.
Liability	Money owed by the business, e.g. nett pay to the employee, PAYE to HMRC/Revenue, employer pension to a pension company.

The following is a list of basic payroll transactions:

Debit (Dr) Profit & Loss	£	Credit (Cr) Balance Sheet	£
Gross Pay Increasing an employer's expenses, cost incurred by the employer	2,000	Employee Nett Pay Increasing an employer liability, money owed to the employee	1,500
		Employee NI/PRSI Increasing an employer liability, money owed to HMRC/Revenue	100
		Employee PAYE Increasing an employer liability, money owed to HMRC/Revenue	400
Total	2,000	Total	2,000

2.1.2. Payroll Expenses/Costs and Liabilities

Each pay element will belong to one of the below payment types:

Debits / Expenses/Costs	Credits / Liabilities
Gross Pay/Salary (GP Gross Pay)	Nett Pay (NP Nett Pay)
Employer PRSI/NI (DN Deduction)	PAYE (DN Deduction)
Employer Pension (EN ER Pension)	Employee PRSI/NI (DN Deduction)
Non-Taxable Additions (NT Non-Taxable Payments)	Employee Pension (TR Tax Relief Deductions)
Apprentice Levy (AL Apprentice Levy)	Employer PRSI/NI (DN Deduction) – Control Account
	Employer Pension (EN ER Pension) – Control Account
	Apprentice Levy (AL Apprentice Levy) - Control Account

Note 1: Employer Pension, Employer PRSI/NI, and Apprentice Levy are both an Expense/Cost to the Employer (cost incurred) and a Liability (monies owed).

Note 2: The Balance Sheet or Credit side of the Journal is sometimes defined as deductions from pay plus nett pay plus employer costs. However, it is monies owed by the employer once the payroll expense/costs have been incurred.

Note 3: You can view payroll transactions by going to

- *Payroll Dashboard > Employees > View > Payslip History* **OR**
- *Payroll Dashboard > Enquiry > Payslips* **OR**
- Create a BI or Insight report using the Pay History view.

2.1.3. What is the Profit & Loss Account and Balance Sheet?

Note: A Profit & Loss Account can also be referred to as an Income Statement.

Once a transaction has been broken down into Debits and Credits, it is then posted to the Profit & Loss and Balance Sheet.

Profit and Loss	Balance Sheet
A financial statement that summarizes the revenues, costs and expenses incurred during a specified period	A statement of the assets, liabilities, and capital of a business at a point in time.
For the purposes of payroll accounting, we will just be posting expenses/costs.	For the purposes of payroll accounting, we will just be posting liabilities.

Note 1: Generally, all P & L transactions will be Debits i.e. increasing the employer's expenses. An exception would be negative gross pay or an employer pension refund.

Note 2: Generally, all Balance Sheet transactions will be Credits i.e. increasing the employer's liabilities. An exception would be a PAYE refund.

2.1.4. Define Costing Element Terminology

Defining costing elements ensures that all stakeholders are referring to the same elements; it is imperative that similar terminology is being used. For example:

Financial Reference Data – Definition of Terms:

FMS Definition	PeopleXD Definition
Budget Holder Cost Centre	Cost Centre
Activity Award Source of Funds Task Works Order	Project Code
Account Code Expenditure Type GL Code Natural Account Nominal Code	Expense Code

Once the terminology has been agreed, the next step would be to define the derivation of these elements.

2.2. Key Elements Sent to the GL

2.2.1. Cost Centre and Project Code

Key Elements	Description
Cost Centre	A Cost Centre is a unit within your company, to which costs may be allocated for cost accounting purposes. These should be in line with the Cost Centres set up in your FMS.
Project Code	A project is a temporary endeavour with a defined beginning and end (usually time-constrained, and often constrained by funding or deliverables), undertaken to meet unique goals and objectives.

In PeopleXD, the Cost Centre and Project Code would normally reside on the employee's appointment/contract record. The Cost Centre is assigned to the appointment/contract in People Management.

Note: If a “Cost Allocation” is added to an employee’s record or a Cost Centre or Project Code has been specified on a manual timesheet entry, this takes precedence over the Cost Centre and Project Code on the employee’s appointment/contract. See section [3. Costing Hierarchy on PeopleXD](#) for further details.

2.2.2. Expense Code

Expense Codes are used to summarise transactions into groups of expenses/costs and liabilities, so they can be posted GL (Profit & Loss and Balance Sheet) in the form of Debits and Credits. The following points should be taken into consideration regarding Expense Codes:

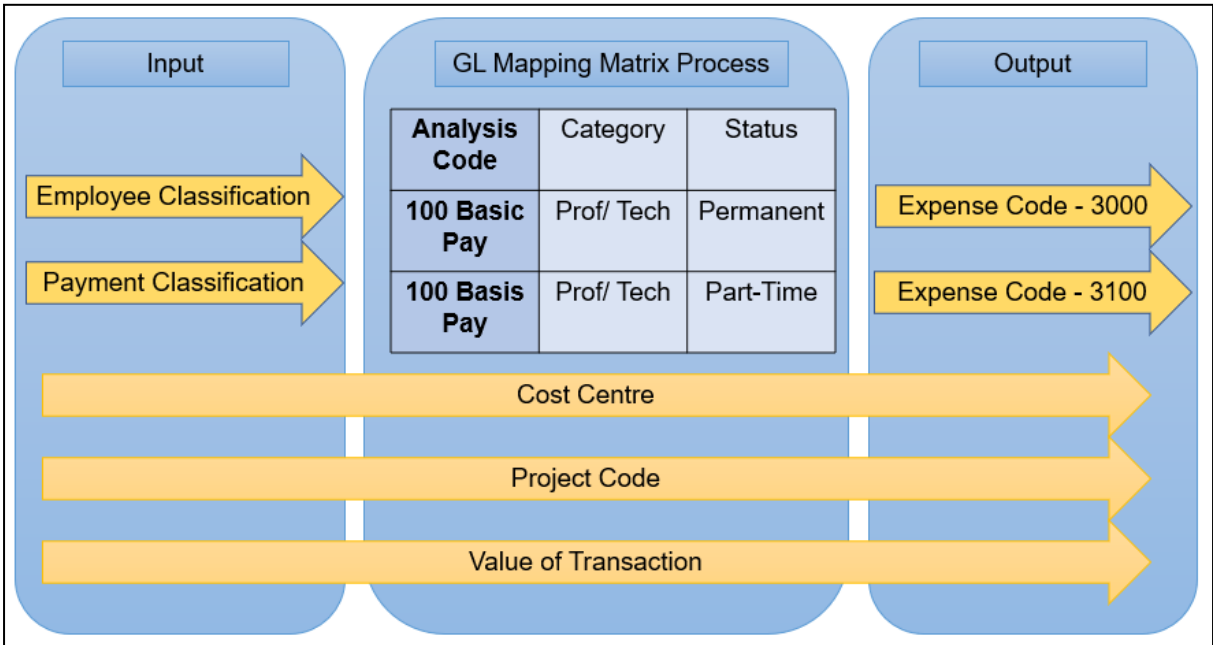

- An Expense Code is not associated with an employee. It’s possible to have a different Expense Code for every element of pay an employee receives.
- Expense Codes are used in conjunction with the Cost Centres, i.e. one Expense Code may be used in many different Cost Centres.
- The Expense Code is normally derived based on the type of employee and the type of pay that the employee receives.
- An Expense Code is an 8-digit number field. Data mapping can be used to ensure the Expense Code output by PeopleXD matches the Expense Code in your FMS. See section [6.2. Data Talk](#)

The below screenshot illustrates how, unlike the Cost Centre and Project Code, the Expense Code derives from the employee classification and payment classification.

To configure this combination, it is recommended that a General Ledger Matrix is used. See section [4.2. How to Configure and set up a GL Matrix for Derivation of the Expense Code](#)

The next illustration, is the combination of the employee's payment (Analysis Code) and inherent Attributes (Category and Status) of their record that will derive the Expense Code.

2.3. General Ledger Standard Principles – Double Entry Book-Keeping

The Profit & Loss and Balance Sheet posting details in the GL are controlled in PeopleXD by Analysis Type. Every pay element in PeopleXD must be linked to one of the following Analysis Types:

Analysis Type	Description
GP	Gross Pay
NT	Non-Taxable Payments
DN	Voluntary & Statutory Deductions
TR	Tax Relief Deductions (Employee Pension)
NP	Nett Pay
ER	Employer NI
EN	Employer Pension
AL	Apprentice Levy (UK only)

The Analysis Type dictates whether the posting will be a Debit or a Credit:

Profit & Loss (Debits)	Balance Sheet (Credits)
Analysis Type "GP"	Analysis Type "DN"
Analysis Type "NT"	Analysis Type "TR"
	Analysis Type "NP"
Analysis Type "ER"	Analysis Type "ER"
Analysis Type "EN"	Analysis Type "EN"
Analysis Type "AL"	Analysis Type "AL"

 **Reminder:** ER Pension, ER PRSI/NI, and Apprentice Levy are both an Expense/Cost (Debit) and a Liability (Credit).

2.3.1. How Pay Codes and Analysis Codes Link to Analysis Types

An Analysis Code is made up of a group of Pay Codes that have common characteristics. All Pay Codes must have an Analysis Code.

Each Analysis Code will carry an Analysis Type. See section [2.3 General Ledger Standard Principles – Double Entry Book-Keeping](#) for a full list of Analysis Types.

Example of Analysis Codes:

Analysis Code	Description	Analysis Type
100	Basic Pay	GP
200	Overtime	GP
300	Other Pay	GP
400	Non-Taxable Payments	NT
500	Pensions	TR
600	Statutory Deductions	DN
700	Voluntary Deductions	DN
800	Nett Pay	NP
900	Employer NI/PRSI	ER
910	Employers Pension	EN

2.4. Example of Double-Entry Book-Keeping

Please see the below for an example of an employee's payslip:

Description	Analysis Type	Amount €
Salary	GP (Gross Pay)	1,000.95
Meal	NT (Non-Taxable)	13.96
Pension	TR (Tax Relief Deduction)	-16.08
PAYE	DN (Deductions)	-41.02
EE NIC/PRSI	DN (Deductions)	-5.96
Nett Pay	NP (Nett Pay)	950.85
ER NIC/PRSI	ER (ER NIC/PRSI)	-100.12
Pension ER	EN (ER Pension)	-96.11

Below the payslip is represented as a T-Account (list of Debits and Credits):

! **Note:** The contents of a Payslip are self-balancing; (i.e. Payments minus Deductions equal Nett Pay) and employer costs are be posted to both sides as a double entry.

Debit – Profit & Loss (GP, NT, ER*-1, EN*-1)		Credit – Balance Sheet (NP, TR, DN, ER, EN)	
Salary (GP)	1,000.95	Nett Pay (NP)	950.85
Meal (NT)	13.96	EE NIC/PRSI, PAYE (DN)	47.98
ER Pension (EN)	96.11	Pension (TR)	16.08
ER NIC/PRSI (ER)	100.12	ER NIC/PRSI (ER) Control Account	100.12
		ER Pension (EN) Control Account	96.11
	1,211.14		1,211.14

3. Costing Hierarchy on PeopleXD

Configuring the costing hierarchy/structure correctly is a fundamental prerequisite for being able to interface into your FMS. Configuring the hierarchy correctly will ensure the correct costing of pay history.

Note 1: The Pay History in PeopleXD is made up of rows of payroll transactions. Each transaction should have a correct Cost Centre and Expense Code. The Project Code is optional.

Note 2: To view Pay History:

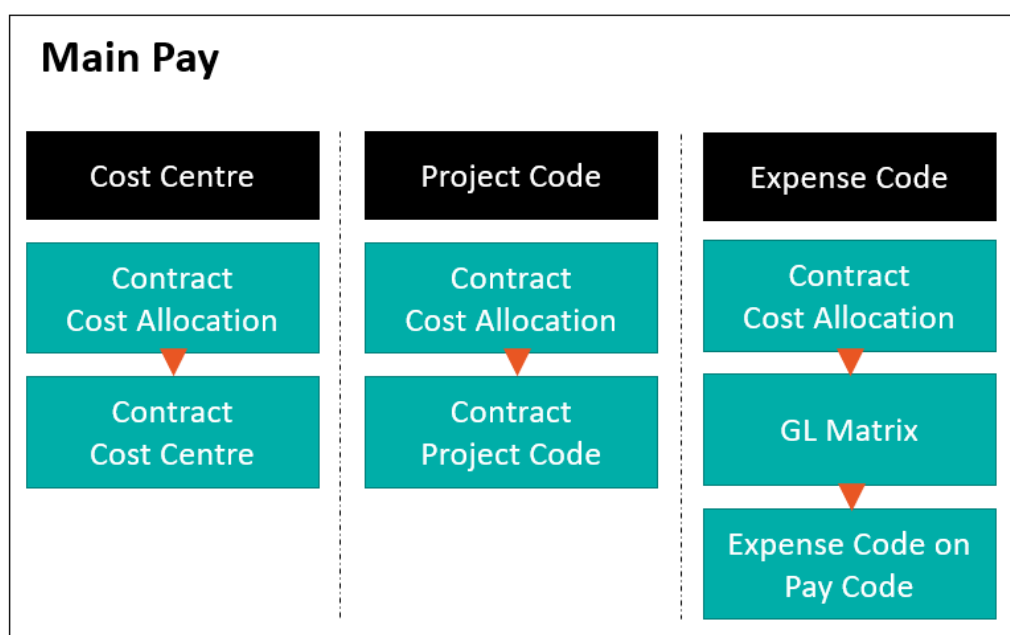

- Go to *Payroll Dashboard > Employees > View > Payslip History* **OR**
- *Payroll Dashboard > Enquiry > Payslips* **OR**
- Create a BI or Insight report using the Pay History view.

3.1. Hierarchy for Deriving Debit Costing Elements (Profit & Loss)

This section provides guidance on the costing hierarchy for deriving the various Profit and Loss Costing elements. The costing hierarchy refers to how PeopleXD identifies where to derive the Cost Centre, Project Code or Expense Code from for a transaction.

3.1.1. Main Pay Hierarchy

The below illustration details the costing hierarchy for Main Pay.

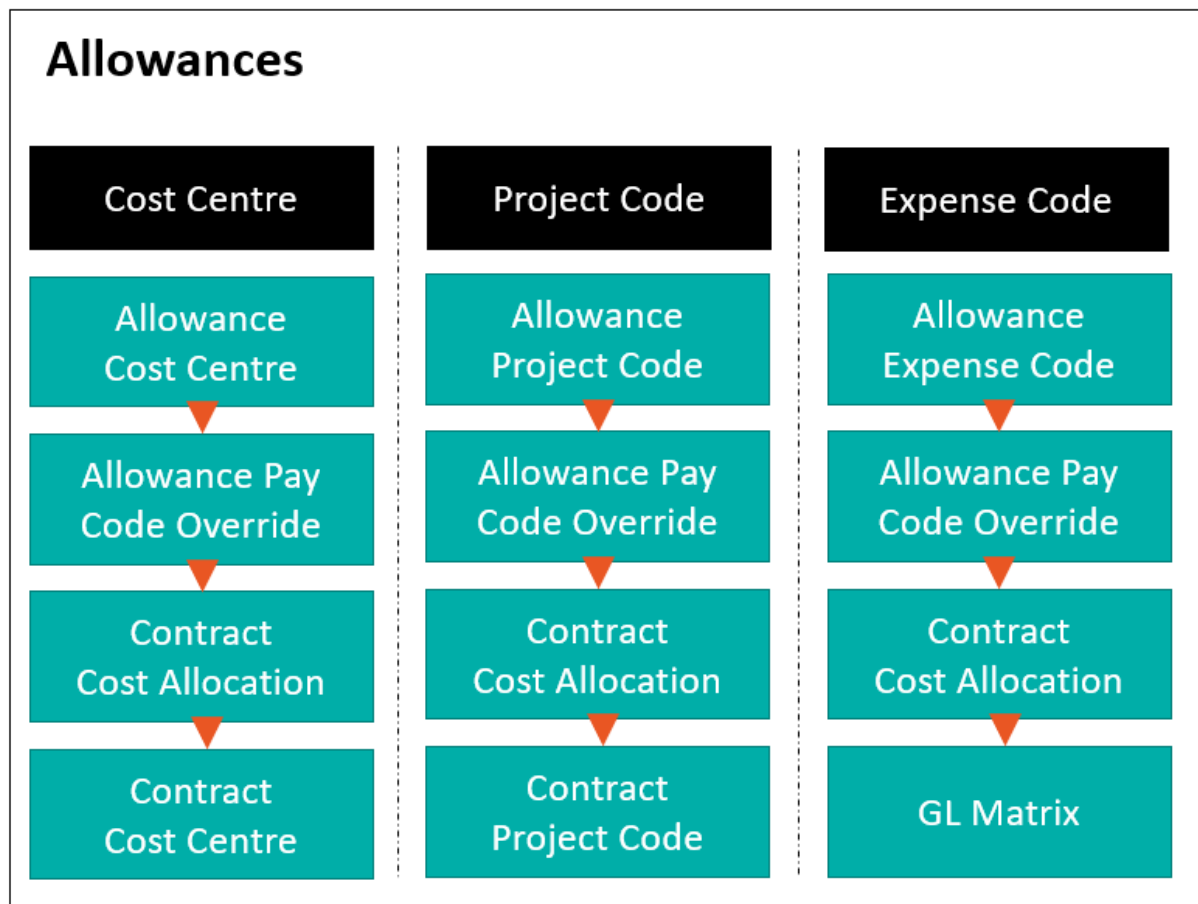

For example, the Cost Centre provided on a Contract Cost Allocation takes precedence over the Contract Cost Centre:

- If a Cost Allocation exists, this Cost Centre will be used.
- If a Cost Allocation is not provided, then the system will take the Cost Centre from the Contract.

3.1.2. Allowances Hierarchy

The below illustration details the costing hierarchy for Allowances:

For example, the Cost Centre provided directly on the Allowance record takes precedence:

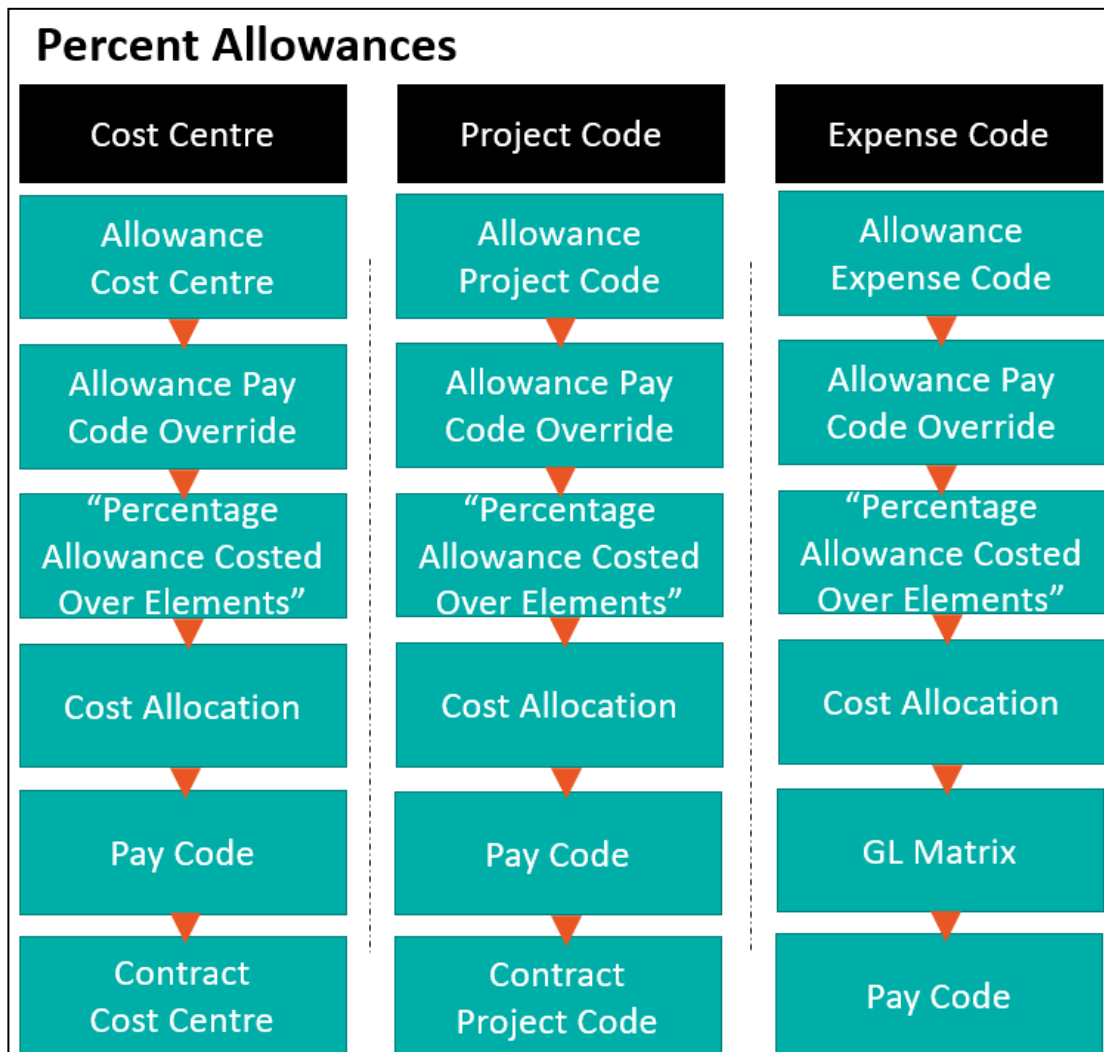

- If none is provided on the Allowance, the system will check if there is a Cost Centre specified on the pay code and the "GL Posting Override" is switched on.

Cost Centre Cost Centre 1	Project Project Delivery	Expense 810101
GL Posting Override ☒	Do not Include in Employer Costings ☐	Allocate over Employee Cost Allocation ☐
Calculate Employer Savings ☐	Group Deduction by Employee Reference ☐	Post To Employee Cost Centre ☐

- If none is provided on the pay code, the system will check if there are Cost Allocations applicable to the Contract that this Allowance is attached to.
- If a Cost Allocation is not provided, then the system will take the Cost Centre from the Contract.

3.1.3. Percentage Allowances

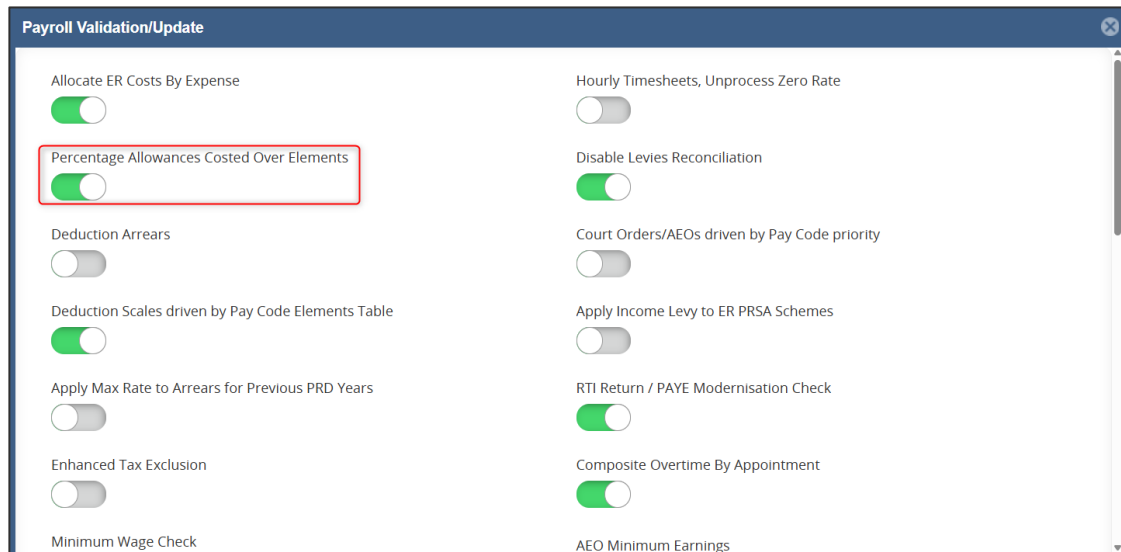

The below illustration details the costing hierarchy for Percentage Allowances:

For example, the Cost Centre provided directly on the Allowance record takes precedence:

- If none is provided on the Allowance, the system will check if there is a Cost Centre specified on the pay code and the “GL Posting Override” is switched on.
- If not the system level indicator “Percentage Allowances Cost Over Elements” will cause the Cost Centre, Project and Expense Code to be taken from the underlying timesheet the percentage allowance is based on.

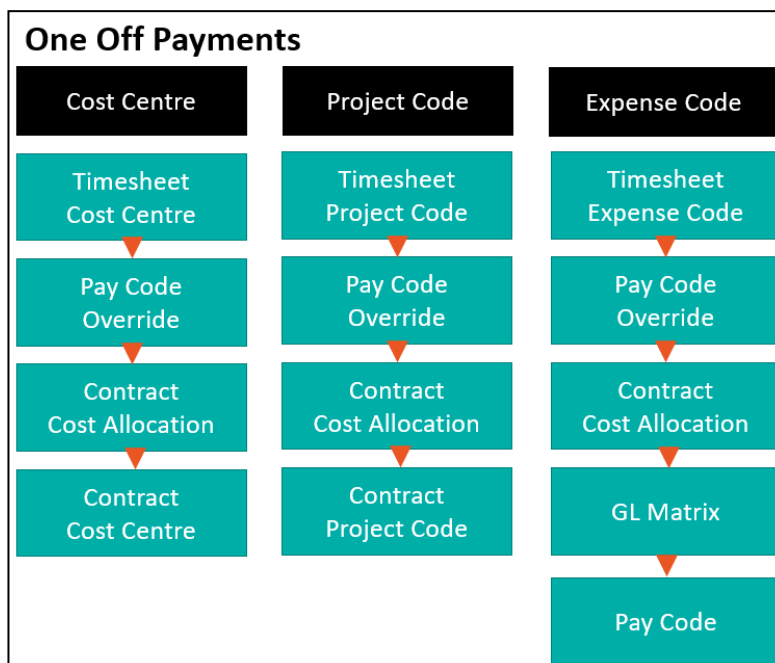

Go to the *Payroll Dashboard > Settings > System Configuration > Payroll Validation/Update*.

- If not, the system will check if there are Cost Allocations applicable to the Contract that this Allowance is attached to.
- If a Cost Allocation is not provided, then the system will take the Cost Centre from the Contract.

3.1.4. One-off Payments Hierarchy

The below illustration details the costing hierarchy for one-off payments (i.e. timesheet entries):

For example, the Cost Centre provided directly on the timesheet record takes precedence:

- If none is provided on the payment, the system will check if there is a Cost Centre specified on the pay code and the “GL Posting Override” is switched on.
- If not, the system will check if there are Cost Allocations applicable to the Contract that this timesheet is associated with, and the indicator “Allocate over Employee Cost Allocation” is turned on.

Cost Centre:

Project:

Expense:

GL Posting Override: ☐

Do not Include in Employer Costings: ☐

Calculate Employer Savings: ☐

Group Deduction by Employee Reference: ☐

Post To Employee Cost Centre: ☐

Allocate over Employee Cost Allocation: ☒

- If not, then the system will take the Cost Centre from the Contract.

3.1.5. Recoverable Percentage of Statutory Payments Hierarchy

The recoverable percentage of statutory payments are derived from the Statutory Pay Parameters.

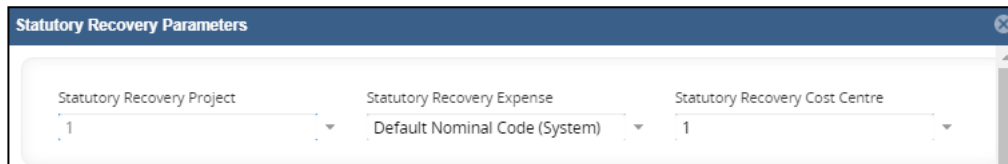

To access the Statutory Pay Parameters:

1. Go to the *Payroll Dashboard > Settings > General*.

2. Click on **Statutory Recovery**.

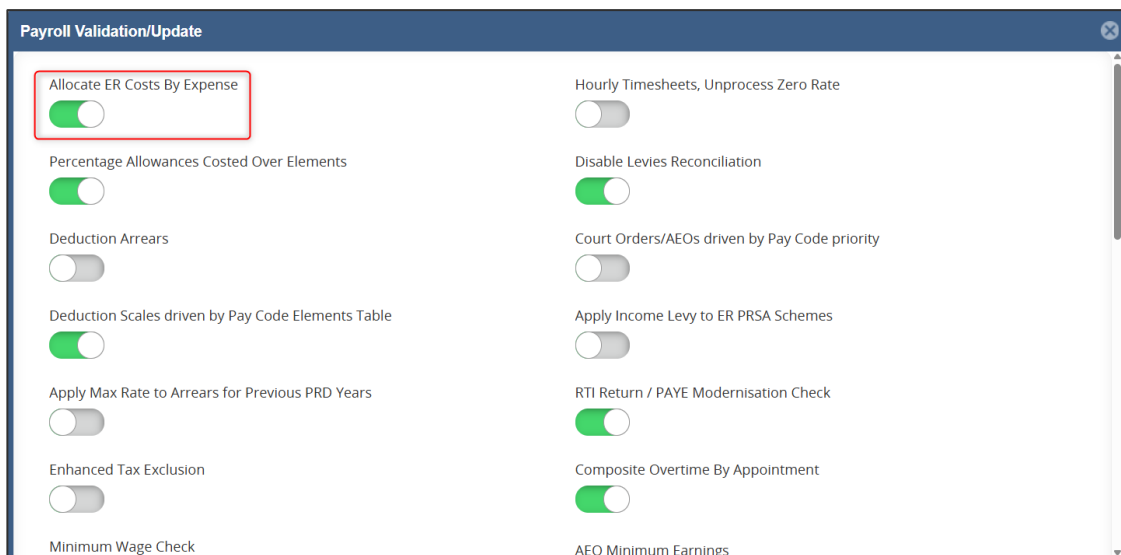

The *Statutory Recovery Parameters* screen opens.

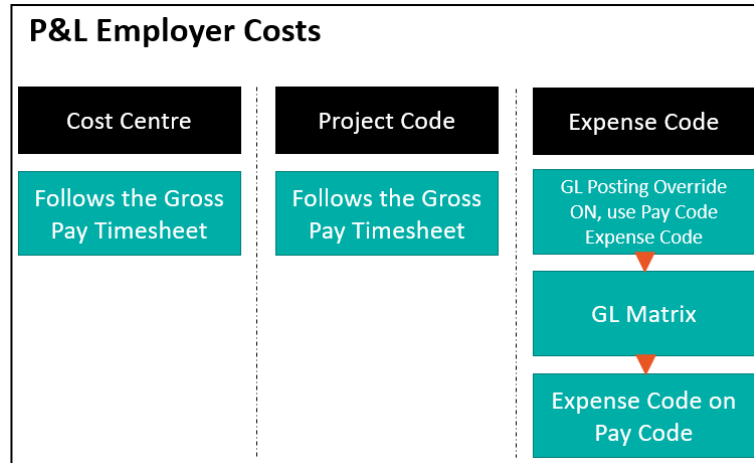

3.1.6. Employer NIC/PRSI, ER Pension and Apprentice Levy Hierarchy

Note: If the system level indicator “Allocation ER Costs by Expense” is switched on, then the (P&L) employer costs (ER NI/PRSI, ER Pension & AL) Expense Code will follow the Expense Code on the pay code to which they relate i.e. If ER NI relates to basic pay (pay code 1000), then the ER NI will get posted to the same Expense Code as the basic pay.

Go to the *Payroll Dashboard > Settings > System Configuration > Payroll Validation/Update*.

If this indicator is not switched on the Expense hierarchy will follow the below illustration.

Note: When the Cost Centre, Project Code or Expense Code is set to follow the appropriate gross pay timesheet entries, they will exclude the pay codes where **Do not Include in Employer Costings** is switched on. This would be typically turned on for negative allowances such as Salary Sacrifice.

Cost Centre	Project	Expense
GL Posting Override ☐	Do not Include in Employer Costings ☒	Allocate over Employee Cost Allocation ☐
Calculate Employer Savings ☐	Group Deduction by Employee Reference ☐	Post To Employee Cost Centre ☐

3.2. Hierarchy for Deriving Credit Costing Elements (Balance Sheet)

Below are the default hierarchies for deriving the various Balance Sheet liability elements:

Element on Balance Sheet	Cost Centre	Project	GL Expenses
Statutory Deductions	Pay Code	Pay Code	Pay Code
Voluntary Deductions	Pay Code	Pay Code	Pay Code
Nett Pay	Pay Code	Pay Code	Pay Code
Employer NIC/PRSI	Payroll Parameters	Payroll Parameters	Payroll Parameters
Employer Pension	Pension Scheme	Pension Scheme	Pension Scheme
	Payroll Parameters	Payroll Parameters	Payroll Parameters

Note 1: For the Employer NIC/PRSI Expense Code, if the parameter **Use Balance Sheet Matrix for Employer NIC/PRSI Control Account** is turned on then the Balance Sheet Matrix is used. If not the Expense Code on Payroll Parameters is used.

Note 2: For the Employer Pension Expense Code, if the parameter **Use Balance Sheet Matrix for Employer Pension Control Account** is turned on then the Balance Sheet Matrix is used. If not the Expense Code on Payroll Parameters is used.

To access the "Use Balance Sheet Matrix" parameters

1. Go to *Payroll Dashboard > Settings > General Rules & Settings*.
2. Select **Parameter Settings** from the *Select Detail* drop-down menu.

4. GL Matrix

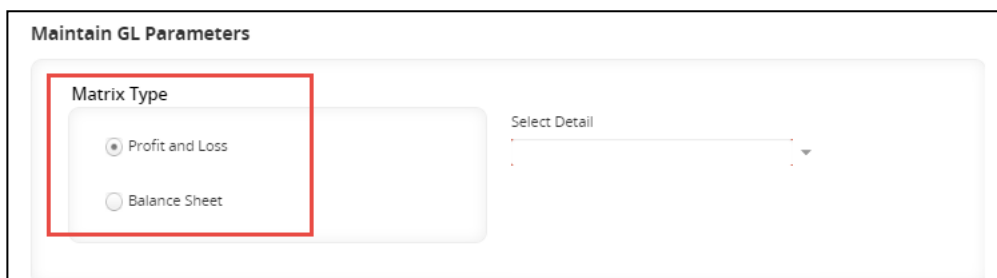

4.1. What is the GL Matrix?

A General Ledger Matrix maps payment classifications and employee classifications together using a mapping of PeopleXD values to derive the Expense Codes for posting to your FMS. The best way to understand this matrix is to get a list of your FMS codes are and work back from there.

4.2. How to Configure and set up a GL Matrix for Derivation of the Expense Code

To configure and set up a GL Matrix, follow the below steps:

1. Go to *Payroll Dashboard > Settings > General Rules & Settings*.
2. Select a *Matrix Type*, i.e. Profit and Loss or Balance Sheet.

Maintain GL Parameters

Level 3

☐

Level 4

5. Choose one of the following *Payment Classifications*:
 - a. Analysis Code
 - b. Labour Cost Group
 - c. Pay Code

These define an element of pay for posting. It is recommended that you use Analysis Code rather than Pay Code. The reason is that you will often set up new Pay Codes, and you don't want to have to change the Matrix each time.

Field Element	Description
Analysis Code	Every Pay Code is linked to an Analysis Code, so effectively this means that Pay Codes can be grouped into Analysis Codes for reporting, i.e. Overtime Analysis Code could be linked to OT@1, OT@1.5, OT@2, OT@2.5 etc.
Pay Code	A Pay Code is the base element of an employees pay profile, e.g. Salary, OT@1, PAYE, NI EE, NI. ER, EE Pension, Student Loan, etc. It is the lowest transactional element within PeopleXD.
Labour Cost Group	Labour Cost Groups are like Analysis Codes in that you can link Pay Codes to them. This effectively means that your Pay Codes can be grouped into Labour Cost groups for reporting. Unlike Analysis Codes, Labour Cost groups are not mandatory.

- Define levels for Employee/Appointment attributes; you can create up to 5 employee classifications. The purpose of this step is to identify pay and employee classifications. Select how you wish to define the employees.

Example of employee classifications.

- Level 1: Sub Category - Engineering
- Level 2: Management Unit - Head Office
- Level 3: Location - London

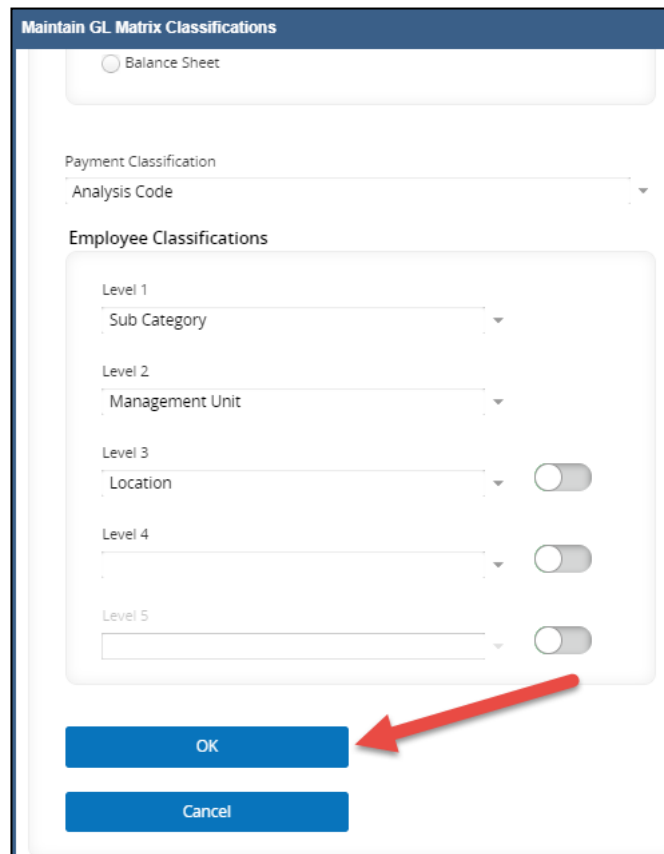

The screenshot shows a 'Payment Classification' form. At the top, there is a dropdown menu for 'Analysis Code'. Below this, the 'Employee Classifications' section is visible. It contains three levels of classification, each with a dropdown menu and a toggle switch to its right. Level 1 is 'Sub Category', Level 2 is 'Management Unit', and Level 3 is 'Location'. The toggle switch for Level 3 is currently turned on.

Please see below list of all available employee classifications:

Field Element	Description
Category	It can be used to categorise employees according to their profession or their collective bargaining practice, e.g. Professional/Technical.

Field Element	Description
Sub Category	It can be used to further categorise employees based on the <i>Category</i> field, e.g. Technical.
Status	It can be used to describe the status or type of employment, e.g. Permanent.
Sub Status	Further breakdown of employee <i>Status</i> , e.g. Part-Time.
Management Unit	Typically referred to as a Directorate or Business Unit. Business Units group together multiple related divisions in a company.
Department	Functional areas and responsibilities e.g. Recruitment, Finance, I.T. etc.
Division	Distinct units of the business based on the types of products or services or geographic locations, e.g. Manufacturing.
Location	The physical location where the employee works.
Payroll Company	Each payroll company will have a separate company registration number with Revenue/HMRC.
HR Company	A single company (legal entity) or a number of companies treated as one corporate group.
Pay Group	A pay group is a logical grouping of payees with a common pay frequency within a payroll company. All payees in a pay group are processed together for payment.
Job Title	An employee's job title for system purposes.
Work Group	A Work Group is used to represent the employee's "team". Each employee must be assigned a Work Group to indicate what team they are part of and who their line manager is.
Cost Centre	A Cost Centre is a unit within your company, to which costs may be allocated for cost accounting purposes. These should be in line with the Cost Centres set up in your financial system.
Project	A Project is a temporary endeavour with a defined beginning and end (usually time-constrained, and often constrained by funding or deliverables), undertaken to meet unique goals and objectives.
Position Code	A pay scale/grade/position in conjunction with the scale point defines the amount of pay an employee will receive. The pay grade is generally defined by the level of responsibility associated with the employee's job and the length of time they have been in employment.

- Click **OK** to save the Matrix Classification.

The dialog box titled "Maintain GL Matrix Classifications" has a "Balance Sheet" radio button at the top. Below it are "Payment Classification" and "Analysis Code" dropdown menus. The "Employee Classifications" section contains five levels, each with a dropdown menu and a toggle switch: Level 1 (Sub Category), Level 2 (Management Unit), Level 3 (Location), Level 4, and Level 5. At the bottom are "OK" and "Cancel" buttons. A red arrow points to the "OK" button.

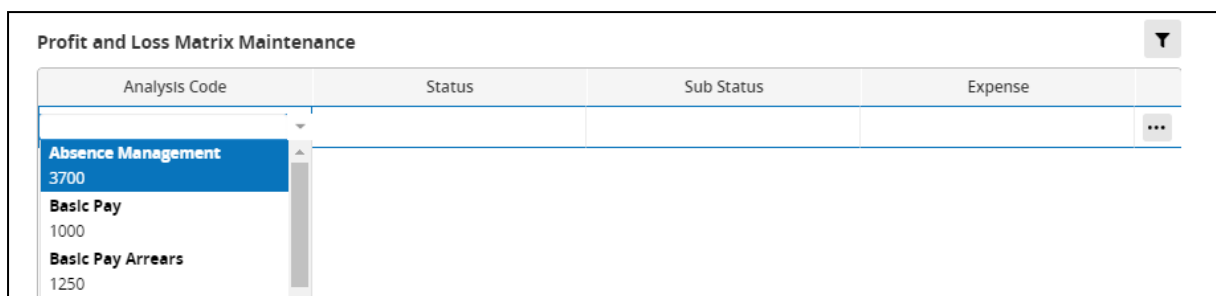

Once saved you are returned to the GL Matrix screen.

- Click **Add** to start creating rows on your matrix.

The GL Matrix screen shows a "Cancel" button on the left and "Add" and "Save" buttons on the right. A red arrow points to the "Add" button.

- The GL Matrix is now available for population. Use the drop-down menu to populate each classification.

The "Profit and Loss Matrix Maintenance" screen features a table with columns: Analysis Code, Status, Sub Status, and Expense. A dropdown menu is open for the "Analysis Code" column, showing a list of items: "Absence Management 3700", "Basic Pay 1000", and "Basic Pay Arrears 1250".

Analysis Code	Status	Sub Status	Expense
Absence Management 3700			
Basic Pay 1000			
Basic Pay Arrears 1250			

- Continue to populate your matrix until all payment classifications and employee classifications are mapped to an Expense Code.

Activity Co...	Char	13				☐	
Analystic C...	Number	4				☐	

Note 1: The accounting/costing fields become available on a grid at the bottom of the screen. These are pre-set and are maintained by PeopleXD. You don't need to use all fields, only those relevant to your FMS. These fields are associated with Pay History.

Note 2: This screen will allow you to define the fields that are to appear on the GL.

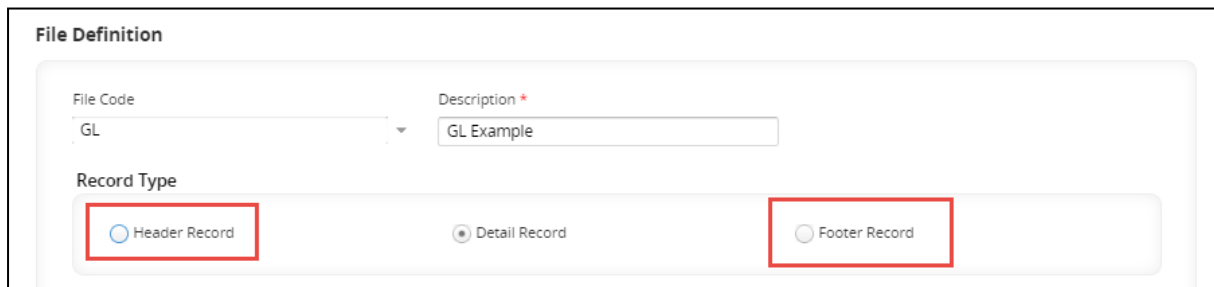

7. Select a definition element to include.
8. Choose what position you want the element to appear on the file.
9. If necessary, you can adjust the size of the field. The size dictates the number of characters the field will allow. See screenshot below.
10. Once the has been fully defined, click **Save** to commit the change.

Field	Type	Size	Posn	Date Format	Size	Use Dec.	No. of Decs
Employee ...	Char	10	1		9	☐	
Appointm...	Char	13	2			☐	
Cost Centre	Char	13	3			☐	
Project	Char	13	4			☐	
Expense	Number	8	5			☐	
Debit Value	Number	15	6			☐	
Credit Value	Number	15	7			☐	

4.3.1. Header & Footer Field - User Defined Fields

"User fields" can be used on the header and footer records. Many files from finance systems have a header record and footer record. You have the option here to add "User Defined Fields" see section [6.3 User Defined Fields](#).

1. Select the **Header Record** or **Footer Record** type.

The **File Definition** form contains the following fields and options:

- File Code:** A dropdown menu with "GL" selected.
- Description *:** A text input field containing "GL Example".
- Record Type:** A group of three radio buttons: "Header Record" (highlighted with a red box), "Detail Record" (selected), and "Footer Record" (highlighted with a red box).

2. Enter a *File Header Sequence*.

The **File Header Description** form contains the following fields and controls:

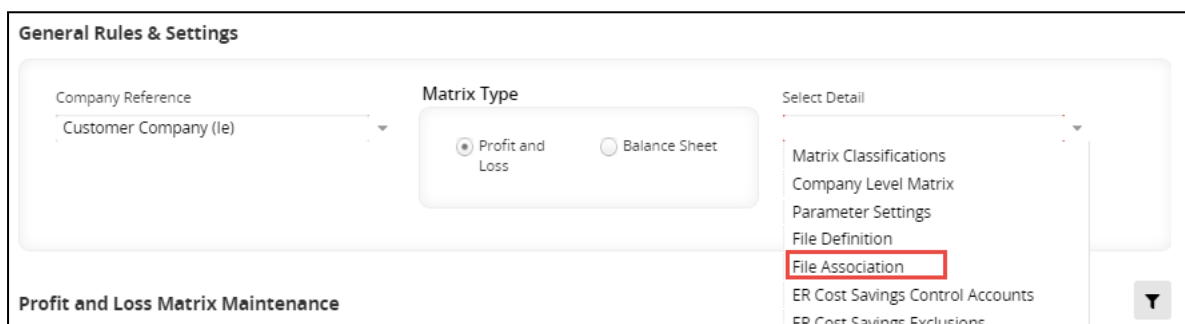

- File Header Sequence:** A text input field containing "123", highlighted with a red box.
- Buttons:** "Cancel", "Previous", "1 of 2", "Next", "Add", "Save", and "Remove".
- Footer:** A small icon in the bottom right corner.

3. Choose from the list of available definition elements. See [Section 4.3 Creating your Journal File](#).
4. If required, add a "User Defined Field". See [Section 6.3 User Defined Fields](#).

4.4. File Association

The below process is used to associate the Journal File with the pay group:

1. Go to *Payroll Dashboard > Settings > General Rules & Settings*.
2. Select **File Association** from the *Select Detail* drop-down menu.

The **General Rules & Settings** form contains the following fields and controls:

- Company Reference:** A dropdown menu with "Customer Company (le)" selected.
- Matrix Type:** A group of two radio buttons: "Profit and Loss" (selected) and "Balance Sheet".
- Select Detail:** A dropdown menu with a list of options: "Matrix Classifications", "Company Level Matrix", "Parameter Settings", "File Definition", "File Association" (highlighted with a red box), "ER Cost Savings Control Accounts", and "ER Cost Savings Exclusions".
- Footer:** A small icon in the bottom right corner.

3. Select a pay group from the *Pay Group* drop-down menu.
4. Click on **Add** to add a *File Association*.

Assign File Associations

Pay Group
Irish Monthly

File Code	File Name	Reference Type	File Type	File Extraction Criteria	File Extraction Values	File Processing Order
 No data to display						

Cancel
Add
Save

5. Populate the file association row with the following:

- *File Code* you want to associate with the Pay Group.
- *File Name*, e.g. "ACCELERATE.csv".
- A *Reference Type* from the drop-down menu, e.g. pay group.
- A *File Type* from the drop-down menu, e.g. CSV, Pipe delimited, Fixed Width or Tilda delimited.
- **Optional:** When there is more than a single file being created, there are additional optional elements that can be provided.
 - Select a *File Extraction Criteria* from the drop-down menu, e.g. Cost Centre.
 - Select *File Extraction Values* from the drop-down menu, e.g. Cost Centre.
 - Select *File Processing Order*, i.e. which file to process first.

Assign File Associations

Pay Group
Irish Weekly

File Code	File Name	Reference Type	File Type	File Extraction Criteria	File Extraction Values	File Processing Order
GL Exampe	ACCELERATE.csv<><>	Pay Group	Comma Seperat...			1 ...
GL Exampe	ACCELERATE1000<<FINANCIAL_PERL...	Pay Group	Comma Seperat...	Cost Centre	1	2 ...

Cancel
Add
Save

For example, the above 2 files will now be created in the Data Centre; however, the second file will only contain details prevalent to Cost Centre 1, and the first file to be processed would include ALL Cost Centres.

5. Generating the GL File

5.1. Generating the GL Output File

Note: The GL can be generated once the “Run Payroll Update” job has completed, as it is at this point that Pay History is written. This means you can effectively run a trial GL before you run your “Complete Update”.

Follow the below steps to generate a GL:

1. Go to *Payroll Dashboard > Manage Payroll*.
2. Select a *Pay Group*.
3. Click on the *Outputs* tab.
4. Click on the **General Ledger** button.

The screenshot shows the 'Manage Payroll' interface. At the top, there's a table with columns: Pay Groups, Observations, Stage, Payroll Completion, Joiners, Leavers, Rejoiners, and Supplements. Below this table, there are three tabs: Inputs, Payroll Checking, and Outputs. The 'Outputs' tab is selected. Under the 'Outputs' tab, there are five buttons: Reports, Bank File, ROS, Print Payslips, and General Ledger. A red arrow points to the 'General Ledger' button.

5. Select from the following drop-down menus
 - a. Select a *Pay Group* from the pay group drop-down menu.
 - b. **Optional:** Enter the Employee Reference number to run the GL for one employee or leave blank to run for the full pay group.
 - c. Enter the *From Period* for which the Ledger is being run for e.g. 201904.
 - d. Enter the *To Period* for which the Ledger is being run for e.g. 201904.
 - e. The *Financial Period* will be automatically derived based on the payroll periods. This is based on the payroll calendar associated with the pay group.

Note: The GL can be generated for multiple payroll periods e.g. for weekly payroll enter a *From Period* of 201901 and a *To Period* of 201904 to generate a GL that spans the first 4 weeks.

6. Click on **Generate**.

General Ledger

Payroll Dashboard > General Ledger

BALANCE EXCEPTION ENQUIRY

Pay Group*

GENERATE

Once generated, the General Ledger sends a summary PDF report and CSV File to the *Report Centre* menu option.

Report Centre		
Files		
File Name		Date Created
Test.csv	Customer Company (Ie)	16-Jul-2019 12:38
Test1000.csv	Customer Company (Ie)	16-Jul-2019 12:38

7. To view, go to the *Payroll Dashboard > Report Centre*.

The PDF File will show at a summarised level the total of Debits and Credits.

Cost Centre	Description	Expense	Debit	Credit
CONTROL	Saul Employer Pension	2	0.00	1593.17
CONTROL	Employer NI	80000	160.33	0.00
CONTROL	Basic Hours	100001	71.55	0.00
CONTROL	Salary	100001	1127.78	0.00
CONTROL	APPRENTICE LEVY	155000	6.00	0.00
CONTROL	Saul Employer Pension	500100	23.99	0.00
			1389.65	1593.17
Cost Centre	Description	Expense	Debit	Credit
NO CENTRE	Saul Employee Pension	0	0.00	1593.17
			0.00	1593.17
Cost Centre	Description	Expense	Debit	Credit
			93765.50	93765.50

The CSV File will show a detailed breakdown of all costing fields specified in the File Definition.

```
000037,502212-3,1,20624,100001,422.88,0
000156,502247-5,1,20624,100001,1292.12,0
000157,502247-6,1,20624,100001,1292.12,0
000159,502247-8,1,20624,100001,289.14,0
000160,502247-9,1,20624,100001,980.08,0
```

The output file can now be uploaded to the FMS.

5.2. Handling Exceptions – File Does not balance

Where the GL is not balanced, PeopleXD provides an on-screen reconciliation tool detailing all employees affected. Follow the below steps to identify the handling exemption once the GL has been generated:

1. Go to the *General Ledger* screen, same steps as section [5.1 Generating the GL Output File](#).
2. Select a *Pay Group* from the pay group drop-down menu.
3. **Optional:** Enter the Employee Reference number to run the GL for one employee or leave blank to run for all pay groups.
4. Enter the *From Period* for which the Ledger is being run.
5. Enter the *To Period* for which the Ledger is being run.
6. The *Financial Period* will be automatically derived based on the Payroll Periods. This is based on the Payroll Calendar associated with the Paygroup.
7. Click the **Balance Exception Enquiry** button.

The Balance Exception Enquiry by Employee screen opens.

Balance Exception Enquiry By Employee			
Payroll Dashboard > General Ledger > Balance Exception Enquiry By Employee			
Balance Exception Enquiry			
Monthly Payroll (UK Training) ▼			
Employee Reference	Name	Debit Value ▼	Credit Value
000013	John Marston	0	547.26
000017	Laura Barton	0	260.62
000019	Maria Hill	0	242.89
1 - 3 of 3 < >			

! **Note 1:** This will highlight any employee whose journal record is not balanced i.e. the sum of Debits and Credits do not equate to zero.

! **Note 2:** The employees highlighted should be investigated to ensure that all costing elements have been configured on their record.

6. Advanced GL Interface Configuration

6.1. Constants

A *Constant* is a value that cannot be altered by the program during execution, i.e. the value is constant.

The following describes how a CONSTANT value (static text) may be added to the Journal File Definition:

1. Go to *Payroll Dashboard > Settings > Create File Definitions*.
2. Select a *File Code* from the drop-down menu.

All current Definition Elements and their positions are displayed. You have the option to either:

- a. Add a new element to the file by choosing an element not yet included in your file definition. **OR**
 - b. Update an existing element by choosing an element included in your file definition.
3. Click on **Add a Constant**.

Field	Type	Size	Posn	Date Format	Size	Use Dec.	No. of Decs
Employee ...	Char	10	1			☐	
Appointm...	Char	13	2			☐	
Cost Centre	Char	13	3			☐	
Project	Char	13	4			☐	
Expense	Number	8	5			☐	
Debit Value	Number	15	6			☐	
Credit Value	Number	15	7			☐	

Cancel Add a Constant

4. On the CONSTANT row, add the required position, size and constant value.

Example: To add a new a static string of 'COREPAY' at position 8 on the File.

Field	Type	Size	Posn	Size	Use Dec.	No. of Decs	Padding	No. of Char Start	No. of Char End	Constant Value
Constant	Char	7	8	7	☐					CorePay
Credit Value Duplicate	Number	15			☐					
Date Left	DATE	11			☐					
Date Started	DATE	11			☐					
Debit Value Duplicate	Number	15			☐					
Department	Char	4			☐					

5. Click **Save**.

Field	Type	Size	Posn	Date Format	Size	Use Dec.	No. of
Constant	Char	7	8		7	☐	

6. You can add a CONSTANT value as a PREFIX or SUFFIX to an existing field, for example on the numeric *Expense Code* field we wish to output the char EXPS before the numeric value.

- In the *Constant Value* field, add the value that you wish output on the File.
- On the *Constant Position*, define whether the CONSTANT value is to be a "Prefix" or a "Suffix".

Field	Type	Size	Posn	Size	Use Dec.	Pad Char	Constant Value	Constant Position	Default Value	User Field
Employee Reference	Char	10	1		☐					☐
Appointment ID	Char	13	2		☐					☐
Cost Centre	Char	13	3		☐					☐
Project	Char	13	4		☐					☐
Expense	Number	8	5		☐		EXPS	Prefix		☐
Debit Value	Number	15	6		☐					☐

7. Click **Save**.

8. Re-run the GL extract to review the results.

```
000037,502212-3,1,20624,EXPS100001,422.88,0,COREPAY
000156,502247-5,1,20624,EXPS100001,1292.12,0,COREPAY
000157,502247-6,1,20624,EXPS100001,1292.12,0,COREPAY
000159,502247-8,1,20624,EXPS100001,289.14,0,COREPAY
000160,502247-9,1,20624,EXPS100001,980.08,0,COREPAY
```

6.2. Data Talk

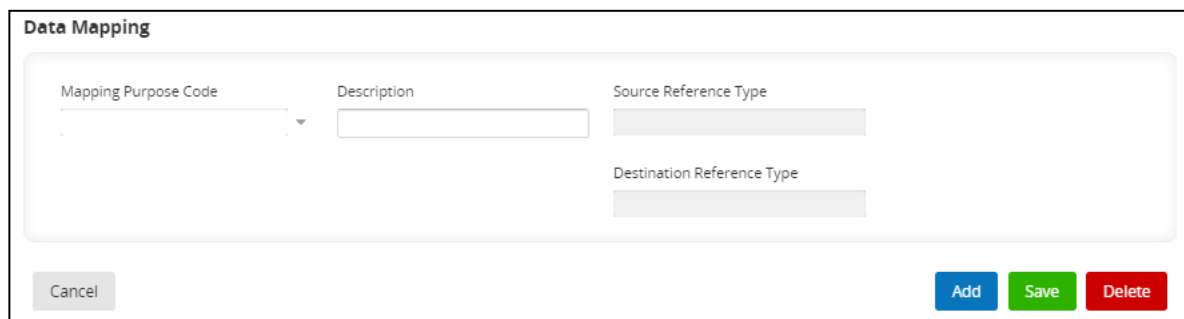

Mapped values may be added to the Journal File definition. This is used when the Reference Data item within the FMS does not match the Reference Data item within PeopleXD.

An example of this is where the GL/Account codes in the FMS are alphanumeric, whereas the Expense Codes in PeopleXD are numeric.

The below steps are used to map elements from the Journal File for output to the FMS:

1. Go to *Payroll Dashboard > Settings > Data Talk*.

The Data Mapping screen opens.

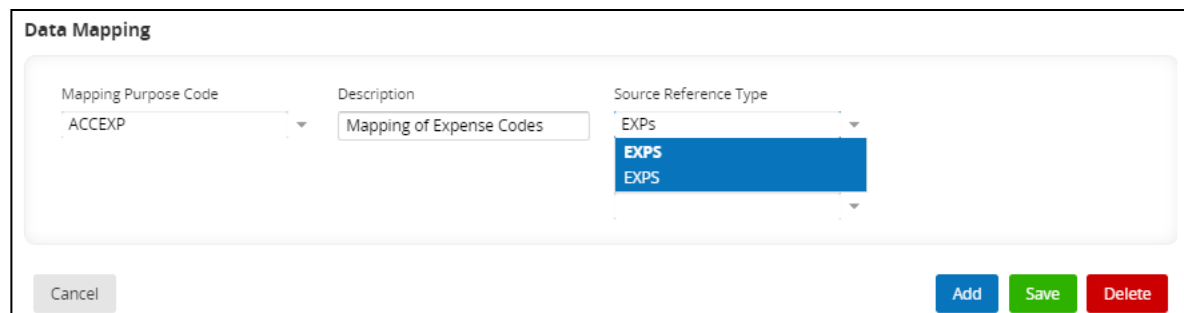

The screenshot shows the 'Data Mapping' form with the following fields:

- Mapping Purpose Code: A dropdown menu.
- Description: A text input field.
- Source Reference Type: A dropdown menu.
- Destination Reference Type: A dropdown menu.

At the bottom, there are three buttons: 'Cancel' (grey), 'Add' (blue), 'Save' (green), and 'Delete' (red).

2. Enter a *Mapping Purpose Code* and *Description*.
3. Use the *Source Reference Type* drop-down menu to choose the *Source Reference Type*.

In this example, as we are mapping numeric Expense Codes to Alphanumeric FMS codes, the *Source Reference Type* would be EXPS.

The screenshot shows the 'Data Mapping' form with the following values:

- Mapping Purpose Code: ACCEXP
- Description: Mapping of Expense Codes
- Source Reference Type: EXPS (selected from a dropdown menu showing EXPS and EXPS)

At the bottom, there are three buttons: 'Cancel' (grey), 'Add' (blue), 'Save' (green), and 'Delete' (red).

4. Use the Destination Reference Type drop-down menu to choose the *Destination Reference* Type. In this example, as we are mapping numeric Expense Codes to Alphanumeric FMS codes, the *Destination Reference Type* would be CUSTOM.

Data Mapping

Mapping Purpose Code: ACCEXP

Description: Mapping of Expense Codes

Source Reference Type: EXPS

Destination Reference Type: custom

CUSTOM

Cancel Add Save Delete

5. Use the *Source Code* drop-down menu to select the numeric *Expense Source Code*.
6. In the *Destination Code* field, enter the alphanumeric reference to display.
7. Click **Save**.

Data Mapping

Mapping Purpose Code: ACCEXP

Description: Mapping of Accelerate Expense (

Source Reference Type: EXPS

Destination Reference Type: CUSTOM

Cancel Add Save Delete

Mapping Codes

Source Code	Description	Destination Code	Description
16	Administration	DATATALK2700	Custom value of DATATALK2700

To add a DATA TALK mapped code value

1. In Portal, go to *Payroll Dashboard > Settings > Create File Definition*.
2. Select the row that you wish to amend, e.g. Expense Code.
3. In the *Mapping Code* field, use the drop-down menu to assign the *Mapping Purpose Code*.

Field	Type	Size	Posn	Size	Use Dec.	No. of Decs	Mapping Code	No. of Char Start	Constant Value	Constant Position
Project	Char	13	4		☐					
Expense	Number	8	5		☐		Mapping ...		EXPS	Prefix
Debit Value	Number	15	6		☐					
Credit Value	Number	15	7		☐					
Constant	Char	7	8	7	☐					

4. Click **Save**.
5. Re-run the GL extract to review the results.

In this example, the system is mapping the numeric Expense Code to the alphanumeric equivalent while also applying the CONSTANT prefix that had also been defined on the File Definition.

```
000037,502212-3,1,20624,EXPSDATATALK100001,422.88,0,COREPAY
000156,502247-5,1,20624,EXPSDATATALK100001,1292.12,0,COREPAY
000157,502247-6,1,20624,EXPSDATATALK100001,1292.12,0,COREPAY
000159,502247-8,1,20624,EXPSDATATALK100001,289.14,0,COREPAY
000160,502247-9,1,20624,EXPSDATATALK100001,980.08,0,COREPAY
```

6.3. User Defined Fields

A “User Defined Field” can be added to the Journal File definition. This is predominantly used you when a need to create a duplicate entry on the file, i.e. Cost Centre at two separate positions or where you wish to amalgamate a number of different reference items into one specific field on the Journal File.

6.3.1. To add User Defined Fields to the Journal File for output to the FMS

1. Go to *Payroll Dashboard > Settings > Create File Definition*.
2. Select a *File Code* from the drop-down menu and tab.

All Definition Elements and their current position on the file are displayed.

3. To add a new “User Defined Field” on the file.
 - a. Select a User Field, i.e. 1 to 30.
 - b. Expand the **3 dot menu**.
 - c. Select **Edit User Field**.

The *General Ledger User Fields* screen opens.

General Ledger User Fields

User Fields

User Field No: 13 Separator: Space: ☐ User Field Name: USER FIELD 13 **Reset**

Reference Item	Date Format	Size	Padding	Pad Char	Mapping Code	Value
Reference Item 1						
Reference Item 2						
Reference Item 3						
Reference Item 4						
Reference Item 5						

OK **Cancel**

- The *User Field No* will display in the User Field that has been chosen.
- The *Separator* field will allow for a delimiter to be defined where there are reference fields being amalgamated or a space may be defined as the separator.
- The *User Field Name* is the label for the new "User Defined Field". This can be overwritten if needed.
- Other options available:
 - Option to amalgamate up to 5 Reference Fields.
 - For Date Fields, the *Date Format* can be changed, i.e. DDMMYYYY, DD-MON-YYYY etc.
 - Padding (left or right) and the associated pad chars (X,0) can be chosen.
 - A Data Talk *Mapping Code* can be included.
 - A Constant *Value* can be defined.

See below example of a User Defined Field:

General Ledger User Fields

User Fields

User Field No: 13 Separator: | Space: ☐ User Field Name: ACCELERATE Reset

Reference Item	Date Format	Size	Padding	Pad Char	Mapping Code	Value
Reference Item 1 Cost Centre						
Reference Item 2 Project Code						
Reference Item 3 Expense						
Reference Item 4 Expense Descripti...						
Reference Item 5 Expense					ACCEXP	

OK Cancel

In the above example, the User Defined Field is made up of Cost Centre, Project Code, Expense Code, Expense Description and mapped Expense Code that was created via Data Talk. Any reference items can be used instead, as required.

- **Separator:** To create a pipe separator between the 5 elements, input a | in the separator field.
 - **User Field Name:** Re-label the User Field 13 as ACCELERATE.
 - **Reference Item 1:** Select Reference Type "Cost Centre".
 - **Reference Item 2:** Select Reference Type "Project Code".
 - **Reference Item 3:** Select Reference Type "Expense".
 - **Reference Item 4:** Select Reference Type "Expense Description".
 - **Reference Item 5:** Select Reference Type "Expense", also select ACCEXP Mapping Code what was created earlier.
4. Click **OK**.
 5. On the User Defined Row (relabelled as ACCELERATE), select the position as to where the new field will be displayed, i.e. POSN 8.

Field	Type	Size	Posn	Date Format	Size	Use Dec.	No. of Decs
Project	Char	13	4			☐	
Expense	Number	8	5			☐	
Debit Value	Number	15	6			☐	
Credit Value	Number	15	7			☐	
Constant	Char	7	8		7	☐	
ACCELE...	Char	50	9			☐	
Accountin	Date	11				☐	

Cancel Add a Constant

6. In this example, a CONSTANT value of ACCELERATE has also been added as a Prefix code.

Field	Mapping Code	No. of Char Start	No. of Char End	Constant Value	Constant Position	Default Value	Record Field Label	User Field
								☐
								☐
								☐
				ACCELE...	Prefix			☒
								☐
								☐

Cancel Add a Constant

7. Press the **Save** Button.

Cancel Add **Save** Remove

Field	Mapping Code	No. of Char Start	No. of Char End	Constant Value	Constant Position	Default Value	Record Field Label	User Field
								☐
								☐
								☐
				ACCELE...	Prefix			☒
								☐
								☐

Cancel Add a Constant

8. Re-run the GL:

a. Go to *Payroll Dashboard > Manage Payroll*.

- b. Select a pay group.
- c. Click on the *Outputs* tab.
- d. Click on the **General Ledger** button.

 **Note:** The result of the changes above will create a new field at position 9 on the Journal File. This new single field will contain a Prefix value followed by an amalgamated string of Cost Centre, Project Code, Expense Code, Expense Description, the mapped Expense Code all separated by a pipe (|).

```
000037,502212-3,1,20624,EXPSDATATALK100001,422.88,0,COREPAY,

Calendar offset for Financial Period 2

Enable User Field 1

See below list of available parameters and descriptions:

Parameter	Description
Calendar offset for Financial Period	This option enables the Financial Periods to be offset when output on the Journal File. The default Financial Period is derived based on the Payroll Calendar, i.e. April is Financial Period 4. Where the Finance Year does not match the Calendar Year, an offset can be used.
Enable User Field and User Field label	This option allows for a non-reference field to be added to the GL Matrix.
Use Balance Sheet Matrix for Employer NIC Control Account	This option is only used if the Balance Sheet costing are derived based on a Matrix, and if the ER NIC control account is NOT derived based on Payroll Parameters.
Use Balance Sheet Matrix for Employer Pension Control Account	This option is only used if the Balance Sheet costing are derived based on a Matrix, and if the ER Pension control account is NOT derived on Payroll Parameters.
General Ledger Processing Message	This option is ticked to display a message if the GL is being run for a period that has already been processed.
Include Projects File Interface	This option is ticked if both a GL and Projects File (Oracle Financials) is output. By default, the Projects file would contain the Profit and Loss (Debit) values for a 'Project' whereas the GL file would contain the Debits for a GL type costing plus the Balance Sheet (Credits) for both GL and Project Costing.  Note: The total value of the Project File must be posted back to the GL file to produce a balanced Journal. see section 7.2 Additional Select Detail Options.

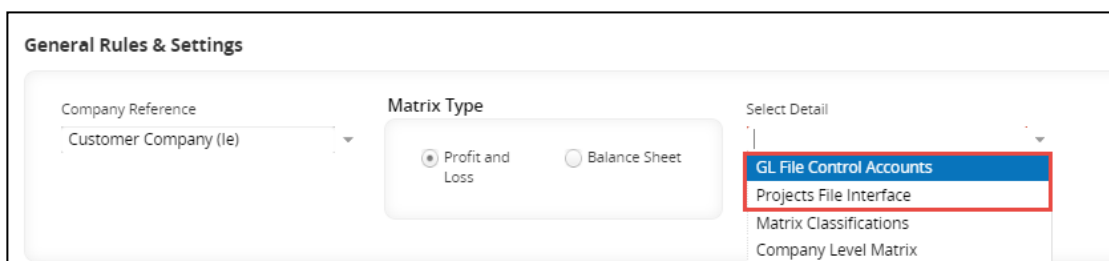

Parameter	Description
Prevent Projects to GL File Summary Posting	Switch on this option for the control summary of the Project File not to be posted back to the GL file.  Note: This will lead to an unbalanced GL file.
ER Statutory Recovery Costs	Switch on this option to allow for Statutory Payments to be recovered within the General Ledger, e.g. 92% of SMP would be recovered, and output against a Statutory Recovery control account made up of Cost Centre, Project Code and Expense Code – see section 7.2 Additional Select Detail Options .
Manual/Cancel Payments not Processed	Switch on this option if cancel and manual payments are not to be included in the GL.
Generate GL for Supplementary Run	Switch on this option to generate GL for a supplementary run.

7.2. Additional Select Details Options

When the “Include Project File Interface” parameter is switched on in the *Parameter Setting* screen, additional *Select Detail* options become available. See section [7.1. Additional Parameters for GL Configuration](#).

7.2.1. GL File Control Accounts

1. Go to *Payroll Dashboard > Settings > General Rules & Settings*.
2. Select **GL File Control Accounts** from the *Select Detail* drop-down menu.

This screen allows for the input of a Projects Control Account costing string. This is the costing string that is associated with the total of the Projects File, which is written back to the GL file.

ER Cost Savings Control Accounts

Projects File Interface | ER Cost Savings Control Accounts | **Non GL File Control Accounts**

Control Accounts

Company Code
Customer Company (Uk)

Project File

Cost Centre | Project | Expense | Reference

AR File

Cost Centre | Reference | Project | Expense

OK Cancel

7.2.2. Projects File Interface

1. Go to *Payroll Dashboard > Settings > General Rules & Settings*.
2. Select **Project File Interface** from the *Select Detail* drop-down menu.

This screen allows the system to control which Reference Type gets posted to the Projects File as opposed to the GL file. For example, if Project is chosen as the Reference Item, then the system will return all Project Codes in the System. A decision can then be made to include the Project Code on the Projects File but exclude it from the GL file.

ER Cost Savings Control Accounts

Cancel Save

7.2.3. ER Cost Savings Control Accounts

1. Go to *Payroll Dashboard > Settings > General Rules & Settings*.
2. Select **ER Cost Saving Control Accounts** from the *Select Detail* drop-down menu.

The screenshot shows a web application window titled "ER Cost Savings Control Accounts". It has three tabs: "Projects File Interface", "ER Cost Savings Control Accounts" (which is selected), and "Non GL File Control Accounts". The main content area contains two sections: "Debit Control Account" and "Credit Control Account". Each section has three dropdown menus: "Company Code" (set to "Customer Company (Uk)"), "Cost Centre", and "Project". In the "Debit Control Account" section, "Cost Centre" is set to "Default" and "Project" is set to "Development". In the "Credit Control Account" section, "Cost Centre" is set to "Research" and "Project" is set to "Recruitment". There are "OK" and "Cancel" buttons at the bottom of the main content area. At the very bottom of the window, there are navigation buttons: "Cancel", "Previous", "1 of 1", "Next", "Add", "Save", and "Delete".

If you are required to identify how much ER NIC a Cost Centre may accrue due to employees who are availing of Salary Sacrifice Schemes, the following points should be noted:

- Salary Sacrifice Schemes result in an employee paying less PAYE and NIC but also result in reducing ER NIC for the budget holders, i.e. particular Cost Centres.
- As well as the system handling the Credit Control Account, these Savings can be posted against the original pay history rows, or if the user specifies a Debit Control account entry, i.e. any one of Project, Cost Centre or Expense Code then the control account entry will be used, i.e. the entire saving will be posted to the control a/c.

7.2.4. ER Cost Saving Exclusions

Not all expenditure items are subject to the NIC Savings Scheme. Therefore, the following points should be noted:

- To identify those to be excluded, there is a rule available in the GL Parameters Screen called *ER Cost Savings Exclusions*.

- This gives the end user the option of selecting from a range of expenditure data items namely the PeopleXD ledger code data items (Cost Centre, project and expense) which can be the basis for building the rule i.e. if the end user wants to use Cost Centres as the basis then they should select the *Cost Centre* field.
- Each non-contributing Cost Centre then must be ticked to indicate that these codes are not subject to the ER NIC Savings.

ER Cost Savings Exclusions

8. Integrating with FMS for Reference Data

Maintenance

All Finance/Costing related reference data/attributes may be mastered in the customer's FMS. These may need to be interfaced to PeopleXD to ensure that the data used in PeopleXD and interfaced to the FMS in the Payroll file is consistent with the data held there.

Note: Not all Finance/costing attributes may need to be interfaced to PeopleXD, only those relevant to payroll and those that you wish to report on in Insight/BI. This should be discussed with your PeopleXD project team if required.

The key objective of this feed is to ensure that there is a consistency of finance related reference data/attributes between the customer's FMS and PeopleXD.

8.1. Cost Centres

Cost Centres can be fed nightly from the FMS system using a scheduled Oracle job. Any reference data Cost Centres contained within PeopleXD but NOT on the nightly feed file from the FMS will be automatically deactivated on PeopleXD.

Example: If you have 1000 Cost Centres in the application and you create a new Cost Centre in the FMS, the expectation is that the new file would contain 1001 Cost Centres. If the file only contained the one additional Cost Centre, then the other 1000 Cost Centres would be automatically deactivated.

Cost Centres can be viewed by going to *Payroll Dashboard > Settings > Cost Centres*.

Cost Code	Description	Activity Code	Description	Client Reference	Subhead	Description	Active	BIK	
1	Default	1	Default Activity				☒	☐	...
10	Research	1	Default Activity				☒	☐	...

8.2. Project Codes

Project Codes can be fed nightly from the FMS system using a scheduled Oracle job. Any reference data Project Codes contained within PeopleXD but NOT on the nightly feed file from the FMS will be automatically deactivated on PeopleXD.

Project Codes can be viewed by going to *Payroll Dashboard > Settings > Project*.

Projects						
Project Code	Description	Client Ref.	Analysis Code	Description	Activity Code	Desc
1	Development					
2	Training					
4	Administration					
5	Sales					
6	Recruitment					
7	Project Delivery					

8.3. Expense Codes

Expense Codes can be fed nightly from the FMS system using a scheduled Oracle job. Any reference data Expense Codes contained within PeopleXD but NOT on the nightly feed file from the FMS will be automatically deactivated on PeopleXD.

Expense Codes can be viewed by going to *Payroll Dashboard > Settings > Expense/GL Codes*.

Expense Codes
