1. Overview

1.1. Purpose of the Guide

The purpose of this document is to provide guidance on how to configure and generate the LGPS Return in Payroll, this includes how to:

- Configure the LGPS Module.
- Generate the LGPS Return.
- Export the LGPS Return using Insight.
- Export the LGPS Return using the I-Connect specification.
- Grant access to the LGPS Module.

1.2. What is LGPS?

The LGPS is a public service pension scheme and its rules are made with the approval of Parliament. The Scheme is administered locally by pension funds across the country who make decisions about your pension. Those pension funds decide how pension contributions are invested. A Local Pension Board helps each pension fund administer the LGPS and comply with the Scheme rules. For further details on LGPS rules and regulations, please see

<https://www.lgpsregs.org/>

1.3. LGPS in PeopleXD Payroll

All appointments in Payroll within the LGPS solution will be treated as separate and returned separately on the monthly and annual return.

In relation to any Single Employment Relationship requirement to return two contracts as ONE on the LGPS return then to facilitate this you would need to hold any additional contract payments as allowances on the employees Substantive/main contract.

In Payroll the LGPS solution pensions are processed at post & appointment level. This meets the LGPS requirements where for the new scheme different employee contribution rates can be in force for different jobs. In addition, an employee could be in the main scheme for one job and the 50/50 scheme for a different job.

2. Configure LGPS

2.1. Configure LGPS Screen

To access the LGPS configuration screen:

1. Go to **Payroll Dashboard**.
2. Click the **Local Government Pension Scheme (LGPS)** tab.

3. Click **Configure**.

2.2. Configure Parameters

To enter the parameters for your LGPS company:

1. Go to the **LGPS Configuration Screen**.
2. Click the **Parameters** tab.

Parameters		Rules	Employee Override	Pay Code Configuration	Pension Scheme
Company	Employer Code	Main Text	50/50 Text		
UK University 1					⋮
University Irish 2					⋮
30 UK Org 30					⋮
Abc Solutions 1000					⋮

- Expand the company's **3-dot menu**.
- Click **Edit**.

Edit Company

OK

- Fill in the **Employer Code**, **Main Text** and **50/50 Text** fields.
- Click **OK**.

2.3. LGPS Rules

The LGPS rules determine which employees are to be included in the LGPS return based on your chosen Reference Type.

2.3.1. Add a Rule

To add new rules for the LGPS company:

- Go to the **LGPS Configuration Screen**.
- Click the **Rules** tab.

<

Parameters

Rules

Employee Override

Pay Code Configuration

>

ADD

Company	Type	Value	Description	Part Time	Casual	Include	
1	Category	8	Marketing	☐	☐	☐	
30	Department	A1	Admin Security	☐	☐	☐	
30	Job Title	BUDA	Budget Analyst	☐	☐	☐	

- Click **Add**.

CANCEL

OK

- Select the LGPS **Company**.
- Select the reference **Type**.
- Select a **Value** for the chosen reference Type.
- Enable the **Include** toggle.
- Enable the **Part Time** toggle where employees are to be output as part time employees.
- Enable the **Casual** toggle where employees are to be output as casual employees.
- Click **OK**.

2.3.2. Edit a Rule

To edit a rule for the LGPS company:

- Go to the **LGPS Configuration Screen**.
- Click the **Rules** tab.
- Expand the rules **3-dot menu**.
- Click **Edit**.
- Amend the details where needed.
- Click **OK**.

2.3.3. Delete Rules

To delete a rule for the LGPS company:

1. Go to the **LGPS Configuration Screen**.
2. Click the **Rules** tab.
3. Expand the rules **3-dot menu**.
4. Click **Delete**.
5. Click **Yes**.

2.4. Employee Override

The employee override tab allows you to exclude employees from your chosen reference type. These employees will not appear on the LGPS return.

2.4.1. Add Employee Override

To exclude an employee:

1. Go to the **LGPS Configuration Screen**.
2. Click the **Employee Override tab**.

Employee	Full Name
000003	Joe Bloggs

3. Click **Add**.

Add Employee Exclusion

Employee *
John Ryan

CANCEL OK

4. Select an **Employee**.
5. Click **OK**.

2.4.2. Delete an Employee Override

To delete an exclusion for an employee:

1. Go to the **LGPS Configuration Screen**.
2. Click the **Employee Override** tab.
3. Expand the Employees **3-dot menu**.
4. Click **Delete**.

Delete

Are you sure you want to delete this?

NO YES

5. Click **Yes**.

2.5. Pay Code Configuration

The Pay Code Configuration tab allows you to assign pay codes which are used for unpaid absences. This allows for the output of the following fields on the LGPS return:

Output	Description
Employment Break Start Date	The Start Date of the employee's first unpaid absence in period
Employment Break End Date	The End Date of the employee's last unpaid absence in period
Employment Break Reason	Outputs the employee break reason letter

To assign a pay code as an unpaid absence:

1. Go to the **LGPS Configuration** Screen.
2. Click the **Pay Code Configuration** tab.

Parameters Rules Employee Override Pay Code Configuration >			
Search

- Enable the **Unpaid Absences** toggle.
- Select an **Employee Break Reason**.
- Click **OK**.

2.6. Configure Pension Scheme Identification

The Pension Scheme Identification tab allows you to configure your LGPS pension schemes. The configuration options selected on this screen determine how pension details are output on the LGPS return.

The following Pension Scheme Identification options are available:

Indicator	Description
LGPS	Enable if the scheme is a LGPS Scheme.

Indicator	Description
Main	Enable if the scheme is a Main LGPS Scheme.
50/50	Enable if the scheme is a 50/50 LGPS Scheme.
AVC	Enable if the scheme is a AVC LGPS Scheme.
ARC	Enable if the scheme is an ARC LGPS Scheme.
ER AVC Buy Back	Enable if the scheme is an ER AVC Buy Back LGPS Scheme.
Addition Scheme	Enable if the scheme is an Addition Scheme LGPS Scheme.
Councillor	Enable if the scheme is a Councillor LGPS Scheme. If marked as a councillor's scheme, this scheme must also be marked as a Main or 50/50 pension scheme.

To configure Pension Schemes for LGPS:

1. Go to the **LGPS Configuration Screen**.
2. Click the **Pension Scheme Identification** tab.

< Rules Employee Override Pay Code Configuration Pension Scheme Identification >

5. Enable the relevant **toggles**.
6. Click **OK**.

3. LGPS Pension Scheme Configuration

The following sections outline the configuration steps you need to complete prior to running a payroll for the new tax year.

Note:

All payrolls for the current tax year must have been completed prior to making the below configuration change.

3.1. Pension Schemes

The LGPS Scheme will require a number of pension schemes but in the case of the Main Scheme this can be just an amendment/reconfiguration of the existing scheme (after your yearend cleardown) or a new scheme (We recommend using the existing scheme as it removes the need to transfer employees from the existing scheme code and for setting up new pay codes). You will require new scheme for the 50/50 and additional pension scheme i.e. AVC ER buy back scheme, Councillor Scheme and Additional Pension Scheme.

The following additional configuration is required to configure the pension scheme for LGPS requirements.

3.1.1. Reconfiguring the Main Scheme (After Year End)

The following configuration changes are required for the existing LGPS Main scheme in your organisation:

1. Go to the **Payroll Dashboard**.
2. Click the **Settings Tab**.
3. Click the **Pension Scheme** Tile.

Pension Scheme
Payroll Dashboard > Pension Scheme

9. Click **Save**.

The following table shows the contribution bands for 2024/2025:

Band	Pensionable Pay Range for an Employment	EE Contribution Rate
1	Up to £17,600	5.5%
2	£17,601 to £27,600	5.8%
3	£27,601 to £44,900	6.5%
4	£44,901 to £56,800	6.8%
5	£56,801 to £79,700	8.5%
6	£79,701 to £112,900	9.9%
7	£112,901 to £133,100	10.5%
8	£133,101 to £199,700	11.4%
9	£199,701 or more	12.5%

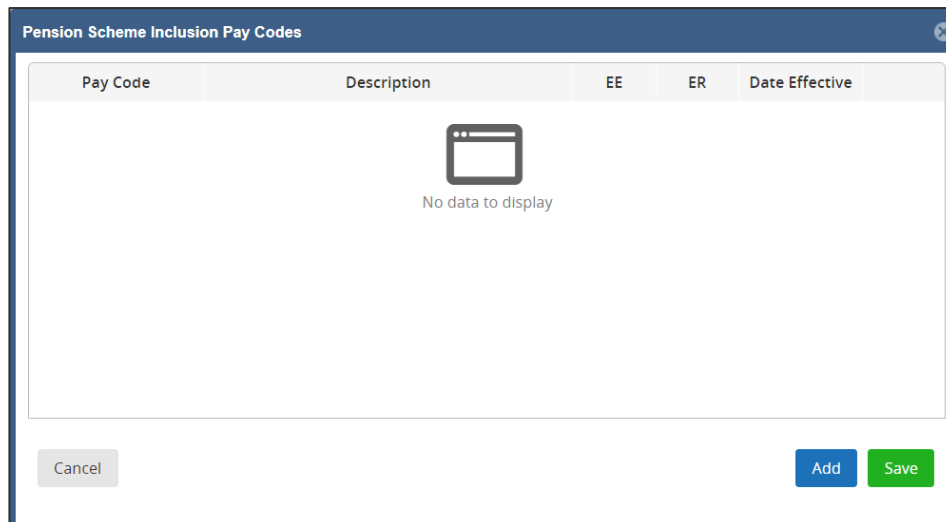

Note:

The employer pays in the balance of the cost of providing your benefits in the scheme after taking into account investment returns. Every three years, an independent actuary calculates how much your employer should contribute to the scheme. The amount will vary, but generally the present underlying assumption is that employees contribute approximately one third of the scheme's costs and the employer contributes the rest.

10. Select **Actual** from the **Contribution Rate** drop down.
11. Enable the **Band Assessment Exclusion** toggle.
 - a. If any pay elements are to be made exempt from the band assessment (e.g. arrears of pay) then they need to be flagged here.
 - b. Click **List** to add the relevant Pay Codes and click **Save**

Pay Code	Description	EE	ER	Date Effective
No data to display				

12. Enable the **Pay Code Inclusions** toggle.
 - a. Click **List**.
 - b. Add pay codes which are non pensionable but are to be included for pensionable within this scheme.
 - c. Enter a **Date effective** where inclusion should only apply from a date going forward or leave this field blank by default.

Pay Code	Description	EE	ER	Date Effective
No data to display				

Cancel Add Save

13. Enable the **Tiered Effective Date** toggle.

3.1.2. New Scheme 50/50 Pension

Unlike the MAIN scheme (which can be new or existing) the 50/50 Scheme must be a **NEW Scheme** in Payroll.

We recommend you set up **new Employee & Employer Deduction pay codes** for any new scheme always so that the deduction can be clearly identified on an employee's payslip etc and for internal visibility in terms of enquiries and reporting.

In terms of best practise for setting up new Pension Schemes (after you have set up your pay codes) you use the **Duplicate Button** to create a clone of an existing similar scheme and then make the necessary adjustments.

Specific configuration as outlined in the Main Scheme also applies to the 50/50 Scheme.

The exception to this is the EE contribution rates are 50% of the equivalent on the main scheme and that the employer contributions are the same as the main scheme.

3.1.3. Other LGPS Pension Schemes

In addition to the Main and 50/50 typical potential additional pension schemes in your organisation may be required for:

Scheme Type	Description
AVC Pension Schemes	Any additional voluntary contributions the employee is paying.
ER AVC Buy Back Pension Scheme	Where shared cost additional pension contributions are being paid.
Additional Scheme	Any additional regular contributions the employee is paying.
Councillor Scheme	If a councillor's scheme Note: A councillor scheme must also be marked as a Main or 50/50 pension scheme.

Note:

These additional schemes are usually either percentage or value based schemes and would not need to be set up as tiered year driven in most cases, subject to requirements. Please ensure to review the inclusions / exclusion pay codes on all schemes to ensure that you are classifying pay codes correctly for each scheme i.e. is a particular pay code pensionable for this scheme only or is pensionable for all other schemes and should be excluded from this scheme etc.

For any new scheme you are setting up to cover additional scheme requirements we recommend you set up **new Employee & Employer Deduction pay codes** beforehand so that the deduction can be clearly identified on an employee's payslip etc and for internal visibility in terms of enquiries and reporting.

In terms of best practise for setting up new Pension Schemes (after you have set up your pay codes) you use the **Duplicate Button** to create a clone of an existing similar scheme and then make the necessary adjustments.

4. Assumed Pensionable Pay

Assumed Pensionable Pay (APP) for pension purposes is applied if an employee moves to a period of reduced contractual pay or nil pay because of sickness or injury; or reduced pensionable pay during relevant child related leave (i.e. ordinary maternity, paternity or adoption leave and any paid additional maternity, paternity or adoption leave).

Note:

- This doesn't include the unpaid additional maternity, paternity or adoption leave available at the end of relevant child related leave; this is to be treated as unpaid leave of absence and no APP accrues during that period.
- If the member was in the 50/50 pension scheme prior to dropping to nil contractual pay because of sickness they should be returned to the main pension scheme from the beginning of the next pay period (provided they are still on no pay at that time due to sickness).

4.1. Configure Assumed Pensionable Pay (APP)

4.1.1. Configure Absence Rules to Absence Types

To configure Assumed Pensionable Pay:

1. On the **Payroll Dashboard** click the **Settings** tab.
2. Click the **Absence Pay Parameters** tile.

6. Click **Save**.

4.1.2. Configure Working Year Days

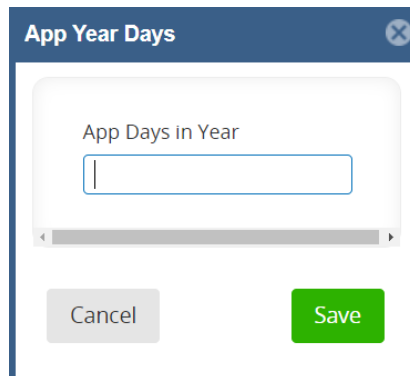

APP can calculate taking 365 or 260 days of the year into consideration. If working off a 7-day absence week it should be set to 365, if working off a 5-day absence week it should be set to 260. If neither is set it will default to 260.

To configure the Working Year Days:

1. On the **Payroll Dashboard** click the **Settings** tab.
2. Click the **General** tile in the UK Tax Rates section.
3. Scroll to the bottom of the page and click **Other**.

4. Select **APP Days in Year** from the *Select Detail* drop-down menu.

5. Enter the **App Days in Year** e.g. 365 or 260.
6. Click **Save**.

4.1.3. Manually Override Assumed Pensionable Pay (APP)

Actual and Assumed Pensionable Pay can be overwritten for individual employees. If the manual fields outlined below are populated then they will be used as an override and the automatic calculation configured in section [4.1.1. Configure Absence Rules to Absence Types](#).

To overwrite the Actual and Assumed Pensionable Pay for an employee:

1. On the **Payroll Dashboard** click the **Employee** tab.
2. Search for the employee and click **View**.
3. Click the **Pension** tab.
4. Expand the Pension Schemes **3-dot menu** and click **Edit**.

Edit Pension

access PeopleXD

AUTOENROLMENT DETAILS SUBMIT

5. Use the **Pensionable Pay Override** fields to overwrite the following:
 - EE Pensionable Pay
 - ER Normal Pensionable Pay
 - LGPS Assumed Pensionable Pay
6. Click **Save**.

Note:

If either of the ER pensionable pay fields are populated the other ER field becomes mandatory.

These fields are set to NULL by default at the end of each run so this should be reviewed for each pay run. This is controlled by the **Hold Pensionable Pay Override Fields** toggle. To access the toggle, go to:

- Payroll Dashboard > Settings > System Configuration > Complete Update

If ticked the Pensionable EE and ER over ride fields used for tiered year drive pensions will NOT be cleared out each time the complete update is run.

It will set the following pensionable pay fields to NULL:

- EE Pensionable Pay
- ER Normal Pen Pay
- ER Assumed Pen Pay

It is recommended a process is in place to review these fields when an employee returns

4.2. Calculation of Assumed Pensionable Pay (APP)

4.2.1. Monthly Paid

For a monthly paid employee, three complete pay periods should be used instead of 12 but the calculation is the same.

Example A:

Month 1 £1,400, Month 2 £2,500 including a £1,000 regular annual bonus and Month 3 £1,400.

The calculation of APP is as follows:

- Annual rate of APP = $(£1,400 + £1,500 + £1,400) / 3 * 12 = £17,200$.

The £1,000 bonus is removed prior to the averaging and grossing up calculation. This is because the £1,000 has already been included in the Cumulative Pensionable Pay (CPP) prior to going on

to APP and so it would be inappropriate to include it again in the calculation of APP (as to do so would result in double counting).

APP may be increased at the time of calculation where the employer, at their sole discretion, decides to add back into the APP any regular lump sum payment made in the last 12 months. The employer must determine at the point APP commences that where there is a 'reasonable expectation' that a regular lump sum payment received in the previous 12 months would be paid again during the period where APP applies this is added back into the APP annual rate figure.

Example B:

In example (a), the member received a regular annual bonus of £1,000 in the period before going on to APP. In calculating the flat rate average APP, the lump sum was removed. In deciding whether the lump sum should be added back into the APP annual rate the employer should reasonably assess if in their view the employee will still be on APP the next time the lump sum is due to be paid. Therefore, if in the employer's reasonable assessment, the period of APP will extend to 11 months or more and the £1,000 bonus would have been paid again then the amount should be added back into the annual APP rate i.e.

- Annual rate of APP = $(£1,400 + £1,500 + £1,400)/3 * 12 = £17,200 + £1,000$ (future bonus)
= £18,200

Proportioning

When determining the proportion of the annual APP rate to be added to the cumulative pensionable pay, the same method used for determining part periods for other reasons should be maintained. Therefore, if you need to calculate one day's APP use whatever method you would normally use to calculate one day's pay from an annual rate.

Example C:

A monthly paid employee drops to reduced pay on 15th June and stays on that until 4th September when they return to normal working. The employee is in the main pension scheme throughout. Main Scheme CPP is accrued as follows:

- June – 14 days of Pensionable Pay plus 16 days at the APP rate
- July – APP
- August – APP
- September – 3 days APP plus 27 days of pensionable pay

4.2.2. Weekly, Fortnightly and 4-Weekly

Calculate the average of the pensionable pay for the 12 complete pay periods prior to the relevant event after removing any pensionable lump sum payments. Gross up to an annual figure. If 12 complete pay periods do not exist use whatever number of complete periods are available.

The relevant event is the date on which the employee drops to reduced contractual pay or nil pay due to sickness or injury or reduced or nil pensionable pay during relevant child related leave (i.e. ordinary maternity, paternity or adoption leave and any paid additional maternity, paternity or adoption leave), or the date the member commenced reserve forces service leave.

4.2.3. 50/50 Rule

If the member was in the 50/50 pension scheme prior to dropping to nil contractual pay because of sickness or injury they should be placed in the main pension scheme from the beginning of the next pay period (provided they are still on no pay due to sickness or injury at that time) and the APP added to CPP in the Main Scheme rather than CPP in the 50:50 Scheme as from the beginning of that pay period.

A monthly paid employee drops to reduced contractual pay due to sickness on 15th June then on 15th September they drop to nil pay. They return to normal working on 1st December. At the date of the relevant event, they were in the 50/50 pension scheme. The CPP accrued throughout is as follows:

- June – 14 days of pensionable pay plus 16 days of APP is added to CPP in the 50:50 Scheme

- July – APP is added to CPP in the 50:50 Scheme
- Aug – APP is added to CPP in the 50:50 Scheme
- Sept – APP is added to CPP in the 50:50 Scheme
- Oct – APP is added to CPP in the Main Scheme (next pay period following the drop to nil pay)
- Nov – APP added to CPP in the Main Scheme
- Dec – APP added to CPP in the Main Scheme

5. FTE Calculations

5.1. Overview

This section outlines the four distinct calculation methods, and the associated rules used to determine an employee's Full-Time Equivalent (FTE) salary for pension purposes by appointment. These methods ensure accurate salary calculations based on different employment scenarios.

5.1.1. Calculation Methods

The following calculation methods are:

1. LGPS Hourly Paid – Used for employees paid on an hourly basis, where FTE salary calculations are derived directly from hourly rates.
2. LGPS Hourly Paid Average – Determines the FTE salary based on an average hourly rate over a defined period.
3. LGPS Salary Paid – Applied to employees with a fixed salary, ensuring pension calculations align with contracted pay.
4. LGPS Salary Paid with Average Hours – Calculates the FTE salary by incorporating average hours worked over a specified period.

Each employee's pension record stores the applicable calculation method for their relevant appointment.

5.2. Calculation Pay Codes

Pay codes included in this calculation must be **pensionable** and must **not** be marked for exclusion from the relevant calculation method.

5.2.1. Exclude a Pay Code from a Calculation Method

To specify a pay code as excluded from the from a relevant Calculation Method:

1. Go to Payroll Dashboard > Local Government Pension Scheme
2. Click **Configure**.

5.3. Enhanced Pay Codes

Certain pay codes are classified as **Enhanced Payments**. These pay codes are treated differently across various **calculation methods**, ensuring accurate pensionable salary calculations.

5.3.1. Mark a Pay Code as an Enhanced Payment

Pay codes can be indicated as being Enhanced Payments going to:

1. Go to Payroll Dashboard > Local Government Pension Scheme > Configure > Pay Code Configuration.

Pay Code	Unpaid Absence	Enhanced Payment	Employment Break Reason	Break Reason Description
Allowance 2	☐	☐		...
Salary 1000	☐	☐		...
Salary Arrears 1002	☐	☐		...
Occupational Salary Offset 1003	☐	☐		...
Additional Salary Arrears 1004	☐	☐		...

2. Expand the **3-dot menu** next to the Pay Code to be indicated as being enhanced Payment.
3. Click **Edit**.
4. Enable the **Enhanced Payment** toggle.

Edit Pay Code

Unpaid Absence ☐

Enhanced Payment ☒

CANCEL OK

5. Click **OK**.

5.4. Calculation Methods

5.4.1. LGPS Hourly Paid Calculation method

The **LGPS Hourly Paid** calculation method processes data **month by month** for the **12 months** prior to and including the month of the **parameter end date**.

Calculation Process

1. **Retrieve Active Appointments**

- For each month, all **active appointments** within that month are identified.
- The **FTE salary** for each appointment is calculated based on its date range within the month.
- The calculated FTE salary is **accumulated** into the employee's total annual **FTE salary**.

2. **Retrieve Pensionable Payments**

- All **pensionable payments** for the month are retrieved, **excluding** any pay codes marked for exclusion (as outlined in Section 2.1).
- The method then determines if the pay code is classified as an **Enhanced Payment**.

3. **Enhanced Payments Handling**

- If the pay code is marked as **Enhanced**, the **enhanced value** is calculated as the amount **above** the base payment (pay multiplier of 1).

Example:

- An employee earns **£10 per hour** and is paid for **8 hours** at a **1.5x multiplier**:
- Payment received: **£120**
- Base payment (8 × £10): **£80**
- **Enhanced value**: £120 - £80 = **£40**

- If the pay code is **not enhanced**, the **full payment value** is used.

4. **Calculate FTE Value of the Payment**

- Once the payment value is determined, the **FTE value** is calculated using the following formula:

$$\text{FTE Value} = \left(\frac{\text{Payment Value}}{\text{Contracted Hours}} \right) \times \text{FTE Hours}$$

Example:

- Payment value: **£40**
- Contracted hours: **32**
- FTE hours: **35**

$$\left(\frac{40}{32} \right) \times 35 = 43.75$$

5. Update Annual FTE Salary

- The **FTE value** of the payment is **added** to the employee's **annual FTE salary**.

5.4.2. LGPS Hourly Paid Average Hours Calculation method

The **LGPS Hourly Paid Average Hours** calculation method determines an employee's **Full-Time Equivalent (FTE) salary** by analysing **average contract hours** over a defined period.

1. Define the Date Range

- Identify the **maximum payment date** for the employee's **pay frequency** within the **financial end period**.
- Use this date to establish the **year's date range** for processing.
- Retrieve the **minimum and maximum calendar weeks** for this date range to be used when extracting data from **History**.

2. Retrieve Contract and FTE Hours

- Extract the **start and end dates, contracted hours, and FTE hours** for each **distinct period** where these hours apply within the year's date range.
- For each period, determine:
 - **Basic pensionable hours** (pay codes without the **Enhanced Pay** indicator).
 - **Extra/overtime hours** (pay codes with the **Enhanced Pay** indicator).
 - **Total pensionable pay** for the date range.

3. Calculate Average Weekly Contract Hours

- The **Average Weekly Contract Hours** is calculated using the formula:

$$\left(\frac{\text{Total Basic} + \text{Extra/Overtime Hours}}{\text{Number of Days in Date Range}} \right) \times 7$$

4. Determine the FTE Salary for Each Date Range

- **Scenario 1: Zero Average Weekly Contract Hours**
 - If the **Average Weekly Contract Hours = 0**, calculate the **FTE salary** for the appointment based on the **relevant date range**.
 - Add this to the **calculated pensionable pay** to determine the FTE salary for the date range.
- **Scenario 2: Average Weekly Contract Hours Exceeds FTE Hours**
 - If the **Average Weekly Contract Hours** are **greater than** the **FTE Hours** for the appointment, the **calculated pensionable pay** is considered the **FTE salary** for the date range.

- **Scenario 3: Standard Calculation (Up-Rating Pensionable Pay)**

- If neither of the above conditions are met, the **calculated pensionable pay** is adjusted using the following formula:

$$\left(\frac{\text{Calculated Pensionable Pay}}{\text{Average Weekly Contract Hours}} \right) \times \text{FTE Hours}$$

5. Determine the Overall FTE Salary

- The **overall FTE salary** is the **sum** of the **FTE salaries** calculated for all the date ranges.

6. Calculate the Average Contract Hours for the Year

- If multiple date ranges exist, calculate the **annual average** of the **Average Contract Hours** as follows:

$$\sum \left(\frac{\text{Average Contract Hours}}{\text{Total Days in Year}} \times \text{Days in Relevant Date Range} \right)$$

The accumulated value from this formula is considered the **Average Contract Hours** for the year.

5.4.3. LGPS Salary Paid Calculation method

This calculation method processes data **month by month** for the **12 months prior to and including the month of the parameter end date**.

1. **Retrieve Active Appointments**

- For each month, all **active appointments** within that month are identified.
- The **FTE salary** for each appointment is calculated based on its **date range within the month**.
- The calculated **FTE salary** is accumulated into the employee's **annual FTE salary**.

2. **Retrieve Pensionable Payments**

- All **pensionable payments** processed during the month are retrieved.
- Any **excluded pay codes** (as outlined in Section 2.1) are **not included** in the calculation.

3. **Determine Payment Value**

For each pensionable payment, the calculation depends on whether it is marked as an **Enhanced Payment**:

- **Enhanced Payments:** The **enhanced value** is calculated as the amount **above** the base payment (multiplier of 1).

- **Example:**

- Employee earns **£10 per hour**.
- Worked **8 hours** at a **1.5x multiplier**.
- Total payment: **£120** ($8 \times £10 \times 1.5$).
- Base payment ($8 \times £10$): **£80**.
- **Enhanced value** = $£120 - £80 = £40$.

- **Non-Enhanced Payments:** The **full value** of the payment is used in the calculation.

4. **Calculate the FTE Value of the Payment**

- Once the payment value is determined, the **FTE value** is calculated using the formula:

$$\text{FTE Value} = \left(\frac{\text{Payment Value}}{\text{Contracted Hours}} \right) \times \text{FTE Hours}$$

- **Example Calculation:**

- Payment value: **£40**.
- Contracted hours: **32**.
- FTE hours: **35**.

$$\left(\frac{40}{32}\right) \times 35 = 43.75$$

5. **Accumulate FTE Salary**

- The **FTE value** is added to the employee's **annual FTE salary**.

5.4.4. LGPS Salary Paid with Average Hours Calculation method

The **LGPS Hourly Paid Average Hours** calculation method determines an employee's **Full-Time Equivalent (FTE) salary** by analysing **average contract hours** over a defined period, adjusting for arrears-based payments.

1. **Define the Date Range**

- Identify the **maximum payment date** for the employee's **pay frequency** within the **financial end period**.
- Use this date to establish the **year's processing date range**.
- Retrieve the **minimum and maximum calendar weeks** for this date range to extract data from **History**.

2. **Retrieve Contract and FTE Hours**

- Extract the **start and end dates, contracted hours, and FTE hours** for each **distinct period** where these hours apply within the **year's date range**.
- Adjust the **date range** to account for **arrears-based** payments when retrieving **History** data.

3. **Retrieve Pensionable Pay and Hours**

- For each date range, retrieve:
 - **Basic pensionable hours** (pay codes **without** the **Enhanced Pay** indicator).
 - **Extra/overtime hours** (pay codes **with** the **Enhanced Pay** indicator).
 - **Total pensionable pay** for the adjusted date range.

4. **Calculate Employee's Actual Salary Paid**

- Determine the employee's **actual salary paid** for the relevant original date range.
- Add this value to the **pensionable pay** for the date range.

5. **Calculate Average Weekly Contract Hours**

- The **Average Weekly Contract Hours** is calculated using the formula:

$$\left(\frac{\text{Total Basic} + \text{Extra/Overtime Hours}}{\text{Number of Days in Date Range}} \right) \times 7$$

- The employee's **actual contract hours** for the date range are **added** to the **Average Contract Hours**.

6. **Determine the FTE Salary for Each Date Range**

- **Scenario 1: Zero Average Weekly Contract Hours**

- If the **Average Weekly Contract Hours = 0**, calculate the **FTE salary** for the appointment based on the **relevant date range**.
- **Scenario 2: Average Weekly Contract Hours Exceeds FTE Hours**
 - If the **Average Weekly Contract Hours** are **greater than** the **FTE Hours** for the appointment, the **calculated pensionable pay** is considered the **FTE salary** for the date range.
- **Scenario 3: Standard Calculation (Up-Rating Pensionable Pay)**
 - If neither of the above conditions are met, the **calculated pensionable pay** is adjusted using the following formula:

$$\left(\frac{\text{Calculated Pensionable Pay}}{\text{Average Weekly Contract Hours}} \right) \times \text{FTE Hours}$$

7. **Determine the Overall FTE Salary**

- The **overall FTE salary** is the **sum** of the **FTE salaries** calculated for all the date ranges.

8. **Calculate the Average Contract Hours for the Year**

- If multiple date ranges exist, calculate the **annual average** of the **Average Contract Hours** as follows:

$$\sum \left(\frac{\text{Average Contract Hours}}{\text{Total Days in Year}} \times \text{Days in Relevant Date Range} \right)$$

The accumulated value from this formula is considered the **Average Contract Hours** for the year.

6. Generate the LGPS Report

To generate the LGPS Return:

1. Go to the **LGPS Configuration** screen.

Local Government Pension Scheme (LGPS) CONFIGURE

Generate Data

Payroll Company ▼ Employee

Select a Payroll Company Select a Employee

From Date * 📅 To Date * 📅

Select a Period Start Date Select a Period End Date

GENERATE DATA

2. Select the **Payroll Company**.
 - a. It is optional to select an **Employee**.
3. Enter a **From Date** and **To Date** for which you want to generate the LGPS Return.
14. Click **Generate Data**.

Once generated LGPS reports can be found in the report centre.

6.1. Generate LGPS Return by Pension Group

By default, the LGPS return generates by Payroll Company. A new option has been added to allow for the generation of the LGPS return by Pension Groups.

Once the generation of the LGPS return by Pension Groups option is enabled, you can select a Pension Group for which you want to generate your LGPS Return.

Local Government Pension Scheme (LGPS)

6.1.1. Switch on LGPS by Pension Group

To Switch on the LGPS by Pension group the following system parameter's value will need to be changed to 'Y':

1. Go to the **Administrator Dashboard**.
2. Click **Open** on **Admin Settings**.
3. Search for **LGPS by Pension Group**.

Admin Settings

Administrator Dashboard > Admin Settings

Coreportal Parameters

LGPS by Pension group

×

🔍

Search Whole Phrase

▼

Parameter Description	Parameter Code	Product Name	Current Value	
LGPS by Pension group.	cp_lgps_by_pension_group		Y	EDIT

4. Click **Edit**.
5. Enter **Y** as the **Value**.
6. Click **OK**.

Payroll Company will now be replaced with Pension Group on the LGPS screen.

6.1.2. Configure LGPS Pension Groups

LGPS Pension Groups can be configured from the LGPS Configuration screen. To do this:

1. Go to the **Pension Scheme Identification** tab.

2. Expand the **3-dot menu** on the LGPS pension Scheme.
3. Click **Edit**.
4. Enter the name of the **Pension Group** in the **Text Field**.

Edit Scheme

5. Click **OK**.

7. Insight Reports

7.1. Insight Views

An insight view LGPS Return (Pay) is available containing all fields in the LGPS Return. This allows employers to report on how the system calculation was applied.

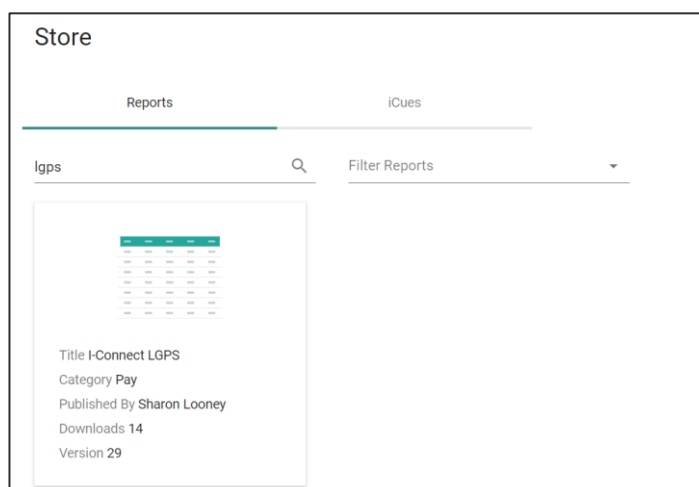

Data	View
Absence Ind	Pay Lgps Return
Address 1	Pay Lgps Return
Address 2	Pay Lgps Return
Ae Qualifying Pension	Pay Lgps Return
Annual Fte Salary Inc Allow	Pay Lgps Return

7.2. I-Connection Specification

For users who need to return their LGPS Return according to the I-Connection specification a preconfigured LGPS return is available to download from the Report Store.

1. On the **Insight Dashboard** click the **Report Store** tab.
2. Search for and click the **I-Connect LGPS** report.
