1. Overview

1.1. Purpose of the Guide

PeopleXD will deliver a Single Pension Scheme (SPS) solution to your environment by providing a software update to your current Pension application. Once the software is in place, the PeopleXD implementation team will also build a default configuration used to control the format and layout of the information displayed. Once the team have completed their function, they will sign off the delivery and hand over to the client pensions department.

At this point, the client must complete the system configuration local their environment e.g. define the pensionable elements applicable to SPS. The purpose of this document is to clearly outline the configuration steps carried out by PeopleXD and those required by the client. Each chapter clearly outlines what function PeopleXD has completed and what actions if any are required by you.

The document will:

- Outline the Main Configuration Options
- Describe the Current Processes which require your attention
- Describe the processes which have been completed by PeopleXD during implementation and configuration

Note:

This document will contain screenshots of functional areas which are representative of what the client will see and are mainly for illustration purposes. Screen layouts may vary depending on system version.

2. System Parameters

2.1. System Parameters

When implementing Defined Benefit pension schemes in PeopleXD Pension a series of system parameters are installed and configured which can be used to control the presentation of data. This configuration is agreed at the offset and is not available for general use during normal operation. See below a screen shot for illustration purposes.

2.1.1. Action Owner

PeopleXD Action:

During the Single Pension Scheme (SPS) implementation in your environment Core will take an existing DB scheme structure, modify, and adapt to suit the SPS requirements.

Client Action:

This step requires no configuration from the client side.

2.2. SPS Banking Operational Parameters

When implementing the SPS Banking solution an operational parameter must be specified by the implementation team. This parameter should be set to 2 by default. It will specify the number of years forward SPS estimates can be generated without “Banking” previous years. See below a screen shot for illustration purposes.

Core Pension System Parameters

Parameter	Username	Value
PENSION SCHEME SALARY FACTORS		Y
SALARY OVERRIDE FACILITY		N
AUTO CREDIT OF EXTRA YEARS		Y
RETIREMENT AGE BY GRADE		N
AUTO VIEW PENSION BENEFITS		Y
CALC PENSION ON PAY ELEMENTS		Y
CREATE/DELETE WITH PEN1095		Y
CREATE/DELETE WITH PEN660		Y

Service Types

Reference	Description
BOUGHT	Bought
SUNDRY	Sundry
CREDITED	
TRANSFER	Transfer

Pension System Name

System Name: CorePension Develop

System Version: V15.2.1c

System Type: Corehr

Log File Location: d:\coreapps\corehr\payroll\dev\log

Upload File Location: c:\upload_files\

Client Reference:

Deferred Pensioners Setup: Standard

Planned End Date: ☒

Banked Years: 2

Social Welfare Benefits

Reference	Description
SWOAP	State Pension
SWDB	SW Disability Benefit
SWUB	SW Unemployment Benefit

Benefit Statement

Benefit Statement Address:

Example:

If 2013 and 2014 are banked, then the practitioner can only generate benefits up to and including 31-Dec-2016.

2.2.1. Action Owner

PeopleXD Action:

See step below

Field name	Field Description
Banked Years	Enter the number of years system will allow SPS benefit generation before insisting on previous years been Banked. Enter 2 in this field

Client Action:

This step requires no configuration from the client side.

3. Reference Data

3.1. Pension Schemes

The configuration of the Single Pension Scheme is managed in Maintain Pension Schemes. For the purpose of this exercise, we are concerned about page 3 of the screen. See below for illustration purposes.

Configuration: Core | Pension/ Reference/ Pension Schemes

Steps:

- Enter the SPS Pension Scheme Code and Execute the Query.
- Navigate to Page 3.
- Populate the relevant fields as outlined below
- Once complete save the changes.

The following fields are those considered pertinent to the configuration of SPS. All other fields should be overlooked as they are not applicable to SPS configuration.

Required Fields

Field name	Field Description
Salary Years to Average	Enter the number of years to be examined for pension salary calculation basis. Leave this field blank
Contribution Refund Service Threshold	Enter the refund of contributions service threshold, any service above this threshold cannot receive a refund of contributions. Enter 2 in this field
OAP Multiplier	This is Legislative agreed multiplier Set this value to 3.74
Pension Days in Year	This is the calculable number of Pension Days in the year Set this to 365
Refund Rate of Tax	Enter the rate of tax charged on contribution refunds Enter 20%
Single Scheme Start Date	Enter the date on which the Single Pension Scheme became effective Enter 1-Jan-2013.
Retirement Age (Male)	Enter the retirement age (Male) Enter 70 in this field
Retirement Age (Female)	Enter the retirement age (Female) Enter 70 in this field

All other fields on this screen should remain blank.

3.1.1. Action Owner

PeopleXD Action:

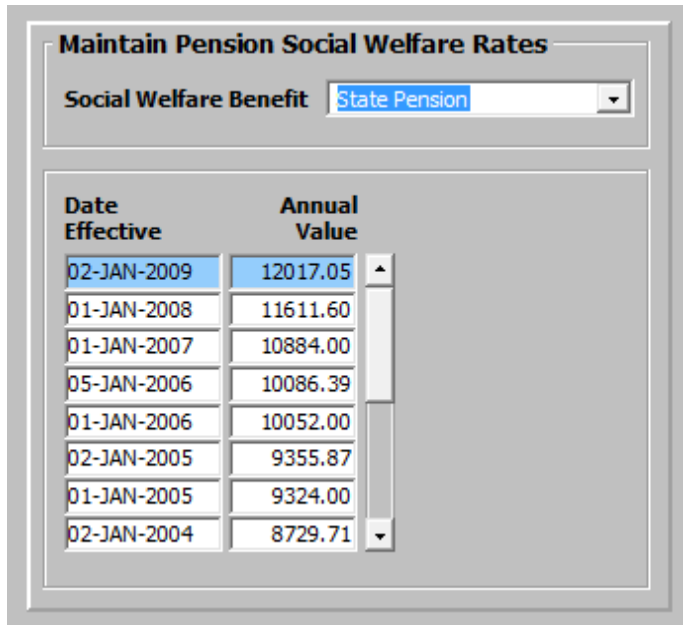

None, as the pension scheme will already exist from payroll setup.

Client Action:

The client will be responsible for the configuration of this facility.

3.2. Social Welfare Rates

This facility is used to store the State Contributory Pension (SCP) rates. The rates are stored as annual values and are held by Effective Date.

Date Effective	Annual Value
02-JAN-2009	12017.05
01-JAN-2008	11611.60
01-JAN-2007	10884.00
05-JAN-2006	10086.39
01-JAN-2006	10052.00
02-JAN-2005	9355.87
01-JAN-2005	9324.00
02-JAN-2004	8729.71

Configuration: Core | Pension/ Reference/ Pension Social Welfare Rates

Steps:

- From the dropdown menu, select State Pension.
- On entering this option the State Pension rates are displayed by default.
- If rates must be entered then please adhere to the following rules
 - Dates are input in DD-MMM-YYYY format.
 - The effective date is that which the rate comes into effect from, normally 01st Jan on the calendar year in question.
 - Under the Annual Value Column, all figures here are expressed in Annual Terms. The current CSP is €230.30 per week which equates to €12,017.05 annually (based on 52.1799 (52.18 rounded) calendar weeks in the year).
 - Save the changes.

3.2.1. Action Owner

PeopleXD Action:

None

Client Action:

The client will be responsible for the configuration of this facility.

3.3. Pension Reference Data

This screen facilitates the configuration of various pension scheme calculations at scheme level. See screen shot below for illustration purposes.

Code	Description
200	Single Pension Scheme CPI Increases

Configuration: Core | Pension/ Reference/ Pension Reference Data

For the purposes of Single Scheme configuration, we are only concerned about four of these facilities.

- Pension Actuarial Rates
- Pension Types
- Scheme Contribution Elements

- Single Scheme Elements

Pension Actuarial Rates: This is used to setup any codes that will be required for actuarial table calculations e.g., CPI increases. (Reference chapter 17 in Circular 11/2014: Single Public Service Pension Scheme: Benefits Calculation and Statements for Members)

Steps:

- Enter the pension scheme and press return.
- Choose the option "07. Pension Actuarial Rates" from the dropdown.
- Enter a unique Code and Description e.g. 200 Single Pension Scheme CPI Increases
- Save the changes

Scheme Contribution Elements: This facility is used to specify which pay elements are used to store the pension contributions in payroll history so they can be identified for reporting.

Steps:

- Enter the pension scheme and press return.
- Choose the option "08. Scheme Contributions" from the dropdown.
- Specify the Codes used to store this information in PeopleXD Payroll e.g. 300 Pensionable Contribution. The description will populate by default as it's already setup in PeopleXD Payroll.
- Save the changes

Pension Types: This text modification re-labels a description on generated pension benefits breakdown, properly describing SPS calculation method.

Steps:

- Enter the pension scheme and press return.
- Choose the option "09. Pension Types" from the dropdown.
- Change the text from "Pension at 1/200" to, for example, "Pension at the Higher Rate"
- Save the changes

Single Scheme Elements: This facility is used to specify which pay elements are used to store the pensionable pay in payroll history so they can be identified for processing and reporting.

Steps:

- Enter the pension scheme and press return.
- Choose the option "15. Single Scheme Elements" Codes from the dropdown.

- Specify the Codes used to store this information in PeopleXD Payroll e.g. 1000 Salary. The description will populate by default as it's already setup in XD Payroll.
- Specify the Allowance Category ensuring only the Salary or Basic Pay elements are set to "Salary". Pensionable Allowances are left blank. This configuration is vital to the allocation of Contributory State Pension per period.
- Save the changes

3.3.1. Action Owner

PeopleXD Action:

N/A

Client Action:

The client will be responsible for the configuration of this facility.

3.4. Pension Actuarial Rates

The purpose of this screen is to maintain any actuarial tables that are required in the calculation of employee benefits e.g., CPI increases. See screen shot below for illustration purposes

The screenshot shows a web-based configuration interface titled "Maintain Pension Actuarial Rates". It contains several input fields and a table for actuarial rates.

Configuration Fields:

- Pension Scheme:** A text box containing "88" and a dropdown menu showing "Single Pension Scheme".
- Actuarial Code:** A text box containing "200" and a dropdown menu showing "Single Pension Scheme CPI Increases".
- Effective Date:** A date picker showing "01-JAN-2013".
- Pro Rata Calculations:** A checkbox that is currently unchecked.

Actuarial Rate Basis: Radio buttons for "Age", "Date" (selected), and "Year".

Actuarial Gender Basis: Radio buttons for "Male/Female", "Married/Single", "None" (selected), and "Rate A/B".

Table: A table with two columns: "Date" and "N/A". The "Date" column has a date picker showing "31-DEC-2014". The "N/A" column has a text box containing ".031000000000000". Below these are several empty rows for data entry. A vertical scrollbar is on the right side of the table.

Buttons: A "Copy Actuarial Rates" button is located at the bottom right of the form.

Configuration: Core | Pension/ Reference/ Pension Actuarial Rates

Steps:

- Enter the SPS Pension Scheme Code and press return.
- Enter the CPI Code that was created earlier and press return
- Enter the Effective Date of the CPI Code and press return. Make the table effective from 1-Jan-2013
- Choose the Actuarial Rate Basis of "Date"
- Choose the Actuarial Gender Basis of "None"
- Enter the applicable dates and rates affective.
- Save the Changes.

3.4.1. Action Owner

PeopleXD Action:

N/A

Client Action:

The client will be responsible for the configuration of this facility.

3.5. Assign Actuarial Table References

Once the CPI Table is created it must be assigned to the calculation routine. See below for illustration purposes

Assign Actuarial Table References		
Pension Scheme	88	Single Pension Scheme
Purchase AVC Service		
One Year (%)		
One Year (Value)		
Pension Rates		
Commutation		
Uprating (EM)		
Uprating (NE)		
Early Retirement (EM)		
Early Retirement (NE)		
Augmentation		
Present Value		
Transfer Value		
Pension RM		
Lump Sum RM		
Special Pension		
CARE CPI	200	Single Pension Scheme CPI Increases

Configuration: Core | Pension/ Reference/ Assign Actuarial Table References

Steps:

- Enter the SPS Pension Scheme Code and press return.
- Enter the CPI Code that was created earlier in the CARE CPI field and press return.
- Save the changes.

3.5.1. Action Owner

PeopleXD Action:

N/A

Client Action:

The client will be responsible for the configuration of this facility.

3.6. Maintain Pension Salary Types

This facility is used to maintain multiple pensionable salary types per pension scheme. It was used in PeopleXD Pension to define Salary Definitions for final Salary Schemes. Based on the new scheme requirements and PeopleXD functionality this facility is currently not required. A default configuration will exist for operational purposes only. See screen shot below for illustration purposes only.

Remuneration Code	Description	S.W. Multiplier	Base Remuneration	Social Welfare Benefit	Actual Salary	Apply Salary Cap
PR	Pension Remuneration SPS					
CPR	Current Salary					
APR						
ACPR						
AAPR						
PTCPR						
PTPR						

Configuration: Core | Pension/ Reference/ Pension Salary Types

Steps:

- Enter the SPS Pension Scheme Code and press return.

3.6.1. Action Owner

PeopleXD Action:

PeopleXD will implement a default configuration for operational purposes only.

Client Action:

N/A

3.7. Pension Types

This facility is used to define the rule base for calculating scheme benefits. It will be activated for the SPS to define the rules for calculating pension and lump sum referable amounts accrued by the member, along with the contributions paid. See screen shot below for illustration purposes only.

Pension Type	Description	Accrual Factor	Accrual Rate	Salary Type	Under Threshold	Use OAP	Over Use
5	Accrued at lower pension rate	/	.58	Pension Remuneration SPS		☒	
6	Accrued at higher pension rate	/	1.25	Pension Remuneration SPS		☒	
		/					
		/					
		/					
		/					

Configuration: Core | Pension/ Reference/ Pension Types

Steps:

- Enter the SPS Pension Scheme Code and press return.

3.7.1. Action Owner

PeopleXD Action:

PeopleXD will create a default configuration to define the rules for calculating pension and lump sum referable amounts accrued by the member.

Client Action:

N/A

3.8. Next Step

Once you have reached this point three fundamental tasks have been completed in the project. See table below

Task	Responsibility
Software Installed	PeopleXD
Build Default Configuration	PeopleXD
Build Client Configuration	Client

The next step requires the pensions department to review the PeopleXD Pension SPS User Manual and commence processing data.

4. Appendix A Uniformed Accrual SPS

4.1. Background

Gardaí, Prison Officers, Permanent Defence Forces personnel and full-time firefighters must retire before the general compulsory retirement age of 70 for Single Scheme members. In reflection of this, these grades (which can be collectively termed “uniformed services”) have a customised set of pension terms in the Single Scheme, which in particular give them

- pensions paid earlier than in the case of standard-accrual public servants (those earlier ages may vary),
- higher accrual rates for pension and retirement lump sum than those applying to standard-accrual public servants,
- a higher contribution rate than applies to standard-accrual public servants.

As such, a separate Scheme must be created to cater for these members.

4.2. Pension Schemes

The configuration of the Single Pension Scheme is managed in Maintain Pension Schemes. For the purpose of this exercise, we are concerned about page 1 of the screen.

See screen shot below for illustration purposes only.

The screenshot displays the 'Maintain Pension Schemes' form. The form includes the following fields and values:

Maintain Pension Schemes	
Pension Code	38
Description	SINGLE PENSION SCHEME
Company	COMPANY ABC
Renewal Period (Tax Week)	52
Deduction Percent (EE) 1	3
Deduction Percent (EE) 2	3.5
Deduction Percent (EE) 3	
Deduction Percent (ER)	
Reckonable Days	
Social Welfare Ded. 1	☒
Social Welfare Ded. 2	☐
Social Welfare Ded. 3	☐
Scheme Type	☒
Calculate Only	☐
Override Scheme %	☒

Uniformed services members of the Single Scheme pay contributions on the following basis:

Field	Scheme Specific Data
Deduction Percent (EE) 1	3.3% of pensionable remuneration
Deduction Percent (EE) 2	4.2% of net pensionable remuneration

Configuration: Core | Pension/ Reference/ Pension Schemes

Steps:

- Enter the SPS Pension Scheme Code and execute query
- Enter new rates for Deduction Percent (EE) 1
- Enter new rates for Deduction Percent (EE) 2
- Save Changes

4.2.1. Action Owner

PeopleXD Action:

PeopleXD will create a default configuration to define the rules for calculating pension and lump sum referable amounts accrued by the member.

Client Action:

N/A

4.3. Pension Types

This facility is used to define the rule base for calculating scheme benefits. It will be activated for the SPS to define the rules for calculating pension and lump sum referable amounts accrued by the member, along with the contributions paid. See screen shot below for illustration purposes only.

Maintain Pension Types

Pension Scheme: 88 Single Pension Scheme

Benefit Type: At Calculation Date Referable Amount (Pension)

Remuneration | Service | Advanced Service | Actuarial Codes

Pension Type	Description	Accrual Factor	Accrual Rate	Salary Type	Under Threshold	Use OAP	Over Use Threshold	OAP
5	Accrued at lower pension rate	/	.58	Pension Remuneration SPS		☒		☐
6	Accrued at higher pension rate	/	1.25	Pension Remuneration SPS		☐		☒
		/				☐		☐
		/				☐		☐
		/				☐		☐
		/				☐		☐

Accrual of pension

Uniformed services members of the Single Scheme accrue pension referable amounts on the following basis:

Field	Scheme Specific Data (Accrual Rate)
Accrued at lower pension rate	Enter .58
Accrued at higher pension rate	Enter 1.43

Steps:

- Enter the SPS Pension Scheme Code and press return.
- Ensure Benefit Type is set to "At Calculation Date Referrable Amount (Pension)"
- Enter Lower Pension Rate of .58
- Enter Higher Pension Rate of 1.43
- Save Changes

Accrual of retirement lump sum

Uniformed services members of the Single Scheme accrue retirement lump sum referable amounts on the following basis:

Field	Scheme Specific Data (Accrual Rate)
Accrued at pension rate	<i>Enter 4.29</i>

Maintain Pension Types

Pension Scheme: 88 Single Pension Scheme

Benefit Type: At Calculation Date Referable Amount (Lump Sum)

Remuneration | Service | Advanced Service | Actuarial Codes

Pension Type	Description	Accrual Factor	Accrual Rate	Salary Type	Under Threshold	Use OAP	Over Threshold	Use OAP
7	Accrued at pension rate	/	3.75	Pension Remuneration SPS		☐		☐
						☐		☐
						☐		☐
						☐		☐
						☐		☐

Steps:

- Enter the SPS Pension Scheme Code and press return.
- Ensure Benefit Type is set to "At Calculation Date Referrable Amount (Lump Sum)"
- Enter Accrued at Pension Rate of 4.29
- Save Changes

Configuration: Core | Pension/ Reference/ Pension Types

4.3.1. Action Owner

PeopleXD Action:

PeopleXD will create a default configuration to define the rules for calculating pension and lump sum referable amounts accrued by the member.

Client Action:

N/A

4.4. Benefit Statements

These should be prepared and issued along the lines set out for Single Scheme members generally earlier in the circular and as at Appendix D. At the "Membership category" line of the supplied model form, "Standard accrual" should be replaced, as appropriate, by "Garda", "Permanent Defence Force", "Prison Officer" or "Firefighter".

Single Public Service Pension Scheme ("Single Scheme")

ANNUAL STATEMENT issued by [Name & No. of Relevant Authority / employer]

Date of Statement: 31-DEC-2013

Scheme Year: 01-JAN-2013 to 31-DEC-2013
Employment period(s): 11-FEB-2013 to 31-DEC-2013

Name of member: John Smith
PPSN: 1234561H

Membership category: Standard accrual

In respect of your employment as a Single Scheme member during 2013 by [Relevant Authority / employer], this statement records, in the table below, and on a provisional basis, the **pension contributions which you paid during 2013**, and the **future-payable amounts of pension and retirement lump sum, known as "referable amounts"**, which you accrued during 2013.

NB: Read the notes below the table – they are an important part of your pension statement.

Single Scheme contributions and benefit accrual in 2013	
	€
1. Contributions	
Paid by you in 2013:	518.66
2. Referable amount towards pension	
Accrued during 2013:	137.50
3. Referable amount towards retirement lump sum	
Accrued during 2013:	858.13

4.5. Retirement Age

This specific scheme has been created due to the fact that uniformed members must retire at an earlier age. Depending on the contract, position and type of employment, retirement ages may differ.

However, for SPS purposes, the retirement age has no impact on calculations and as a result does not need to be set specifically for calculation purposes.

4.5.1. Action Owner
