1. Introduction

1.1. Purpose of the Guide

The purpose of this document is to provide some clarity on the key concepts and terminology that will be used on People Management when managing employee contracts. This does not replace the overall tutorial on **HR Key Concepts** and should be reviewed in addition to the details supplied in that course.

1.2. Posts & Contracts

A *Contract* on CoreHR may also be referred to as a *Post Appointment*.

- As reviewed in the *Managing Post Profiles* user guide, all available posts in the company are setup and maintained on CoreHR. These posts are used to form the blueprint of an employee contract and include key details such as the job title, the location in the organisation, pay scale, sanctioned headcount etc.
- Contracts are created directly from these posts and will inherit these key details. The hr administrator may then update the employee's contract with details specific to that employment e.g. start date, contract hours etc.

For every new contract activity for an employee on People Management (i.e. new hire, replacement contract, additional contract or rehire) the first step is to select a post that has been already set up on CoreHR. That post will then be used to form the basis of the new contract for the employee. However, the hr administrator will still have the ability to update and amend the details for each individual contract of employment, as required.

1.3. Access to Posts

Whenever a new contract is to be created on People Management, the first step required is to select a post. Wherever the *Post* drop down list (or *Post* and *Sequence* lists) is displayed, the list of posts displayed to the end user may vary. This is due to:

- The user's HR Users Access.
- The types of posts that have been setup on CoreHR.

1.3.1. HR Access

Users of the People Management Dashboard must be granted specific access in order to see posts. This access is linked directly to the Organisational Hierarchy that has been defined for the organisation. It is possible to grant users access to all posts so that they can complete the aforementioned activities for all areas of the business. In a more devolved HR team, there may be a requirement to restrict access for users to specific groups of posts e.g. all posts in Division A. This is prescribed for each individual user and full details on this are available in the **User Data Access** user guide for this feature.

1.3.2. Post Types

As reviewed in the **Managing Post Profiles** user guide, the Post Profile records set up on CoreHR can be configured as:

- Auto-Authorised
- Auto-Commenced
- Non-Auto

When searching for posts, all *auto* posts will return, based on the user's HR Access.

However, if a post has been defined as *non-auto*, this will only be available to the user if a Post Appointment has been *Planned* and *Authorised*.

1.4. Calculating the Contract FTE

The FTE on a contract identifies whether the employee is working full-time or part time in that contract. This may be input directly by the hr administrator or CoreHR may calculate this automatically based on other contract fields.

The calculation of the FTE is based on the following fields:

For example:

- Standard Hours per Week = 37.5
- Mary is contracted work 37.5 Hours pw so $37.5 / 37.5 = 1$ FTE
- Jack is contracted to work 18.75 Hours pw so $18.75 / 37.5 = 0.5$ FTE

The FTE cannot be greater than 1 on an employee's contract.
