1. Overview

The employee bulk update functionality allows you to update employee records at scale, that would otherwise require time-consuming individual updates or support from Optimisation Services. This is a Data Migration process where you can download an available template, or create your own template with a variety of contract elements.

1.1. Purpose of the Guide

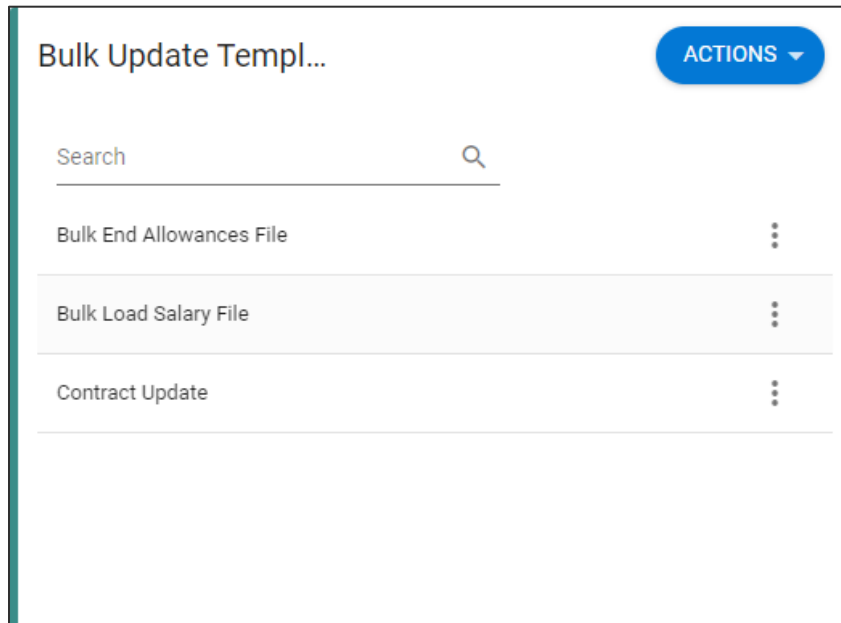

The purpose of this document is to provide guidance on how to use the employee bulk update feature.

This includes:

- The available default templates
- Creating a custom template for contract bulk updates
- Processing a bulk update
- How to configure the system to support bulk updates

2. Bulk Update Templates

The Bulk Update Templates widget allows you to download the available templates and associated helper files, and manage contract specific templates. This can be accessed from the People Management dashboard.

2.1. Default Templates

There are various standard templates available on the widget, detailed in the sections below.

2.1.1. Bulk End Allowances

The Bulk End Allowances template allows you to bulk end active (approved) allowances. The file requires you to provide the following details:

- Personnel number
- Appointment ID the allowance is linked to
- The allowance pay code to be ended
- An end date.

Note: It's recommended to co-ordinate with your Payroll team when performing this update, as once the records in the file are processed, it will automatically feed through to PeopleXD Payroll.

2.1.2. Bulk Load Salary

The Bulk Load Salary template allows you to bulk upload new salary amendments against active (commenced) contracts/employee records. This is beneficial where you currently do not use PeopleXD Payroll, and therefore do not have access its facility to bulk update salary records.

The file requires you to provide the following details:

- Personnel number
- Appointment ID
- The updated salary
- An effective date.

Note: Before processing this file, it's recommended to co-ordinate with your Payroll team.

By default, the upload process will bypass your existing salary approval process. This can be disabled when processing the file so that the records supplied on the file follow your existing salary approval process. See [Advanced Settings](#) for further details.

2.2. **Contract Templates**

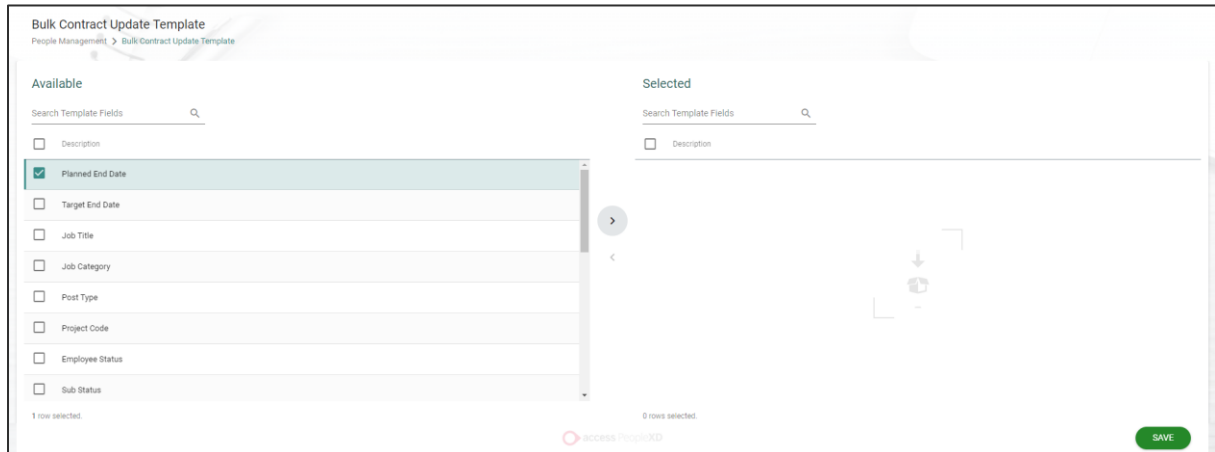

You can also bulk amend employee contracts. This applies changes in the same way as creating individual contract amendments within an employee's record in People Management.

Only contracts that are commenced, or confirmed future can be updated, and updates can't be made to fields specified on the Organisation Structure.

There is no default template for contract amendments; you can create your own custom template. The template file will require users to supply the effective date, the list of fields to be updated, and their new values. This allows you to create a template specific to the fields that need updating, and once created the template can be re-used or deleted if no longer relevant.

To create a template, follow the below steps:

1. Navigate to the Bulk Update Templates widget
2. Expand the Actions menu, and click Create Contract Template.
3. Search for the required fields and tick the checkboxes.
4. Click the right-facing arrow to move the fields to the Selected column.

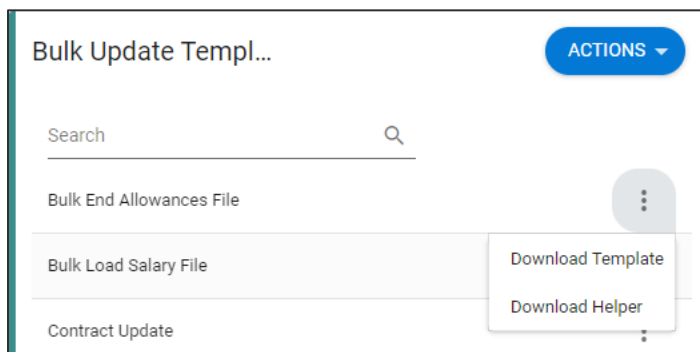

5. Click Save.
6. Enter a name and click OK.

The new template is now available, and users can prepare the file upload.

2.3. Preparing the Bulk Update file

To download a template, expand the three dot menu and click Download Template. You can then enter the relevant information into each field. Additional guidance for filling this out is available by clicking Download Helper from the three-dot menu.

Note:

- The file type must be .CSV, and the records within it pipe delimited.
- It is not possible to update fields to a null value.

3. Processing Bulk Updates

Bulk updates can be processed from the Employee Bulk Updates widget on the People Management dashboard. This allows you to load, process, and manage your bulk update file uploads.

Employee Bulk Updates					LOAD FILE
Search		Open			
Uploaded On	File Name	Template	File Summary	Status	
08-Apr-2024	Bulk End Allowances 2024 v2.... Private ID: 2024040806124111	Bulk End Allowanc...	Ready 5 Failed 0 Complete 0	Processing	
08-Apr-2024	Copy of Bulk End Allowances ... Private ID: 2024040806124109	Bulk End Allowanc...	Ready 5 Failed 0 Complete 0	Ready	
08-Apr-2024	Bulk End Allowances 2024.csv Private ID: 2024040806124108			Invalid	

3.1. Loading a File

Once you have prepared your file with records within it, click Load File on the Employee Bulk Update Widget, and select the file from the location where you have it saved. Once loaded, the file will have a status of Ready and the processing editor will open automatically.

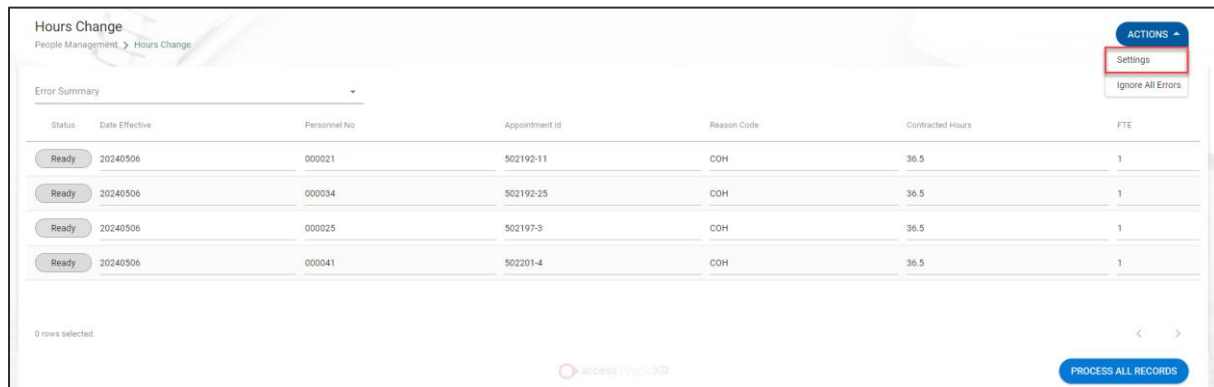

Note: By default, files are marked as Private, so only user who has uploaded it only has access to it. This ensures information that may be sensitive can only be accessed by the user responsible for performing the upload. It is possible to make an uploaded file public, making it available to any other user who has access to the widget. See [section 3.2](#) for further details

3.1.1. Advanced Settings

Depending on the template type, there may be advanced settings to configure. For example, you can configure whether salary amendments follow your existing salary approval process.

To configure any Advanced Settings applicable to the template type, follow the below steps:

1. From the processing screen, expand the Actions Button
2. Click Settings

3. Enable the toggles as required

Setting	Description
Bypass Salary Approvals	When toggled on, salary amendments bypass the salary approval process.
Apply these changes to Future Dated Amendments	When toggled on, the fields to be updated will be cascaded down to any existing future date amendments. For example, if you have created a contract template that includes the job title field, the job title values specified on the file will be applied to the future dated amendments. The reason code will not be applied to the existing future dated amendments.

4. Click OK

3.1.2. Correcting Errors

You can view details of any errors by:

- Expanding the Error Summary dropdown
- Clicking on a record, then clicking Display Errors

The screenshot shows the 'Bulk End Allowances File' interface. On the left, an 'Error Summary' dropdown is expanded, showing two error types: 'Error Cannot end this allowance as it is still outstanding' (Total 4) and 'Error No allowance exists for this employee/appointment/pay code combinat...' (Total 1). Below the dropdown, a table lists records with columns for Contract ID, Pay Code, and End Date. The table shows four records with Contract IDs 502192-25, 502192-11, 502197-3, and 502201-4, all with Pay Code 3700 and End Date 08-Apr-2024. At the bottom, there are buttons for 'DISPLAY ERRORS' and 'PROCESS ALL RECORDS'.

Contract ID	Pay Code	End Date
502192-25	3700	08-Apr-2024
502192-11	3700	08-Apr-2024
502197-3	3700	08-Apr-2024
502201-4	3700	08-Apr-2024

To correct an error, click into the field and update the text.

If there are multiple instances of this error on other records, you can update any other identical fields with the corrected value by clicking Yes when prompted.

Rectify All

Change 4 other Pay Code fields from
'3700'
to
'3701'?

NO YES

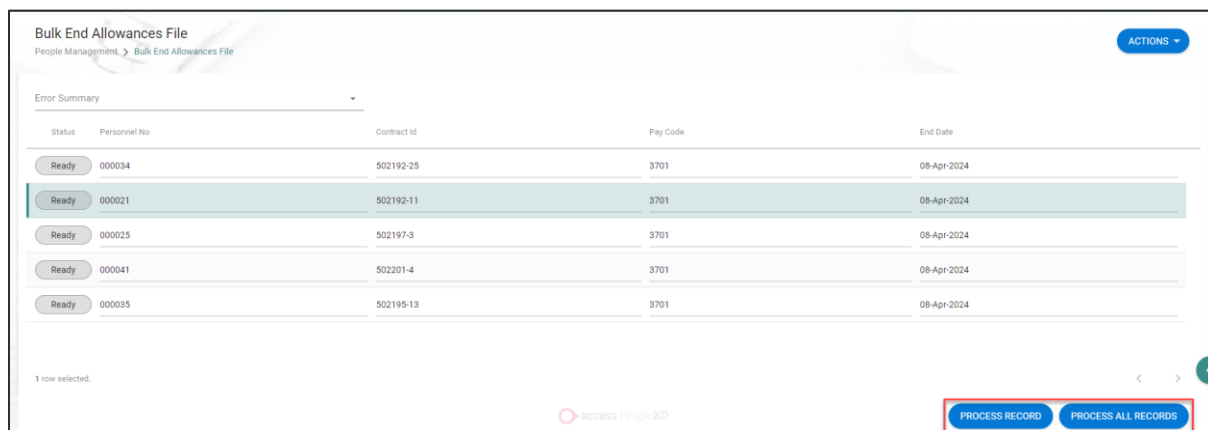

To reset the status of any records on the screen with errors, expand the Actions menu and click Ignore All Errors. This is useful if a correction has been made and cascaded to all records.

Note: Any changes made save automatically, and it is possible to leave the processing screen and revisit to make further changes. Any records already processed will remain processed, and the file's status can be viewed on the Employee Bulk Updates widget.

3.1.3. Processing Records

From the processing screen, you can:

- Process record one by one by selecting the record, and clicking Process Record
- Process all records in bulk by clicking Process All Records. Any records that have already been processed individually will be skipped.

3.2. Managing Files

By default, the Employee Bulk Updates widget is filtered to display existing files that are currently Open. The table below outlines the statuses included in the Open filter:

Status	Description
Ready	The file has been loaded and is awaiting processing.
Processing	The records are currently being processed.
In Progress	Some records have been processed, but not all have been processed.
Failed	Some records have been processed; while some may have been successful, there are some that have failed.

The widget can also be filtered by the following statuses:

Status	Description
Archived	The file has been archived by a user
Complete	The file has finished processing with all records loaded
Error	There has been an issue processing the file
Invalid	The file uploaded is not in the required format
Uploading	The file is being uploaded

Depending on the file's status and the user's menu options, the following actions are available from the three-dot menu:

Action	Description
Edit	Brings user back into the Processing screen
Download	Downloads the records as seen in the processing screen which may be different to the original file loaded due to corrections into an Excel CSV file
View Details	Allows user to see File ID and user who uploaded the file
Archive	Marks the file as Archived, file will now appear in the Archived Filter
Set Public	Marks the file as Public allowing other users to view the file loaded.
Set Private	Marks the file as Private, allowing only the file owner to access it
Unarchive	Unarchives the file and returns it to its previous status

4. Configuration

4.1. Menu Options

The table outlines the menu options that control access to the employee bulk update functionality:

System	Menu Option	Menu ID	Description
CorePortal	XD Bulk Update	MAIN_MENU.HR_XD_BULK_UPDATE	Grants access to the Bulk Update Template and Employee Bulk Updates widgets
CorePortal	Bulk update - View/Manage Private	MAIN_MENU.BULKUPDATE_PRIVATE	Allows users to view and manage files set to private
CorePortal	Bulk update - Unarchive	MAIN_MENU.BULKUPDATE_UNARCHIVE	Allows users to unarchive files
CorePortal	Bulk update - Download	MAIN_MENU.BULKUPDATE_DOWNLOAD	Allows users to download files
CorePortal	Bulk update - Download Archived	MAIN_MENU.BULKUPDATE_ARCHIVED_DOWNLOAD	Allows users to download archived files

The table outlines the web services required for the bulk update functionality:

Menu Option	Menu ID
Create v2 bulkupdate contracts	WS_DATAMIGRATION_MENU.POST_V2_BULKUPDATE_CONTRACTS
Create v2 bulkupdate createcontracttemplate	WS_DATAMIGRATION_MENU.POST_V2_BULKUPDATE_CREATECONTRACTTEMPLATE
Create v2 bulkupdate endallowances	WS_DATAMIGRATION_MENU.POST_V2_BULKUPDATE_ENDALLOWANCES
Create v2 bulkupdate files	WS_DATAMIGRATION_MENU.POST_V2_BULKUPDATE_FILES
Create v2 bulkupdate salary	WS_DATAMIGRATION_MENU.POST_V2_BULKUPDATE_SALARY

Menu Option	Menu ID
Delete v2 bulkupdate	WS_DATAMIGRATION_MENU.DELETE_V2_BULKUPDATE_ID
Get v2 bulkupdate	WS_DATAMIGRATION_MENU.GET_V2_BULKUPDATE
Get v2 bulkupdate config	WS_DATAMIGRATION_MENU.GET_V2_BULKUPDATE_CONFIG_ID
Get v2 bulkupdate files	WS_DATAMIGRATION_MENU.GET_V2_BULKUPDATE_FILES
Get v2 bulkupdate files download	WS_DATAMIGRATION_MENU.GET_V2_BULKUPDATE_FILES_DOWNLOAD_ID
Get v2 bulkupdate files errors summary	WS_DATAMIGRATION_MENU.GET_V2_BULKUPDATE_FILES_ERRORS_SUMMARY
Get v2 bulkupdate files field count	WS_DATAMIGRATION_MENU.GET_V2_BULKUPDATE_FILES_FIELD_COUNT
Get v2 bulkupdate history	WS_DATAMIGRATION_MENU.GET_V2_BULKUPDATE_HISTORY
Update v2 bulkupdate files	WS_DATAMIGRATION_MENU.PATCH_V2_BULKUPDATE_FILES
Update v2 bulkupdate files summary	WS_DATAMIGRATION_MENU.PATCH_V2_BULKUPDATE_FILES_SUMMARY

4.2. Dashboard Configuration

The bulk update widgets must be added to the relevant dashboards in order for users to access them. To do this, follow the below steps:

1. Navigate to the Administrator Dashboard.
2. From the Site Manager widget, click Open on Dashboard Configuration.
3. Select the relevant dashboard from the dropdown menu.
4. Select the relevant tab from the Dashboard Tabs section.
5. From the Tab Widgets section, enable the toggles for Bulk Update Templates and Employee Bulk Updates. Changes are saved automatically.
