1. Overview

1.1. Purpose of this Document

The purpose of this document is to provide full guidance on how to use the features provided by PeopleXD to support your organisation's legislative requirements. These include:

- Managing GDPR Requests
 - Right to be Forgotten
 - Subject Access Requests
- Reporting on GDPR
- Report Sensitivity Classification
- Sharing a Data Privacy Statement

Note:

Guidance on how to complete the required set up is covered in a separate **GDPR (SAAS v27+) Configuration Guide**.

1.2. Overview of GDPR Features

1.2.1. GDPR Request Centre

The *GDPR Request Centre* screen can be made available to users to complete the following employee requests:

- Subject Access Requests
- Right to be Forgotten Requests

The GDPR request centre allows you to:

- Search for existing requests
- Submit requests
- Track their progress
- View and download the reports and documentation that are output for *Subject Access Requests*
- Delete requests

1.2.2. Reporting on GDPR via Insight

Insight provides full reporting capability for GDPR purposes including:

- The ability to report on submitted requests.
- The ability to report on the PeopleXD system tables included in the 'Subject Access Requests' & 'Right to be Forgotten Requests'.
- The ability to custom build a report option for Subject Access Request details.

Note:

For full guidance on what is provided in Insight for GDPR, refer to [5. Reporting on GDPR via Insight](#).

1.2.3. Report Sensitivity Classification

A 'Data Classification' can be applied to all Insight reports. This displays when viewing the report on Insight but also on all exported formats of the report.

Full guidance on how to apply this classification is available in [6. Insight Report Sensitivity Classification](#).

1.2.4. Candidate Right To Be Forgotten Requests.

The Right To Be Forgotten feature in PeopleXD Recruitment allows users to action right to be forgotten requests by deleting any candidate information retained with PeopleXD. Full guidance is available in [3.3 Candidate Right to Be Forgotten Requests](#).

1.2.5. Data Privacy Statement

A configurable 'Data Privacy Statement' can be made available to all Portal users. Once enabled, this appears to all users when they log on to Portal. This includes:

- A statement of up to 20,000 characters.
- 2 URLs.

The user needs to click on a link to close the statement. When they have reviewed this once, the statement will no longer appear to them. However, if the statement updates, this can be republished to all users to be reviewed again.

Note:

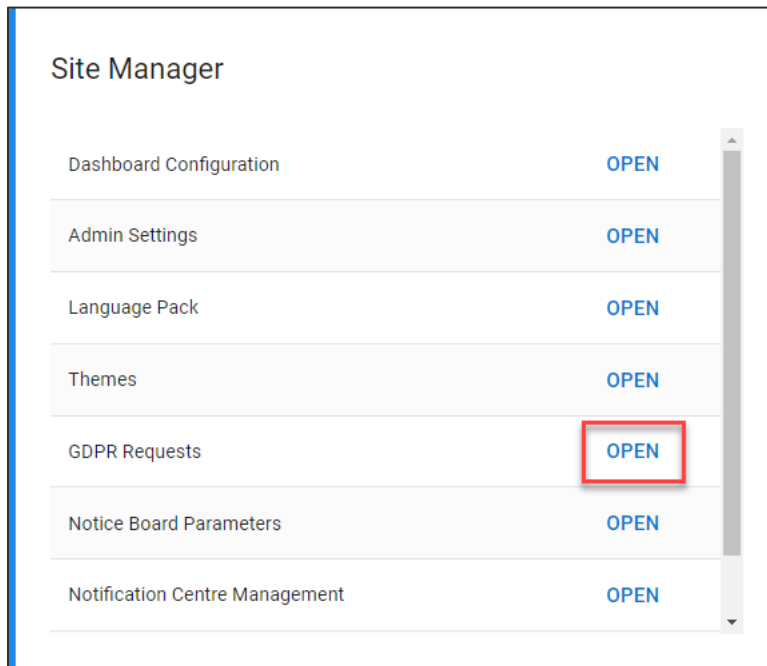

For guidance on how to use this feature refer to [7. Data Privacy Statement on Login to Portal](#)

2. GDPR Request Centre

2.1. Accessing the GDPR Request Centre

The *GDPR Requests Centre* is available via the *Administrator Dashboard*. To access this, follow the steps below:

1. Go to the Administrator Dashboard.
2. On the Site Manager widget, click **Open** on GDPR Requests.

2.2. GDPR Requests Screen Overview

The *GDPR Requests* screen is where the user submits GDPR requests for employees on PeopleXD. Further details on how to submit requests are available on ([3. Right to be Forgotten](#) & [4. Subject Access Request](#))

Any requests submitted on PeopleXD will appear here.

- These automatically clear down after a specified number of days (defaulted to 30 days, but configurable per organisation).
- Successfully completed 'Right to be Forgotten' requests are not displayed here.
- Use the  button to access options to download any reports for *Subject Access Requests* OR delete the request.
- Each user sees:

- Requests that they have submitted.
- Requests that been submitted by another user for employees that they have been granted access to for GDPR.

GDPR Requests						
Administrator Dashboard > GDPR Requests						
General Data Protection Regulation Requests						
Search Requests						
NEW REQUEST						
Subject	Subject Name	Request Type	Status	Date	Controller	Controller Name
000039	Susan Jennings	DELETE	DELETE NOT ALLOWED	20-APR-18	000013	Alice Jones

The table below describes the data displayed for each request.

Column	Description
Subject *	Employee Number.
Subject Name *	Employee Name.
Request Type	Delete i.e. Right to be Forgotten. Query i.e. Subject Access Request.
Status *	Current status of the request. This will update as the request is processing.
Date	The date that the request was submitted.
Controller *	The employee number of the user that submitted the request.
Controller Name *	The name of the user who submitted the request.

** field is searched when using the Search Requests option.*

3. Right to be Forgotten

3.1. What is the Right to be Forgotten?

Any employee or candidate, referred to as the data subject, has the right to be forgotten as per GDPR guidelines. It is the responsibility of the organisation to carry out any due diligence and internal processes in relation to this request.

 **Note:** Using this feature permanently removes data from the PeopleXD domain. There will be a number of verifications/warnings before deletion.

Once completed, the request is irreversible.

3.2. Employee Right To Be Forgotten Requests

3.2.1. Create a Delete Request

Submit Request

Once the organisation has decided that employee data is to be deleted from PeopleXD, this is managed via a Data Deletion request.

1. Go to the *Administrator Dashboard*
2. Click **Open** on GDPR Requests.
3. Click **New Request**, to open the *Create New Request* screen.
4. Enter the following details:
 - a. **Request Type:** Data Deletion.
 - b. **Data Subject:** Search for the employee by forename, surname, or employee number.
 - o This list will only show employees based on the user's GDPR Organisation Role assignment i.e. users will only see employees that they have been granted access to manage for GDPR purposes.

Note: Filter Settings are not applicable for this request.

5. Click **Submit** to create the request.

To fully submit the request, the user needs to respond to 3 distinct warning messages:

First Warning

Submit GDPR Data Deletion Request

This action will erase all information on this \"data subject\" from the CoreHR database. Once this data is erased it will no longer be retrievable for use now or in the future. Please proceed with due diligence. Click \"Yes\" if you wish to proceed otherwise click \"No\".

NO YES

Second Warning

Submit GDPR Data Deletion Request

Please note you have proceeded to a secondary caution message. This action will erase all information on this \"data subject\" from the CoreHR database. Once this data is erased it will no longer be retrievable for use now or in the future. Please proceed with due diligence. Click \"Yes\" if you wish to proceed otherwise click \"No\".

NO YES

Third Warning

Submit GDPR Data Deletion Request

This is the third and final caution message. This action will erase all information on this \"data subject\" from the CoreHR database. Once this data is erased it will no longer be retrievable for use now or in the future. Please proceed with due diligence. Click \"Yes\" if you wish to proceed otherwise click \"No\".

NO YES

If the user clicks **No** for any of the warning messages, the request is not submitted. Once the user clicks **Yes** for all 3 warning messages, the request is fully submitted.

Once a request is successfully submitted, it is listed on the *GDPR Requests* screen, with:

- a status of *OPEN*
- a request type of *DELETE*

GDPR Requests

Administrator Dashboard > GDPR Requests

GDPR Request Submitted Successfully

General Data Protection Regulation Requests

Search Requests

NEW REQUEST

Subject	Subject Name	Request Type	Status	Date	Controller	Controller Name
000095	Clara Dawson	DELETE	OPEN	26-MAY-20	000193	Rory Admin
000039	Susan Jennings	DELETE	DELETE NOT ALLOWED	20-APR-18	000013	Alice Jones

Request Failure

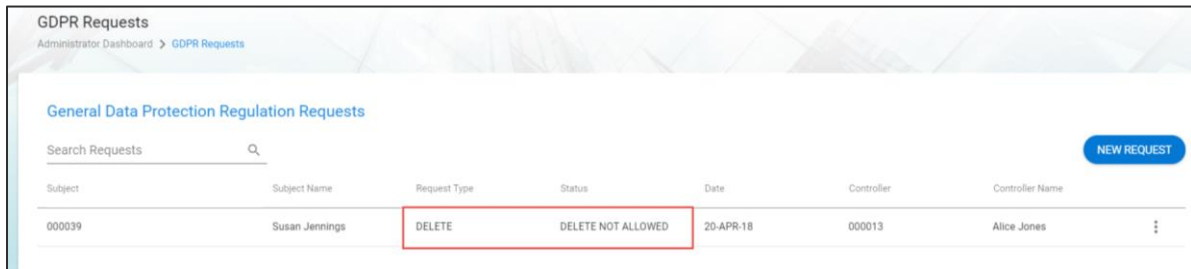

An employee record may only be deleted if:

- The employee is a leaver
- Their leave date is > 7 years ago*

*The duration applied here is defaulted on PeopleXD to 7 years, in line with revenue's recommended guidelines for maintaining financial records. However, this can be configured to a different number of years per organisation if required.

If the request fails:

- An alert appears in the Notification Centre, to confirm that the request has completed.
- The request is listed on the *GDPR Requests* screen, with a status of *DELETE NOT ALLOWED*.

Subject	Subject Name	Request Type	Status	Date	Controller	Controller Name
000039	Susan Jennings	DELETE	DELETE NOT ALLOWED	20-APR-18	000013	Alice Jones

- The employee record is not updated / deleted for a request with this status.
- The request will remain on the *GDPR Requests* screen for reference, until it is cleared down on this screen (requests are typically removed from this screen after 30 days, but this number is configurable per organisation).

Request Success

Once a request is successfully submitted, it is listed on the *GDPR Requests* screen, with a status of *OPEN*. The time taken for the request to be processed depends on the range and volume of data recorded for that employee e.g. 10 - 15 minutes.

When the processing begins, the status updates on the *GDPR Requests* screen to *PROCESSING* + the record that is currently being processed e.g. if employee bonus options are being deleted, the status displays as *PROCESSING BONUS_OPTIONS*.

Once the delete request finishes processing:

- An alert appears in the Notification Centre, confirming the request is completed.
- The request is immediately deleted from the *GDPR Requests* screen.

Note: All traces of the deletion request are removed from PeopleXD and are not retrievable via the *GDPR Requests* screen. This is completed in accordance with the GDPR regulations.

The request may be reported on via Insight. The employee details are redacted. See [5.2 Activity View](#) for further details.

Anonymising / Redacting Employee Data

It is currently not possible to amend an employee's record to redact / anonymise requested details, via the *GDPR Requests* screen. If an employee requests this, the organisation currently needs to request additional support from PeopleXD by raising a ticket with the support helpdesk.

3.3. Candidate Right to Be Forgotten Requests

GDPR gives individuals the right to ask organisations to delete their personal data. In the scenario where a candidate has registered on an organisation's website e.g. Careers Portal, or has submitted an application but been unsuccessful, they may request the right to be forgotten.

The Right To Be Forgotten feature in PeopleXD Recruitment allows users to action this request by deleting any candidate information retained with PeopleXD.

3.3.1. Process Candidate Right to be Forgotten Requests

To process a request, follow the below steps:

1. Navigate to the My Recruit Toolbox widget on the Recruitment Dashboard.
2. Click **Open** on Right To Be Forgotten.
3. Search for the applicant to be deleted using their name, applicant number, or email address. Alternatively, click **OK** to view all available candidates.

Right To Be Forgotten			
Recruitment > Right To Be Forgotten			
Search by Applicant No, Name or Email 🔍			
Applicant Name	Applicant No	Email	
Ana Petrovic	A1852	a.p@mail.com	DELETE
Beth Brown	A1743	b.brown@email.com	DELETE
Alex Park	A1342	alexpark@mail.com	DELETE

4. Click **Delete** on the relevant row.
5. Click **Yes** to confirm the deletion.

Note: Only candidates who are eligible to be deleted will be available on the Right To Be Forgotten screen. These are candidates who:

- Do not have an employee record (i.e an applicant record with a personnel number attached)
- Do not have another application at the accepted stage

3.3.2. What Data is Deleted

The following are all deleted when a Right to be Forgotten request has been processed:

- All Candidate Data held within the PeopleXD ATS i.e. Portal View of PeopleXD Recruitment
- Generated PDF View of Candidate Application
- Candidate Data held within eRecruitment website

The following candidate data is **not deleted**:

- Candidate Data held within the new Careers Website (powered by Volcanic). However, customers have a self-serve facility to delete this data.
- Merged PDF Packs of Candidates (multiple candidates merged into the one PDF document). These merged documents can be deleted manually by users, or as part of a process when closing the vacancy. These documents can also be deleted as part of the automated Applicant Cleardown process subject to the vacancy and candidate being eligible for cleardown. See the user guide for further information.

3.3.3. Access to Right To Be Forgotten Requests

To access to the Right To Be Forgotten option, the following menu options must be enabled on the user's menu profile:

System	Menu Option	ID
Web Services	Delete rtbf	WS_RECRUITMENT_MENU.DELETE_RTBF
Web Services	Get rtbf	WS_RECRUITMENT_MENU.GET_RTBF
CorePortal	Recruitment - Right to be forgotten	MAIN_MENU.RIGHTTOBEFORGOTTEN

4. Subject Access Request

4.1. What is a 'Subject Access Request'?

The "data subject" has the right to request a copy of the personal data the controller has stored about them in a "structured commonly used and machine-readable format". The *GDPR Requests* screen provides this data in multiple formats including:

- A CSV file.
- A machine readable JSON file.
- An Insight report (created by the organisation if required).

4.2. Create a Subject Access Request

4.2.1. Submit Request

Once the organisation proceeds with a 'Subject Access Request', this is managed via a *Data Provision request*.

1. Open the *GDPR Requests* screen.
2. Click **New Request**, to open the *Create New Request* screen.
3. Enter the following details:
 - a. **Request Type:** Data Provision.
 - b. **Data Subject:** Search for the employee by forename, surname or employee number
 - This list only shows employees based on the user's GDPR Organisation Role assignment i.e. users only see employees they have been granted access to manage for GDPR purposes.
 - c. **Filter Settings:**
 - Switch filters on as required.

Filter	Description
Ordinary	On by default. This is standard personal information data e.g. employee number, name, address etc.
Sensitive	On by default. This refers to special categories of personal data e.g. ethnic background, sexual orientation etc.
Financial	Off by default. This is the "data subject's" financial information e.g. payroll history.

The data items underpinning this GDPR framework are supplied as standard with the PeopleXD GDPR solution and cannot be modified on an intermittent basis. See [5.3 Category View](#) for details on how to create a report on all of the fields available for each filter.

Note: If all filters are off, this triggers a request for all information held for the “data subject” on PeopleXD.

There is no exact definition of the data volumes or scope associated with this request so this may take some time to process.

4. Click **Submit** to create the request.

To fully submit the request, the user needs to respond to a confirmation message.

Submit GDPR data provision request for this data subject

This action will provide a “data provision” of information on this “data subject” from the CoreHR database. Please proceed with due diligence. Click “Yes” if you wish to proceed otherwise click “No”.

NO YES

- If the user clicks **No** on the warning message, the request is not submitted.
- Once the user clicks **Yes** on the warning message, the request is fully submitted.

4.2.2. Request Success

Once a request has been successfully submitted, it is listed on the *GDPR Requests* screen, with:

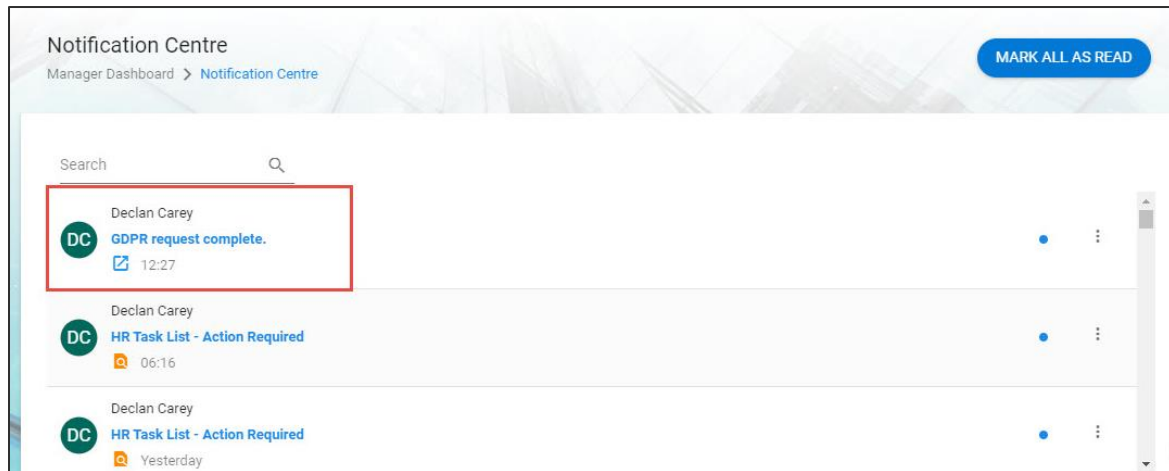

- a status of *OPEN*
- a request type of *QUERY*

The request can take some time to process e.g. 10 - 15 minutes. This depends on the record being processed, and the range of data and volume recorded for that employee on PeopleXD.

When the processing begins, the status updates on the *GDPR Requests* screen to *PROCESSING* + the record element that is currently being processed e.g. if employee payroll history is retrieved, the status displays as *PROCESSING PAY_HISTORY*.

Once the request finishes processing:

- An alert appears in the Notification Centre, to confirm that the request is completed.

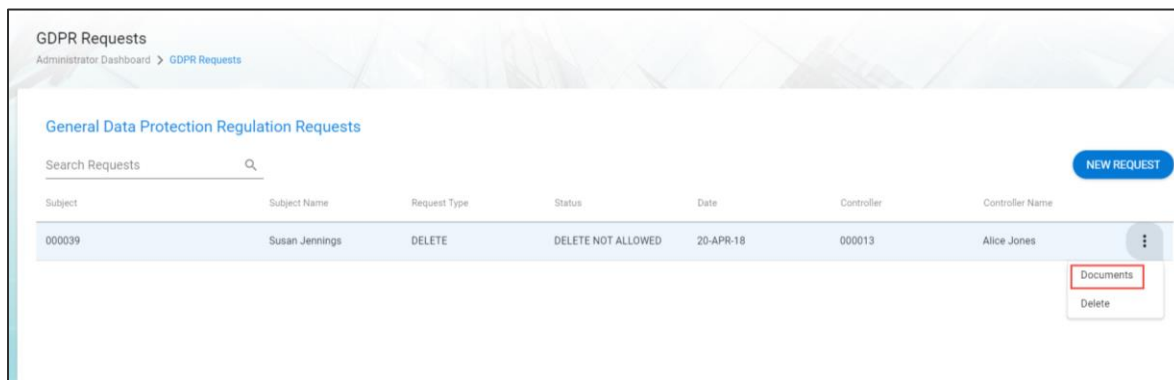

- The status updates to “CLOSED” on the *GDPR Requests Screen*.
- The information requested for the data subject is now be available to download from PeopleXD.

4.3. Download Subject Access Request Files

4.3.1. Download the CSV / JSON File

To download the 'Subject Access Request' output file for the employee:

1. Open the *GDPR Requests* screen.
2. Search for the request.
3. Click the  button, then click **Documents**.

4. The *GDPR Documents* screen opens and all the of the files produced as part of this request are listed on screen. This is the same report available in 2 formats:
 - a. .json file
 - b. .csv file
5. Click the  button for the required file and click **Download**.

4.3.2. JSON File Example

GDPR legislation requires this report to be made available in a machine-readable format. In computing, JavaScript Object Notation or JSON is an open-standard file format that uses human-readable text to transmit data objects consisting of attribute–value pairs and array data types (or any other serializable value). JSON is a language-independent data format.

  ]
}, {
```

4.3.3. CSV File Example

Please note: this file includes a 'Report Sensitivity Classification' of *Highly Sensitive* by default.

[illegible]

4.3.4. Other Documents

If there are any files held for the employee on PeopleXD, these are listed on this *GDPR Documents* screen. These can be differentiated from the GDPR report files as these include a 'Source Name'.

4.4. Insight Report on Subject Access Request

It is possible to report on the data retrieved for the 'Subject Access Request' via Insight. See [5. Reporting on GDPR via Insight](#) for further details on how this is achieved.

5. Reporting on GDPR via Insight

5.1. GDPR Business Area

The 'Core GDPR' business area is available in Insight to facilitate reporting on GDPR activities on PeopleXD. This is intended for use by those users responsible for managing GDPR within the organisation. This includes 3 views:

Filter	Description
Activity View	Report on requests submitted through the <i>GDPR Requests</i> screen. Completed 'Data Deletion' requests are reportable here with the employee reference redacted. See 5.2 Activity View for further details.
Category View	Report on the data items that underpin each of the 3 filters when creating a 'Subject Access Request' i.e. • Ordinary • Sensitive • Financial See 5.3 Category View for further details.
Request Data View	Produce a report on the actual details retrieved for a 'Subject Access Request'. See 5.4 Request Data View for further details.

Access to this business area is restricted on PeopleXD. Therefore, it only appears to a user when creating a report, if they have been granted access to see it.

5.2. Activity View

This view provides the ability to report on all GDPR requests that have been created on PeopleXD, for both 'Data Deletion' & 'Data Provision'. Access to data in this report is dependent on the user's GDPR Organisational Role assignment i.e. they are able to report on the same set of employees that they have been granted access to see on the *GDPR Requests* screen.

The fields available are listed in the table below:

Field	Definition
Action	Describes the Action which is in progress
Date Added	Date request made
ID	ID number
Last Updated	Last activity update
Last Updated By	Current status
Status	Status of the request
Subject	Subject of the request
Username	User name

'Data Deletion' requests that have been completed successfully can be reported on here. However, the employee's details are redacted.

Important Considerations:

- *Query* requests
 - If a user deletes a request on the *GDPR Requests* screen, this is no longer reportable here.
 - If *Query* requests are cleared down from the *GDPR Requests* screen (e.g. after 30 days) they continue to appear here.
- *Delete* requests
 - These always appear here, regardless of date or status (i.e. both *CLOSED* and *DELETE NOT ALLOWED*).
 - For successfully completed 'Data Deletion' requests, these are reportable here. However, the subject will be *REDACTED* i.e. the employee number is not held

5.3. Category View

This view is aligned to 'Subject Access Requests' only.

This view provides the ability to create a report that lists all of the data fields that are used to create the framework that underpins the request filters for Ordinary, Sensitive, and Financial i.e. the elements of the employee's PeopleXD record that are used if the filter is enabled.

For example, creating a report that filters on 'Ordinary' = "yes" provides a list of all of the tables that are referenced when producing a 'Subject Access Request' with the filter 'Ordinary' on.

This view does not report on any employee/request data. It is for reference purposes only.

5.4. Request Data View

This view is aligned to 'Subject Access Requests' only.

This view provides the ability to generate a report on the actual data retrieved as part of a subject access request. Access to data in this report is dependent on the user's GDPR Organisational Role assignment i.e. they are able to report on the same set of employees that they have been granted access to see on the *GDPR Requests* screen.

This is essentially the same data that is provided to the user in .json or .csv format via the *Documents* section of the *GDPR Requests* screen.

This view provides the organisation with the option to extract the same data for the request in the exact format that they prefer.

6. Insight Report Sensitivity Categorisation

6.1. What is 'Report Sensitivity Categorisation'?

Insight includes an option to define the sensitivity for every report created. The user can select from a list of available sensitivity classifications and this displays:

- at the top left of the report on screen
- in the header / footer of the report when exported / printed

This classification appears to all users that run the report e.g. if the report is shared with another user.

Note: This is available from version **27+**.

6.2. How to Update Report Sensitivity

To set the sensitivity classification on a report:

1. On the *Edit Report* screen, click **Settings** from the *Select a setting* dropdown menu.
2. Select from the list of options on the *Data Classification* dropdown.
3. The 'Data Classification' is displayed at the top left of the report.

The screenshot shows the 'Edit Report' interface. On the left sidebar, the 'Settings' dropdown is selected, and the 'Data Classification' dropdown is set to 'High Sensitivity'. The main report area displays a table with the following data:

Forename And Surname	Department	Calc1	Department Description
Chris Cornell	FIN1		Accounts
Michael Langston	FIN1		Accounts
Laura McEnroe	FIN1		Accounts
Cathal Cormack	FIN2		Budget
Timmy Byrne	M3		Digital Marketing

This also displays on all exported formats of the report i.e.

7. Data Privacy Statement on Login to Portal

When a user logs into Portal, a statement can be displayed to them, to outline the lawful basis for processing employee information.

 **Note:** This functionality is not enabled by default and it is the responsibility of each organisation to update this for their own requirements.

For example:

Privacy Reminder

Sample GDPR message to your DPO

Openness and transparency is the bedrock of GDPR and this new Privacy Notification functionality can be used by your organisation to update your employees on the types of data that is being processed, the legal basis for the processing and that they will be contacted if their explicit consent is required for any element of this processing. You may also choose to for example insert links to Corporate Policies and Procedures outlining how your organisation has approached GDPR along with the contact details of the DPO, HR or other individuals they can reach out to for more information.

Sample GDPR message for your employees

The GDPR regulation comes into law from the 25th May 2018 and this regulation puts an onus on {Insert your company name} as a Data Controller to ensure that there is appropriate security and controls in place to protect individuals personal data. {Insert your company name} collects and stores personal data on employees for the legitimate purposes of running our organisation efficiently and effectively. Organisations must have a lawful basis for processing an individual's data and this may be contractual e.g. processing an employee's details as part of a payroll or one of the other five lawful basis. If {insert your company name} processes any personal information on you as an employee which requires your explicit consent, a member of our HR team will reach out to you directly. If you would like more information on GDPR or if you have specific questions on your data, please reach out to the HR team or to the organisations DPO.
