1. Overview

1.1. Purpose of the Guide

The purpose of this document is to provide guidance on the Job Seekers Register. This feature in People Management automatically links an employee to the company's Job Seekers / Redeployment Register, given their funding expiry date and eligible continuous service entitlements. This ensures that the employee who will shortly be finishing their contract within an organisation will be considered for open appointments, if they comply with the various Job Seeker Register eligibility rules.

The first configuration step involves defining limits for funding expiry and continuous service dates. This will help determine which employees will be included or excluded from the Job Seekers Register in accordance with their personal continuous service and funding expiry date.

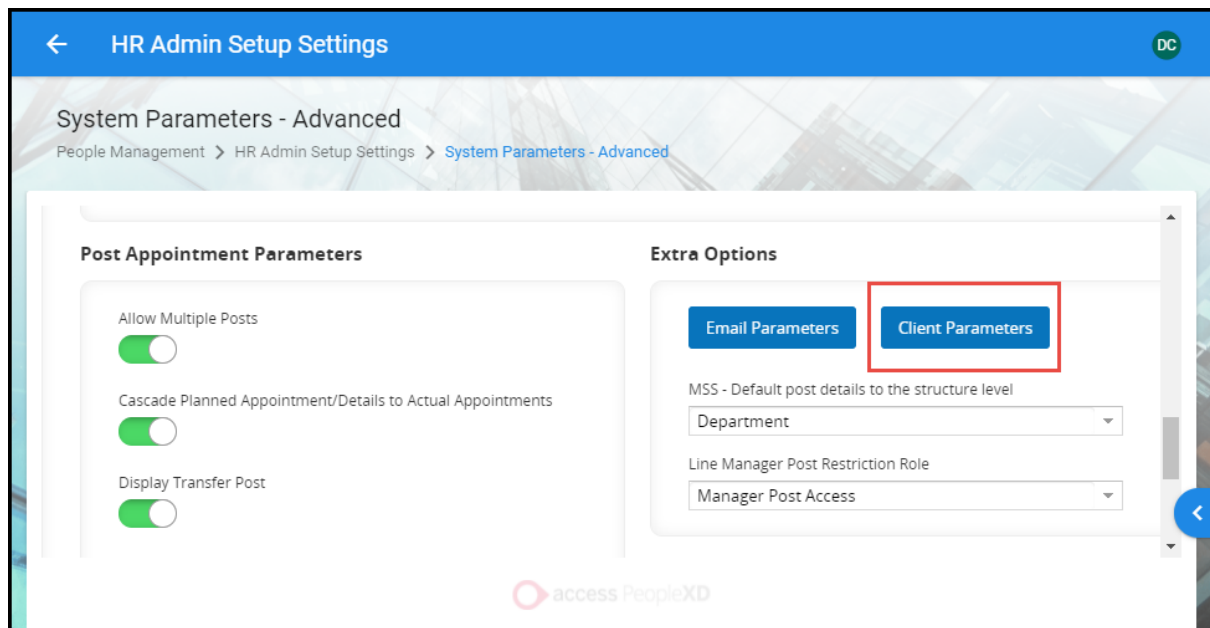

The second configuration step requires the definition of service rules to determine employees who are eligible for the Job Seekers Register.

2. Configuration

2.1. Numeric Client Parameters

To set up the numeric client parameters, follow the below steps.

1. Navigate to the People Management Dashboard.
2. Click the Data Centre tab
3. Click **Open** on HR Admin Setup Settings
4. Search for and click on **System Parameters – Advanced**
5. Click **Client Parameters**

6. On the *Numeric Client Parameters* tab, search for JSR.

JSR Find

Parameter	Numeric Value
JSR Continuous Service Eligibility	6
JSR Funding Expiry Eligibility	3

access PeopleXD

The following table outlines what each parameter means:

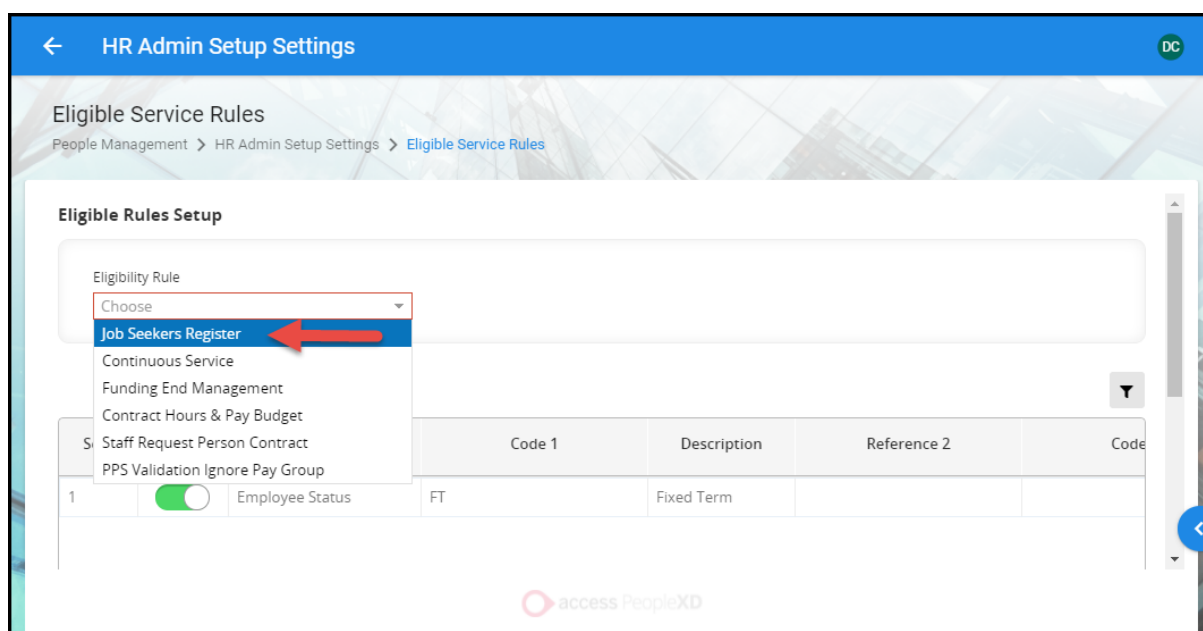

Parameter	Description
JSR Continuous Service Eligibility	The minimum number of months' worth of continuous service that an employee should have in order to qualify for inclusion on the Redeployment Register.
JSR Funding Expiry Eligibility	The maximum number of months before an employee's Funding Expiry date, as stored on their Post Appointment Cost Allocation. This field determines the number of months which must exist between today and an employee's Funding Expiry End date before they will be considered eligible for the redeployment register. Example: If the value of this field is set to 6 months, then employees with a funding expiry date in 7 months' time will not be considered for redeployment.

Note: JSR is strictly driven off the 'Funding Expiry' date on the Cost Allocations for an employee's Post Appointment. If an employee does not have Cost Allocations recorded and just has a home Cost Centre on their Post Appointment, they will not get processed by the JSR calculation.

2.2. Eligible Service Rules

To configure the service rules, follow the steps below:

1. Navigate to the People Management Dashboard.
2. Click the Data Centre tab
3. Click **Open** on HR Admin Setup Settings
4. Search for and click on **Eligible Service Rules**
5. Select **Job Seekers Register** from the *Eligible Service Rule* dropdown menu to manage service rules for Job Seekers Register.

To add a new rule, follow the below steps:

1. Click **Add** to make a new row available.
2. Input the rule details into the blank row. The below table outlines the items that need to be created:

Item	Description
Sequence	The sequence number must be entered, this determines the order in which the rules are executed, for example, if the sequence number is 3 then the rule will be executed after rule 1 and 2.
Eligible	This specifies whether the criteria defined in the service rule, counts as eligible continuous service.

Item	Description
	If this indicator is enabled for a rule, that implies that if an employee's Post Appointment meets those criteria, they will be eligible for inclusion on the Job Seekers / Redeployment Register. If this indicator is not enabled for a rule, that implies that if an employee's Post Appointment meets those criteria, they will not be eligible for inclusion on the Job Seekers / Redeployment Register.
Reference 1 - 3	The screen will allow for up to 3 references which can be used to construct a rule. The items available under Reference1, Reference2 and Reference3 are as follows: - Company - Management Unit - Department - Cost Centre - Location - Category - Sub Category - Job Title - Employee Status - Pay Scale - Pay Group - User Code 1 - User Code 2 - User Code 3 - User Code 4 - User Code 5
Code 1 - 3	Depending on the item selected from the Reference drop down, the corresponding Code field LOV will be altered to provide a list of the relevant reference data codes e.g. if Employee Status is chosen in Reference1, only Employee Status reference data codes will be listed in Code1.
Description	This will automatically populate with the code description.
Active	'Active' indicator specifies that the rule is active.

3. Click **Save**

Note: There is no requirement to populate the *Break In Service*, *Break In Service Type*, and *Length of Service* fields.

2.2.1. Eligible Toggle

The Eligible toggle should be used as follows:

- Enable the Eligible toggle if the service rule is used to determine the employees (whose funding is approaching expiration and who have eligible continuous service) which should be included in the Job Seekers Redeployment Register.
- Turn off the toggle if the rule is used to determine employees which should be excluded from the register.

For example, consider that all casual workers are eligible to be included in the Job Seekers Redeployment Register, except those working in the Marketing department. In this case, two rules would need to be created:

1. The first would have employee status = casual and the Eligible toggle would be enabled.
2. The second rule would have employee status = casual and department = marketing (populated under reference2) and the Eligible flag would be turned off.

3. How to Use

3.1. Adding someone to the Job Seekers Register

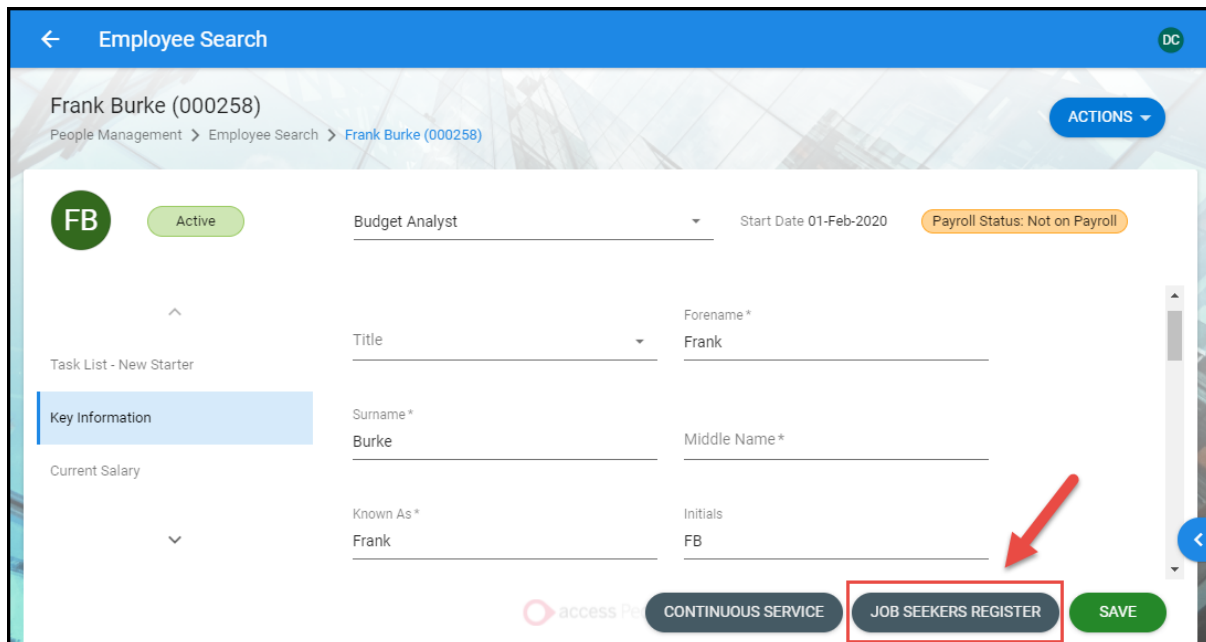

A nightly database job is run to identify any employees that meet the criteria defined for the Job Seekers Register in:

- Numeric Client Parameters
- Job Seekers Register Eligible Service Rules

If an employee meets these defined criteria, they are added to the Job Seekers / Redeployment Register.

To view whether an employee is on the Job Seekers / Redeployment Register, follow the below steps:

1. Navigate to the People Management Dashboard
2. From the *Command Centre* widget, click **View** on *Employees*
3. Search for the employee and click **View** on their record
4. On the Key Information section, click **Job Seekers Register**

access PeopleXD

The following table outlines the JSR details that are held on this screen:

Item	Description
Post Number	This shows the post number that this rule is effecting
Post Sequence	This shows the post sequence that this rule is effecting
Post Title	This is the employee's Post Title that they are sitting in.
Employee Status	This is the employee status that that the employee has.
JSR Indicator	If this is enabled, the employee is on the Redeployment Register. If this is not enabled, the employee is not on the Redeployment Register. This will be updated automatically as enabled / not enabled, depending on the JSR Override option chosen for the employee.
JSR Override	'Calculate' is the default option and implies that the employee's JSR indicator value will be enabled only if the employee meets the JSR service rules.

	'Yes' will ensure the JSR indicator value is enabled the next time the nightly database job is run. This will allow an employee to be put on the Redeployment Register. 'No' will ensure that the JSR indicator value is not enabled the next time that the nightly database job is run. This will never be updated for the employee, even if their employee record satisfies the JSR service rules.
Date	The date on which the employee was added to the JSR.
Modified	The date on which the JSR Override value was updated.
Modified By	COREHR if the JSR Override value is set to Calculate by default. The user that modified the JSR Override value.

3.2. Funding Expiry Date

To update the employee's Funding Expiry Date, follow the below steps:

1. Navigate to the People Management Dashboard
2. From the *Command Centre* widget, click **View** on *Employees*
3. Search for the employee and click **View** on their record
4. Click the **Cost Allocation** tab
5. Click **Add** to create a new funding allocation, or click **Edit** from the three dot menu on an existing funding allocation
6. Enter a start date and end date for the funding. The End Date (along with a number of other factors such as the service rules defined) will determine whether or not the employee will be included in the Job Seekers Register.

3.3. Continuous Service

To view/update an employee's Continuous Service details, follow the below steps:

1. Navigate to the People Management Dashboard
2. From the *Command Centre* widget, click **View** on *Employees*
3. Search for the employee and click **View** on their record
4. Click **Continuous Service**

The details on these calculations will depend on the configuration set up in the rules in the Continuous Service matrix (refer to Continuous Service documentation).

The Service Details section will be populated with the Original Date Joined, Latest Start Date, and Leave date.

The calculation of continuous service dates will be triggered on:

- Commencement of a Post Appointment
- Update of Commenced or Ended Post Appointment
- End of Post Appointment

The system will allow for *Override Dates & TUPE Dates* to be entered manually, which can determine the overall 'Continuous Service Duration' calculation:

The screenshot shows the 'Detail' page for an employee named Alan Connolly (ID: 000243). The 'Service Detail' section includes fields for 'Person' (Alan Connolly), 'Original Date Joined' (01-Jul-2020), 'Latest Start Date' (01-Jul-2020), and 'Leave Date'. The 'Continuous Service' section includes 'Continuous Service Duration' (3.16), 'Continuous Service Start Date' (01-Jul-2020), 'Continuous Service End Date', 'TUPE Date', and 'Override Start Date'. The 'Appointment Summary' table shows one appointment for the role of Accountant, starting on 01-Jul-2020.

The table below outlines the items in the Continuous Service section:

Field	Description
Continuous Service Duration	This is a read-only field which represents the continuous service duration in years. It will display: • The length of time between the <i>Continuous Service Start Date</i> and the <i>Continuous Service End Date</i> • The length of time between the <i>Continuous Service Start Date</i> and the system date (today), if <i>Continuous Service End Date</i> is not populated

Continuous Service Start Date	This is a read-only field and will display the date based on the following ordering rules: • System calculated <i>Continuous Service Start Date</i> based on Service Rules • <i>TUPE Date</i>, if this is populated • <i>Override Start Date</i>, if this is populated
Continuous Service End Date	This is a read-only field and will display the date based on the following ordering rules: • System calculated <i>Continuous Service End Date</i> based on Service Rules • <i>Override End Date</i>, if this is populated

If an employee has no eligible Continuous Service, the *Continuous Service* button will still be available on their record, however there will be no Post Appointments listed in the *Appointment Summary* table.

If an employee is subsequently transferred back into a Post Appointment that is eligible for Continuous Service, the *Continuous Service Start Date* will be reset in line with the Service Rules defined.

3.4. Automatic Job Seekers Register Update

A nightly database job is run to identify any employees that meet the criteria defined for the Job Seekers Register in:

- Numeric Client Parameters
- Job Seekers Register Eligible Service Rules

If an employee meets these defined criteria, they are added to the Job Seekers / Redeployment Register.

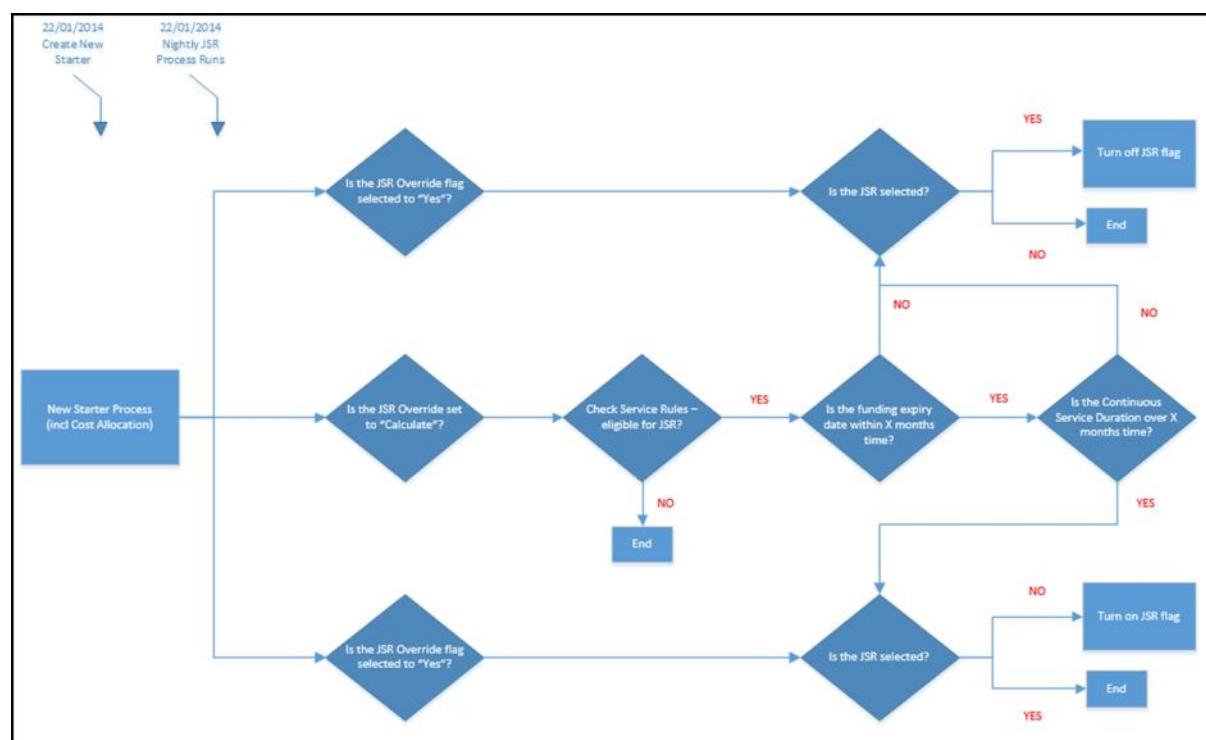

In order to determine whether the necessary job has been set up on your environment, please follow the below steps:

1. Navigate to the Administrator Dashboard
2. Click that Scheduled Jobs tab
3. Search for *JOB_SEEKERS_REGISTER*

From here, you will be able to see when the last job ran and when the job is next scheduled to run. The name of the database job which updates the Job Seekers Register in accordance with the service details, the employee's continuous service and funding expiry dates is called *pers_job_seekers_register_proc.process_jsr_records*

3.5. Process Summary

The diagram below provides a summary of the JSR process. Each of the steps below is detailed in previous sections of this document.

4. Reporting

4.1. Views

It is possible to get a full list of all the employees included in the Job Seekers Redeployment Register in Insight. The XD function *PRBL_GET_JSR_INDICATOR*. This will report on all employees where JSR is enabled.
