1. Overview

1.1. Purpose of the Guide

The purpose of this document is to provide guidance on the functionality available within the *Social Security Settings* feature and how this may be used to capture the required social security details for employees across multiple countries.

1.2. What is the *Social Security Settings* Feature

CoreHR provides 2 options for validation on the social security number provided for an employee:

- *PPS Number* for Republic of Ireland
- *NI Number* for United Kingdom

For both of the above, the number entered on the system by the user will be validated to ensure that it is in the expected syntax for PPS or NI.

The *Social Security Settings* feature provides the option to:

- Identify the default number and validation that will be used on the system.
- Identify other groups of employees that fall into other jurisdictions that are not applicable to the default setting and flag those groups as requiring either another validation routine or none at all.

For example, it is possible to configure the system to:

- Use NI Number by default for employees. For these employees, the system will:
 - expect a valid NI Number to be provided and will check this.
 - display the label *NI Number* on screen.
- Identify a group of employees based on their *Location* on their contract and flag those as based in Ireland. For these employees, the system will:
 - expect a valid PPS Number to be provided and it will check this.
 - display the label *PPS Number* on screen.
- Identify another group of employees that are not based in either the UK or Ireland. For these employees, the system will:

XD People Management: Social Security Settings

- accept any number in any format i.e. validation is not applied.
- display any label required, to reflect that country's social security settings.

 **Note** The above example is for illustrative purposes only. This is a highly configurable setting that can be setup to reflect each organisation's specific requirements.

2. Configuring Social Security Settings

2.1. Where to Access *Social Security Settings*

To access the *Social Security Settings* feature:

1. Quick jump to the *Data Centre* widget and **Open** *HR Admin Setup Settings*
2. Search for “Social Security Settings” and click on the corresponding option.

The *Social Security Settings* window opens.

XD People Management: Social Security Settings

FIN1	Accounts		

corehr
Smarter HR Technology

SAVE

To configure the default number:

1. Update the *Label* (max 20 alphanumeric characters).
2. Select the *Validation Routine* to be applied i.e.

Validation Routine	Description
PPS Number (IRE)	Should be used for employees paid in ROI. This will ensure that the number provided is validated as an actual PPS Number.
NI Number (GBR)	Should be used for employees paid in the UK. This will ensure that the number provided is validated as an actual NI Number.

XD People Management: Social Security Settings

Validation Routine	Description
None	No validation will be applied. This is recommended if employees are not being paid in either the UK or ROI.

3. Click **Save** to save the changes made.

For the example used below, the default setting is *NI Number*. This means that, when the employee is being set up on CoreHR, the screen will prompt them to provide a valid NI Number:

← Duplicate Employee Check

New Starter
People Management > Search for Post > Duplicate Employee Check > New Starter

Validation → The 9th character of the NI Number must be A, B, C or D ... DISMISS

Apply next increment on

2.2.2. Social Security Exceptions

The *Social Security based on Organisational Structure* section at the lower half of the screen allows for exceptions to the default configuration to be catered for. Using the Org Structure levels, you can identify a group of employees that shouldn't use the same number and validation as defined in the *Global Settings*.

ID	Name	Location	Social Security
IT1	Technical Support - IT1	Ireland	PPS Number
IT2	Networks - IT2	Ireland	PPS Number
IT3	It Security - IT3		
M1	Lead Nurturing - M1		
M2	Campaigns & Events - M2		
M3	Digital Marketing - M3		
M4	Marketing Admin - M4		
S1	Menswear - S1		
S2	Household - S2		
S4	Contracts & Legal - S4		
S5	Sales Admin - S5		
SMGT	Senior Management - SMGT	United States	Social Security

For example:

- Global Settings = *NI Number*.
- Employees working in *Tech Support* and *Networks* are actually based in IRL and require PPS Number Validation.
- Employees working in *Senior Management* are actually based in the USA and therefore need a *Social Security Number*.

Note The above is just an example. It is possible to identify the groups of employees using any level defined on the Organisational Structure OR their Pay Group. This will differ based on how each organisation's structure is configured on CoreHR.

XD People Management: Social Security Settings

To define the exceptions:

1. Select the required Org Structure from the *Structure* drop down list. If only one structure exists, this will be selected by default.
2. Select the Organisational Level that will be used to identify the groups of employees.
Options available on the drop-down list will reflect the levels that have been defined in the Org Structure and may include:

- Company
- Division
- Management
- Department
- Cost Centre
- Location
- Work Group
- User Field 1 – User Field 5

Pay Group is also available to group here.

3. The grid below will update to reflect the units that are defined on CoreHR for the chosen level i.e. if *Work Group* is selected, the grid will display a list of all Work Groups on CoreHR.
4. Select the country that this group should be aligned to from the *ISO Country Code* drop-down list.

Group Data Code	Group Name	ISO Country Code	Label
1	Default Workgroup		
CEO	Ceo	Ireland	
FIMU	Finance	Ireland 0000	
FIN1	Accounts	Manage addresses...	
FIN2	Budget		

5. Input the *Label* (max 20 alphanumeric characters) that should be displayed for employees in this country e.g. PPS Number.

XD People Management: Social Security Settings

Group Data Code	Group Name	ISO Country Code	Label
1	Default Workgroup		
CEO	Ceo	Ireland	PPS Number
FIMU	Finance		
FIN1	Accounts		
FIN2	Budget		

6. Repeat as required for all groups of employees.
7. Click **Save** to save the exceptions.

Points to Note:

- If *ISO Country Code* = "IRL", then the system will automatically apply PPS Number validation.
- If *ISO Country Code* = "GBR", then the system will automatically apply NI Number validation.
- If *ISO Country Code* is any other code (i.e. not IRL or GBR) no validation is applied.
- If an *ISO Country Code* is defined, a corresponding 'Label' must also be supplied.
- If the *ISO Country Code* and *Label* are blank, then the system will apply the default validation routine defined in the Global Settings.

2.2.3. Configuration Example

Please see an example of how this feature may be used, in the screenshot below:

Apply next increment on: [Calendar icon]

Paysgroup employee will be paid in*: 100 - Archived 100

2. Employees in the Work Group of “Senior Management” will require a Social Security Number for the USA.
 - The system will display a label of *Social Security*.
 - No validation will be applied on the number provided.

XD People Management: Social Security Settings

The screenshot shows the 'New Starter' form in the XD People Management system. The form is divided into four steps: 1. Person Information, 2. Organizational Structure, 3. Contract Information, and 4. Salary Information. The 'Social Security' tab is selected, and the 'Starter Declaration' dropdown is set to 'Social Security'. The 'Employee to be paid based on' is set to 'Scale-Point', the 'Scale' is 'Grade 1', and the 'Point on Scale' is 'Point 1'. The 'Multiplier' is set to '1'. The 'This to be paid' is set to 'Annual', and the 'Amount to be paid' is '28000'. The 'Paygroup employee will be paid' dropdown is set to '*'. The 'Apply next increment on' dropdown is set to 'Annual'. The 'PREVIOUS' and 'SAVE' buttons are at the bottom right.

3. All other employees i.e. employees in every other Work Group, will require an NI Number.
 - The system will display a label of *NI Number*.
 - The number provided will be validated as an acceptable NI Number.

The screenshot shows the 'Duplicate Employee Check' form in the XD People Management system. The form is divided into four steps: 1. Person Information, 2. Organizational Structure, 3. Contract Information, and 4. Salary Information. The 'NI Number' is entered as '1234567'. A red box highlights the 'NI Number' field, and a red arrow points to the error message 'NI Number is invalid'. The 'Starter Declaration' dropdown is set to 'Social Security'. The 'Employee to be paid based on' is set to 'Scale-Point', the 'Scale' is 'Personal Rate', and the 'Point on Scale' is 'Default Scale Point'. The 'Multiplier' is set to '1'. The 'This to be paid' is set to 'Annual', and the 'Amount to be paid' is '0'. The 'Paygroup employee will be paid' dropdown is set to '*'. The 'Apply next increment on' dropdown is set to 'Annual'. The 'PREVIOUS' and 'SAVE' buttons are at the bottom right. A red error message 'Invalid Prefix on the NI Number' is displayed at the top right.

2.3. Where is the Validation Applied?

The *Label* and validation routine settings apply to the following screens in People Management:

3. Additional Configuration Required

3.1. Parameter to Switch On Social Security Settings

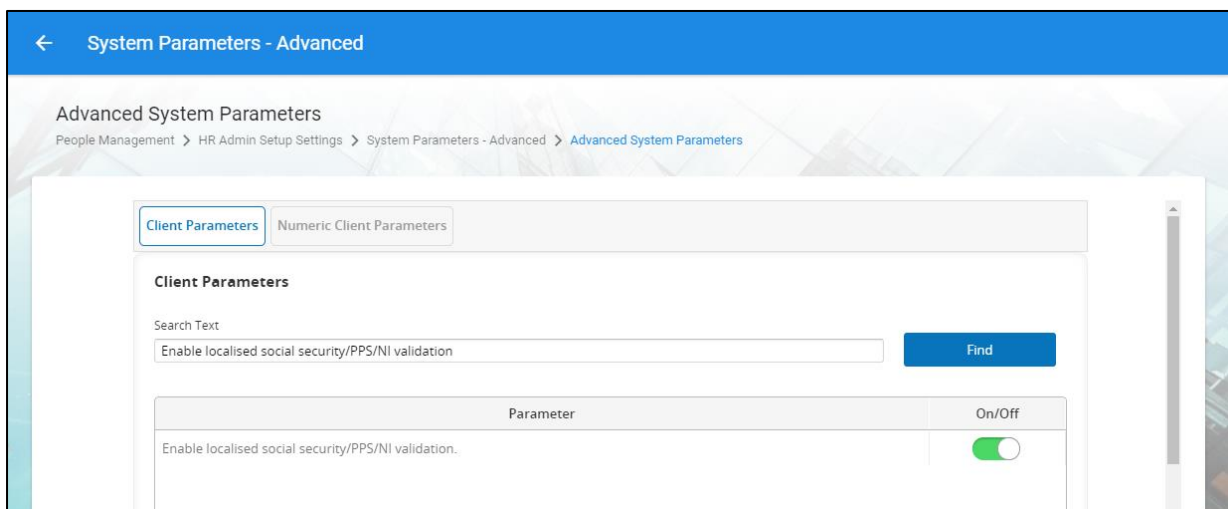

The following parameter must be enabled, for the system to apply the configuration that has been defined on the 'Social Security Settings' feature:

1. Quick jump to the *Data Centre* widget and **Open** *HR Admin Setup Settings*.
2. Search for "System Parameters - Advanced" and click on the corresponding option.
3. Scroll down the screen and click the **Client Parameters** button.

The screenshot shows the 'HR Admin Setup Settings' page with the 'System Parameters - Advanced' section selected. The page is divided into two main columns: 'Post Appointment Parameters' and 'Extra Options'. The 'Post Appointment Parameters' column contains several toggle switches: 'Allow Multiple Posts' (on), 'Cascade Planned Appointment/Details to Actual Appointments' (on), 'Display Transfer Post' (on), and 'Link Work groups to Cost Centres' (off). Below these is a text input field for 'Default Activity Code' with the value '1'. The 'Extra Options' column contains two buttons: 'Email Parameters' and 'Client Parameters' (highlighted with a red box). Below the buttons are two dropdown menus: 'MSS - Default post details to the structure level' (set to 'Department') and 'Line Manager Post Restriction Role' (set to 'Manager Post Access').

4. Search for the parameter "Enable localised social security/PPS/NI validation".
5. Switch the parameter on.

The screenshot shows the 'System Parameters - Advanced' page with the 'Client Parameters' section selected. The page is divided into two main columns: 'Client Parameters' and 'Numeric Client Parameters'. The 'Client Parameters' column contains a search bar with the text 'Enable localised social security/PPS/NI validation' and a 'Find' button. Below the search bar is a table with the following structure:

Parameter	On/Off
Enable localised social security/PPS/NI validation.	☒

6. Click the **Save** button to save changes.

 **Note** If this parameter is off, the settings defined in the *Social Security Settings* screen will not be applied.

3.2. Menu Options

The following menu option is required to see the *Social Security Settings* option on the *Settings* widget.

Once that option is enabled for a user's Menu Profile, they will have access to all of the functionality available on the screen.

System	Menu Option
People Management	Social Security Settings
