1. Overview

1.1. Purpose of the Guide

The purpose of this document is to provide guidance on how a user's access to employee, contract and salary data is managed in People Management.

This includes:

- An overview of user access on PeopleXD.
- How access is managed for employee, contracts, & post records.
- How access is managed for the employee's salary & allowance records.
- How to assign user HR and Pay access.

2. User Access

2.1. Overview

User access to the PeopleXD system can be broadly split into 2 categories:

Menu Profiles	Data Access
• Provides access to system functionality. • Menu options are linked to system elements including: ○ Dashboards ○ Screens ○ Buttons ○ Menu options ○ Widgets • Typically aligned to a user's role in the organisation e.g. a profile for hr administrators, another for payroll administrators etc.	• Provides access to the actual data / records stored on the system. • For People Management, this includes access to the following records: ○ Employees ○ Posts ○ Salaries • Different employees can have access to different sets of records on PeopleXD e.g. access to all records, access to only a subset of records.

Therefore, users of the *People Management* dashboard will need to be granted access for both categories i.e. a user will need:

1. A Menu Profile e.g. PEOPLE_MGT_EMPLOYEE_ADMIN, to see the People Management dashboard and all functionality within that.
2. Data access to see employee records, search for posts and access salary information.

2.2. Access by Organisational Structure

Access to employee, post, and contract data on People Management is based on the Organisational Structure that has been set up on PeopleXD. A user's access will be aligned directly to an organisational unit or level that has been defined on the Org Structure.

For example, a user may be granted access for:

- the entire Company
- A particular Department
- A particular Management Unit, and all departments within it

The levels available to align access to are those that have the *Hierarchy Indicator* enabled on the Hierarchy Structure definition i.e.

For the example structure in the screenshot above, access can be aligned to the Company, Division, Management Unit & Department levels only.

Each level in the Org Structure is made up of a number of organisational units. These are the actual companies, management units, departments etc that the organisation is comprised of.

The diagram below provides an example of a small sample of an organisational hierarchy:

On People Management, access can be aligned to any level and any org unit defined in that organisational structure. If access is granted at a higher level in the structure, the user has access to all units that roll up in that level.

For example:

1. A user may have access to a **single department**. E.g. *Sales*.

2. A user may have access to a **full management unit** e.g. *HR* which means they have access to all units in HR including *Comps & Bens*, *Recruitment* & *Training*.

3. A user may have access to the **company** *ABC Solutions*, which means they have access to the entire structure.

2.3. Access by Pay Group

A user requires an additional level of data access to see the salary records associated with an employee and their contract.

- This is based on the **Pay Group** that the employee is a member of.
- This is not based on the Org Structure.

A user must be granted access to a Pay Group. They will then have access to all the salary records for employees in that Pay Group.

This access is necessary for the user to access salary, allowance, and deductions data on People Management.

However, Pay Group access alone will not provide the user with any additional access to the employee / contract / post data on People Management.

- At a minimum, a user must first be given access to see the employee and contract records on People Management (see [2.2 Access by Organisational Structure](#)).
- Only if a user can see the employee / contract AND if they have been granted access to the Pay Group that the employee is in, then they will be able to see the salary details.

Pay Group Access Scenario	User Impact
Access to All Pay Groups	User will be able to see the payroll data for all employees that they have been granted HR access to.
Access to specific Pay Groups only	User will be able to see the payroll data for all employees that they have been granted HR access to, that are in those specific Pay Groups. If the user has access to an employee that is not in one of the specified Pay Groups, then they will not be able to see that employee's payroll records.
No Pay Group access	User will not have access to any payroll data on People Management.

Pay Group Access Scenario	User Impact
Access to Pay Group but <i>not Org Structure</i>	User will only be able to access the payroll data for employees that are in the org units they have been granted access to. If the user has access to the employee's Pay Group but not their Org Unit, they will not see that employee on People Management.

3. Configuring User Access

3.1. Where is Access Granted to a User?

You can manage all aspects of a user's access from the *Assign Access* screen. For more information, see the **Assign Access** user guide.

Alternatively, follow the instructions below:

1. Quick jump to the Data Centre widget and **Open People Management**.
2. Search for HR User Access (Basic) and click on the corresponding option.

The *Data Security Access* screen opens.

HR User Access (Basic)

People Management > People Management > HR User Access (Basic)

Search for person or job title

1 - 25 of 134

This screen provides a list of all active employees on PeopleXD.

- Access is not restricted – all employees will appear here.
- Users will have access to their own record here, even if the parameter is enabled to hide their actual employee HR record on the *Command Centre > Employee* screen widget.
- Dormant employees will not appear here.

The search option at the top of the screen allows the user to search for an employee using their forename, surname or both. It is not possible to search using the employee's personnel number.

This screen provides a summary at a glance of the user's current access:

- If they have data access, this will appear in the Data Access column.
 - *HR* indicates access to data for employees, contracts and posts.
 - *Pay* indicates access to salary and allowance data.
- If they have access to default Menu Profiles, there will be a green tick in the corresponding column (see [3.4 Assign Default Menu Profiles](#)).

3.2. Granting HR Access (Employees, Contracts, Posts)

To grant access to HR data:

1. Search for the employee on the *HR User Access (Basic)* screen.

2. In the relevant employee row. Click on the  button for the *HR Admin* option.
The Administrator Access screen appears.
3. Select the Structure Code dropdown.
 - If more than 1 Org Structure exists on PeopleXD for an organisation, it is vital to select the correct one here.
 - If only 1 exists, select this.
4. Select the *Structure Level* from the drop down list.
 - The levels displayed here will reflect the levels that have the *Hierarchy Indicator* enabled on the Org Structure definition (see [2.2 Access by Organisational Structure](#)).

The window expands to include a list of all the active org units for the chosen level e.g. if *Company* is selected, this will be a list of companies, if *Department* is selected this will be a list of departments.

5. Select the indicator for the Org Unit.

AS Alan Saunders (000088), Support Analyst, It Security

HR Admin Pay Admin Recruit Admin

Structure Code: Abc Solutions Structure Level: Company

DESELECT ALL

Field	Active
Abc Solutions	☒

- Use the **Enable All** button to select all org units on screen.

If access is enabled at the top level of the structure, this provides full access to all units beneath.

If access is required for only specific sub units, ensure that:

- the org unit at the top level is not enabled.
- the correct level is selected on the *Structure Level* drop down list.
- only the required units are enabled for the selected level e.g.

Administrator Access

People Management > People Management > HR User Access (Basic) > Administrator Access

AS Alan Saunders (000088), Support Analyst, It Security

HR Admin Pay Admin Recruit Admin

Structure Code: Abc Solutions Structure Level: Department

ENABLE ALL

Field	Active
Accounts	☐
Budget	☐

Changes to the user access settings are automatically saved.

On returning to the *Data Security Access* screen, the *Data Access* column will display a label of *HR*, indicating that this employee has been granted access to see HR data on the system (employees, contracts & posts).

3.3. Granting Pay Access (Salaries & Allowances)

1. Search for the employee on the *HR User Access (Basic)* screen.
2. Click on the  button for the *Pay Admin* option on the employee's row.

The *Pay Admin* screen opens. All active Pay Groups on PeopleXD will be listed here.

3. Select the required Pay Groups.
 - Access is based on Pay Group & Input Locations.
 - If there are multiple Input Locations configured on the system, ensure the correct combination option is selected.
 - Use the **Enable All** button to select all Pay Groups if required.

User access changes are automatically saved.

The *Pay Admin* screen will immediately close. On returning to the *HR System Users (Basic)* screen, the *Data Access* column will display a label of *Pay*, indicating that this employee has been granted access to see Payroll data on the system (salaries & allowances).

3.4. Assign Default Menu Profiles

The *HR User Access (Basic)* screen include a list of roles and indicators (highlighted below).

paul								
Employee		Admin	Manager	Employee	HR Admin	Pay Admin	Recruit A...	Talent
PK	Paul Keane (000108)	☐	☐	☐	☐	☐	☐	☐
PM	Paul Martin (000017)	☐	☒	☒	☒	☐	☐	☐

The purpose of these indicators is to provide a quick way for user to identify the role that the employee has in the organisation and assign them to a default menu profile.

Note: This is an optional feature. This is hardcoded to point to specific Menu Profiles (listed in the table below). It is not possible to configure the Menu Profiles associated with each option.

User menu profile access may be managed in a variety of ways on PeopleXD including:

- Directly assigning Menu Profiles to the employee's Portal user account in Security.
- Directly assigning Menu Profiles to the employee's record in People Management.
- Automatic assignment via Self Registration.
- Assignment via the organisational role rules defined in the *Menu Profile Matrix*.

This table identifies the Menu Profile that will be assigned to the employee for each option.

Option	Menu Profile
Administrator	COREPORTAL_ADMIN
Manager	COREPORTAL_MANAGER
Employee	COREPORTAL_EMPLOYEE
HR Admin	PEOPLE_MGT_EMPLOYEE_ADMIN
Pay Admin	COREPORTAL_PAYADMIN
Recruitment Admin	COREPORTAL_RECRUITMENT_ADMIN
Talent Admin	COREPORTAL_PMDSDMN

To assign a Menu Profile on this screen:

1. Enable the required indicator e.g. *HR Admin*, *Recruitment Admin*.
 - Changes will be saved immediately.
 - If that employee has a user account, the Menu Profile assignment will be immediately available to see on their account in Security.
2. On the *HR User Access (Basic)* screen, the indicator can be used to provide a view at-a-glance of the menu profiles assigned to the user.

paul 									
Employee		Admin	Manager	Employee	HR Admin	Pay Admin	Recruit A...	Talent	Data Access
	Paul Keane (000108)	☐	☐	☐	☐	☐	☐	☐	HR Pay 
	Paul Martin (000017)	☐	☒	☒	☒	☐	☐	☐	HR Recruit 

- If an indicator is disabled for an option on the *Security Access* screen, the corresponding Menu Profile will be immediately removed from the employee's user account in Security.
- If one of the menu profiles listed above is directly assigned to a user in Security (i.e. not via this feature) the blue tick will still display on the *HR User Access (Basic)* screen for them.

4. Additional Data Control

4.1. Substantive Contract Access

It is possible to control whether users should be able to access employee records, where they no longer have access to the employee's current substantive contract.

The options available are:

- Allow a user to access an employee's record if they have access to any of the contracts that the employee previously held
- Only allow a user to access an employee if they can see their current substantive contract.

This is parameter driven on People Management. The default setting for this is the second option above.

To update this parameter:

1. Quick jump to the *Data Centre* widget and **Open People Management**.
2. Search for and select the option *System Parameters – Advanced*.
3. On the *System Parameters - Advanced* screen, click the **Client Parameters** button.

System Parameters - Advanced

People Management > HR Admin Setup Settings > System Parameters - Advanced

Post Appointment Parameters

- Allow Multiple Posts ☒
- Cascade Planned Appointment/Details to Actual Appointments ☒
- Display Transfer Post ☒
- Link Work groups to Cost Centres ☐
- Default Activity Code:

Extra Options

Email Parameters Client Parameters

MSS - Default post details to the structure level
Department

Line Manager Post Restriction Role
Manager Post Access

4. Search for the following parameter:

"Hide all information when viewing employees you no longer have access to"

The screenshot shows the 'System Parameters - Advanced' page. Under 'Advanced System Parameters', there are two tabs: 'Client Parameters' (selected) and 'Numeric Client Parameters'. In the 'Client Parameters' section, there is a search bar with the text 'hide all information when viewing employees you no longer have access to' and a 'Find' button. Below this is a table with two columns: 'Parameter' and 'On/Off'. The table contains one row with the same parameter text and a green toggle switch in the 'On/Off' column.

5. Switch On/Off as required, then click **Save**.

Option	Result
On	Users will be able to see employees based on the following: • If the employee is active and their current substantive contract aligns to the user's HR access. • If the employee is dormant and their last substantive contract aligns to the user's HR access. Users will not be able to see employees: • If the employee is active and their current substantive contract does not align to the user's hr access. • If the employee is dormant and their last substantive contract does not align to the user's hr access
Off	Users will be able to see the employee (active or dormant) if they have access to any of their contracts (current or historic, substantive or non-substantive). • They will be able to see all of the employee's personal details. • They will only have access to view the contract(s) and associated details (e.g. salaries, probation etc) for the employee that align to their hr access.

For example:

I only have access to employees in the Management Unit of *Operations*.

Mary's current substantive contract is in *Sales*, but she previously had a contract in *Operations*

If this parameter is **On**

- I won't be able to see Mary's record on *People Management*, because I don't have access to her current substantive contract in *Sales*.

If this parameter is **Off**

- I will be able to see Mary's record, including her personal details
- I will only be able to see her contract in *Operations*, including the details associated with the contract e.g. Salary, Allowances, Cost Allocations etc.
- I won't be able to see her *Sales* contract or any associated details.

4.2. Confirmed Future Contracts

If the parameter reviewed in [4.1 View Employees Based on Their Current Substantive Contract](#) is on, this means that a user may not be able to see an employee who has a future dated contract aligned to the user's HR access i.e. if I don't have access to an employee but they have a future dated contract aligned to my HR access, they I won't see the employee until the start date of that contract.

There is a parameter available to allow these employees and their relevant future dated contract to appear to the user.

To update this parameter:

1. Quick jump to the *Data Centre* widget and **Open People Management**.
2. Search for and select the option *System Parameters – Advanced*
3. On the *System Parameters - Advanced* screen, click **Client Parameters**.

4. Search for the following parameter:

"Display future transfers to users who will have access to future appointments"

Advanced System Parameters

People Management > HR Admin Setup Settings > System Parameters - Advanced > [Advanced System Parameters](#)

Client Parameters Numeric Client Parameters

Client Parameters

Search Text
display future Find

Parameter	On/Off
Display future transfers to users who will have access to future appointment	☒

5. Switch On/Off as required, then click **Save**.

Option	Result
On	Users will be able to see the employee. - They will be able to see all their personal details. - They will only be able to see the future dated contract that is aligned to their hr access.
Off	Users will not see the employee until the start date of their new contract

Note: This parameter is to be used when the parameter in [4.1 View Employees Based on Their Current Substantive Contract](#) is enabled.

For example:

I only have access to employees in the Management Unit of “Operations”.

Mary’s current substantive contract is in “Sales” but she has a future dated contract in “Operations”

If this parameter is **Off**

- I won’t be able to see Mary’s record on People Management, because I don’t have access to her current substantive contract in “Sales”
- I will only see Mary when from the start date of the contract in “Operations”

If this parameter is **On**

- I will be able to see Mary's record, including her personal details
- I will only be able to see her future dated contract in "Operations", including the details associated with the contract e.g. Salary, Allowances, Cost Allocations etc.
- I won't be able to see her current substantive "Sales" contract or any associated details.

5. Additional Configuration Required

5.1. User Access

The following menu option is required to see the *HR User Access (Basic)* option on the *People Management* widget.

Once that option is enabled for a user's Menu Profile, they will have access to all the functionality available on the screen.

System	Menu Option
People Management	Hr User Access (Basic)

6. Post Profile Data Access

6.1. What Additional Access is Required?

The user settings covered in 6.2 and 6.3 are required to ensure that a user has the necessary access to:

- Authorise Post Profiles
- Update the *Auto Authorisation* or *Auto Commencement* indicators on a Post Profile.

6.2. CoreHR Security

1. Quick jump to *Security*.
2. On the *Set Up* tab, **Open** *CoreHR Security*.
3. Enter password “university” and click **Submit**.
4. Search for the employee number of the user.
5. Enable the **CorePersonnel Access** indicator.
6. Click **Save**.

6.3. User Access to Authorise

1. Quick jump to *Security*.
2. On the *Setup* tab. Click **Open** at *CorePersonnel Pst Mgmt Security*.
3. The user’s employee number will only appear here if [6.1. CoreHR Security](#) has been completed.
4. Update the indicators and save.

Post Management User Security				
Username	Authorise Appointment	Appoint a Person	End Appointment	Amend Appointment
000013	☒	☒	☒	☒

7. Appendix

7.1. Employees & Contracts

Access to see employee records on People Management is dependent on this access. Users will only see employees that have contracts that are aligned to the organisation units they have been granted access to see. This includes:

7.1.1. Command Centre widget

Employees will only appear here if the underlying contract for the new starter/rehire/probation expiry is in an org unit that the user has access to.

Command Centre		NEW STARTER
Employees 113 Currently Active Employees	VIEW	Onboarding 113 Pending VIEW
Transfers 1 Transfers Pending	VIEW	Starters 0 Starters Pending VIEW
Applicants 7 Applicants	VIEW	Leavers 0 Leavers Pending VIEW
Salary Approvals 0 Salaries Pending	VIEW	Probation 0 Probations Pending VIEW

7.1.2. Employee Screen

Employees will only appear here if at least one of their contracts is in an org unit that the user has access to.

Employee Search						
People Management > Employee Search						
Search Name or Personnel No.		Active				
Name	Personnel No.	Job Title	Department	Date Started	Reports To	
 Alan Saunders	000088	Support Analyst	It Security	01-Feb-2016	Ann Long	VIEW
 Alice Jones	000013	Hr Administrator	HR Admin	01-Jan-2011	Thomas Cole	VIEW
 Ann Grant	000063	Shop Assistant	Menswear	17-Jul-2016	Claire Smith	VIEW

This means depending on the org units that a user has access to, employees will appear here if the user has access to:

- All the employee's current and historical contracts,
OR
- Only historical contracts i.e. the user doesn't have access to the employee's current org unit but does have access to a unit from an earlier contract.
OR
- Only current contracts i.e. the user doesn't have access to the employee's historical org units but does have access to a unit for their current contract.

7.1.3. Employee Record Contract List

The contracts that are listed in the dropdown on this screen will display based on the user's access.

For example, if the user has access to all the departments in the HR management unit, they will see all the contracts below:

7.1.4. Contracts Screen

The contracts available will display based on the user's access, similar to the [7.13. Employee Record Contract List](#).

7.1.5. Replace Contract – Choose Contract Screen

The contracts displayed on the *Choose Contract* screen when replacing a contract, will be based on the user's access, similar to the [7.13. Employee Record Contract List](#)

7.2. Posts

All employee contract related activities on People Management rely on the user's access to a Post i.e. whenever an employee is awarded a contract (New Hire, Replace Contract, Additional Contract, Rehire), the first step in the process is for the user to select the Post that will be used to create the Contract.

The Posts that are available to the user to select from will be dependent on the user's access i.e. the user will only see Posts that are aligned to org units that they have access to.
