1. Overview

1.1. Purpose of the Guide

This guide gives an overview of the integration between PeopleXD Recruitment and Access Screening. This allows a Recruiter (user) to submit a Candidate Background Check from within the PeopleXD Application record. Once successfully submitted, the Recruiter will be able to monitor the status of the check.

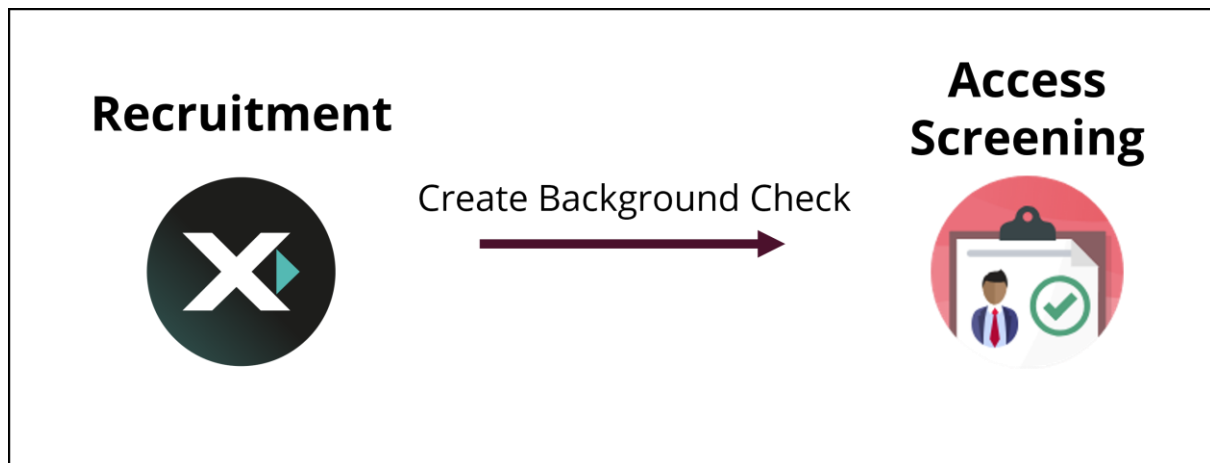

1.2. Access Screening Integration Overview

When a background check is successfully submitted by a user in PeopleXD Recruitment, specific data relating to the applicant and PeopleXD user is sent to Access Screening. The status of the background check will be sent from Access Screening, so the user can view it in real time from PeopleXD.

1.3. Access Screening Integration Process

1.3.1. Submitting a Background Check

When a background check is successfully submitted, the following data set relating to the applicant and PXD user is sent to Access Screening:

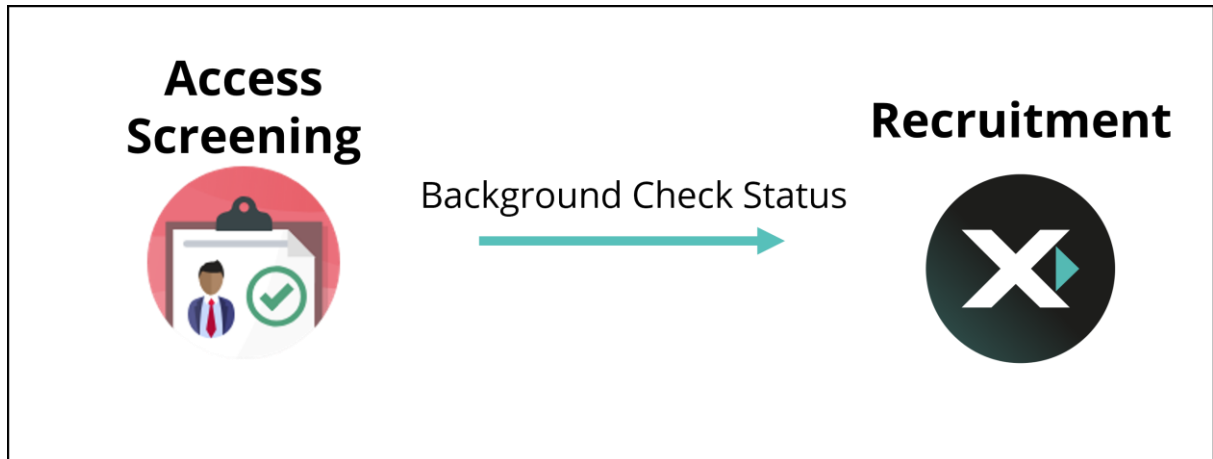

- Applicant Title
- Applicant First Name*
- Applicant Surname*
- Applicant Email Address*
- Background Check Brand*
- Background Check Workflow*
- PXD user Email Address*

*Mandatory information is marked with an asterisk; without this, the background check cannot be created.

Note: The user initiating the process in PeopleXD must also have a user account in Access Screening. This is necessary for the background check to start and be assigned to users within Access Screening correctly, where they can then manage the screening check.

Note: There are no Screening "Tags" sent to Access Screening as part of the integration.

1.3.2. Background Check Status

Once the background check has been submitted, the status can be seen within PeopleXD. The following information is available:

- Screening Brand
- Screening Workflow
- Background Check ID
- Background Check Status
- Submitted By (PXD user who submitted the background check)
- Started (Date & Time the background check was started)
- Updated At (Date & Time the background check was last updated)
- Candidate Completed (Date & Time the candidate completed their step)

2. How to configure

2.1. Access Screening Admin Settings

Once a screening environment has been set up, the API URL and the API Authorization Token will need to be obtained and entered into PeopleXD. To enter the data, follow the below steps:

1. Go to the Data Centre tab on the People Management Dashboard
2. Select HR Admin Setup Settings and click Open
3. Search for Access Screening Admin and open the corresponding tile
4. Enter the Authorization Token and URL into the relevant fields

2.2. PeopleXD API Whitelisting

For the API integration to function successfully, the Screening Team will need to whitelist the correct PeopleXD IP addresses. This process is completed within the Access Screening product.

2.3. Access to Background Checks

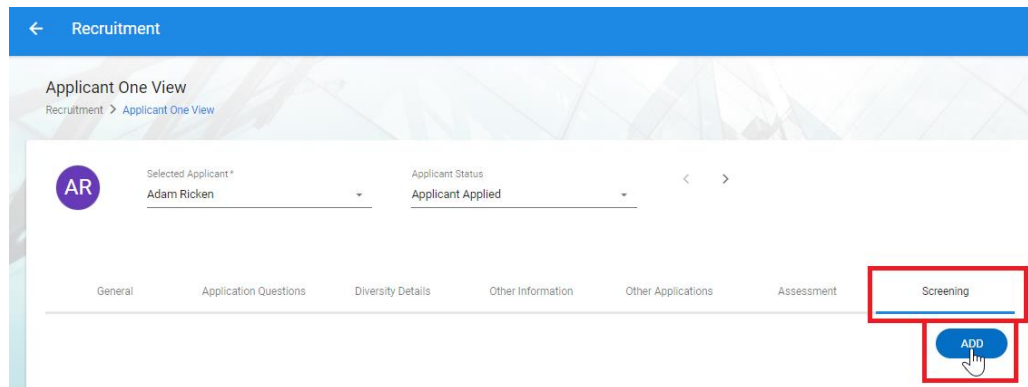

The following menu options are required to view and create background checks from the PeopleXD Recruitment Dashboard.

System	Menu Option
Web Services	Recruitment - Get screening background checks
Web Services	Recruitment - Get screening brands
Web Services	Recruitment - Get screening details
Web Services	Recruitment - Create screening background check
Web Services	Recruitment - Create screening details

3. How to use

3.1. Submit a Background Check

1. Navigate to the Applicant One View screen in PeopleXD Recruitment.
2. Within the Screening tab, click **Add**.

3. Select the Screening Brand and Workflow from the dropdown lists, then click **OK**.

The screenshot shows a modal form titled 'Enter Screening Details'. It has two dropdown menus: 'Brand *' and 'Workflow *'. At the bottom, there are two buttons: 'CANCEL' and 'OK'.

Note: If the mandatory data does not exist, the background check will not be submitted, and an error message will display on screen (see [1.3.1 Submitting a Background Check](#)).

4. Thereafter, users will be able to review the overall status of the background check within the Screening Tab in People XD, and the background checks will have automatically started and be assigned to the user within the Access Screening.

The screenshot shows the 'Background Checks' tab in the PeopleXD Recruitment system. The table has the following columns: Reference, Brand, Workflow, Candidate, Completed, Emails Sent, Status, and Operator. The table lists several background checks in progress, all with a status of 'Waiting For Candidate'.

Reference	Brand	Workflow	Candidate	Completed	Emails Sent	Status	Operator
BC-000285	Retail Banking	Standard & Advanced	Mikev Beavens	Not completed	4	Waiting For Candidate	Adam Ricken
BC-000286	Retail Banking	Standard Retail Checks	Paddy Deegan	Not completed	4	Waiting For Candidate	Adam Ricken
