1. Overview

1.1. Purpose of the Guide

This document is relevant to any existing XD Recruitment customers who are moving to our new Access Careers Website powered by Volcanic.

- Any existing XD Recruitment customer that is currently using our old eRecruitment applicant facing website in conjunction with our existing ATS (Recruitment Dashboard / Staff Requests)
- Any existing XD customer using our existing ATS (Recruitment Dashboard / Staff Request) but using a 3rd party careers / job site.

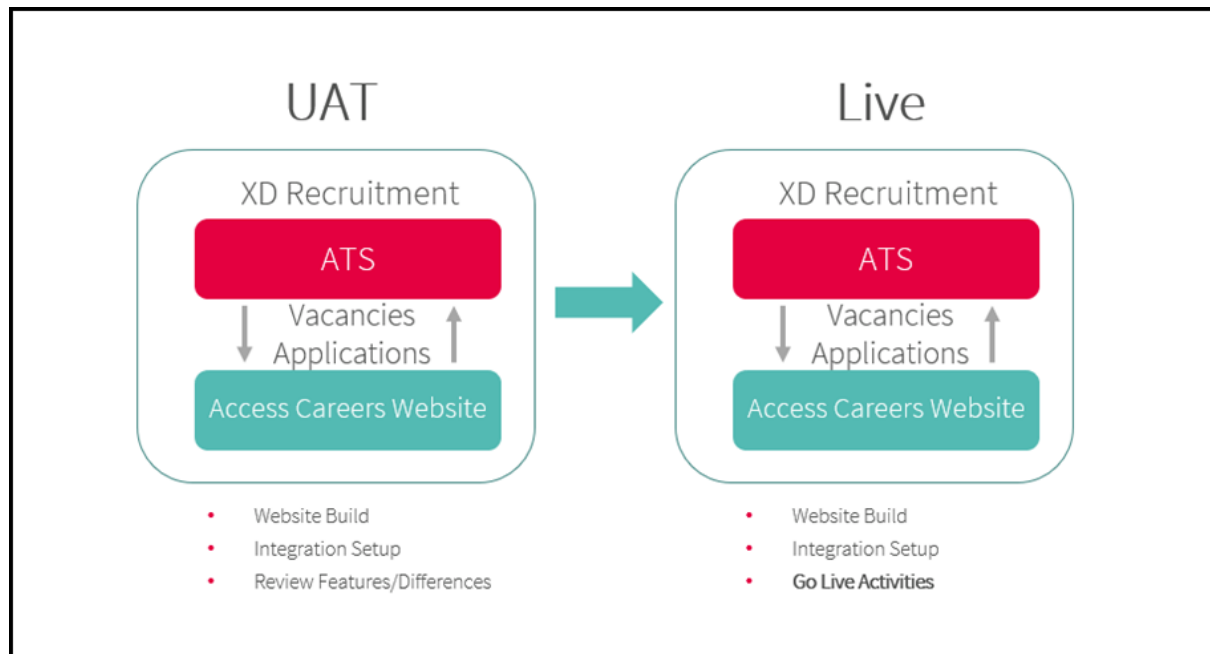

The sections and detail below will outline the process/steps that need to be followed as well as important considerations and configuration required.

Full content is available during the migration project to successfully support you in the move to the Access Careers Website.

2. Transition Process

2.1. Key Activities

Once you have started your project there are some key activities that will need to be undertaken.

2.2. UAT Review

- As part of your migration project, a new Careers Website powered by Volcanic, will be built for you.

Note: There is only one instance of the Careers Website. During testing it will sync to your UAT Environment and for Go Live it will sync to your Production Environment.

- Once that website has been built it will be integrated to XD Recruitment.
 - Once the integration has been activated, any new vacancy created thereafter on XD Recruitment will be created in a new format (new fields, layout) allowing it to be published to the new Careers Website and allowing applications to be received.
 - Activating the integration will require an XD consultant to perform this quick and easy task.

XD Recruitment - Moving from eRecruitment to our new Careers Website

- During this phase you can start to review the new processes involved around vacancy publishing, new fields, new screens, and the functionality/features that will no longer be available as part of the transition.

2.2.1. New Vacancy Tabs & Screens

The Vacancy Details and Vacancy Profile tabs that currently exist for our eRecruitment solution, have been re-organised, removed or amalgamated into a single Tab called Vacancy Detail. This makes it easier to find items relating to posting the Vacancy to the Careers Website.

The screenshot shows the 'Vacancy Detail' screen in the XD Recruitment system. The sidebar on the left contains a list of tabs: 'VACANCY DETAIL' (expanded), 'Vacancy Status', 'Job Advert', 'Job Description', 'Current Questions', 'Authorisation Details', 'Assessments', 'Further Particulars', 'Comments', 'Documents', and 'INTERVIEW PANEL'. The main content area is titled 'Vacancy Details: 001482 - HR advisor' and includes an 'UPDATE LIVE JOB' button. Under 'Vacancy Status', there are three indicators: 'Job Advert Details', 'Job Description', and 'Vacancy Authorised'. The 'Job Posting' section contains a table with the following data:

Advertise To	Open Date	Closing Date	Status	PUBLISH	UNPUBLISH	RELIST
Internal Candidates Only			Not Live	PUBLISH	UNPUBLISH	RELIST
Internal and External Candidates	03-Oct-2024	24-Oct-2024	Live	PUBLISH	UNPUBLISH	RELIST
Redeployment Candidates			Not Live	PUBLISH	UNPUBLISH	RELIST

Below the table is the 'Expiry Date and Time' section, which includes an 'Expiry Date' field. At the bottom right, there is a 'SAVE' button.

Existing eRecruitment tab	Action
Vacancy Details 1	Updated and added to the new Vacancy Detail tab.
Vacancy Details 2	Updated and added to the new Vacancy Detail tab.
Job Description/Job Text	Updated and added to the new Vacancy Detail tab.
Language	Has been removed.

2.3. Go Live

As part of the go live process, your Careers Website will be integrated to your XD Recruitment Production Environment. There will be some key activities that you will need to undertake in the

management of vacancies that are still being advertised on the old eRecruitment website, and some configuration items.

1. Once your XD Recruitment Production is integrated to the new Careers website, any new vacancy created thereafter can only be published to this new website and not the older eRecruit website.
2. Existing live vacancies that are being advertised on the old eRecruit website will not be advertised on the new Career Website.
3. It will not be possible to simply re-advertise these eRecruit vacancies to the new Careers website. However, you can copy existing vacancies, and they will be re-created in the new formatting.
4. Existing live and legacy vacancies will still be accessible within the Recruitment Dashboard and users will have the ability to access application data within.
5. Staff Requests not yet approved (i.e. vacancy not yet created from one) will automatically create a vacancy in the new Career Website compatible format once approved allowing it to be advertised on the new website.
6. You will need to recreate your existing Question Category Profiles in a new facility available on the My Recruit Toolbox widget
7. Update relevant menu profiles with new menu access options.
8. Remove existing employee facing vacancies widget (Recently Open Vacancies) and replace it with the new Open Positions Widget that will display vacancies advertised on the new Careers Website.
9. You will need to review/change any existing feeds/redirects to/from eRecruit Vacancies that may exist in your existing corporate website, 3rd party applications, downstream systems.

2.4. Moving Existing Live Vacancies

If there are vacancies that are currently being advertised on the eRecruit website that still need to be advertised, it will not be possible to continue using the eRecruitment website to advertise these vacancies and the below process will need to be followed.

2.4.1. Close Vacancies

Close all vacancies currently being displayed on eRecruit and vacancies awaiting to be advertised i.e. stop vacancies being displayed on the eRecruit website.

1. Close the vacancy, end date the advertising date with a date in the past.
2. If applicants have already applied, their applications continue to be accessible.
3. Remove/unpublish links to these live eRecruit vacancies that would redirect the user back to the old eRecruit website e.g. Job Boards.

2.4.2. Recreate Vacancies

Recreate these vacancies and publish these to the new Careers Website.

1. These only need to be recreated if the job advert still requires advertising.
2. This will be new Vacancy ID in XD which will only contain applications that have applied via the new Careers Website.
3. This step should only be done once the integration between the XD ATS and the careers website has been completed.
4. A new **Copy Vacancy** function will be available to users to help in this process but will only be available once the integration between XD ATS and the new Careers website has been activated.

3. Legacy Features

As part of the migration to the new Careers Website the functionality listed below is no longer available within the XD Recruitment and / or available to the Applicant.

3.1. Unique Internal or External Application Forms

The ability to have a unique & separate internal application form and a unique & separate external application form to open concurrently for Applicants is not available. In our old e-Recruitment solution, the functionality which allowed separate application forms for certain Vacancies or Recruitment drives was a feature. However, on our new Careers Website it is now possible to create different Application Forms with configurable questions that are rule driven but not specific to Internal or External Applicants.

3.2. Applicant Online Job Offer

The ability for an applicant to review offer details was specific to the eRecruit website and will no longer be available.

3.3. Applicant Key Word Search

This functionality was available to Recruiters via the Recruitment Toolbox widget and was specific to the eRecruit website and will no longer be available.

3.4. Online Timeslots Selection for Group Interviews

The ability to publish group interview timeslots to an applicant to select from online will no longer be available.

 **Note:** The ability to publish individual timeslots to an applicant still exists.

3.5. Compare Applicants

The ability to compare applicants via the compare applicants within the applicant listing screen will no longer be available.

3.6. Hire Cards

The Hire Card option will no longer be available against an applicant record.

3.7. Open Position Widget on Mobile

The new Open Position Widget on the Employee Dashboard is not available on Mobile Web version of PeopleXD. However, the ability to view Vacancies as an Applicant will be available on the PeopleXD Mobile App in a future release.

4. Configuration Considerations

Note: To implement our new Career Website with PeopleXD, there is little impact on the BAU processes within PeopleXD. The items below outlines at a high level some of the fundamental elements.

4.1. Menu Access

New menu access options have been created and recruitment users will need to be granted these new menu options as part of setup.

4.2. Question Categories

Any existing question categories will need to be recreated. These must be recreated within the new vacancy question screen available within the Recruitment Toolbox widget and can be maintained within this new screen thereafter.

4.2.1. Diversity Question Category

A new out of the box question category will be available which will contain existing diversity fields. If you intend to capture diversity information from candidates as part of the application process, these questions can be published as part of the vacancy publishing process.

Recruitment > Vacancy Question Categories > View Questions						
Search						
Display Sequence	Question	Answer Type	Active	Mandatory	Private	
7	Gender Identity	Reference	Active	Optional	Public	EDIT
9	Sexual Orientation	Reference	Inactive	Optional	Public	EDIT
10	Ethnic Origin	Reference	Active	Optional	Private	EDIT
12	Nationality Header	Heading	Active	Optional	Public	EDIT DELETE
13	Nationality	Reference	Active	Optional	Public	EDIT

XD Recruitment - Moving from eRecruitment to our new Careers Website

- These questions are directly linked to the Reference Data configured as part of People Management.
- When an applicant answers these questions as part of the application process, a Diversity record will be created on the system and feeds into People Management once the applicant has become successful and commences in a contract within People Management.
- The Diversity and Disability section for an applicant can be found on their Applicant Details screen:

Applicant Details - Denis Cotter (A2712)

Recruitment > Vacancies > Applicant Details: 002762 - Finance Director > Applicant Details - Denis Cotter (A2712)

4.3. Employee Vacancy Widget

A new employee facing widget has also been created which will advertise vacancies to employees on their employee dashboard.

The new widget will need to be added to the employee dashboard, relevant menu access assigned to employees, and the older widget that displayed vacancies to employees removed from the dashboard.

4.4. Capturing Address & Phone Information

To continue capturing address information and phone information, these will need to be captured as part of the registration process an applicant will complete on the new Careers Website. This uses permalink functionality from Volcanic to XD Recruitment.

4.5. Dynamic Application Forms / Vacancy Questions

A standard Application Form can now be configured on the admin area of the Careers Website Platform and not within the XD Recruitment Dashboard.

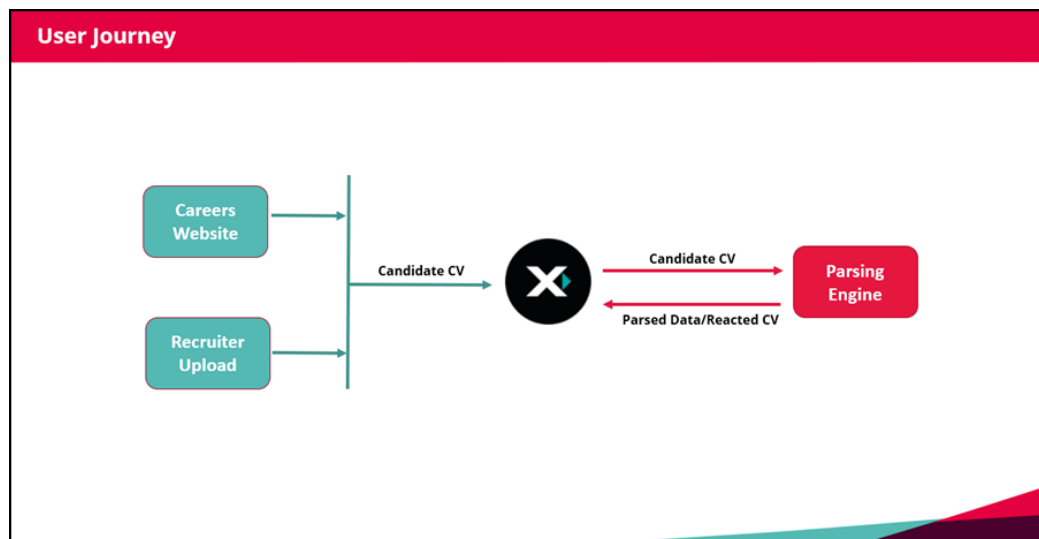

Question Profiles, ad-hoc questions, and unsuitable answers can still be maintained within the XD Recruitment dashboard and added to the vacancy when published which the applicant will completed with any other additional questions as per application form setup.

4.6. CV Parsing & Anonymisation

 **Note:** CV Parsing & Anonymisation is only available to customers who have a XD Recruitment Premium and who are using our new Careers Website.

XD Recruitment - Moving from eRecruitment to our new Careers Website

CV Parsing when enabled will result in CVs being parsed when they are submitted by a candidate via the application process (careers website) or when a user manually adds a CV to an existing candidate/application record.

Applicant anonymisation can be enabled for any Applicant Status that is configured on PeopleXD.
