Document Control

Version	Date	Author	Details
0.1	22/07/2022	Andy Miles	Document Creation
1.0	24/08/2022	Georga Edwards	Published to Portal
1.1	08/06/2023	Andy Miles	Updates for using PXD – Access Workspace V3 integration and replacement of script for setting fall-back codes with UI.

1. Overview

This guide outlines the steps that need to be taken to accommodate the PeopleXD (PXD) <> Access People Planner (APP) interface.

- If you have PeopleXD integrated with Access Workspace using V3 solution or later, then skip to [Step 4](#).
- If you are integrating PeopleXD with Access Workspace using an earlier method, please follow from Step 2.

2. Access Workspace Administrator

In Access Workspace Administrator

Create the organisation or get the organisation ID from the existing organisation.

Edit the organisation in organisation details add a subscription for XD **External**.

Instance name = XD

Menu Endpoint URL =

```
[{"id":"XD.Main","displayName":"XD","icon":{"url":"https://my.corehr.com/js/resources/images/framework/xdcircle.png"},"faded":false,"children":null,"location":{"url":"https://my.corehr.com/pls/coreportal_XXXXX/i"},"navigationType":"NewWindow"}]
```

Replace XXXXX with the tenant ID for the People XD environment you are using.

Open up the properties and make note of the public and private API keys.

3. Hubble Access Workspace Setup

In Hubble go to the Integrations Tab

Go to Workspace and add client.

Select the tenant.

Add organisation ID, private key and public key. Leave the rest blank.

This will populate a settings table in PeopleXD and will run a job to check if there are email addresses that match in Access Workspace. If these exist, it creates the mapping between the PeopleXD user and the Access Workspace user. These this for around 30 minutes before continuing to allow the job to finish. Any users that do not exist in Workspace will be enabled by an overnight job that runs.

4. Hubble People Planner Setup

Select the tenant.

Go to PeoplePlanner tab and add client.

Add the organisation ID.

Add the namespace, key name and key value that comes from People Planer DevOps.

Key name PxdPublisherSasPolicy

5. LaunchDarkly

Until the Timesheet Phase 2 feature is released to UAT and Production the feature flag wfm-timesheets-phase2 will need to be enabled by a member of the WFM Product Team. **Please contact one of the following: Evelyn O'Connell, Andy Miles, Amy Butler or Barry Rice.**

6. PeopleXD

Login to People XD as an Administrator

Go to Security in the Quick Links

Select Menu Profiles

Search for the menu profile you wish to add the People Planner Admin functionality to.

Click on the 3-dot menu and select Manage Menu Profile.

Search for People Planner Dashboard and activate it.

7. PeopleXD SQL Server

PeopleXD needs a fall-back work pattern and a fall-back rest pattern for attaching shift information returned from People Planner. These are entered in PXD Main Menu > People Planner > Mapping > Fall-Back Patterns.

8. PeopleXD

After the customer has checked all the data is correct and will pass any validation, and, they have completed all the mapping settings, see our guide '[PeopleXD to Access People Planner Interface](#)', a consultant should then click on the 'Sync XD Employees'. This will complete the Access Workspace and People Planner configuration.
