1. Overview

A badge can be created for an employee to allow automatic tracking of their clockings via a device(s). Badges can be created manually via the WFM Admin Dashboard or in Bulk via the Data Migration tool, in the Administrator Dashboard. This guide will walk you through the processes of managing an employee's badge.

The guide will cover:

- Manually creating a Badge – WFM Admin Dashboard
- Managing a user's Badge
- Bulk creation of Badges – Data Migration Tool

 **Note:** Once a badge number is issued, it cannot be assigned to another staff member. A person can only have one active badge at a time. They can have multiple badge numbers assigned to them but only one can be Active, which must have a valid issue date.

2. The Badge Details Screen

The Badge Details Screen is where an Administrator can manually create and manage a user's Badge.

2.1. How to Access the Badge Details Screen

To access the Badge Details screen, follow the steps below:

1. From the **WFM Admin Dashboard**.
2. Select **WFM Person Maintenance** from the menu on the left-hand side.
3. Search for the relevant employee and using their 3-dot menu select **View**.
4. Navigate to the **Badge Details** tab.
5. The Badge details screen displays.

Once you have accessed the Badge Details screen, you will see the following.

The screenshot displays the 'Badge Details' screen for an employee named Agatha Harkness. The interface includes a top navigation bar with 'WFM Admin Dashboard' and 'Agatha Harkness'. On the left, a sidebar menu lists various options, with 'Badge Details' highlighted. The main content area features a search bar and three tabs: 'Individual Information', 'Badge Enquiry', and 'Clocking Distribution Groups'. The 'Individual Information' tab is active, showing a table with columns for Badge, Person, Na..., Version No., Valid, Issue Date, Expiry Date, De..., and Code. A single row is visible with the following data: Badge 1, Person T17, Na... Ag..., Version No. 1, Valid (checked), Issue Date 05-Dec-2022, Expiry Date 05-Dec-2023, De..., and Code. An 'ADD' button is located in the top right corner of the table area. At the bottom right, there is a green back arrow button.

The Badge Details Screen has 3 tabs available:

Individual Information: lists all the employee's badges and shows their status.

Badge Enquiry: display the badge details for employees within the user remit.

Clocking Distribution Groups: lists all clocking distribution groups.

2.2. Individual Information

The Individual Information screen lists all badges created for an employee, detailing the badge number, version, status, and the issued date. An employee can have multiple badges assigned but only one can be Active.

The *Individual Information* screen contains the following fields.

Field	Details
Badge	This is the Badge number. It is a numeric field, ranging from 1 to 12 digits. Badge numbers are unique and cannot be reused. If an existing badge number is entered an Error notification will appear and the number will need to be amended before it can be created.
Person	This is the employee number.
Name	This is the employee's known as name.
Version No.	The version number enables administrators to track how many times a badge number is issued to the same employee e.g. An employee's card is broken, on re-issue the administrator increments the version number. The column is required and at a minimum should be set to 1 if not tracking badge number versions.
Valid	Staff members may have multiple badge numbers assigned but only one badge number can be marked as valid. Where deployed in conjunction with TDS/Access Control this also downloads the badge number, which in turn, is enabled at the various clocking devices.
Issue Date	The date the badge number was issued.
Expiry Date	If a badge was taken back from an employee, the Administrator can enter the date the badge was expired. This does not de-activate the physical badge number from being used at various devices, it's a note storing when a badge was de-activated. This is an Optional field.
Description	You can select if the badge is a visitor or a contractor badge. This is an Optional field.
Code	This returns a related code if the Description field is populated.

2.2.1. To Add a Badge:

1. Click **Add**.
2. Enter the **Badge Number**, **Issue Date** and **Version** plus any additional information required.
3. Click **OK**.
4. The badge will now display.
5. **Activate** the Valid toggle to enable.

2.2.2. To Edit a Badge:

1. Search for the relevant Badge.
2. From the 3-dot menu select **Edit**.
3. Update the Badge Details with the required changes.
4. Click **OK**.

2.2.3. To Delete a Badge:

1. Search for the relevant Badge.
2. From the 3-dot menu select **Delete**.
3. A warning notification will display.
4. Click **Yes**.

2.3. Badge Enquiry

The displays all employee badge details. Information is pulling from the Individual Information screen and is non editable.

To revert to the individual display, select the Individual information tab.

All columns, except for Valid, can be sorted in ascending/descending order by clicking on the headers and selecting the required order.

The Badge Enquiry screen contains the following fields:

Field	Details
Badge	This is the Badge number.
Person	This is the employee number.
Name	This is the employee's known as name.
Version No.	The current version number of the badge
Valid	The status of the badge
Issue Date	The date the badge number was issued.
Expiry Date	The date the badge expired, if applicable.
Description	This displays if Visit or Contractor access has been granted.
Code	If the Description field has been populated the related code is displayed.

2.4. Clocking Distribution Groups

This is where clocking distribution groups can be assigned to an employee. It uses a third party, Grosvenor, to integrate the clocking system. For further guidance refer to our guide: [Grosvenor Clocking Integration](#).

2.5. Auto Assignment

When a new starter is created the following is populated in the system, if Auto Assignment is enabled in Back Office:

- Badge Number (same as the person number).
- The associated person number is assigned.
- The valid indicator is set to Y.
- The issue date is current date.
- The version number is set to 1.

2.5.1. How to Turn On Auto Assignment

Auto Assignment should **ONLY** be completed by the PeopleXD implementation team. Currently this is only supported in Back Office.

To switch on Auto Assignment:

1. Go to **CoreTime > Global Parameters > General**
2. Switch on the indicator **Create Badge when New Person Created**

3. Bulk Creation of Badges

This section guides you through the process of migrating data using the Data Migration Template and the Data Migration Helper File to create Badge Assignment in bulk.

Note: Before you download the Data Migration Template you will need to download the Helper file. This is a csv file which gives a breakdown of the fields on an excel sheet and gives you guidance on filling out the template. See below for further guidance.

To download the Helper file:

1. Navigate to the *Administrator Dashboard*
2. Click the **Data Migration** tab.
3. On the **Data Migration Template** widget, search for the Badge Assignments file.
4. From the 3-dot menu, click **Download Helper**.

5. Once the file downloads, open the folder.
6. Open the **Badge Assignments File_HELP.xlsx** file. Here you can get specific information on how to populate the data migration fields.

To upload a Badge Assignment data migration file:

1. On the Data Migration Template widget, search for the Badge Assignments file.
2. From the 3-dot menu, click **Download Template**.

- Once the file downloads, open the Badge Assignments.csv file.
- Populate the template.
- Save the .csv file.
- Return to the **Data Migration** tab.
- On the **Data Migration Options** widget, click **Load File**.

- Select or drag and drop the .csv file.
- Click **OK**.
- When the file successfully uploads you will see it in the widget with the status *Ready*.
- From the 3-dot menu click **Edit**. When the screen opens, you see the information which you have entered on the csv file.
- Click **Process All Records** to process the import.
- If successful, the file status will update to *Complete*.

For further information see the [Data Migration Tool - User Guide](#) on the Knowledge Base.

4. Menu Options

The following menu options are required to enable access to the Badge Details screen.

Menu Option	Menu ID	System
Add/Update Badges	MAIN_MENU.NADGE_DETAILS_UPDATE	CorePortal
CorePortal Time – Badge Details Screen Admin	MAIN_MENU.BADGE_DETAILS_SADM	CorePortal
Badge Details	PERSON_MAINT_ADM_MENU.BADGE_DETAILS_ADM	CorePortal
Badge Enquiry	PERSON_MAINT_ADM_MENU.BADGE_DETAILS_ENQUIRY	CorePortal
Badge Details	PERSON_MAINT_MGR_MENU.BADGE_DETAILS_MGR	CorePortal
Badge Enquiry	PERSON_MAINT_MGR_MENU.BADGE_DETAILS_ENQUIRY	CorePortal
Create v2 badgeassignments	WS_DATAMIGRATION_MENU.POST_V2_BADGEASSIGNMENTS	Web Services
Delete v2 badgeassignments	WS_DATAMIGRATION_MENU.DELETE_V2_BADGEASSIGNMENTS_ID	Web Services
Create badges newbie	WS_RECOGNITION_MENU.POST_BADGES_NEWBIE	Web Services

5. Frequently Asked Questions

This section covers a number of the common questions or configuration queries.

5.1. Error: Badge Number X has been allocated to XXX.

Once a badge number is issued, it cannot be assigned to another staff member. The badge number being assigned has been allocated to another employee, the error message contains the badge number and the person and number/name of the person that has the badge assigned.

5.2. There cannot be more than one badge with an active indicator per user.

A Person can only have once active badge at a time. A user is trying to activate two badge numbers for the one employee record i.e. clicking the active indicator where a badge is already active.

5.3. The expiry date cannot be less that the issue date.

User tried to enter an expiry date that is less that the issue date.
