Version	Date	Author	Details
1.0	12/12/2021	Rory Coakley	Published to Access LMS
1.1	22/02/2024	Georga Edwards	General QOL review, screens and description tables updated. Added <u>Include Historical Exceptions</u> to Section 3.1.2 Settings

1. Overview

1.1. Purpose of the Guide

The Exception Management screen give you access to a single screen where you can manage exceptions in a clocking environment. Access is via the Time Exceptions Widget where you can see, at a glance, the number of exceptions that require action or are auto approved.

This guide covers:

- The Time Exceptions Widget.
- The Exception Management screen and description of its tabs.
- Configuring Exception Management.

Note: Decimal values are converted to hours & minutes before they are displayed on the *Exceptions* screen. Therefore:

- **Monetary & Unit Values (decimal):** Cannot be managed via the *Exceptions* screen, as they are converted to a non sensical value.
- **Hours Values (decimal):** Can be managed via the *Exceptions* screen, however, due to conversion/rounding will not always be correct e.g., an employee is 29 mins late, this is calculated as 0.48 then converted to 28 mins, for display on the *Exceptions* screen.

1.2. Accessing the Exceptions Screen

The Exceptions screen is accessed via the *Time Exceptions Widget*, on your Manager Dashboard or via the *Time Exceptions* tab on the Workforce Management Dashboard.

The Time Exceptions widget can be configured to sit on any tab, via Dashboard Configuration. To do this:

1. Navigate to the **Dashboard Configuration** dashboard.
2. Select a Dashboard from the drop-down menu e.g., Manager.
3. Search for and click on the tab you want to add the widget to e.g., Time.
4. Then in the Tab Widgets section, search for **Time Exceptions**.
5. **Enable** the Selected toggle.

Once enabled the Time Exceptions Widget will display the following:

- Specify **Period Calendar** - Only applicable if you have access to multiple calendars.
- The exceptions listings will display per period.
 - Listings of Exception Types including Current, Historical or Both.
 - A count of Action Required & Auto-Approved Exceptions, per period.

VIEW SCHEDULER			
Weekly Calendar		Current	
Period	Action Required	Auto Approved	Last Generated
202401 01 Jan 24 - 07 Jan 24	150	0	
202402 08 Jan 24 - 14 Jan 24	0	0	
202403 15 Jan 24 - 21 Jan 24	0	0	

6. Select **Manage Exceptions** from the 3-dot menu, for the required period.
7. The Exceptions screen for the selected period displays.

2. Manage Exception Management

The Exceptions screen displays a listing of exceptions to be actioned, detailed with supporting information. The actions to be taken can typically include the Approval or Rejection of an Exception, or a Recode of the Exception by selecting the Exception Pay Code and choosing another Pay Code from the list of values available, where options may have been pre-determined.

2.1. The Exceptions Screen

Once you have accessed the Exceptions screen, you will see the following:

The screen can be filtered using the following options:

Option	Details
Search	This allows you to search exceptions. For example, you can search by Employee, Pay Code etc.
Select Period	This allows you to select the relevant view: • Current - default, displays the current periods exception. • Historical - displays historical periods exceptions; so that previous periods exceptions can be managed. • Both - display both the Current and Historical exceptions in one view.

Option	Details
Select Week	This allows you to use the arrows, or dropdown options, to move from week to week. If changing the week viewed, you will need to click Apply to update the information on screen.

The Exceptions screen contains the following fields:

Field	Description
Employee	This is the employee name, plus additional employee information line 1 if configured.
Roster	This displays the employees planned Roster details, if applicable.
Clock	This displays the employees actual clocking details, if applicable.
Date	This displays the date of the exception.
Paycode	This displays the exception pay code.
Hours	This displays the hours calculated for the exception.
Action Required	This displays the action required e.g., Recode Required, Approval/Rejection.
Approve/Reject	Enable the relevant Approve/Reject toggle as required to action an exception. Depending on your configuration, if rejecting an exception you may be required to enter a comment/reason.
Comments	This displays a count of comments associated with the exception. To view/add, select <i>Comment/Reason</i> from the exception 3-dot menu.

The **Actions** button allows you to:

- **Change Calendar** – Use the drop-down options to select the alternative calendar required. Only applicable if you have access to multiple calendars.
- *** Display Values/Hours** – This allows you to change between values or hours displayed, if applicable.
- *** Calculate Actual** – This will cost the actual hours per period and display when Last Calculated on the exceptions screen. This option only available on current and historical periods.
- *** Calculate Planned** – This will cost the planned hours per period and display when Last Calculated on the exceptions screen. This option only available on current and future periods.

- **Generate Todays Exception** – This will allow the user to Generate Todays Exceptions.

Note: The Actions options marked with an * are configurable, so some or all may not display. These are configured in *WFM Admin Dashboard > Cost of Roster*. See our guide [Cost of Roster](#) for further guidance.

The Exceptions screen has three available tabs, see [Section 3 Configuration](#) for further details:

- **Action Required** – Lists all the Exceptions, for the specified group, that require explicit action.
- **Auto Approved** – Lists all the Exceptions, for the specified group, that do not require explicit action.
- **All Exceptions** – Lists all the Exceptions present for the specified group, where there is still Action Required, that have been Auto Approved, and that have been Actioned.

2.2. Action Required Tab

The *Action Required* tab lists all the Exceptions, for the specified group, that require explicit action. These Exceptions are listed by employee; these can be completed directly on this screen e.g., Recode, Approve/Reject.

access PeopleXO SAVE

There are a number of *Action Required* Exceptions:

- Hours recorded against Pay Codes which require approval AND the hours have not yet been approved or rejected.
- Hours recorded against Pay Codes which require Recode.
- Hours recorded against Pay Codes which require a reason AND the hours do not already have a reason attached.
- Hours recorded against Pay Codes which require a narrative AND the hours do not already have a narrative attached.

2.2.1. Recode an Exception

The action required here consists of changing the *Exception Pay Code* to a different, circumstance appropriate Pay Code.

By default, all Pay Codes you have access to are displayed in the dropdown list. However, it is also possible to limit the list of Pay Codes to a pre-configured list, see [Section 3.3 Recode Options](#) for further details.

To Recode the Pay Code on the Exception:

1. From the exception that requires recoding, **click** the Pay Code.
2. **Select** an alternative Pay Code, from the dropdown list.
3. Click **Save** to commit the action.
4. Once the action has been performed and saved, the exception will no longer be displayed.

2.2.2. Approve/Reject an Exception

Pay Codes requiring approval have the Approve/Reject toggles.

1. From the exception that requires Action.
2. Enable the **Approve** or **Reject** toggle as required.
3. Click **Save** to commit the action.
4. Once the action has been performed and saved, the exception will no longer be displayed.

Employee	Roster	Clock	Day	Paycode	Hours	Actions Required	Approve	Reject	Comments
Naomi Henderson Operations 7266	First Last	05-Jan-2024	Missed Clocking	7.30	Recode Required				0
Matthew Arden Development 7266	First Last	05-Jan-2024	Missed Clocking	7.30	Recode Required				0
Mark O'Driscoll Development 7266	First Last	05-Jan-2024	Privilege Day	7.50	Approval/Rejection	☒	☐		0
Mark O'Driscoll Development 7266	First Last	05-Jan-2024	Missed Clocking	7.30	Recode Required				0
Ed Graham Development 7266	First Last	05-Jan-2024	Privilege Day	7.50	Approval/Rejection	☐	☐		0
Ed Graham Development 7266	First Last	05-Jan-2024	Missed Clocking	7.30	Recode Required				0

Note: For exceptions that do not require Approval/Rejection, the toggles will not display.

From the 3-dot menu against an exception you can access the following screens for the employee to review, assist or add details with actioning the exception:

Option	Description
View Roster/Clock Details	This option allows you to view the employee's Timesheet, clocking times and their attendance hours.
Action Details	This screen allows you to view who and when an exception was actioned.
Absence Details	This option opens the Absence details screen to record an unexplained absence. If you book the employee on Annual Leave, the Exception will disappear from the Exception List.

Option	Description
Comment/Reasons	This option opens the Comment/Reason screen for you to add details to the exception. - A Reason can be selected from the dropdown options available, if applicable. - Comments can be added. - Click <i>Apply</i> to capture details.
Change Roster	This option allows you to adjust the employee's Roster to manage a <i>Not Rostered</i> Exception by selecting the <i>Requested Work Pattern</i>.

2.3. Auto Approved Tab

The Auto Approved screen lists all the Exceptions, for the specified group, that do not require explicit action. This comprises of hours recorded against a Pay Code set up as an Exception Pay Code where the Pay Code doesn't also require:

- Approval
- Recode
- Reason
- Narrative

However, Exceptions can still be recoded here, if required.

The screenshot shows the 'Exceptions' Manager Dashboard. At the top, it displays 'Planned Values 0.00', 'Actual Values 366.08', and 'Last Calculated 15/Jan/24 15:50'. Below this, there are tabs for 'Action Required' (146), 'Auto Approved' (72), and 'All Exceptions'. The 'Auto Approved' tab is selected. A search bar is present. The main table lists exceptions for employees on 05-Jan-2024. The columns are Employee, Roster, Clock, Day, Paycode, Hours, Actions Required, and Comments. A dropdown menu is open for the 'Late' exception type, showing a list of options including 'HOURS CLAIM (7266-8021 TR CC)', 'Hours Claim (7264-7001) - Amy', 'Hours Claim (7266-9001) - Copy', 'Hours Claim (8001)', 'Hours Taken Off', 'Hrs Claim (7266-8006) - Trans', 'LATE 3604', and 'Late'. The 'Late' option is selected. The dashboard also includes filters for 'Exception Type' and 'Date Range' (01 Jan 24 - 07 Jan 24), and buttons for 'APPLY' and 'ACTIONS'. The bottom right corner has a 'SAVE' button.

Examples of an Auto Approved Exception may include, a Late Deduction Pay Code set up to transfer to Payroll without explicit approval, therefore does not require approval but is also flagged as an Exception, therefore this is considered to be Auto Approved.

2.4. All Exceptions Tab

The *All Exceptions* screen lists all the Exceptions present for the specified group, where:

- There is still Action Required.
- That have been Auto Approved.
- Where Action has already been completed.
- That meet the following criteria:
 - Hours recorded against Pay Codes set up as an Exception Pay Code.
 - Hours recorded against Pay Codes which Require Approval, **regardless of whether the hours have been approved or not.**
 - Hours recorded against Pay Codes which require Recode.
 - Hours recorded against Pay Codes which require a Reason AND the hours do not already have a Reason attached.
 - Hours recorded against Pay Codes which require a Narrative AND the hours do not already have a Narrative attached.

You can review and re-complete any Actions you require on this screen, if necessary.

Employee	Roster	Clock	Day	Paycode	Hours	Actions Required	Status	Approve	Reject	Comments

3. Configuration

3.1. How to access the Time Exceptions Configuration Screen

You can access the Time Exceptions Configuration Screen via the WFM Admin Dashboard. To do this:

1. Go to *WFM Admin Dashboard*.
2. Select **WFM Configuration**.
3. Select **Time Exceptions Settings** tile.
4. The Time Exceptions Settings screen displays.
 - There are two steps of configuration on this screen, which include:
 - Employee Information
 - Settings

3.1.1. Employee Information

The **Employee Info** section contains the following fields:

Field	Details
Display Additional Employee Info	When enabled this will display the Additional Employee Information configured on the Exceptions screen as supporting information. Additional employee information line 1, will display under the Employee name on the exceptions screen with lines 2 & 3 being displayed when <i>View Roster/Clock Details</i> option is selected.
Override for Rostered Employees	This is only displayed if Rostered Employees are present. It is also possible to override what is displayed for Rostered employees. This is because items such as Home Team Area and

Field	Details
	Rostered Team Area are key information for Rostered employees but are not applicable to T&A Only employees.
Additional Information Line 1 - 3	Select the applicable information you require displayed, from the list of reference data available on each drop-down menu.

3.1.2. Settings

access PeopleXD

PREVIOUS SAVE

The **Settings** section contains the following fields:

Field	Details
Org Group	Select from the available dropdown options the Org Group you wish Time Exceptions to be based on e.g., Work Group, Department.
Org Role	Select from the available dropdown options the Org Role you wish Time Exceptions to be based on e.g., Reports To Manager.
Org Role Access(On)/Transaction Access (Off)	This option controls whether the Time Exceptions screen will use the Org Role access or Transactional Access. If this option is enabled than access will be based on the Org Role and Org Group.

Field	Details
	If this option is not enabled than access will be based on the Team Area.
Enable Live Exceptions Mode	When enabled, the option 'Generate Todays Exceptions' is available from the Actions button on the Time Exceptions widget. The option 'Generate Todays Exceptions' will only be available if the option 'Org Role Access(On)/Transaction Access(Off) is not enabled.
Display Warning on Generate Todays Exceptions	When enabled any warnings messages will be displayed when running the option 'Generate Todays Exceptions' from the Actions button.
Display Auto Approve on Widget	An <i>Auto Approved Exception</i> refers to hours recorded against a Pay Code flagged as an Exception but does not require action. Therefore, not configured to require Recode, Approval, Comment or Narrative. When enabled, the Auto Approved Count is displayed on the Time Exceptions widget.
Display Auto Approve Tab	An <i>Auto Approved Exception</i> refers to hours recorded against a Pay Code flagged as an Exception but does not require action. Therefore, not configured to require Recode, Approval, Comment or Narrative. When enabled, the Auto Approved Tab is displayed on the Exceptions screen.  Note: This is only applicable if auto approved exceptions are applicable, and users want them to display in their own list, with the option to Recode/Reject.
Show Count on the All Tab	When enabled, a count is displayed on the All Exceptions tab. The count displays the total number of Exceptions displayed in the list.

Field	Details
	Typically, this is ticked off, as the All Exceptions tab shows a combination of Actioned and Unactioned Exceptions.
Open Screen on Open Period(N)/Today's Period(Y)	When enabled, the screen opens on the period containing Today's Date, when accessed from the Roster Details or the Scheduler. It is recommended this is disabled so the screen opens on the Open Period when accessed from the Roster Details or the Scheduler.
Treat adjoining shifts as a single shift	When enabled, then Adjoining shifts are treated as a single shift for the purposes of displaying the start and end times on the Exceptions screen. The start time displayed is the start time of the first shift and the end time displayed is the end time of the adjoining second shifts. When disabled, adjoining patterns are treated as two different shifts when displaying the start and end times on the Exceptions screen.  Note: This is only applicable if using Roster & The Retail Calculation applicable.
Mandatory Comments on Rejection	When enabled, you are forced to enter a Comment every time Exceptions hours are Rejected, regardless of the Requires Narrative parameter set at the Pay Code level.
Include Historical Exceptions	When enabled, this will allow the on screen options to view current, historical or both current and historical exceptions.  Note: Carry over of Historical Exceptions To carry over Time Exceptions, Generate Timesheet users need to select the <i>Ignore Confirmed Hours</i> toggle at the Ready to Retrieve stage.

3.2. Configuration Types

There are two main configuration types for Exception Management.

- **Option 1: Standard Configuration** – Based on Organisation Role/Group.
- **Option 2: Alternative Configuration for Roster Sites** – Based on Transactional Rostered Team Area.

Note: You can only use one of these configuration types at any one time.

3.2.1. Option 1 - Access Based on Organisation Role/Group

This configuration type works for Rostered employees, T&A Only employees and a mixture of both. There is no dependency on the calculation for use. Therefore, the Standard Calculation, the Retail Calculation, or a combination of both can be used. This configuration type is consistent with the standard WFM access i.e. the same Org. Role/Groups are used for Absence Records, Timesheet and Scheduler.

The employees, you will have access to as a manager, drives what Exceptions you see.

Required Configuration Settings:

Field Option	Setting
Org Role Access	Must be Enabled
Org Group	Must be Selected
Org Role	Must be Selected
Enable Live Exception Mode	Must be Disabled . The Live Exception Calculation (Generate Todays Exceptions) is not compatible with this configuration type.
Display Warning on Generate Todays Exceptions	Must be Disabled . The Live Exception Calculation (Generate Todays Exceptions) is not compatible with this configuration.

3.2.2. Option 2 - Access Based on Transactional Rostered Team Area

 **Note:** This configuration type is only applicable to Rosters Sites.

This configuration type is dependent on the following:

- **Retail Calculation:** T&A Hours for all applicable employees are calculated using the Retail Calculation. This configuration type will not work with Standard Calculation.
- **Rostered Employees only:** All Exception Management employees must be Rostered employees. Therefore, you cannot use the screen to manage Exceptions for mixture of Rostered and T&A Only employees.
- **No User Defined Calendars:** User Defined Calendars are at the person level, or workgroup level only, therefore are not compatible with transactional access.

There are some other considerations that need to be considered for this configuration type:

- It is not possible to amend the calculated Team Area for an Exception.
- Only the access on the Exceptions screen is controlled via Team Area access. If you drill into another screen from the Exceptions screen, then the standard access for that screen is used.

The Team Areas, you will have access to as a manager drives what Exceptions you see.

Required Configuration Settings:

Field Option	Setting
Org Role Access	Must be Disabled . The selected Org Group & Org Role will be ignored. As Parameters configured in Admin Settings to draw through data, see requirements below.
Enable Live Exception Mode	Should be Disabled unless the Live Exception Calculation (Generate Todays Exceptions) is required.
Display Warning on Generate Todays Exceptions	Should be Disabled unless the Live Exception Calculation (Generate Todays Exceptions) is required.

Required Admin Settings:

Two parameters require configuration for Exception Management with Option 2:

- **Transactional value access based on** - 'cp_exc_mgmt_transact' needs to be configured to Team Area
- **Weekly Calendar screen – Open Period** - 'cp_exc_mgmt_open_date' can be configured to open in:
 - Current Open System Period if the value set to **Y**.
 - Period containing Today's date if the value set to **N**.

To configure your parameters, follow the steps below:

1. Navigate to the *Admin Dashboard*
2. Select **Site Manager**
3. Then within the Site Manager widget click **Open** against Admin Settings
4. Search for parameter e.g., cp_exc_mgmt_transact
5. Click **Edit**
6. Enter the **Value** e.g., Team_Area
7. Click **OK**.

3.3. Recode Options - Personalised Pay Code Groups

Any Exception can be Recoded by selecting the Pay Code and choosing another Pay Code from the list of values available to you. If required, a specific list of Recode options can be configured per Exception Pay Code, this is to limit the list of values to only applicable Pay Codes e.g., the only valid options for a Not Rostered Exceptions might be Clocked in Error.

By default, all Pay Codes you have access to are displayed in the list of values. However, you can limit this list of Pay Codes to a pre-configured list, per Exception Pay Code. This can be done by creating a Personalised Pay Code Group, see our guide [Pay Code Access Groups](#), for further details.

Once created add your Personalised Pay Code Group to be the only group of pay codes available in the list of values, when you action, an Exception Recode.

3.3.1. To Add an Exception Recode Group

1. Go to *WFM Admin Dashboard*.
2. Select **WFM Configuration**.
3. Select **Time Exceptions Pay Code Groups** tile.
 - A list of existing Time Exceptions Pay Code Groups will display.
4. Click **Add**, to create a new row.
5. Select the **Exception Pay Code**, from the dropdown options.
6. Select your **Pay Code Group**, from the dropdown options.
7. Click **Save**.

4. Menu Options

The following menu options are needed to access and configure the Time Exceptions screens.

Menu Option	Menu ID	System
