1. Overview

1.1. Purpose of the Guide

The purpose of the document is to explain the reference data required by the Flexitime system.

This document will cover the following details from a flexitime perspective:

- Pay Codes
- Control Parameters
- Work Patterns
- Shift Types
- Employee
- Flexitime Calculation
- Balance
- Transaction Report

2. Flexitime Setup

2.1. Step 1: Pay Codes

There are four pay codes that are mandatory for Flexitime, and should be created if they do not already exist:

- **Positive Flexitime:** Generated when a person works more than your default day.
- **Negative Flexitime:** Generated when a person works less than your default day.
- **Coretime Infringement:** Generated to *flag* that a person was not present during *core* hours.
- **Flexi Leave:** Used to book leave based on the flexi time they have worked up.

Typically, all these pay codes are non-payroll except for the *Flexi Leave* code. Coretime Infringement is normally classed as an exception.

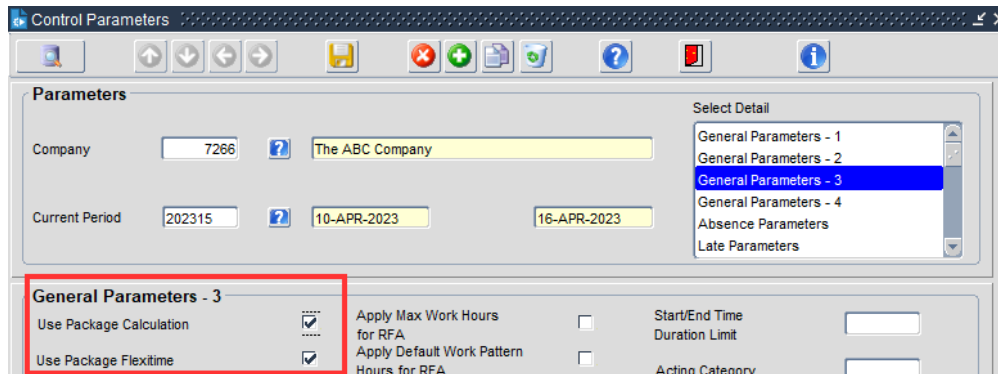

The 'Flexi Leave' pay codes should also be setup to allow employees book this absence in advance via Book-Time Off Widget.

The 'Balance Effect' of the 'Flexi Leave' and the 'Negative Flexitime' pay codes should be changed to 'Negative'.

The screenshot shows the 'Pay Codes' configuration window. The 'General Details' section includes fields for 'Pay Code' (3614), 'Abbreviation' (FL), 'Short Name' (FL), 'Type' (Basic), and 'Segment' (None). The 'General Parameters - 1' section contains checkboxes for 'Requires Approval', 'Requires Recode', 'Requires Reason', 'Requires Narrative', 'Exception Code', 'Overtime Code', 'Ignore Company Holidays', 'Absence', 'Bank Holiday', 'Maternity Code', 'Holiday', 'Sick', 'HR Only', 'Working Time Code', 'Maintain via Absence Details Only', 'Allow Future Absences', 'Allow Advance Payments', 'Allow Leave Requests', 'Allow Absence Details', 'Display on Co-Workers Roster', and 'Display Only'. The 'Balance Affect' section is highlighted with a red box, showing 'Positive' and 'Negative' radio buttons, with 'Negative' selected.

2.2. Step 2: Control Parameters

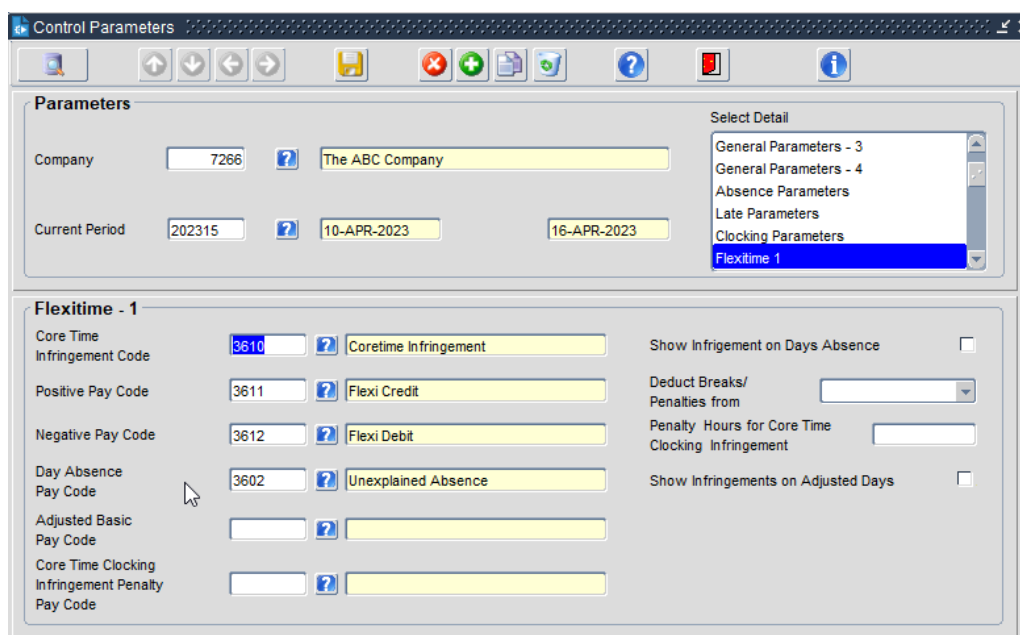

Ensure **Use Package Calculation** and **Use Package Flexitime** are both set to on.

The screenshot shows the 'Control Parameters' window. In the 'Parameters' section, the 'Company' is '7266 The ABC Company' and the 'Current Period' is '202315' from '10-APR-2023' to '16-APR-2023'. The 'Select Detail' dropdown is set to 'General Parameters - 3'. In the 'General Parameters - 3' section, the 'Use Package Calculation' and 'Use Package Flexitime' checkboxes are checked and highlighted with a red box. Other options like 'Apply Max Work Hours for RFA' and 'Apply Default Work Pattern Hours for RFA' are unchecked.

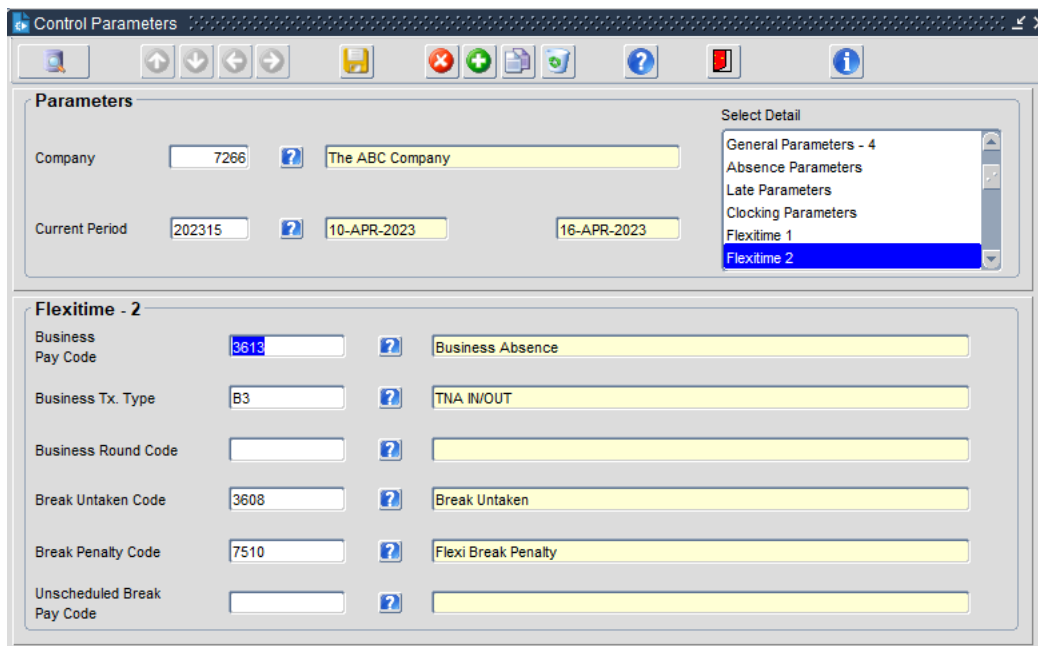

On the **Flexitime 1** section, assign the positive flexitime, negative flexitime and coretime infringement pay codes to the appropriate fields.

If an employee is absent for an entire day, it normally shows as negative flexitime for the default hours. If you wish a full day's absence to show as a different pay code, e.g. unapproved absence, you specify the 'Day Absence Code' as 'Unapproved Absence'. This is recommended. Similarly, on a full day's absence core time infringements normally do not show, click on 'Show Infringement on Days Absence' to change this. This is not normally required.

The screenshot shows the 'Control Parameters' window with the 'Flexitime - 1' section selected. The 'Core Time Infringement Code' is '3610 Coretime Infringement', the 'Positive Pay Code' is '3611 Flexi Credit', and the 'Negative Pay Code' is '3612 Flexi Debit'. The 'Day Absence Pay Code' is '3602 Unexplained Absence'. The 'Adjusted Basic Pay Code' and 'Core Time Clocking Infringement Penalty Pay Code' are empty. The 'Show Infringement on Days Absence' checkbox is unchecked. The 'Deduct Breaks/ Penalties from' dropdown is set to 'Penalty Hours for Core Time Clocking Infringement'. The 'Show Infringements on Adjusted Days' checkbox is unchecked.

On **Flexitime 2**, you can specify the details for Business Absences if required.

2.3. Step 3: Work Patterns

Work patterns for the different types of flexi-day must be set up. The Work Pattern screen allows users to specify the flexi rules for a given day for the various categories of FlexiTime workers in the organisation. These rules will be applied to the in & out times on the appropriate days to allow CoreTime to generate the precise FlexiTime calculations. The modelling process primarily tries to capture such things as default hours, flexi start time, flexi end time, break start and end times, coretimes and lapsed times where flexi calculation do not apply. Ensure **Flexi Time Pattern** and **Core Time Violations** are both marked on.

Generally, the majority of Work Patterns are created at system installation, and it is only when work practices change that users are required to update this information. The majority of the relevant flexi data is maintained on numerous different blocks. Example: *General* and *FlexiTime Hours* selections. Refer to the sample pattern below.

In a flexitime pattern there are three types of time range:

Lapsed - Time worked in this time range does not contribute to your total hours in the day.

Core Time - The hours during which you must be present.

Normal - Flexible working hours.

Work Patterns

General Details

Code: FLEXI FlexiTime Sample 1

Default Pay Code: 1005 BASIC HOURS

Default Overtime Code: 3601 Extra Hours Worked

Default Hours: 8.00

Default Start Time: 08:00

Default End Time: 18:00

Dormant: ☐ Retail Calculation: ☐

Flexi-Time Time Ranges

Seq. No.	Start Time	Grace Late	Grace Early	End Time	No. of Hours	Round Code	Min. in Thresh.	Pay Code	Description	Type
1	06:00			08:00			?	3601	Extra Hours Worked	Normal
2	08:00			10:00			?	1005	BASIC HOURS	Normal
3	10:00			12:00			?	1005	BASIC HOURS	Core Time
4	12:00			14:00			?	1005	BASIC HOURS	Normal
5	14:00			16:00			?	1005	BASIC HOURS	Core Time
6	16:00			18:00			?	1005	BASIC HOURS	Normal
7	18:00			06:00			?	3601	Extra Hours Worked	Lapsed

2.3.1. Create a Flexi Work Pattern:

1. Select the **System Params** Menu and then select the **Work Patterns** option.
2. Enter a Work Pattern Code or select from the List of Work Patterns
3. Fill in the **General Details** regarding an individual work pattern:

Field	Description
Pattern Code & Name	Code and description to identify the pattern.
Default Time Code	Standard (Normal) Hours code from list of values selection.
Default Overtime Code	Overtime or Extra Hours code from list of values selection.
Default Hours	Enter the day duration in decimal format, for example 7 and a 1/2 hour day is recorded as 7.50.
Default Start	Enter Official Start & Earliest Times for the day.
End Times	Enter Official End.
Earliest Start Time	Earliest Times for the day.

Field	Description
Rest Pattern	Click On if pattern is to be identified as a rest pattern i.e. day off.
Flexi-Time Pattern	Click On if pattern is to be identified as a FlexiTime pattern.
CoreTime Violations	Click On if CoreTime violations are to be generated

- Click on the **FlexiTime Hours** selection. Fill in the necessary details for the relevant time bands:

Field	Description
Sequence Number	Day calculation order sequence number.
Start Time & End Time	Time Band Start & End Time.
Time Code	Enter the appropriate time code for the time band start & end time.
Type	Enter the Time Band Type e.g. Normal, Core Time, Lapsed.

- Click on the **Breaks** selection. Fill in the necessary information:

Field	Description
Sequence Number	Breaks Order sequence.
Type	Enter break type Variable or Fixed duration.
Start Time & End Time	Break Start & End Time.
Duration	Break Duration time in minutes.
Must Clock Before/After	Start & End Time before break is deducted on part day work.
Penalty	Time deduction penalty for not clocking breaks.

The screenshot shows the 'Work Patterns' application window. The 'General Details' section includes fields for Code (FLEXI), Default Pay Code (1005), Default Overtime Code (3601), Default Hours (8.00), Default Start Time (08:00), Default End Time (18:00), and Dormant (unchecked). There are also checkboxes for 'Retail Calculation' and 'FlexTime Sample 1'. The 'Breaks' section is a table with columns: Seq. No., Type, Start, End, Duration, Tolerance, Must Clock Before / After, and Penalty. The first row is highlighted with a blue selection bar. To the right of the table is a vertical list of buttons labeled 'Extra...'. A dropdown menu is open on the right side of the window, showing options: General, Standard Hours, Breaks (selected), Flexitime Hours, Alternate Patterns, Bonus Payments, Premiums, Misc. Options - 1, Misc. Options - 2, and Misc. Options - 3.

Seq. No.	Type	Start	End	Duration	Tolerance	Must Clock Before / After	Penalty
1	Variable	12:00	14:00	00:30		12:00 14:00	01:00
2

6. **Save** Changes.

2.4. Step 4: Shift Types

A shift type needs to be created that uses the new flexitime work patterns. This is setup the same as your standard shift types.

2.5. Step 5: Employees

Employees should then be assigned to this new shift type, either by changing the default shift type for the work group, creating a new work group, or changing the shift type for individual employees.

3. Calculation of Flexitime

Based on the employee's clockings, the total time in work is calculated. This total time is then compared against the default hours on the work pattern. If the total exceeds the default hours, the difference is written at the positive flexitime pay code. If the total is less than the default hours, the difference is written at the negative flexitime pay code.

Any time worked in a 'lapsed' time frame does not contribute towards the total time in work.

Refer to the sample clockings below, which are based on the work pattern on the previous page.

- **Monday:** Worked a standard day – 8 hours basic.
- **Tuesday:** Worked 8.30 hours – giving 30 minutes positive flexitime.
- **Wednesday:** Worked 7.30 hours – giving 30 minutes negative flexitime.
- **Thursday:** Worked 8.30 hours, but 30 minutes is in a Lapsed time frame (6am – 8am) - this 30mins is generated as overtime based on out pattern.
 - Also, the person did not clock out for lunch, so the 30-minute break plus the 1hr penalty (specified on the pattern) is also deducted. So, total time in work = 6 hours, giving 2 hours negative flexitime.
- **Friday:** The Employee Started & Finished as normal but left for 15 minutes during the core time (the clock times are also marked with a 'C'). Worked 7.45 hours – giving 15 minutes negative flexitime.

4. Flexitime Balance

A balance can be setup on the system to keep an up-to-date total for an employee's flexitime hours. This would be a *Maintain Balance Only* balance, which would be affected by the positive and negative flexitime and flexi leave pay codes.

The balance calendar is created to reflect rules in place in your organisation, for example, how long is the flexitime *accounting period*, e.g. four-weekly/monthly, is there a limit on the number of hours you can carry from one month to the next, etc. This detail is specified in the *End of Period Limits*.

The relevant employees are then activated on the new flexitime balance, after which all the standard balance enquiries/reports are available for use.
