1. Overview

1.1. Purpose of the Guide

This guide is to provide an overview of the alternate 'lite' calculation available for WFM Roster solutions. This document runs through:

- How the calculation works
- Limitations of the calculation
- What configuration is required to allow the calculation to work?

1.2. Introduction

As part of the migration to Portal in v23/24, an alternate attendance calculation was developed for WFM Roster, mostly to provide a solution to the clients who have patterns that constantly change. This is a very light calculation and only uses some elements of the standard calculation.

1.3. Pre-Requisites

Employee must be on Roster (on a Team Area) before they can use the Roster Calculation to calculate their hours.

1.4. Benefits of Retail Calculation Solution

A traditional roster solution requires a significant number of Work Pattern reference data to be set-up as part of the build to cater for varying start/end times, overtime rules etc. The 'lite' solution requires only a handful of patterns, assuming a basic Overtime calculation is to be deployed.

- Reduced complexity to improve project completion duration.
- Significantly less data migration required as part of the build.
- Less maintenance for BAU.
- Cost of Roster functionality suitable Limitations.
- Lite calculation means the full breadth of WFM calculation is unavailable to the customer.

2. How it Works

If an employee is working multiple patterns in the day or working adjoining patterns PeopleXD will complete the below:

Exception Management

- Checks if the employee has clocked in/out late for the day.

Attendance

- Generates the default hours for the day and will generate the late and early out exceptions in addition to the exceptions.
- If patterns are adjoining employee will not need to clock per pattern, the system will take the first clock and the last clock time to calculate the day e.g. pattern 1 - 09:00-13:00 pattern two 13:00 to 19:00.
- If patterns are not adjoining the employee will need to clock per pattern e.g. pattern 1 - 09:00-13:00 pattern two 16:00 to 19:00.

Breaks

- If there are breaks scheduled the system will calculate the total breaks for the day. If the employee has clocked out throughout the day more than the specified time for the day a break exception is raised.
- A grace period can be added to the breaks depending on the number of breaks in a day e.g. 1 break – grace period of 5 minutes, two breaks grace period – 8 three breaks grace period of 10 minutes.
- If the break untaken pay code is configured and the employee does not clock for a break the break untaken code will calculate for the duration of all breaks on the day.
- The pattern does not expect employees to clock to the actual break time. Breaks can be taken all at once or multiple clockings throughout the day once the duration does not exceed the total duration and grace period.
- If an employee does not take their full break duration no exception is raised, and the full duration will be deducted from the day.

Note: Customers will not have the ability to roster employees on the same pattern multiple times in the one day. There is a restriction that each pattern can only be used once for an employee on the day. For example, if BASE1 is standard retail work pattern, BASE2 (a copy of BASE1) would be required to allow rostering twice in single day. The pattern will calculate for 4 hours before the pattern start time and 4 hours after the pattern end time. – This option will be parametrised so the user can change this duration.

2.1. Multiple Patterns

If an employee has an adjoining pattern on the day, (start time of the second pattern is the same as the end time on the first pattern) the system will try to logically create one pattern based on the pattern sequences assigned. The pattern will be logically created by taking the:

- Before shift row on the first pattern.
- Working time row from the first pattern.
- Working time row from the second pattern.
- After shift row from the second pattern.
- Breaks from both patterns will be added to the pattern where the employee can take the breaks any time between the start time of the first pattern and end time of the second pattern.

2.2. Clockings

The Roster Lite/Retail Calculation is immediately enabled as soon as the Rostering Calculation Method parameter on the employee or Work Group is set to **Retail**. Once active, all automatic clockings will be tagged with the employee's scheduled pattern and a roster id. Any automatic clockings automatically trigger an update to populate the following columns on **CT_CLOCKING**.

Column	Notes
Calculation_work_pattern	Scheduled pattern when clocking occurs. If two patterns allocated for the day, populates relevant pattern
Roster_id	Unique roster id to cater for Roster Lite calculation

 **Note:** If switching from traditional to Retail calculation, please be aware of knock-on impact of changing roster calculation method to **Retail**. For example, any open WFM periods with clockings not tagged with CALCULATION_WORK_PATTERN may result in Unexplained Absences calculating overnight. **Best practice is to agree a cut-off period when to apply. For example, use traditional clockings until X date, enable Roster Retail calc for Work Groups from Y date.**

3. Absence Management

A full-day absence will be recorded as per the duration on the Primary pattern if an employee is rostered to work. If unrostered booking is being used, full-day absences will calculate as per the value from the employee's roster contract.

3.1. Absence Scenario – Clocking on a full-day absence

If an employee clocks in while on a full day absence the below will calculate. These will need to be manually amended before sending to payroll.

- Absence for the duration of the day
- Basic Hours for the duration of the day
- Late and early out exceptions

3.2. Absence Scenario – Clocking on a part-day absence

If a part day absence is booked the roster should be updated to reflect the hours scheduled to be worked.

For example, if an employee was rostered to work from 09:00 to 17:00 and books 3 hours Annual Leave (AL) the client should update the roster for the employee to start at 12:00 to 17:00. The system will calculate:

Pay Code	Attendance
Annual Leave	3HRS
Basic Hours	5HRS

If the client does not update the pattern to reflect the hours, the client is working this may have implications on Payroll e.g. the system would calculate:

Pay Code	Attendance
Annual Leave	3HRS
Basic Hours	5HRS
Late	3HRS

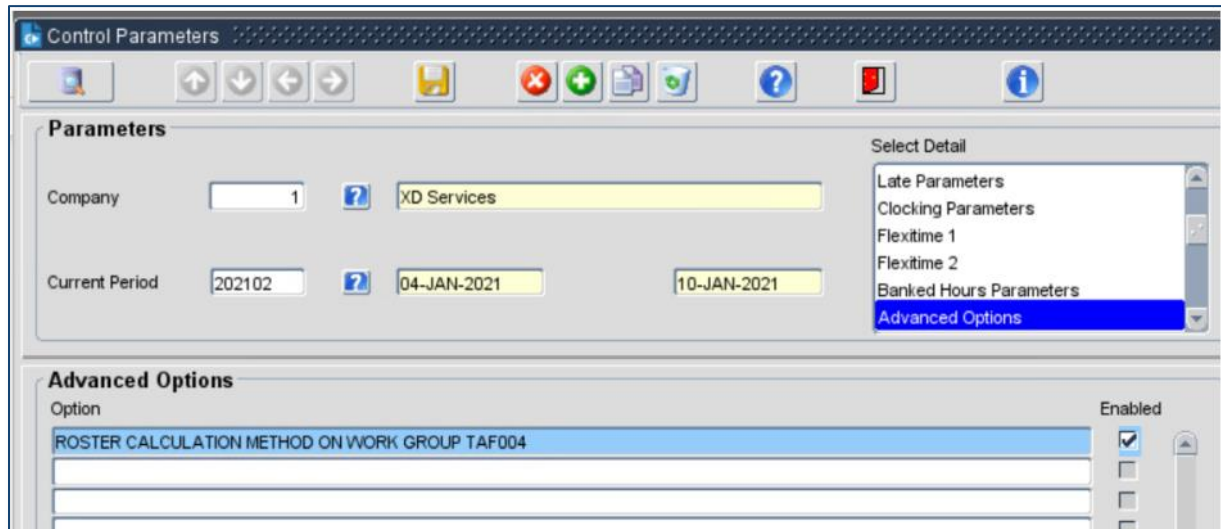

Note: In the following circumstances, AL will only be applied to the primary pattern:

- If employee has AL booked for 1 day and the employee is on two adjoining patterns (09:00-13:00 and 13:00 – 17:00)
- If an employee has AL booked for 1 day and the employee is on two patterns not adjoining (09:00-13:00 and 17:00-20:00)

4. Configuration

4.1. Work Groups

The Rostering Calculation Method option is not visible on the work group screen as part of the out-of-the-box solution. To view, the user will need to switch on the following Control Parameters advance option in Back Office: **ROSTER CALCULATION METHOD ON WORK GROUP TAF004**.

To configure the calculation for a group of employees the Rostering Calculation Method on the work group must be marked as **Retail**. Once switched on, the new calculation includes all employees in the work group. To do this follow the steps below:

1. From the **WFM Admin Dashboard**, select **WFM Configuration**
2. Search for and select **Work Groups**
3. Choose the Work Group you wish to apply the Roster Calculation Method to and from the 3-dot menu select **View/Edit Work Group**
4. From the **General Parameters** screen scroll to Calculations
5. Select **Retail** from the drop-down menu under **Roster Calculation Method** field
6. Click **Save**

WFM: Roster Calculation (Retail Calc) – User Guide

The screenshot displays the 'Work Groups' configuration page for 'Work Group 2 7264'. The left sidebar contains a menu with options: General Parameters (selected), Payment Rules, Default Payroll Hours, Group Codes, Trigger Points, Extra Hours Recoding, Absence Contract Days, and Advanced Config. The main content area is titled 'Calculation' and includes several settings:

- Current Work Group:** Work Group 2 7264
- Search:** A search bar with a magnifying glass icon.
- Monthly:** A dropdown menu.
- Balance Interface:** A dropdown menu.
- Sign Off not required for Payroll:** A toggle switch.
- Calculate Default Hours:** A dropdown menu set to 'No'.
- Calculate Clockings:** A toggle switch.
- Minimum In Hours:** A dropdown menu.
- Working Time Group:** A dropdown menu set to 'Retail - DO NOT CHANGE'.
- Allow Generation of Default Clocks:** A toggle switch.
- User Defined Calendar Group:** A toggle switch.
- MGR: Rollback Weeks for Data Entry:** A dropdown menu.
- EMP: Rollback Weeks for Data Entry:** A dropdown menu.
- Team Scheduler Timesheet Template:** A dropdown menu.
- Declan Manager Templates:** A dropdown menu.
- Rostering Calculation Method:** A dropdown menu highlighted with a red box, set to 'Retail'.
- Deduct Absences Retail Calculation:** A toggle switch.
- Time Template:** A dropdown menu.
- Run Nightly Planned Cost:** A toggle switch.

At the bottom right, there is a green 'SAVE' button. The footer of the page includes the 'access PeopleX' logo.

4.2. Work Patterns

Work Pattern – Standard Hours

Patterns must be set-up with 3 rows:

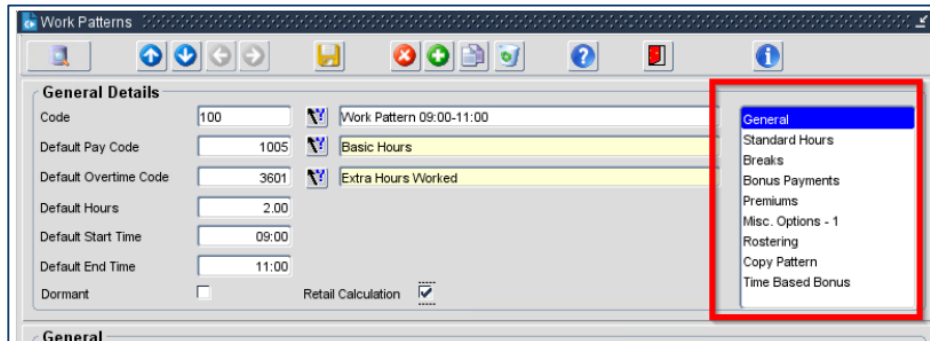

- one from before the base hours on the shift begins
- one to cover standard base hours
- one row for after the base hours on the shift

The screenshot shows the 'Work Patterns' window. The 'General Details' section includes fields for Code (BASE), Default Pay Code (1005), Default Overtime Code (3601), Default Hours (4.00), Default Start Time (09:00), Default End Time (13:00), and Dormant (unchecked). The 'Standard Hours' section is a table with columns: Seq. No., Start Time, Late Grace, End Time, No. of Hours, Rounding Code, Min. in Thresh., OT Seq., Pay OFB Code, Description, and Recode to Default. The table contains three rows: Row 1 (Seq. 1, Start 00:01, End 09:00, Description EXTRA HOURS WORKED), Row 2 (Seq. 2, Start 09:00, End 13:00, Description BASIC HOURS), and Row 3 (Seq. 3, Start 13:00, End 00:01, Description EXTRA HOURS WORKED). A 'Retail Calculation' checkbox is checked at the bottom.

An indicator exists to mark a Work Pattern as relevant to the Retail Calculation. This is an aesthetic indicator only, added to guide users.

The screenshot shows the 'Work Patterns' window. The 'General Details' section includes fields for Code (100), Default Pay Code (1005), Default Overtime Code (3601), Default Hours (2.00), Default Start Time (09:00), Default End Time (11:00), and Dormant (unchecked). The 'General' section includes fields for Earliest Start Time (03:00), Overtime Override, and a 'Retail Calculation' checkbox which is highlighted with a red box. The 'General' section also includes checkboxes for Fill Basic Hours (checked), Fill Basic Before Thrs. (unchecked), Rest Pattern (unchecked), Flexi-Time Pattern (unchecked), Core Time Violations (unchecked), and Split Default Hours (unchecked).

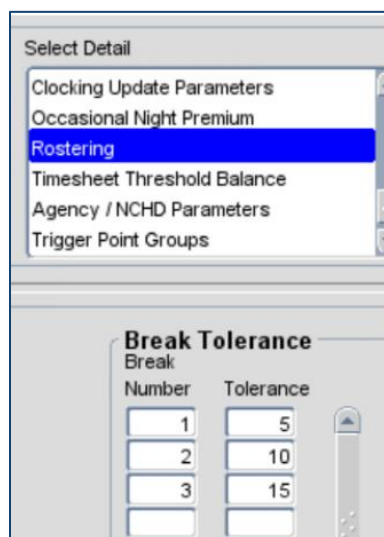

Enabling this option removes access to work pattern features only available to traditional calculation e.g. Always Remove Unapproved Absence.

Note: The work pattern indicator Retail Calculation has no impact on attendance calculation. The Rostering Calculation Method being set to Retail on the Work Group/Person determines the outcome of the actual calculation.

4.3. Set Break Tolerance

Break Grace Period should be populated on the rostering section of the Control Parameters screen. This is set as follows in the 'out-of-the-box' baseline.

4.4. Additional Control Parameters

Option	Detail	Config Screen	Config Param
Rest Day Clocking	Configure a pay code to generate if an employee clocks in on a day that they are not rostered to work. For example, could generate a 'Not Rostered Exception' if the employee clocks on a rest day.	Control Parameters > Absence Parameters	Clocked On Rest Day Pay Code

 **Note:** This is a change to the retail calculation in general and is not specific to WFM - Roster v28: Roster Lite Overview (Retail Calculation) - User Guide Access Limited Distribution Page 16 of 25 For example, could generate a 'Not Rostered Exception' if the employee clocks on a rest day. the Live Calculation.

Option	Detail	Config Screen	Config Param
Early Clocking	Configure a pay code to generate if an employee clocks > X minutes before their rostered start time. For example, could generate a 'Not Rostered – too early' if the employee clocks > 2 hours before their rostered start time	Control Parameters > Absence Parameters	Started Too Early Pay Code/Started Too Early Threshold

 **Note:** This is a change to the retail calculation in general and is not specific to the Live Calculation.

Always Show Absence: ☐

Calculate Hours to Clock Out Time: ☐

Deduct unpaid breaks from Early Out: ☐

4.5. Employee Record

All employees using the calculation should be marked as **Generate Overtime** on **Person Maintenance**.

5. How it does NOT Work

The calculation only uses certain elements of the work pattern configuration.

The following are items of note:

- If the customer is utilising an appointment-driven site (multi-appointment), all contracts for the day must be marked as retail. For example, employee working one appointment on work group 1 and second appointment on work group 2 both work groups must be marked as retail. •
- Rounding of late and early outs is not currently an option.
- Fill basic on the pattern is not applied.
- The calculation has limited Public Holiday functionality, please test fully before trying to calculate a different pay code on a Public Holiday.
- No rounding on basic hours.
- Balances must be tracked in hours – daily balances are not compatible with the calculation.
- For days with absence less than one full day the employee's roster must be updated to reflect the time of the absence in the work schedule. Rosters should show the start time/end times.
- Exceptions are not deducted from the basic hours **May impact OT rates if using the Salary/Shift rule. For example - if employee has contract hours of 39 hours and get salary for this, if employee works 42 hours in the week and has 2 hours late what is sent to payroll is below:
 - 3 hours at the OT rate (rate of 1.5)
 - 2 hours at late (rate of -1)
 - 39 hours not sent to payroll as salary employee
- Employee may get paid higher rate for OT as exceptions (late) are not offset against OT hours.

6. Scenarios

Several attendance calculation examples are available below:

6.1. Unpaid Break Example #1

Multiple breaks in the day where the employee **takes the correct duration**.

WFM item	Detail
Pattern	09:00 – 17:00
Pattern 2	n/a
Default Hours	7hrs 15mins
Break(s)	10:00 – 10:15 (15m) 13:00 – 13:30 (30m)
Clockings	09:00 10:00 10:45 17:00
Basic Hours	7hrs 15mins
Break Exception	n/a

6.2. Unpaid Break Example #2

Multiple breaks in the day where the employee **exceeds the break duration**.

WFM item	Detail
Pattern	09:00 – 17:00
Pattern 2	n/a
Default Hours	7hrs 15mins
Break(s)	10:00 – 10:15 (15m) 13:00 – 13:30 (30m)
Clockings	09:00 10:00 11:00 17:00

WFM item	Detail
Basic Hours	7hrs 15mins
Break Exception	15mins*

*Break exception configured to transfer to payroll.

6.3. Unpaid Break Example #3

Multiple breaks in the day where the Employee **takes less than the break duration**.

WFM item	Detail
Pattern	09:00 – 13:00
Pattern 2	13:00 - 18:00
Default Hours	7hrs 15mins
Break(s)	10:00 – 10:15 (15m) 14:00 – 15:00 (60m)
Clockings	09:00 10:00 11:00 18:00
Basic Hours	3hrs 45mins (Pattern1) 3hrs (Pattern2)
Break Exception	N/A

6.4. Unpaid Break Example #4

Employee rostered to two adjoining patterns.

Multiple breaks in the day where the employee **exceeds the break duration**.

WFM item	Detail
Pattern	09:00 – 13:00
Pattern 2	13:00 - 18:00
Default Hours	7hrs 45mins
Break(s)	10:00 – 10:15 (15m)

WFM item	Detail
	14:00 – 15:00 (60m)
Clockings	09:00 12:00 13:30 18:00
Basic Hours	3hrs 45mins (Pattern1) 4hrs (Pattern2)
Break Exception	15mins*

*Break exception configured to transfer to payroll

6.5. Paid Break Example #1

Multiple breaks in the day, one paid, one unpaid. Clocked to full day.

WFM item	Detail
Pattern	09:00 – 17:00
Pattern 2	NA
Default Hours	7hrs 45mins (paid break incl.)
Break(s)	10:00 – 10:15 (15m) 13:00 – 13:30 (30m paid)
Clockings	09:00 10:00 10:45 17:00
Basic Hours	7hrs 45mins
Break Exception	N/A

6.6. Paid Break Example #2

Multiple breaks in the day, one paid, one unpaid. Employee clocks out for > unpaid break.

WFM item	Detail
Pattern	09:00 – 17:00
Pattern 2	NA
Default Hours	7hrs 45mins (paid break incl.)
Break(s)	10:00 – 10:15 (15m) 13:00 – 13:30 (30m paid)
Clockings	09:00 10:00 10:30 17:00
Basic Hours	7hrs 45mins
Break Exception	N/A

6.7. Paid Break Example #3

Employee rostered to two adjoining patterns. Multiple breaks in the day, one paid, one unpaid.

WFM item	Detail
Pattern	09:00 – 13:00
Pattern 2	13:00 – 18:00
Default Hours	8hrs 45mins (paid break incl.)
Break(s)	10:00 – 10:15 (15m) 13:00 – 13:30 (30m paid)
Clockings	09:00 10:00 11:00 18:00
Basic Hours	8hrs 45mins
Break Exception	N/A

6.8. Paid Break Example #4

Employee rostered to two adjoining patterns. Multiple breaks in the day, one paid, one unpaid.

Employee clocks out > total breaks (paid and unpaid).

WFM item	Detail
Pattern	09:00 – 13:00
Pattern 2	13:00 – 18:00
Default Hours	8hrs 45mins (paid break incl.)
Break(s)	10:00 – 10:15 (15m) 14:00 – 15:00 (30m paid)
Clockings	09:00 12:00 13:30 18:00
Basic Hours	8hrs 45mins
Break Exception	15mins*

*Break exception configured to transfer to payroll

7. Frequently Asked Questions

Several commonly raised queries:

1. Employee has clocked in/out to match their shift but why is Unexplained Absence is calculating?

A work pattern must be attached to each clocking. If the clockings were entered manually the column CT_CLOCKING.CALCULATION_WORK_PATTERN will not be populated. To resolve, assign a work pattern to the clockings via Timesheet Input, then recalculate.

2. Is it possible to assign an employee to two different schedules on the same day?

Yes. However, it is not possible to assign the same work pattern. It is standard to have one BASE work pattern selected as the primary shift and a second similar pattern (BASE2, FLEX etc.) available for assigning a second daily schedule.

3. Can I use the Roster Calculation if my employee is not a roster employee?

No, the Roster calculation should only be used for roster employees who have been assigned a Team Area.
