1. Overview

1.1. Purpose of the Guide

The purpose of this document is to provide a step-by-step guide to setting up and configuration associated with the Workforce Management Roster feature. This document provides guidance on viewing and modifying the different tabs and screens within the workforce management dashboard. The guide goes through the setup required in portal admin screens and explains the parameters that need to be configured for both employees and managers to enable access to the workforce management features. An explanation for the following is provided in this document:

- Overview of roster functionality
- Overview of roster calculation types
- Roster configuration settings/roster links settings

1.2. What is Roster

The *Workforce Management Roster* function ensures your organisation has employees rostered to their shifts in the correct place, at the correct time. This enables your organisation to successfully meet your business needs, therefore, matching business demand with resource supply. Features within the *Roster* function include:

- Roster creation and publishing
- Alerts for under/over staffing, budget variations, breaches of WTD
- Rostered versus contracted hours tracking
- Configurable validation rules
- Absence entitlement tracking and validation
- AutoRostering

It is possible to complete the following actions via Workforce Management Roster:

- Create Roster schedules for Team Area, per roster period.
- Review if an appropriate Roster schedule is in place for your Team Area and the applicable roster period.

- Adjust Roster schedules as necessary, to ensure that the appropriate level of staffing is provided for each day of the roster period.

As well as ensuring that an appropriate level of staffing is in place, the *Roster Details* screen also allows you to ensure the roster is not in breach of organisational rules that have been defined.

- For example, this ensures that employees do not breach their contract hours or the *Working Time Directive*.

 **Note:** It is common to configure Roster as a phase 2 implementation, with a Time & Attendance solution already configured in phase 1. Multiple key decisions made during the configuration of the phase 1 Time & Attendance solution may have a significant impact on the required Workforce Management Roster configuration. Therefore, it is essential to contact your PeopleXD Project Team for configuration guidance.

1.3. Rostering Options

There are a number of roasting options available within the Roster solution. These options are listed below:

- Validation roasting
- AutoRoasting
- Demand based roasting

All *Rostering* options include a single view of *Roster* to include, visibility for employee:

- | | |
|-------------------------|------------------|
| • Working and rest days | • Absences |
| • Time exceptions | • Shift swaps |
| • Contract Hours | • Qualifications |
| • Job Titles | • Departments |
| • Employee Costs | |

All *Rostering* options also include the *Uncovered Shift* feature, allowing:

- the system to highlight last minute resource gaps and recommend replacements.
- shifts to be published onto *Employee Self Service*.

1.3.1. Validation Rostering Overview

For *Validation Rostering*, the employees are assigned a standard *Work Pattern* (cycle shift) in *Workforce Management*, therefore, the employees are already placed on their applicable shift coming into *Roster*. It is then possible to review the employee's shift via the *Roster Details* screen and manually apply *Roster Changes* to the employee shifts if required.

For *Validation Rostering*, staff and resource requirements are configured to be held against the *Team Areas*. A *Roster Dashboard* is available to highlight KPIs such as:

- Over/under staffing based on cycle shifts versus staffing requirements.
- Cost of *Roster* versus budget, to ensure the schedule is accurately costed.
- *Working Time Directive* breaches.

Validation Rostering Employee and Manager Self Service options include:

- MSS *Roster Dashboard* review and reporting.
- MSS *Time Exceptions Management*.
- ESS work schedule review and team absences.
- ESS *Shift Swap*, *Uncovered Shift* acceptance, and *Roster Availability*.

1.3.2. AutoRostering Overview

When *AutoRostering*, the system allows for an automatic *Roster* build process, that is run, based on the *Validation Rules* you have configured. The employees are assigned a *Rest Work Pattern* in *Workforce Management*; therefore, the employees are not already placed on their applicable shift coming into *Roster*.

The system then auto-assigns shifts to employees using the staffing requirements held against the *Team Area*.

To ensure the most appropriate employees are rostered to the applicable shifts, the system uses the full employee profile and *Contract Details* when auto-assigning shifts, to include:

- Job title
- Availability
- Qualifications
- Absence records

- Working time directive
- Contracted Hours i.e. ensuring contract hours are met
- Work permit dates
- Organisational compliance
- Fairness rules e.g. number of weekends worked

AutoRostering Employee and Manager Self Service options include:

- *MSS Roster Dashboard* review and reporting.
- *MSS Time Exceptions Management*.
- ESS work schedule review and team absences.
- *ESS Shift Swap, Uncovered Shift acceptance, and Roster Availability*.
- 'One Click' *AutoRostering* button.

1.3.3. Demand Based Rostering

When *Demand Based Rostering* is in use, staffing requirements are dynamically created using transactional data. Key metrics, such as the examples listed below, are used to automatically create the staffing requirements for a *Team Areas*:

- Sales
- Footfall
- Transactions
- Units
- Deliveries

Base Requirements, such as organisational opening/closing times, can also be used. For *Demand Based Rostering*, the system uses last year's metrics, that have been manually input or interfaced into the system via the *WFM Interface File*, to generate the anticipated demand for the coming weeks.

In addition to this, the system can perform a trend analysis to automatically uplift or reduce the anticipated demand, based on the actual sales over the last number of periods.

This rostering type:

- automatically creates the staffing requirements, removing the need for you to manually change the resource needs during busy and/or quiet periods.

- can integrate with finance and EPOS systems, and data warehouses to interface a feed of data which is used to generate demand.

With *Demand Based Rostering*, the system allows for an automatic *Roster* build process, that is run, based on the demand generated. The employees are assigned a *Rest Work Pattern* in *Workforce Management*; therefore, the employees are not already placed on their applicable shift coming into *Roster*.

The system then auto-assigns shifts to employees using the demand generated and held against the *Team Area*.

AutoRostering Employee and Manager Self Service options include:

- *MSS Roster Dashboard* review and reporting.
- *MSS Time Exceptions Management*.
- ESS work schedule review and team absences.
- *ESS Shift Swap, Uncovered Shift* acceptance, and *Roster Availability*.
- Full visibility of the organisations anticipated demand.
- 'One Click' *Demand Generation*.
- 'One Click' *AutoRostering*.

2. Roster Calculation Types

There are a number of different calculation options that can be used within *Roster*, listed below:

- Standard Calculation
- Standard Calculation – Multi Pattern: Non-clocking
- Roster Retail Calculation
- Retail Calculation – Deduct Exceptions

There are a number of important factors that must be taken into consideration when deciding on a calculation type for your *Roster* configuration, as the *Roster* calculation type implemented is dependent on your organisational needs. Items to consider may include:

- Is *Demand Based Rostering* required?
 - **Retail Calculation Only**
- Are *Split Rules* required?
 - **Retail Calculation Only**
- Is *AutoRostering to Contract* required?
 - **Standard and Retail Calculation**

Note: It is advised to discuss your existing T&A solution configuration and your organisational requirements, with your PeopleXD project team, to ensure the Roster solution configured is optimised to the highest potential of meeting your organisational requirements.

2.1. Standard Calculation

The *Standard Calculation* is used when there is a *Work Pattern* matching every combination of times that employees can work and have the associated calculation rules specified at the *Work Pattern* level. With this calculation type, employees can clock in or have their default hours generated. For example, this calculation type can be used for when employees work on cycle shifts within a manufacturing organisation. Employees can clock in for their shifts and the overnight calculation runs to calculate against their *Work Pattern*.

Note: The *Split Rule* cannot be used in conjunction with the *Standard Calculation*. The *Standard Calculation* ensures a one-to-one mapping with the *Roster Rules* and the employee shift.

2.2. Standard Calculation – Multi Pattern: Non-Clocking

The *Standard Calculation – Multi Pattern* calculation option is only available where employees are not clocking for their shifts. This calculation type ensures that the *Primary Pattern* and *Additional Pattern* default hours are summed together and are generated against the *Primary Pattern Pay Code*.

- Rostered hours are calculated for multi-patterns by summing the default hours specified on each *Primary* and *Additional Work Pattern*. Additional non-contract days are not calculated.
- Premium hours calculated, are taken from the *Primary Pattern* regardless of what is specified on the *Additional Work Pattern*.

The linking of *Team Areas* with *Cost Centres* with the *Multi Pattern* calculation is based on each employee being assigned one *Team Area* per day. If an employee is rostered to work across multiple *Team Areas*, on the same day, the system calculates all hours against the *Cost Centre/Team Area* associated with the *Primary Pattern* for that day.

The following *Absence* scenarios should be considered, regarding the use of *Standard Calculation – Multi Pattern*:

- Full day *Absences*, where *Primary* and *Additional* patterns are entered, use the default hours for all the *Primary* and *Additional* patterns.
- Additional non-contract hours are not calculated for default hours or *Absences*.
- Part day *Absences* calculate the duration of the absence only. However, do not calculate the standard hours segment when using the *Primary* hours or a combination of *Primary* and *Additional* hours.
- The calculation of company holiday hours remains unchanged.

- The calculation of partial *Absences* remains unchanged. The duration of the part day absence calculates, and the standard hours do not calculate for the day.
- All employee *Balances* are tracked in hours.

Note: The following considerations should be considered for the configuration of the *Standard Calculation – Multi Pattern* calculation option:

- The default *Pay Code* should be the same on all *Work Patterns*. For example, Basic Pay.
- The *Extra Shifts* indicator on the *Roster System Params - Miscellaneous* tab, screen must be enabled.
- This configuration does not support the clocking calculation for *Work Groups* or employees.

2.3. Retail Calculation

The *Retail Calculation* option allows for two *Work Patterns* to be rostered in the day and allows for employees to clock in and out for their shifts daily. With this calculation option, full default hours are generated for the duration of the day, along with any relevant *Time Exceptions* that are generated in addition to these default hours.

The following table details how the *Retail Calculation* works with different system scenarios:

Scenario	How it Works
One Pattern per Day	The system: • Checks if the employee has clocked in late for the day. • Checks if the employee has clocked out late for the day. • Generates the default hours for the day and generates any late in or early out <i>Time Exceptions</i>. If <i>Work Patterns</i> are adjoining: • The employee does not need to clock per pattern.

Scenario	How it Works
	- The system takes the first clock and the last clock time to calculate the day. For example, pattern 1 - 09:00 to 13:00 pattern two 13:00 to 19:00 If <i>Work Patterns</i> are not adjoining: - The employee needs to clock per pattern, for example: Pattern 1 – 09:00 to 13:00, Pattern 2 – 16:00 to 19:00 - You do not have the ability to roster employees on the same Work Pattern multiple times in the one day. There is a restriction that each pattern can only be used once for an employee on the day. - The Work Pattern can calculate for a specified number of hours before the pattern start time and for a specified number of hours after the pattern end time. - The specified number of hours is configurable via the Base & Rest Work Patterns section.
Breaks	If there are breaks scheduled, the system calculates the total breaks for the day. If the employee clocks out, throughout the day, more than a specified time for the day, a break Time Exception is raised: - Grace periods can be added to the total break times, this can be dependent on the number of breaks in a day, for example: 1 break grace period of 5 minutes. 2 breaks grace period 8 minutes. 3 breaks grace period of 10 minutes. If an <i>Untaken Break Pay Code</i> is configured, and employees do not clock for their break, the <i>Untaken Break Pay Code</i> calculates for the duration of all breaks on the day.

Scenario	How it Works
	The Work Pattern does not expect employees to clock to the actual break time. Therefore, breaks can be taken all at once or multiple clockings throughout the day once the duration does not exceed the total duration and grace period. However, if an employee does not take their full break duration, no <i>Time Exception</i> is raised, and the full duration will be deducted from the day.
Multiple Pattern Breaks	If an employee has an <i>Adjoining Work Pattern</i> on the day, the system tries to logically create one <i>Work Pattern</i> based on the pattern sequences assigned. This pattern is logically created by taking the following: ○ Before shift row on the first pattern. ○ Working time row from the first pattern. ○ Working time row from the second pattern. ○ After shift row from the second pattern. Breaks from both patterns are then added to the one pattern. The employee can then take the breaks any time between the start time of the first pattern and end time of the second pattern.
Full Day Absences	The full day absence duration is recorded on the <i>Primary Pattern</i>, if an employee is rostered to work. If Unrostered Booking is being used, full day absences calculate to the value of the employee's roster contract. If an employee clocks in while on a full day absence, the below calculates: ○ Absence for the duration of the day. ○ Basic Hours for the duration of the day. ○ Late and Early out Time Exceptions.

Scenario	How it Works
	 Note: This calculation may require manual amending before the hours are transferred to payroll.
Part Day Absences	If a part day absence is booked, the <i>Roster</i> should be updated to reflect the hours the employee is working. For example, if an employee was rostered to work from 09:00 to 17:00 and books 3 AM hours <i>Annual Leave</i>, you must update the roster for the employee to start from 12:00 to 17:00. The system then calculates: ○ 3 hours <i>Annual leave</i> ○ 5 hours <i>Basic</i> If you do not update the <i>Work Pattern</i> to reflect the hours the employee is working this may have implications on <i>Payroll</i>. For example, the system then calculates: ○ 3 hours Annual Leave ○ 8 hours Basic ○ 3 hours Late
Working Time Directive	The <i>Retail Calculation</i> option always generates the default hours when calculating values. However, <i>Basic</i> hours may not always reflect the hours an employee has worked for the <i>WTD</i> calculation.

2.3.1. Retail Calculation Considerations

The *Retail Calculation* option does not use all elements of the Work Pattern configuration; therefore, you must ensure that the *Retail Calculation* caters for the required configuration you are applying to the *Work Pattern*.

- Multi Appointments are not supported in the Retail Calculation.
- The *Rounding* of basic hours, late in and early outs is not possible.
- *Fill Basic* on the *Work Pattern* is not applied.
- *Balances* must be tracked in hours.
- Daily Balances are not compatible.

- For days with absence less than one full day, the employee's *Roster* must be updated to reflect the time of the absence in the work schedule.

Time Exceptions are not deducted from the basic hours. This may impact overtime rates if using the Salary Rule. For example, if an employee has contracted hours of 39, and gets a salary for this, then works 42 hours in the week and has 2 hours late, the following is sent to payroll:

- 3 hours at the overtime rate.
- 2 hours late.
- 39 hours not sent to payroll; they are a salaried employee. Therefore, the employee may get paid a higher rate for overtime, as the *Time Exceptions* (late) are not offset against overtime hours.

2.4. Retail Calculation – Deduct Exceptions

The *Deduct/Reduce Exceptions* additional option for *Retail Calculation* ensures the breaks and *Time Exceptions* are included in the calculation of basic hours, against the *Team Area*. This feature reduces the basic hours, where there is a *Time Exception* present, that is affecting these hours within the day.

Therefore, when the *Retail Calculation* is configured, and *Deduct/Reduce Exceptions* additional option is enabled, the *Time Exceptions* are deducted from the basic hours.

Scenario	How it Works
Breaks	Breaks in the Retail Calculation work by allowing an employee to clock in and out at any time, once the employee does not exceed the break duration. The break is then deducted from the time slot it is scheduled in. An issue can arise where an employee clocks for breaks across multiple <i>Team Areas</i> in a day, as the break is deducted from the <i>Team Area</i>, the break is scheduled on rather than when the break was taken.

Scenario	How it Works
	To resolve this issue, when the <i>Deduct/Reduce Exceptions</i> parameter is enabled, the break is then deducted from the slot when the break is taken. • Employees can still clock out for breaks at any time throughout the day, once the time clocked out does not exceed the break duration for the day. • If the employee clocks for a duration less than the full duration of the day, the difference is deducted from the Team Area in which the break is scheduled. • If an employee clocks for a duration greater than the duration of the breaks, the difference is deducted from the <i>Team Area</i> based on the last scheduled <i>Team Area</i> for the employee.
Public Holidays	Where shifts are rostered over midnight and are falling over a <i>Public Holiday</i>. A premium is applied to the hours that fall on the Public Holiday. For example, if a Public Holiday falls on the 2nd of July: • If the employee is rostered on the 1st of July into the 2nd of July 20:00pm to 08:00am. ○ The hours worked from 00:00am – 08:00am have the Public Holiday Premium applied. • If the employee is rostered from the 2nd of July into the 3rd of July 20:00pm – 08:00am. ○ The hours worked from 20:00pm – 00:00am have the Public Holiday Premium applied.

To enable the *Deduct/Reduce Exceptions* feature, a parameter must be switched on for the changes to the *Retail calculation* to action. This is configured at Work Group level. To do this:

1. Navigate to the *WFM Admin Dashboard* and select **WFM Configuration**.
2. Search for and select the **Work Groups** tile.
3. Expand the 3-dot menu of the relevant work group and select **View/Edit Work Group**.

4. Turn on the **Deduct Absences Retail Calculation** toggle.
 - The parameter is only available for selection if the *Rostering Calculation Method* is set to **Retail**.
5. Click **Save**.

The screenshot shows the 'Test 1234' configuration page in the WFM Admin Dashboard. The left sidebar lists various configuration categories, with 'General Parameters' selected. The main content area displays several settings:

- Current Work Group:** Test 1234
- Search:** A search bar with a magnifying glass icon.
- Allow Generation of Default Clocks:** A toggle switch that is currently turned on.
- User Defined Calendar Group:** A toggle switch that is currently turned on.
- MGR: Rollback Weeks for Data Entry:** A dropdown menu.
- EMP: Rollback Weeks for Data Entry:** A dropdown menu.
- Rostering Calculation Method:** A dropdown menu set to 'Retail'.
- Deduct Absences Retail Calculation:** A toggle switch that is currently turned on.
- Retail Deduct Clocked Breaks Only:** A toggle switch that is currently turned off.
- Run Nightly Planned Cost:** A toggle switch that is currently turned off.
- Time Template:** A dropdown menu.
- Team Scheduler Timesheet Template:** A dropdown menu.
- Use Outside Grade Working:** A toggle switch that is currently turned off.

At the bottom right, there is a green 'SAVE' button. The 'access PeopleXD' logo is visible at the bottom center.

By default, if this option is enabled if a row has the same *Pay Code*, *Team Area*, *Hours*, or *Status*, these rows are summed together rather than being displayed multiple times. If the *Pay Codes* are to be displayed on separate rows, this is controlled by switching on the *Do Not Amalgamate in Calc* indicator at *Pay Code* Level.

To enable the *Do Not Amalgamate in Calc* indicator:

1. Go to Backoffice > CoreTime/CoreRoster > System Params > Pay Codes.
2. Enter the applicable Pay Code.
3. Select **General – 3**.
4. Tick the Do Not Amalgamate in Calc. indicator.
5. Click the button to save.

[illegible]

3. Team Area and Structure Overview

3.1. Team Area Overview

A *Roster Team Area* is created to logically group similar employees working within the same team. Teams within the *Team Area Structure* should ideally match the *Work Groups* defined in *Workforce Management*. For example, *Team Areas* might be based on the different departments in a retail store such as: Menswear, Womenswear & Household.

Depending on the needs of each Team Area, different rules and criteria can be assigned to each to ensure the team is adequately resourced. Roster allows for rules to be assigned at *Team Area* level, ensuring variation of requirements for each team.

The *Team Area Configuration* screen can be used to create the *Team Areas* that appear within Roster. This screen allows you to define, the roster criteria at a team level, for example:

- Area Rules
- Validation Rules
- Budget
- Staff Requirements, etc.

These criteria are then applied to the *Team Area*, including any possible sub-teams in the organisational hierarchy. *Team Area* configuration must be assigned at team level for employees to be added to each team, during rostering. Shift dependencies, such as *Area Rule* and *Validation Rule* templates can be attached to the individual *Team Areas* with a date effective.

3.2. Structure Hierarchy Overview

The *Team Area Structure* represents the organisational hierarchy within your organisation. There are three significant elements that must be considered before creating *Team Areas*.

- Levels
- Team Area Code Structure
- Naming Convention

Note: *Team Areas* provide the foundational building blocks for *Roster*. Designing an accurate hierarchy is critical for configuration.

3.2.1. Team Area Levels

Roster allows for any number of Teams within the hierarchy, yet it is standard practise to limit *Team Area* levels to 4 or 5 to ensure the following:

- Optimum user experience
- Reduction in maintenance

The following table provides an example *Team Area Structure* breakdown. Four hierarchical levels have been agreed on for the example storage company. The organisation is broken down as follows:

Level	Title	Explanation
1	Group	This is the highest level. Only 1 <i>Team Area</i> exists at this level.
2	Company	The Group is overall owner of two different types of companies. Store and Logistics. Therefore, employees either work in Store or Logistics, not both.
3	Location	This level represents the actual site. For example, Store - London or Logistics - Leeds.
4	Team Area	This level represents the areas within a site. For example, there are 6 sub-departments within Store: • Storage Floor Team • Goods Inward/Outward Team • Security Team • Load Area Team • Heavy Goods Team • Safe Team

Note: It would have been possible to add another level between the *Company* level and *Location* level to cover *Region*, i.e. UK/Ireland or South/East/West/North, however, for the purposes of the Store example, the levels have been kept to 4.

3.2.2. Area Code Structure

Once the hierarchical levels have been confirmed, the *Team Area* coding conventions can be agreed.

Note: The *Team Area Code* can be a max of 6 characters.

The following table outlines the example *Area Code Structure* that has been defined for Store:

Level	Team Area Code	Description
1	S	Store Group
2	SS SL	Store Logistics
3	SS001 SS002 CS003 CL004 CL005	Store London Store Manchester CoreStore Liverpool CoreLogistics Brighton CoreLogistics Leeds
4	CS001A, CS002A, CS003A CS001B, CS002B, CS003B CS001C, CS002C, CS003C CS001D, CS002D, CS003D CS001E, CS002E, CS003E CS001F, CS002F, CS003F CL004G, CL005G	Storage Floor Team Goods Inward/Outward Team Security Team Load Area Team Heavy Goods Team Safe Team Planning Team

3.2.3. Naming Convention

It is important to note that the PeopleXD *Roster* screens display *Team Area* descriptions only, and do not display reference codes. It is not essential to include the *Area Code* in your *Team Area* description, however, for searching and referencing purposes, it is recommended to include the *Area Code* in the *Team Area* description.

The below table outlines 3 different naming conventions for your Team Areas. Example 2 displays the *Team Area* name along with the *Area Code* in the *Team Area Description*. This is the recommend naming convention for your *Teams Areas*.

Example	Example Description	Team Area	Team Area Description
1	Team Area only	CS001A	Storage Floor Team
2	Team Area with reference code	CS001A	Storage Floor Team (CS001A)
3	Parent Team Area, Team Area, and reference code	CS001A	London Storage Floor Team (CS001A)

4. Roster Parameters

Roster parameters allow you edit the data available to users on rostering screens to suit your organisational requirements. For example, you can set:

- Employee details available in roster details.
- Additional information available in roster details.

These can be accessed via **Admin Settings** on the *Admin Dashboard*. The table below details some sample *Admin Settings* that can be configured for *Roster* solutions.

! Note: There are 4 mandatory Admin Settings, these are detailed in the below table. This is not an extensive list of available Roster Admin Settings. To ensure your Roster solution is best optimised to your organisational requirements, contact your PeopleXD Project team.

Parameter	Setting	Detail
cp_roster_installed	Y	Mandatory for all Roster solutions.
cp_roster_rep_dlines	Y	Mandatory for all Roster solutions.
cp_roster_lev_node	5	Mandatory to set to lowest level for all Roster solutions e.g. if 5 hierarchy levels, set to 5.
cp_roster_active	Y	Mandatory for all Roster solutions.
cp_roster_show_diff	Y	Roster Details – displays difference between contract hours and rostered hours.
cp_roster_detcol5	Difference	Roster Details – in conjunction with cp_roster_show_diff.
cp_roster_avail	Y	Availability - toggles employee view of availability. If set to 'Y' displays the options Number of Sundays, number of late nights and available for late nights.
cp_roster_pubholiday	N	Availability – Public Holiday does not work with Retail calc so option should not be available.

Parameter	Setting	Detail
cp_my_approvals_sswap	Y	Shift Swap – Enable to allow employees to submit shift swap requests.
cp_hide_swp_app_checkbox	N	Shift Swap – Ensures Shift Swaps can be filtered on My Approvals widget.
cp_roster_show_swap	Y	Roster Details - Allows a manager to swap shifts via Change Roster.

p_alw_unrost_on_rest_day	Y	Unrostered Booking.
cp_roster_unc_order	D	Uncovered Shifts – Order by days.

5. Roster Configuration Settings

Roster configuration settings are used to setup and maintain your roster settings. We will walk you through each of the option available. Once configured some of the options can then be assigned to the applicable Team Area.

You can access these settings in two areas of PeopleXD:

1. The **WFM Configuration** tab on the *WFM Admin Dashboard*.
2. The **Roster Links** widget within the *Admin Dashboard*.

5.1. Roster Dashboard Order

The workforce management dashboard displays several options which users can select. The options available will be based on the User Security menu options attached to the employee.

Roster Dashboard Order allows a site to choose which of the screens it wishes to prioritise. This may vary from site to site depending on the daily and weekly tasks performed by a manager or an admin.

The screen order can be changed from the *default* to one which is more suitable for the site. The *default button* allows you to reset the screens to their original order, should there be a change in priority, or any errors made.

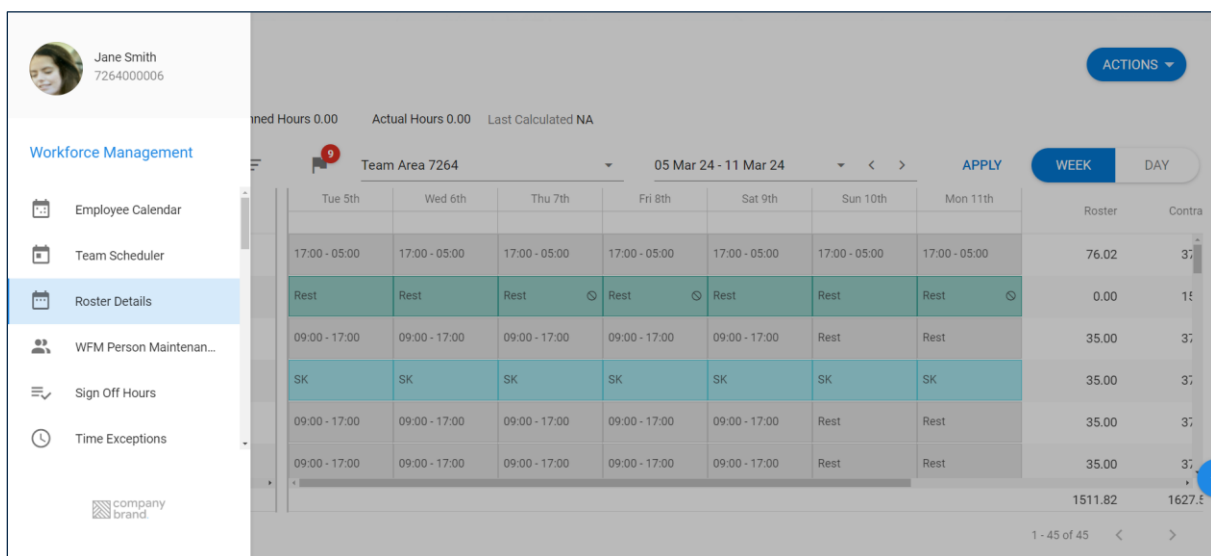

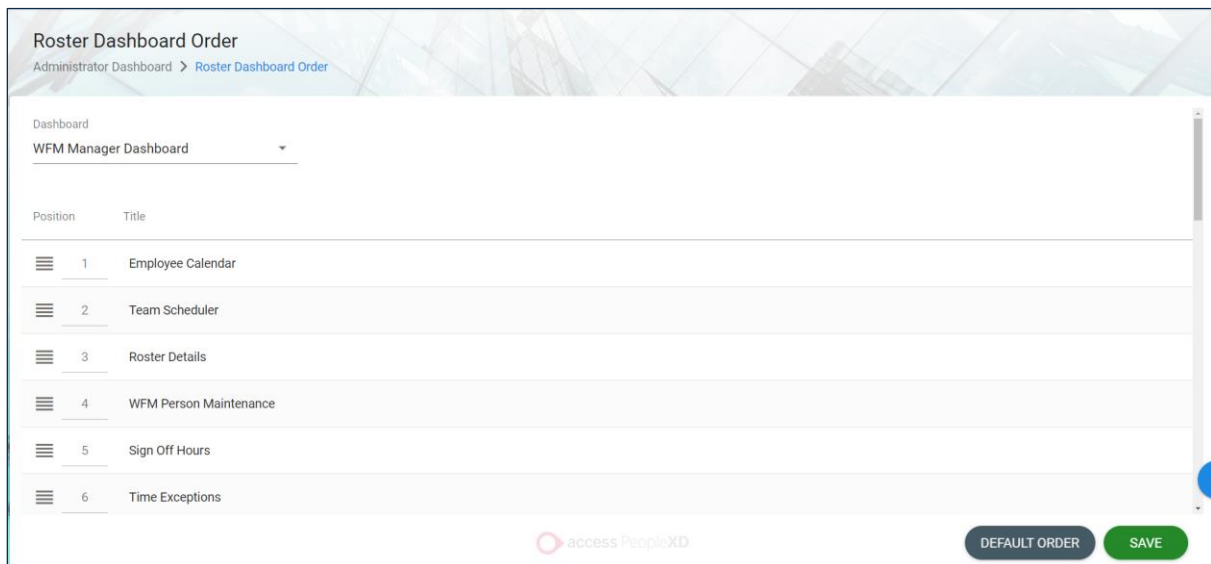

To change the order of a dashboard, from the *Admin Dashboard*:

1. Quick jump to *Roster Links* open **Roster Dashboard Order**.
2. Select the dashboard you wish to order from the *Dashboard* dropdown.
 - There are four options available, two specifically relating to Person Maintenance:

Dashboard	Details
WFM Admin Dashboard	This controls the order of the screens through the WFM Admin Dashboard.
WFM Manager Dashboard	This controls the order of the screens through the WFM Manager Dashboard.

Dashboard	Details
Person Maintenance Admin	Controls the order of the screens from the Person Maintenance screen when accessed from the WFM Admin Dashboard.
Person Maintenance Manager	Controls the order of the screens from the Person Maintenance screen when accessed from the Workforce Management Dashboard.

3. Drag and drop, or edit the position number, to order the options into the position you want them displayed.
4. Click **Save**.
5. The **Default Order** button allows you to reset the screens to their original order, if required.

5.2. Base Requirements

Base Requirements are configured to determine the opening and closing times of the site. For this example:

- Open to the public at 09:00 and close to the public at 18:30 (*Trading Hours*).
- Working times run from 08:30 until 19:00 (*Opening Hours*).

5.2.1. To Add Base Requirements

To configure Base Requirements, from *WFM Admin Dashboard*:

1. Select *WFM Configuration* and search for and select the **Base Requirements** tile.
2. Select the **Company** from the drop-down list.
3. Select the **Requirement** from the drop-down list.
4. Click the *Opening Hours* tab and enter the **Opening & Closing Time** for each day.
5. Enter the number of: Entrances, Escalators, Elevators and Doors, if applicable.
6. Click the *Trading Hours* tab and enter the **Trading Opening & Closing Time** for each day.
7. Click **Save**.

 **Note:** These fields are configurable and Language Packed. Therefore, it is possible to specify any requirements here. For example, number of checkouts, number of dressing rooms etc. For further information, see section [5.2.3 Field Language Pack Configuration](#).

Base Requirements

WFM Admin Dashboard > Base Requirements

Company: HQ
Requirement *: Store times

Select a company | Select a requirement

Opening Hours | Trading Hours

Day	Opening Time	Closing Time
MONDAY	08:30	19:00
TUESDAY	08:30	19:00
WEDNESDAY	08:30	19:00
THURSDAY	08:30	20:00
FRIDAY	08:30	19:00
SATURDAY	08:30	19:00
SUNDAY	09:00	19:00

access PeopleXD | **SAVE**

From **Actions** you can Add New or Edit a requirement.

5.2.2. To Assign Base Requirements to a Team Area

Once your Base Requirements have been configured, they can be assigned to the applicable Team Area. To do this:

1. Quick Jump to **Team Area Configuration**.
2. Select the applicable Team Area from the drop-down list.
3. **Open** Base Requirements.

Team Area Configuration

Operations Assistant | **ADD TEAM AREA**

Area Rule	OPEN	Validation Rule	OPEN
Recommended Teams	OPEN	Budget	OPEN
Auto Rostering	OPEN	General Parameters	OPEN
Base Requirements	OPEN	Staff Requirements	OPEN
Minor Rules	OPEN		

4. Click **Add**.
5. A new row is created on screen.

6. Select the applicable **Base Requirement** from the drop-down list.
7. Enter a **Date Effective**.
8. Click **Save**.

The screenshot shows the 'Base Requirements' form. At the top, there's a breadcrumb 'Workforce Management > Base Requirements'. Below this is a table with two columns: 'Base Requirement' and 'Date Effective'. The first row contains 'Store times' and '01-Jan-2025'. To the right of the table is a 'DELETE' button. At the bottom right, there is a 'SAVE' button. The background of the form features a blurred image of a person's head and shoulders.

Note: It is possible for Base Requirements to be assigned to an upper-level Team Area (parent Team Area), these requirements then flow down to the applicable lower-level Team Areas (child/sub-Team Areas).

5.2.3. Field Language Pack Configuration

It is possible to update any of the 4 variable field labels on the Base Requirements screen as outlined above. To do this:

1. Quick jump to **Site Manager**.
2. **Open** Language Pack.
3. Search for the label, in need of update e.g. number of entrances.
4. Click on the label to Edit.
5. Enter the required text.
6. Press Enter or outside the field, on your keyboard to Save.

The screenshot shows the 'Language Pack' configuration screen. At the top, there's a breadcrumb 'Administrator Dashboard > Language Pack'. Below this is a message: 'All labels are cached to significantly improve performance for users. Therefore, it might take some time for labels to generate and for users to see the updated text. Labels last generated on 18-Dec-2024 12:39:04'. Below the message is a search bar with 'entrances' entered and a dropdown menu with 'English' selected. Below the search bar is a table with three columns: 'Label', 'Default Label', and 'Updated On'. The table has two rows: 'No. Entrances' with 'No. Entrances' as the default label, and 'Number of Customer Entrances' with 'Number of Entrances' as the default label. The 'Updated On' column shows '14-Apr-2025 15:52:05' for the second row. There is a vertical ellipsis icon next to the 'Updated On' value for the second row.

5.3. Interface Types

The Interface Types screen holds the configuration settings required for Roster Interface Files. These files are used to load historical data into the system. This historical data can then be used by the system to predict trends, when a manager generates demand. When the Generate Values process is run, the system calculates predicted values for the period based on last year's actual values.

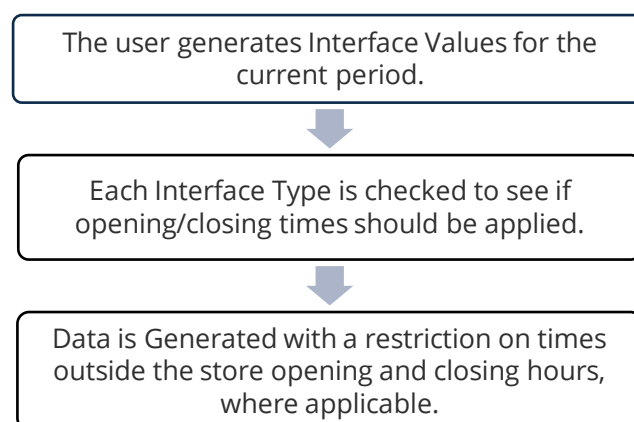

This is intended for use by Administrators who generate expected demands for periods with Roster. This functionality ensures that, when Generating Demand for a period, the system ensures the demand is not generated for times outside of the company's Operational Hours, for the selected Interface Types. Furthermore, ensuring that the data generated is in line with:

- Changes to Operational Hours year on year (should opening hours increase or decrease).
- Closure days year on year, for example Local/Company Holidays or other Closure days.

If this functionality is not configured, where the store opened from 10:00 – 18:00 **last year** and opens 11:00 – 18:00 **this year**:

- The system will generate data from 10:00 – 11:00 as it is applying the trending factor to last years' data. Employees will be rostered outside of the store opening times this year unless the staffing demands are manually amended.

However, with this functionality, you can indicate on each Interface Type if the 'Generate Values' should apply the opening and closing times to the values for Roster.

This functionality relates to the **Opening Times** set in [Base Requirements](#) against the Team Area.

Note: It is not possible for the system to consider Trading Times instead of the Opening Times, for this functionality.

5.3.1. Switch on Operational Times

To switch on this functionality there is a toggle next to each interface type on the *Interface Types* screen, and this logic is only applied to any interface type that is marked as *Operational Times*.

Code	Description	Predict Future Values	Check Last Years D...	Disregard Start/End...	Operational Times	Use Duration	Spread Across Dura...

5.4. Minor Rules

Use Minor Rules to setup and maintain the minor rule group and break rules that they are entitled to.

5.4.1. To Add Minor Rules

To configure Minor Rules, from *WFM Admin Dashboard*:

1. Select *WFM Configuration* and search for and select the **Minor Rules** tile.
2. Click **Add Group**.
3. Enter the **Group Name & Description** and click **OK**.
4. The Minor Rules screen displays two rows that can be populated as follows:
5. Enter the **Rule Name**.

6. Enter the **Age**.
7. Enter the **Earliest Start Time**.
8. Enter the **Latest Start Time**.
9. Enter the **Max Working Hours**.
10. Click **Save**.

5.4.2. To Assign Minor Rules to a Team Area

Once your Minor Rules are configured, they can be assigned to the applicable Team Area. To do this:

1. Quick Jump to **Team Area Configuration**.
2. Select the applicable Team Area from the drop-down list.
3. **Open** Minor Rules.

Team Area Configuration

Operations Assistant

ADD TEAM AREA

Area Rule	OPEN	Validation Rule	OPEN
Recommended Teams	OPEN	Budget	OPEN
Auto Rostering	OPEN	General Parameters	OPEN
Base Requirements	OPEN	Staff Requirements	OPEN
Minor Rules	OPEN		

4. Click **Add**.
5. A new row is created on screen.

6. Select the applicable **Minor Rules** from the drop-down list.
7. Enter a **Start Date**.
8. Enter an **End Date**, if required.
9. Click **Save**.

The screenshot shows the 'Minor Rules' page in a system. At the top, there's a breadcrumb 'Workforce Management > Minor Rules'. Below this is a table with columns: 'Rule', 'Start Date', and 'End Date'. One row is visible with 'STORES' in the 'Rule' column and '01-Jan-2025' in the 'Start Date' column. To the right of the table is a 'DELETE' button. Above the table is an 'ADD' button. At the bottom right is a 'SAVE' button. The 'access PeopleXD' logo is at the bottom center.

5.5. Normal Day Rule

Use the Normal Day Rule 4-step wizard to define the public holiday rule and the pay codes associated to normal and non-normal working days for Roster.

The screenshot shows the 'Add Rule' wizard, Step 1: Rule Definition. The breadcrumb is 'WFM Admin Dashboard > Normal Day Rule > Add Rule'. On the left is a sidebar with four steps: 1. Rule Definition (selected), 2. Normal, 3. Non-Normal, and 4. Holiday Schemes. The main area contains the following fields:

- 'Rule Code *' and 'Rule Description *' at the top.
- 'Paycodes that will count as worked when determining' section with three dropdowns:
 - 'If the Public Holiday is a normal working day' with a '*' value.
 - 'If the employee has exceeded the worked threshold' with a '*' value.
 - 'The hours worked on the last day worked before the Public Holiday' with a '*' value.
- 'Length of Service Type *' dropdown.
- 'Service (Weeks)', 'Worked (Weeks)', and 'Out of (Weeks)' fields at the bottom.

At the bottom right are 'ADD' and 'NEXT' buttons. The 'access PeopleXD' logo is at the bottom center.

The **Rule Definition** screen contains the following fields:

Field	Description
Rule Code	The Unique Rule code. This can be up to 6 characters in length.
Rule Description	The Rule Description. This can be up to 50 characters in length.
If the Public Holiday is normal working day	Select the relevant pay code.
If the employee has exceeded the worked threshold	Select the relevant pay code.
The hours worked on the last day worked before the Public Holiday	Select the relevant pay code.
Length of Service Type	Select the LOS type applicable to the rule. Options are: • Original Start Date • Rejoin Date • Permanent Start Date • Continuance Date
Add	Allows you to add Service/Worked hours.
Service (Weeks)	Enter the number of Weeks Service.
Worked (Weeks)	Enter the number of weeks the employee must have worked.
Out of (Weeks)	
Delete	Allows you to delete the Service/Worked hours.

The Normal screen contains the following fields:

Field	Description
Pay Code	Select the applicable pay code for a normal workday.
Calculation Type	Select the applicable calculation type for the normal workday. Options are: • Actual Hours - • % of Contracted Hours - • Last Day Worked -
Pay Code	Select the applicable pay code for a normal rest day.
Calculation Type	Select the applicable calculation type for the normal rest day. Options are: • Actual Hours - • % of Contracted Hours - • Last Day Worked -
Look Back Period (Weeks)	Enter a value for the number of weeks to look back, if applicable.

The **Non-Normal** screen contains the following fields:

Field	Description
Pay Code	Select the applicable pay code for a normal workday.
Calculation Type	Select the applicable calculation type for the normal workday. Options are: Actual Hours - % of Contracted Hours - Last Day Worked -
Pay Code	Select the applicable pay code for a normal rest day.
Calculation Type	Select the applicable calculation type for the normal rest day. Options are: Actual Hours - % of Contracted Hours - Last Day Worked -
% Of Contracted Hours	Enter the percentage of contract hours for a normal rest day.
Qualifying Hours	Enter the qualifying hours for a normal rest day.
Qualifying Period (Weeks)	Enter qualifying weeks for a normal rest day.

The Holiday Schemes screen shows all the holiday schemes the normal day rules has been assigned to. This is done via the Bank Holiday Schemes tile within WFM Configuration. See our [Bank Holiday Scheme](#) guide for further guidance.

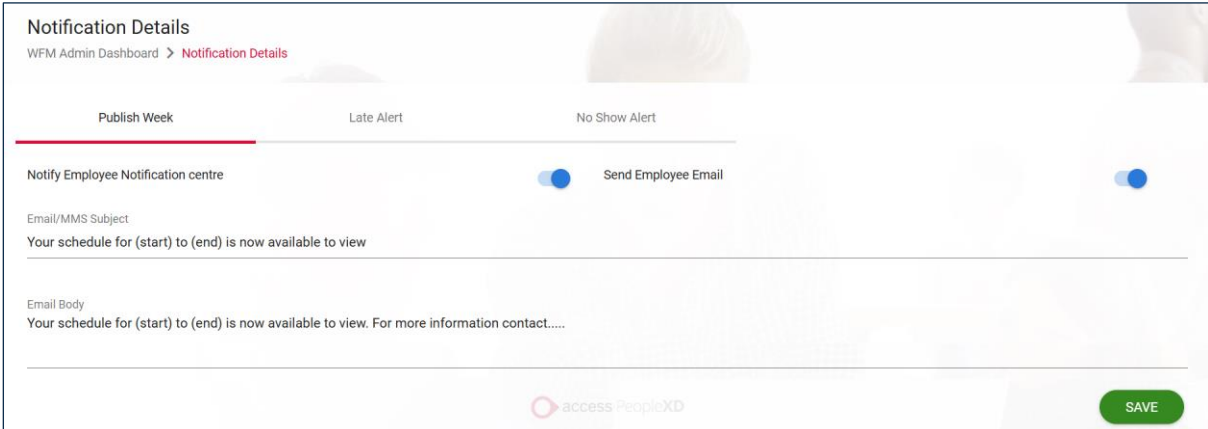

5.6. Notification Details

The Notification Details option allows you to configure default notifications. These notifications are set at company level. Here, it is possible to configure notifications to:

- Employees, when a manager has Published a week in roster – **Publish Week**.
- Managers, when an employee within their remit has clocked in late for work – **Late Alert**.
- Managers, when an employee within their remit is a no show for work – **No Show Alert**.

5.6.1. Publish Week Notifications

1. Select *WFM Configuration* and search for and select the **Notification Details** tile.
2. Select the **Publish Week** tab.
3. Turn on the **Notify the Notification Centre** toggle.
4. Turn on the Send employee Email toggle, if applicable.
5. Enter the default text for the Email/MMS Subject.
6. Enter the Email Body. For default configuration, using the text '(start)' and '(end)' allows the dates for the period to be placed in the mail by the system.
7. Click **Save**.

The screenshot shows the 'Notification Details' configuration page for 'Publish Week'. The page has a breadcrumb trail 'WFM Admin Dashboard > Notification Details'. There are three tabs: 'Publish Week' (selected), 'Late Alert', and 'No Show Alert'. Below the tabs, there are two toggle switches: 'Notify Employee Notification centre' (turned on) and 'Send Employee Email' (turned on). Below these, there are two text input fields. The 'Email/MMS Subject' field contains the text 'Your schedule for (start) to (end) is now available to view'. The 'Email Body' field contains the text 'Your schedule for (start) to (end) is now available to view. For more information contact.....'. At the bottom right, there is a green 'SAVE' button. The 'access PeopleXD' logo is visible at the bottom center.

5.6.2. Late Alert Notifications

1. Select *WFM Configuration* and search for and select the **Notification Details** tile.
2. Select the **Late Alert** tab.
3. Enter the default text for the Email/MMS Subject.
4. Enter the Email Body. For default configuration, using the text '[[Person]]' allows the employee to be placed in the mail by the system.
5. Click **Save**.

The screenshot shows the 'Notification Details' page in the 'WFM Admin Dashboard'. The breadcrumb trail is 'WFM Admin Dashboard > Notification Details'. There are three tabs: 'Publish Week', 'Late Alert' (which is selected and highlighted with a red underline), and 'No Show Alert'. Below the tabs, there are two text input fields. The first is labeled 'Email/MMS Subject' and contains the text '[[Person]] late.'. The second is labeled 'Email Body' and contains the text '[[Person]] clocked in late for rostered shift start time [[Start_time]]'. At the bottom of the form, there is a logo for 'access PeopleXD' and a green 'SAVE' button.

5.6.3. No Show Alert Notifications

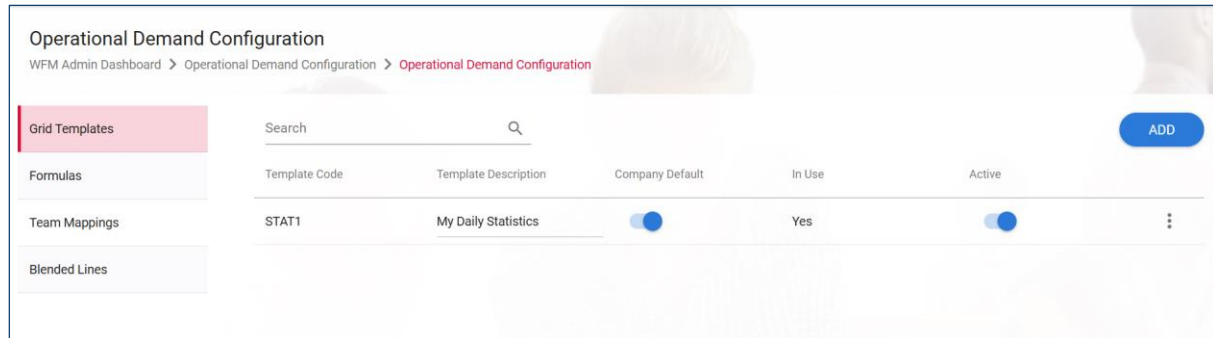

1. Select *WFM Configuration* and search for and select the **Notification Details** tile.
2. Select the **No Show Alert** tab.
3. Enter the default text for the Email/MMS Subject.
4. Enter the Email Body. For default configuration, using the text '[[Person]]' allows the employee to be placed in the mail by the system.
5. Click **Save**.

The screenshot shows the 'Notification Details' page in the 'WFM Admin Dashboard'. The breadcrumb trail is 'WFM Admin Dashboard > Notification Details'. There are three tabs: 'Publish Week', 'Late Alert', and 'No Show Alert' (which is selected and highlighted with a red underline). Below the tabs, there are two text input fields. The first is labeled 'Email/MMS Subject' and contains the text '[[Person]] no show.'. The second is labeled 'Email Body' and contains the text '[[Person]] is a no show for rostered shift start time [[Start_time]]'. At the bottom of the form, there is a logo for 'access PeopleXD' and a green 'SAVE' button.

5.7. Operational Demand Configuration

Use Operational Demand Configuration to set up and maintain grids displaying various imported and calculated data and assign these grids to teams. A manager can then see these grids on the roster details screen to assist in completing staffing requirements for the following week(s).

See our [Operational Demand](#) guide for full configuration details.

5.7.1. To Create a New Grid Template

To add a new Grid Template, follow the steps below:

1. Click **Add**.
2. Enter the **Template Code**.
3. Enter the **Template Description**.
4. **Enable** the Active toggle, this will make this template immediately available.
5. If this template is to be used as the Company Default, then enable the Site Default toggle.

Note: There can only be **ONE** Company Default template. Setting a new template as default will disable the existing company default template.

6. Click **OK**.
7. Your new Grid Template is ready to be configured.

5.7.2. To Create a New Formula

To add a new formula, follow the steps below:

1. Click **Add** and populate the fields:
 - **Formula Code** – the code you want to assign to the formula.
 - **Formula Name** – the description for the formula.
 - **Interface Type/Value** - select the option that will be the first part of the formula. If this will be a fixed value, then choose *Entered Value*. You can also choose the imported data, system data or the results of a formula.
 - **Value** - if Entered Value was selected at step 4, then enter the required value.
 - **Action** - select what you want the formula to do. Option available are: Add, Minus, Divide, Multiply or Multiple Add.

- Multiply Add means that the first entered value is multiplied by the second entered value and added to the first entered value (Result = Value 1 + (Value 1 x Value 2)).
 - **Interface Type/Value** - select the option that will be the second part of the formula. If this will be a fixed value, then choose *Entered Value*.
 - **Value** - if Entered Value was chosen at step 8, then enter the required value.
 - **Type** - use the drop-down option to select the result value type. Options available are value or percentage.
2. Once happy with your selection, click on **Save**.

5.7.3. To Create a New Team Mapping

To add a new team mapping, follow the steps below:

1. Click **Add**.
2. Enter the **External Team Code/Name**.
3. Select the PeopleXD Team, from the drop-down options, for this to be mapped to.
4. Click **OK**.

5.7.4. To Create a Blended Line

1. From the *Operational Demand Configuration* screen, select **Blended Lines**.
2. Click **Add**.
3. Enter a **Blended Code** for the new Blended Line.
4. In *Reference Code 1*, use the dropdown to select the **Reference Code** to be displayed up to and including the current day.
5. In *Reference Code 2*, use the dropdown to select the **Reference Code** to be displayed from the day after the current day until the end of the week.
6. Enter the **Display Name** to appear on the Operational Demand Grid.
7. In *Display Type* select **Value** or **Percent**, as appropriate.
8. Click **Save**.

Once configured there are 3 ways to assign your Grid Template to a Team:

- **Set as Company Default** - There must always be one operational demand grid template set as Company default. This will automatically be assigned to all teams unless a different template is assigned to a team or one of its parents.

- **From the Operational Demand Configuration Screen** - Use the Operational Demand Configuration screen to assign a grid template directly to a team and all its child teams.
- **From the Team Area Configuration Screen** - You can also use the Team Area Configuration screen to override the company default grid template for a specific team only. This does not apply to other teams in the tree access.

5.8. Person Team Area Assignment

All roster employees must be assigned to a home team area for them to display on the Roster Details screen. The Person Team Area Assignment screen allows you to individually assign employees within your remit to a team area.

5.8.1. To Assign an Employee to a Team Area

To assign an employee to a Team Area, from *WFM Admin Dashboard*:

1. Select *WFM Configuration* and search for and select the **Person Team Area Assignment** tile.
2. Select the applicable **employee** from the *Person* drop-down list.
3. The appointment will automatically populate. If a multi-appointment site, select the relevant employee appointment.
4. Click the **Add** button.

5. Select the applicable **Team Area** from the drop-down list.
6. Enter the **Start Date**.
 - The Start Date should match start date of the Work Pattern assignment.
7. Enter the **End Date**, if applicable.
 - There should only be a single open-ended row per employee, as employees can only have a single Home Team Area.
8. Click **Save**.

Note: Team Area Assignments can also be completed via the Data Migration feature using the HRIM06DM Data Migration Template for Roster Area Assignment (AreAss) template. The below details sample contents for *Team Area Assignment Data Migration* file.

```
000003,CN001A,02012019,  
000004,CN001A,02012019,
```

This can only be completed by toggling to the Classic UI.

5.9. Roster Attribute Setup

An Attribute is effectively a means of applying a label to an employee's pattern. This will be the task/job that the employee is scheduled to complete. The Attributes are user specified, examples may include 'Cashier', 'Floor', 'Security' or 'Training'. The Attribute can then be displayed on the Roster Details screen and can also be overridden on a day level. From a system point of view, the Attribute is a job/task that is available within Roster to be assigned to an

employee, for each pattern they are working within the week. See our [Roster Attributes](#) guide for full details.

You can create a new Attribute via the *Roster Attribute Setup* screen. This wizard will walk you through 3 steps. Note that on this wizard, existing *Attributes* and *Groups* are also available to be *Assigned*. You do not need to create a new *Attribute* or *Group* each time; each step can be followed individually.

1. Create Attribute – you can also use existing attributes.
2. Create Group – you can also use existing groups.
3. Assign Attribute – you can assign existing attributes and groups.

WFM Admin Dashboard > undefined

5.9.1. Create a New Attribute

To create a new attribute, from *WFM Admin Dashboard*:

1. Select *WFM Configuration* and search for and select the **Roster Attribute Setup** tile.
2. Work through the wizard, as below:

Step 1 - Create Attribute

1. Click the **Add** button, to create a new row.
2. Enter the **Attribute Code & Description**.
3. Click **Save**.
4. Select **Next**, to move on or click the *Create Group* tab.

Step 2 - Create Group

1. Click the **Add** button, to create a new row.
2. Enter a **Description** for the new group.
3. Click **Save**.
4. Select **Next**, to move on or click the *Assign Attribute* tab

Step 3 - Assign Attribute

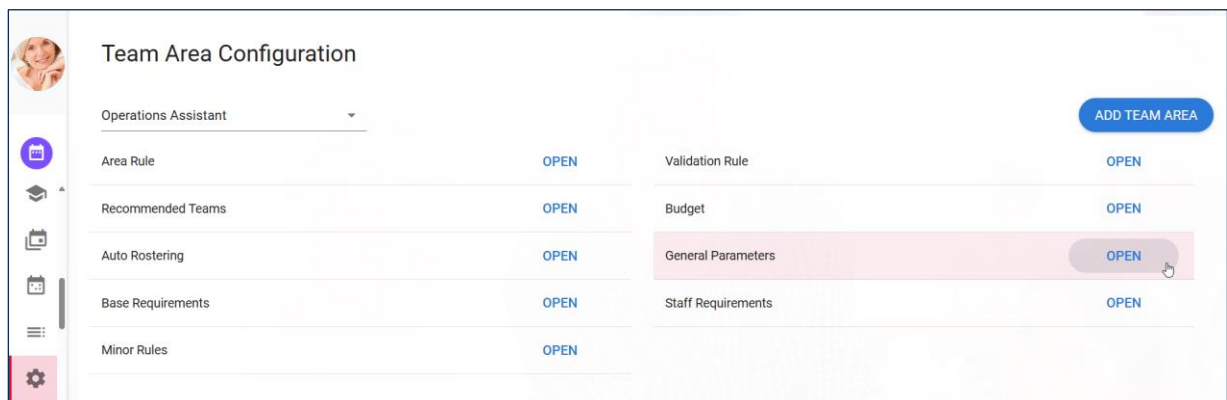

1. Select the required *Attribute Group* from the drop-down list.
2. Click the **Add** button, to create a new row.
3. Select the required *Attributes* from the drop-down list.
4. Click **Save**.

Attribute groups can be assigned to a Team Area via General Parameters, or at person level via Person Maintenance. If no Attribute Group is assigned, all Attributes will be available for selection, when assigning to employees and Team Areas.

5.9.2. To Assign an Attribute Group to a Team Area

To assign an Attribute Group to the applicable Team Area, via General Parameters:

1. Quick Jump to **Team Area Configuration**.
2. Select the applicable Team Area from the drop-down list.
3. **Open** General Parameters.

4. Select the required **Attribute Group** from drop-down list.
5. Click **Save**.

5.10. Roster General Settings

Roster General Settings are used to enable and configure your general & auto roster settings. For example, in General Settings you can enable roster attributes to allow attributes to be assigned to and display on an employee contract. Or turn on the operational demand grid to show on the Roster Details Screen.

The **General Setting** section contains the following fields:

Fields	Description
Extend Uncovered Maybes	Extend Uncovered Maybes is a roster system feature that allows the autoroster to extend existing employee shifts to cover short gaps in uncovered shifts. If enabled, the system attempts to fill uncovered roster gaps by extending adjacent shifts of employees who are already working, rather than requiring completely new shift assignments.
Hours greater than overtime	If enabled, displays overtime rate on roster details screen. Note: this section is limited to 6 additional fields see section 6.1.2 Additional Information.
Day View – Availability	If enabled, availability will be available to view within Day mode on the roster details screen.
Day View – Rostered Times	If enabled, roster times will be available to view within Day mode on the roster details screen.
Breaks by duration	If enabled, will look at the start & end times entered to calculate the break duration. If no enabled, it will return whatever is manually entered.
Calculate WTD breaks	This parameter controls whether the roster system automatically calculates break times when maintaining shifts that adjoin (are adjacent to) each other. When enabled, the system will check for adjoining patterns and calculate breaks based on the total duration of the entire day rather than just the current shift being modified. If enabled, when a shift is maintained the roster change screen we will check for adjoining patterns and calculate the breaks based on the total duration of the day not just the current shift.
Published recommended teams	This ensures that employees assigned to <i>Recommended Teams</i> are not <i>Rostered</i> against another <i>Team Area</i> before their own <i>Home Team Area</i> has been published. The indicator is present to

Fields	Description
	ensure the employees in the unpublished <i>Team Area</i> are ignored when running: • AutoRoster • Uncovered Shifts • Publish Available Shifts • Shift Swaps If enabled, a validation check ensures the employee's <i>Home Team Area</i>, for the day/week, has been <i>Published</i> before they can be used by the <i>Recommend Teams</i>, to fill a staffing shortage. Once the employee's <i>Home Team Area</i> has been <i>Published</i>, employees within the <i>Recommended Team</i> can then be used to fill staffing shortages for other <i>Teams Areas</i>. If turned off, there is no validation check to see if the employees <i>Home Team Area</i> has already been <i>Published</i> or not. Employees in <i>Recommended Teams</i> can be pulled into a <i>Roster</i> before their own <i>Home Team Area</i> has been <i>Published</i>. Both <i>Recommended Teams</i> and <i>Home Team Areas</i> are checked simultaneously when filling staffing shortages in your <i>Team Area</i>, resulting in the employees with the highest scores being scheduled first.
Enable Code Sorting	If custom sorting is configured in back-office then if enabled, this will sort the roster details screen based on that custom sequence.
Roster Details Rollup	This feature allows you to <i>Roll Up</i> an employee's roster rows to a single row per shift, on the <i>Roster Details - Week</i> view screen. By default, when an employee is rostered across different variables in a week, this splits the employee across multiple rows on the <i>Roster Details</i> screen. This means there may be multiple rows per employee, each for their: • Rostered team areas • Rostered shift types

Fields	Description
	Rostered qualifications If enabled, the screen merges these multiple rows into a single row, allowing more employees to be displayed on screen for review.
Delegation level for Team Area	Enter the relevant delegation level for your team areas. This functionality works with your organisation levels. For example, if your organisation had 3 levels and this field was set to 2, managers of a team in level 2 would only be able select from users within their team or child teams (level 1) to delegate team area access.
Timesheet Access Mode	Select the relevant Timesheet Access Mode. Options available are: - Access anyone on screen (no navigation) - Access based on home team area - Access based on org role

The **Qualifications** section contains the following fields:

Field	Description
Display Qualifications	If enabled, this will hide qualifications on the roster one/roster many screens.
Assign Qualifications	If enabled, this will allow user to update and amend qualifications per day against the employee to make quick updates.
Qualification by day	To identify what qualification an employee is working on for a shift, there are three options available when displaying employees against qualifications on a day: Combine Qualification - the day view by qualification is person based, and if a person has more than one qualification, they appear under a combination group rather than in each individual qualification group.

Field	Description
	Individual Qualification - the day view by qualification is person based, and if a person has more than one qualification they appear under each individual qualification; there are no combination groups. Rule Based - the day view by qualification is rule based, a person only appears if they satisfy the current rules if the rule is marked as match qualification; if a person has more than one qualification they appear under each individual qualification, with an * appended to their name representing the number of other qualifications satisfying the current rules; there are no combination groups. If a person has only one applicable qualification, they do not have an *.

The **No Show/Late Alerts** section contains the following fields:

Field	Description
Late Alerts	If enabled, late alerts will be turned on, using the criteria set. Late Alerts will display in Roster Alerts for the Team on the Roster Details screen.
Frequency in minutes	Sets how often the system checks for late arrivals (in minutes).
No Show Threshold	Defines how long after the scheduled start time an employee is considered a "no show" (stored in hours, converted to minutes for display).

The **Demand Based Roster** section contains the following fields:

Field	Description
Calculate Sales Mix	Controls whether the system calculates sales mix data during roster operations. When enabled, the system processes sales mix transactions to analyse product/service distribution patterns.
Generate ASP/ATV	Enables automatic generation of Average Selling Price (ASP) and Average Transaction Value (ATV) calculations. When enabled,

Field	Description
	the system creates transaction records using configured ASP/ATV rates for forecasting purposes.
Forecast Rolling Weeks	Specifies the number of weeks to use when calculating data trends for forecasting. This parameter determines how far back the system looks to establish patterns for future predictions.
Maximum Sales Search Weeks	Sets the maximum number of weeks the system will search backwards to find completed sales data in the ct_roster_transactions table. This prevents excessive database searches when historical data is incomplete.

The **Shift Swap** section contains the following fields:

Field	Description
Display Adjoined Shifts	Where an employee is working across multiple patterns in the one-day users can now adjoin multiple patterns. If this toggle is enabled, instead of seeing the breakdown of the day users will only see the start time of the first pattern and end time of the last adjoining pattern. The following areas will be updated to display this view: • Work Week • Employee Calendar
Swap Adjoined Shifts	If enabled, when a user wants to complete a shift swap, they will see any adjoining shifts as one shift, where they can only swap the one shift. Where the shifts are not adjoining the shifts should remain separate and should be swapped individually.

The **Roster Attributes** section contains the following fields:

Field	Description
Roster Attribute Active	If enabled, access is granted to <i>Roster Attributes</i>, across all screens, including: • Reference to <i>Roster Attribute</i> on <i>Change Roster - One</i> and <i>Change Roster - Many</i>.

Field	Description
	- Screens needed to assign an Attribute to an employee. - Screens needed to allow the quick assignment of an Attribute at Day Level. - The display of Attributes on the <i>Work Week</i> and the <i>Calendar</i> widgets.
Display Attribute on Rest Days	This option decides if the <i>Attribute</i> should be displayed on a <i>Rest Days</i> .

The **Operational Demand** section contains the following fields:

Field	Description
Enable Operational Demand Grid	If turned on, Operational Demand is enabled for Roster.

The **Auto Roster Settings** screen contains the following fields:

Field	Description
Fill employee hours to contract	Adds additional hours once autoroster is complete and contract hours not met.
One employee per rule	When enabled, this setting restricts the auto-rostering algorithm to only attempt to cover one rule requirement at a time when

Field	Description
	automatically filling uncovered shifts, rather than trying to satisfy multiple rule requirements simultaneously. This can help ensure more predictable and controlled auto-rostering behaviour.
Pattern on Uncovered Shifts	This parameter controls whether uncovered roster shifts can have their pattern changed to a different pattern, other than the original rule pattern.
Minimum shift to fill in minutes	Minimum length of shift for autoroster to fill. E.g., 240 hours

5.11. Roster Hierarchy

Roster Hierarchy allows you to label the levels in your organisational structure, for example group, company, location and team area. These will then display on the Roster Dashboard to identify what level of the structure you are viewing.

To create a hierarchy levels, from *WFM Admin Dashboard*:

1. Select *WFM Configuration* and search for and select the **Roster Hierarchy** tile.
2. Click **Add Level**.
3. This adds a new row to the screen, where you can add a description/label for the level.
4. Once all levels are added, click **Save**.

5.12. Roster Smoothing Settings

Roster smoothing settings are a set of predefined calculations, when enabled relate to auto roster. They allow adjust shifts to fit when employee's time, the shifts or gaps in shifts fall weirdly. For example if you extended an employee's shift for 2 hours to cover but you have 15 minutes left over; the smoothing setting will adjust.

To enable smoothing settings, from *WFM Admin Dashboard*:

1. Select *WFM Configuration* and search for and select the **Roster Smoothing Settings** tile.
2. From here you can:
 - Enter a value for the required Slots.
 - Turn on the rule using the Enabled toggle.

5.13. Roster Statistics Settings

Use the Roster Statistics Settings to give roster alerts a colour rating, allowing managers to quickly identify actions that need taking.

To colour rate roster alerts, from *WFM Admin Dashboard*:

1. Select *WFM Configuration* and search for and select the **Roster Statistic Settings** tile.
2. Select the **statistic** to add a colour rating to e.g., Planned absence.
3. Enter the **under** value and select the colour this will be displayed as e.g., 1 and Red.
4. Enter the **over** value and select the colour this will be displayed as e.g., 1 and Green
5. Click **OK**.

- Based on the configuration this highlights the value in the specified colour, on the Roster Alerts screen.

5.14. Shift Swap Validation

The Shift Swap Validation option allows you to enable the *Validation Rules* at different stages of the *Shift Swap* process. These settings determine at which process in the workflow the *Validation Rules* are applied. To configure the validation levels:

To configure the validation levels, from *WFM Admin Dashboard*:

- Select *WFM Configuration* and search for and select the **Shift Swap Validation** tile.
- Enable the applicable indicators on screen. In this example, the following indicators have been enabled. Therefore, the Validation Rules are applied at these stages of the process.
- Click **OK**.

5.15. Staffing Demand Ranges

The Staffing Demand Ranges option to create intervals or ranges of values for Roster. These ranges can then be applied to a team's requirements. For example using footfall to determine the number of staff required.

See our [Staffing Demand](#) guide for further details.

Range Code	Range Code Description	In Use
OA T1	Operative Assistant	No

5.15.1. To Add a Staffing Demand Range

1. Click **Add**.
2. Enter a **Range Code** and **Range Description** and click **OK**.
 - This new range is now available on the listing.
 - The display Range Code, Range Description and if the range is In Use.

5.15.2. To Edit a Staffing Demand Range

1. From the Staffing Demand Ranges screen.
2. Expand the 3-dot menu of the relevant range and select **View / Edit**.
3. Click **Add** to create a new range entry.
4. Select from the dropdown options what you are basing the **Value Type** range on e.g., Footfall.
5. Enter the required range in the **From Value** and **To Value** fields.
6. Enter the number of staff required in the **Staff** field.
7. Click **Save**.
8. Repeat for all ranges required.

SAVE

5.15.3. To Apply a Range to a Team's Requirements

To apply a range to a Team's requirements:

1. From the *Workforce Management Dashboard* select **Staffing Requirements**.
2. Expand the 3-dot menu of the group you wish to edit and select **View Staff Requirement**.
3. Click **Add**.
4. Select the **Type** and **Description**, from the dropdown options e.g., Job Title and Waiting Staff.
5. Under **Metric** select the data you are basing your calculation on e.g., FOOTFALL
6. Under **Range Code** select the range you want to use or have just created.
7. Under **Pattern** select the relevant Working Pattern.
8. Click **Save**.

5.16. Team Area Structure (Team Structure)

The **Team Area Structure** option, or *Team Structure* on Roster Links, provides the ability to create new team structures, maintain existing team structures, and modify team area settings, where required. It is possible to:

- Add a new Team Area
- Create new Team Structures
- Modify existing Team Structures

5.16.1. To Add a New Team Area

To add new Team Area, from the *WFM Admin Dashboard*:

1. Select *WFM Configuration* and search for and select the **Team Area Structure** tile.
2. Click **Add Team Area**.
3. Enter a relevant **Code** and **Description**.
4. Click **OK**.
5. You can now add the new team area to your team area structure.
6. Expand the 3-dot menu of the relevant Parent Team Area and select **Add Child Team**.
7. Select your new **Team Area**.
8. Click **OK**.

5.16.2. To Delete a Team Area

To Delete a Team Area, from the *WFM Admin Dashboard*:

1. Select *WFM Configuration* and search for and select the **Team Area Structure** tile.
2. Expand the relevant Team Area 3-dot menu and click **Delete**.
3. Click **Save** to confirm the deletion.

Note: A *Team Area* that holds a child *Team Area* cannot be deleted. The child *Team Areas* must be moved or deleted first.

5.16.3. To Create a New Team Structure

To create a New Team Structure, from the *WFM Dashboard*:

1. Select *WFM Configuration* and search for and select the **Team Area Structure** tile.
2. Follow the step above to create your new Team Areas (parent & child).
3. To add a new team area structure to your tree.
4. Expand the 3-dot menu of the relevant Parent Team Area and select **Add Child Team**.
5. Select your new parent, **Team Area**.
6. Expand the 3-dot menu of your new parent Team Area and select **Add Child Team**.
7. Select your new child **Team Area**.
8. Repeat until all child team areas added.
9. Click **Save**, to confirm your new Team Area Structure.

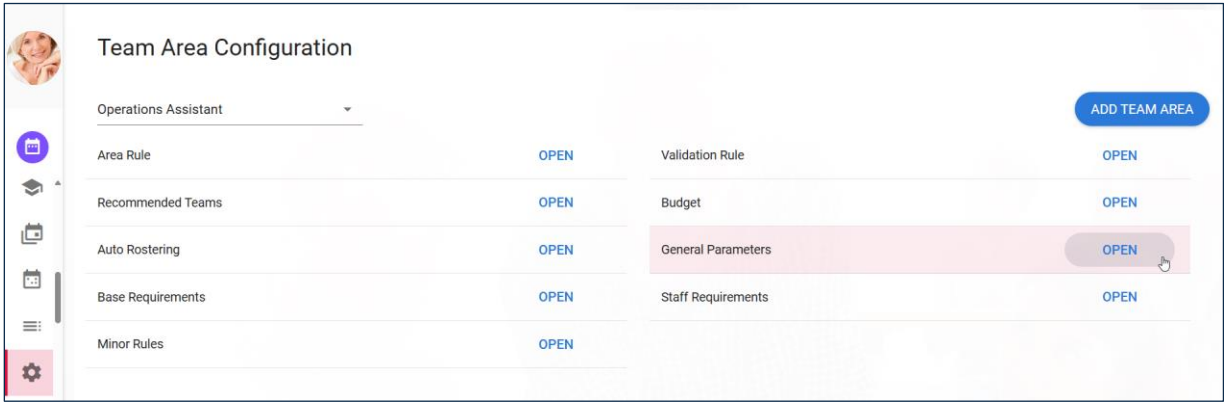

5.16.4. Considerations

- Team Areas can be moved around by dragging and dropping within the Team Structure.
- A Team Area can be moved up levels or arranged in a different order at the same level.
- With the drag and drop functionality, it is possible to move Team Areas down a level within the structure, however, only as far as the current lowest level within the Team Structure.

5.16.5. To Assign a Team Area

To assign a Team Area to the applicable Team Area, via General Parameters:

1. Quick Jump to **Team Area Configuration**.
2. Select the applicable Team Area from the drop-down list.
3. **Open** General Paraments.

Team Area Configuration	
Operations Assistant	ADD TEAM AREA
Area Rule	OPEN
Validation Rule	OPEN
Recommended Teams	OPEN
Budget	OPEN
Auto Rostering	OPEN
General Parameters	OPEN
Base Requirements	OPEN
Staff Requirements	OPEN
Minor Rules	OPEN

4. Select the required **Attribute Group** from drop-down list.
5. Click **Save**.

5.16.6. Data Migration

It is possible to create a new *Team Area Structure* via *Data Migration* within PeopleXD. There are a number of items to consider when data migrating your *Team Area Structure*:

- If piloting small *Team Areas*, the entire *Team Area Structure* must still be loaded initially.
- It is possible to do all editing in a Microsoft Excel file initially, then convert to a .CSV file.
- It is important to follow the correct order of *Team Area Structure* in the .CSV file, for example:

6. Workforce Management Dashboard

The workforce management dashboard displays several options which users can select. The options available will be based on the User Security menu options attached to the employee.

6.1. Roster Details

The *Roster Details* screen allows you to view and manage rosters for *Team Areas*, within your remit. The configurable options available within the Roster details screen are outlined below.

6.1.1. Employee Details

The employee details that display to the left of the *Roster Details* screen are controlled by Admin Settings. The items displayed here can be configured dependant on what employee details you require on the Roster Details screen.

6.1.2. Additional Information

The additional Information columns provide managers with useful summarised roster calculations. For example being able to compare an employees Rostered Hours against Overall Rostered Hours if work in different team areas.

The additional information fields display to the right of the *Roster Details* screen are controlled by Admin Settings. The items displayed here can be configured dependant on what additional information you require on the Roster Details screen.

Use the scroll bar at the bottom of the screen to view the additional information fields.

Name	Thu 13th	Fri 14th	Sat 15th	Sun 16th	Roster	Contract	Overall Roster To...	Difference	Cost
Angela Maybourne	09:00 - 17:30	09:00 - 17:30	Rest	Rest	37.50	18.00	0.00	19.50	0.00
Barry King	09:00 - 17:30	09:00 - 17:30	Rest	Rest	37.50	0.00	0.00	37.50	0.00
Beatrice Ennis	09:00 - 17:30	09:00 - 17:30	Rest	Rest	37.50	0.00	0.00	37.50	0.00
Bernie Walls	09:00 - 17:30	09:00 - 17:30	Rest	Rest	37.50	0.00	0.00	37.50	0.00

Colin Crabtree	09:00 - 17:30	09:00 - 17:30	Rest	Rest	37.50	37.50	0.00	0.00	0.00
Dave Johnson	09:00 - 17:30	09:00 - 17:30	Rest	Rest	37.50	0.00	0.00	37.50	0.00
22					408.50	310.25	0.00	98.25	0.00

To configure the Additional Information fields, follow the steps below:

1. From the *Administrator Dashboard* select **Site Manager**.
2. Open **Admin Settings**.
3. Search for **cp_roster_det**
 - There are 6 Roster Details Tabs you can edit, to display the values required.
4. Select **EDIT** and enter the required **Value**.
5. Click **OK**.

The available Additional Information Parameters to select to display are.

Parameter	Description
cp_roster_detcol1	ROSTERED_HOURS
cp_roster_detcol2	CONTRACT_HOURS
cp_roster_detcol3	OVERALL_ROSTER_TOTAL
cp_roster_detcol4	HOURS_ALLOWED
cp_roster_detcol5	DIFFERENCE
cp_roster_detcol6	EMPLOYEE_COST

6.1.3. Colour Code Work Patterns

It is possible to colour code each *Work Pattern* instance, if required, on the Roster Details screen.
To do this:

1. From the *WFM Admin Dashboard* select **WFM Configuration**.
2. Select the **Work Patterns** tile.
3. Expand the 3-dot menu of the relevant work pattern and click **View/Edit Work Pattern**.
4. Scroll to the *Rostering* tab.
5. Use the colour palette to select the Highlight Colour.
6. Click **Save**.
7. Repeat for all required work patterns.

 **Note:** Configuration change applied to Roster will refresh overnight. To display changes immediately select *Refresh this Week* from the Actions menu of the Roster Details screen.

6.1.4. Roster Alerts

Roster alerts that display under the flag on the *Roster Details* screen are controlled by Admin Settings. It is possible to hide *Roster Alerts* from appearing on the *Roster Details* screen if the notification count is 0.

To do this

1. From the *Administrator Dashboard* select **Site Manager**.
2. Open **Admin Settings**.
3. Search for **cp_roster_notif_hide0**, then:
 - Set to Y – to hide *Roster Alerts* when the value is 0.
 - Set to N – to display *Roster Alerts* when the value is 0.

6.1.5. Roster Roll Up

The Roster Roll Up feature, within Roster Settings, must be enabled at a global level within the system. Once enabled, a user can switch the feature ON or OFF via the filter window, on the *Roster Details* screen.

To enable Roster Roll Up:

1. From the *WFM Admin Dashboard* select **WFM Configuration**.
2. Search for and click on the **Roster General Settings** tile.

3. Turn on the **Roster Details Rollup** toggle.
4. Click **Save**.

6.1.6. Publish Week

Once all the applicable changes have been made to the *Roster*, and you are satisfied that the staffing requirements have been filled, it is then possible to publish the week's *Roster*. When the week has been published, the *Roster* is visible to the employees within the *Team Area* immediately.

There is an *Admin Setting* that should be set to **Y** if you do not want employees to be able to view the roster before the week is published. This setting hides the visibility of roster to employees, for the week, until it is published.

To update the *Hide Roster* parameter:

1. From the *Administrator Dashboard* select **Site Manager**.
2. Open **Admin Settings**.
4. Search for **cp_roster_hide_til_pub**, then:
 - Set to Y – to hide the Roster until Published.

6.1.7. Qualifications

It is possible for qualifications to be added to the system and assigned to employee records. These qualifications are then considered by the *Validation Rules* that are specified for *Rostering* processes, to determine employee's suitability, for filling staffing requirements. If an employee has an expired qualification:

- The qualification does not display in the *Qualification* drop-down list to select when actioning Roster Changes.
- The qualification is not considered by the *Validation Rules*.

For the *Roster* to determine if a qualification is active or not, the *Start* and *End Dates* on the employee's qualification must be defined. Therefore, only *Active* qualifications are considered by the *Validation Rules*.

Enable Qualifications

To enable the Qualifications functionality:

1. From the *WFM Admin Dashboard* select **WFM Configuration**.
2. Search for and click on the **Roster General Settings** tile.
3. Under the *Qualifications* section, turn on:
 - **Display Qualifications.**
 - **Assign Qualifications.**
4. Select the applicable option from the **Qualification by day**.
 - This setting determines how the Group By - Qualification function displays on the Roster Details – Day View Screen.
 - The available options are:

Options	Description
Combine Qualifications	If the <i>Combine Qualifications</i> option is selected, the <i>Roster Details - Day View</i> by qualification is person based. If an employee has more

Options	Description
	than one qualification, they appear under a qualification combination group rather than in each individual qualification group.
Individual Qualifications	If the <i>Individual Qualifications</i> option is selected, the <i>Roster Details - Day View</i> by qualification is person based. If an employee has more than one qualification, they appear under each individual qualification, therefore, there are no combination groups.
Rules Based	If the <i>Rules based</i> option is selected, the <i>Roster Details - Day View</i> is based by qualification. The employee only appears if they satisfy the current rules, if the rule is marked as <i>Match Qualification</i>. If an employee has more than one qualification, they appear under each individual qualification, with an * appended to their name. This represents the number of other qualifications satisfying the current rules. There are no combination groups.

5. Click **Save**.

Add Qualification Codes

Qualifications are represented by *Education/Skill Codes* in PeopleXD.

To add a new qualification:

1. From the *People Management Dashboard* select **Data Centre**.
2. Open **Reference Data**.
3. Select **Education Codes**.
4. Click **Add**.
5. Enter the Education/Skill **Code** and **Description**.
6. Expand it's 3-dot menu and select Details.
 - Here it is possible to exclude the code from *Roster* and mark the code as a *Manager Qualification*.
7. Click **Save**.
8. The Education/Skill Code (Qualification) is now available to selection, when adding qualifications to employee records.

6.2. Statistics

The *Statistics* screen provides you with a detailed breakdown of the *Staffing Requirements* for the week. Cells are highlighted to show clearly where there is *Rostered* or *Required* staff within a day.

The display of employees can be configured on the Statistics screen; this is done via Admin Settings. Columns can be hidden from the *Statistics* screen via *Admin Settings*:

To do this

1. From the *Administrator Dashboard* select **Site Manager**.
2. Open **Admin Settings**.
3. Search for the below parameters, then:
 - Set to Y – to hide 'Transferred In' or 'Non-Staff' on the Roster Statistics screen.
 - Set to N – to display 'Transferred In' or 'Non-Staff' on the Roster Statistics screen.

Admin Setting	Description
cp_rost_stats_hide_trans	This hides 'Transferred In' employees on the <i>Roster Statistics</i> screen. For example, employees who have been transferred into the <i>Team Area</i> .
cp_rost_stats_non_staff	This hides 'Non-Staff' employees on the <i>Roster Statistics</i> screen. For example, employees who are not members of the <i>Team Area</i> .

6.3. Team Area Configuration

The Team Area Configuration screen allows you to apply configuration options at a team level.

6.3.1. Area Rule

The Area Rules tab allows you to assign area rules (roster rule templates) on a daily, weekly or open-ended basis against a team. These can then be compared in Statistics to show rostered employees against required staffing.

To assign an *Area/Roster Rule* to a *Team Area*:

1. From **Team Area Configuration**, select the applicable Team Area from the drop-down list.
2. **Open** Area Rule.
3. Click **Add**.
4. Select the **Area/Roster Rule** from the drop-down list.
5. Enter the **Start Date**.
6. Enter the **End Date**, if applicable.
7. Tick the **Fixed** indicator, if applicable.
8. Click **Save**.

6.3.2. Validation Rule

Validation rule templates can be assigned to a team area, see [section 6.5 Validation Rules](#). Roster alerts are enabled against a validation rule and breaches of any roster alerts on the week are displayed to managers on the Roster Details screen for example, exceeding maximum daily hours.

To assign a *Validation Rule Template* to a *Team Area*:

1. From **Team Area Configuration**, select the applicable Team Area from the drop-down list.
2. **Open** Validation Rule.
3. Click **Add**.
4. Select the applicable *Validation Rule Template* from the drop-down list.
5. Enter the **Start Date**.
6. Enter the **End Date**, if applicable.
7. Enter the **Date Assigned**.
8. Click **Save**.

6.3.3. Recommended Teams

Recommended Teams can be attached to a team area. The recommended teams can be used to fill gaps in the roster, if the home team area does not have enough capacity (employees) to meet staffing demand.

To add Recommended Teams:

1. From **Team Area Configuration**, select the applicable Team Area from the drop-down list.
2. **Open** Recommended Teams.
3. Click **Add**.
4. Select the **Team Area** from the drop-down list.
5. Click **Save**.
6. The added Team Area will now be a Recommended Team Area for the select applicable Team Area.

Restrict Recommended Team Level

There is an *Admin Setting* available to restrict the *Recommended Team Areas* that are listed, to the lowest team levels you have access to.

Parameter	Description
cp_roster_restrict_rec	Restrict recommended teams to lowest team levels user has access to. When this Admin Setting is: • Set to Y - you can only view/select Team Areas that you have access to in the lowest level. Therefore, higher levels (above the Home Team Area) in the hierarchy are not displayed. • Set to N - you can view/select all Team Areas in the hierarchy drop-down list.

See our [Roster Before Period is Published](#) guide for further guidance on Recommended Teams.

6.3.4. Budget

The Budget tab allows you to set a budget for a team area for a period. The data is then used in the Cost vs Budget feature on the Roster Details screen to compare budget for the day or week against costs that occur.

The budget is assigned per *Team Area*. You can assign a set budget to groups of dates. These dates can be set on a daily or a weekly level:

- To set on a daily level, you must enter the required dates for the budget into the *Start Date* and *End Date* fields.
- To set the required budget for a weekly level, you must enter the start date of the week in the *Start Date* field, generally the Monday, and the end date in the *End Date* field, generally the following Sunday.

To configure the *Team Area Budget*:

1. Navigate to the *Workforce Management Dashboard* and select **Team Area Configuration**.
2. Select the applicable **Team Area** from the drop-down list.
3. **Open** Budget.
4. Click **Add**.
5. Enter the *Start & End Dates*.
6. Then select the **Budget Type**, Hours or Value.
7. And enter the **Budget**.
8. Click **Save**.

Note: As access for Managers is not recommended for this screen, if managers are required to assign Budgets to a Team Area, we would recommend the **Interface Value** tab is enabled for them to complete this task.

6.3.5. Auto Rostering

The Auto Rostering tab is where you can configure the Day and General Settings for Auto Rostering. For example, prioritising your busiest days of the week starting with 1 as the highest priority.

To configure the Auto Rostering settings:

1. From **Team Area Configuration**, select the applicable **Team Area** from the drop-down list.
2. **Open** Auto Rostering.
3. On the **Day Settings** section, you can prioritise your busiest days within the week. For example, 1 for the highest priority, 2 for the second etc.
4. Enter the applicable priority for each day of the week.

5. On the **General Settings** section, you can specify the rules surrounding *Late Nights* and *Overnight* times.
6. Enter the **Late Night Time & Number of Late Nights**.
 - The validation checks what the max number of Late Nights is for the Team Area, and during Auto Rostering, scores the employee accordingly to ensure this rule is not breached. To ensure an employee does not get rostered for more than the specified number of late nights.
 - A late night is identified by the system, where the start or end time is after the Late Night Time field as set for the Team Area.
7. Enter the **Overnight Start & End Times**.
8. Enter the number of **Weeks to Scan**.
 - This *Validation Rule* has been applied to ensure employees are not rostered to work on more than the specified number of overnight shifts in a rostering period. A night shift is identified where the start time of the shift is on or before the Overnight Start Time and the end time is on or after the Overnight End Time as held on the *Team Area*.
9. Click **Save**.

The **General Parameters** section contains the following fields.

Fields	Description
Code	Code for the Team Area.
Team Area Name	Name of the Team Area.

Fields	Description
Short Name	The Short Name for the Team Area, to help search / identification.
Cost Centre	Select a cost centre so that the hours rostered/worked will cost against that on the employee timesheets, instead of their HR record cost centre.
Work Pattern Group	Select a work pattern group.
Hide Team Costs	Hides team costs for the team area.
Away Team Cost	
Bank	
Consecutive Days	
Max Overnight Allowed	Enter the maximum number of overnights allowed.
Overtime Value	Enter the overtime value
Attribute Group	Select an Attribute group for the Team Area
Exclude contract hours validation when publishing this team	Excludes contract hours validation when publishing roster for this team.

The **Roster Period** section contains the following fields.

Fields	Description
Start Date	Select the start date of the roster period.
End Date	Select the end date of the roster period.
Type	Select whether Calendar or Weeks.
Number of Weeks	Enter the number of weeks for the roster period.
Company	Select the applicable company from the dropdown list.
Close roster before the start date	

The **Self Rostering** section contains the following fields.

Fields	Description
Days allowed before start date	This parameter defines how many days in advance employees can start making changes to their roster before the roster period officially begins. For example, if set to 14, employees can begin self-rostering 14 days before their scheduled shifts starts.
Days restricted before start date	This parameter sets the cutoff point where employees can no longer make self-rostering changes. If set to 2, employees lose the ability to modify their roster 2 days before their shifts are scheduled to start.

The **Sales Mix** section contains the following fields.

Fields	Description
Days of the week	Enter the priority against each day of the week.

The **Operational Demand** section contains the following fields.

Fields	Description
Inherited Template	The template assigned to the team.
Template Override	Select from the dropdown list a new operational grid template to override the inherited template for this team only.
Disable Grid	If enabled, the Operational Demand grid will not display on this team's Roster Details screen.

6.3.7. Base Requirements

Base Requirements allow you to assign the opening and trading hours for a site to a team area.

To add a Base Requirement to a Team Area:

1. From **Team Area Configuration**, select the applicable **Team Area** from the drop-down list.
2. **Open** Base Requirements.
3. Click **Add**.
4. Select the applicable **Base Requirement**.
5. Enter the **Date Effective**.

- Click **Save**.

Note: You can assign a Base Requirement to an upper-level *Team Area* (parent *Team Area*), these requirements then flow down to the applicable lower-level *Team Areas* (child/sub-*Team Areas*).

6.3.8. Staff Requirements

Staff requirements are effective for generating *Demand Based Rostering* on sales or other metrics. *Staff Requirements* are initially created via the *Roster Requirements* screen and are then assigned to *Team Areas* via the *Staff Requirements* option.

To create a *Staff Requirement*:

- Navigate to the *Workforce Management Dashboard* and select **Staff Requirements**.
- Click **Add**.
- Enter the group **Code & Description**, then click **OK**.
- The *Group* will display on the *Staff Requirements* screen.
- Expand its 3-dot menu and select **View Staff Requirements**.
- Here you can add the rules that are generated against the specified metric and applied to the *Team Area*.
- Click Add and enter the applicable fields.
- Click **Save**.

Staff Requirements: 7275 North											
Workforce Management > Staff Requirements: 7275 North											
ADD											
ID	Type	Description	Metric	Range Code	Value	Base Seconds	Minimum Val...	Maximum Va...	Lag time start	Lag time end	Pattern

access PeopleXD											
SAVE											

You can now assign the Staff Requirement group to the applicable *Team Area*.

1. From **Team Area Configuration**, select the applicable **Team Area** from the drop-down list.
2. **Open** Staff Requirements.
3. Click **Add**.
4. Select the applicable **Group** from the drop-down list.
5. Enter the **Date Effective**.
6. Click **Save**.

6.3.9. Minor Rules

The Minor Rules tab allows you to assign a minor rule group to a team area, defining the break rules that they are entitled to.

You can now assign a Minor Rule to the applicable *Team Area*..

1. From **Team Area Configuration**, select the applicable **Team Area** from the drop-down list.
1. **Open** Minor Rules.
2. Click **Add**.
3. A new row is created on screen.
4. Select the applicable **Minor Rules** from the drop-down list.
5. Enter a **Start Date**.
6. Enter an **End Date**, if required.
7. Click **Save**.

6.4. Roster Uncovered Shifts

Uncovered Shifts display staffing gaps in the period, where the Auto Roster has not been able to fill the full staffing requirement. Uncovered Shifts then identifies what employees are best suited to filling the gaps, based on a scored basis.

It is possible to configure several items on the **Roster Uncovered Shifts** screen. These are controlled by **Admin Settings** on the *Admin Dashboard*.

Parameter	Setting
cp_roster_unc_order	Configure the order in which <i>Uncovered Shifts</i> are displayed on screen - Set to GD to order by the days with the largest gaps. - Set to D to order by Day and start time. - Set to G to order by the largest gaps.
cp_dnf_prefilled	Configure the Do Not Fill Indicator. - If set to Y, the system sets all Do not fill indicators to be ticked on by default. - If set to N the indicators will be unticked by default. It is still possible for you to manually update the Do Not Fill indicator on the Uncovered Shifts screen per shift.
cp_roster_hide_til_pub	This setting hides the visibility of roster to employees, for the week, until it is published. It should be set to Y if you do not want employees to be able to view the roster before the week is published.

6.5. Validation Rules

The *Validation Rules* screen allows you to create *Roster Validation Rule Templates* that hold the rules which *Team Area Rosters* are validated against. These *Validation Rules* ensure that when the *Team Area Rosters* are created, there are no roster violations, and the most appropriate employee is selected first when *AutoRostering*. These rules ensure that the team rosters created are not in violation of the organisational rules that you have defined. For example, rules can help ensure employees do not exceed their contract hours. Once a *Validation Rule Template* is defined, it can be assigned to the appropriate *Team Area(s)* at any stage.

Roster Validation Rule schemes allow you to:

- Configure/define the business logic that you wish *Roster* to apply when automatically creating rosters to meet area demand.
- Define what real-time alerts/notifications you wish to see on your *Roster* in the event of any violations arising.

There are different types of rules in the *Validation Rules* section, these rule types are detailed in the table below:

Validation Rule Type	Explanation
Roster Rules / Alerts	The rules applied to the <i>Team Area</i> on any given day. These rules dictate what real-time alerts/notifications are flagged, when a Roster is in breach of specific criteria, that is specified as being of key importance to your organisation, for example: • Legislative criteria e.g. EU WTD, Average Hours Breach, EU WTD Daily Rest breach. • Organisational criteria e.g. Cost vs. Budget breach, Contract hours breach.
AutoRoster Rules	The rules that are checked when the <i>AutoRoster</i> process is running. These rules dictate what logic gets applied when the <i>AutoRoster</i> process is invoked to complete a Team Area Roster. For example, the business logic/rules you want the system to apply, when choosing the most appropriate employee to fill each <i>Roster</i> gap.
Uncovered Shift Rules	The set of validation rules that the system checks when the <i>AutoRoster</i> process has been run and there are still gaps in the <i>Roster</i>. These rules are normally more lenient than the <i>AutoRoster</i> rules. These rules dictate what logic gets applied when an Uncovered Shift arises. For example, the business logic/rules you want the system to apply when producing a scored list of employee recommendations to cover <i>Uncovered Shifts</i>.
Shift Swap Rules	The rules that are checked when the <i>Shift Swap</i> process is run. The employee available for selection can be shortlisted based on passing the <i>Validation Rules</i>. Employees who have failed validation are not available in the dropdown list for selection.

Validation Rule Type	Explanation
Leave Requests Rule	This rule dictates if a <i>Leave Request</i> can be approved, if it causes the day to become short staffed as a result of accepting the shifts.
Publish Shifts Rules	These rules dictate what logic gets applied when the manager <i>Publishes</i> a shift, and when an employee accepts a shift: For example, the business logic/rules you want the system to apply when choosing who the most appropriate employee is to fill each Roster gap.

The *Roster Rules/Alerts* are applied on and can be viewed via the *Roster Dashboard* screen. The colours for each of the columns on this screen are configurable. For example, flag as 'red' if overstaffed or 'orange' if understaffed, etc. For further information, view section [5.14 Roster Statistics Settings](#).

Note: Recommendations for configuring *Validation Rules*:

- It is possible to create multiple *Validation Rule Templates*; however, it is recommended to restrict to a single *Validation Rule Template* for all *Team Areas*.
- Begin configuration with the minimum basic *Validation Rules* required and adjust from there.
- The more *Validation Rules* set as *Mandatory*, the smaller the spectrum of employees

The below table outlines some standard example *Validation Rules* that are generally configured as *Mandatory*.

Validation Rule	Explanation
Autorostering: Work / Rest / Absent	Without this, the system will <i>Autoroster</i> employees even when booked absent.
Autorostering: Overlapping Shifts	Without this, the system will <i>Autoroster</i> employees even if already assigned a shift.

Validation Rule	Explanation
Autorostering: Available Days	Without this, the system will <i>Autoroster</i> employees even if explicitly unavailable on that day.
Autorostering: Available Times	Without this, the system will <i>Autoroster</i> employees even if explicitly unavailable for the duration of the shift.

6.5.1. To Create a Validation Rule Template

1. From the *Workforce Management Dashboard*, select **Validation Rules**.
2. Click **Add**.
3. Enter the template **Code & Description**.
4. The *Validation Rule Template* is now displayed.
5. Expand the 3-dot menu on the applicable template and select **View Validation Rules**.
6. Ensure the applicable rules are ticked as **Selected**.
 - If the *Mandatory* indicator is ticked, once an employee breeches this rule, they automatically fail the *Roster* process and cannot be rostered to work.
7. Click **Save**.

From any *Roster Rule Template* you can also:

- Edit the *Validation Rules*, by selecting **View Validation Rules**.
- Edit the template description, by selecting **Edit Description**.
- **Delete Template**.

6.6. Roster Rules

Roster Rules define the staffing requirements and employee demand that apply to *Roster* for the various Team Areas. Therefore, *Roster Rules* can be assigned to different *Team Areas*. These *Roster Rules* help ensure that the *Roster* generated meets all the necessary staffing requirements for the day.

Area/Roster Rule configuration considerations:

- It is standard to create individual *Area/Roster Rules* for each *Team Area*. Therefore, *Team Areas* can be assigned individual rules rather than sharing the same rule.

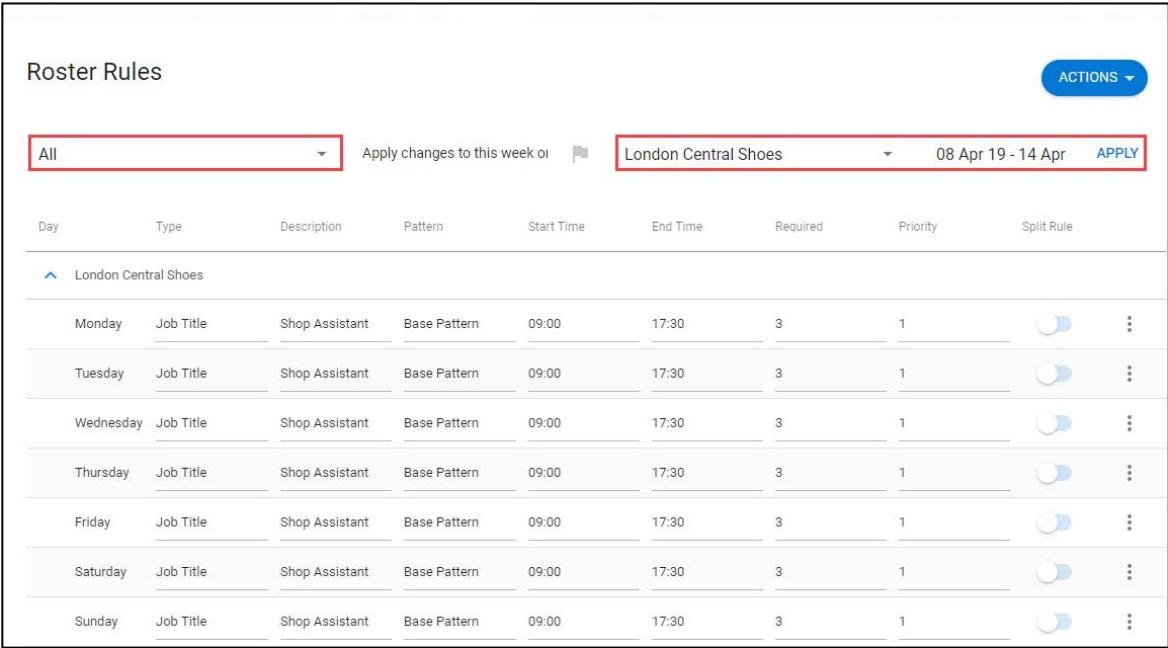

- Like *Team Areas*, a naming scheme for *Roster Rules* is recommended. It is common for the *Roster Rule Codes* to match the *Team Area Codes*.
- The *Priority Levels* setting on *Roster Rules* only refers to the order of display on *Statistics* screen. Setting this rule does not change the order of *AutoRoster*.

Roster Rules must be configured initially via *Back Office*. They can then be managed in Portal where, it is possible to **edit**, **copy** and **assign**.

6.6.1. View Area Rules

To view the *Area Rule* for the *Team Area*:

1. From the *Workforce Management* select **Roster Rules**.
2. Select the applicable day or **All** days from the drop-down list.
3. Specify the *Team Area* and *Period*.
4. Click **Apply**. In this example, the *Area Rules* from Monday to Sunday are displayed on screen.

Day	Type	Description	Pattern	Start Time	End Time	Required	Priority	Split Rule
London Central Shoes								
Monday	Job Title	Shop Assistant	Base Pattern	09:00	17:30	3	1	☒
Tuesday	Job Title	Shop Assistant	Base Pattern	09:00	17:30	3	1	☒
Wednesday	Job Title	Shop Assistant	Base Pattern	09:00	17:30	3	1	☒
Thursday	Job Title	Shop Assistant	Base Pattern	09:00	17:30	3	1	☒
Friday	Job Title	Shop Assistant	Base Pattern	09:00	17:30	3	1	☒
Saturday	Job Title	Shop Assistant	Base Pattern	09:00	17:30	3	1	☒
Sunday	Job Title	Shop Assistant	Base Pattern	09:00	17:30	3	1	☒

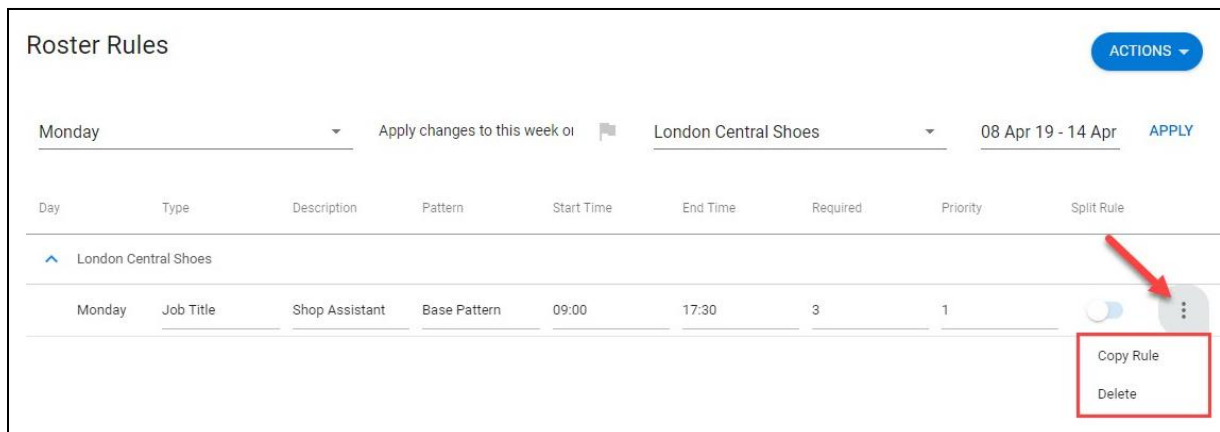

6.6.2. Edit Area Rules

To edit the *Area Rule* for the *Team Area*:

1. From the *Workforce Management* select **Roster Rules**.
2. The *Roster Rules* screen displays. Here it is possible to *Edit* the following items per rule:

- Type
- Pattern
- End Time
- Priority
- Description
- Start Time
- Required
- Mark the rule as a *Split Rule*. View section [8.4.5 Split Rule](#), for further information.

3. From the 3-dot menu of a rule you can also **Copy** or **Delete** a rule.

4. Ensure you click **Save** after editing a *Roster Rule*.

6.6.3. One Rule

Note:

- This corresponds with the *Standard Calculation* or *Retail Calculation* options.
- If *Pattern Mapping* is enabled, employees will only be counted towards the day if they are *Rostered* to work on the specified shift, in line with having the required Qualification or Job Title.

When the One Rule feature is enabled, the AutoRoster ensures a one-to-one mapping with the *Roster Rules* and the employee selected to work that shift. When using with *AutoRoster*, it is recommended to set up rules based on *Job Titles* or *Qualification*. This option is also available at *Rule* level.

Example	Details
Example 1	• A 'Cashier' is required from 09:00 – 17:00.

Example	Details
	The example employee has the correct availability, therefore is selected to work the shift by <i>AutoRoster</i> from 09:00 – 17:00.
Example 2	- A 'Cashier' is required from 09:00 – 17:00. - The example employee only has availability to work from 09:00 – 16:00, however, passes the other <i>Validation Rules</i>. - The employee is not <i>AutoRostered</i> to work, as they cannot work the full shift.

To configure the *One Rule* feature:

1. From the WFM Admin Dashboard, select WFM Configuration.
2. Search for and select the Roster General Settings tile.
3. Select the **Auto Roster Settings** tab.
4. Ensure the **Fill employee hours to contract** indicator is off.
5. Switch on the **One employee per rule** indicator.
6. Click **Save**.

SAVE

Note:

- Ensure that *Split Rule* option is not selected on the applicable *Area/Roster Rules*.
- To allow *One Rule* per person, a database parameter must be manually set by your PeopleXD Project team.

Use Pattern Validation

Note: This corresponds with the *Standard Calculation* option only.

The *Use Pattern Validation* indicator is a global setting that should be used in line with the *One Rule* feature. This indicator ensures that the employee only counts as covering the rule if they are Rostered on the shift, as identified by the rule.

To enable the Use Pattern Validation indicator:

1. Go to *Backoffice > CoreTime/CoreRoster > System Params > Roster Parameters > System Parameters*.
2. Select the **Miscellaneous** tab.
3. Tick on the **Use Pattern Validation** indicator.
4. Click **Save**.

6.6.4. Split Rule

All rules used for a *Roster-to-Contract* solution must be configured as *Split Rule*. The *Split Rule* option allows for rules to be split out between different employees in the day. The following considerations relate to the *Split Rule*.

- *AutoRoster* completes multiple iterations to see what mix of employees best fill the rules.
- The *Split Rule* means that there is not a one-to-one relationship between a rule and an employee.

The following *AutoRoster* steps are conducted by the *Split Rule* feature:

1. See if employees can fill a full gap in the day.
2. Split shifts to suit employees' availability and check who can cover the shifts.
3. Extend out shifts at start of shift to cover gaps.
4. Extend out shifts at end of shift to cover gaps.
5. Try to fill gaps in the middle of the shifts.
6. The system then repeats steps 3, 4, and 5 multiple times until there is no further improvement.

Split Rule Example 1:

- A 'Shop Assistant' is required from 09:00 – 17:00.
 - The employee has the required availability and skills, therefore is selected to work the shift from 09:00 – 17:00.

Split Rule Example 2:

- A 'Shop Assistant' is required from 09:00 – 22:00.
 - The employee only has availability to work from 09:00 – 16:00, however passes the other *Validation Rules*.
 - The employee is not *Rostered* to work the shift, as the employee cannot work the full shift on the first check.
 - The rules are then split, and the employee is rostered from 09:00 – 16:00, however, a gap remains from 16:00 – 22:00.
 - The next iteration runs to find an employee to fill the gap from 16:00 – 22:00.

Note: The *Split Rule* feature:

- Should only be used where more than one employee can fill a rule, across a day.
- Should be switched on in line with *New Auto Roster Calculation*.
- Cannot be used if the *Only assign one employee per rule* indicator is enabled.
- Can be used in line with *Minimum shift to fill in minutes*, to ensure splitting shifts does not put an employee on a very short shift.
- Must be used in line with the *Retail Calculation*.

To enable the *Split Rule* feature for a *Team Area*:

1. From the *Workforce Management Dashboard* select **Roster Rules**.
2. Select the applicable day or **All** days from the drop-down list.
3. Specify the *Team Area* and *Period*.
4. Click **Apply**.
5. Enable to **Split Rule** indicator for the applicable rules.
6. Click **Save**.

7. Absences and Leave

In *Roster* any absence that has at least one workday between the start date of the absence and end date of the absence is seen as a *Rostered* absence and is treated like a standard *Absence* in Workforce Management.

The absence calculates as per the duration of the day based on the *Pattern* times.

In *Roster* all balances should be tracked in hours. The nature of *Roster* means the day duration constantly changes so an hour balance is seen as the most accurate.

The following options are available within *Roster* when booking absences:

- Absence on workdays
- Absence on rest days (Unrostered Bookings)
- Absence using start and end time
- Part day absence (standard calculation)
- Part day absence (retail calculation)

See our [Roster Absences](#) guide for further guidance.
