1. Overview

1.1. Purpose of Document

This document is intended for use by Managers/Administrators who generate expected demands for periods with Roster. Here, we outline the functionality and configuration required to Generate Demand for Opening Times. Items covered include:

- Enabling/Disabling functionality
- Accessing the screen
- Generating demand
- Reporting

1.2. Functionality Overview

This functionality ensures that, when Generating Demand for a period the system ensures the demand is not generated for times outside of the company's Operational Hours, for the selected Interface Types. Furthermore, ensuring that the data generated is in line with:

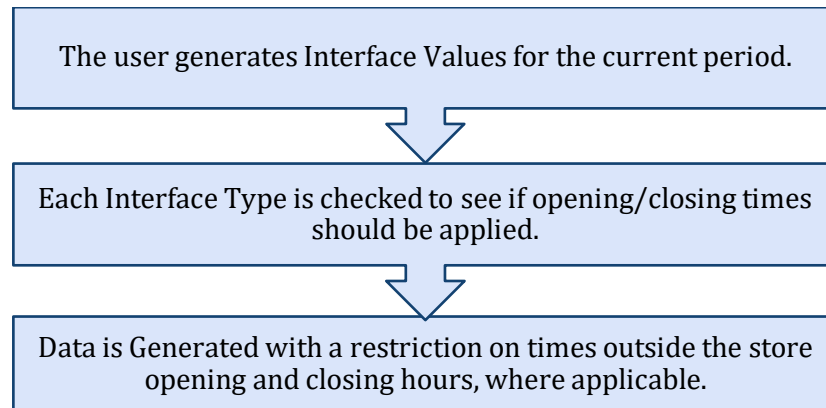

- Changes to Operational Hours year on year (should opening hours increase or decrease).
- Closure days year on year, for example Local/Company Holidays or other Closure days.

1.2.1. Process Flow Scenario

If this functionality is not configured, where the store opened from 10:00 – 18:00 **last year** and opens 11:00 – 18:00 **this year**:

- The system will generate data from 10:00 – 11:00 as it is applying the trending factor to last years' data. Employees will be rostered outside of the store opening times this year unless the staffing demands are manually amended.

However, with this functionality, you can indicate on each Interface Type if the 'Generate Values' should apply the opening and closing times to the values for Roster.

2. Configuration

2.1. Enable/Disable Functionality

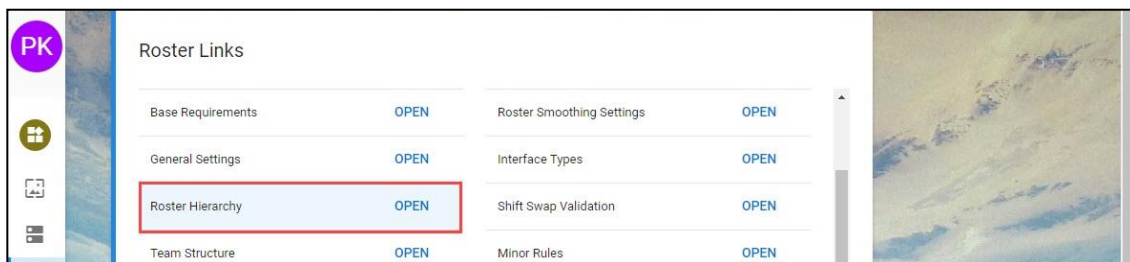

This functionality will relate to the 'Opening Times' set in 'Base Requirements' against the Team Area.

Note: It is not possible for the system to consider 'Trading Times' instead of the 'Opening Times', for this functionality.

2.1.1. Setting Opening Times in Base Requirements

To review/amend opening times:

1. Quick jump to *Roster Links*.
2. Select **Open** *Base Requirements*.

The *Base Requirements* screen displays. Here it is possible to edit existing requirements or add new requirements.

10. Next, you can specify requirements surrounding organisation variables. In this example, the Bristol retail store has:

- 1 Entrance
- 1 Elevator
- 1 Escalator
- 10 Changing Rooms

These 4 fields are configurable to be in line with your organisation, through Language Pack. Outlined in [Section 2.1.3. Field Language Pack.](#)

11. Once complete, select **Save**.

2.1.2. Switch On Operational Times

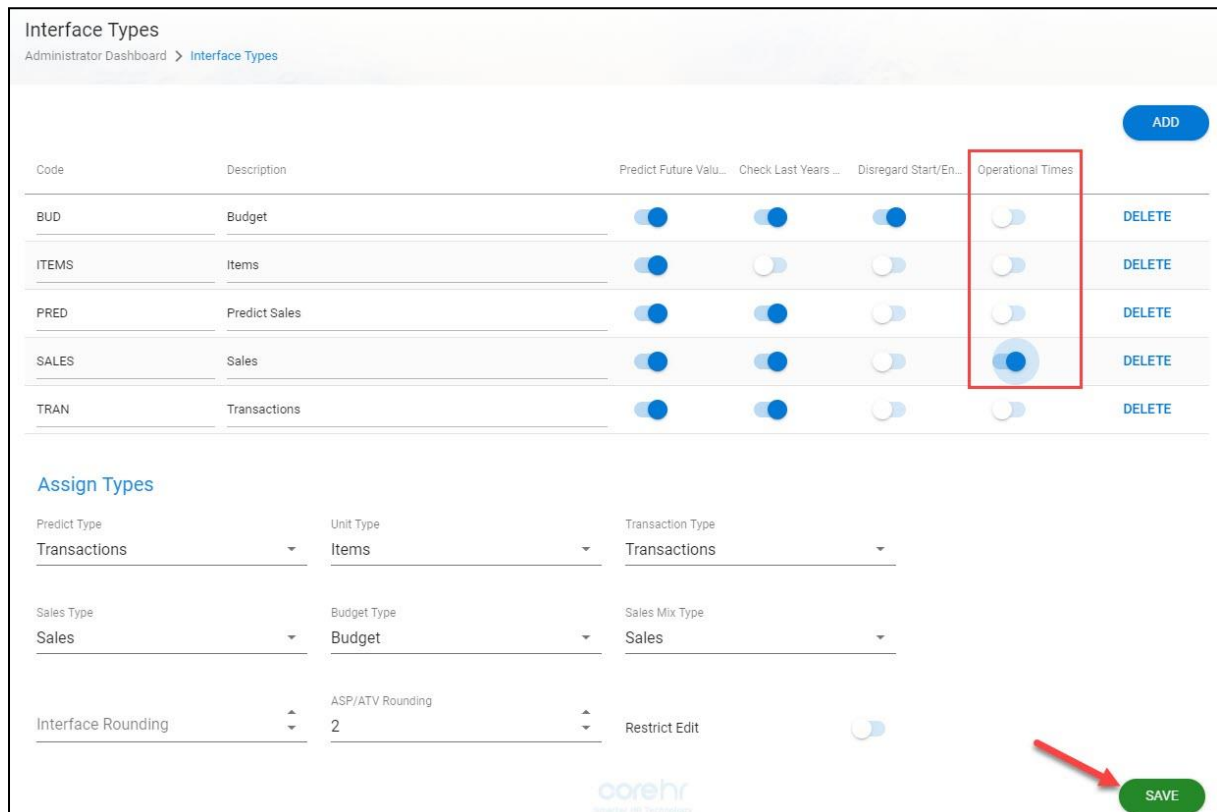

To switch on this functionality there is a toggle next to each interface type on the *Interface Types* screen, and this logic is only applied to any interface type that is marked as *Operational Times*.

1. Quick jump to *Roster Links*.
2. Select Open **Interface Types**.

The *Interface Types* screen displays.

3. Switch the **Operational Times** toggle On.
4. Click **Save**.

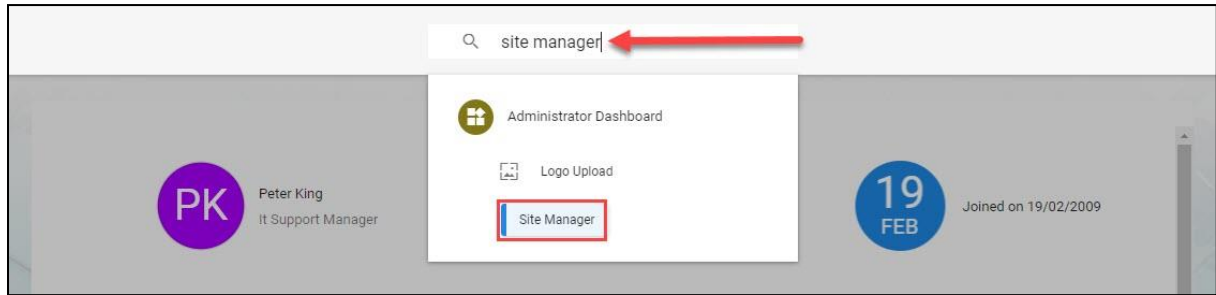

2.1.3. Field Language Pack

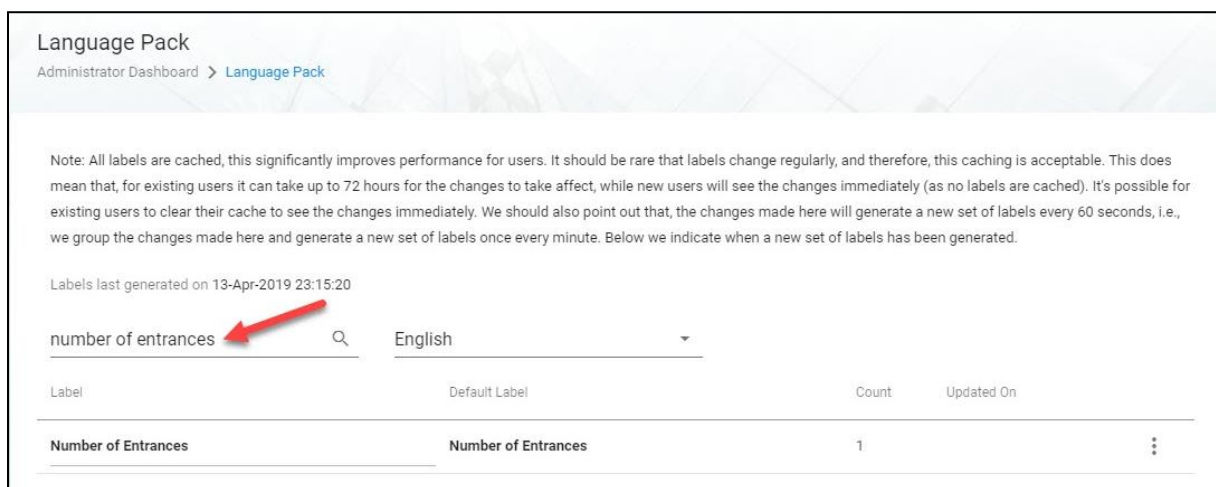

You can update any of the 4 variable field labels on the Base Requirements screen as outlined in [Section 2.1.1. Base Requirements](#).

To do this, go to:

1. *Quick Jump to Site Manager*.

2. Click **Open Language Pack**.
3. Search for the label, in need of update.

4. Click on the *Label* to edit.
5. Enter the applicable label between the tags.
6. Press **Enter** on your keyboard to save.
Or click outside the field, on your screen.

Language Pack

Administrator Dashboard > [Language Pack](#)

Note: All labels are cached, this significantly improves performance for users. It should be rare that labels change regularly, and therefore, this caching is acceptable. This does mean that, for existing users it can take up to 72 hours for the changes to take affect, while new users will see the changes immediately (as no labels are cached). It's possible for existing users to clear their cache to see the changes immediately. We should also point out that, the changes made here will generate a new set of labels every 60 seconds, i.e., we group the changes made here and generate a new set of labels once every minute. Below we indicate when a new set of labels has been generated.

Labels last generated on 13-Apr-2019 23:15:20

number of entrances 🔍 English ▼

3. Generate Demand outside Store Opening Times

3.1. Generating Values

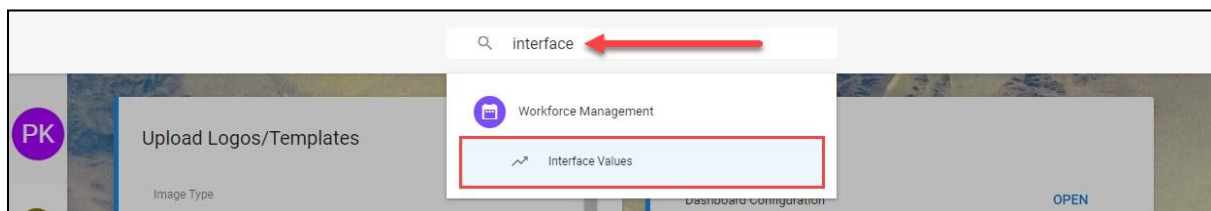

When the 'Generate Values' process is run, the system calculates predicted values for the period based on last year's actual values. This data can be manually added, or interfaced into the system. Please see the WFM Interface File Layout Guide, for detail on migrating this history data into Roster.

If the option 'Generate Values' is selected the Interface Types marked with 'Operational Times' will be checked with the relevant history, and Operational Times applied, therefore:

- Any Interface Type that is marked with 'Operational Times' will have the associated times applied.
- Data for the previous year, outside of these times, will not be applied.
- If there are no Opening/Closing Times entered on a particular date, no data will be applied to that date for the Interface Type.

To *Generate Values*:

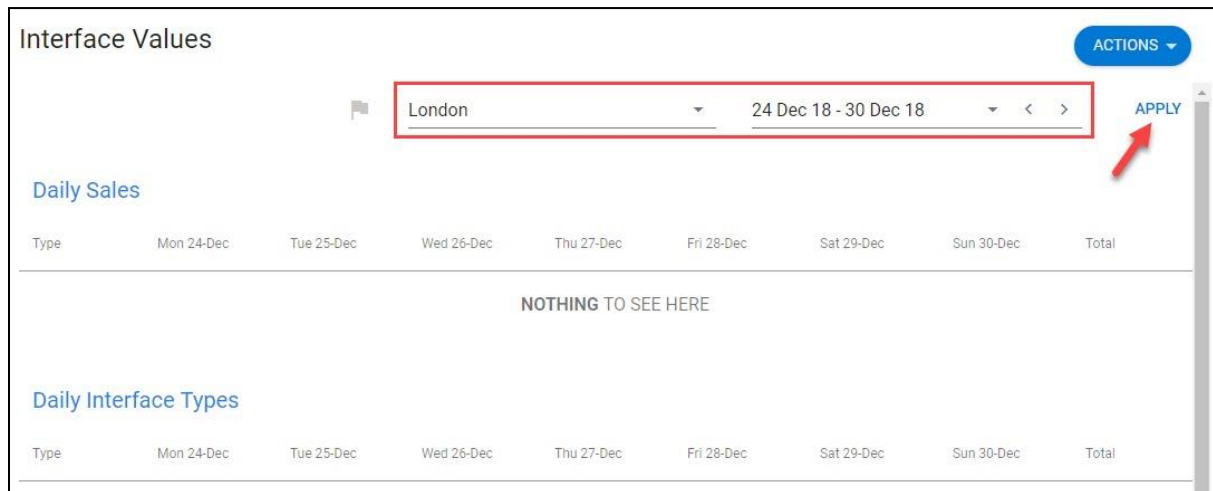

1. Quick jump to *Interface Values*.

The *Interface Values* screen displays.

2. Specify the required *Team Area* and Week from the drop-down lists.
3. Click **Apply**, to refresh the page.
