1.1	25/03/2025	Georga Edwards	QOL update to Portal and Menu Options added

1. Overview

One of the main uses of trigger points is to highlight levels or patterns of sickness absence that require further attention. Using trigger point configuration parameters can be set to determine when action is needed. The attendance records of individual employees are then monitored against set criteria. Examples of trigger points may include:

- Cumulative day's absence in a set period
- Number of spells in a set period
- Combinations of days and spells
- Pattern related
- Notification:
 - where Fit note/Certs due
 - where staff returning from planned leave
 - where there is a change in an employee's rate of pay relating to long term absence

Trigger points can be created within the system so that alerts are generated once an employee is absent for a pre-determined number of days, instances or occurrences during a period. The notifications are available to definable roles such as Employee, Managers & HR Admin.

Trigger Points Notifications allows managers and employees to see when they have activated a trigger in the system. A notification can be sent to their email and to the manager self-service/ employee self-service in PeopleXD. The administrator is responsible for setting up the triggers for the system and it is the administrator that decides who receives the notification and what information is sent in the notification.

There are four main types of triggers: Sum Rule, Daily Rule, Reminder Rule and Occupational Sick Leave Rule. Each of the rules will have different configuration setting associated with them.

1.1. How to enable the Trigger Points Widget

The Trigger Points Widget is where administrators can set up and manage triggers for the organisation.

To enable this, follow the steps below:

- Select **Dashboard Configuration** from the quick jump menu
- Using the drop-down menu select **Administrator Dashboard**
- Select the Dashboard you want the widget to appear on e.g., **Site Manager**
- Now under the Tab Widgets search for **Trigger Points** and **Activate** the toggle

2. The Trigger Points Widget

Once you have enabled the Trigger Points widget, it will display all existing rules. The widget display can be filtered to Include or Exclude Dormant rules.

The screenshot shows the 'Trigger Points' widget interface. At the top, there is a title 'Trigger Points' and a blue button labeled 'ACTIONS' with a dropdown arrow. Below the title is a filter dropdown menu currently set to 'Include Dormant'. Underneath is a table with two columns: 'Rule ID' and 'Rule Description'. The table contains four rows of rules, each with an 'EDIT' link to its right.

Rule ID	Rule Description	
1	Uncertified Sick > 7 days	EDIT
2	More than 3 Uncertified Sick Days on a Friday	EDIT
3	Maternity Reminder	EDIT
4	Occupational Sick Movement	EDIT

The *Trigger Points widget* contains the following fields:

Option	Details
Rule ID	This is the unique code given to the rule
Rule Description	This is the description given to the rule. This should be as meaningful as possible, so it is easily identifiable.
Edit	This allows you to open an existing rule. From here you can: - Edit the rule and save changes. - Copy the rule.

From the Actions button you have access to:

- **Add Rule** – where you can create a rule from scratch.
- **Rule Groupings** – allows you to group rules together, the group can then be attached to an employee, work group or be marked as a company default.

3. Trigger Point Rule Configuration Screen

Whether you are adding or editing a rule you will use the Trigger Point Rule screen. Depending on the Rule type selected the Rule Conditions will differ.

The screenshot shows the 'Add Trigger Point Rule' configuration screen. At the top, there's a breadcrumb 'Administrator Dashboard > Add Trigger Point Rule' and a 'NOTIFICATION DETAILS' button. The main form contains several sections: 'Rule ID' (2), 'Rule description' (More than 3 Uncertified Sick Days on a Fri...), 'Rule type *' (Daily Rule), 'Leave type' (Uncertified Sick Leave), 'Number of weeks' (52), 'Rolling direction' (Backward), 'Dormant' (toggle), 'Multi appointment' (toggle), 'Rule Conditions' (Days: Friday, Condition: Greater than, Frequency: 3, Frequency Type: Days), and buttons for 'COPY' and 'SAVE'.

The *Trigger Point Rule* screen contains the following fields:

Option	Details
Rule ID	This is the unique code given to the rule
Rule Description	This is the description given to the rule. This should be as meaningful as possible, so it is easily identifiable.
Rule Type	Select the rule type for the trigger you are creating. Options available are: • Sum Rule - identify when a user has taken a number of days absence or a combination of several absence. • Daily Rule - can be used to check patterns of absences on particular days. • Reminder - can be used to send a trigger to remind the user of a specific event. • Occupational Absence Entitlements - will notify the manager/employee if there is any movement in an employee's rate of pay.

Option	Details
Leave Type	Select the leave types you want associated to the rule. Multiple leave types can be selected, if required.
Number of Weeks	Enter the number of weeks the rule should check.
Rolling Direction	The direction in which you want the rule to check the defined number of weeks selected. This can either be <i>Forward</i> or <i>Backward</i> .
Dormant	If enabled, this will make the rule dormant. Dormant rules will not generate triggers.
Multi appointment	If enabled, this allows for employees, who have multiple appointments, within an organisation to have a Trigger rule apply to each job separately.

The **Rule Conditions** for the **Sum Rule** type contains the following fields:

Option	Details
Condition	Select the condition you want applied to the rule. Options are: • Less than • Greater than • Equal • Less than OR equal to • Greater than OR equal to
Days	Enter the number of days to be applied to the condition selected e.g., Greater than, 7 days.
Hours	Enter the number of hours to be applied to the condition selected e.g., Less than, 7 hours.
Occurrences	Enter the number of occurrences to be applied to the condition selected e.g., Equal, 3.
Instances	Enter the number of instances to be applied to the condition selected e.g., Less than Or equal to, 3.
Additional conditional type	Select whether you want additional condition types applied to your rule. Options available:

Option	Details
	And – allows you to add an additional set of conditions. All conditions will need to be met for the rule to trigger. Or – allows you to add an additional set of conditions. Only one set of conditions must be met for the rule to be triggered. None – no additional conditions required.

Note: **Instance** would be the actual absence, and **Occurrence** is the number of days. For example, if an employee has sick leave for 01-MAY to 05-MAY for 5 days, this would be 1 instance and 5 occurrences.

The **Rule Conditions** for the **Daily Rule** type contains the following fields:

Option	Details
Days	Select the Day of the week you want to apply the rule to.
Condition	Select the condition you want applied to the rule. Options are: • Less than • Greater than • Equal • Less than OR equal to • Greater than OR equal to
Frequency	Enter the frequency (number) you want the condition to meet before the rule is triggered.
Frequency Type	Select the frequency type that applies to your rule. Options available are Days, Hours or Occurrences.

The **Rule Conditions** for the **Reminder Rule** type contains the following fields:

Option	Details
Method Frequency	Select the value to be associated with the Reminder Method & Frequency Type.

Option	Details
Reminder Method	Select the reminder method. This works in conjunction with the value selected in Method Frequency & Frequency Type. Options available are: • Days before the start date of the absence • Days before the end date of the absence • Days after the start date of the absence • Days after the end date of the absence
Frequency Type	Select whether the frequency is to be Days or Hours.
Condition	Select the condition you want applied to the rule. Options are: • Less than • Greater than • Equal • Less than OR equal to Greater than OR equal to
Absence duration	Select the value of absence duration you want associated to the condition. E.g., absence is greater than 3 days
Day type	Select whether the frequency is to be: • Days - will use the 7 days when deciding when to send a trigger. Reminder triggers may be sent on a day the employee is not working. E.g. trigger received on a Sunday to submit a sick certification. • Roster Days - will count the number of days the employee is rostered when counting the days back to know when to send the trigger. Trigger will count the number of workdays e.g. if an employee is not rostered to work a Saturday or Sunday, they will not receive a trigger.
Return to work interview not completed	If enabled, a reminder will be triggered, for an absence, where the RTWI is not completed.

Option	Details
Supporting documentation not received	If enabled, a reminder will be triggered, for an absence, where supporting documentation has not been received.
Open ended absence	If enabled, a reminder will be triggered, for an absence, where the absence is open ended.
Overlapping absences	If enabled, a reminder will be triggered, for an absence, where it overlaps with another absence.

3.1. Notification Details

The notification details allow you to configure the details that are sent as an email or notification to the Manager, Employee or both in the *Trigger Point Notifications* widget once a trigger is activated. Each rule can have different notification details associated with it.

To add notification details to a rule, click on the **Notification Details** button. The Notification Details screen will display:

Notification Details

Administrator Dashboard > Add Trigger Point Rule > Notification Details

SAVE

The **Notification Details** screen contains the following fields:

Option	Details
Notify	Select whom to notify when the trigger is activated. Options are: Employee, Manager or Employee & Manager.

Option	Details
Email/MMS Subject	Enter the details you want to appear on the Email/MMS subject title. You can use the dropdown menu to select merge field to add to your title. Place your cursor where you require the merge field to be inserted and then select from the dropdown menu. e.g., <<FORENAME>><<SURNAME>> is returning from Maternity Leave on the <<REMINDER_ABS_END_DATE>>
Email Body	Enter the message you want to appear for the user in the Email. Merge fields can also be used within your email message, in the same way.
MMS Body	Enter the message you want to appear for the user in the MMS. Merge fields can also be used within your MMS message, in the same way.
Send Manager Email/MSS	If enabled, the manager will receive a notification. This can be to both email and MSS or to just one.
Manager Email/MSS Always On	If enabled, the manager will not be able to turn the notification off in the Trigger Point Notifications widget.
Send Employee Email/MSS	If enabled, the employee will receive a notification. This can be to both email and MSS or to just one.
Employee Email/MSS Always On	If enabled, the employee will not be able to turn the notification off in the Trigger Point Notifications widget.

3.2. Add a Rule

To add a rule, follow the steps below:

1. From the Trigger Points widget expand Actions and click **Add Rule**.
2. Give your rule an appropriate **ID** and **description**.
 - This should be something meaningful for easy identification.
3. Select the **Rule type** from the dropdown menu.
4. Select the **Leave type** you want to associate to the rule.
 - You can select multiple leave types, if required.
5. Enter the **Number of weeks** you want the rule to check.

6. Select whether you want the system to check **Backwards** or **Forwards**.
7. Enter the criteria for the **Rule Conditions**.
8. Click **Save**.
9. Click the **Notification Details** button and select whom to receive the notification.
10. Enter the title and message of the notification.
11. Select how the users are to be notified.
12. Click **Save**.

3.3. Rule Grouping

Rule Grouping allows you to group rules together, the group can then be applied to an employee, work group or be marked as a company default. This allows you to setup the triggers and easily apply them to the entire company.

To add a rule group, follow the steps below:

1. From the Trigger Points widget expand Actions and click **Rule Grouping**.
2. Click **Add Rule Group**.
3. Give your group an appropriate **Group ID** and **Name**.
4. Select the Company Default tick box, if applicable.
 - Company Default can only be applied to 1 Rule Group.
5. Click **OK**.

To add/edit rules in a group, follow the steps below:

1. Select the relevant Group.
2. Turn on the **Selected** toggle against each rule to be included in the Rule Grouping.
 - Turn off the Selected toggle to remove a rule from the Rule Grouping.
3. Click **Save**.

4. Trigger Point Rule Examples

There are four main types of triggers: Sum Rule, Daily Rule, Reminder Rule and Occupational Sick Leave Rule. Each of the rules will have different configuration setting associated with them. We've given an example of each below.

4.1. Sum Rule

The sum rule allows users to create triggers to identify when a user has taken a number of days absence or a combination of several absence. Multiple conditions can be checked in the one rule by using the AND/OR condition.

Note: If AND is used all conditions must be met for the trigger to fire, if the OR rule is used if any of the conditions are met the trigger will fire.

Example:

This example shows how to configure a rule where the trigger fires to a manager once an employee takes more than 8+ days Uncertified Sick leave or 60 hours+ within the last 52 weeks.

1. Select the rule type as **Sum Rule**.
2. Select **Uncertified Sick Leave** as the absence type.
3. Enter **52** as your Number of weeks and **Backward** for the Rolling direction.
4. Then apply the following Rule Conditions:
 - o Greater than, 7 Days
5. In Additional condition type, select **OR** to add in a second condition.
6. Apply the following Additional Rule Conditions:
 - o Greater than, 60 Hours
8. Click the **Notification Details** button and select to notify Manager.
9. Enter the Email Subject e.g., <<FORENAME>><<SURNAME>> 8 Day/60Hours Uncertified Sick
10. Select how you want the notification to be sent Email and/or MSS by turning on the relevant user toggles.

11. Enter the message for the Email/MSS e.g., <<FORENAME>><<SURNAME>> has taken more than 8 days or 60 Hours Uncertified Sick days in the past 52 weeks.
12. Click **Save**.

4.2. Daily Rule

The daily rule can be used to **check patterns of absences** on particular days. E.g. Number of Sick days on a Monday, number of overtime Occurrences on a Saturday.

Example

This example shows how to configure a rule where the trigger fires once there is more than 3 days Uncertified Sick leave on a Monday within the last 52 weeks.

1. From the Trigger Points widget expand Actions and click **Add Rule**.
2. Enter the **rule ID** and **Description**.
3. Select **Daily Rule** as your Rule Type.
4. Select **Uncertified Sick Leave** as your Leave Type.
5. Enter **52** as your Number of weeks and **Backward** for the Rolling direction.
6. Then apply the following Rule Conditions:
 - Monday, Greater than or equals, 3 & Days

Add Trigger Point Rule
Administrator Dashboard > Add Trigger Point Rule

NOTIFICATION DETAILS

Rule ID	Rule description	Rule type *
DR US>3 Monday	More than 3 Uncertified Sick Days on a Mo...	Daily Rule

Leave type	Number of weeks	Rolling direction
Uncertified Sick Leave	52	Backward

Dormant ☐ Multi appointment ☐

Rule Conditions

Days *	Condition *	Frequency *	Frequency Type *
Monday	Greater than	3	Days

access PeopleXD

COPY **SAVE**

7. Click the **Notification Details** button and select to notify the Employee & Manager.

8. Enter the Email Subject e.g., <<FORENAME>><<SURNAME>> 3 Uncertified Sick days on a Monday
9. Select how you want the notification to be sent Email and/or MSS by turning on the relevant user toggles
10. Enter the message for the Email/MSS e.g., <<FORENAME>><<SURNAME>> has taken more than 3 days Uncertified Sick days in the past 52 weeks.
11. Click **Save**.

4.3. Reminder Rule

The reminder rule can be used to send a trigger to remind the user of a specific event. For example, you can send a reminder:

- 3 days after an Uncertified Sick absence, where the absence is greater than 3 days so you require the employee to submit a certificate.
- 14 days before the end date of a Maternity absence to contact the employee to ensure they are returning to work.
- 2 days after the end date of Certified Sick absence for the employee to submit their sick cert.

Example:

This example shows how to configure a rule where the trigger fires to remind the manager to contact the employee whose maternity leave is due to end in 14 days to arrange their return to work.

1. From the Trigger Points widget expand Actions and click **Add Rule**.
2. Enter the **rule ID** and **Description**.
3. Select **Reminder Rule** as your Rule Type.
4. Select **Maternity Leave** as your Leave Type
5. Then apply the following Rule Conditions:
 - 14, Days before the end of the absence, Days, Greater than OR equal to, 240 & Days.
6. Click the **Notification Details** button and select to notify the Manager.
7. Enter the Email Subject e.g., Reminder: <<FORENAME>><<SURNAME>> will be returning from Maternity Leave on the <<REMINDER_ABS_END_DATE>>.

8. Select how you want the notification to be sent Email and/or MSS by turning on the relevant user toggles.
9. Enter the message for the Email/MSS e.g., Reminder: <<FORENAME>><<SURNAME>> will be returning from Maternity Leave on the <<REMINDER_ABS_END_DATE>>. Please contact to arrange their return to work.
10. Click **Save**.

4.4. Occupational Absence Entitlements Rule

The Occupational Absence Entitlements Rule will notify the manager/employee if there is any movement in an employee's rate of pay, e.g. if a person moves from full pay to half pay, half pay to 0 rate of pay or from 0 rate of pay back up to full pay.

Note: The **Validation in Payroll** or the overnight **Future Calculation** will need to have **run** for the details to display on the Occupational Absence Tables, and for triggers to be generated for the triggers at **Complete Update** stage.

5. Trigger Point Notifications Widget

Once a Trigger has been activated, based on how the rule has been configured, a notification will be sent to either the Manager, Employee or both. The Trigger Point Notifications widget is where the triggers will be displayed for the user.

5.1. Enable the Trigger Point Notifications Widget

To add the Trigger Point Notification widget to a dashboard, follow the steps below:

- Select **Dashboard Configuration** from the quick jump menu
- Using the drop-down menu select the relevant Dashboard e.g., **Manager** or **Employee**
- Select the Dashboard Tab you want the widget to appear on e.g., **Time**
- Now under the Tab Widgets search for **Trigger Point Notifications** and **Activate** the toggle
- The widget will now display on the selected Tab of their Dashboard.

5.2. View Trigger Notifications

Once a Trigger has been activated a notification will be sent to the user's email and to the Notifications centre in PeopleXD. The Trigger Points Notifications Widget will notify the user that a trigger has been activated.

To view full details of the activated trigger:

1. Click on the **Notifications Centre**
2. Select the **Employee trigger** you want to view
3. The full details of the trigger will appear, these details will vary depending on how the administrator has setup the rule, but can include the employee's name, the rule ID and the text for this rule.

5.3. Turn Trigger Notifications On/Off

Depending on how the Trigger has been setup by the Administrator an employee and or a manager can turn the notifications **on** or **off**. This is done in the *Notification Configuration* screen.

To access the Notification Configuration screen:

1. From the Trigger Point Notifications widget, click the **Notifications** button.
2. The *Notification Configuration* screen displays a list of triggers.
3. Use the **Email** and **ESS/MSS Alert** toggles to turn on or turn off the relevant triggers.
4. If the notifications are turned off, you will no longer receive them.

6. Menu Options

The following menu options need to be enabled for access to the Trigger Point functionality.

6.1. Access for Administrators
