1. Overview

1.1. Purpose of the Guide

The purpose of this document is to provide guidance on how to use the *Data Migration Update Facility* widget. This includes:

- An overview of the *Data Migration Update Facility* widget.
- What records can be updated using the *Data Migration Update Facility* widget.
- How to update data using the *Data Migration Update Facility* widget.
- The dependency on Insight reports for employee and contract updates.
- Cancelling an update that is in progress.
- Fixing errors identified during the update.
- An appendix with detailed guidance for each of the 26 update options.

Note:

This document does not cover the *Data Migration Templates* and *Data Migration Options* widgets, as these are not part of the process for completing bulk updates. Refer to the [Data Migration Tool](#) user guide for further guidance.

1.2. What is the Data Migration Update Facility?

The *Data Migration Update Facility* can be used to make bulk updates to:

- **10 specific personal details** on employee records (full list here in [1.3 Employee Updates](#)).
- **12 specific contract elements** (full list here in [1.4 Contract Updates](#))
- **4 reference data items** (full list here in [1.5 Reference Data Updates](#))

Data Migration Update Facility	
Search	🔍
Contract - Category	QUERY
Contract - Cost Centre	QUERY
Contract - Employee Status	QUERY
Contract - Employee Sub Status	QUERY
Contract - FTE	QUERY
Contract - Job Category	QUERY

The facility allows you to lookup existing records on the system and update these in bulk. For example:

- Update the home phone number for a group of employees at once using the *Person - Home Phone* option.
- Update the descriptions for cost centre reference data items, using the *Reference - Cost Centre Description* option.

This can be an efficient way to update records in bulk on CoreHR, rather than updating each individual employee / contract / reference data item via the standard CoreHR screens.

This differs from data migration because this involves updating existing records on CoreHR, rather than uploading new records to CoreHR.

Note:

- Updates made to any records using this functionality are not audited.
- Changes to contract records are made for the current active sequence. A new contract sequence is not created.

1.3. Employee Updates

All elements of the employees' personal record that can be updated in bulk are listed on the *Data Migration Update Facility* widget, with the prefix of "Person -".

Data Migration Update Facility

person | X Q

Person - Address Details	QUERY
Person - Bank Details	QUERY
Person - Contacts	QUERY
Person - Expense Code	QUERY
Person - Home Phone	QUERY
Person - Input Location	QUERY

The following table lists each of the elements available on the *Data Migration Update Facility*, that can be used to update employee records in bulk.

Update Element	Description
Address Details	Updating an employee's home address.
Bank Details	Updating an employee's bank account details, including: • Sort Code • BIC • IBAN • Account Number • Credit Union Reference
Contacts	Update contacts for an employee, e.g. their mobile number, email etc. • It is only possible to update a contact that already exists for an employee, i.e. if a mobile contact type is not assigned to an employee, it cannot be updated here. All 'Contact Types' assigned to employees can be updated.
Expense Code	Updating an employee's expense code assignment.
Home Phone	Updating an employee's home phone number.
Input Location	Updating an employee's input location (for Payroll).
Pay Code Group	Updating an employee's personalised pay code group assignment.
Probation Details	Updating an employee's probation details. The following can be updated: • Probation Expiry Date • Probation Extension Date • Probation Completion Date • Reason Code • Review Date 1 • Review Date 2
Shift Details	Updating an employee's contract <i>Shift Type</i> assignment. Options available to update are: • Shift Type • Date Effective
Sickness Category Code	Updating an employee's absence category code.

Further guidance is available in [Appendix: Update Helper Guides](#) for each employee data element, including the fields that are available to update and any logic to be aware of when completing the update.

**Note:**

This functionality cannot be used to create new records for an employee. This is used to update existing records only. See the [Data Migration Tool](#) user guide for guidance on how to upload new records to CoreHR.

1.4. Contract Updates

All elements of the employees' contracts that can be updated in bulk are listed on the *Data Migration Update Facility* widget, with the prefix of "Contract -".

The screenshot shows the 'Data Migration Update Facility' interface. At the top, there is a search bar containing the text 'contract'. Below the search bar, a list of contract elements is displayed, each with a 'QUERY' button to its right. The elements are:

- Contract - Category
- Contract - Cost Centre
- Contract - Employee Status
- Contract - Employee Sub Status
- Contract - FTE
- Contract - Job Category

The table below lists each of the elements available on the *Data Migration Update Facility* that can be used to update contract records in bulk.

Update Element	Description
Category	Updates the <i>Category</i> field on an employee's contract record.
Cost Centre	Updates the <i>Cost Centre</i> field on an employee's contract record.
Employee Status	Updates the <i>Employee Status</i> field on an employee's contract record.
Employee Sub Status	Updates the <i>Employee Sub Status</i> field on an employee's contract record.
FTE	Updates the <i>FTE</i> fields on an employee's contract record.
Job Category	Updates the <i>Job Category</i> field on an employee's contract record.
Job Title	Updates the <i>Job Title</i> field on an employee's contract record.

Update Element	Description
Location	Updates the <i>Location</i> field on an employee's contract record.
Project	Updates the <i>Project</i> field on an employee's contract record.
Reports To	Updates the employee's <i>Reports to Manager</i> .
Sub Category	Updates the <i>Sub Category</i> field on an employee's contract record.
Work Group	Updates the <i>Work Group</i> field on an employee's contract record.

Further guidance is available in [Appendix: Update Helper Guides](#) for each contract update element, including the fields that are available to update and any logic to be aware of when completing the update.

**Note:**

This functionality cannot be used to create new contract elements for an employee. This is used to update existing records only. See the [Data Migration Tool](#) user guide for guidance on how to upload new records to CoreHR.

1.5. Reference Data Updates

All reference data items that can be updated in bulk are listed on the *Data Migration Update Facility* widget, with the prefix of "Reference -".

The table below lists each of the elements available on the *Data Migration Update Facility* that can be used to update the reference data items in bulk.

Update Element	Description
Cost Centre Description	Update the description for existing <i>Cost Centre Codes</i> .
Pay Code Description	Update the description for existing <i>Pay Codes</i> .
Shift Type	Update the following elements for existing Shift Type Codes: • Shift Type Description • Sequence • Pattern Code 1 • Pattern Code 2 • Pattern Code 3 • Pattern Code 4 • Pattern Code 5 • Pattern Code 6 • Pattern Code 7

Update Element	Description
	• Dormant
Work Group	Update the following elements for existing Work Groups: • Description • Shift • Holiday Scheme

Further guidance is available in [Appendix: Update Helper Guides](#) for each reference data element, including the fields that are available to update and any logic to be aware of when completing the update.

Note:

This functionality cannot be used to create new reference data items. This is used to update existing records only. See the [Data Migration Tool](#) user guide for guidance on how to upload new records to CoreHR.

2. How to Complete an Update

2.1. Updating Person / Contract Records

To update existing employee / contract records, the system needs to know what records are to be updated. This is facilitated using an *Insight* report. The report runs within the update facility and return the required employee / contract records on screen.

Note:

It is only possible to update records that you currently have access to on the system. When the *Insight* report is generated, records appear based on your 'System Users' access e.g. if you don't have access to the employee / contract in People Management / Payroll etc, you won't have access to it here.

Follow the steps below to retrieve a list of employees / contracts in the update facility:

1. Create a report in *Insight* that identifies the set of records to be updated.
 - a. Reports must include the employee number.
 - b. Contract ID is not required for the contract updates (but is useful to add to ensure the correct set of data is retrieved in *Insight*).
 - c. All other columns included in the report do not display in the update facility but are useful to add to the report to ensure the correct set of data is being retrieved, e.g. name, department etc.

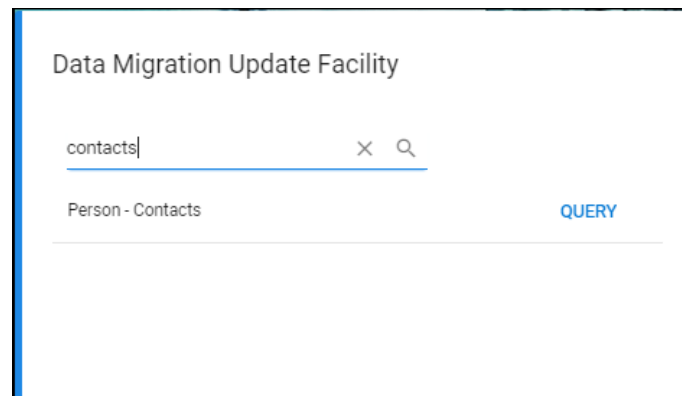

Note:

If the report should only display specific employee or contract records, then any filters required should be applied in *Insight* when creating the report either by:

- Adding filters to pre-filter the report, before it is run in the data migration tool.
- Adding prompts to the report to be filter when it is run in the data migration tool.

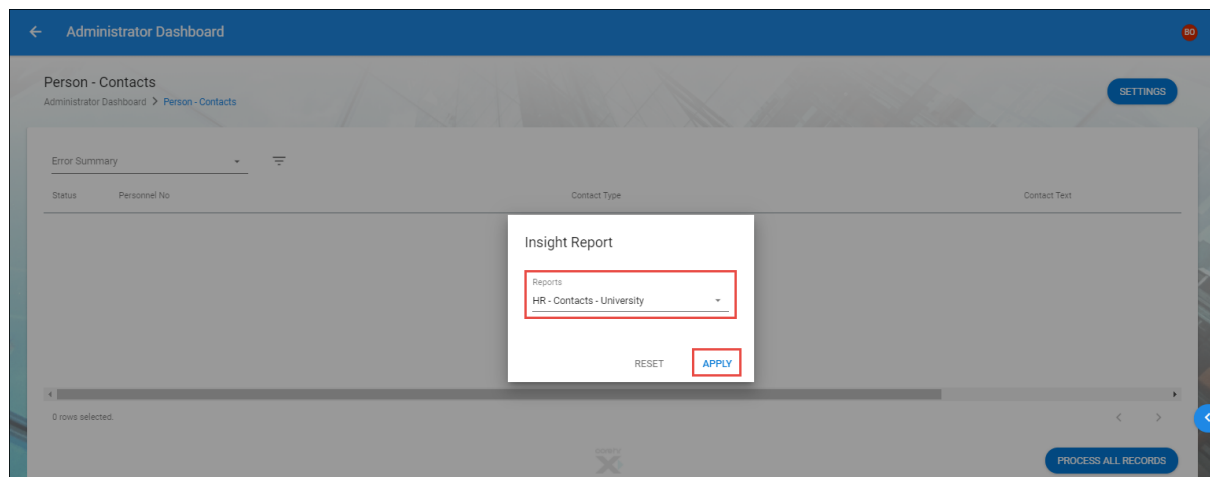

For example, it recommended to always consider adding a filter on your report to show only active records e.g. employees that are active today, contracts that are commenced and not end-dated.

2. Search for the required option on the *Data Migration Update Facility* widget:

The screenshot shows a search interface titled "Data Migration Update Facility". It features a search bar with the text "contacts|", a clear button (X), and a search button (magnifying glass). Below the search bar, the text "Person - Contacts" is displayed on the left, and a blue "QUERY" button is on the right.

3. Click **Query**.
 - a. The *Insight Report* pop up appears.
 - b. Select the required insight report from the *Reports* drop-down menu.
 - c. This menu displays Insight reports that:
 - i. You have created.
 - ii. Have been shared with you in *Insight*.

4. Click **Apply**.
5. A new window displays 'Would you like to be notified when the report has loaded?', select a preferred option and click **OK**.
6. The screen updates to display the records to be updated:

1 row selected. 1 - 26 of 26

Process Record Process All Records

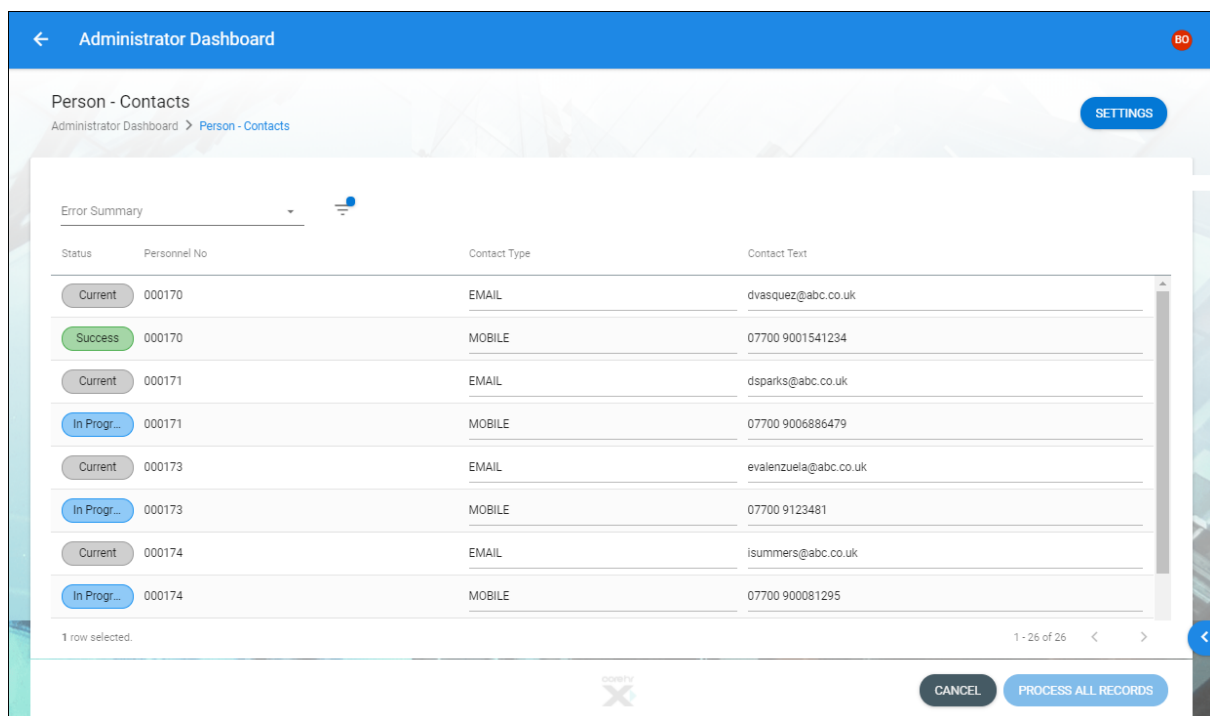

9. Repeat until all required records have been updated.
10. To update a single changed record:
 - a. Click on that record. The row is highlighted in blue.
 - b. Click on **Process Record**.

- c. The status updates to "Success" once the update has been successfully completed.
- d. If the status is updated to "Failed" this indicates that there has been an error in the process. See [2.4 Fixing Update Errors](#).

11. To update all changed records in one action

- a. Click on **Process All Records**.
- b. The status for all changed records updates to "In Progress".

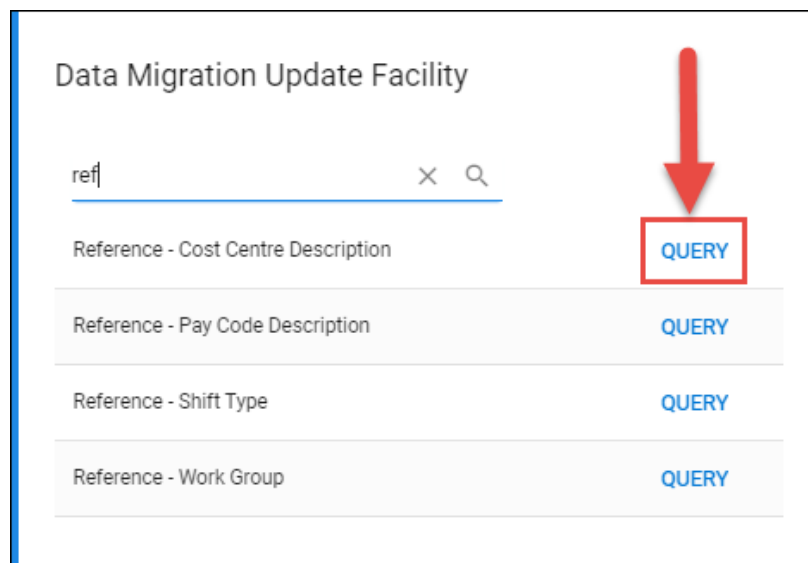

- c. The system processes each record, one at a time.
- d. The status updates to "Success" once the update successfully completes.
- e. If the status is updated to "Failed" this indicates that there has been an error in the process. See [2.4 Fixing Update Errors](#).

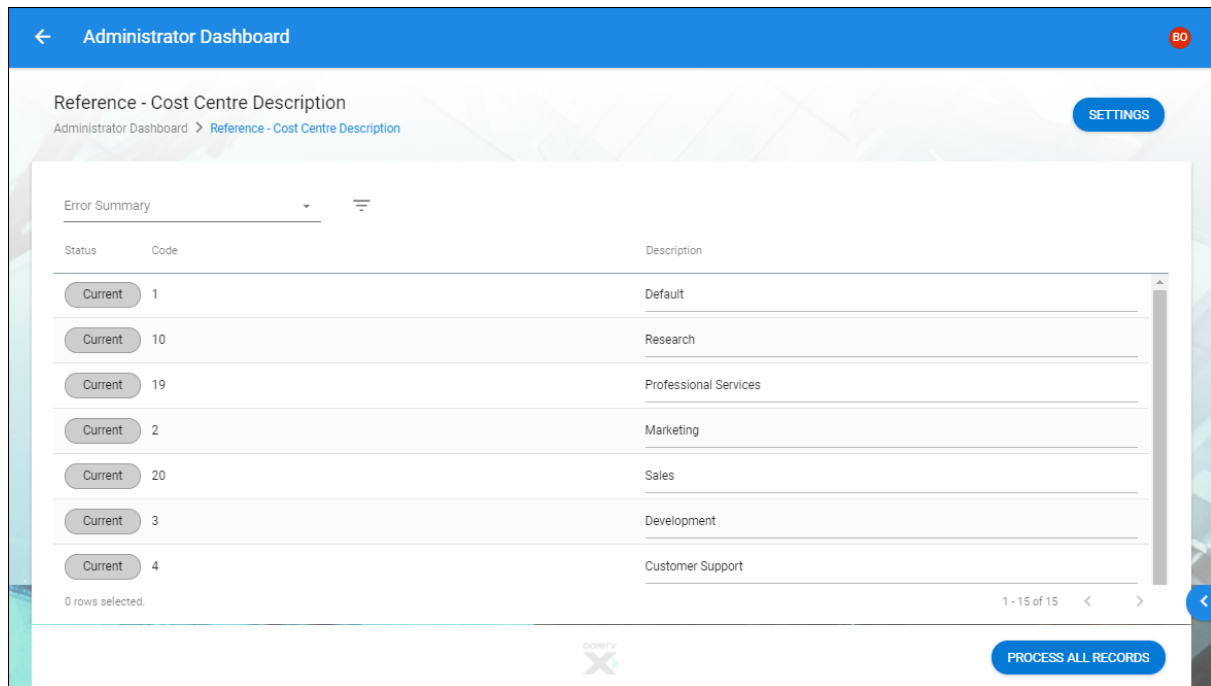

2.2. Updating Reference Data

Follow the steps outlined below to update a reference data item in the Data Migration Update Facility:

1. Search for the required reference data item, e.g. "Cost Centre Description" and click **Query**.

2. The update screen opens.
3. All of the existing reference data items are listed on the screen, including all configurable elements (which differs per reference data item - see [Appendix: Update Helper Guides](#) for further details).

4. Update the records.
 - a. Click into the element of the record to be updated and make the required changes.
 - b. Tab out or hit return.
5. Once updated, the status updates to "Changed".
 - a. At this stage, the change is ready to be applied but has not been saved.
 - b. To cancel the update and ensure changes are not applied, exit out of the screen.
6. To complete the updates and save changes applied, there are two options:

Option 1: Process Record

- a. Click the individual record onscreen. The row is highlighted in blue.
- b. Click **Process Record**.

See next page.

Current	3	Development
Changed	4	Customer Support Analyst
Changed	45	Peter Test 1
Changed	5	I.T Support

1 row selected.

1 - 15 of 15

PROCESS ALL RECORDS

- d. Once complete, the status updates to "Success".
The change has been fully saved to the CoreHR database.

Option 2: Process All Records

1. Click **Process All Records**

2. All records that have a status of "Changed" are updated to "In Progress".

Status	Code	Description
Current	1	Default
Success	10	Research
Current	19	Professional Services
Current	2	Marketing
Success	20	Sales Rep.
In Progress	3	Developer
In Progress	4	Customer Support Analyst
In Progress	45	Peter Test 1
In Progress	5	I.T Support

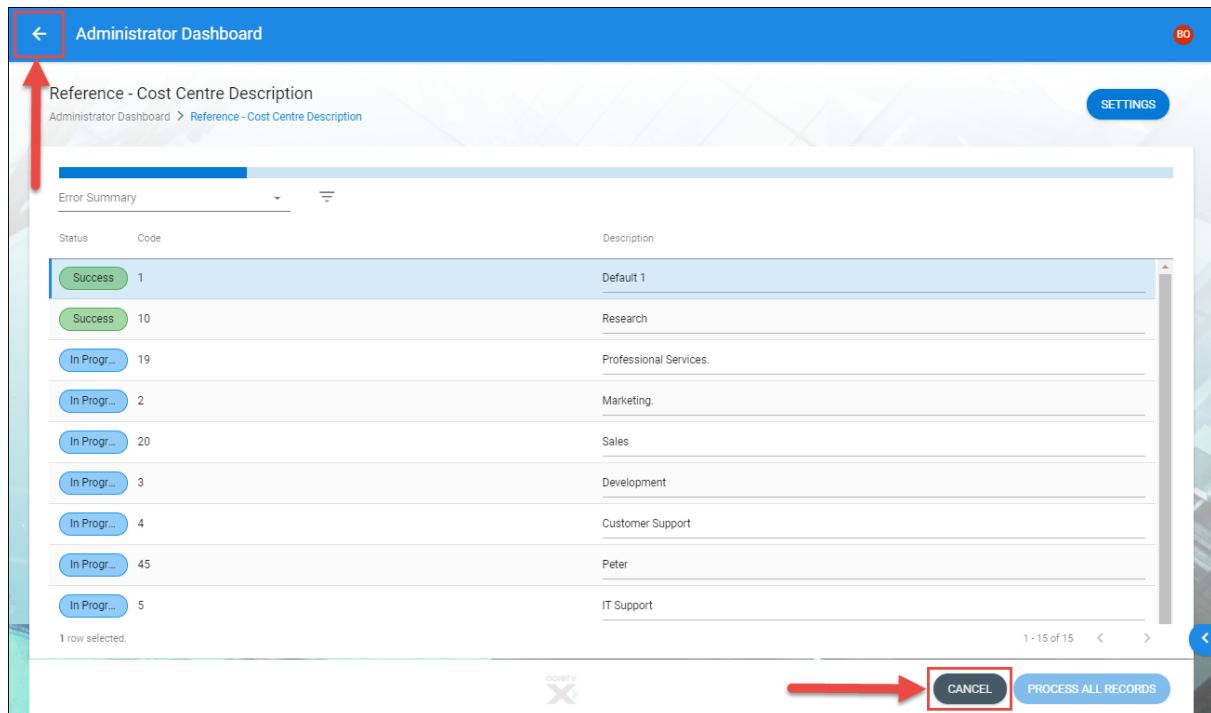

3. As each record is updated, the status updates to:
- "Success," i.e. the change has been fully saved to the CoreHR database.
 - "Failed," i.e. the change was not applied. See [2.4 Fixing Update Errors](#).

Status	Code	Description
Current	1	Default
Success	10	Research
Current	19	Professional Services
Current	2	Marketing
Success	20	Sales Rep.
Success	3	Developer
Success	4	Customer Support Analyst
Success	45	Peter Test 1
Success	5	I.T Support

2.3. Cancelling an Update

Cancelling the update process can be completed via two options:

- Exit out of the screen.
OR
- Click the **Cancel** button.

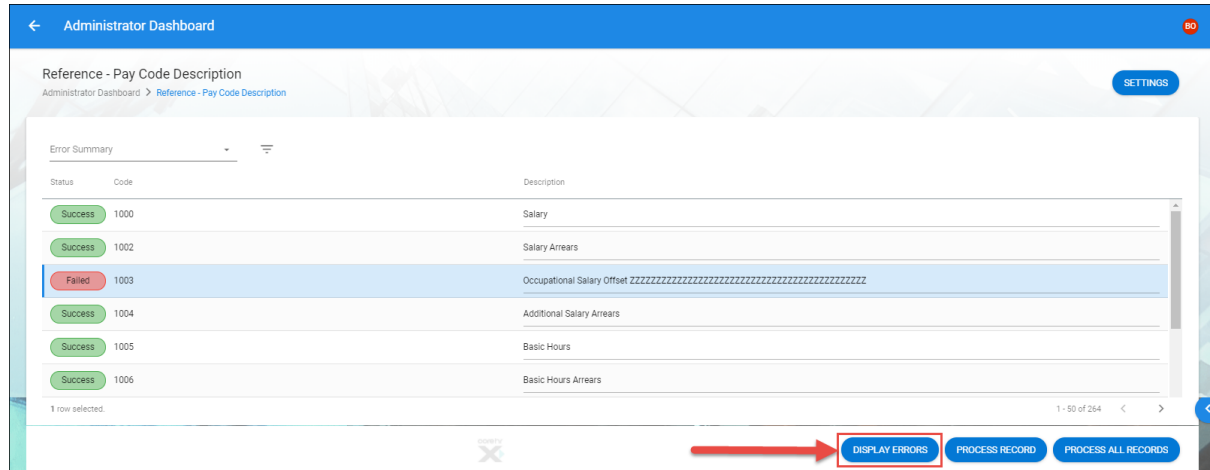

Note:

- Only changes that are “Changed”, “In Progress” or “Failed” are cancelled.
- If any changes were processed and flagged as “Success”, these are not undone.
- If any changes were “Failed” and resolved via the *Row Errors* screen but the record was not processed, the changes are lost.

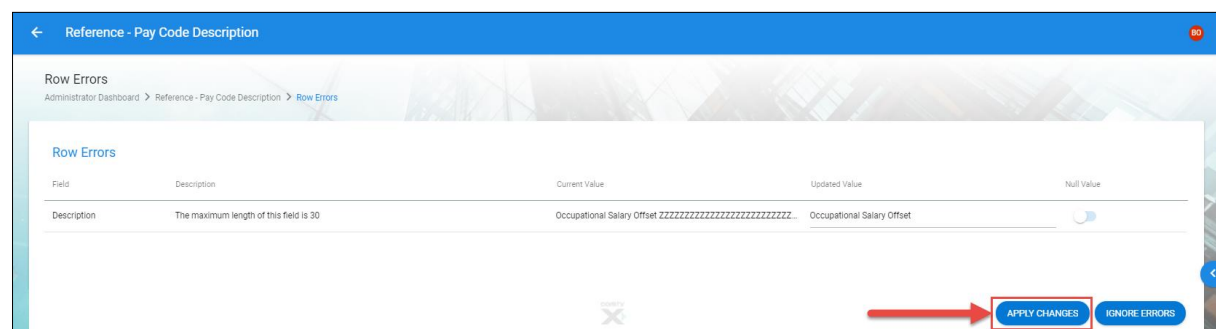

2.4. Fixing Update Errors

If there is an error when processing the record, the status updates to "Failed". To resolved this:

1. Click on the failed record. This is highlighted in blue.
2. Click **Display Errors**.

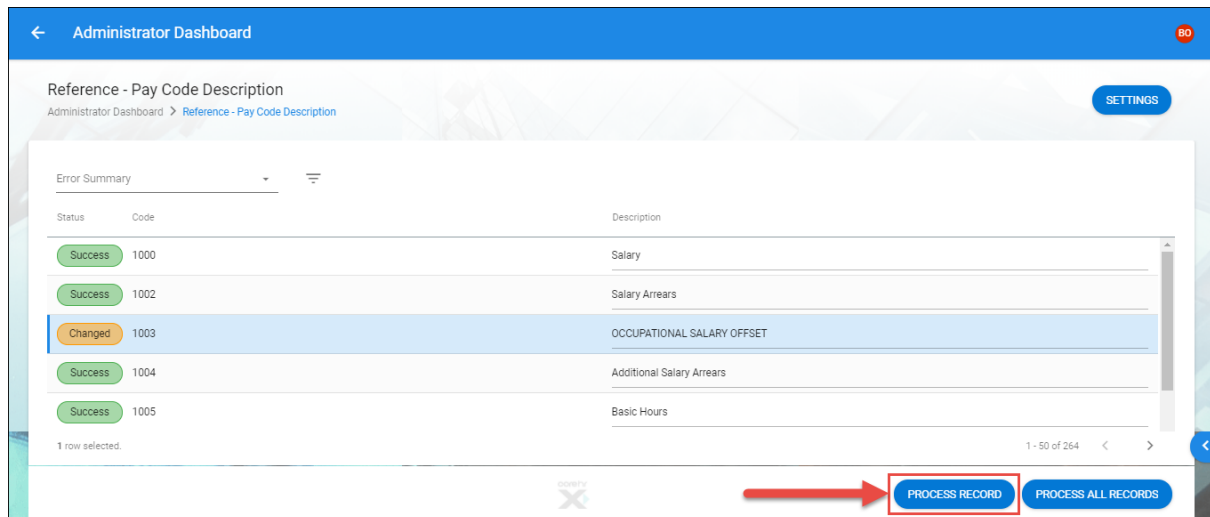

3. The *Row Errors* screen opens.
 - a. *Description* = Why the record failed to load.
 - b. *Current Value* = The item that failed to load for the record.

- To fix the error, enter a new value in the *Updated Value* column. If the value should be blank, switch on the **Null Value** indicator.

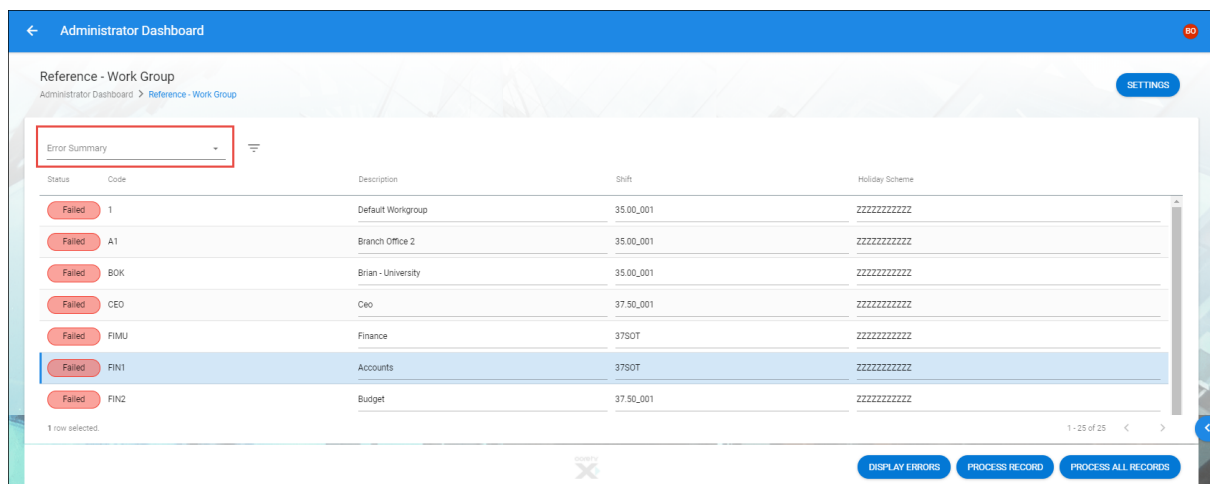

Clicking **Ignore Errors** allows you to exit the screen and clear the error / "Failed" status. The status returns to "Changed", and the record can be reprocessed.

- Click **Apply Changes**.
- The record now has a status of "Changed" and is ready to process again.

If multiple records have failed, use the **Error Summary** drop-down menu to filter the list of records on screen:

1. Select the **Error Summary** drop-down list.
This displays a list of the types of errors found.

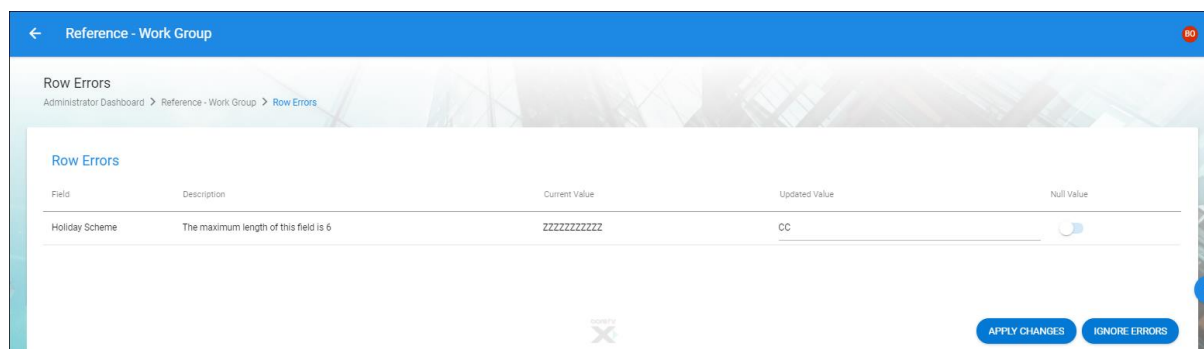

2. Click on one of the options. The screen is filtered to show all records that have that error.
3. Select a record and click **Display Errors**.
4. Resolve the error on the *Row Errors* screen, for that record.

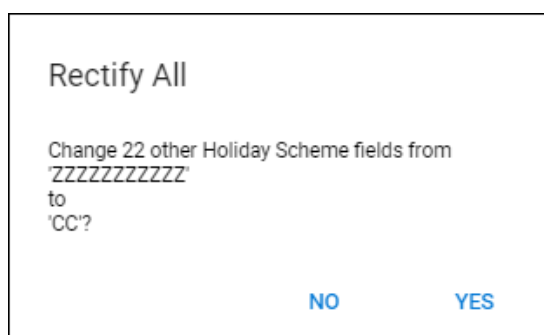

Note:

- If the value should be blank, switch on the **Null Value** indicator.
- Clicking **Ignore Errors** allows you to exit the screen without applying any changes.

5. Click **Apply Changes**.

6. A *Rectify All* prompt appears:
 - a. Click **Yes** to copy the updated value to all other records with the same error.
 - b. Click **No** to update on the current record.

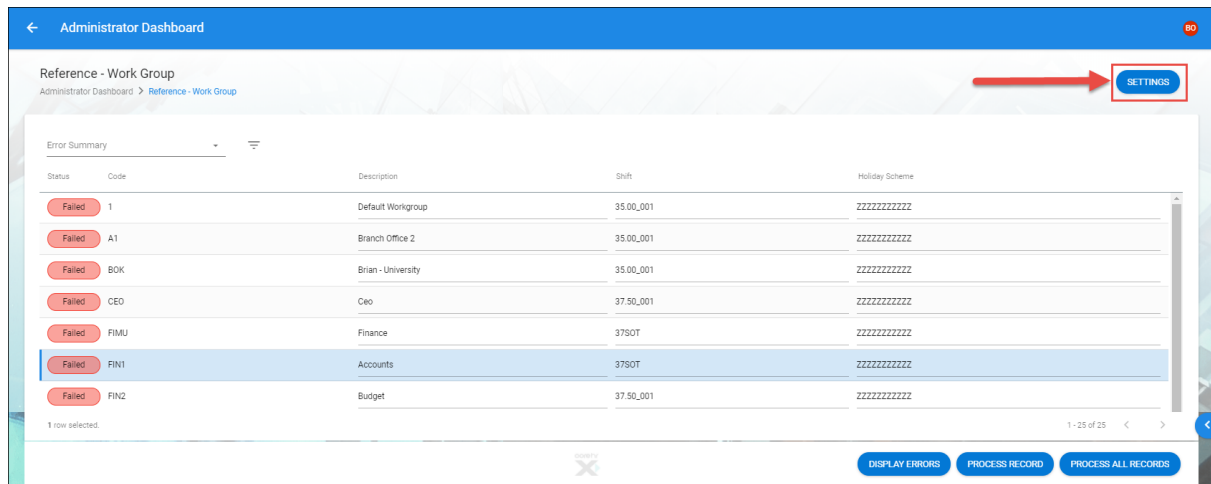

Note:

Yes should only be selected if the value should be updated for every. Take care not to select **Yes** if the data being updated is record specific.

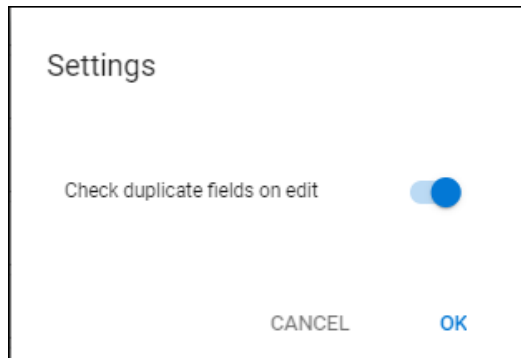

7. All records update with the new value.
8. Click **Process Record** or **Process All Records** to apply the updates.

To prevent the 'Rectify All' prompt from appearing:

1. Click **Settings** on the update screen.

2. Update the *Check duplicate fields on edit* switch.
 - a. **Off** = The prompt does not appear.
 - b. **On** = The prompt appears (as per screenshot).

Note:

- This option defaults to **On**.
- Changes made are saved for the current update item only and resets on exiting out of the screen.

3. Appendix: Update Helper Guides

3.1. Appendix Overview

This appendix provides additional guidance on how the update process is completed for each of the 26 update options available.

3.2. Person Updates

3.2.1. Person - Address Details

This is used to update the employee's home address. The employee's current address displays on the screen and can be overwritten.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	Employee's personnel no.	No
Date Effective	The date effective of the employee's address. Input format of DD-MON-YYYY.	Yes
Line 1	Max 40 characters.	Yes
Line 2	Max 40 characters.	Yes
Line 3	Max 40 characters.	Yes
Line 4	Max 40 characters.	Yes
Line 5	Max 40 characters.	Yes
Post Code Prefix	Address Post Code Prefix	Yes
Post Code Suffix	Address Post Code Suffix	Yes
Country Desc	Address Country	Yes

3.2.2. Person - Bank Details

This is used to update the employee's bank details. The employee's current bank details are displayed on the screen and can be overwritten. If no bank details are stored for the employee, the employee appears, but all the bank fields are blank and can be updated as required.

Note:

Updating on this screen validates against the employee's pay group currency, i.e. if this is an Irish pay group it requires BIC and IBAN, if this is a UK pay group it requires sort code and account number.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	The employee' personnel number.	No
BIC	- Provide a valid BIC Number. - BIC Number reference data is available to review under: Back Office > CorePersonnel > Reference > Reference A-C > Bank Sort Codes	Yes
IBAN	Provide a valid IBAN.	Yes
Sort Code	- Provide a valid Bank Sort Code. - Bank Sort Code reference data is available to review under: Back Office > CorePersonnel > Reference > Reference A-C > Bank Sort Codes	Yes
Account No.	Digits 0 to 9 only. The maximum length of this field is 18 .	Yes
Credit Union Ref.	The maximum length of this field is 20 .	Yes

3.2.3. Person - Contacts

Update existing contact types for the employee. This screen lists all existing contact types set up for the employee, and these can be updated as required. It is not possible to add contact types for the employee, i.e. if the employee already has a mobile number this can be updated; however, if they don't have one, it cannot be added here.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	The employee's personnel number.	No
Contact Type	This is the contact type code, e.g. 'EMAIL', 'MOB'. This is not updateable.	No
Contact Text	Provide the updated contact detail, e.g. email address for contact type of 'EMAIL'. The maximum length of this field is 80 .	Yes

3.2.4. Person - Expense Code

This is used to update the *Expense Code* assignment for the employee. This screen allows for the creation of new *Expense Code* reference data, i.e. you can provide an existing code or a new code / description to create a code when updating the record automatically.

Note:

If the employee already has an *Expense Code* assignment, then it is only possible to update the 'Code'. Changes to the description do not be save.

If the employee does not have any code assigned, the following options are possible:

- Provide an existing code. **OR**
- Add a new description and leave code blank. The new reference data item is automatically created, and a code generates for this. **OR**
- Add a new description and new code. The new reference data item creates using these.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	Employee's personnel number.	No
Expense Code	See note above. Digits 0 to 9 only. The maximum length of this field is 8	Yes
Expense Description	See note above. The maximum length of this field is 40 .	Yes

3.2.5. Person - Home Phone

This is used to update the employee's home telephone number. The employee's current phone number displays on the screen and can be overwritten. If no phone number is already stored for the employee, the employee appears, but the phone number is blank and available for update.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	Employee's personnel number.	No
Home Phone Number	The maximum length of this field is 40	Yes

3.2.6. Person - Input Location

This is used to update the employee's Input location code for Payroll.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	Employee's personnel number.	No
Input Location Code	Provide a valid Input Location Code here. For a list of valid codes, see Back Office > CorePay > Reference > Corporate Menu > Input Locations.	Yes

3.2.7. Person - Pay Code Group

This is used to update the employee's personalised *Pay Code Group* assignment. This is the grouping used to limit the Pay Codes that are available to the employee to view / select in WFM.

The employee's current *Pay Code Group* displays on the screen and can be overwritten. If no pay code group is stored for the employee, the employee appears, but the field is blank and ready to update.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	Employee's personnel no.	No
Pay Code Group	Provide a valid Pay Code Group Code. View / create this reference data under Portal > Administrator Dashboard > Workforce Management Settings Tab > Time and Attendance Settings Widget > Personalised Pay Code Groups.	Yes

3.2.8. Person - Probation Details

This allows for the employee's probation details to be updated, for their substantive contract. The employee's current details display on the screen and can be overwritten. If no probation details are stored for their substantive contract, the employee appears, but fields are blank and available for update.

**Note:**

This screen allows for the creation of new Probation Extension Reason Code reference data, i.e. you can provide an existing code or you can provide new code and / or description to automatically create a code when updating the record.

The following options are possible:

- Provide an existing code. **OR**
- Add a new description and leave code blank. The new reference data item is automatically created, and a code is generated for this. **OR**
- Add a new description and new code. The new reference data item creates using these.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	Employee's personnel number.	No
Probation Expiry Date	Enter in format type, i.e. DD-MON-YYYY e.g. 01-JAN-2018	Yes
Probation Extension Date	Enter in format type, i.e. DD-MON-YYYY e.g. 01-JAN-2018	Yes
Probation Completion Date	Enter in format type, i.e. DD-MON-YYYY e.g. 01-JAN-2018	Yes
Reason Code	See note Max 6 characters allowed.	Yes
Reason Description	See note Max 40 characters allowed.	Yes
Review Date 1	Enter in format type, i.e. DD-MON-YYYY e.g. 01-JAN-2018	Yes
Review Date 2	Enter in format type, i.e. DD-MON-YYYY e.g. 01-JAN-2018	Yes

3.2.9. Person - Shift Details

This is used to update the shift type assignment for the employee.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	Employee's personnel number.	No
Shift Code	Provide an existing Shift Type code. These are available to view in Back Office > CoreTime > System Params > Shift Types .	Yes
Shift Description	The maximum length of this field is 40 .	Yes
Date Effective	Provide date in format DD-MON-YYYY e.g. 01-JAN-2018.	Yes

3.2.10. Person - Sickness Category Code

This is used to update an employee's absence category.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	Employee's personnel number.	No
Sickness Category Code	Provide an existing Sickness Category Code. This reference data can be viewed / created in Back Office > CoreTime > System Params > Reference A-C > Absence Pay Parameters	Yes

3.3. Contract Updates

3.3.1. Contract - Category

This is used to update the *Category* code assignment for the contract. This screen allows for the creation of new *Category* code reference data, i.e. you can provide an existing code or you can provide new code & description to create a code when updating the record automatically.

Note:

If the employee already has a *Category* code assignment, then it is only possible to update the code. Changes to the description do not be save.

If the employee does not have any code assigned, the following options are possible:

- Provide an existing code. **OR**
- Add a new description and leave code blank. The new reference data item automatically creates, and a code generates for this. **OR**
- Add a new description and new code. The new reference data item creates using these.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	Employee's personnel number.	No
Contract ID	The contract ID.	No
Reference Type	The CoreHR reference type for Category.	No
Code	See note. Provide an existing code or add new. Max 6 characters.	Yes
Description	See note. Max 40 characters.	Yes

3.3.2. Contract - Cost Centre

This is used to update the *Cost Centre* code assignment for the contract. This screen allows for the creation of new *Cost Centre* code reference data, i.e. you can provide an existing code or you can provide new code & description to create a code when updating the record automatically.

**Note:**

The following options are possible:

- Provide an existing code. **OR**
- Add a new description and leave code blank. The new reference data item automatically creates, and a code generates for this. **OR**
- Add a new description and new code. The new reference data item creates using these.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	Employee's personnel number.	No
Contract ID	The contract ID.	No
Reference Type	The CoreHR reference type for Cost Centre Code.	No
Code	See note. Provide existing code or add new. Max 6 characters.	Yes
Description	See note. Max 40 characters.	Yes

3.3.3. Contract - Employee Status

This is used to update the *Employee Status* code assignment for the contract. This screen allows for the creation of new *Employee Status* code reference data, i.e. you can provide an existing code or you can provide new code & description to create a code when updating the record automatically.

**Note:**

The following options are possible:

- Provide an existing code. **OR**
- Add a new description and leave code blank. The new reference data item automatically create, and a code generates for this. **OR**
- Add a new description and new code. The new reference data item creates using these.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No

Field	Description	Updateable
Personnel No.	Employee's personnel number.	No
Contract ID	The contract ID.	No
Reference Type	The CoreHR reference type for Employee Status.	No
Code	See note. Provide existing code or add new. Max 6 characters.	Yes
Description	See note. Max 40 characters.	Yes

3.3.4. Contract - Employee Sub Status

This is used to update the *Employee Sub Status* code assignment for the contract. This screen allows for the creation of new *Employee Sub Status* code reference data, i.e. you can provide an existing code or you can provide new code & description to create a code when updating the record automatically.

Note:

If the employee already has an *Employee Sub Status* code assignment, then it is only possible to update the 'Code'. Changes to the description do not save.

If the employee does not have any code assigned, the following options are possible:

- Provide an existing code. **OR**
- Add a new description and leave code blank. The new reference data item is automatically created, and a code generates for this. **OR**
- Add a new description and new code. The new reference data item creates using these.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	Employee's personnel number.	No
Contract ID	The contract ID.	No
Reference Type	The CoreHR reference type for Employee Sub Status.	No
Code	See note. Provide existing code or add new. Max 6 characters.	Yes

Field	Description	Updateable
Description	See note. Max 40 characters.	Yes

3.3.5. Contract - FTE

This is used to update the hours and FTE on the employee's contract.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	Employee's personnel number.	No
Contract ID	The contract ID.	No
Hours	These are the contract hours for the employee.	Yes
FTE Hours	These are the standard FTE Hours for the week for the organisation.	Yes
FTE	This is the actual FTE for the employee's contract. This must be 1 or less.	Yes

3.3.6. Contract - Job Category

This is used to update the *Job Category* field on an employee's contract record. This screen allows for the creation of new *Job Category* code reference data, i.e. you can provide an existing code or you can provide new code & description to create a code when updating the record automatically.

Note:

If the employee already has a *Job Category Code* assignment, then it is only possible to update the 'Code'. Changes to the description do not be save.

If the employee does not have any code assigned, the following options are possible to:

- Provide an existing code. **OR**
- Add a new description and leave code blank. The new reference data item automatically creates, and a code generates for this. **OR**
- Add a new description and new code. The new reference data item creates using these.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	Employee's personnel number.	No
Contract ID	The contract ID.	No
Reference Type	The CoreHR reference type for Job Category.	No
Code	See note above. Provide a valid reference data code. This reference data item is located in CorePortal > People Management > Reference > Other References > Enter "JOBCAT"	Yes
Description	See note above. The maximum length of this field is 40 .	Yes

3.3.7. Contract - Job Title

This is used to update the *Job Title* field on an employee's contract record. This screen allows for the creation of new *Job Title* code reference data, i.e. you can provide an existing code or you can provide new code & description to create a code when updating the record automatically.

Note:

The following options are possible:

- Provide an existing code. **OR**
- Add a new description and leave code blank. The new reference data item automatically creates, and a code generates for this. **OR**
- Add a new description and new code. The new reference data item creates using these.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	Employee's personnel number.	No
Contract ID	The contract ID.	No
Reference Type	The CoreHR reference type Job Title.	No
Code	See note above.	Yes

Field	Description	Updateable
	- Provide a valid reference data code. - This reference data item is located in CorePortal > People Management > Reference > Job Title Codes	
Description	See note above. The maximum length of this field is 40 .	Yes

3.3.8. Contract - Location

This is used to update the Location field on an employee's contract record. This screen allows for the creation of new *Location code* reference data, i.e. you can provide an existing code or you can provide new code & description to create a code when updating the record automatically.

Note:

The following options are possible:

- Provide an existing code. **OR**
- Add a new description and leave code blank. The new reference data item automatically creates, and a code generates for this. **OR**
- Add a new description and new code. The new reference data item creates using these.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	Employee's personnel number.	No
Contract ID	The contract ID.	No
Reference Type	The CoreHR reference type for Location.	No
Code	See note above. - Provide a valid reference data code. - This reference data item is located in CorePortal > People Management > Reference > Location Codes	Yes
Description	See note above. The maximum length of this field is 40 .	Yes

3.3.9. Contract - Project

This is used to update the *Project* field on an employee's contract record. This screen allows for the creation of new *Project Code* reference data, i.e. you can provide an existing code or you can provide new code & description to create a code when updating the record automatically.

Note:

If the contract already has a Project Code assignment, then it is only possible to update the 'Code'. Changes to the description do not be save.

If the employee does not have any code assigned, the following options are possible:

- Provide an existing code. **OR**
- Add a new description and leave code blank. The new reference data item automatically creates, and a code generates for this. **OR**
- Add a new description and new code. The new reference data item creates using these.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	Employee's personnel number.	No
Contract ID	The contract ID.	No
Reference Type	The CoreHR reference type for Project.	No
Code	See note above. • Provide a valid reference data code. • This reference data item is located in CorePortal > People Management > Reference > Project Codes	Yes
Description	See note above. The maximum length of this field is 40 .	Yes

3.3.10. Contract - Reports To

This is used to update the Reports To Manager assigned to the employee for this contract.

**Note:**

This looks at the *Reports to Manager* configuration that has been setup on CoreHR, e.g. this could be set to used Org Role = 'Reports to Manager' (MGRESS) and Org Group of 'Work Group'.

Suppose an employee number is provided here as a new *Reports to Manager* and they do not already have this organisational role assigned for the contract work group. In that case, this creates for them automatically as part of the update.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	Employee's personnel number.	No
Contract ID	The contract ID.	No
Reports To	Provide the personnel number of the manager of this employee.	Yes

3.3.11. Contract - Sub Category

This is used to update the Sub Category code assignment for the contract. This screen allows for the creation of new *Sub Category* code reference data, i.e. you can provide an existing code or you can provide new code & description to create a code when updating the record automatically.

**Note:**

If the employee already has a Sub Category code assignment, then it is only possible to update the 'Code'. Changes to the description does not save.

If the employee does not have any code assigned, the following options are possible:

- Provide an existing code. **OR**
- Add a new description and leave code blank. The new reference data item automatically creates, and a code generates for this. **OR**
- Add a new description and new code. The new reference data item creates using these.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	Employee's personnel number.	No
Contract ID	The contract ID.	No
Reference Type	The CoreHR reference type for Sub Category	No
Code	See note above. Max 6 characters allowed.	Yes
Description	See note above. Max 40 characters allowed.	Yes

3.3.12. Contract - Work Group

This is used to update the *Work Group* assigned to the employee's contract. This screen allows for the creation of new *Work Group* reference data, i.e. you can provide an existing code or you can provide new *Work Group* description to create a code when updating the record automatically.

Note:

The following options are possible:

- Provide an existing code, to assign an existing project to the contract **OR**
- Add a new description and leave code blank. The new reference data item automatically creates, and a code generates for this. **OR**
- Add a new description and new code. The new reference data item creates using these.

Field on Update Screen	Description	Updatable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Personnel No.	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Contract ID	Employee's personnel number.	No
Reference Type	The contract ID.	No
Code	See note above. Max 6 characters allowed.	Yes
Description	See note above. Max 40 characters allowed.	Yes

3.4. Reference Data Updates

3.4.1. Reference - Cost Centre Description

This is used to update the description for existing *Cost Centre Code* reference data. It cannot be used to create new *Cost Centre Code* reference data items.

These can also be maintained via the standard reference data screen, i.e. *Payroll > Settings > Cost Centres*.

Field	Description	Updatable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Code	Cost Centre Code. This cannot be updated.	No
Description	Cost Centre Description. This can be updated, using up to 40 characters.	Yes

3.4.2. Reference - Pay Code Description

This is used to update the description for existing *Pay Codes / Time Codes*. It cannot be used to create new *Pay Code* reference data items.

These can also be maintained via the standard reference data screen, i.e. *Payroll > Settings > Pay Codes*.

Field	Description	Updatable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Code	Pay Code. This cannot be updated.	No
Description	Pay Description. This can be updated, using up to 30 characters.	Yes

3.4.3. Reference - Shift Type

This is used to update a selection of *Shift Type* elements, for existing *Shift Types* on CoreHR. This cannot be used to create new *Shift Types*.

These can also be managed via *CoreTime > System Parameters > Shift Types*.

Field		Updatable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Shift Type Code	The Shift Type code and cannot be updated.	No
Shift Type Description	This can be updated, using up to 40 characters.	Yes
Sequence	Digits 0 to 9 only. The maximum length of this field is 6	Yes
Pattern Code 1	This can be updated, using up to 12 characters.	Yes
Pattern Code 2	This can be updated, using up to 12 characters.	Yes
Pattern Code 3	This can be updated, using up to 12 characters.	Yes
Pattern Code 4	This can be updated, using up to 12 characters.	Yes
Pattern Code 5	This can be updated, using up to 12 characters.	Yes
Pattern Code 6	This can be updated, using up to 12 characters.	Yes
Pattern Code 7	This can be updated, using up to 12 characters.	Yes
Dormant	Y or N	Yes

3.4.4. Reference - Work Group

This is used to update a selection of Work Group elements, for existing Work Groups on CoreHR. This cannot be used to create new Work Groups.

These can also be managed via *CoreTime > System Parameters > Work Groups*.

Field	Description	Updateable
Status	The update status of the record, i.e. Current, Changed, Failed, Success.	No
Code	The Work Group code and cannot be updated.	No
Description	This can be updated, using up to 40 characters.	Yes
Shift	This can be updated with the shift type code .	Yes
Holiday Scheme	This can be updated with the holiday scheme code .	Yes
