2.0	28 th July 2020	Peter Travers	Added section 9.5 Insight Superuser

1. Overview

1.1. Purpose of the Guide

This document provides guidance on how to use CoreInsight including:

- How to access CoreInsight.
- How to view reports.
- How to create new reports.
- How to manage reports e.g. updating report settings, sharing, scheduling etc.
- Configuration & user access required for CoreInsight.

This is intended to provide general guidance on how to use CoreInsight. This does not include:

- Product specific reporting.
- Advanced report examples.

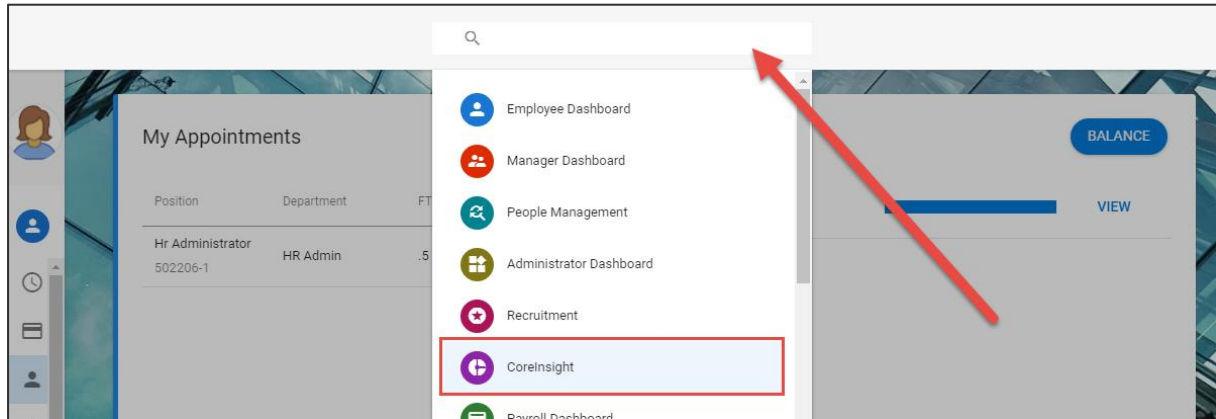

Check out the Core University for all other user guides available for CoreInsight.

2. Accessing CoreInsight

CoreInsight is accessed using the following options:

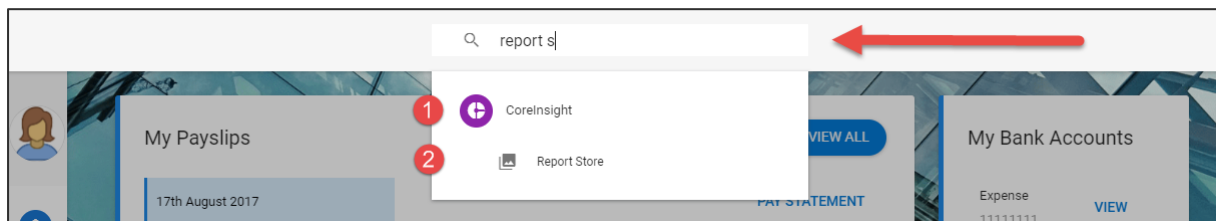

1. Quick Jump

Select CoreInsight from the quick jump menu.

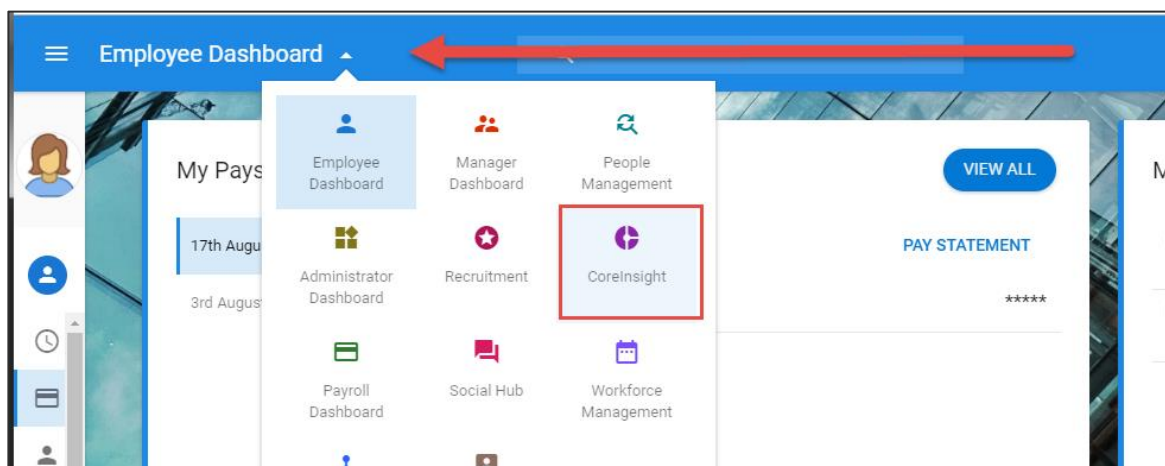

It is possible to search for a CoreInsight dashboard screen name in the *Quick Jump* menu, to jump straight to it. For example, searching for the term “Report Store” returns the following items:

1. The dashboard that the screen is on i.e. *CoreInsight*.
2. The tab that the screen is on i.e. *Report Store*.

2. Dashboard Menu

Select **CoreInsight** from the dashboard menu.

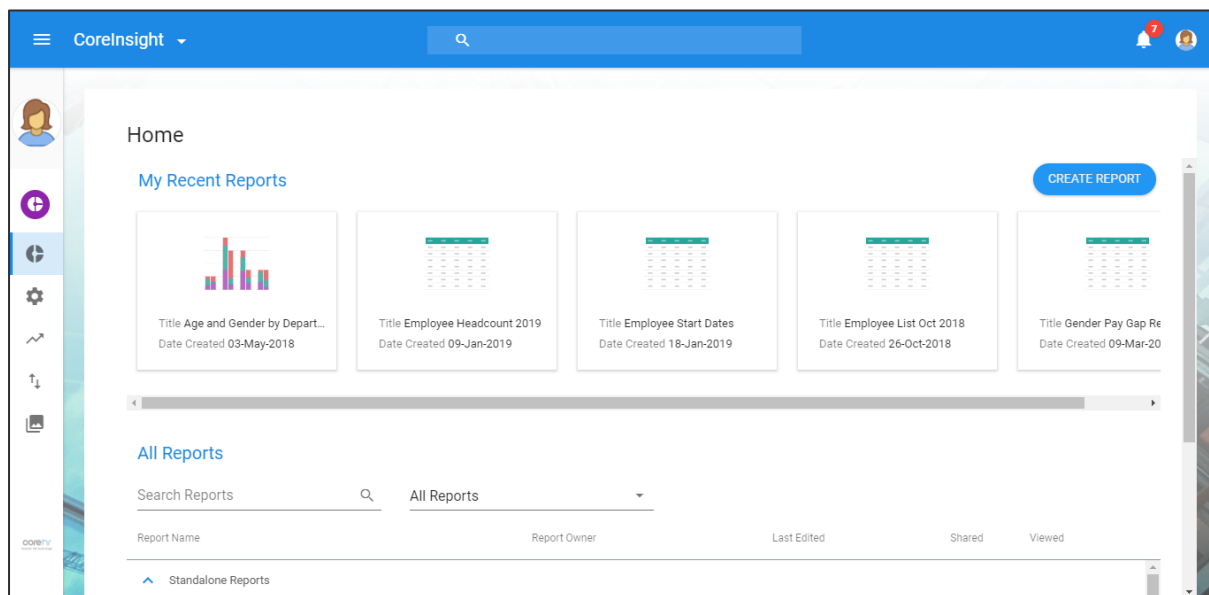

3. CoreInsight Dashboard Overview

3.1. Dashboard Overview

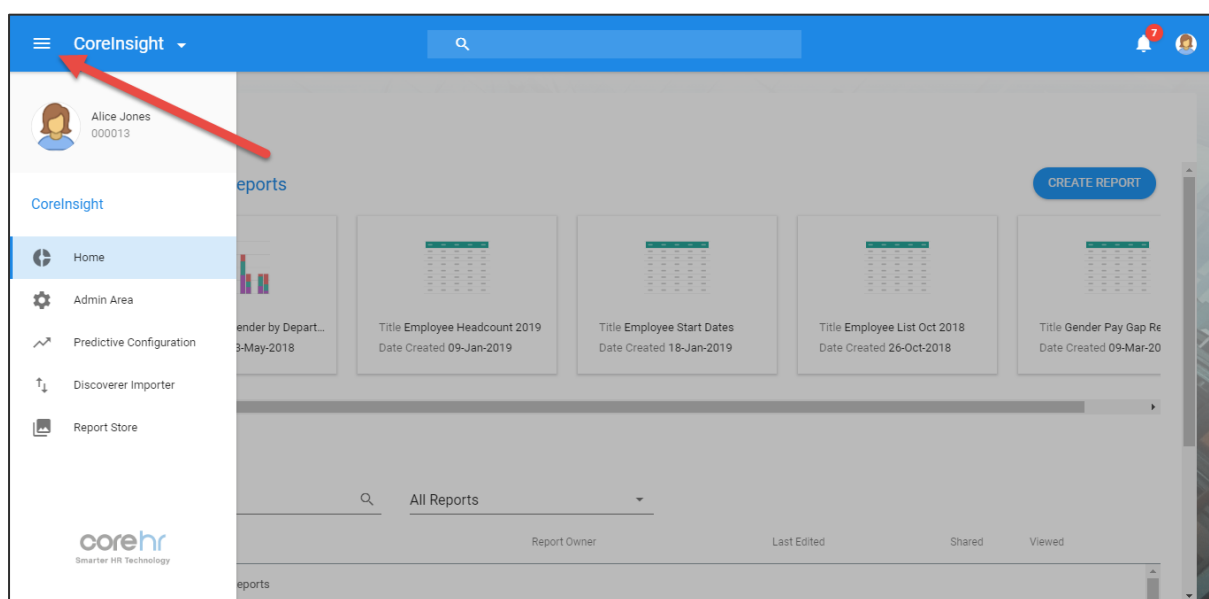

This section provides an overview of the main CoreInsight dashboard. This is where you can:

- View existing reports that you've created, or which have been shared with you.
- Create new reports.
- Edit existing reports.
- Access advanced tasks such as importing reports, the *Reports Store* etc.

There are 5 tabs provided on this dashboard. These only appear to you if you have been granted access to them.

Click the  button to see the tab names.

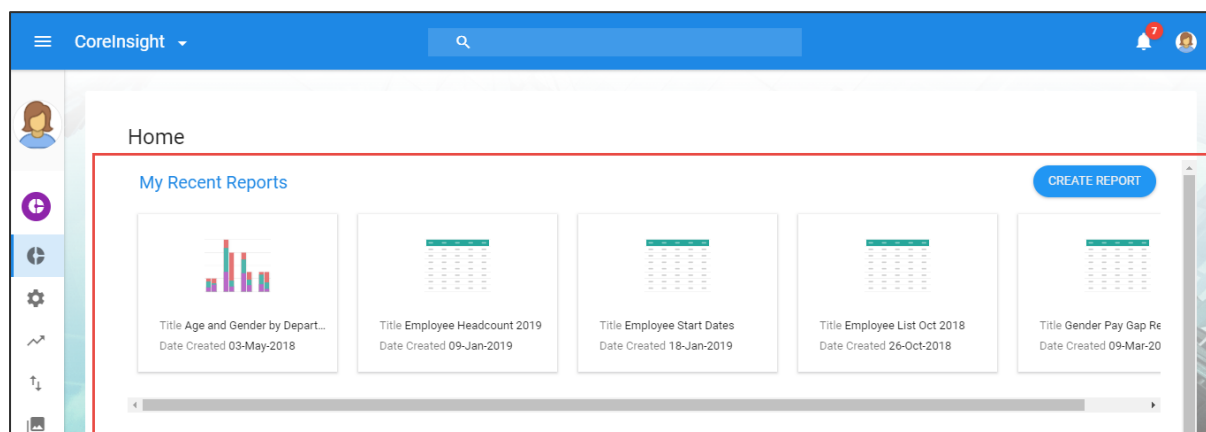

Tab	Description
Home	The main area for managing reports e.g. running report, creating new, scheduling report exports, sharing reports with other users etc.
Admin Area	An administrative area that provides access to additional functions including importing reports, download standard reports etc. See section 8. Advanced Admin Area Tasks for further details.
Predictive Configuration	This screen is used to run predictive analytic reports. See the <i>Predictive Analytics - Retention Risk</i> user guide for further details.
Discoverer Importer	This screen is used to import reports to CoreInsight from CoreBI (Oracle Discoverer). See the <i>Discoverer Importer</i> user guide for further details.
Report Store	This provides access to the Report Store where you can search for and download reports created by other CoreHR users, from the cloud. See the <i>Report Store</i> user guide for further details.

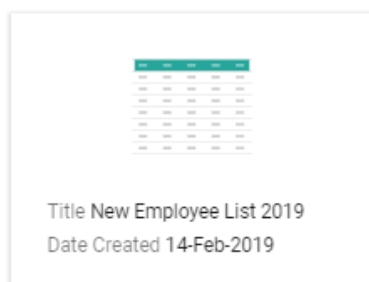

3.2. Home Screen Overview

My Recent Reports

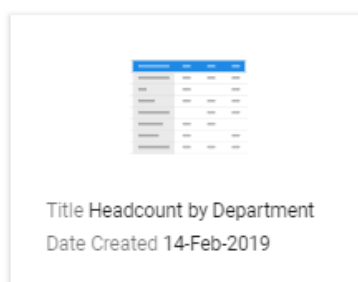

This section provides a scrollable list of reports that you have recently opened - whether they were created by you or shared with you. Click on one of the reports to run the report.

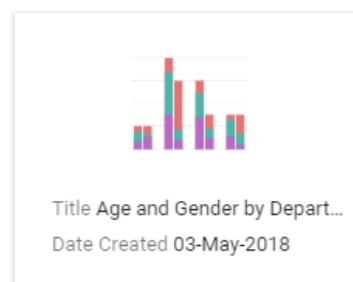

Tabular Report

Cross Tabular Report

Report with Chart

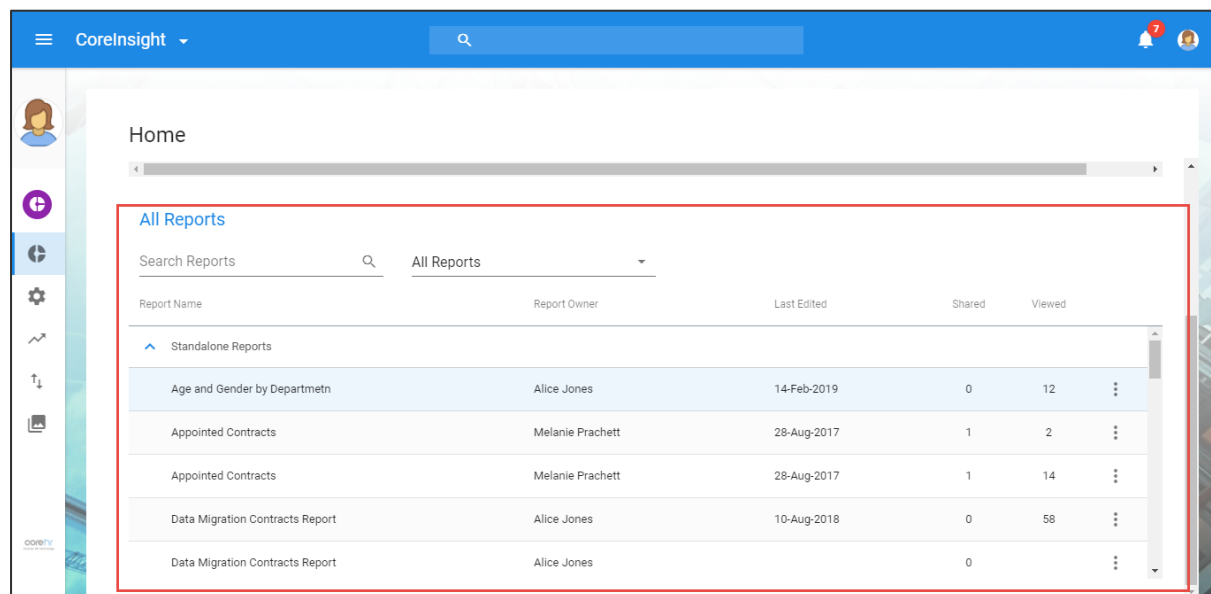

Create Report button

Click this button to create a new tabular or cross-tabular report. This button only appears on screen if you have been given the required permissions to create reports in CoreInsight.

All Reports

The section of the screen lists all of your reports. These are reports that:

- You have created.
- Have been shared with you.

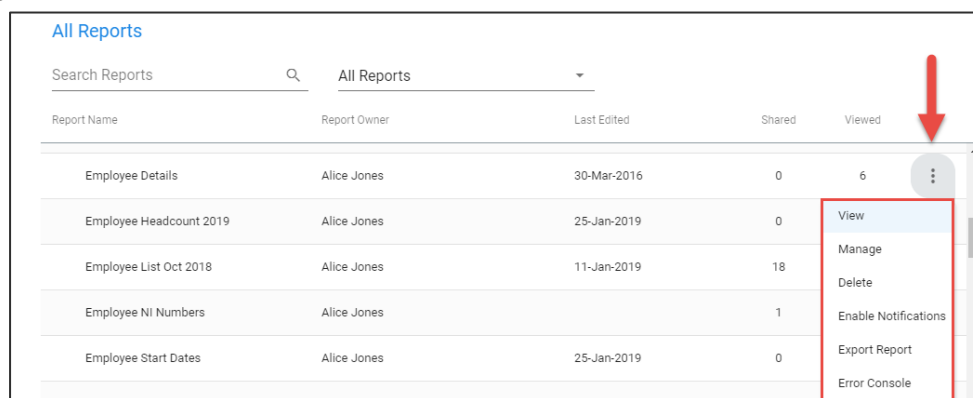

Use the search field to do a keyword search based on the report name.

Use the dropdown list to filter the list of reports to show:

- *All Reports*
- *Data Reports*: These are standard tabular or cross-tabular reports.
- *Interface Reports*: These are reports that you have linked to a scheduled interface.

Depending on your permissions, you may have access to complete additional tasks for any of the reports

by clicking the  button for each:

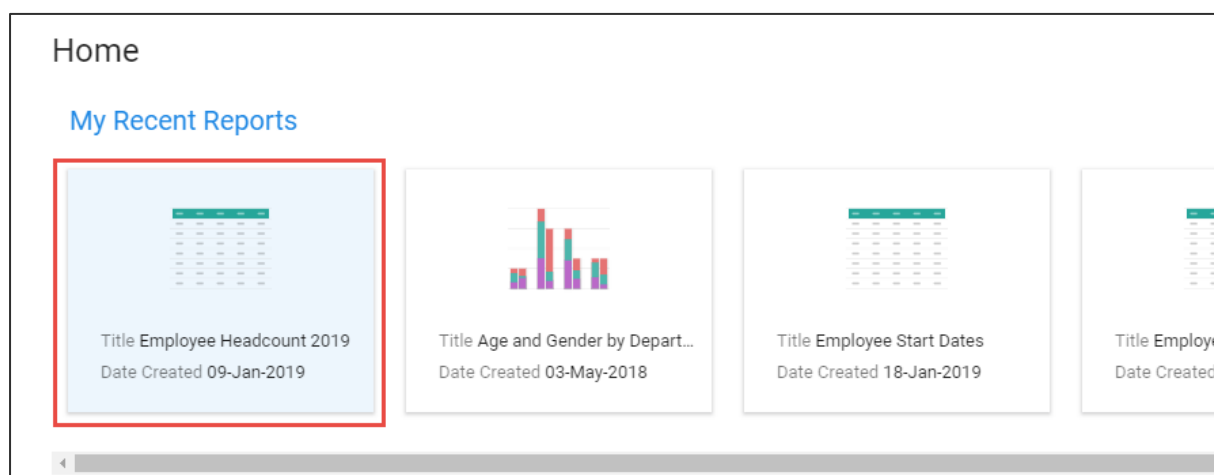

4. Viewing Reports

4.1. What Reports Can I View?

You can view any reports that are available to you on the *CoreInsight > Home* screen. These are the reports that are listed for you under *Recent Reports* and *All Reports*.

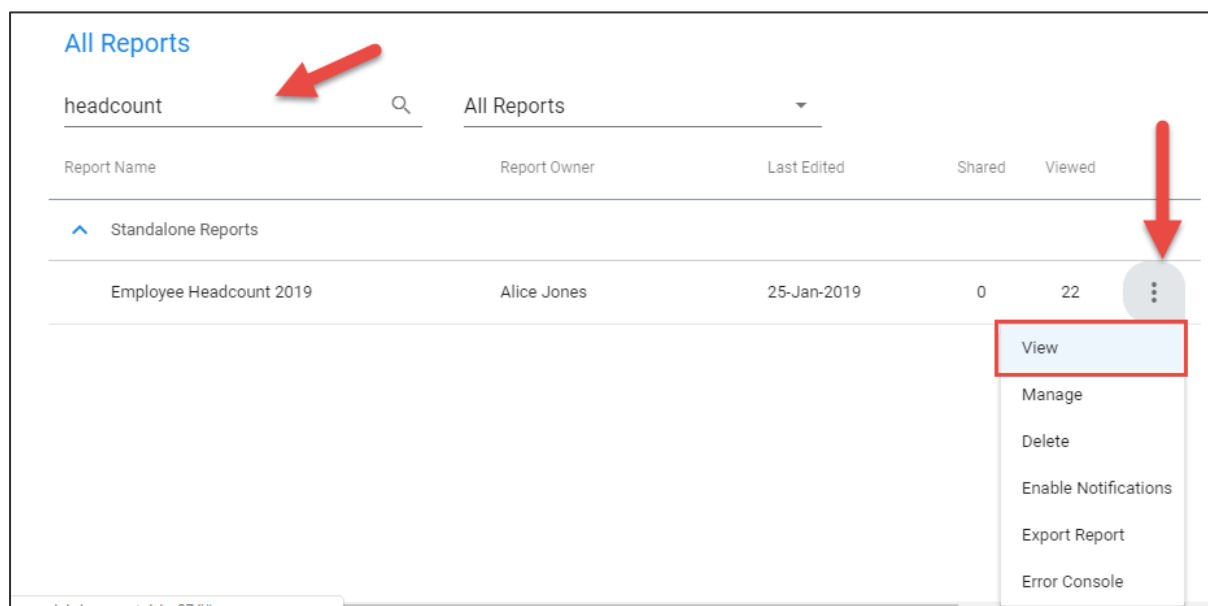

4.2. Open a Report

To view a report under *Recent Reports*, click on the report.

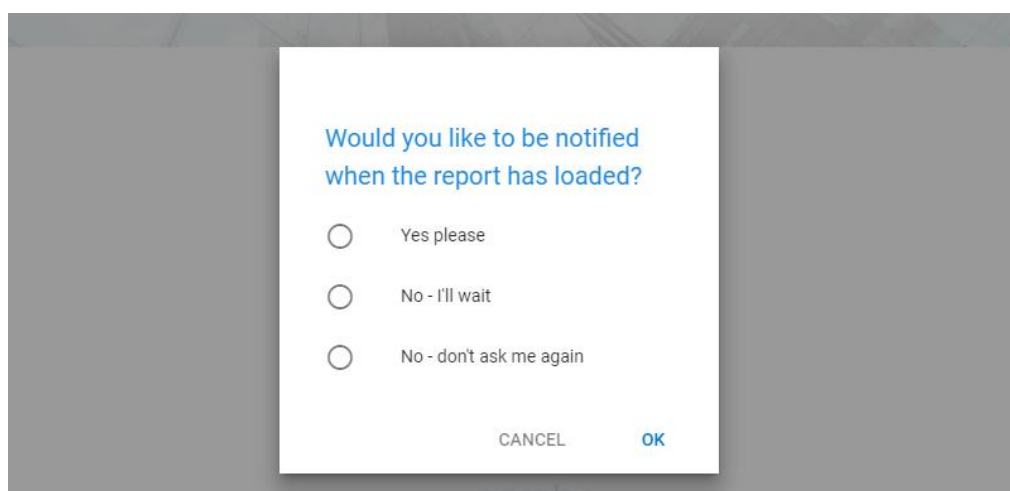

To view a report from the *All Reports* list:

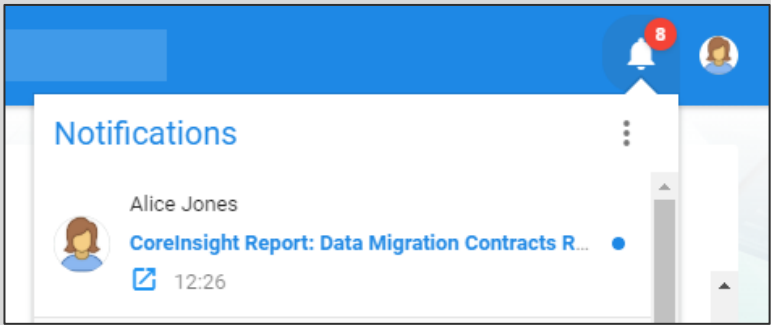

1. Search for the report.
2. Click the  button and select **View**.

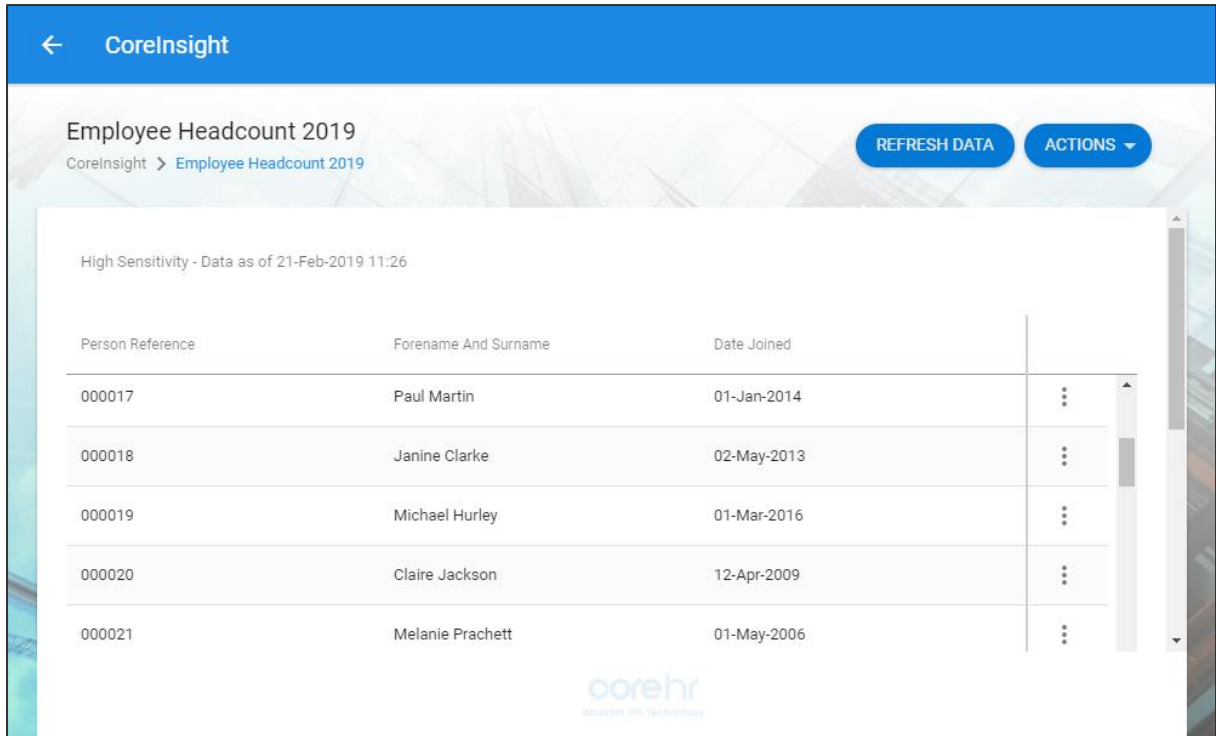

If this is the first time that you have run the report, the following message will appear:

Because the report is running for the first time, this may take a bit of time to retrieve the data and display the results on screen. Therefore, you are presented with 3 options:

Option	Explanation
Yes Please	You chose to exit the screen and be notified when the report is ready, - The report is generating in the background. During this time, you are free to leave CoreInsight and complete any tasks as required. - A notification is provided in the <i>Notification Centre</i> when the report is ready for you to review.  - You will need to repeat steps 1 and 2 of this process to open the report.
No - I'll wait	You will wait for the report to generate. Depending on the report, this time taken to complete can vary. You can leave the screen while the report is being retrieved but you will not be notified when it is ready.
No - don't ask me again	As above. Selecting this option also means that you will not be presented with this option again for this report. The only way to make this prompt appear again is to enable notifications for the report see 7.6 Enable Notifications.

If you have run this report before OR if you have selected the option “No - don’t ask me again”, the report will open on screen without this prompt.

000019	Michael Hurley	01-Mar-2016	⋮
000020	Claire Jackson	12-Apr-2009	⋮
000021	Melanie Prachett	01-May-2006	⋮

corehr
Smarter HR Technology

The report data is displayed on screen. Depending on the size of the report i.e. how many rows and columns this includes, you may need to use the vertical and horizontal scrollbars to view the full set of data.

- The date / time that the report was last generated is displayed at the top left of the report.
 - See [4.3 Cached Reports](#) for further details on how to refresh report data.
 - If the report has been configured to include a data sensitivity classification, this is displayed at the top left of the report.
 - The **Actions** button provides access to complete a number of tasks including:
 - Editing the report.
 - Sharing the report.
 - Exporting the report.
 - Showing / hiding report charts, if these have been setup.
 - Printing the report.
 - Viewing error messages if the report has generated an error.
3. Scroll to the end of the report to view the number of rows returned.

4.3. Cached Reports

In order to ensure that reports are available to you as quickly as possible, CoreHR caches the report data from the last time you ran it. This means when you view the report, you see data generated from the last time you ran the report.

The date and time the report was last run is displayed at the top left of the report page.

This is only applicable if you have run the report at least once. If the report has never been run, then you will be prompted to wait for the data to be retrieved for the first time, as covered in [4.2 Open a Report](#).

In order to view the most up-to-date report data, you will need to refresh the report. To do this:

1. Click **Refresh Data**.
2. Select your preferred notification option e.g. to be notified when the report is ready or to wait for the report to run.

Once the report has been refreshed, the date timestamp is updated.

Note:

This option is configurable. You can update this at a system level if the caching should be on or off.

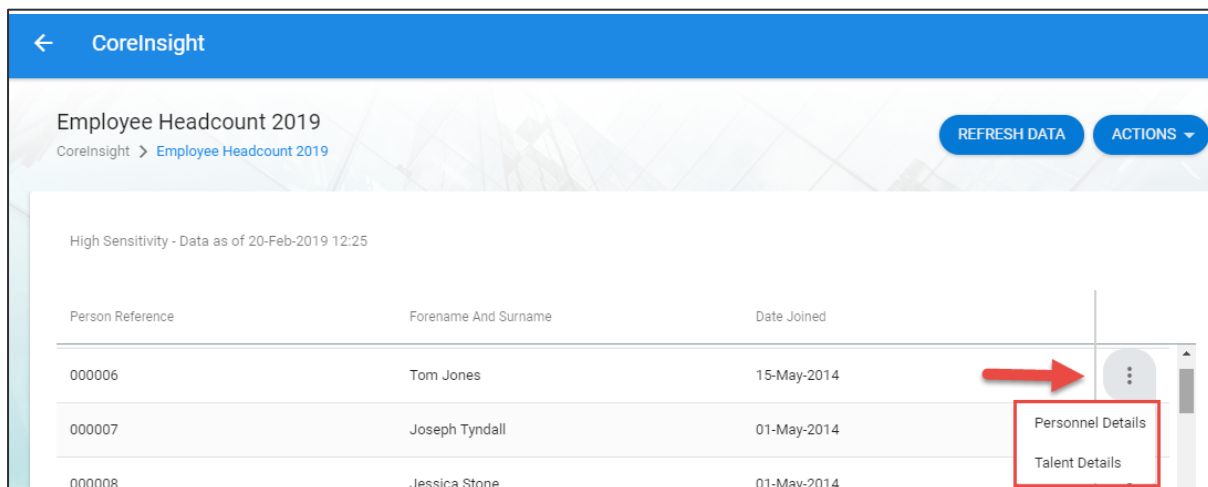

- This is on by default on install.
- If you switch this off, every time you open a report this will re-run to retrieve the latest data.

To view/update this new parameter:

1. Quick jump to *Site Manager > Admin Settings*
2. Search for parameter "cp_insight_cache".
3. Click **Edit** to update the value:
 - a. Set to "Y" to cache reports.
 - b. Set to "N" to disable caching.
4. Save.

4.4. Employee Reference Quick Link

Whenever a personnel number field is included on a CoreInsight report, a button is displayed for each report row, giving you the ability to jump to that employee's full HR or Talent record.

Person Reference	Forename And Surname	Date Joined
000006	Tom Jones	15-May-2014
000007	Joseph Tyndall	01-May-2014
000008	Jessica Stone	01-May-2014

This prevents the need to exit the report and navigate through the system to view that record and also allows you to quickly jump back into the report, via the breadcrumb trail.

For full guidance on this, see the **Employee Reference Quick Link** user guide.

4.5. Report Timeout

CoreHR automatically kills off CoreInsight reports that run longer than one hour. The user that runs the report will receive an email that their report has been stopped as it has exceeded the maximum duration.

In most cases, we have found that these poor-performing reports are joining to multiple areas and views (scanning volumes of data) where there is no need and can be adjusted to return the same results much faster. If you experience this report time out for a report that you have created, we recommended that you review the report structure and contact CoreHR for further guidance if needed to make this run more efficiently.

5. Creating Reports

5.1. Create a New Report - Tabular

Follow these steps to create a new tabular report:

1. Click **Create Report** on the *CoreInsight > Home* page.
This opens the 3-step *Report Wizard*
2. Complete step 1 *Report Type*.
 - a. Select **Create a new report** to create a new report from scratch.
 - b. Select **Tab Report**.
 - c. Give the report a name.

The screenshot shows the 'Report Wizard' interface in the CoreInsight application. The title bar at the top is blue with a back arrow and the text 'CoreInsight'. Below the title bar, the page header reads 'Report Wizard' and 'CoreInsight > Report Wizard'. The main content area is divided into three steps: 1. Report Type, 2. Report Area, and 3. Report Columns. Step 1 is currently active. It contains two questions: 'a. Do you want to create a new report or clone an existing one?' with radio buttons for 'Create a new report' (selected) and 'Clone an existing report'; and 'b. Do you want to create a Tab report or Cross Tab report?' with radio buttons for 'Tab Report' (selected) and 'Cross Tab Report'. Below these questions is a text input field for 'Report Name*' with the value 'New Employee List 2019' and a character count '22/100'. A blue 'NEXT' button is located at the bottom right of the wizard.

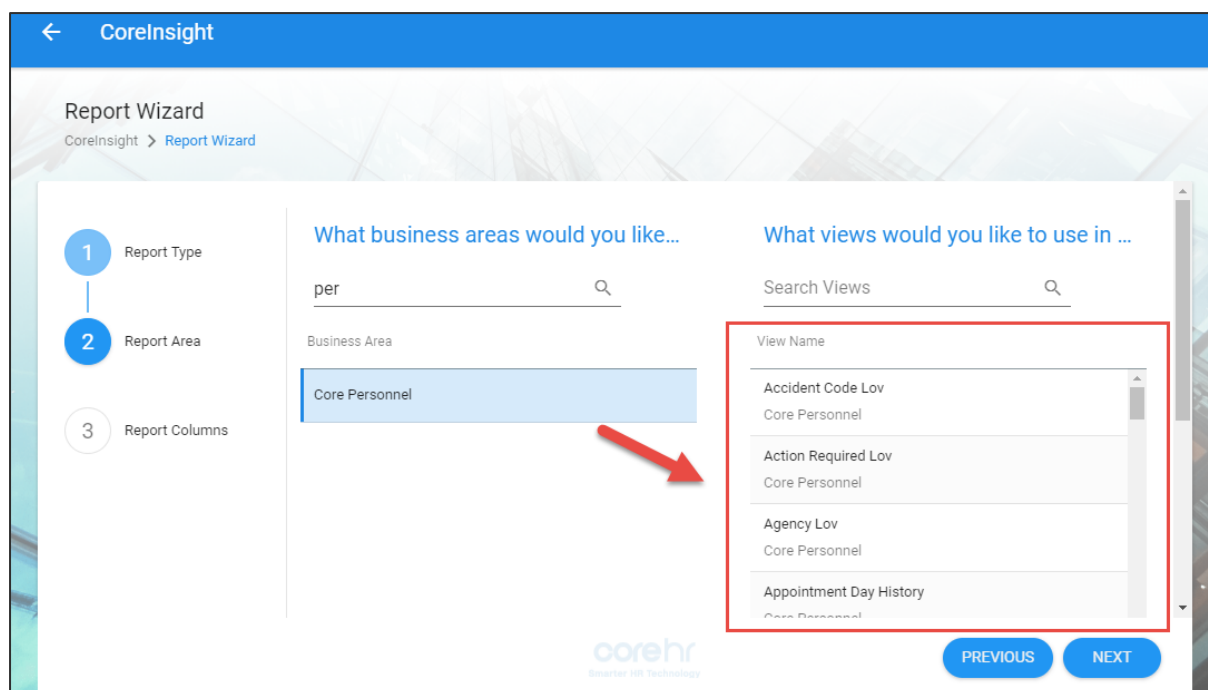

- d. Click **Next**.

3. Complete step 2 *Report Area*:

In this step, you will select the CoreHR product area(s) that report data will be generated from e.g. is this a payroll report, a hr report etc.

- a. Select an area from the list on the left.
Use the *Search Areas* box to search for the required area. You only see areas here that you have been given permission to report on (see [9.3 User Access to Business Areas](#) for more details).

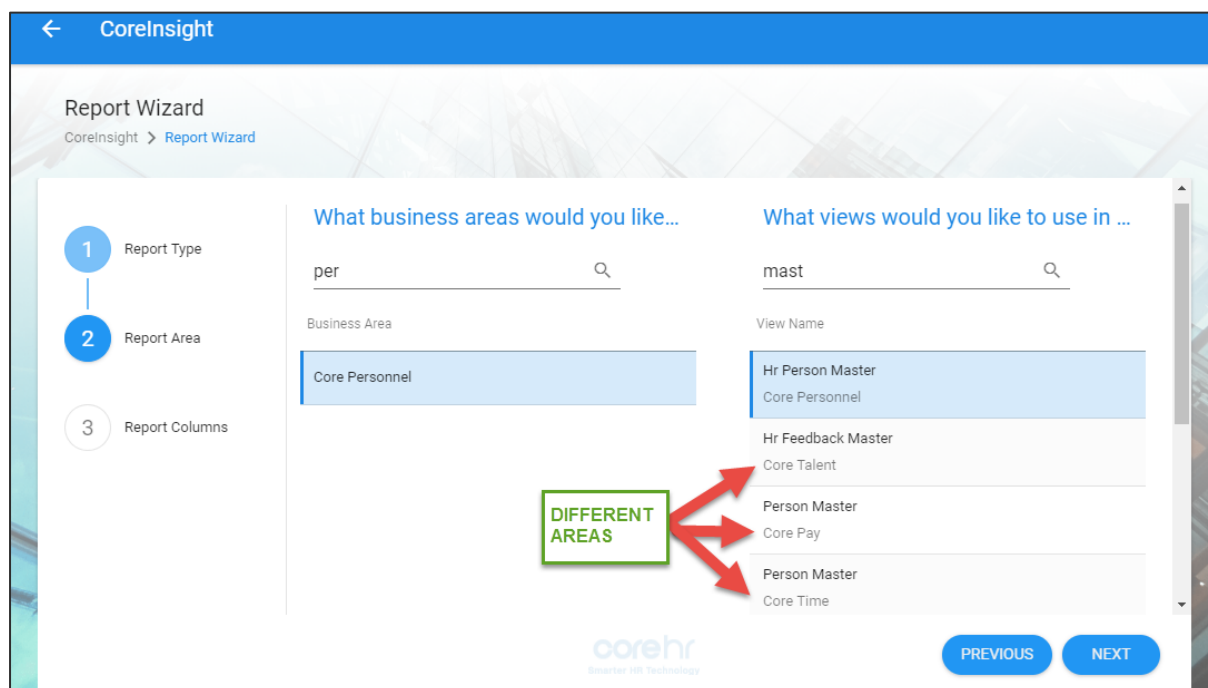

Once selected, the list of views for that business area are populated on the right. For example, selecting the “Core Personnel” business area provides all of the report views for HR:

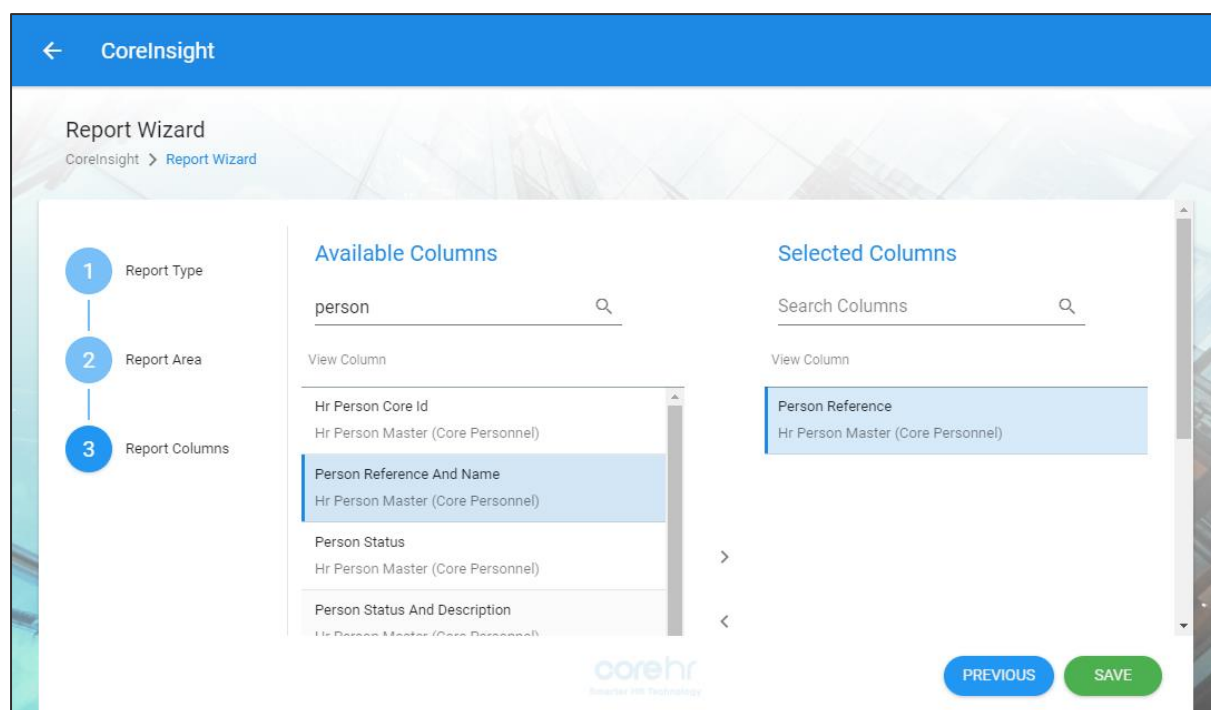

- b. Select the required view(s).

Use the *Search Views* box to filter the list based on a keyword search.

Once you select a view, the list immediately updates to display all of the other views that are joined to the selected view, from both the currently selected area and other areas (only if you have permission to report on those areas).

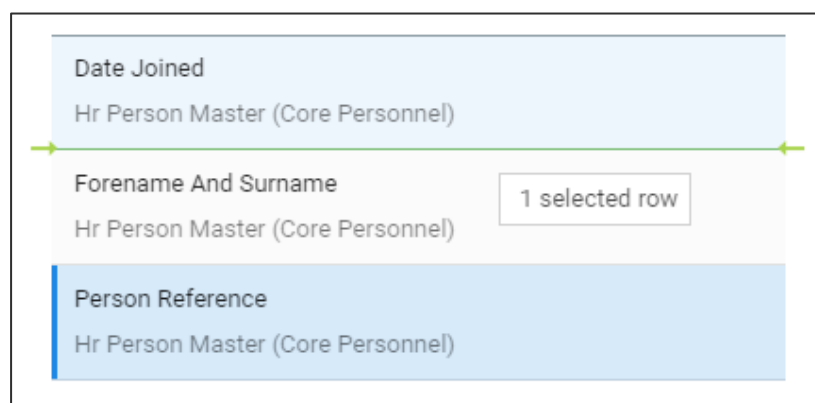

- c. Click **Next**.
4. Complete step 3 *Report Columns*.
Build the report by adding columns to the *Selected Columns* list.
 - a. Search for the column in the *Available Columns* list. The name of the view and business area are displayed for your reference beneath the column name.
 - b. Select the column and click the  button to add it to the *Selected Columns* list.

If you need to remove a column, click on it in the *Selected Columns* list and click the  button to return it to the *Available Columns* list.

- c. Add all columns required.
- d. Reorder the columns if required, by dragging and dropping them to the required position.

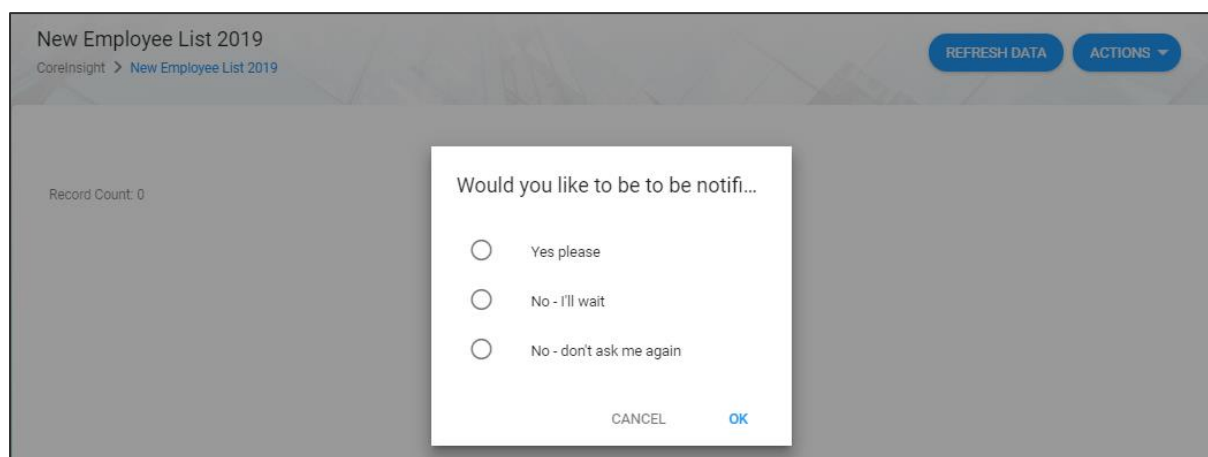

- e. Click **Save**.

The report is created. This opens on the *Manage Report* screen, which gives you the opportunity to apply further settings to the report.

See section [5.5 Edit a Report](#) for full guidance on all of the settings available for the report.

5. Click **Run Report**.

As this is the first time the report is being run, the notification pop-up appears. Select your preferred option and wait for the report to generate.

Once generated, the report data appears on screen.

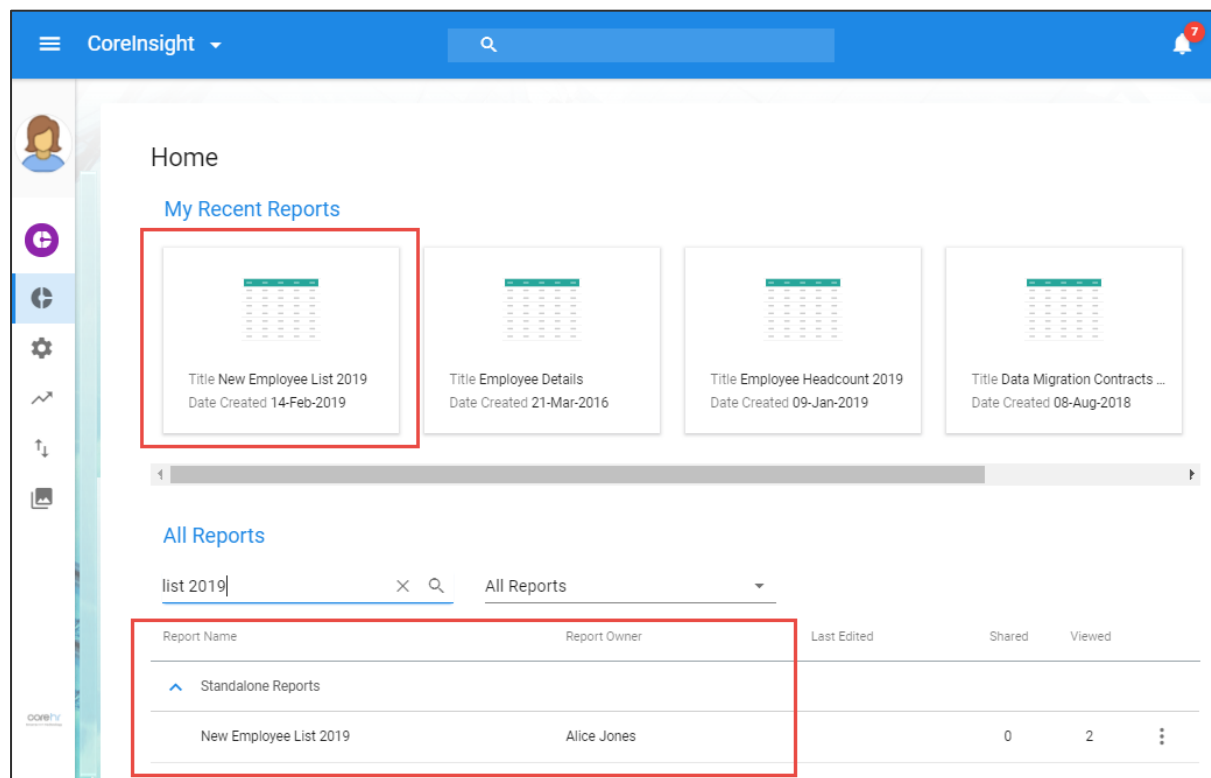

The screenshot shows the 'New Employee List 2019' report screen with the data table displayed. The table has columns for 'Person Reference', 'Forename And Surname', 'Date Joined', 'Department Description', and 'Age'. The data is as of 14-Feb-2019 15:06. The CoreHR logo is visible at the bottom of the table area.

Person Reference	Forename And Surname	Date Joined	Department Description	Age
000017	Paul Martin	01-Jan-2014	Senior Management	53
000018	Janine Clarke	02-May-2013	Compensation & Benefits	53
000019	Michael Hurley	01-Mar-2016	Recruitment	49
000020	Claire Jackson	12-Apr-2009	Compensation & Benefits	28
000021	Melanie Prachett	01-May-2006	Payroll	37
000022	Sam Lynch	26-Apr-2016	Finance Admin	47
000023	Cathy Looney	15-Feb-2019	Finance Admin	35

Once you have created the report, this is available on the *CoreInsight > Home* page:

- My Recent Reports
- All Reports

For all reports that you create, you are flagged as the *Report Owner* (see *All Reports* below).

! **Next Steps:**

Once you have created a new report, the following options are available to you. Click on the links provided to jump straight to the guidance for that item.

- [View the report](#)
- [Edit the report](#)
- [Share the report](#)
- [Create a clone of the report](#)
- [Print the report](#)
- Upload to the *Report Store* (see **Report Store** user guide)
- [Change Report Owner](#)

5.2. Create a New Report - Cross-Tabular

Follow these steps to create a new tabular report:

1. Click **Create Report** on the *CoreInsight > Home* page.
This opens the 5-step Report Wizard
2. Complete step 1 *Report Type*.
 - a. Select **Create a new report** to create a new report from scratch.
 - b. Select **Tab Report**
 - c. Give the report a name.

The screenshot shows the 'Report Wizard' interface in the CoreInsight application. The wizard is at step 1, 'Report Type'. On the left, there is a vertical list of steps: 1. Report Type, 2. Report Area, 3. Report Columns, 4. Report Rows, and 5. Report Functions. Step 1 is currently active. The main content area contains two questions. Question 'a' asks 'Do you want to create a new report or clone an existing one?' with two radio button options: 'Create a new report' (selected) and 'Clone an existing report'. Question 'b' asks 'Do you want to create a Tab report or Cross Tab report?' with two radio button options: 'Tab Report' and 'Cross Tab Report' (selected). Below these questions, there is a text input field for 'Report Name*' with the value 'Headcount by Department'. At the bottom right, there is a blue 'NEXT' button. The CoreHR logo is visible at the bottom center.

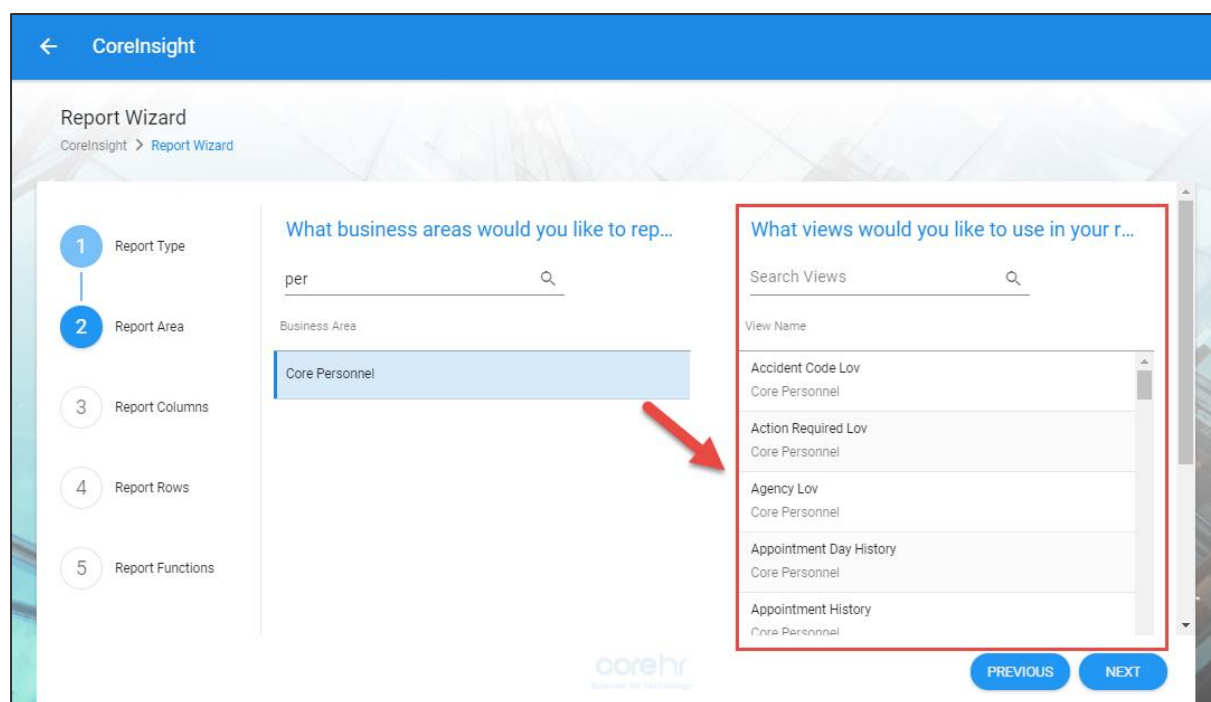

- d. Click **Next**.

3. Complete step 2 *Report Area*:

In this step, you will select the CoreHR product area(s) that report data will be generated from e.g. is this a payroll report, a hr report etc.

- a. Select an area from the list on the left.
Use the *Search Areas* box to search for the required area. You will only see areas here that you have been given permission to report on.

Once selected, the list of views for that business area are populated on the right. For example, selecting the “Core Personnel” business area provides all of the report views for HR:

- b. Select the required view(s).

Use the *Search Views* box to filter the list based on a keyword search.

Once you select a view, the list immediately updates to display all of the other views that are joined to the selected view, from both the current select area and other areas (only if you have permission to report on those areas).

- c. Click **Next**.

4. Complete step 3 *Report Columns*.

Build the report by adding columns to the *Selected Columns* list.

- a. Search for the column in the *Available Columns* list. The name of the view and business are displayed for your reference beneath the column name.
- b. Select the column and click the  button to add it to the *Selected Columns* list.

5. Complete step 4 *Report Rows*.

As per the columns, select the required data item that should be add to the cross-tab row.

6. Complete step 3 *Report Functions*.

- a. As per the columns and rows, select the required data item that should be added as a cross-tab function.

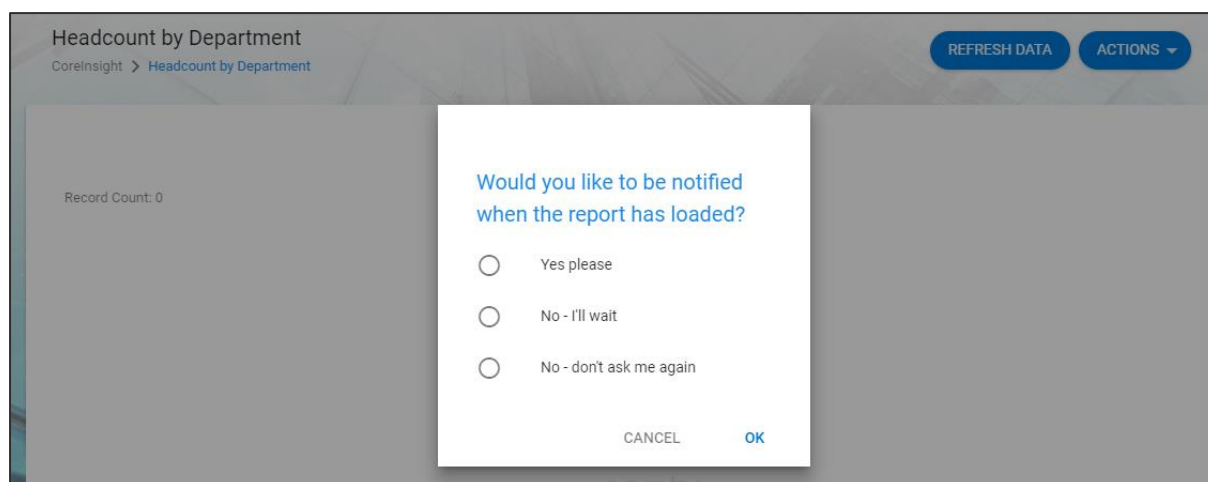

7. Click **Save**.

The report is created. This opens on the *Manage Report* screen, which gives you the opportunity to apply further settings to the report.

See section [5.5 Edit a Report](#) for full guidance on all of the settings available for the report.

6. Click **Run Report**.

As this is the first time the report is being run, the notification pop-up appears. Select your preferred option and wait for the report to generate.

Once generated, the report data appears on screen.

The screenshot shows the 'Headcount by Department' report with data as of 21-Feb-2019 16:40. The table displays employee counts by gender and department.

Gender	Senior Management	Shared Services	Sales & Marketing	Count Of Employees
Female	9.00	41.00	3.00	57.00
Unknown		3.00	2.00	8.00
Male	5.00	58.00	4.00	72.00
Grand total	14.00	102.00	9.00	137.00

Once you have created the report, this is available on the *CoreInsight > Home* page:

- My Recent Reports
- All Reports

For all reports that you create, you are flagged as the *Report Owner* (see *All Reports* below).

All Reports

headcount b

Report Name	Report Owner	Last Edited	Shared	Viewed
Standalone Reports				
Headcount by Department	Alice Jones	21-Feb-2019	0	27

Next Steps:

Once you have created a new report, the following options are available to you. Click on the links provided to jump straight to the guidance for that item.

- [View the report](#)
- [Edit the report](#)
- [Share the report](#)
- [Create a clone of the report](#)
- [Print the report](#)
- Upload to the *Report Store* (see **Report Store** user guide)
- [Change Report Owner](#)

5.3. Clone an Existing Report

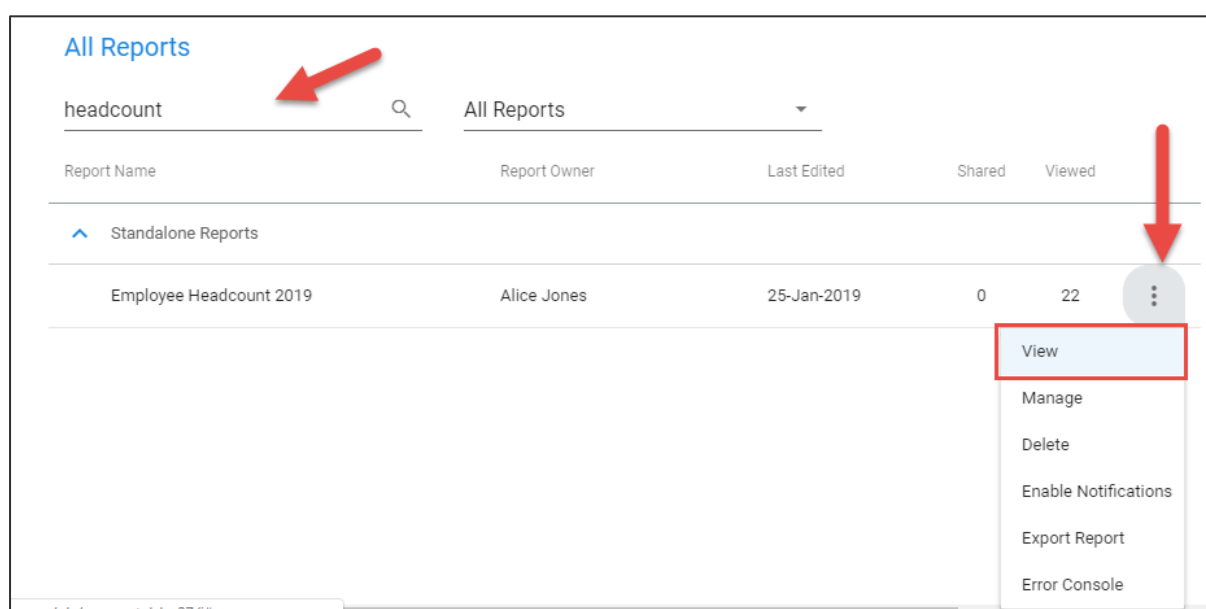

You can create a new report as a clone of an existing report. This is useful for a number of reasons:

- To save time in recreating a similar report to one you already have.
- If a report has been shared with you, but you are not the report owner then you cannot edit this. Creating a copy of the report allows you to edit your own version.

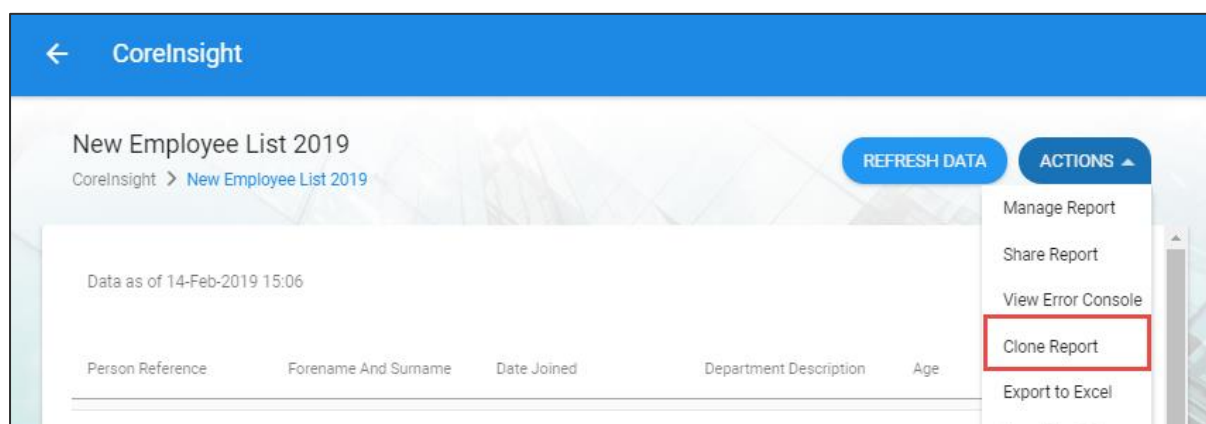

Both tabular and cross-tabular reports can be cloned.

To clone a report:

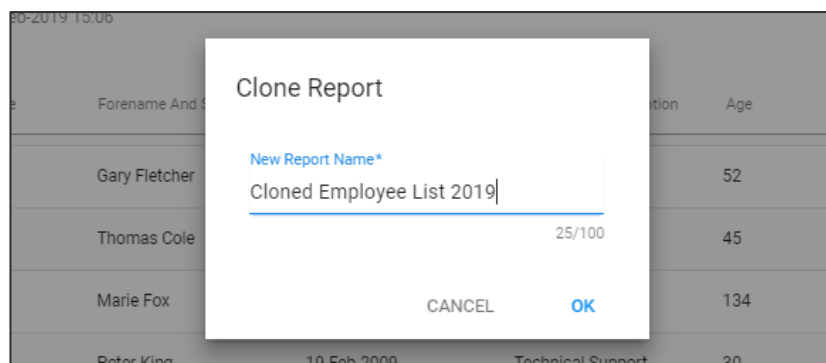

1. Search for the report.
2. Click the  button and select **View**.

3. Click **Actions** and select **Clone Report**.

4. Give the new report a name.

5. Click **OK**.

The report is created and saved with you as the *Report Owner*.

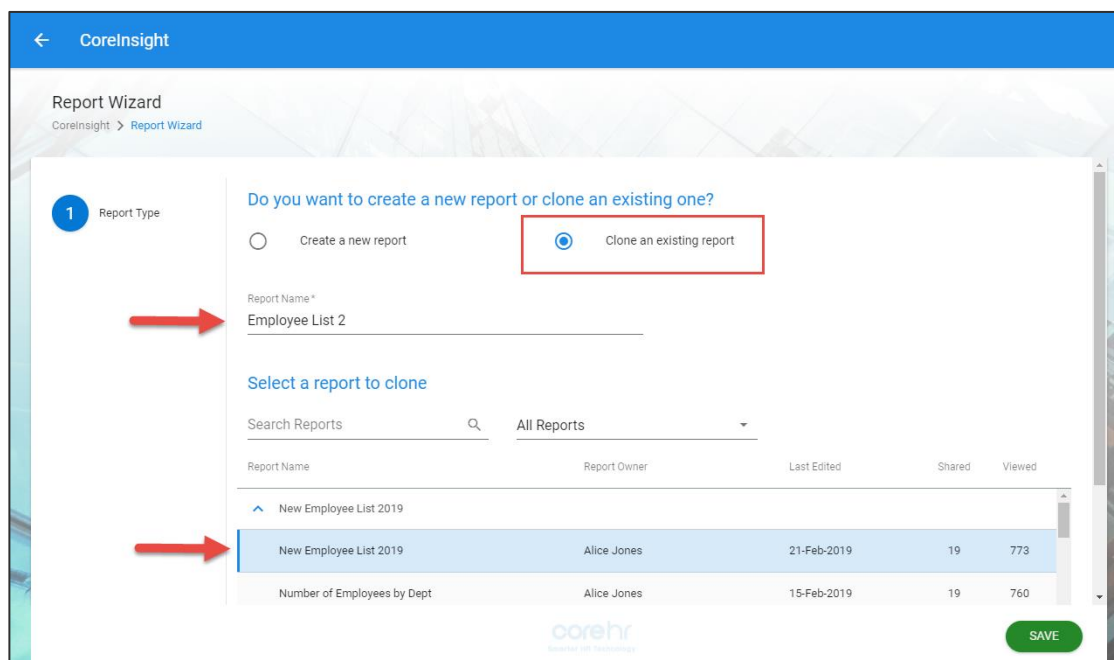

The report is run immediately. The notification prompt appears. Select your preferred option and view the report details once ready.

Next Steps:

Once you have cloned a new report, the next step is typically to edit this further. Follow the guidance in [Edit a Report](#) to find out more about how to edit a report.

You can also create a report as a clone via the Report Wizard

1. Click **Create Report** and select **Clone an existing report**.

2. Give the report a name
3. Search for and select that report that you wish to clone.
4. Click **Save**

The report is automatically created and opens on the *Manage Report* screen.

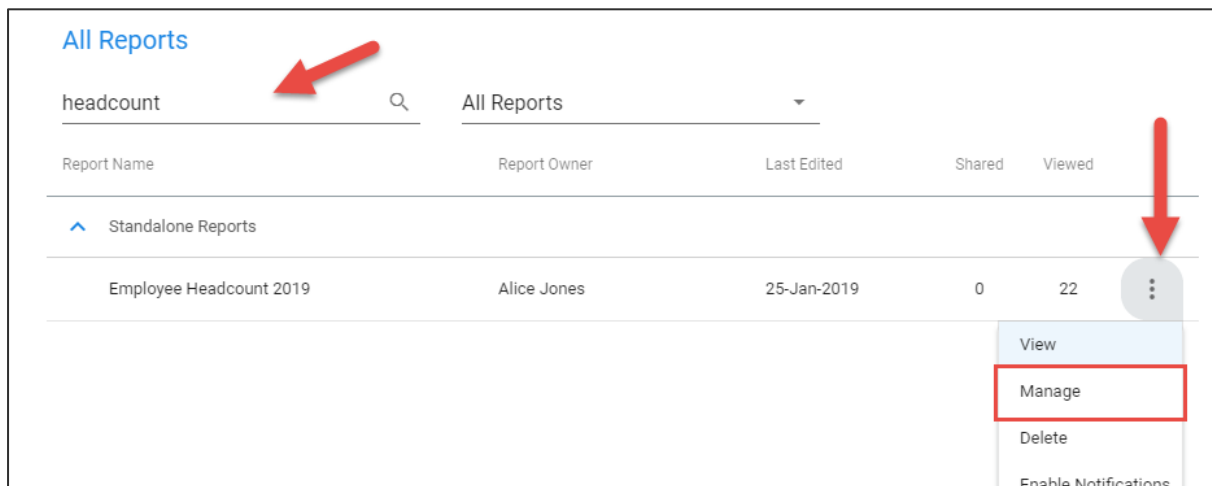

6. Editing Report

6.1. Open the Manage Report Screen

All reports are edited using the *Manage Report* screen. There are number of ways to access this.

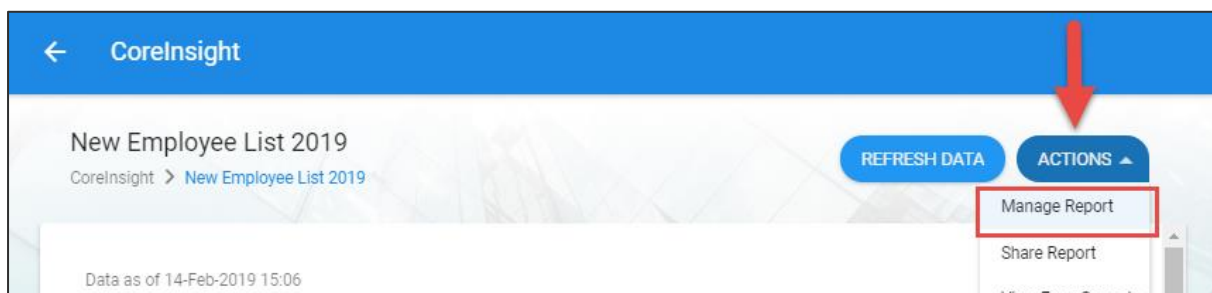

CoreInsight > Home Screen All Reports List

1. Search for the report.
2. Click the  button and select **Manage**.

Viewing the Report

1. Click the **Actions** button.
2. Select **Manage Report**.

Completing the Report Wizard

When creating a new report (tabular or cross-tabular), on completing the report wizard, the *Manage Report* screen is automatically opened. This is to give you the opportunity to further edit the report before running it for the first time.

6.2. Manage Report Screen Overview

The left-hand side of the screen provides a list of configuration options for the report. Each of these are covered in detail in the section [6.4 Manage Report Options](#)

The screenshot shows the 'Manage Report' interface for 'New Employee List 2019'. The left sidebar contains a list of configuration options, each with a red circle indicating the number of items: Settings (highlighted), Columns (5), Tabs (1), Filters (0), Calculations (0), Sorting (0), Chart, Heading, and Formatting (0). The main content area is titled 'Report Settings' and includes fields for 'Report Name*' (New Employee List 2019), 'Report Description', and 'Number of Rows' (250). Below this is the 'Controls and Classification' section with an 'Access Type' field. A 'RUN REPORT' button is located in the top right corner, and a 'SAVE' button is in the bottom right corner. The CoreHR logo is visible at the bottom center.

Where an option is tagged with a number, this provides a quick view of whether this is currently in use e.g. there are X number of columns, filters, formatting rules etc.

Select an option to view the corresponding section on the right-side of the screen.

6.3. Saving Changes to a Report

Whenever a change is made to a report setting, you must click the **Save** button.

Click the **Run Report** button to rerun the report and view the changes made.

Note:

In some cases, the changes are saved automatically. Where this is the case, an alert appears on screen to confirm that the change has been saved.

6.4. Manage Report Options

6.4.1. Settings

Setting	Description
Report Settings	
Report Name	The name of the report. This was created on step 1 of the report wizard and can be updated here.
Report Description	This allows you to provide additional information about the report. This can be displayed on the <i>Report Store</i> if the report is uploaded there.
Number of Rows	This is the maximum number of rows that is returned for the report. - This defaults to 250 to help with the faster retrieval of report data. - However, if you expect the rows to be > 250, ensure to update this here.
Controls and Classification	
Access Type	This is used to define whether the report data will be based on admin, manager or employee level access. <i>Administrator</i>: Report on data based on your existing CoreHR system access. <i>Manager</i>: Report on your team's data. <i>Employee</i>: Report on your own record. See section 9.4 Report Data Access for further details.
Data Classification	This is used to set a data sensitivity label on the report. This displays when the report is previewed on CoreInsight and also on exports and printed versions. See <i>Data Sensitivity Classification</i> user guide for further details.
Hide Duplicate Rows	Switch this on to automatically hide duplicate rows on the report.
Use Outer Joins	This is off by default to ensure that reports are built using inner joins. For example: If you wish to create a report that joins 2 views to report on the languages held on an employee's record. Inner Join: Report only returns employees with languages, Outer Join: Report returns all employees including those without languages.
Make Report Grid Available as Widget	Use this to make the report available as a widget to be shared on CorePortal dashboards.

Make Report Available As A Widget

You can share reports on other dashboards in CorePortal e.g. People Management dashboard. When you run a report in this way, you will only see the data that you should see i.e. based on the report access type and your data access.

1. On the *Manage Report > Settings* screen, tick on **Make Report Grid Available As Widget**.
2. Click **Save**.

Controls and Classification

The widget is displayed on the dashboard tab.

You may need to log out and back in to CorePortal to see the newly added widget.

The screenshot shows the 'People Management' section of the CoreInsight interface. A widget titled 'New Employee List 2019' is displayed, featuring a 'REFRESH DATA' button. The widget contains a table with the following data:

Person Reference	Forename And Surname	Date Joined
000008	Jessica Stone	01-May-14
000012	Rose Smithson	01-Jan-15
000074	Ella Smith2	08-Sep-16
PORTALADM	Portal System Admin	01-Jan-14
PORTALESS	Portal ESS	01-Jan-14

Data as of 21-Feb-2019 16:57:05

6.4.2. Columns

Use this section to update the Columns displayed on the report e.g.

- Add new columns.
- Remove columns.
- Reorder columns.

**Note:**

Ensure that you click **Save** when you apply changes here, as these are not saved automatically.

This screen behaves in the same way as step 2 *Report Columns* in the *Report Wizard*. However, there are two additional settings available for the columns.

Enable Aggregate Functions on Tab Reports.

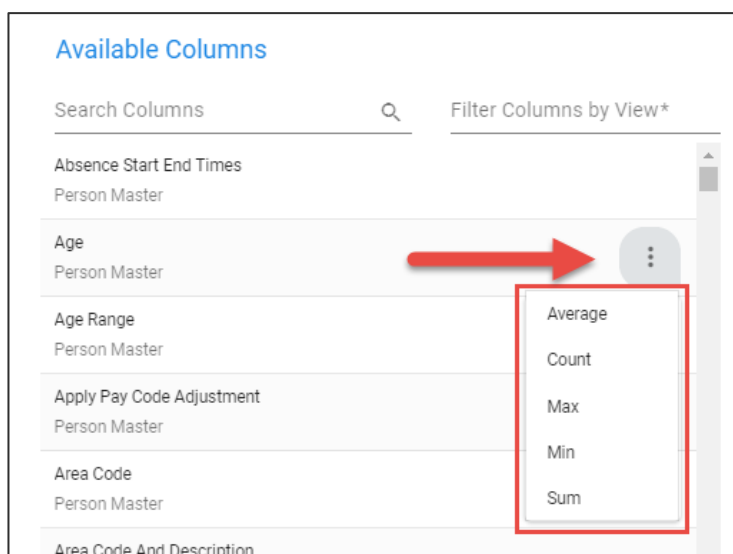

Aggregate functions can be added to report columns at the point of adding the column to the report on the Manage Report screen.

The aggregate options available are:

- Average (numeric fields only)
- Count (numeric fields only)
- Sum (numeric fields only)
- Max (numeric and date fields)
- Min (numeric and date fields)

To add an aggregate column to a report:

1. Search for the column in the *Available Columns* list and click the button.
2. Select the required aggregate type to open the *Field Aggregate* pop up

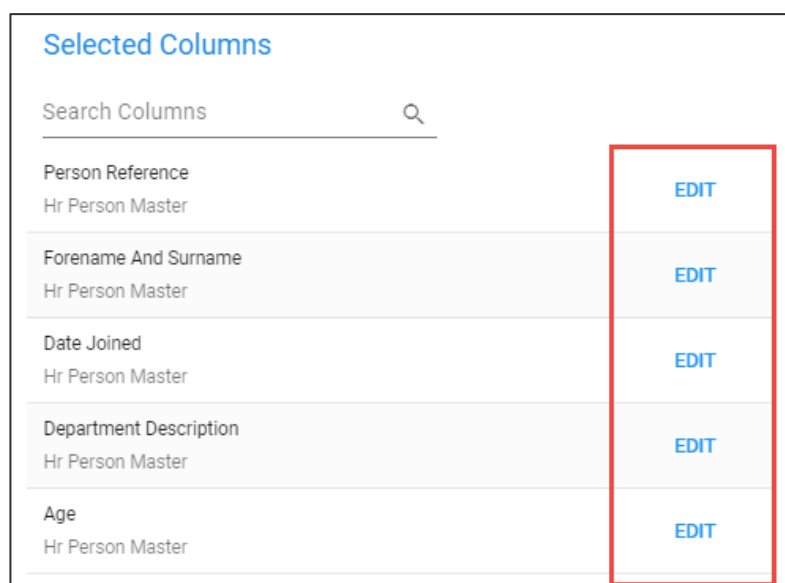

3. Select the report element to 'partition by'.
4. Click **OK** to save.
5. The column is added to the **Selected Column** list and will calculate when the report is next run.

Edit Column Settings

The **Edit** button is available for all columns on the *Selected Columns* list. This allows you to update the settings for each column e.g. rename the column; hide the column; group the column; add a total.

To edit a column:

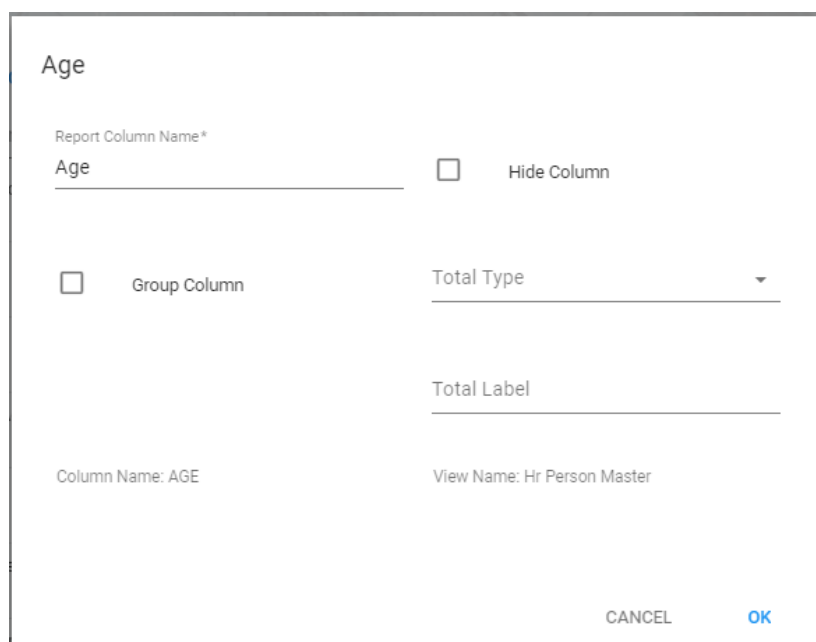

1. Search for the column in the *Selected Columns* list and click **Edit**.

The screenshot shows a window titled "Selected Columns" with a search bar and a list of columns. A red rectangle highlights the "EDIT" button for each row in the list.

Column Name	Source	Action
Person Reference	Hr Person Master	EDIT
Forename And Surname	Hr Person Master	EDIT
Date Joined	Hr Person Master	EDIT
Department Description	Hr Person Master	EDIT
Age	Hr Person Master	EDIT

2. Update the settings as required (see table on the next page for guidance).

The screenshot shows the "Age" column settings dialog box. It includes fields for "Report Column Name*", "Group Column", "Total Type", "Total Label", "Column Name", and "View Name". There are also checkboxes for "Hide Column" and "Group Column".

Report Column Name*
Age

☐ Hide Column

☐ Group Column

Total Type

Total Label

Column Name: AGE

View Name: Hr Person Master

CANCEL OK

3. Click **OK** to save.

Setting	Explanation
Report Column Name	This is the text that will display as the column header on the report.
Hide Column	Enable this to hide the column from displaying on the report.
Group Column	This is used to group report row by this column. See Column Grouping below for an example of how this is used
Total Type	This is used to add total calculations to the column. See Column Totals below for further details.
Total Label	This is linked to the selected <i>Total Type</i> . See Column Totals below for further details.

The original *Column Name* and *View Name* are displayed at the end of the screen for your reference.

Column Grouping

This is used to group report records under a common record value.

- For example, the report below has the **Group Column** indicator enabled for “Department Description”.
- When the report is generated, a grouping is applied - see the new rows added below.
- Under each of these rows, all of the records in that department are displayed.
- You can use the arrows to expand or collapse the grouped records as you review the report.

Person Reference	Forename And Surname	Date Joined	Department Description
▼ Ceo			
▲ Compensation & Benefits			
000018	Janine Clarke	02-May-2013	Compensation & Benefits
000020	Claire Jackson	12-Apr-2009	Compensation & Benefits

Column Totals

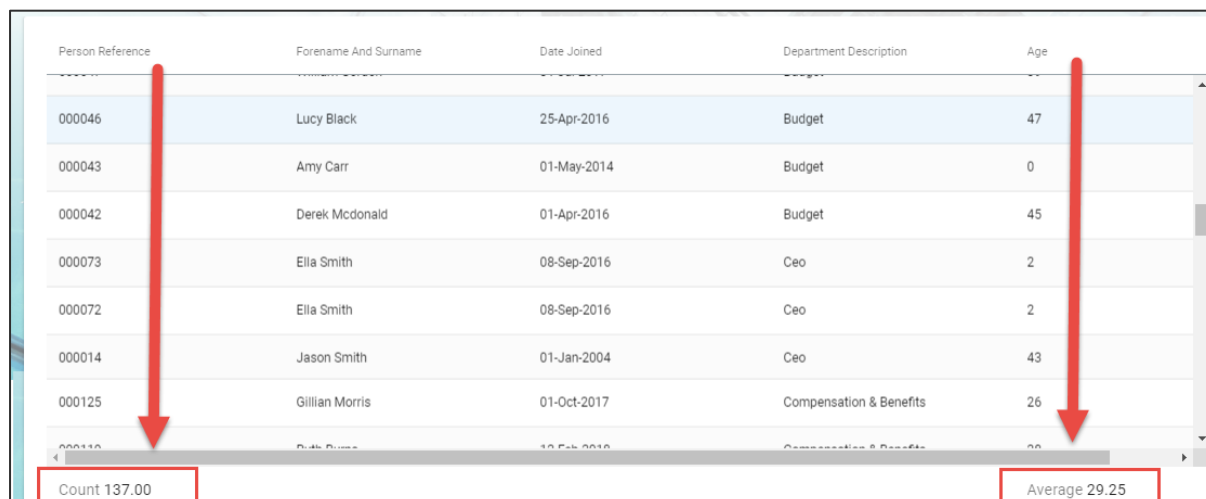

Totals can be added to any column.

- Select the *Total Type* from the drop-down list.
 - Average
 - Count
 - Max
 - Min
 - Sum
- Update the *Total Label* that will appear on the report next to the calculated total.

3. Click **OK**. Changes are saved.
4. **Run Report.**

See an example of a report that has 2 types of totals:

- A count of *Person Reference*.
- The average *Age*.

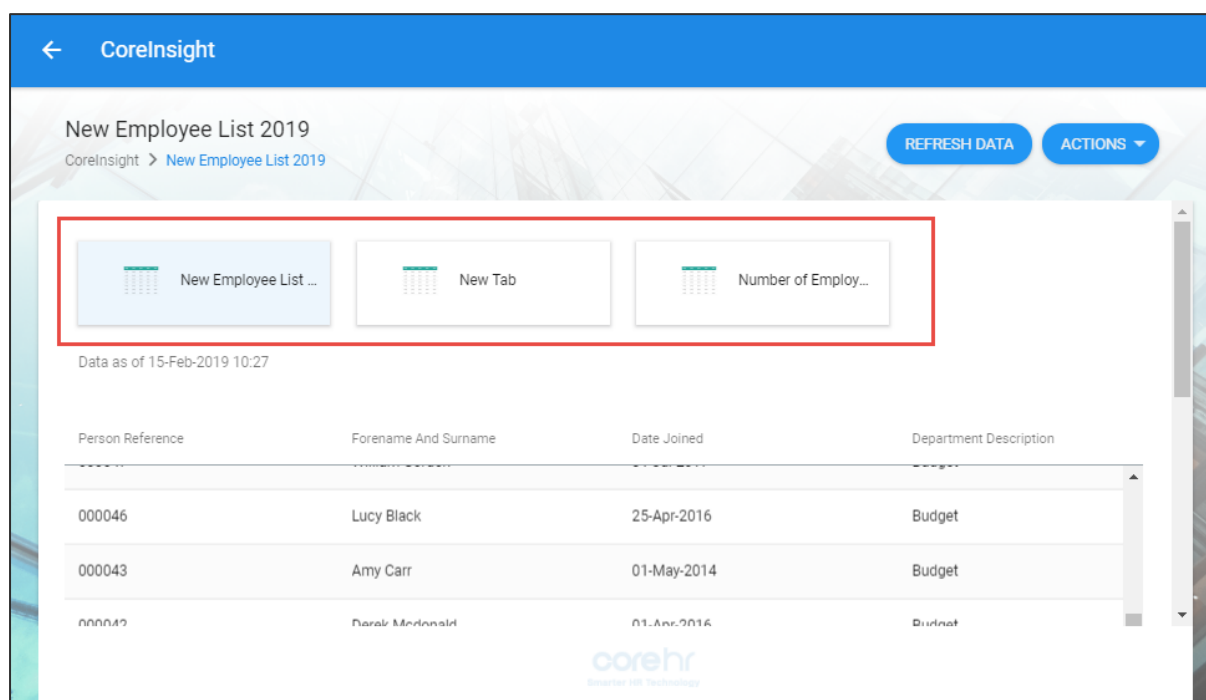

Person Reference	Forename And Surname	Date Joined	Department Description	Age
000046	Lucy Black	25-Apr-2016	Budget	47
000043	Amy Carr	01-May-2014	Budget	0
000042	Derek McDonald	01-Apr-2016	Budget	45
000073	Ella Smith	08-Sep-2016	Ceo	2
000072	Ella Smith	08-Sep-2016	Ceo	2
000014	Jason Smith	01-Jan-2004	Ceo	43
000125	Gillian Morris	01-Oct-2017	Compensation & Benefits	26
000110	Ruth Burns	15-Feb-2019	Compensation & Benefits	26
Count 137.00				Average 29.25

6.4.3. Tab

Tab Overview

Reports can be created to include multiple tabs. If a report contains more than one tab, these are displayed at the top of the report i.e.

CoreInsight

New Employee List 2019

CoreInsight > New Employee List 2019

REFRESH DATA ACTIONS

New Employee List ... New Tab Number of Employ...

Data as of 15-Feb-2019 10:27

Person Reference	Forename And Surname	Date Joined	Department Description
000046	Lucy Black	25-Apr-2016	Budget
000043	Amy Carr	01-May-2014	Budget
000042	Derek McDonald	01-Apr-2016	Budget

corehr
Smarter HR Technology

Click on each tab to view the corresponding report.

- Each tab is essentially a standalone report. Therefore, when opening a tab for the first time (or if the tab has been edited since you last viewed it), the notification prompt appears.
- Reports will therefore have different “Data as of” timestamps.

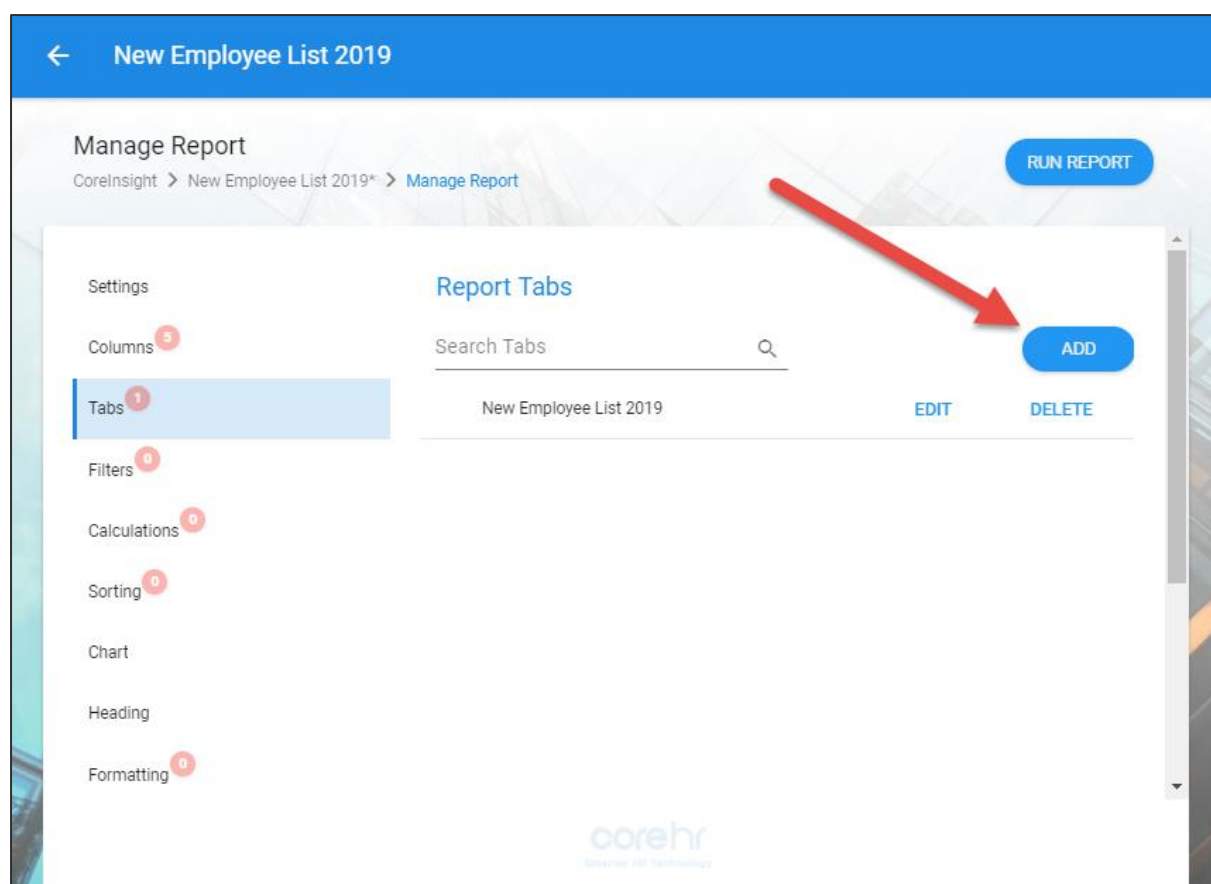

Reports can include both a mix of tabular and cross-tabular reports.

Each tab can be run using a completely separate business area / view configuration.

Add a Tab to a Report

Follow these steps to add a new tab to a report.

1. Open the *Manage Report* screen for the report.
2. Select **Tabs**.
3. Click **Add**.

The *Report Wizard* opens.

Follow the guidance provided in [5. Creating Reports](#) for the steps on how to create a new report.

All options are available here i.e.

- Tab Report
- Cross Tab Report

- Clone an Existing Report.

Manage Report

Add Tab

CoreInsight > New Employee List 2019* > Manage Report* > Add Tab

1 Tab Type

Do you want to create a new tab or clone an existing one?

☒ Create a new tab ☐ Clone an existing report

Filters 0

Calculations 0

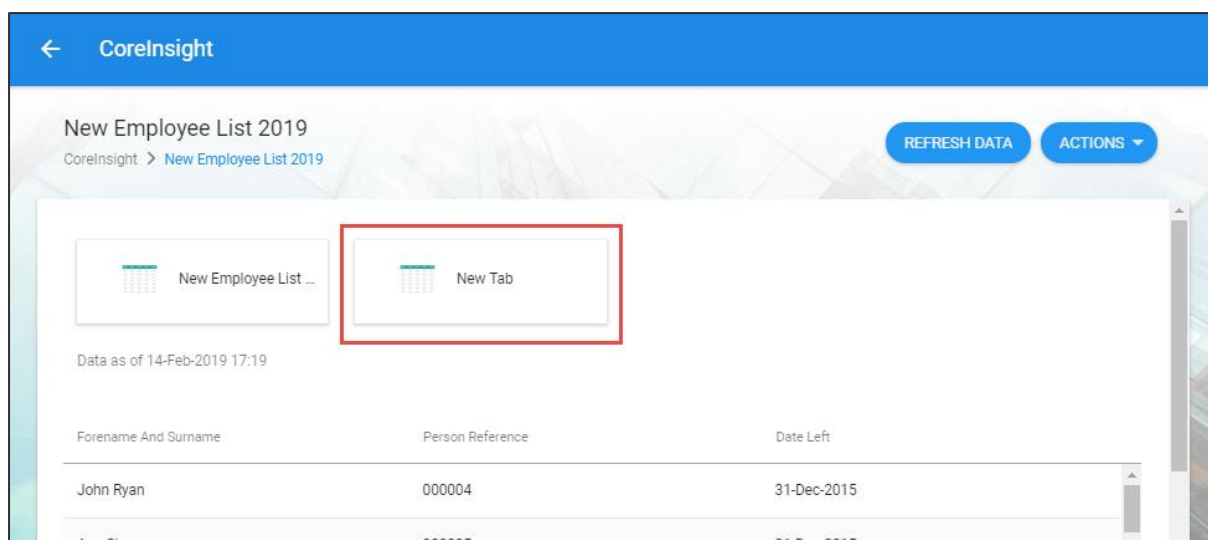

Report Tabs

Search Tabs

New Employee List 2019	EDIT	DELETE
New Tab	EDIT	DELETE

ADD

- Click **Run Report** to see the new tab.
- The new tab is listed at the top of the screen.
- Click this to view the new report.

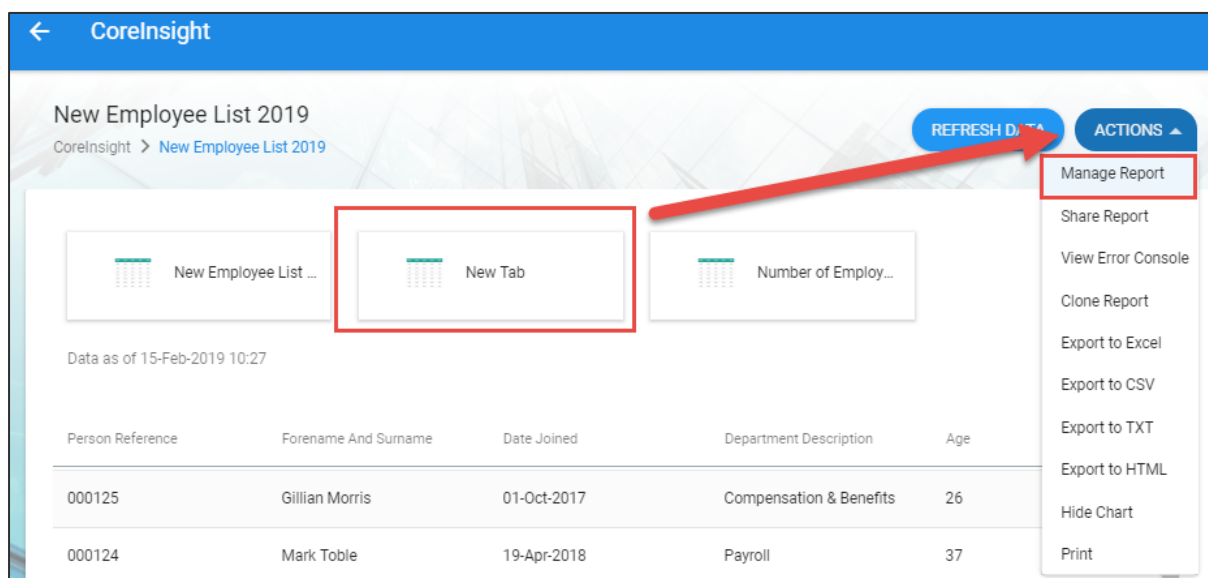

Edit Report Settings for Individual Tabs

Each tab is treated as an individual report. Therefore, each one has a unique set of settings on the *Manage Settings* screen.

Follow these steps to access the *Manage Settings* screen for an individual tab.

- Click the tab, to view that tab's report data.

- Click **Actions** and select *Manage Report*.
- On this screen any settings changes you make are for the chosen tab.

Note: We recommend [adding a heading](#) to each tab to help differentiate which tab you are viewing at any given time.

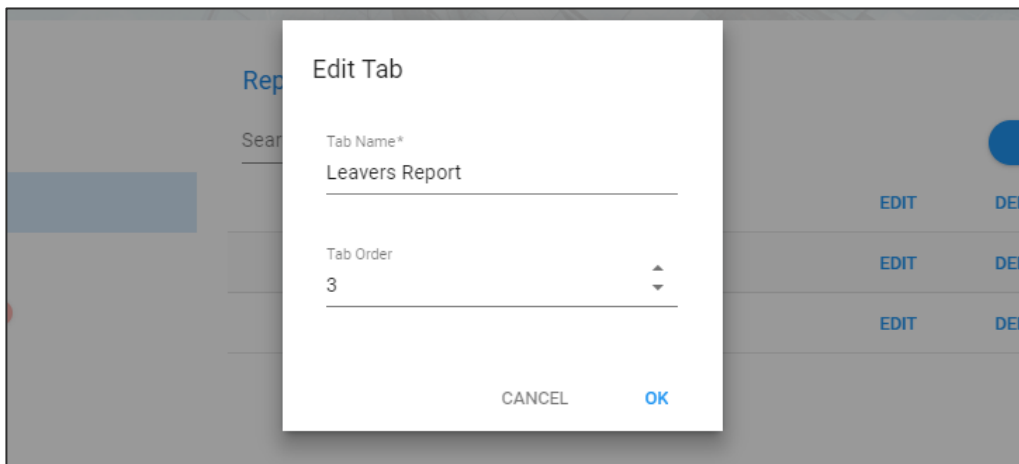

The *Tabs* menu is available, and this gives you the option to:

- Add a new tab (see [Add a Tab to a Report](#)).
- Change the tab names or order of display (see [Change Tab Name or Order](#)).

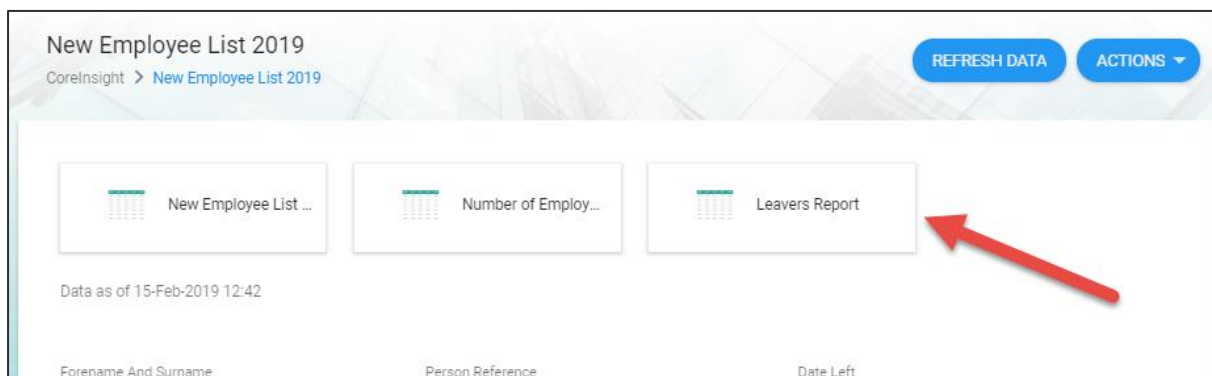

Change Tab Name or Order

Follow these steps to change the tab name or order:

1. Open the *Manage Report* screen for any of the tabs.
2. Select **Tabs**.
3. Click **Edit** for the tab to be renamed
 - a. Update the *Tab Name*.
 - b. Change the *Tab Order* e.g. set this to 1 if the tab should come first. This automatically updates the other tabs to a new *Tab Order*.
4. Click **OK** to save.

Run Report to view the changes made:

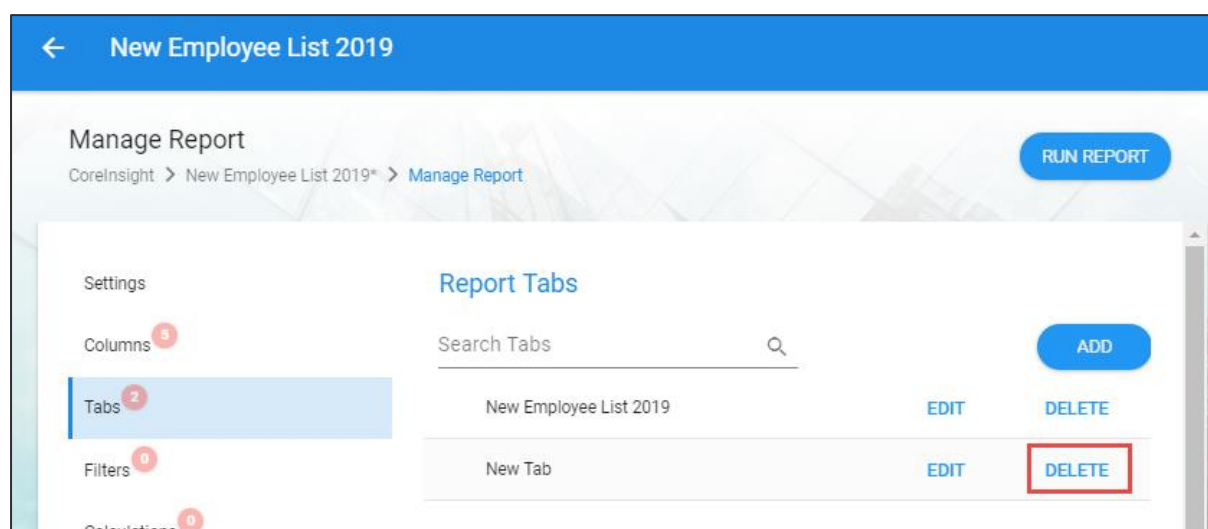

Delete a Tab

Follow these steps to delete a report tab:

1. Open the *Manage Report* screen for any of the tabs.
2. Select **Tabs**.
3. Click **Edit** for the tab to be renamed.
4. Click **Delete** for the required tab.
5. Confirm the deletion on the prompt.

The tab is deleted, and changes are saved automatically.

6.4.4. Filters

Filters Overview

Filters are used to help restrict or limit the data returned in order to create a more meaningful report rather than a straightforward data extract for example

- All employees in *Department X*.
- All employees with a *Date Joined* in 2019.

Many filters can be applied to a report.

You can create nested filters. For example, a filter could be used to return all employees that left in January 2019, using a filter on their leave date:

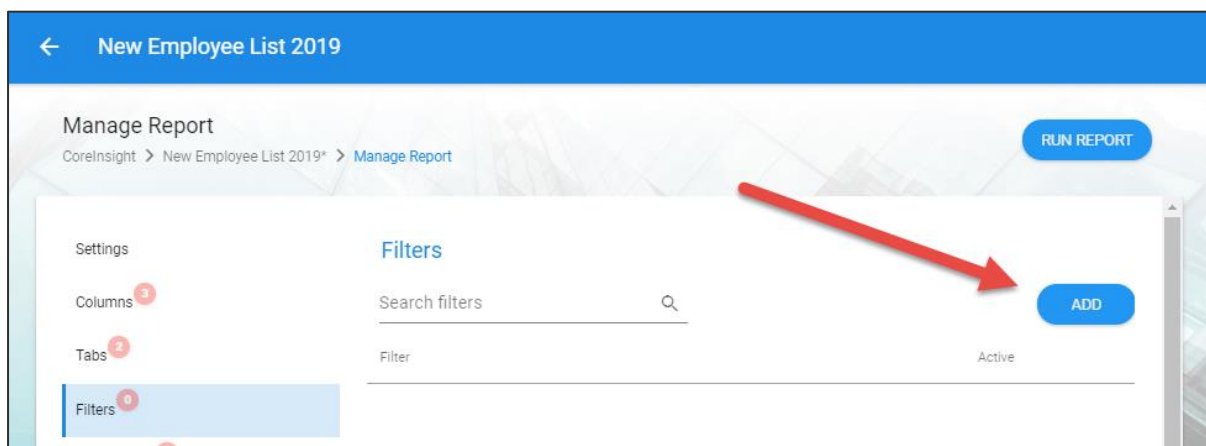

- On or after 1st Jan 2019
- On or before 31st Jan 2019

Prompts can be added to a filter. This means that when the report is run, you will get a prompt on screen asking for the value to filter by e.g. "Enter Year" or "Select the Pay Period". This approach is useful as the report is dynamic and can be run to display different data sets every time, rather than pre-filtering of specific values.

Add a Filter

Follow these steps to add a filter to a report:

1. Open the *Manage Report* screen for the report.
2. Select **Filters** and click **Add**.

The *Add Filter* screen opens.

3. Select the column from the report to filter on.
This list only displays columns that are included on the report. If you need to filter based on a column not included in the report, add this column but hide it. That way you can apply a filter to it, but it will not appear on the report.

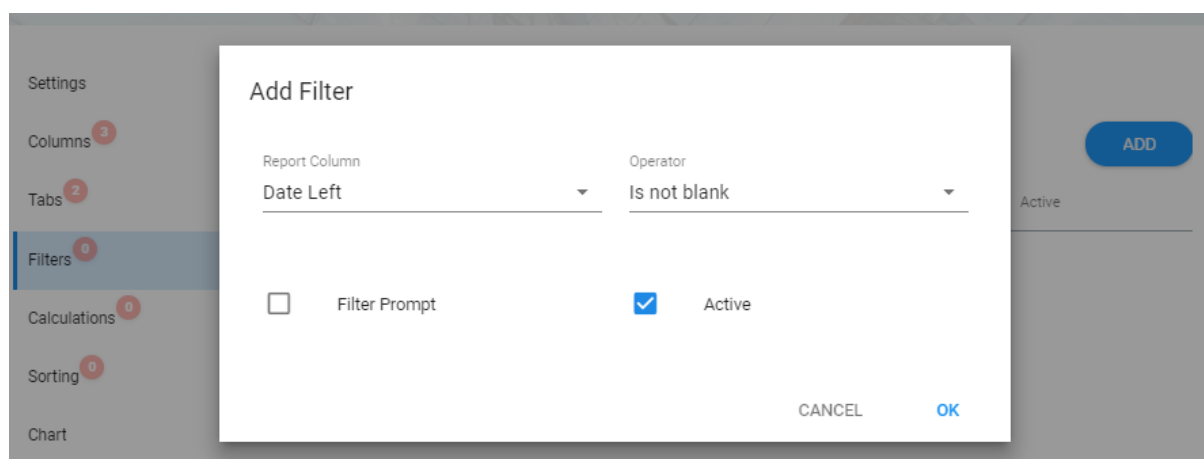

4. Select the *Operator*

This is how you will filter on the select column e.g. where something is equal to, less than, after etc. Depending on the column selected the *Operator* list will differ. This is because there are different operators for different data types e.g. Text, Numeric or Date.

If using the options “In the list” or “Not in the list”, you will need to provide a comma separated list of items in Filter Text to compare against.

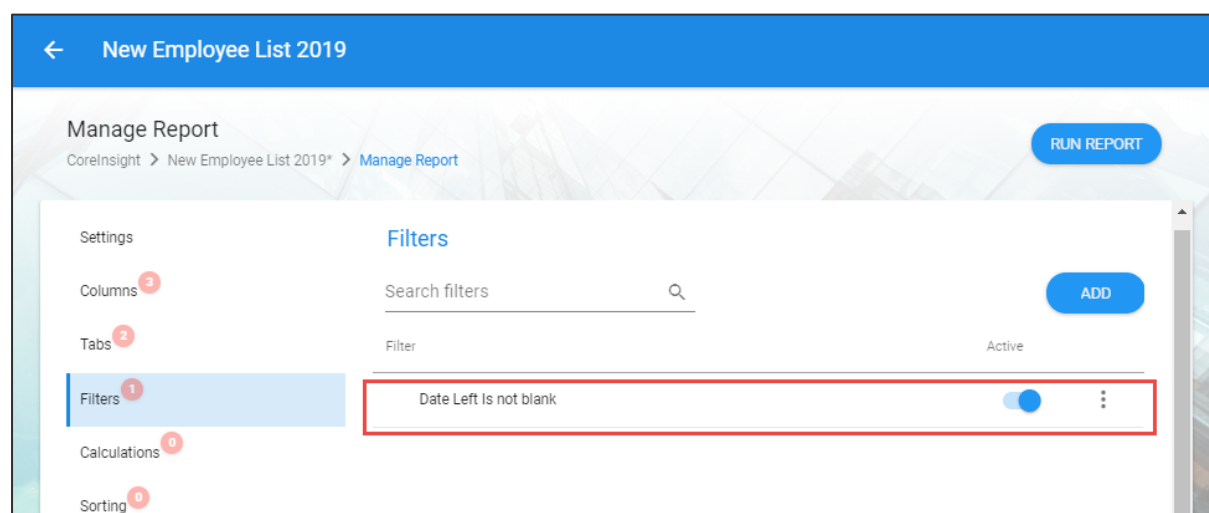

5. Select a *Filter Prompt* if required. See [Filter Prompts](#) for further details.

6. Ensure **Active** is selected.

7. Click **OK** to save.

The filter is created and listed on the *Filter* screen.

8. **Run Report** to see the report with the filter applied.

Filter Prompts

Follow these steps to add a prompt to your report:

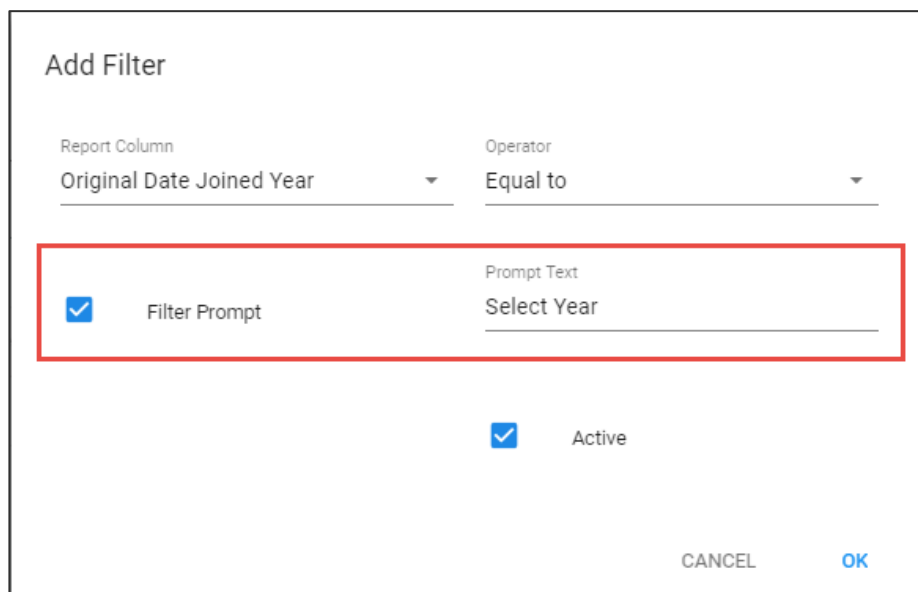

1. Open the *Manage Report* screen for the report.
2. Select **Filters** and click **Add**.
3. Select the column from the report to filter on.
4. Select the *Operator*.

5. Select **Filter Prompt**.

Enable this to ensure that a prompt appears when the report is run, requesting you to input the required value.

6. Provide the *Prompt Text*.

This is the message that will appear to the user when running the report guiding them to provide the value.

Add Filter

Report Column: Original Date Joined Year ▼

Operator: Equal to ▼

☒ Filter Prompt

Prompt Text: Select Year

☒ Active

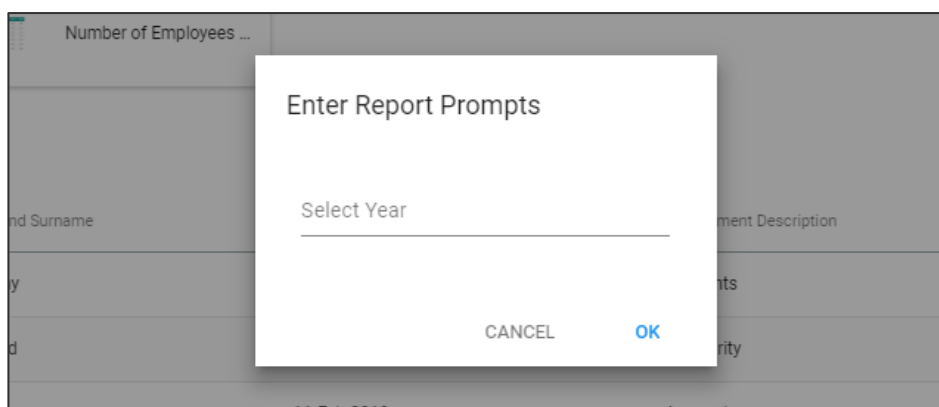

CANCEL OK

7. Ensure **Active** is selected.
8. Click **OK**. The filter is saved automatically.
9. **Run Report**.

The prompt appears on screen.

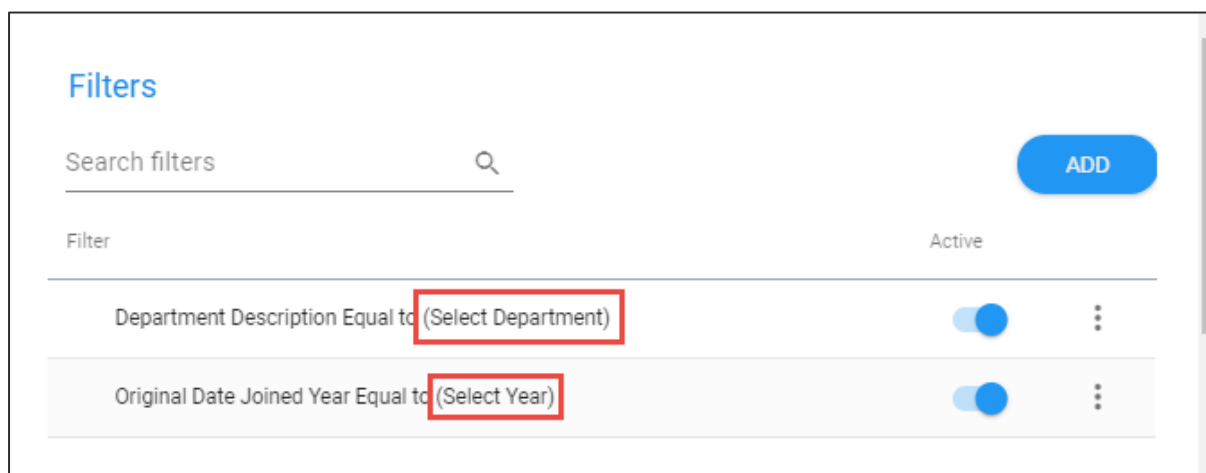

10. Provide a value and click **OK**.

The report runs and the data displayed is filtered based on the value provided in the prompt.

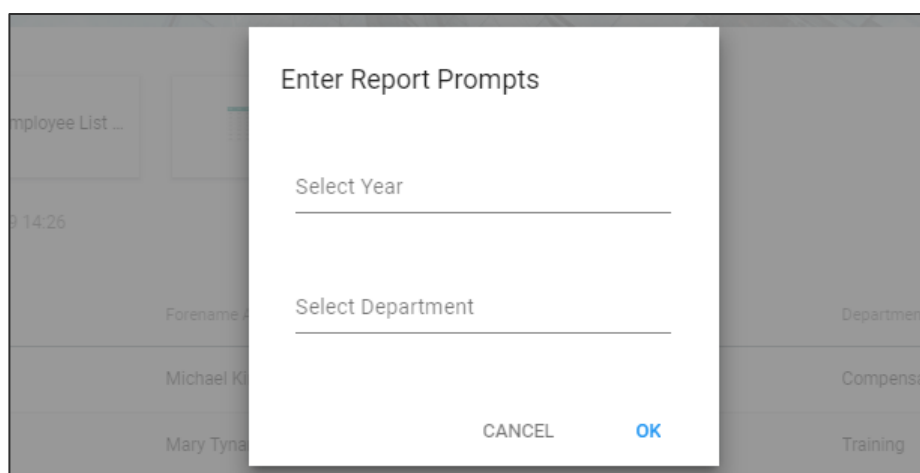

Prompts are not mandatory. Therefore, you can ignore the report and run for all data by clicking **OK**.

Filters that include prompts can be identified on the *Filters* screen as having the *Prompt Text* in brackets:

You can setup multiple prompts for a report. If more than one active filter includes a prompt, this appears as follows when you run the report:

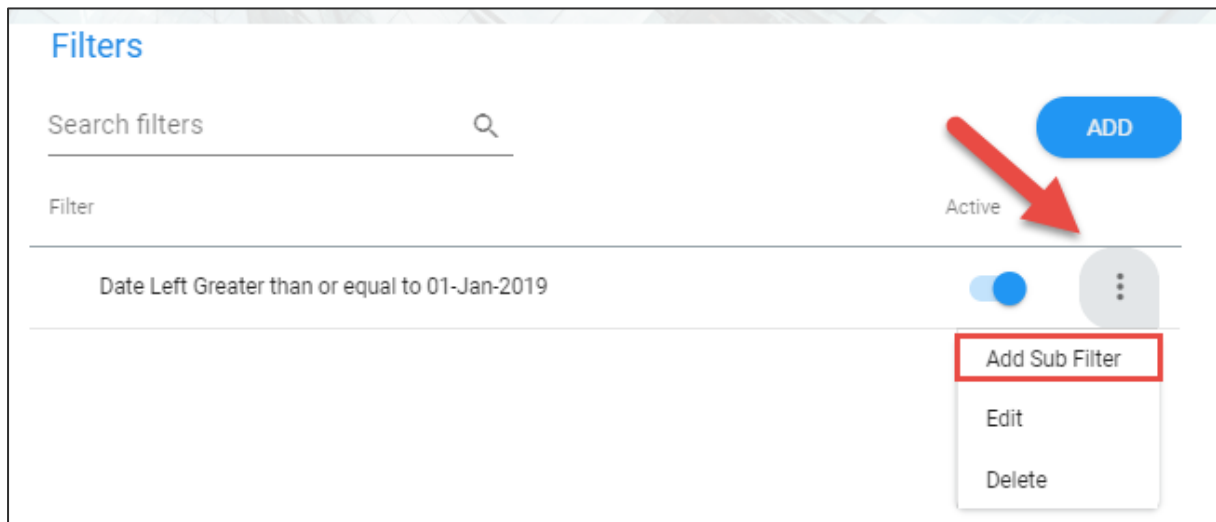

Nested Filters / Sub Filters

Follow these steps to create nested filters i.e. filters that contains some “and / or” conditions.

In this example, we will work through the steps to create filter that will return all leavers in January 2019.

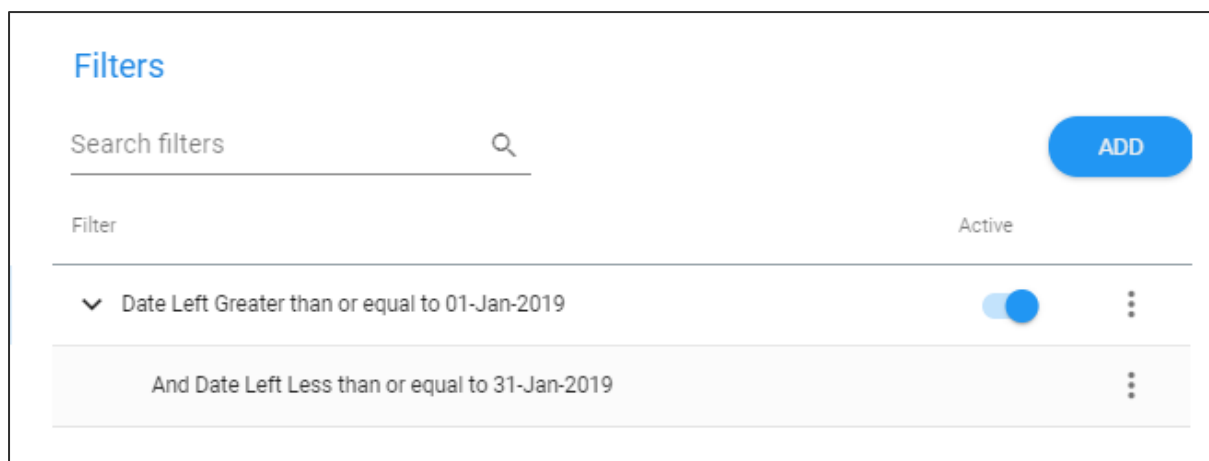

1. Add a filter to the report for “Date Left greater than or equal to 1st January 2019”.
2. Click the button for the filter and select **Add Sub Filter**

3. The *Add Filter* screen includes a new **And/Or** field. Select the required option.
4. Fill out the rest of the filter elements and click **OK**

The 'Add Filter' dialog box is shown. It has a title 'Add Filter'. The first row contains two dropdown menus: 'And/Or' (with 'And' selected and highlighted by a red box) and 'Report Column' (with 'Date Left' selected). The second row contains 'Operator' (with 'Less than or equal to' selected) and 'Filter Date' (with '31-Jan-2019' selected and a calendar icon). At the bottom, there are two checkboxes: 'Filter Prompt' (unchecked) and 'Active' (checked). The 'Active' checkbox is highlighted with a blue checkmark. At the bottom right, there are 'CANCEL' and 'OK' buttons.

The new filter is listed on the *Filters* screen, grouped beneath the original one.

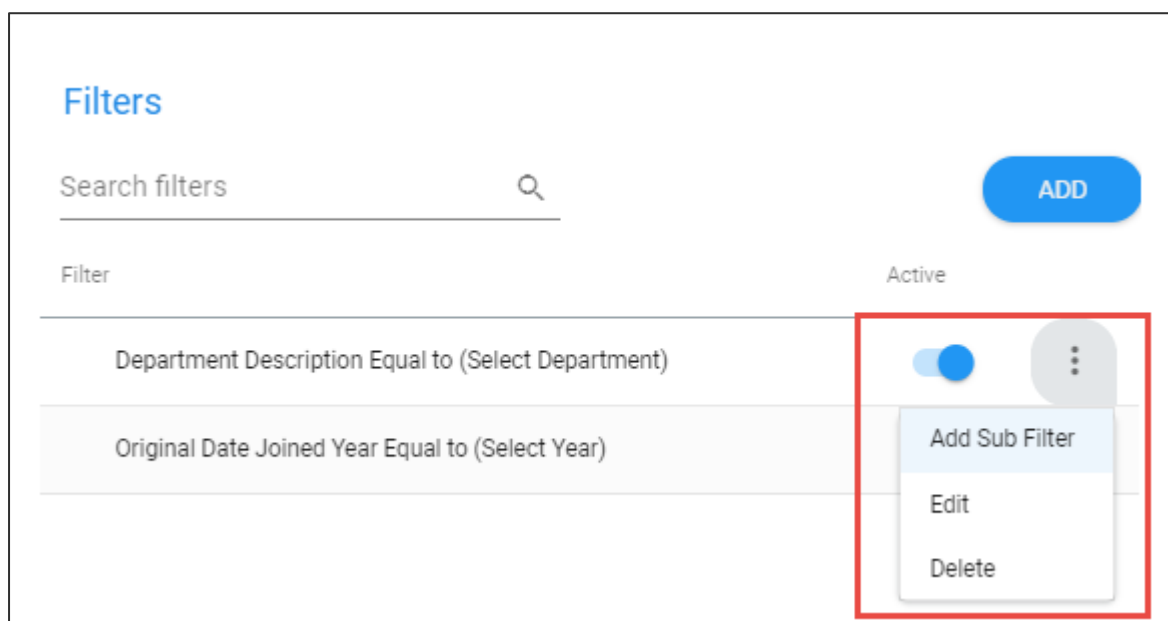

5. Repeat as required.

You can add additional sub filters to the original filter, or an existing sub filter.

Updating Filters

On the *Filters* screen you can do the following for each filter:

- Click  and select **Edit** to update the filter settings e.g. to change the operator and value.
- Click  and select **Delete** to delete the filter completely.
- Unselect the **Active** indicator to ensure that it is not applied when the report is run but keep the filter for use at a future time.
- Select the **Active** indicator to reactivate a filter and ensure it is applied with the report is run.

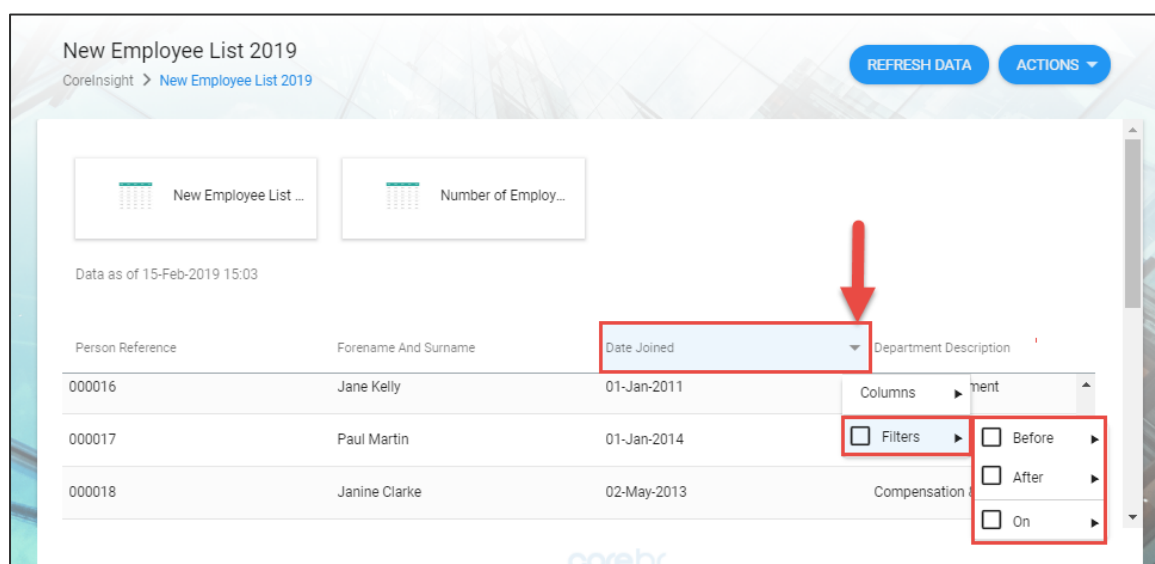

On Screen Filtering

You can apply filters to report columns when viewing the report. These are only set for the duration that you are viewing the report and are not saved for the future.

1. Click the column header.
2. Select **Filters**.
3. The list of options depends on the column type e.g.
 - Dates include options for *Before*, *After* and *On*.
 - Numbers include *Less Than*, *Greater Than*, *Equals*.
 - Text fields include a list of all possible option on the report.
4. Set the filter.

The report updates immediately.

6.4.5. Calculations

What are Calculations?

Calculations are used to define a new value / column to add to a report. These are a useful way to apply some initial data analysis on the report upfront.

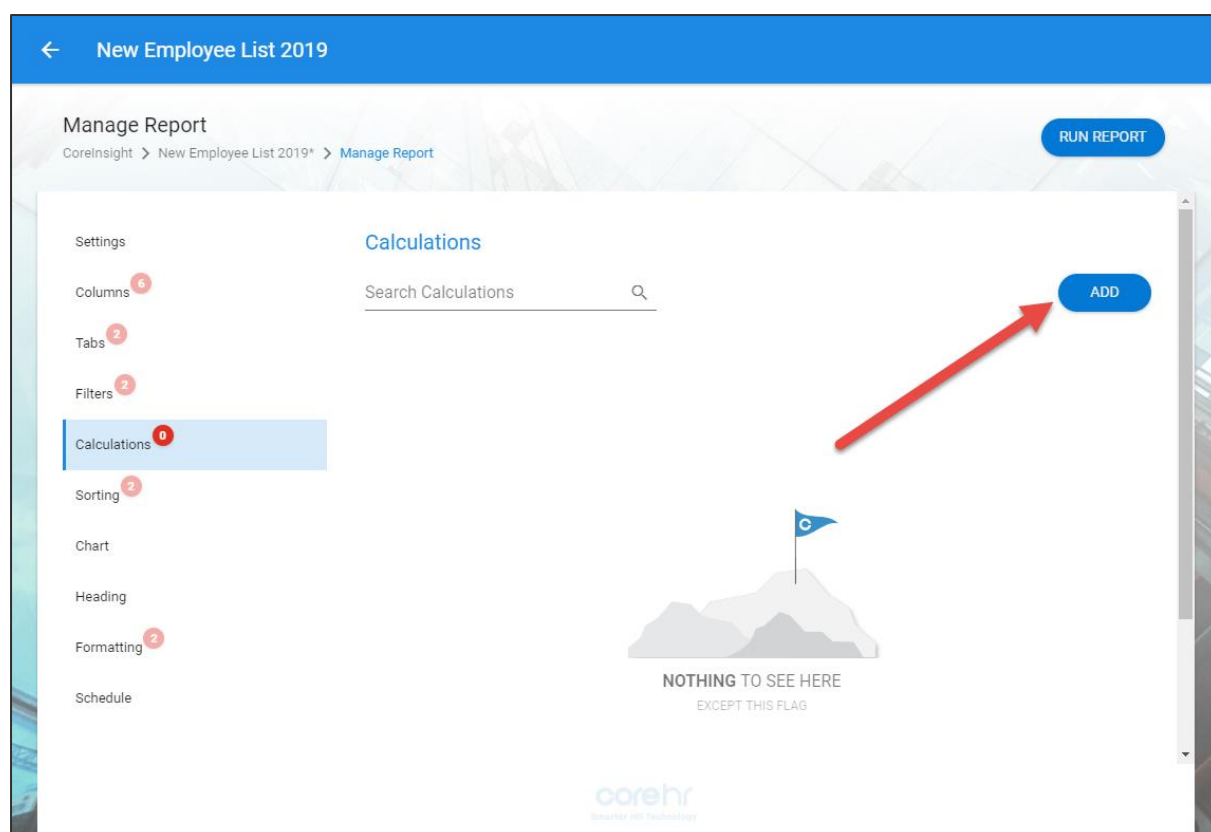

Possible uses of a calculation

- Concatenate multiple fields into a single column.
- Project column data e.g. a date + 30 days, a value + 10% etc.

Once created, a calculation is effectively a new report column. As such it can be filtered on, used in a prompt, formatted, added to a chart etc.

Add a Calculation

1. Select **Calculations** on the *Manage Report* screen.
2. Click **Add**.

The *Add Calculation* screen appears.

3. Complete the screen

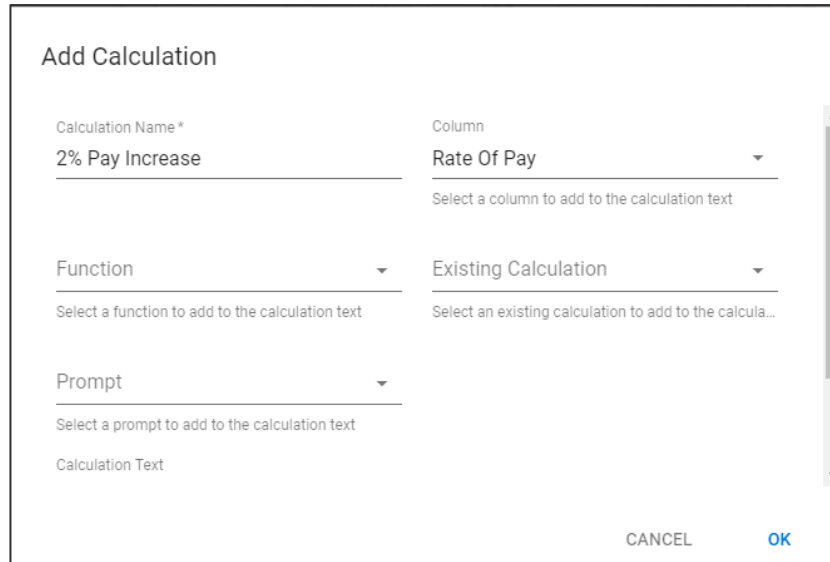

- a. Give the *Calculation Name*.

This is used as the column header for the created calculation. Provide a meaningful description that makes it clear what this calculation is being used for.

- b. Select the *Column* to be used in the calculation.

This automatically updated the *Calculation Text* to include the code for that column.

You can select multiple columns from the list. Each time the selected column will be added to the *Calculation Text* field.

AND / OR

- c. Select a *Function*.

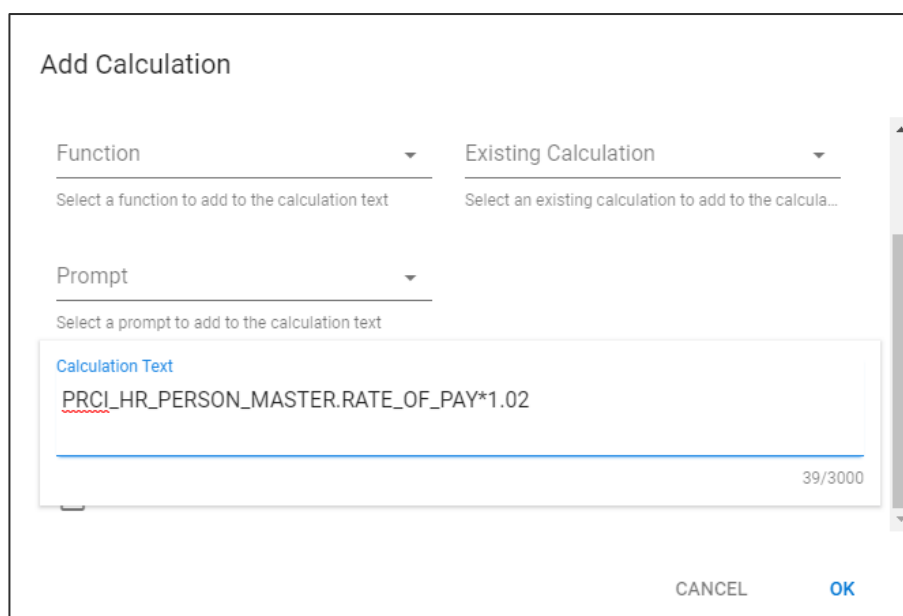

These are a list of preconfigured calculations from CoreHR. Once selected, the code for this calculation is populated in the *Calculation Text*.

AND / OR

- d. Select an *Existing Calculation*. This is a list of the other calculations that have been created for this report. If no other calculations exist, this list is blank.

- e. You can directly add text to the *Calculation Text* field to further define the calculation e.g. use operator such as the list below to build your own calculation

- + to add
- - to subtract
- * to multiply
- / to divide
- || to concatenate
- <, >, =
- IN, NOT IN
- MAX, MIN, SUM, AVG

The 'Add Calculation' dialog box contains the following fields and options:

- Function:** A dropdown menu with the text 'Select a function to add to the calculation text' below it.
- Existing Calculation:** A dropdown menu with the text 'Select an existing calculation to add to the calcula...' below it.
- Prompt:** A dropdown menu with the text 'Select a prompt to add to the calculation text' below it.
- Calculation Text:** A text input field containing the formula `PRCI_HR_PERSON_MASTER.RATE_OF_PAY*1.02`. A character count '39/3000' is visible at the bottom right of the field.

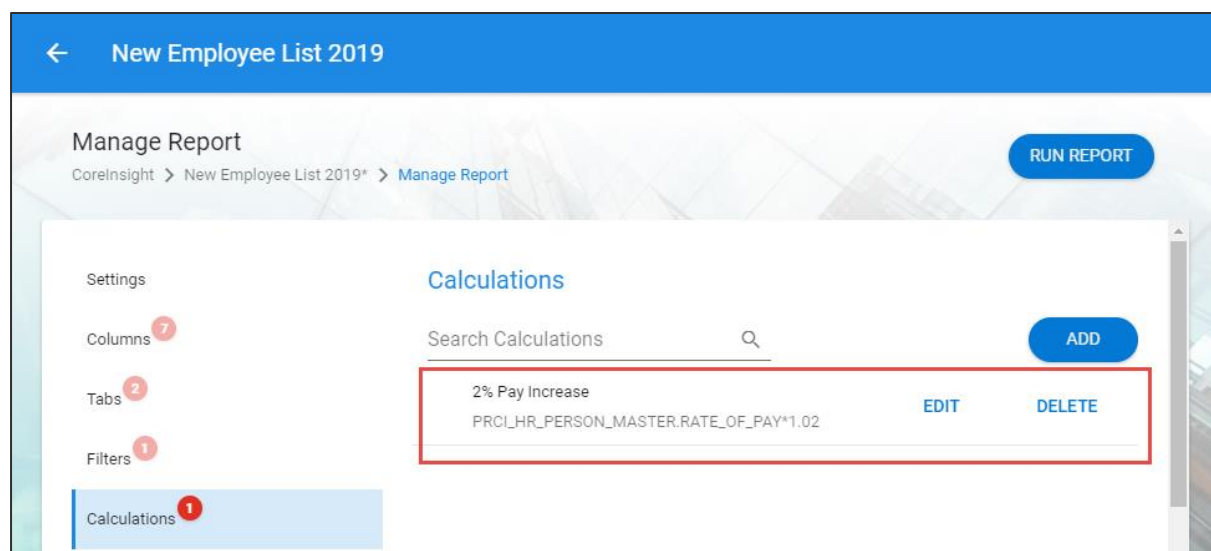

At the bottom right of the dialog are two buttons: 'CANCEL' and 'OK'.

! Next Steps:

The *Calculation Text* field is essentially your calculation builder. Depending on the type of calculation you require, you can construct a formula for this using a mix of the Column, Function and Existing Calculation fields, and the required operators / functions as demonstrated in the bulleted list.

- f. The **Hide Calculation** indicator can be used to ensure that the column created by the calculation is not displayed on the report. For example, you may create a calculation to add to a filter i.e. only show records based on the calculated value, but you may not wish to display the calculated value on screen.

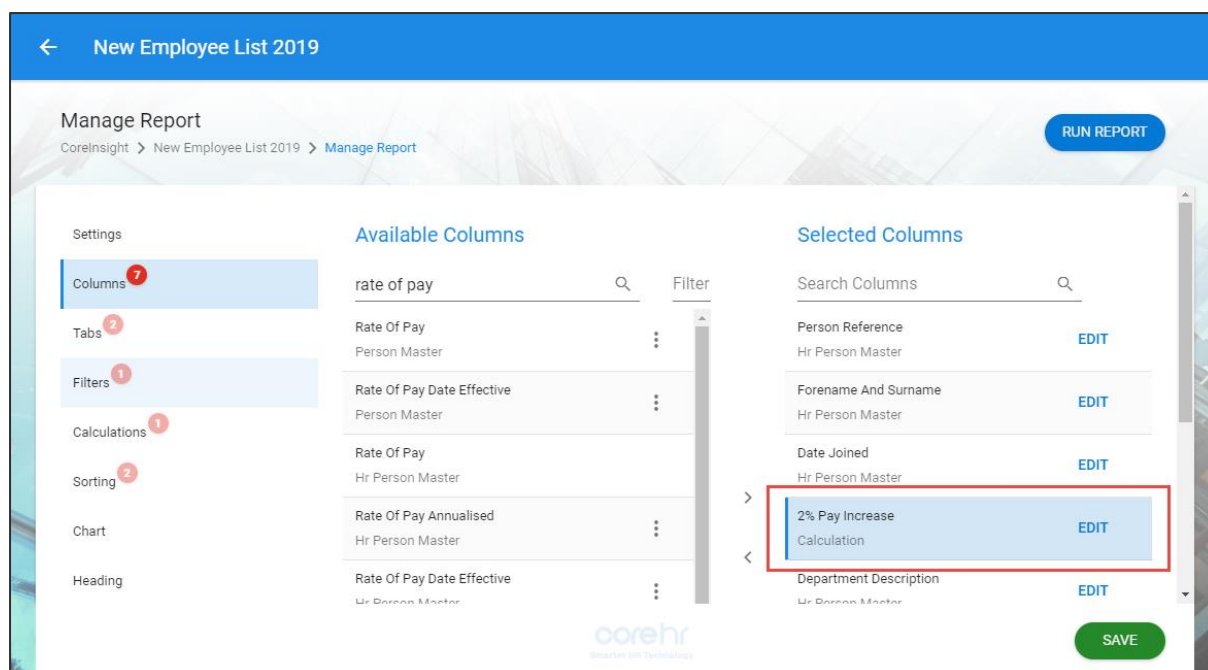

4. Click **OK** to save. The calculation is automatically saved.

The 'Manage Report' screen for 'New Employee List 2019' shows the 'Calculations' section. On the left is a sidebar with navigation links: Settings, Columns (7), Tabs (2), Filters (1), and Calculations (1). The main area is titled 'Calculations' and includes a search bar labeled 'Search Calculations' with a magnifying glass icon and an 'ADD' button. Below the search bar is a table with one calculation entry:

Calculation Name	Formula	Actions
2% Pay Increase	PRCI_HR_PERSON_MASTER.RATE_OF_PAY*1.02	EDIT DELETE

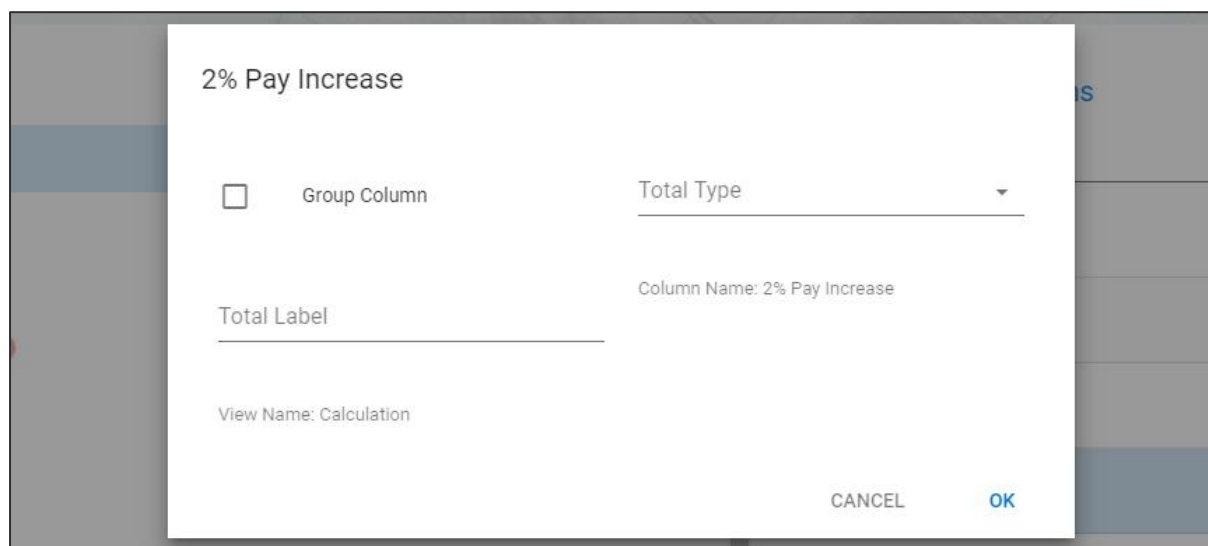

It is also added as a column:

You can edit the calculation column here. The options available are limited to:

- Group Column
- Adding a total.

To edit the column name, this can be done by editing the calculation.

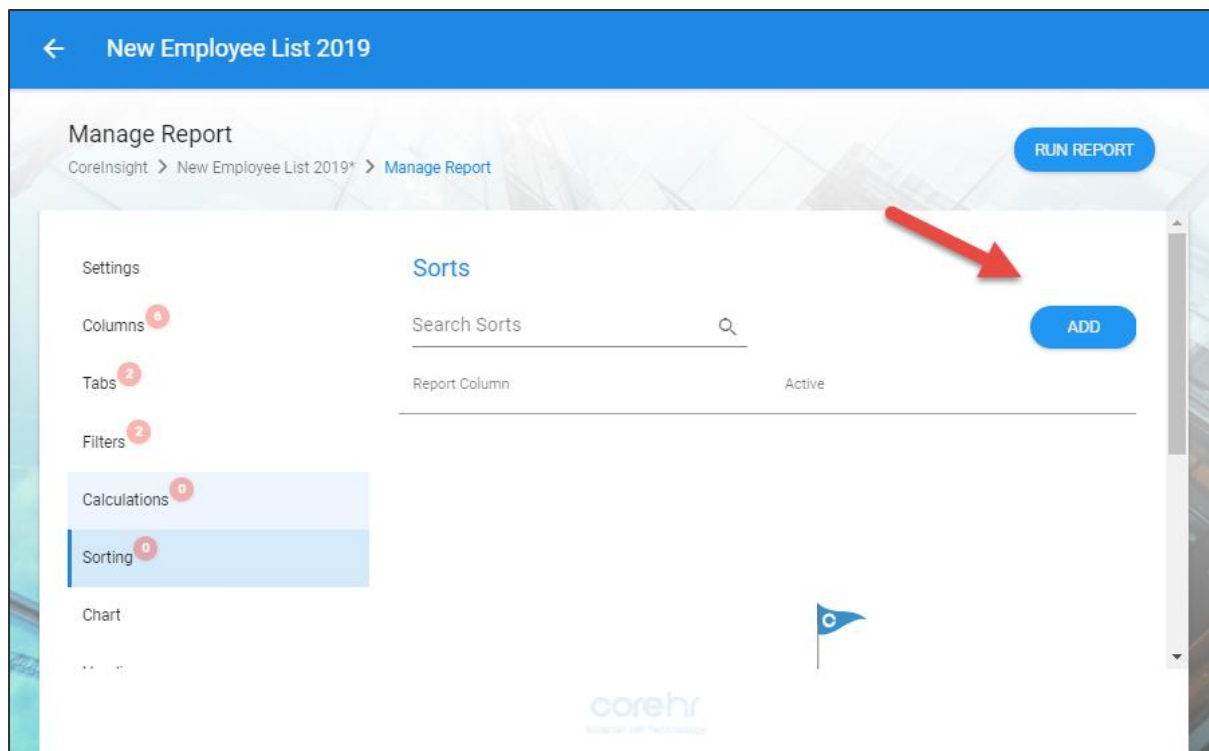

6.4.6. Sorting

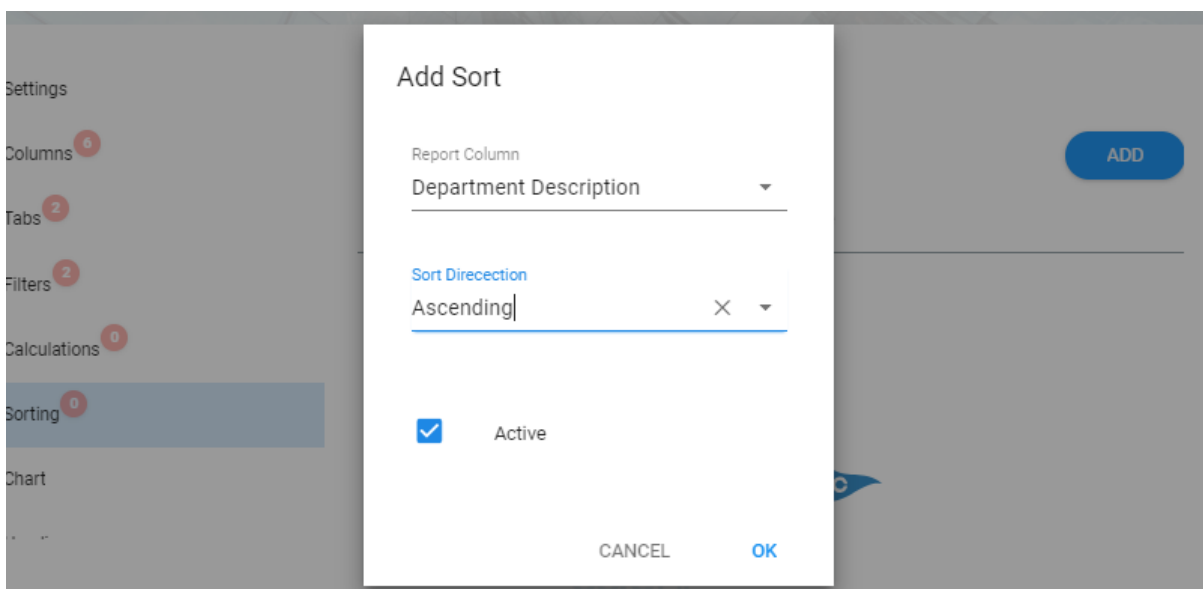

Sorting allows you to control the order in which records are displayed on the report.

To add a column sort rule to a report:

1. Open the *Manage Report* screen for the report.
2. Select **Sorts** and click **Add**.

3. Select the *Column* to sort by.
4. Select the *Sort Direction* i.e. Ascending or Descending.

5. Ensure the **Active** checkbox is selected.
6. Click **OK**.

The sort rule is saved automatically.

Report Column	Active		
Department Description Ascending	☒	EDIT	DELETE

7. **Run Report** to see the changes applied to the report.

You can add many sorts here e.g. sort by “Department Description”, then “Person Reference”. To do this, create the additional sort rules following the same steps above. The report data is sorted based on the order that the sort rules are listed on the *Sorts* screen i.e.:

Report Column	Active		
Department Description Ascending	☒	EDIT	DELETE
Person Reference Ascending	☒	EDIT	DELETE

6.4.7. Charts

Charts Overview

Charts can be added to reports to provide a visual snapshot of the report data.

When a chart is added to a report, this is displayed at the top of the report. There is an option to show / hide this when viewing the report.

If you have multiple report tabs, different charts can be added to each tab.

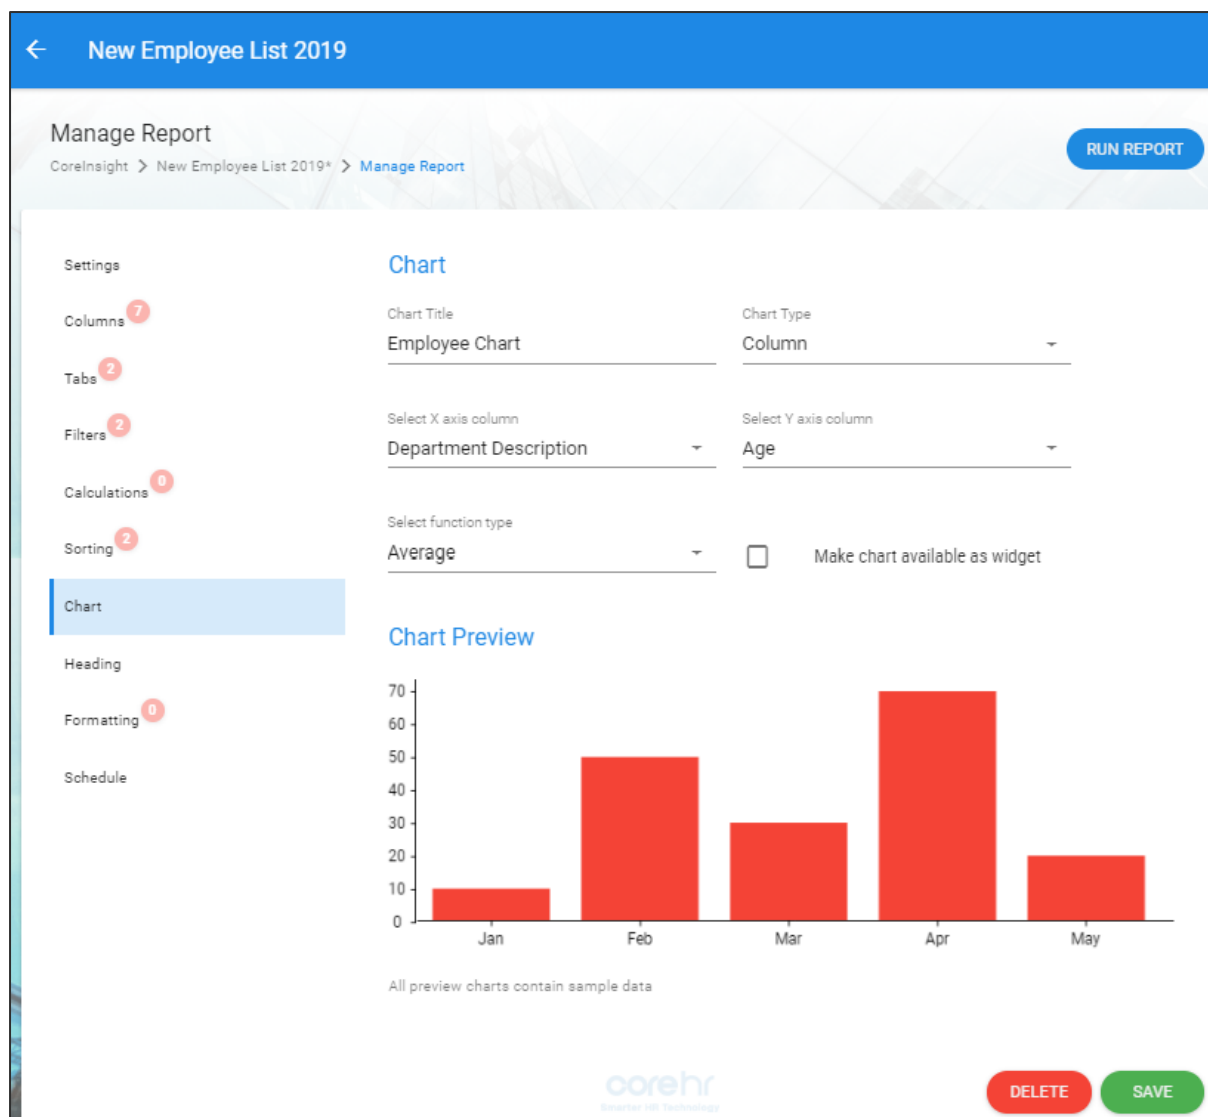

See the table below for the list of *Chart Types* available for tabular and cross tabular reports.

Report Type	Chart
Tabular	Bar Column Line Pie
Cross Tab	Area Bar Column Heat Map Multi Line Radar Scatter Stacked Bar Stacked Column

Add a Chart

Follow these steps to add a chart to a report.

1. Open the *Manage Report* screen for the report.
2. Select **Chart**.
3. Give the chart a name in *Chart Title*.
4. Select the *Chart Type* (see list of options in table above).
A sample version of that chart type is displayed on screen for your reference.
5. Select the X and Y axis for the column.
E.g. for average age by department, X-axis is *Department Description* and Y-axis is *Age*.
You can only select columns that have been added to the report.
6. Select the function type.
E.g. Average, Count, Sum.
7. Click **Save**.

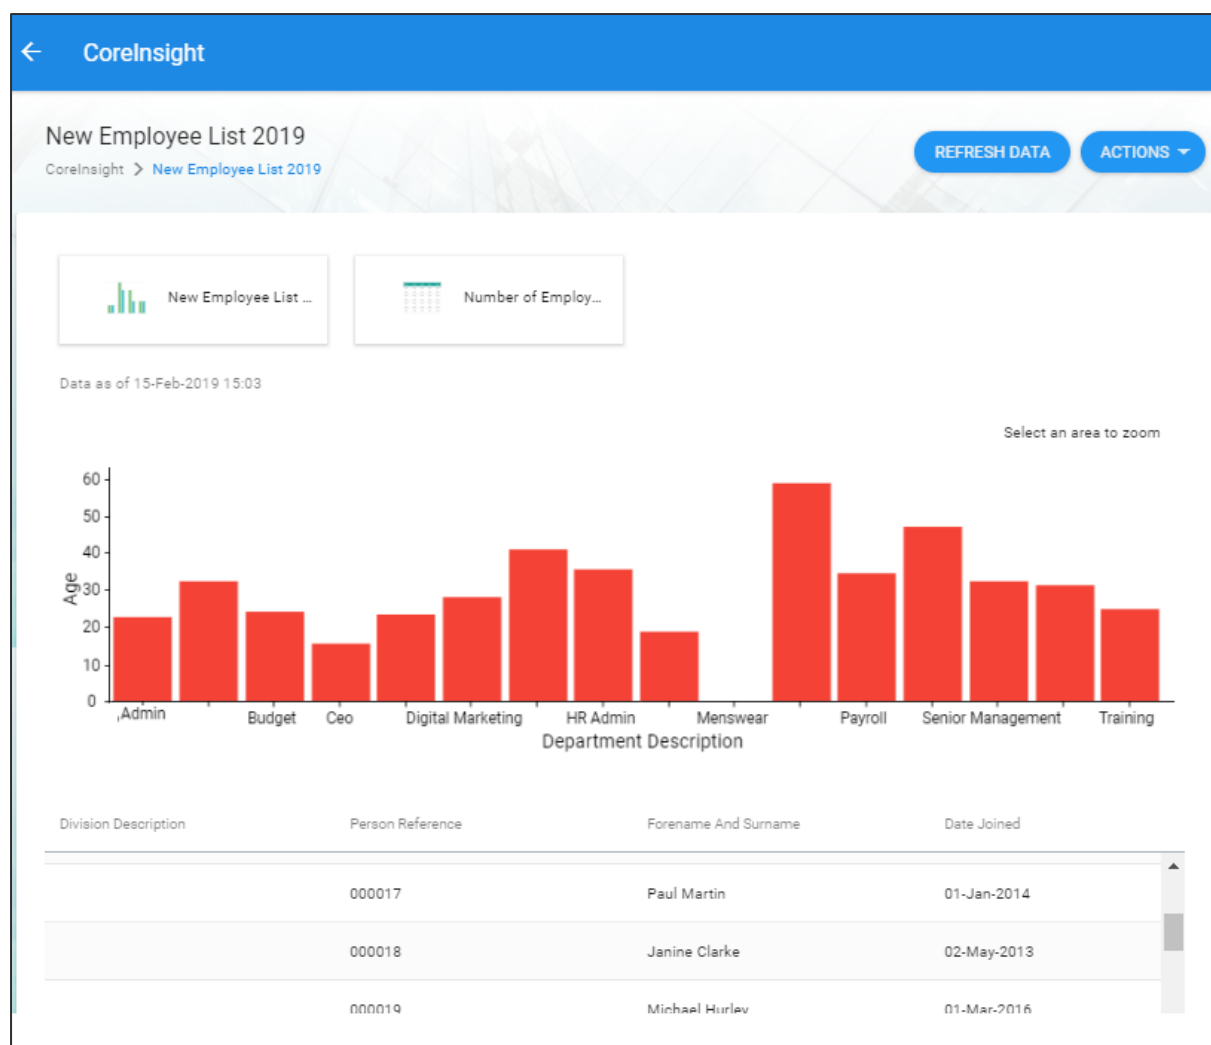

The report is now added to the chart

8. **Run Report** to generate the chart on the report.

The chart appears at the top of the screen.

(see next page)

9. Hover over a chart element to view the calculated value for that item.
10. Click on a chart element to view records for the selected area.

Show / Hide Charts

You can choose whether to show or hide the chart when viewing a report. To do this:

1. Click **Actions**.
2. Select **Hide Chart** OR **Show Chart**.

Save Chart as Widget

Charts can be saved as separate widgets. These widgets can be added to dashboards throughout CorePortal. When other users see the chart, the data reflects only the data that they have access to see based on the chart type (i.e. Administrator, Manager, Employee) and their data access on CoreHR.

To add a chart as a widget to a dashboard:

1. On the *Manage Report > Chart* screen, turn on the **Make Chart Available As Widget** indicator.

6. Select the chart. This is saved automatically.

You may need to login and out of CorePortal to see the widget on the new dashboard:

6.4.8. Heading

The *Manage Report > Heading* screen allows you to update the heading displayed on the report screen. By default, reports do not have a heading:

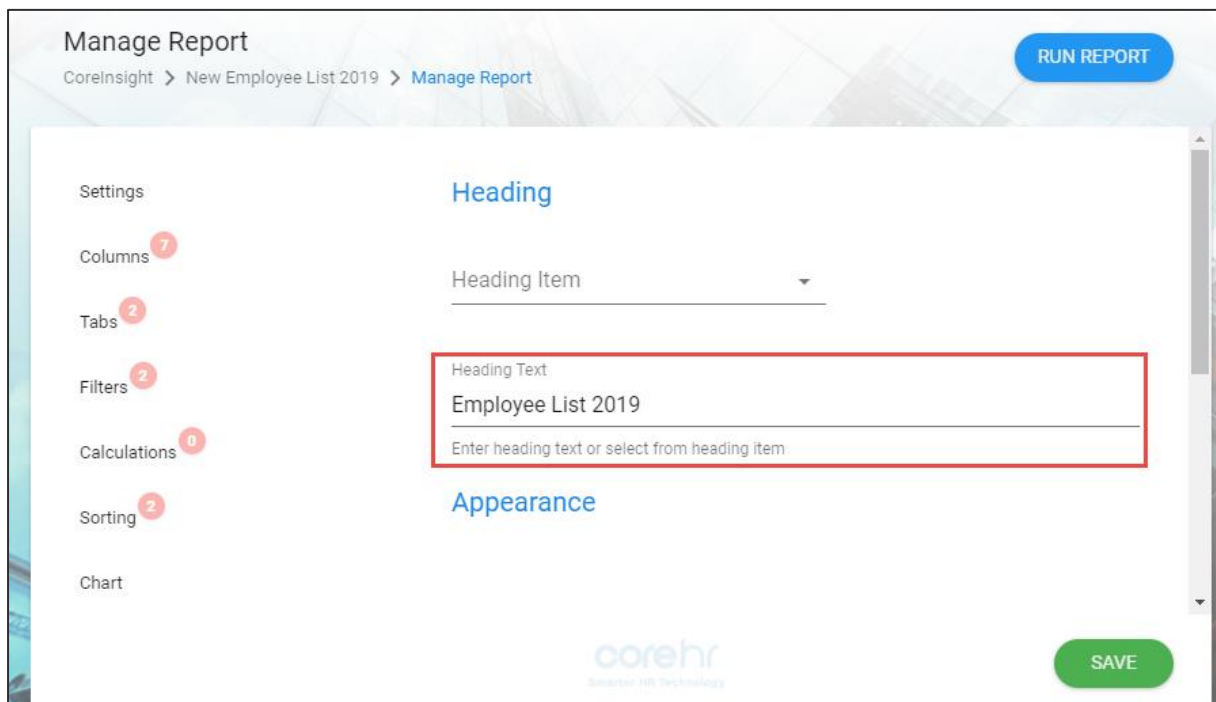

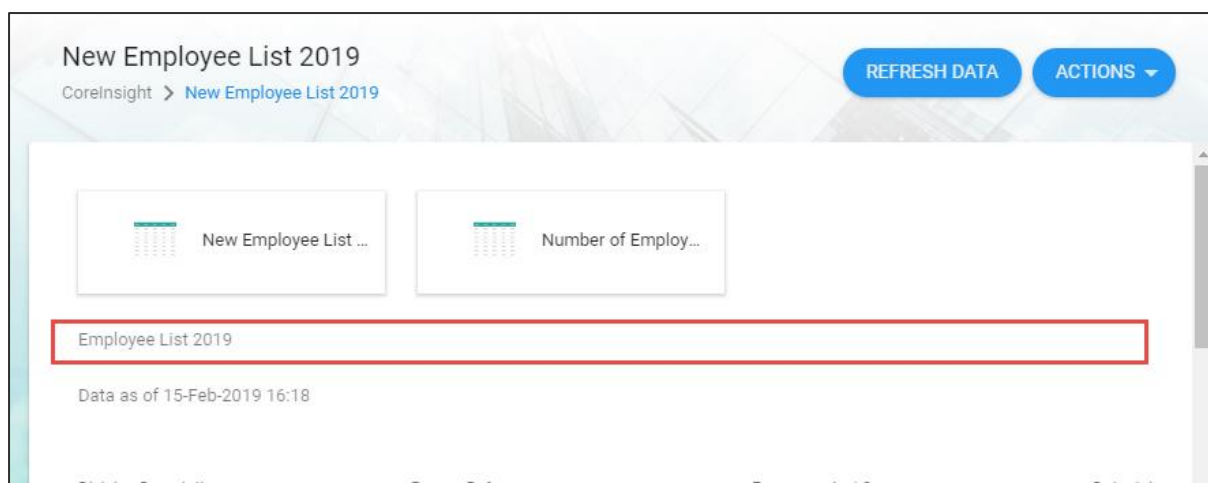

It is particularly useful to add headings to reports with [multiple tabs](#). This will make it clear to you, which tab you are viewing.

Add a Heading

Follow these steps to add a heading to a report:

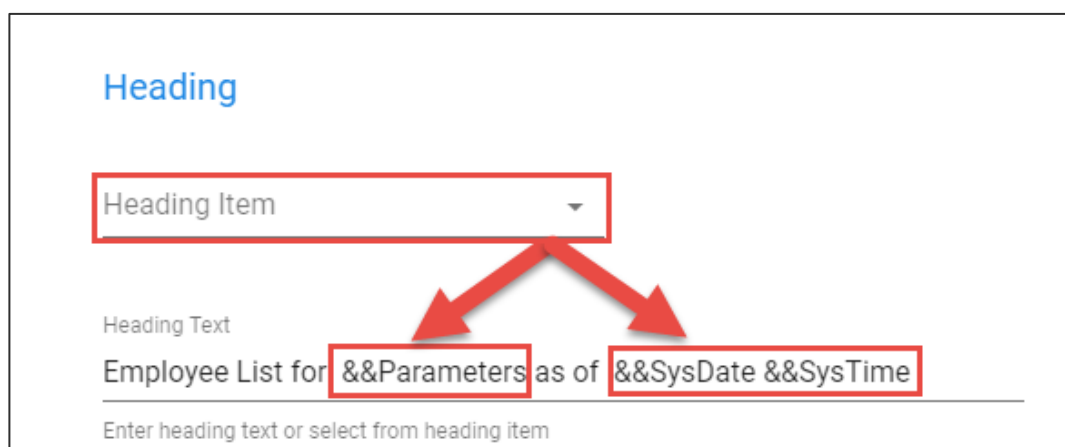

1. Select **Tabs** on the *Manage Report* screen.
2. Update the *Heading Text*.
3. Click **Save**.

4. **Run Report** to view the heading.**Add Heading with Variables**

You can add variable items to a heading. These will update to display values specific to how and when the report was run.

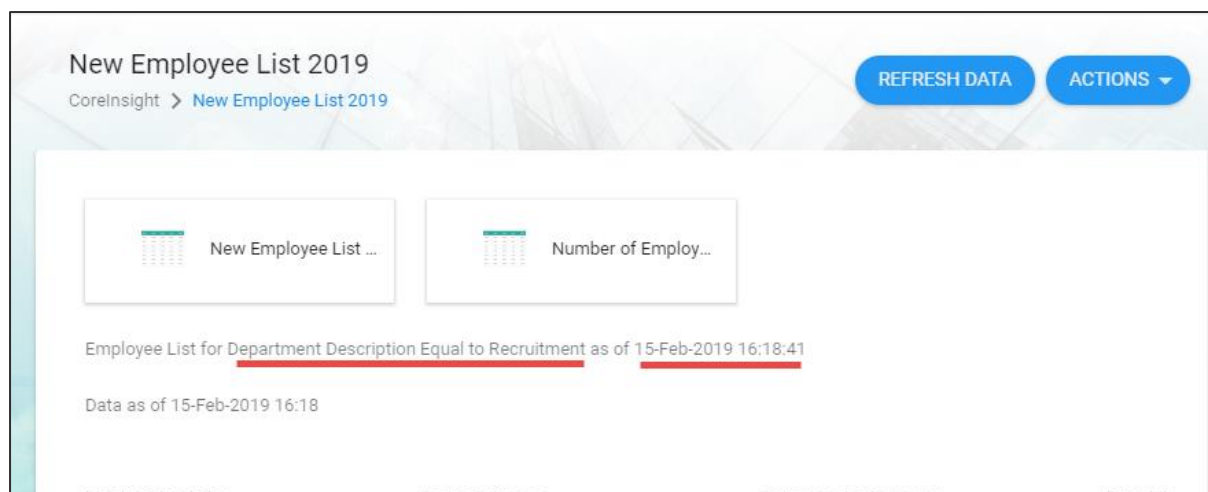

You can do this by selecting heading items from the drop-down list. Once clicked these are added to the *Heading Text*.

Options available are

- **Parameters:** Any prompts added to the report.
- **Conditions:** Any filters added to the report.
- **Sysdate:** The date the report was run.
- **Systime:** The time of day the report was run.

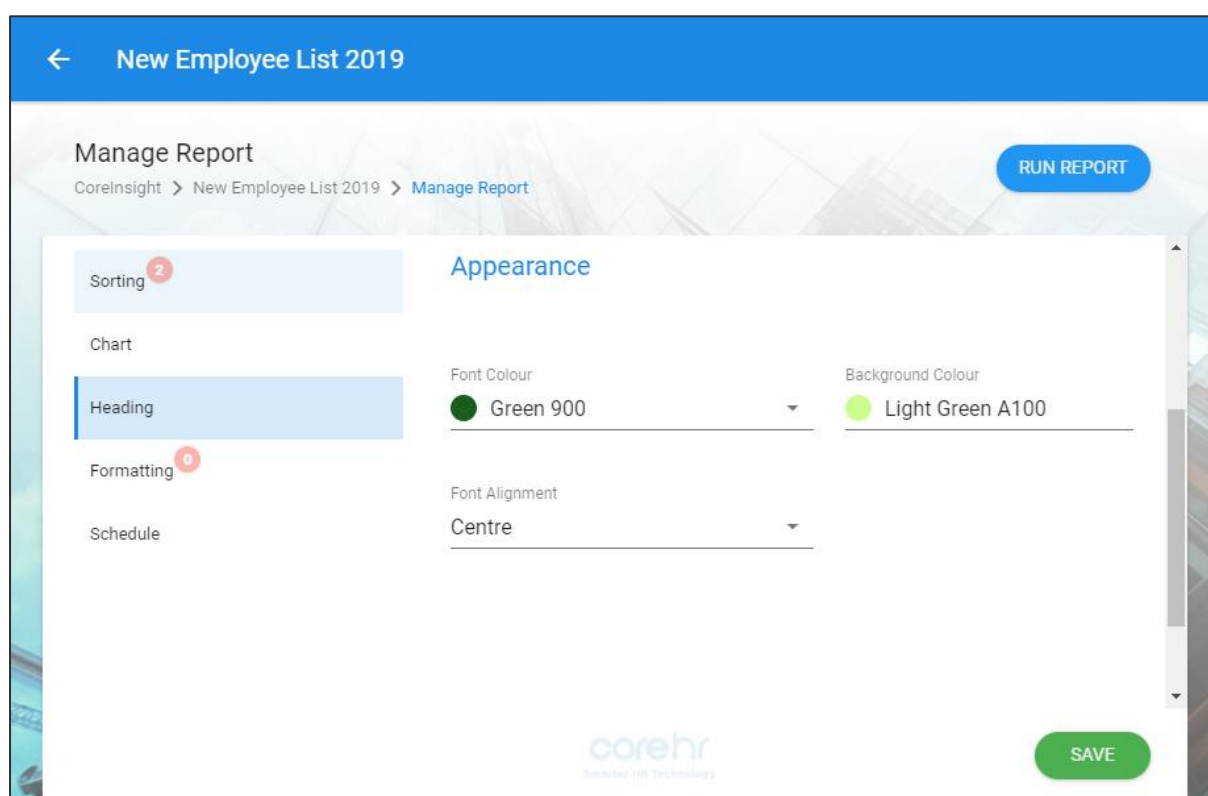

See an example of the next page for a report that has run with this *Heading Text*.

Heading Formatting

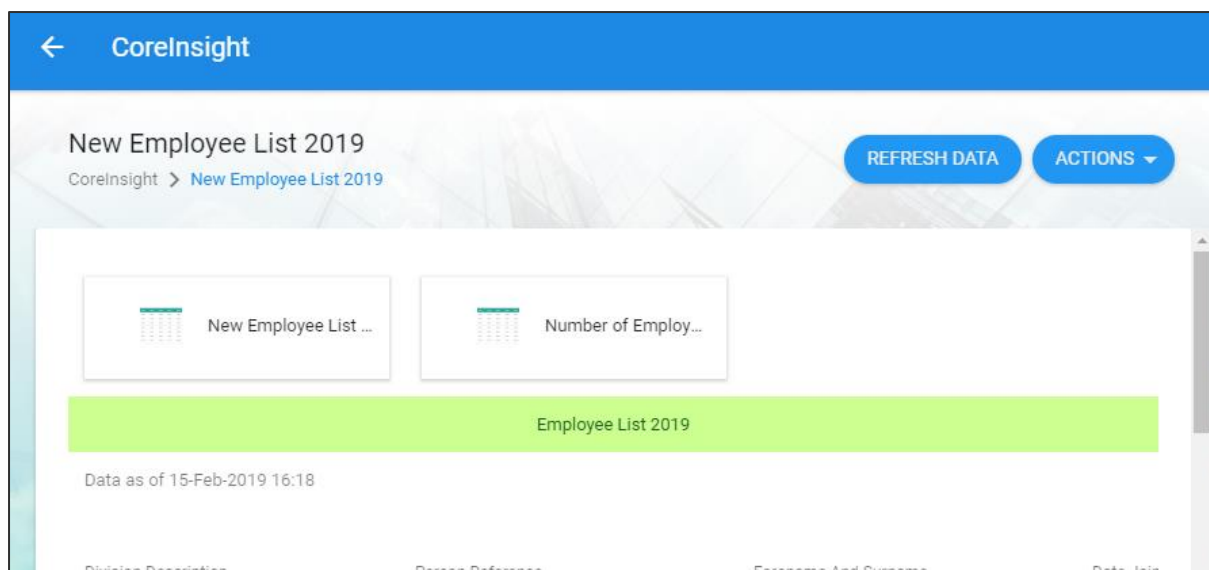

You can apply the following 3 formatting rules to the heading:

- Font Colour
- Background Colour
- Font Alignment

Update any or all of these on the heading and click **Save**.

See screenshot on next page for a report generated with these formatting rules applied.

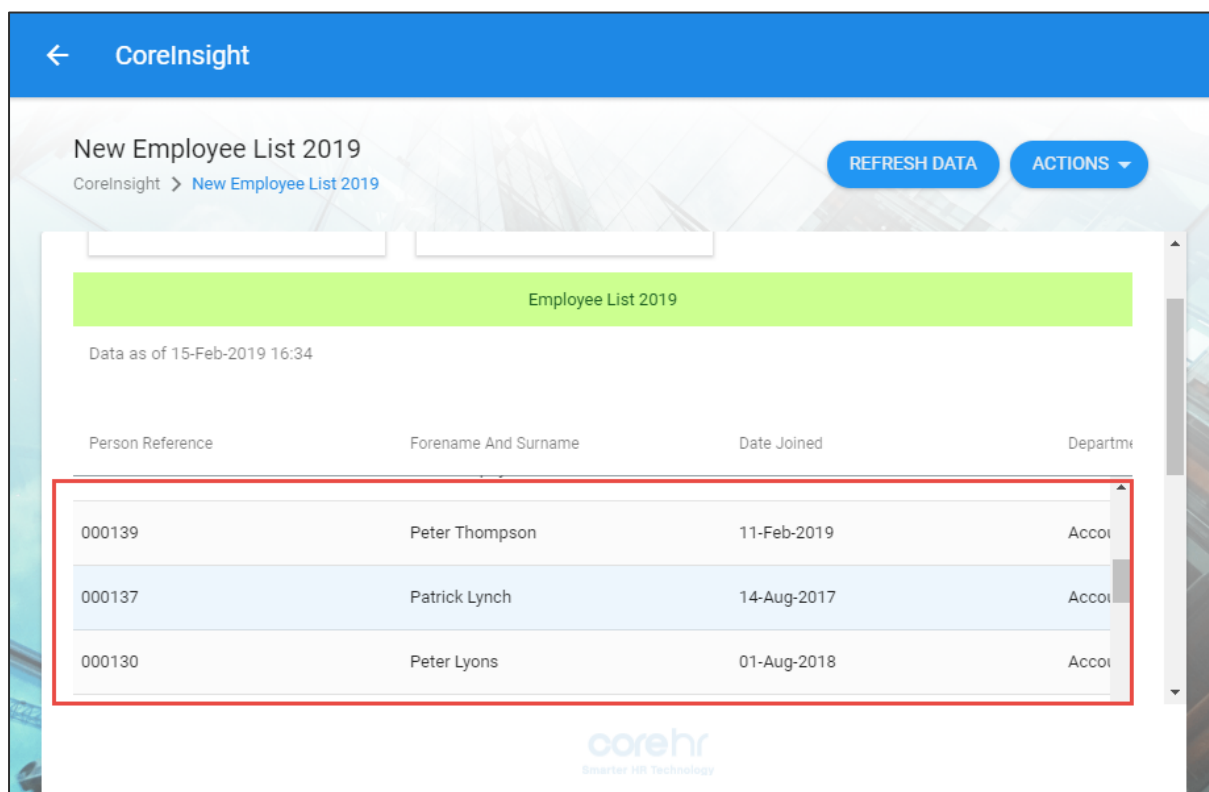

6.4.9. Column and Data Formatting

Formatting Overview

The *Manage Report > Formatting* screen gives you the option to apply formatting to the report data. See an explanation of the *Format Types* available

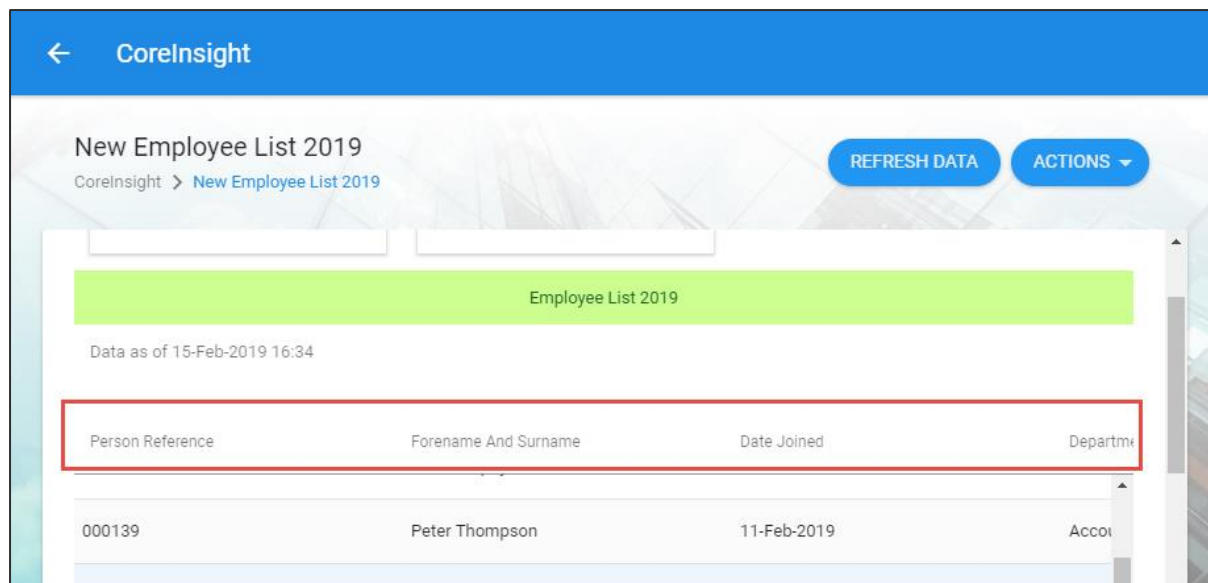

All Column

Applies to all report record data e.g. everything in the report grid.

All Header

Applies to all the column headers i.e.

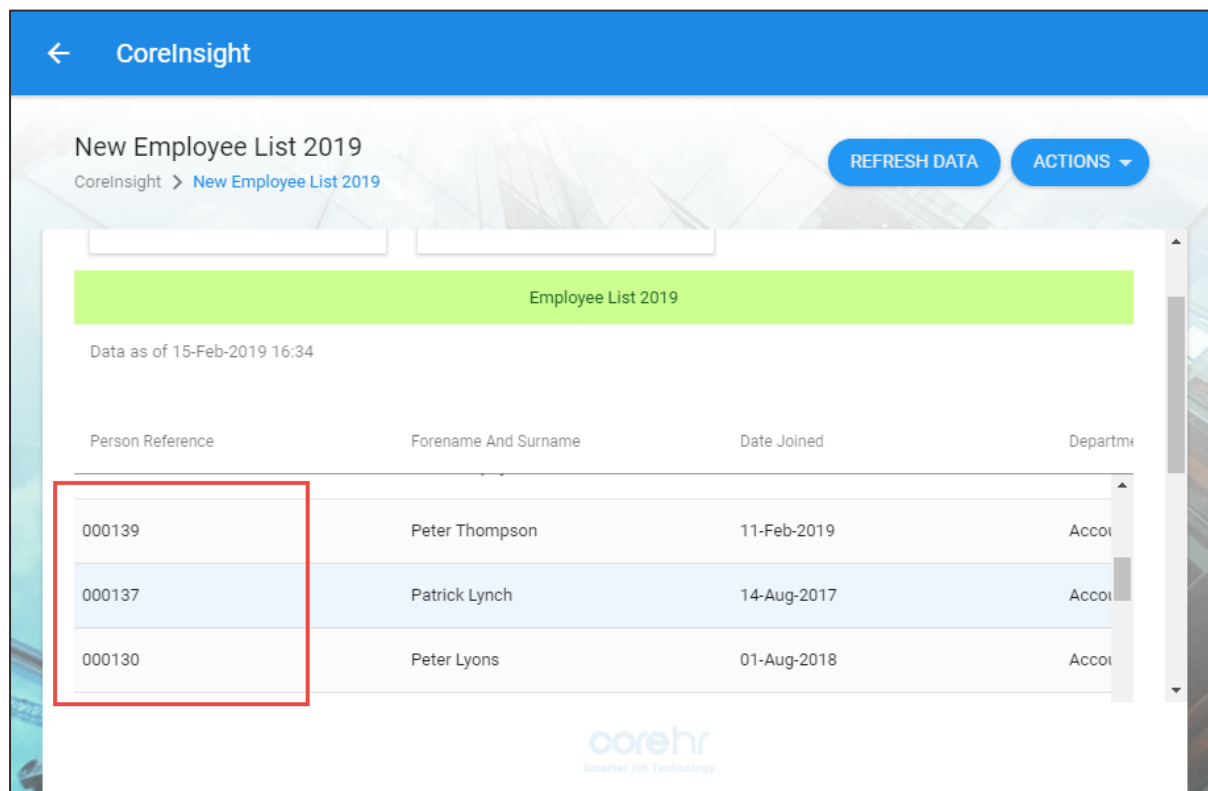

The screenshot shows the 'New Employee List 2019' page in CoreInsight. The table header is highlighted with a red box. The header row contains four columns: 'Person Reference', 'Forename And Surname', 'Date Joined', and 'Department'.

Person Reference	Forename And Surname	Date Joined	Department
000139	Peter Thompson	11-Feb-2019	Account

Single Column

Applies to all the record data in a single column i.e.

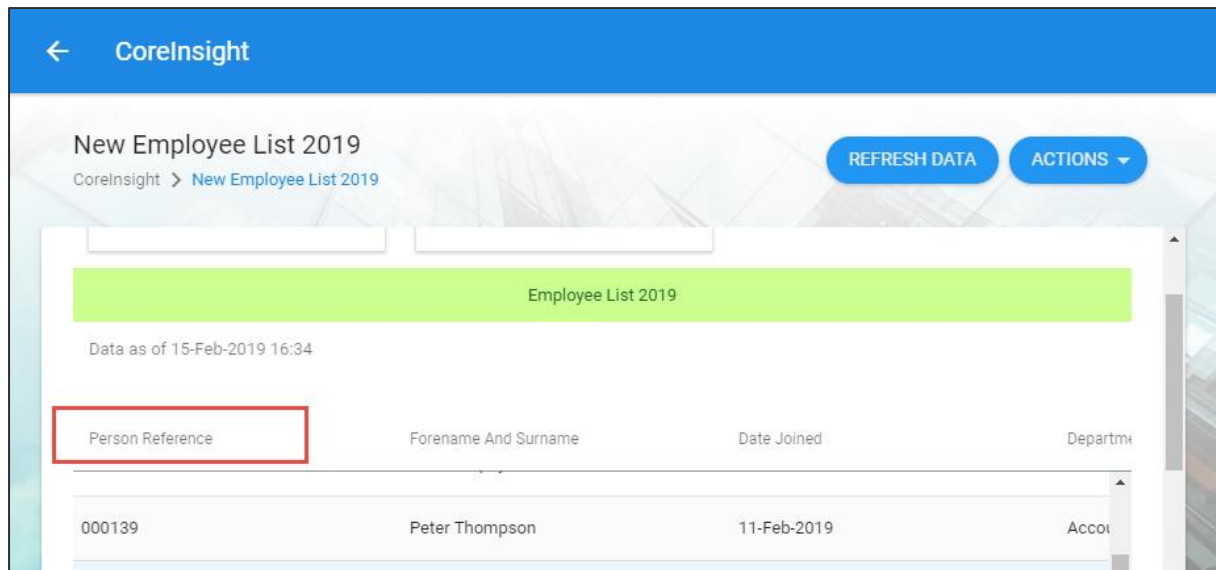

The screenshot shows the 'New Employee List 2019' page in CoreInsight. The first column of the table, 'Person Reference', is highlighted with a red box. The table contains three rows of data.

Person Reference	Forename And Surname	Date Joined	Department
000139	Peter Thompson	11-Feb-2019	Account
000137	Patrick Lynch	14-Aug-2017	Account
000130	Peter Lyons	01-Aug-2018	Account

Single Header

Applies to a single column header only e.g.

Conditional Formatting

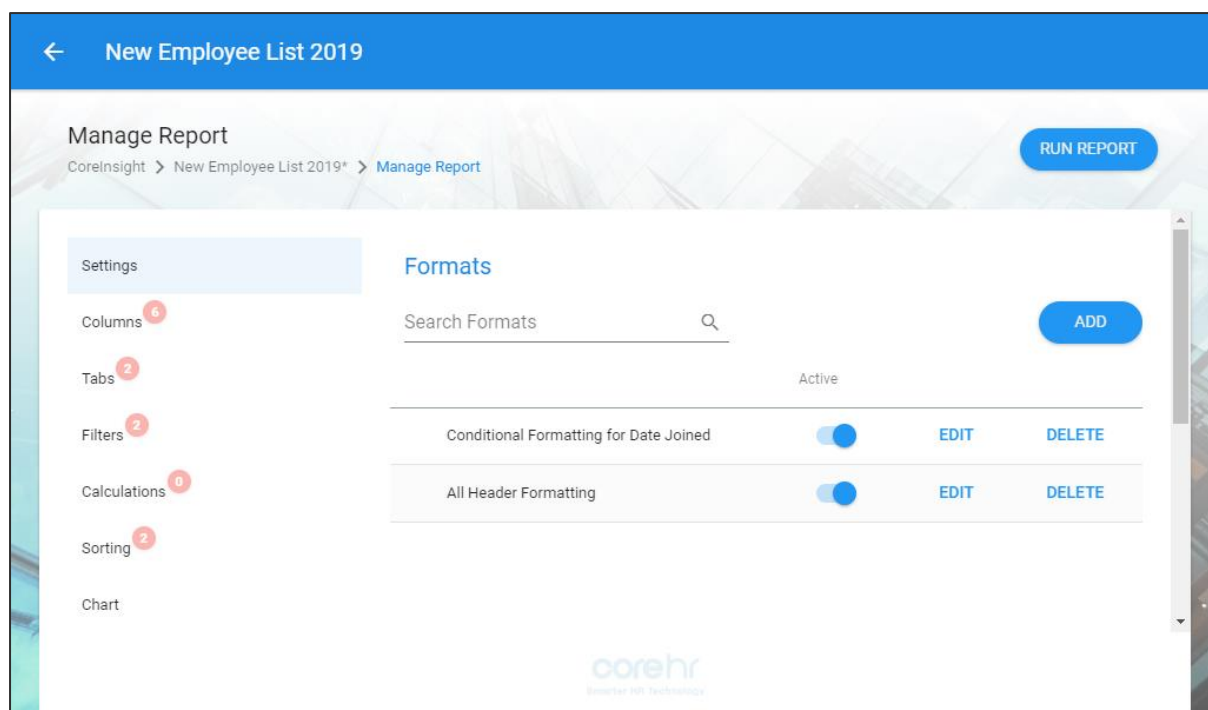

This is used to highlight where a report data field meets certain conditions e.g. a value is greater than a specified threshold. This is applied to all data fields in a given column that meet the conditions.

Add Formatting

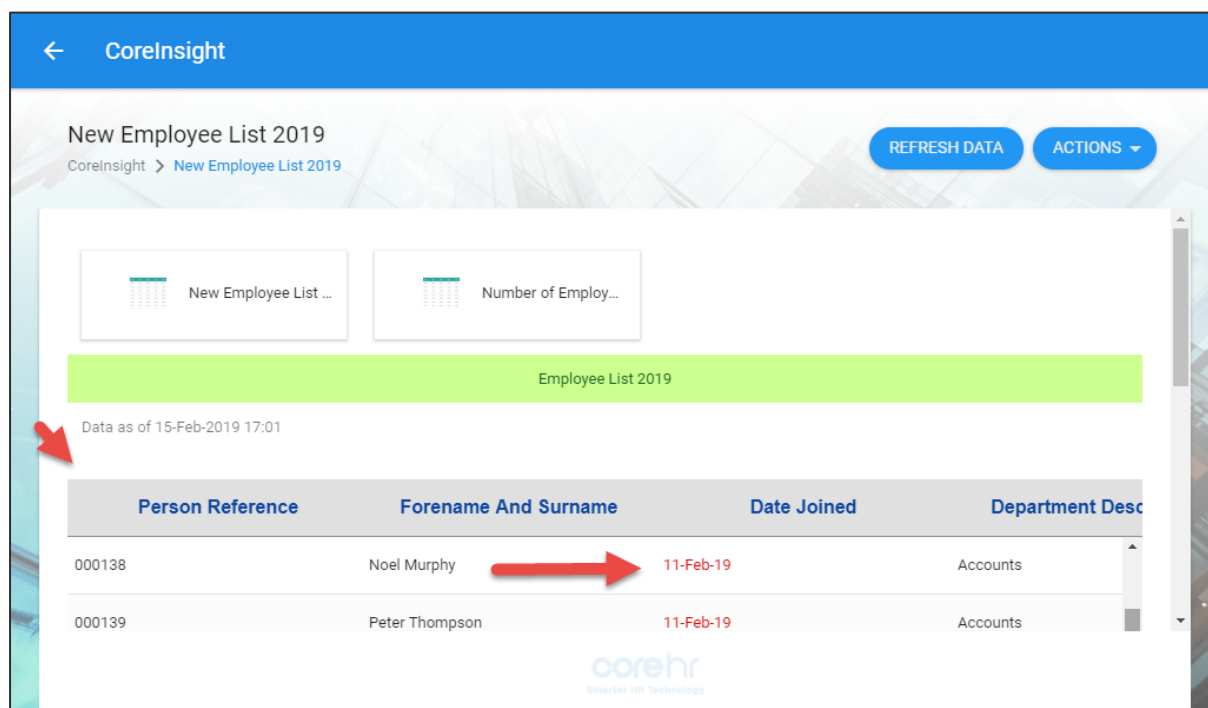

Follow these steps to add formatting rules to your report.

1. On the Manage Settings screen click **Formatting**.
2. Click **Add**.
3. Select *Format Type* (see explanation in [Formatting Overview](#)).
 - Depending on the type selected different options will appear e.g.:
 - For *Single Column*, *Single Heading* and *Conditional Formatting* you are required to select the column the formatting is applied to.
 - For *Conditional Formatting* you also need to set the condition e.g. "greater than 100" in the *Operator* and *Filter Text* fields.
4. Define any of the formatting rules you require, using any of the following options:
 - Font Type e.g. Arial, Times New Roman etc.
 - Font Size
 - Font Colour
 - Background Colour
 - Font Alignment e.g. Left, Centre, Right.
 - Font Style e.g. Bold, Italic, Underlined.
5. Ensure the **Active** checkbox is enabled.
6. Click **Save**.

The rule is listed on the *Formatting* screen.

7. **Run Report** to see the formatting applied:

7. Other Report Actions

7.1. Delete a Report

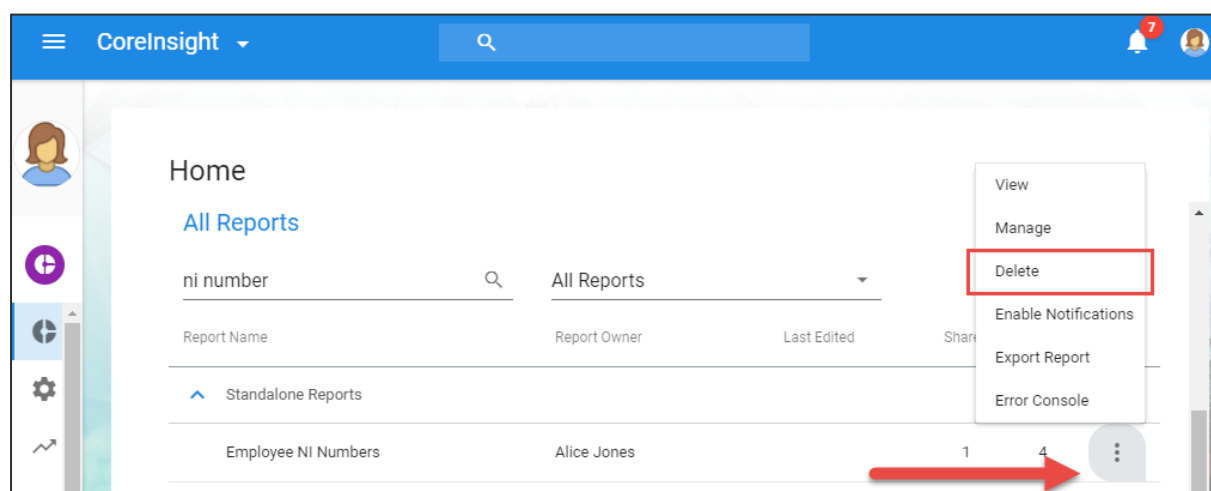

You can delete reports that you no longer require.

- If the report is shared with other CoreInsight users, this will be deleted for them also.
- If the report is uploaded to the *Report Store*, there is no impact. This continues to be available there.
- On the *CoreInsight > Home* screen You cannot delete reports that you have not created. You can only delete reports where you are the *Report Owner*.
- If you have access to the *Admin Area* screen, you can delete reports created by other users.

Once deleted, the report cannot be retrieved again.

Follow these steps to delete a report.

1. On the *CoreInsight > Home* screen, search for the report under *All Reports*.
 2. Click the button and select **Delete**.
 3. Say **Yes** to the prompt.
- The report is deleted.

7.2. Export Reports

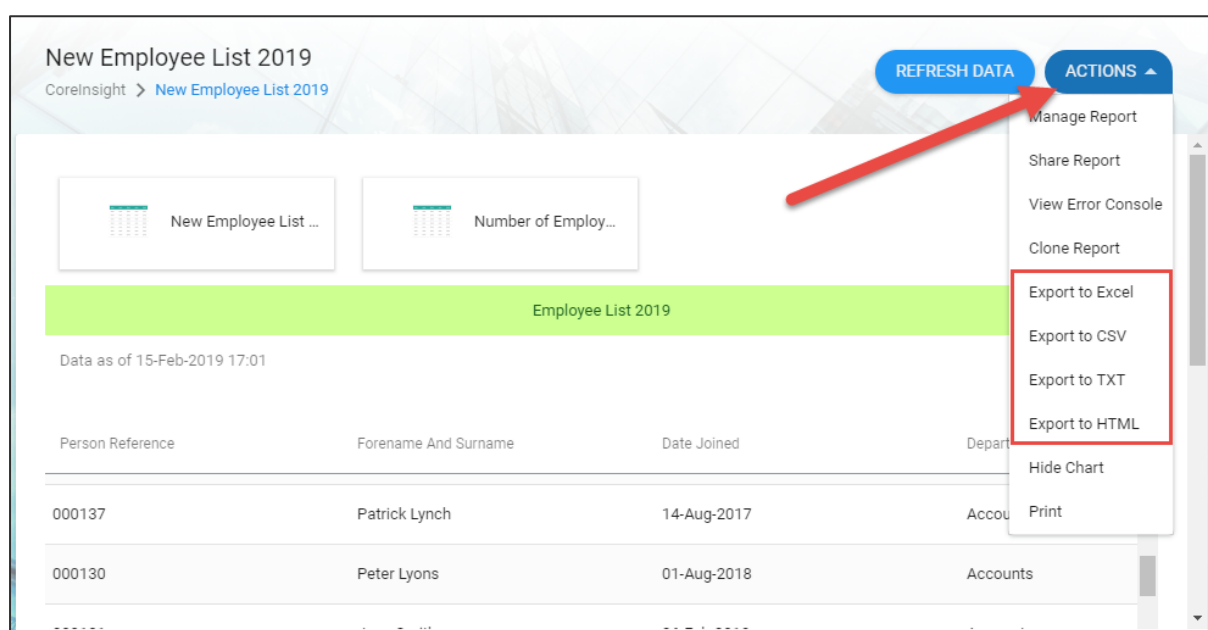

There are 4 export options available when viewing a report.

- Export to Excel
- Export to CSV
- Export to TXT
- Export to HTML

7.2.1. Export a Report

To export a report:

1. View the report.
You may want to refresh the data before completing an export to ensure that the data is current.
2. Click **Actions**.
3. Select the export option required i.e.
 - Export to Excel
 - Export to CSV
 - Export to TXT
 - Export to HTML

The exported file downloads as per your browser settings.

Note:

- If your report contains multiple tabs, only the current tab is exported.
- If your report includes a data sensitivity classification, this is included on all export types.
- Totals are not exported.
- Exports include all rows displayed on screen. This matches the max number of rows defined for the report on the *Manage Reports > Settings* screen.

7.2.2. Excel

The excel export file includes the page header, if you have added one to the report.

Some basic formatting is also applied to the file e.g.

- Heading
- Column headers

Other formatting is not included.

	A	B	C	D	E	F
1	New Employee List 2019					
2	Person Reference	Forename And Surname	Date Joined	Department Description	Age	
3	000134	Charles Daly	05-Nov-18	Accounts	34	
4	000138	Noel Murphy	11-Feb-19	Accounts	29	
5	000041	Richard Green	03-Mar-13	Accounts	54	
6	000044	Darren Bailey	18-May-15	Accounts	42	
7	000056	Laurance Mcgrath	04-Feb-16	Accounts	38	
8	000092	Patrick O'Sullivan	25-Sep-17	Accounts	0	
9	000096	Naomi Briggs	03-Jul-17	Accounts	31	
10	000113	Patrick Lynch	08-Jan-18	Accounts	43	
11	000114	Julie Smith	15-Jan-18	Accounts	29	
12	000116	Derek O'Reilly	18-Feb-19	Accounts	39	
13	000117	Patricia Hayde	01-Jan-18	Accounts	1	
14	000118	Richard Phillips	19-Feb-18	Accounts	36	
15	000120	Barry Smith	23-Feb-18	Accounts	30	
16	000121	Jane Smith	26-Feb-18	Accounts	32	
17	000130	Peter Lvons	01-Aug-18	Accounts	39	

7.2.3. CSV

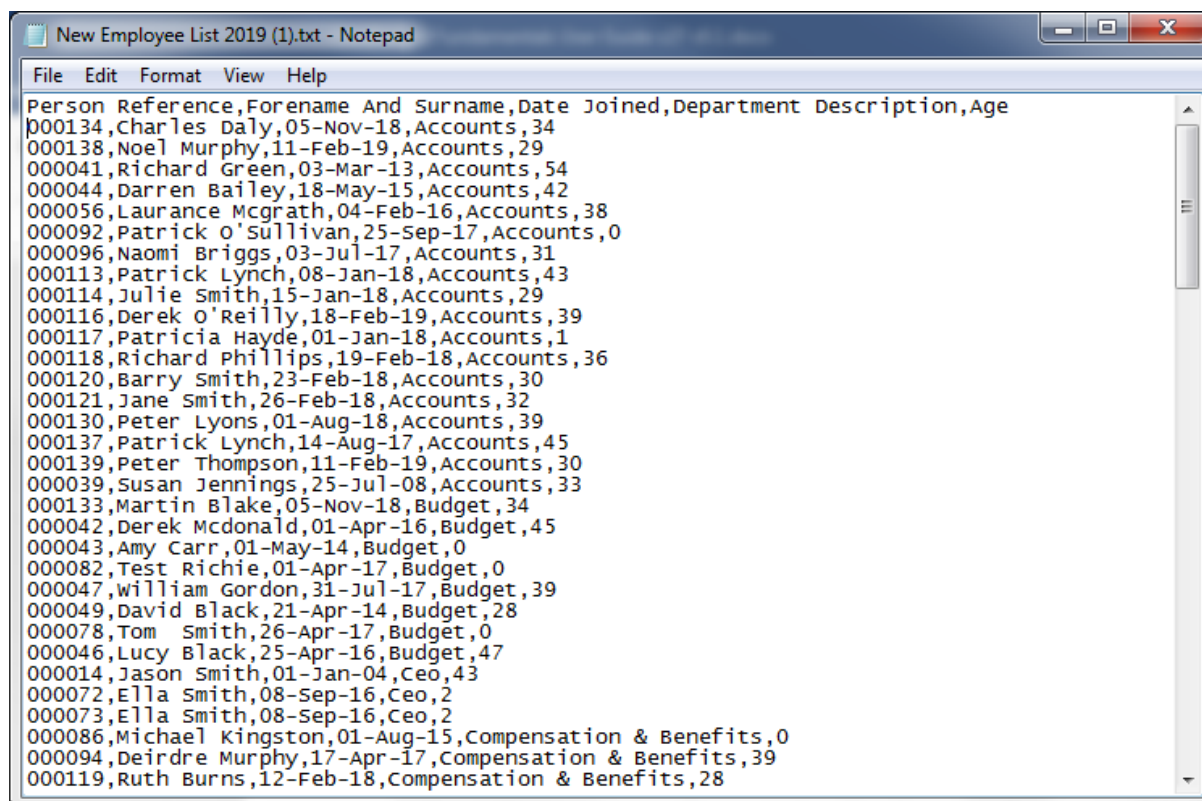

The CSV file is typically opened in excel.

The report header is not exported, and no formatting is applied to this.

	A	B	C	D	E	F	G
1	Person Reference	Forename And Surname	Date Joined	Department Description	Age		
2	134	Charles Daly	05-Nov-18	Accounts	34		
3	138	Noel Murphy	11-Feb-19	Accounts	29		
4	41	Richard Green	03-Mar-13	Accounts	54		
5	44	Darren Bailey	18-May-15	Accounts	42		
6	56	Laurance Mcgrath	04-Feb-16	Accounts	38		
7	92	Patrick O'Sullivan	25-Sep-17	Accounts	0		
8	96	Naomi Briggs	03-Jul-17	Accounts	31		
9	113	Patrick Lynch	08-Jan-18	Accounts	43		
10	114	Julie Smith	15-Jan-18	Accounts	29		
11	116	Derek O'Reilly	18-Feb-19	Accounts	39		
12	117	Patricia Hayde	01-Jan-18	Accounts	1		
13	118	Richard Phillips	19-Feb-18	Accounts	36		
14	120	Barry Smith	23-Feb-18	Accounts	30		
15	121	Jane Smith	26-Feb-18	Accounts	32		
16	130	Peter Lyons	01-Aug-18	Accounts	39		

7.2.4. TXT

The TXT option exports the data into a comma separated list in a .txt file.

7.2.5. HTML

The excel export file includes the page header, if you have added one to the report.

Some basic formatting is also applied to the file e.g.

- Heading
- Column headers

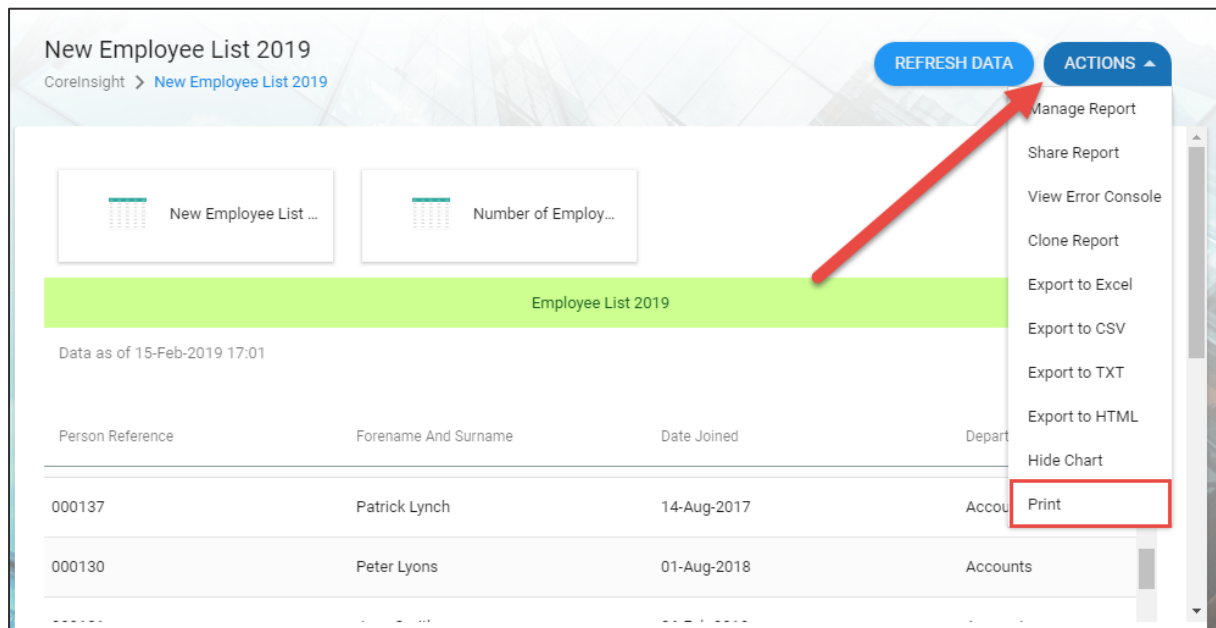

Person Reference	Forename And Surname	Date Joined	Department Description	Age
000134	Charles Daly	05-Nov-18	Accounts	34
000138	Noel Murphy	11-Feb-19	Accounts	29
000041	Richard Green	03-Mar-13	Accounts	54
000044	Darren Bailey	18-May-15	Accounts	42
000056	Laurance McGrath	04-Feb-16	Accounts	38
000092	Patrick O'Sullivan	25-Sep-17	Accounts	0
000096	Naomi Briggs	03-Jul-17	Accounts	31
000113	Patrick Lynch	08-Jan-18	Accounts	43
000114	Julie Smith	15-Jan-18	Accounts	29
000116	Derek O'Reilly	18-Feb-19	Accounts	39
000117	Patricia Hayde	01-Jan-18	Accounts	1
000118	Richard Phillips	19-Feb-18	Accounts	36
000120	Barry Smith	23-Feb-18	Accounts	30
000121	Jane Smith	26-Feb-18	Accounts	32
000130	Peter Lyons	01-Aug-18	Accounts	39
000137	Patrick Lynch	14-Aug-17	Accounts	45
000139	Peter Thompson	11-Feb-19	Accounts	30
000039	Susan Jennings	25-Jul-08	Accounts	33
000133	Martin Blake	05-Nov-18	Budget	34

Other formatting is not included.

7.3. Print Reports

To print a report:

1. View the report.
You may want to refresh the data before completing an export to ensure that the data is current.
2. Click **Actions**.
3. Select **Print**.

This prints as per your browser settings.

- When printing a report, the report is dynamically resized to fit into the page, as best as possible.
- It is recommended when printing to ensure that the page layout is set to landscape.

The printed version of the report includes:

- The report header if you have added one.
- Report totals, if these have been added to the column.
- Charts.

Note:

If your report contains multiple tabs, only the report on the current tab is printed.

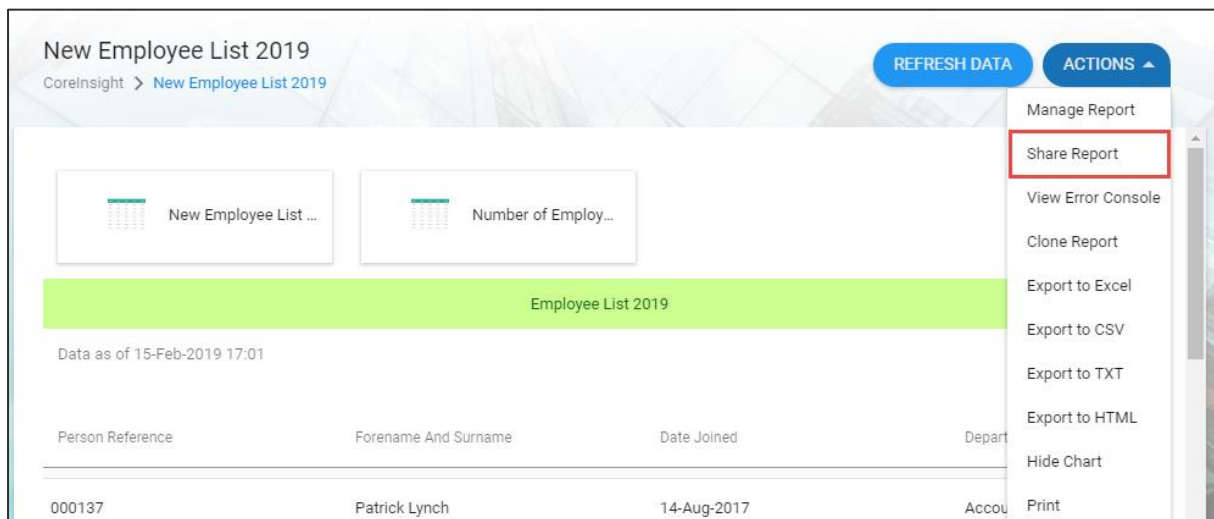

7.4. Share Reports in CoreInsight

7.4.1. Sharing Reports Overview

Reports that you create in CoreInsight can be shared with other users. These are available to them on their *CoreInsight > Home* screen, on the *All Reports* list. These can be identified as reports where their own name is not set as the *Report Owner*.

To share a report:

1. View the report.
2. Click **Actions** and select **Share Report**.

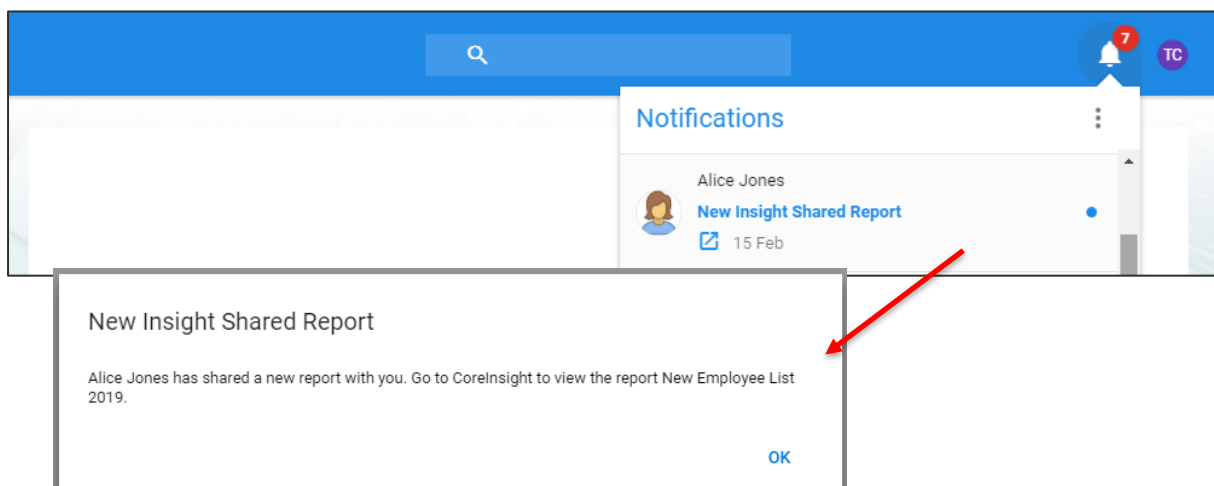

There are two options on the *Share Report* screen:

- [Share with Employee](#)
- [Share with Org Role Group](#)

You can either share via the employee OR the org role group option. You cannot share with a mix of both.

When a report is shared with another user, they receive a notification in the *Notification Centre*:

7.4.2. With Employees

This option allows you to search for and select the specific employees that you wish to share the report with. You can select one or many employees.

To share a report with specific employees:

1. Select the option **Share with Employee**.
2. Search for the employee(s) required. This is the full list of employees on the system.
3. Add them to the *Selected Recipients* list.
4. Click **Save**.

If you chose the option to **Filter by org role**, all employees with that org role for any org group are automatically added to the *Selected Recipients* list.

- This allows you to automatically add all people with that role, and then manually remove any people that you don't want to share the report with.
- This creates a 1-1 share of the report with the selected employees. However, if new employees are awarded that org role OR any of these employees have that org role revoked, those changes are not reflected here. Therefore, it is recommended that org role-based report sharing is completed using the [Share with org role/group](#) option instead.

7.4.3. With Organisational Roles

To share a report with employees using their assigned organisational role(s):

- Select the option **Share with org role / group**.
- Select the org role and org group required.
The screen updates to show all employees who currently have that org role / org group assignment. These are the employees the report will be shared with e.g. all users that have the role of "Reports to Manager" for any "Work Group".

If the employee org role / group assignments change, this is automatically picked up on the report share e.g. if an employee org role assignment is ended, they no longer see that report, if a new employee is assigned the org role / group, they will automatically see that role.

- Click **Save**.

Smarter HR Technology

SAVE

7.4.4. What Report Data Will Other Users See?

When you run a report that has been shared with you, this only shows data based on your own data access e.g.

- User 1 has access to report on Payroll data for Pay Group A.
- User 2 has access to report on Payroll data for Pay Group B.

- User 1 creates a monthly payroll report and shares with User 2.
- When each user runs the report, they will see different sets of data, relative to the pay groups they have access to.

Reports can be set with different *Report Access* settings i.e.

- Administrator
- Manager
- Employee

The data returned when you run the report will reflect your own access, for the Report Access type e.g.

- If Manager, this shows report data for your team
- If Employee, this shows data related to your record.
- If Administrator, this is based on your CoreHR data access (e.g. pay group example above)

7.5. Schedule Reports

7.5.1. Scheduling Overview

There are 2 schedule options available for CoreInsight reports. Only one option can be configured at a time per report.

- **Send as Email**
An excel export of the report is generated and sent via email to the required recipient(s) at a selected time and cadence.
- **Send as Interface**
This is used to support exporting CoreHR data for external interfaces. This functionality is not covered in this user guide.

7.5.2. Send as Email

Follow these steps to configure your report to send a scheduled excel export of your report via email:

1. Open the *Manage Report* screen for the report and select the **Schedule** option.
2. Select the option **Send as Email**.
3. Define when the report should be scheduled to send:

Field	Description
Start Date	The date from which the report should start to send.
End Date	After this date, the report should no longer be sent.
Schedule Frequency	Select if the report should be sent By Minute, Hourly, Daily, Weekly, Monthly, Yearly.

Field	Description
Recur Every	This is directly linked to the schedule frequency e.g. If Weekly, select the weekly recurrence e.g. every 1 week, every 2 weeks. If Hourly, select the hourly recurrence e.g. every 2 hours.
Time	Only required for Daily, Weekly and Monthly frequencies. Select the time of day the report should be sent.
Day(s) if required	Only required for Daily, Weekly and Monthly frequencies. Select days required. Multiple days of the week can be selected e.g. you could choose to send on a Monday, Wednesday and a Friday only.

It is recommended to schedule reports to send outside of your normal business hours.

4. Select the recipient(s).

Search for an employee on the *Available Recipients* list and add them to the *Selected Recipients* list. Chose as many as required.

5. Click **Save**.

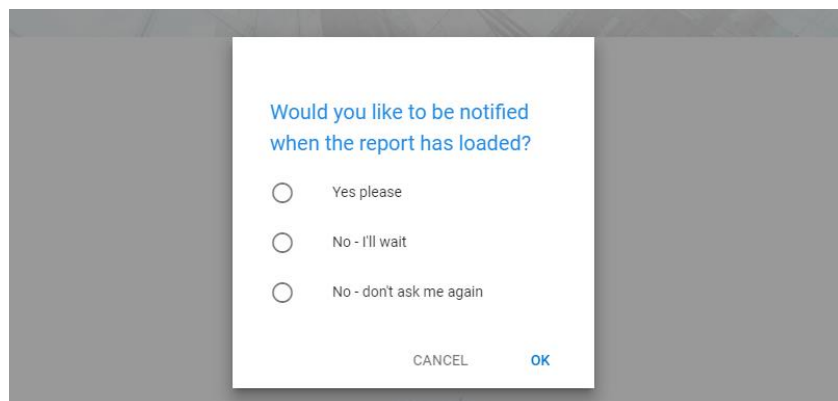

Based on your defined schedule, the report will be generated and sent via email to the selected recipients. The report will send as an exported excel report, and is subject to the same rules as covered in [7.2 Export Reports](#) and [7.2.2 Excel](#).

7.5.3. Send as Interface

This is used to define when the report should be scheduled to send as part of an external interface with CoreHR. This is not covered in this user guide.

7.6. Enable Notifications

As covered in [4.2 Open a Report](#), the first time you run a report, you receive the following prompt:

If “**No - don't ask me again**” is selected, the notifications prompt will no longer appear for you when generating that report. This means that every time you run a report OR click **Refresh Data** you will have to wait for the report to generate on screen. You cannot choose to wait and be notified. This applies for you for that report / tab only.

There is an option to reenable this prompt if required.

1. On the *CoreInsight > Home* Screen, search for the report on the *All Reports* list.
2. Click the button and select **Enable Notifications**.

7.7. Check the Error Console

←

New Employee List 2019

Error Console: Number of Employees by Dept

CoreInsight > New Employee List 2019* > Error Console: Number of Employees by Dept

COPY QUERY

Click on a record to view details

Description	Run Time	Run By	Error Message	
Calculation Run	15-Feb-2019 10:22:02	Alice Jones	ORA-00904: "CTCL_PERSON_MASTER"."AGE": invalid iden...	DELETE

Error Details

ORA-00904: "CTCL_PERSON_MASTER"."AGE": invalid identifier

select count(*) from (select PRCL_HR_PERSON_MASTER.PERSON_REFERENCE V1,PRCL_HR_PERSON_MASTER.DEPARTMENT_DESCRIPTION V2,(count(CTCL_PERSON_MASTER.AGE) over (partition by PRCL_HR_PERSON_MASTER.PERSON_REFERENCE)) V3 from PRCL_HR_PERSON_MASTER,CL_PERS_ACCESS_ALL_ADM where PRCL_HR_PERSON_MASTER.PERSON_REFERENCE = CL_PERS_ACCESS_ALL_ADM.PERSON_REFERENCE offset 0 rows fetch next 250 rows only) where 0 = 1

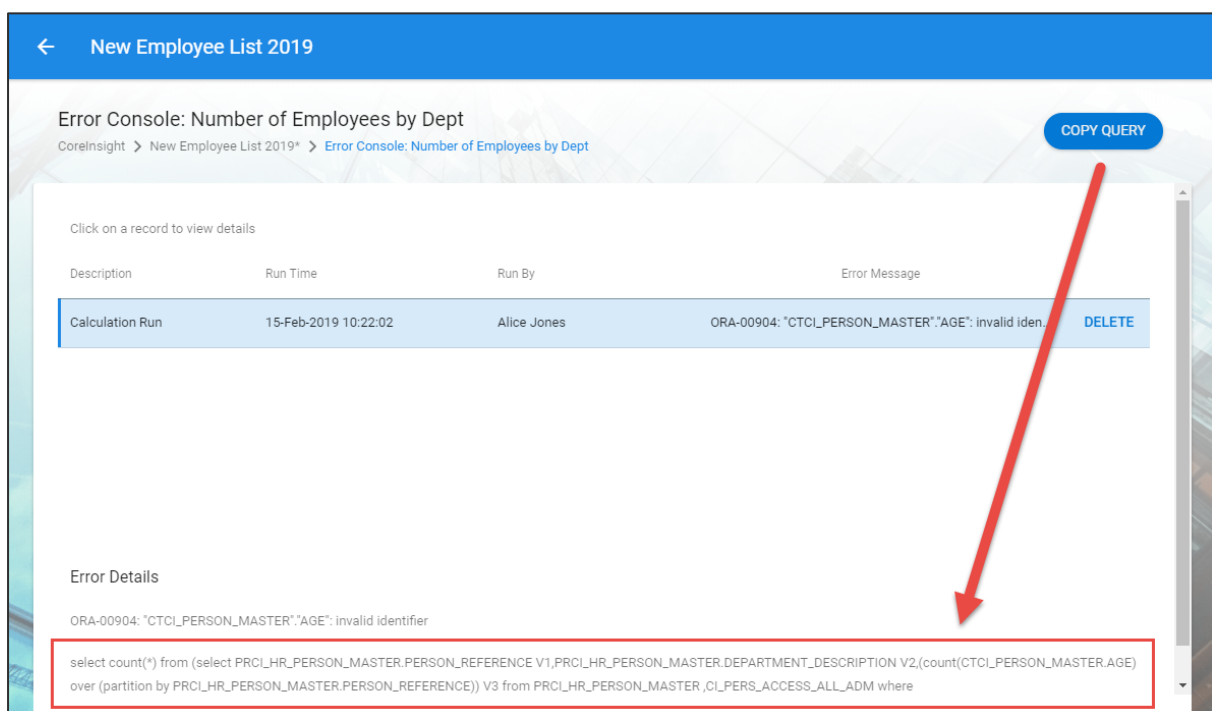

If a report generates a 404 error on screen when it is generating, the *Error Console* can be used to help identify the cause.

If you receive an error like this, you may need to follow up with CoreHR Customer Support. As part of that exercise, the error console for the report provides the following information that can be helpful when troubleshooting the cause of the error:

- Who ran the report.
- The date and time it was run.
- The error message.
- The SQL used to build the report.

If there are multiple errors generated, these will all be listed on screen.

The **Copy Query** button copies the SQL text that is displayed at the end of the screen for the selected query, so that you can paste this into text file or support query as needed.

The error console is available in the following areas of CoreInsight

- The *CoreInsight > Home* screen, by clicking the  button for the report on the *All Reports* list.
- When viewing the report, by clicking the **Actions** button.
- The *Admin Area*, by clicking the  button for the report.

This option is available by default to all users and requires no configuration.

8. Advanced Admin Area Tasks

8.1. Admin Area Overview

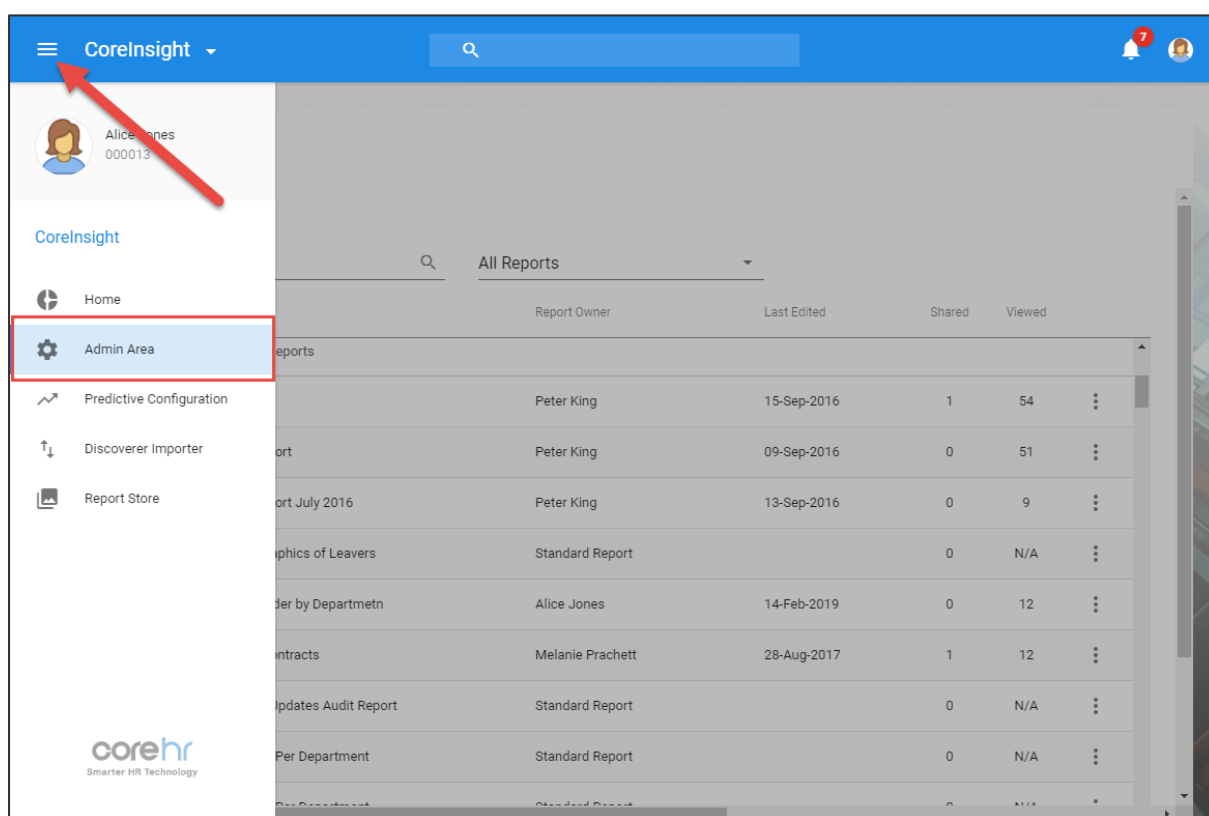

The *Admin Area* screen provides access to some more advanced tasks on CoreInsight including:

- View, manage and delete any reports created by any user in your organisation.
- Access to standard CoreHR reports.
- Publish reports to the *Report Store*.
- Export and import CoreInsight reports.

Access to this screen is protected by additional security to ensure that it is only shared with those who should have access to complete these advanced tasks. See [9.2.7 Admin Area](#) for further details.

To access the *Admin Area* screen:

1. Click the  button
2. Select **Admin Area**.

The *Admin Area* screen includes a list of all reports available on CoreInsight. This is similar to the *All Reports* section on the *CoreInsight > Home* screen, however this includes all of the reports that are available on CoreInsight, not just those created by or shared with you. See the table on the next page for further details on the report types available

Report Type	Description
Data Reports	Reports created by CoreInsight users. - Filter on this to see all reports created by all users in your organisation on CoreInsight. - The <i>Report Owner</i> identifies the user that created the report / currently owns the report and the privileges to edit this via the <i>Manage Reports</i> screen.
Discoverer Imported Reports	Reports that have been imported to CoreInsight using the Discoverer Importer tool. See the Discoverer Importer tool user guide for further details.
Interface Reports	Reports that have a scheduled interface defined on the <i>Manage Report</i> settings. - These are used to support external CoreHR interfaces. - The <i>Report Owner</i> identifies the user that created the report / currently owns the report and the privileges to edit this via the <i>Manage Reports</i> screen.
Standard Reports	Standard 'out of the box' reports provided by CoreHR. See 8.3 Standard Reports for further details.

Depending on the report type, there are different options available by clicking the  button.

Use the *Search Reports* box to do a keyword search for report. This search is based on the report name and report owner.

8.2. Managing 'Data Reports'

Data reports are any reports that have been created by other CoreInsight users in your organisation.

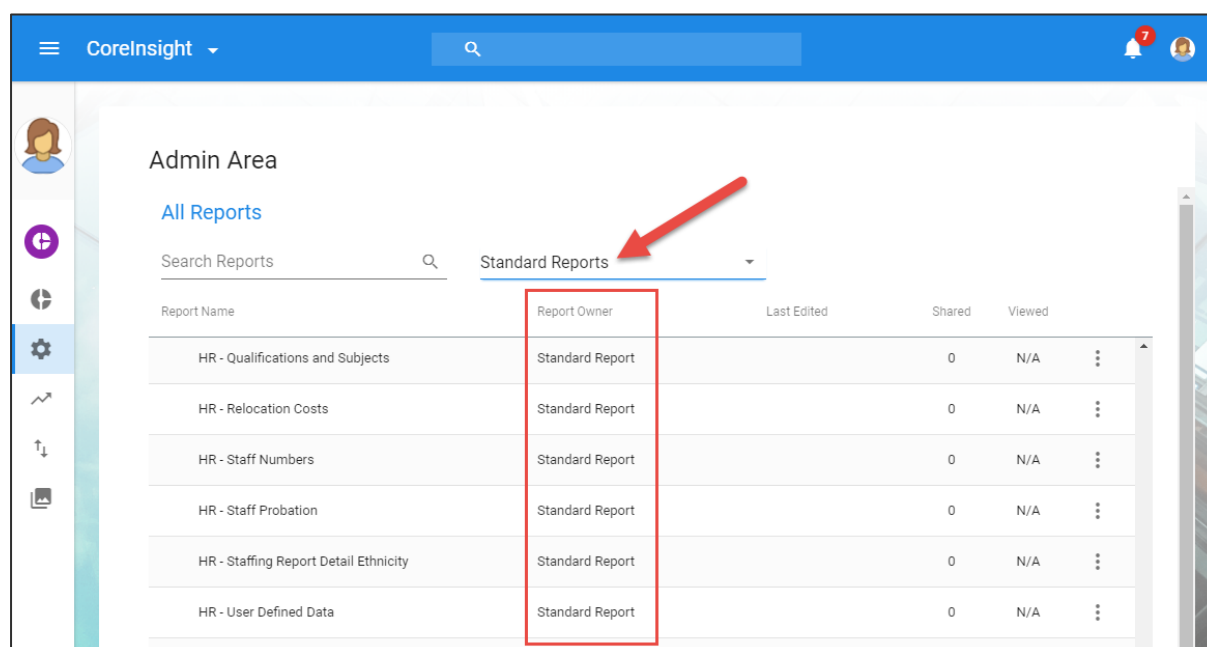

For each of these reports the following options are available:

Option	Description
View	Run the report. The report will only show records based on your data access e.g. if this is a payroll report and you only have access to Pay Group A, not Pay Group B, then the report only shows data for Pay Group A.
Manage	Access to edit the report via the <i>Manage Report</i> screen i.e. full access to all options covered in 6.4 Manage Report Options.

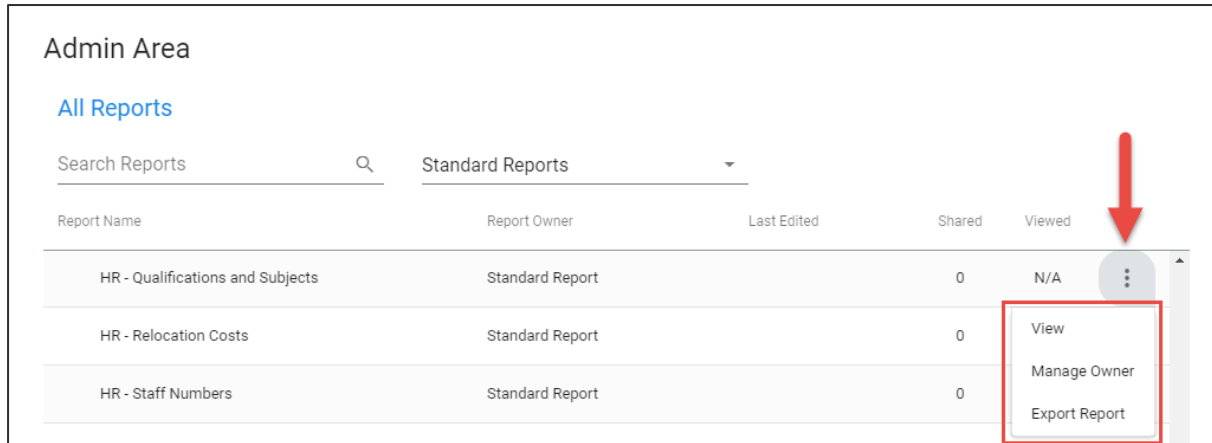

Option	Description
Delete	Delete the report. Doing this fully deletes the report from CoreInsight. This will no longer be available to the <i>Report Owner</i> or any user that it has been shared with.
Manage Owner	Change the report owner. For example, this can be useful to reassign an existing report to a new owner to maintain this, where the original owner is no longer responsible for this e.g. has changed roles, left the organisation etc. See 8.4 Change Report Owner for further details.
Enable Notifications	As covered in 7.6 Enable Notifications .
Export Report	Export the CoreInsight report, so that it can be imported in another instance of CoreInsight. See 8.5 Export and Import a Report for further details.
Publish Report	Publish the report to the <i>Report Store</i> . See the Report Store user guide for further details.
Error Console	Review any errors encountered when generating the report, as covered in 7.7 Check the Error Console

8.3. Standard Reports

Standard reports are reports that CoreHR provide 'out of the box'.

These are only available in the *Admin Area*. See the table on the next page for guidance on the options available for these reports.

Option	Description
View	Run the report. - The report will only show records based on your data access e.g. if this is a payroll report and you only have access to Pay Group A, not Pay Group B, then the report only shows data for Pay Group A. - This is a useful step to help you understand if this is a report that you would like to use for your organisation.
Manage Owner	Allows you to change the owner of the report to another CoreInsight user. If you intend to use this report in your organisation, this is recommended. This ensures that the new Report Owner has full access to the report i.e. to edit the report settings, share with others etc.
Export Report	Export the CoreInsight report, so that it can be imported in another instance of CoreInsight. See 8.5 Export and Import a Report for further details.

Standard reports cannot be edited or shared with other users from within the Admin Area. If you wish to do this, you need to:

1. Use **Manage Owner** to assign this to a CoreInsight user
2. The report will be available in their *All Reports* section where they may have the access to Manage Report, share with others, schedule exports etc i.e. full access to all privileges associated with owning a report.

8.4. Change Report Owner

You can reassign reports to a new report owner. This option is available for all *Report Types* i.e.

- Data Reports
- Standard Reports

- Interface Reports
- Discoverer Imported Reports

The *Report Owner* is the CoreInsight user that has full access to manage the report.

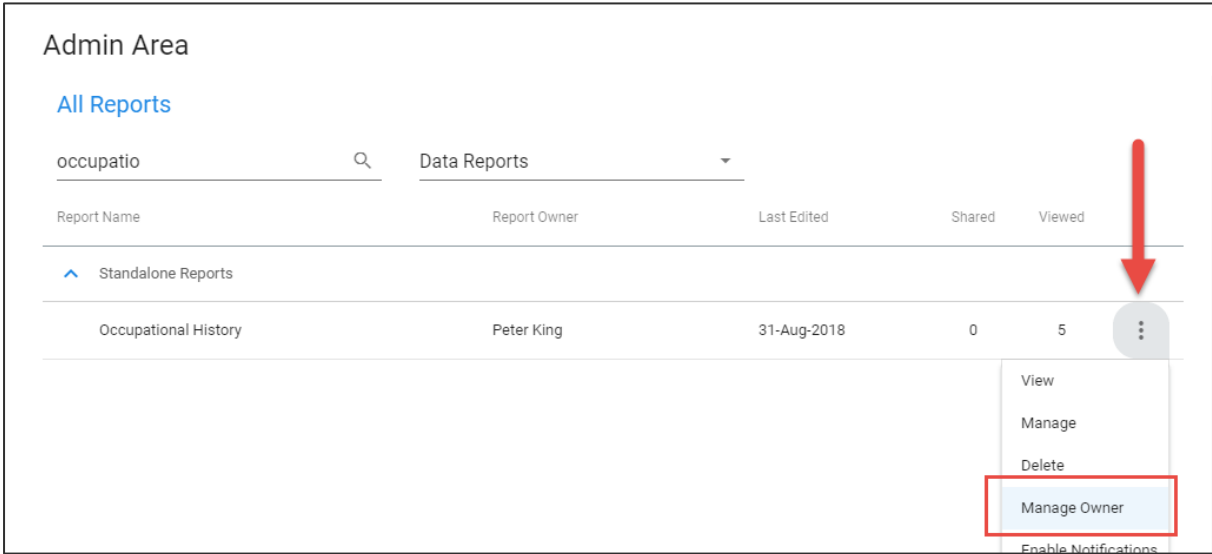

- The report is listed in their *CoreInsight > Home* screen *All Reports* list.
- They have access to the *Manage Report* screen. They are the only user with the privileges to edit the report.
- They can share the report with others, via the *Manage Report* screen.

There are many reasons why you may need to change the report owner:

- The original / current owner is no longer responsible for managing the report because they have changed role, gone on extended leave or left the organisation.
- You want to use a 'Standard Report'.
- You want to run a report that you have imported from CoreBI (Oracle Discoverer).

Follow these steps to change a report owner:

1. Search for the report.
2. Click the  button and select **Manage Owner**.

Admin Area

[All Reports](#)

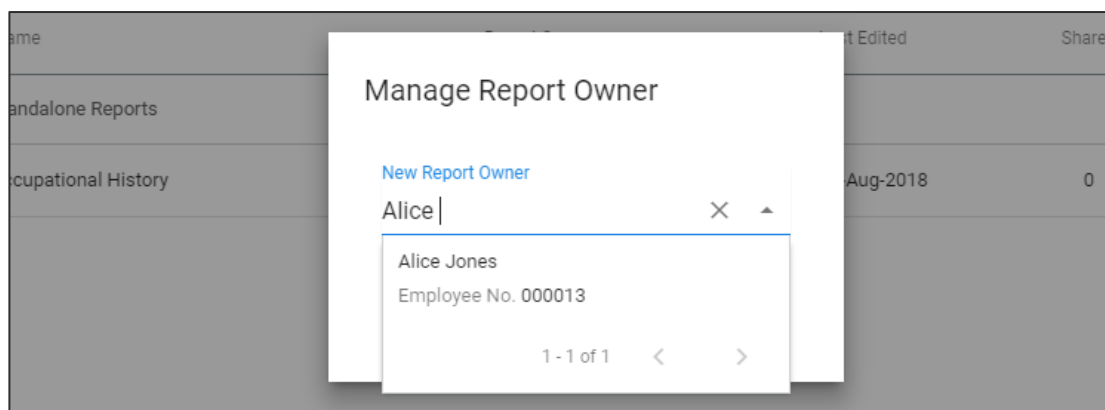

occupatio  Data Reports 

Report Name	Report Owner	Last Edited	Shared	Viewed

- Enable Notifications
- Export Report
- Error Console

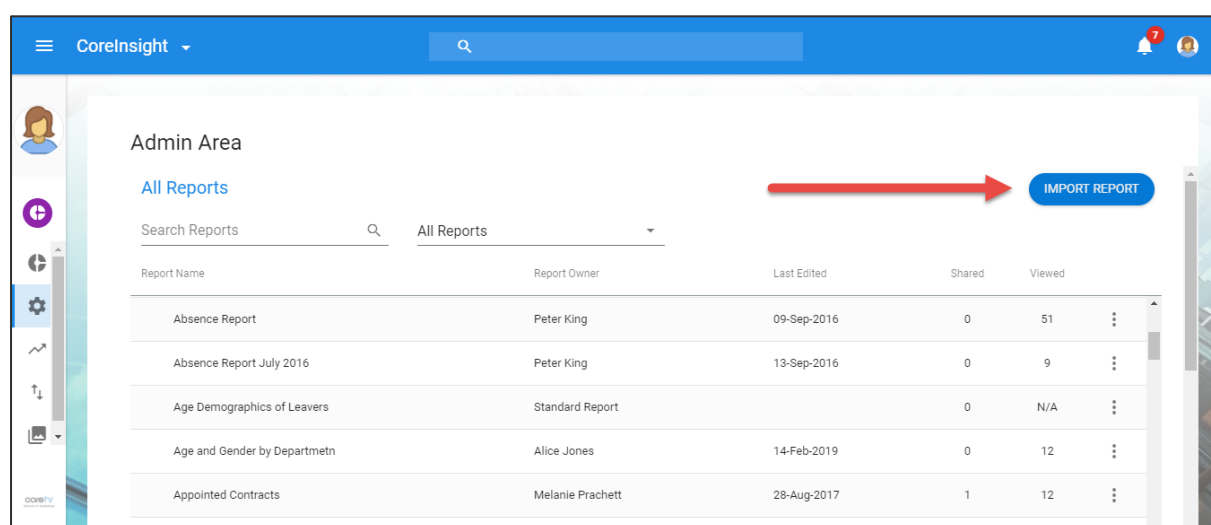

8.5. Export and Import a Report

The **Import Report** button on the *Admin Area* screen is used to import CoreInsight reports. These are report files with an extension of “.coreinsight” which have been exported from an instance of CoreInsight.

A possible use for this is to quickly set up a new report that you have created on a UAT instance, on your LIVE instance, without needing to set this up from scratch.

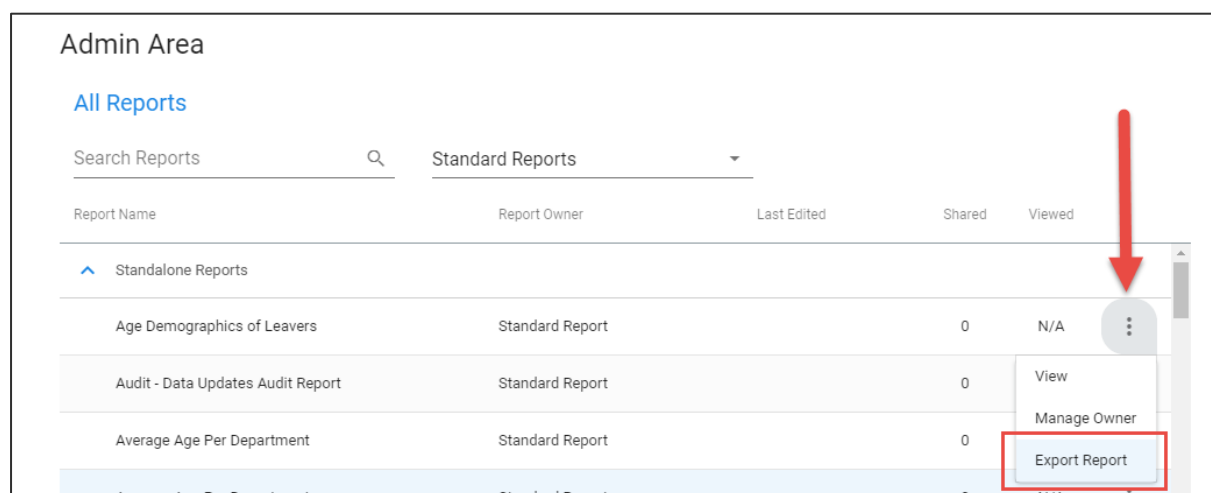

This functionality is not used to:

- Import SQL to create a new report.
- Import reports from CoreBI (see the *Discoverer Importer* user guide).

The only way to create a “.coreinsight” report is to export one from CoreInsight. To do this:

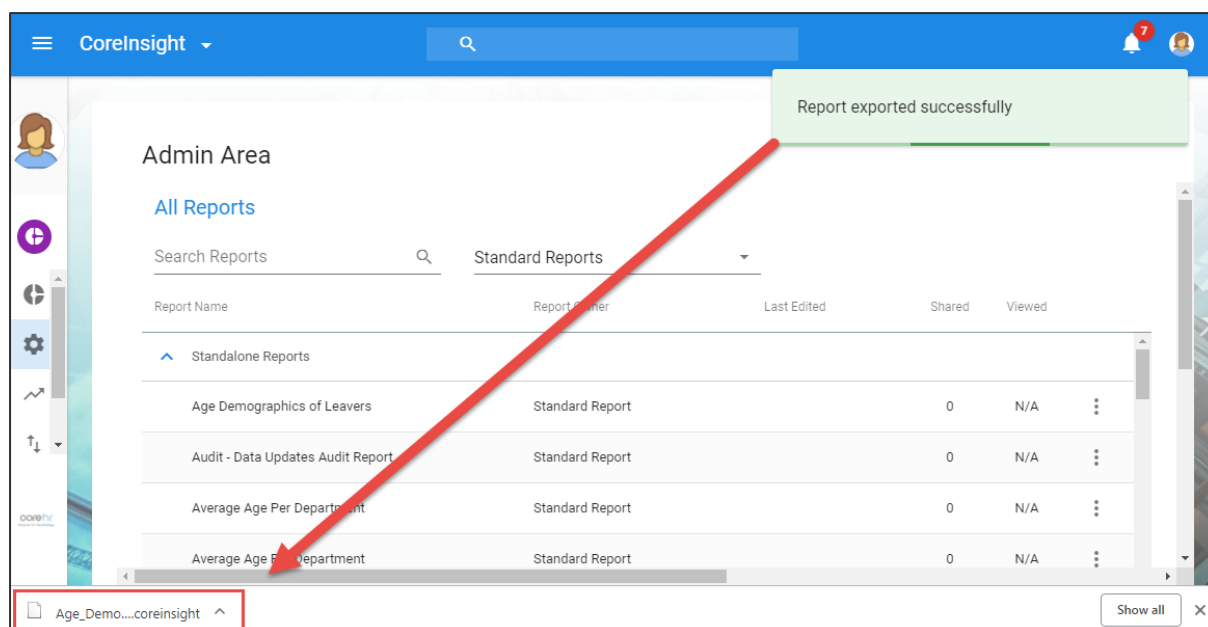

1. Search for the report on the *Admin Area* screen.
2. Click the button and select **Export Report**.

This option is only available for the following report types:

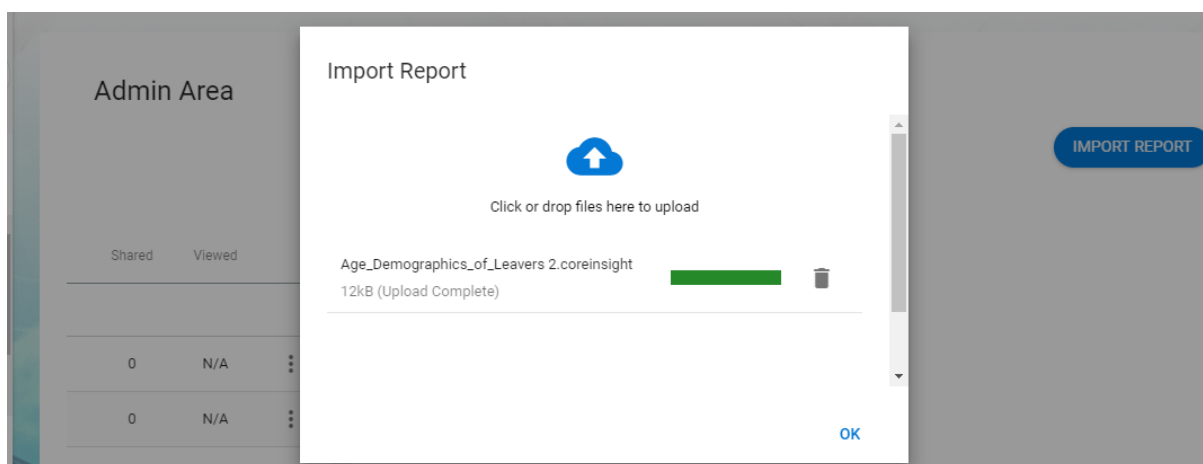

- a. Data Reports
- b. Interface Reports
- c. Standard Reports

The report is exported as a “.coreinsight” file. This downloads per your browser settings.

To import a report:

1. On the *CoreInsight* > *Admin Area* screen, click the **Import Report** button.
2. Browse for OR drop the “.coreinsight” file in the *Import Report* window.
3. Click **OK** when the upload has completed.

The report is imported as a *Data Report*.

There is no *Report Owner* defined.

4. Click the  button and select **Manage Owner**, to assign the imported report to a new user

9. CoreInsight Configuration

9.1. Configuration Overview

This section provides a summary of the different elements of configuration for CoreInsight.

Access to Screens, Buttons and Options

Access to screens, buttons and report options are controlled via CoreSecurity Menu Profiles. For example, you need to give users permission via Menu Profiles and Menu Options to see:

- **CoreInsight** in the quick jump menu.
 - The **Create Report** button the Home screen.
 - The **Report Store** screen.
- Etc.

See [9.2 User Access to Screens, Buttons and Options](#) for guidance on the Menu Options that are used to control user access to each individual element.

Access to Business Areas

All of the business areas that are available in the *Report Wizard* (for tabular and cross-tabular reports) are controlled via CoreSecurity Menu Profiles. You need to give users permission via Menu Profiles and Menu Options to see each business area.

There are no further permissions required for the corresponding views i.e. if you give a user access to the “Core Personnel” business area, they have access to all views in that area. The only exception to this is if the view is an ‘LOV’ view (see [9.3.1 Access to LOV Views](#))

See [9.3 User Access to Business Areas](#) for guidance on the Menu Options that are used to control user access to each business area.

Access to Report Data

Access to data in a report is based on:

- Your existing product specific OR role specific access on CoreHR.
- The ‘Report Access’ setting on the report.

This ensures that you only see records in a report that you have been given permission to see. If you cannot see those records elsewhere in CoreHR, you should not be able to see them in CoreInsight.

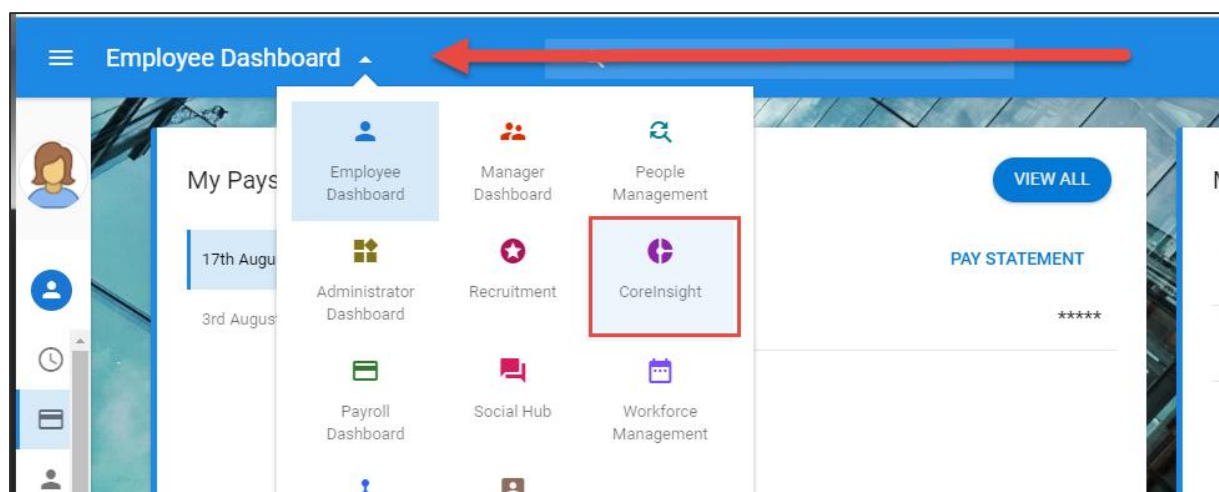

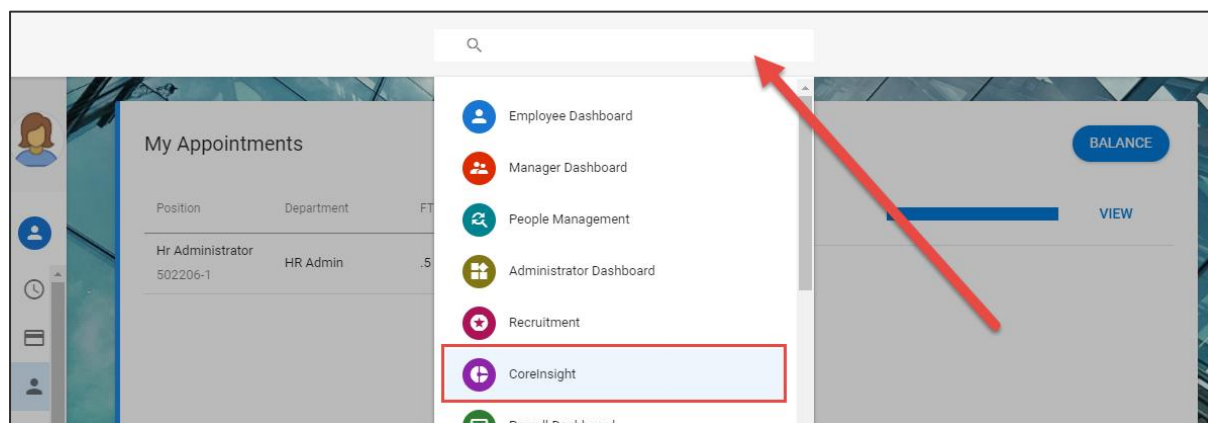

See [9.4 Report Data Access](#) for further guidance on how this works.

9.2. User Access to Screens, Buttons and Options

9.2.1. CoreInsight Dashboard

The following menu option controls access to the CoreInsight dashboard. This is required to see the CoreInsight options on the Quick Jump menu and the Dashboard menu.

System	Menu Option
Coreportal	Coreportal - Manager Hr Analytics

9.2.2. View Report

The following menu option is needed to view reports in CoreInsight. This controls the display of the **View Report** option.

System	Menu Option

9.2.4. Manage / Edit Report

The following menu option is needed to edit reports in CoreInsight. This controls access to the *Manage Report* screen.

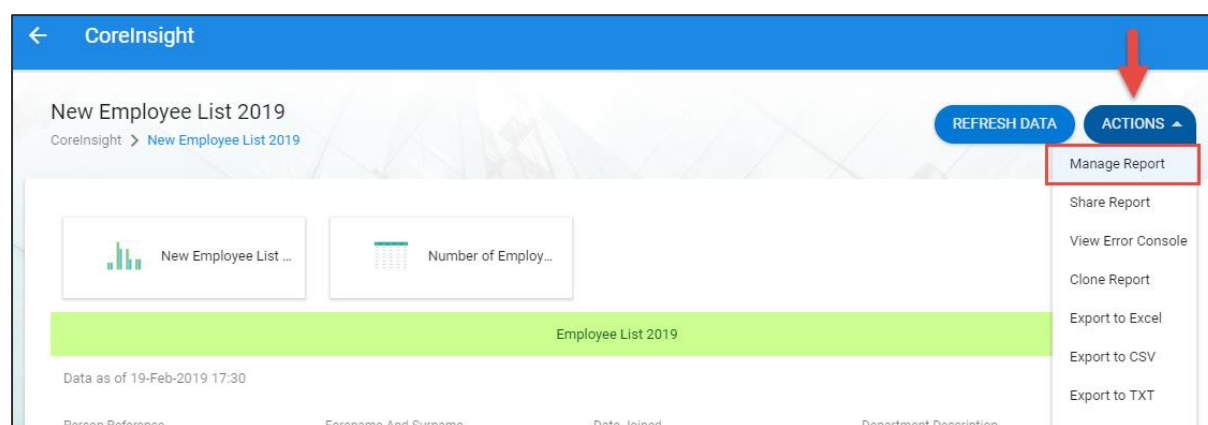

System	Menu Option
Coreportal	Coreportal - Analytics Edit Reports

This makes the **Manage Report** option available:

- On the *All Reports* list.

- When viewing the report.

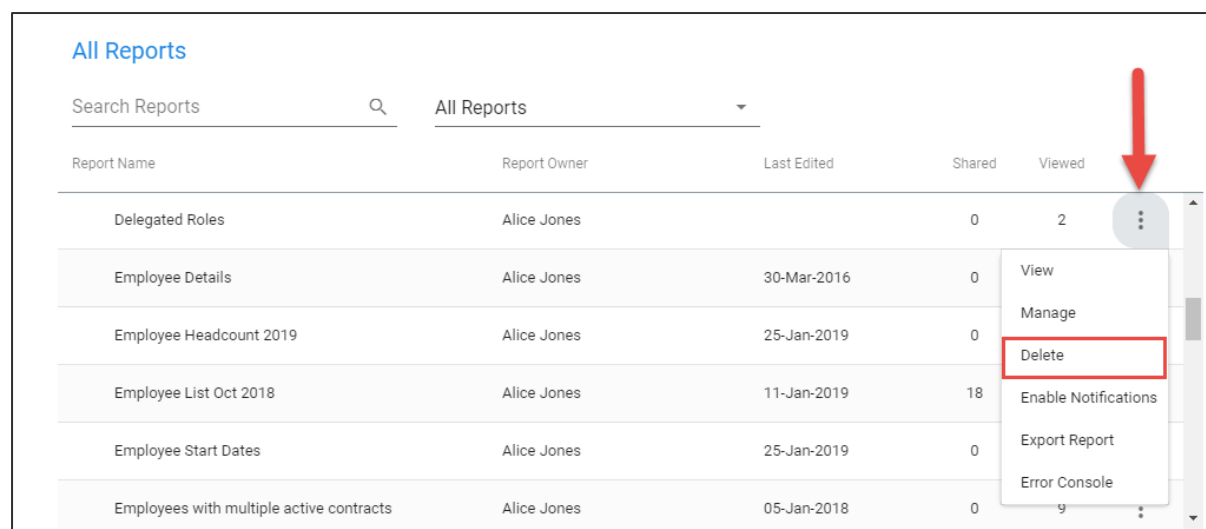

This is also needed to ensure that the *Manage Report* screen is available on completion of the *Report Wizard*.

9.2.5. Delete Report

The following menu option is needed to delete reports in CoreInsight. This controls the display of the **Delete Report** option.

System	Menu Option
Coreportal	Coreportal - Analytics Delete Reports

9.2.6. Clone Report

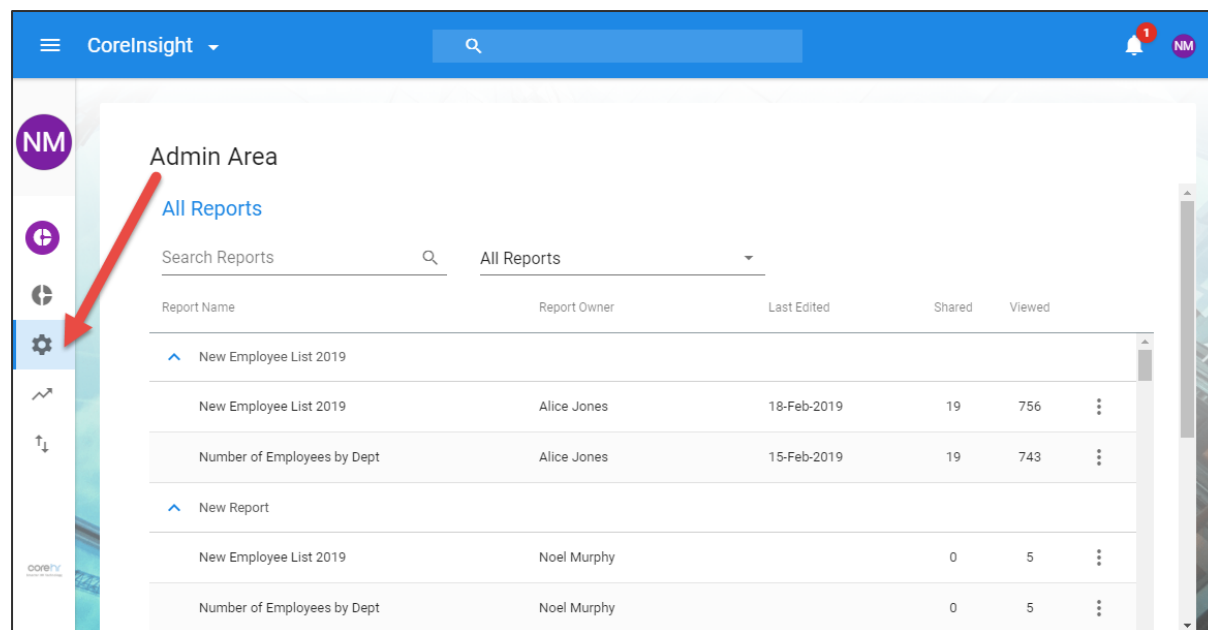

The following menu option is needed to clone reports in CoreInsight. This controls the display of the **Clone Report** option.

System	Menu Option
Coreportal	Coreportal - Analytics Clone Reports

9.2.7. Admin Area

This menu option controls access to the **Admin Area** tab and screen.

System	Menu Option
Coreportal	CorePortal - CoreInsight Admin

Access to view, manage and delete reports from this screen is controlled by the same menu options required to do this from the *CoreInsight > Home* screen.

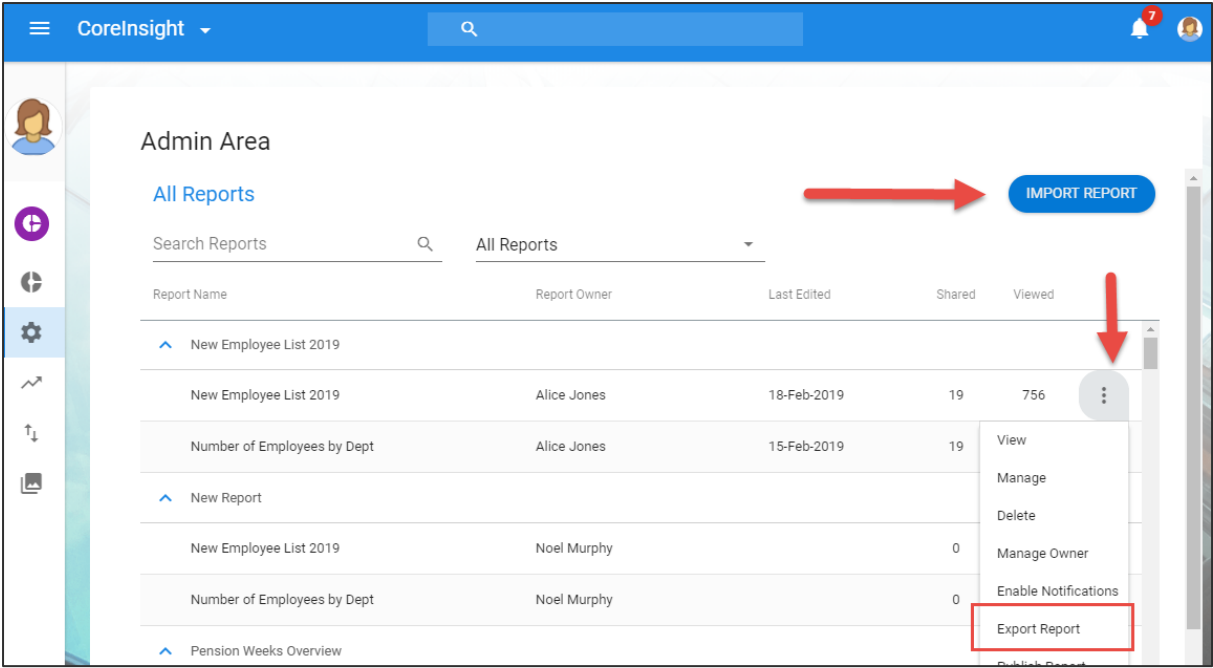

9.2.8. Import Export Reports

The following menu option is needed to export and import CoreInsight reports, as per the steps covered in [8.5 Import Export Reports](#).

This controls the display of

- The **Import Report** button
- The **Export** option on the report

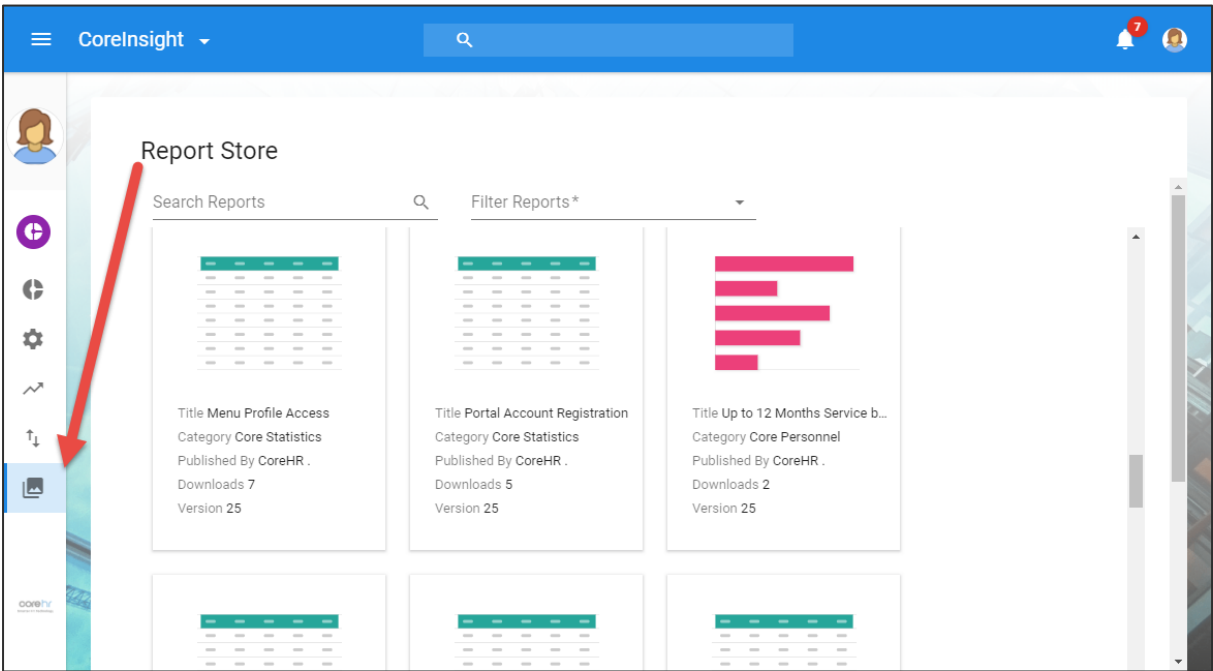

System	Menu Option
Coreportal	Coreportal - Import/Export Reports

9.2.9. Report Store

This menu option controls access to the **Report Store** tab and screen.

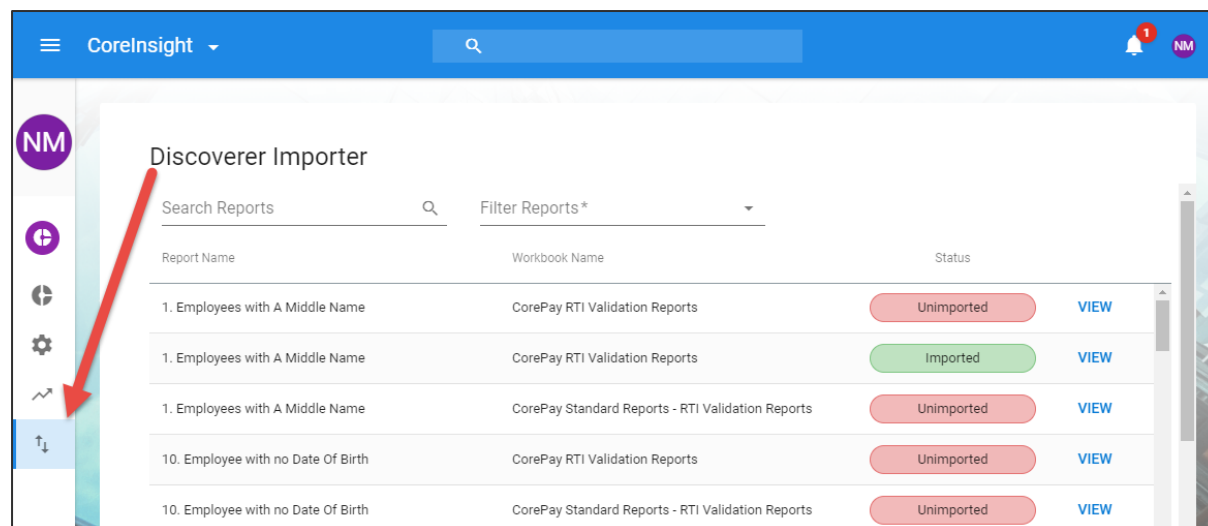

System	Menu Option
Coreportal	CorePortal - Analytics Report Store

9.2.10. Discoverer Importer

This menu option controls access to the **Discover Importer** tab and screen.

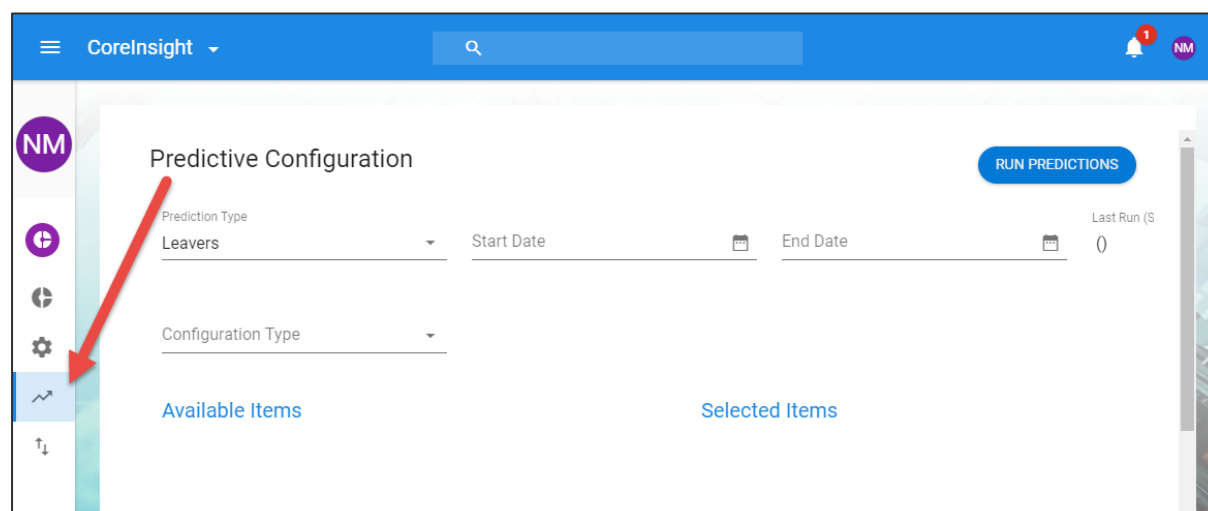

System	Menu Option
Coreportal	Coreportal – BI Reports Importer

9.2.11. Predictive Analytics

This menu option controls access to the **Predictive Analytics** tab and screen.

System	Menu Option
Coreportal	CorePortal - Predictive Analytics Configuration

9.3. User Access to Business Areas

Menu options are used to control access to the business areas that you can report on. Each business area has a corresponding menu option. If you don't have the menu option, for one of your menu profiles, you will not see the area on the business area listed on the *Report Area* step of the *Report Wizard*.

The screenshot shows the 'Report Wizard' interface in CoreInsight. The 'Report Area' step is highlighted with a red box. It displays a list of business areas for selection. The 'Report Columns' step is also visible, showing a list of columns for selection. The interface includes search bars for 'Search Areas' and 'Search Views', and a 'View Name' field. A 'PREVIOUS' button and a 'NEXT' button are at the bottom right.

This access is only required for users that are creating reports. If a user is running a report only, they do not need the business area access to do this i.e. you can view any report shared with you, once you have the underlying [Report Data Access](#).

The table below for a list of all available business areas and the corresponding menu option.

9.3.1. Access to LOV Views

A number of business areas include LOV views. These are used to create a 'list of values' reports for reference data items for the corresponding product:

The screenshot shows the 'Report Wizard' interface in CoreInsight. The left sidebar indicates the current step is '2 Report Area'. The main area is divided into two columns:

- What business areas would you like to repo...:** A list of business areas with 'Core Personnel' selected. The list includes: Core Medical Welfare, Core Pay, Core Pension, Core Personnel, Core Prediction, Core Recruitment, and Core Statistics.
- What views would you like to use in your re...:** A list of LOV (List of Values) views with 'Core Personnel' selected. The list includes: Accident Code Lov, Action Required Lov, Agency Lov, Appointment Reason Lov, Appraisal Type Lov, and Assessment Category Lov.

These views are not available by default. An additional menu option is required for you to see these. Once you have this menu option, you will have access to all LOV views for all business areas that you have access to

System	Menu Option
Coreportal	Coreportal - Analytics Area LOV Selection Allowed

9.4. Report Data Access

When you run a report on CoreInsight it is important that you can only see records that you have been given access to see on CoreHR i.e. if you cannot see the record elsewhere in CoreHR, then you cannot see it in CoreInsight.

Your existing access defined for the other CoreHR products is used in CoreInsight, so this is not an additional configuration step.

Reports can be configured to use 3 different report access types. Depending on what is set here, this will inform what you see when you run the report.

Access Type	Description
Administrator	This report is for administrators to view e.g. hr administrators, payroll administrators etc. Report data is displayed based on your system users access e.g. • HR System Users • Pay System Users
Manager	This report is for managers to run. Report data is displayed based on your team only. Team access is derived based on the following CorePortal parameters: • Cp_team_org_group • Cp_Team_org_role  Note: This does not apply to Payroll reports. Administrator access is required to run reports on the Core Pay business area. If you have Manager access only, you will not be able to run reports for Payroll.
Employee	This report is for the employee to run. The report data is based on your own employee record.

9.5. Insight Superuser

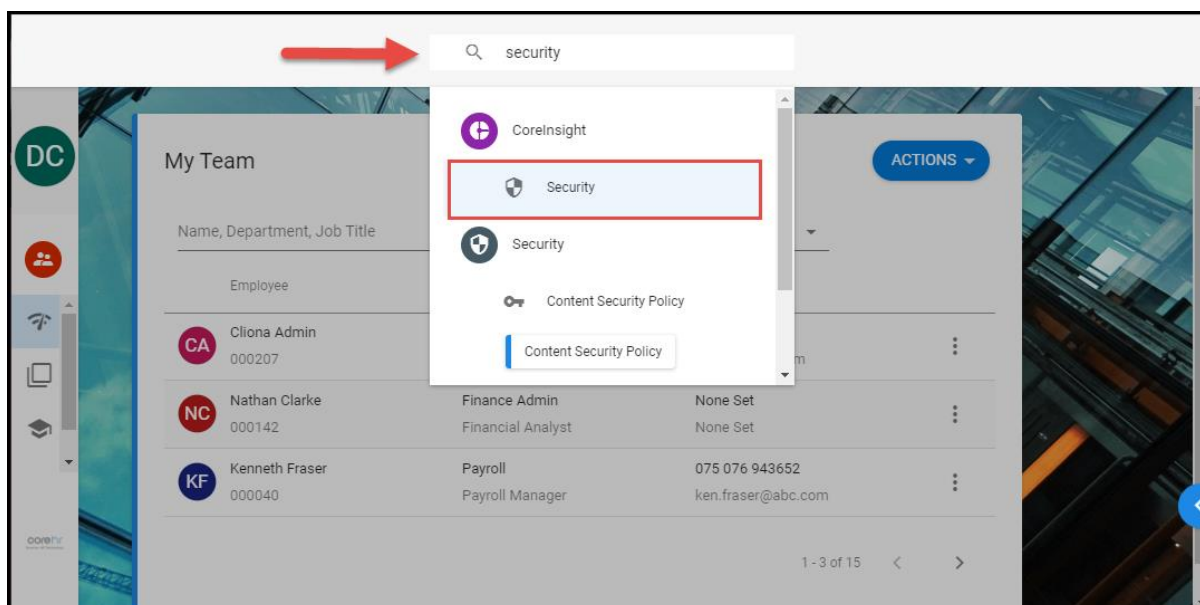

The security widget on the Insight dashboard allows administrators to assign 'Super User' access across the Insight product. Users who are assigned 'Super User' access have full access to all Insight views and data without having to manually amend the access per product. This means that once the 'Super User' access has been enabled for a user; no data security is applied when an Insight report is run.

The following menu option is available to allow this new security widget to become available within Insight.

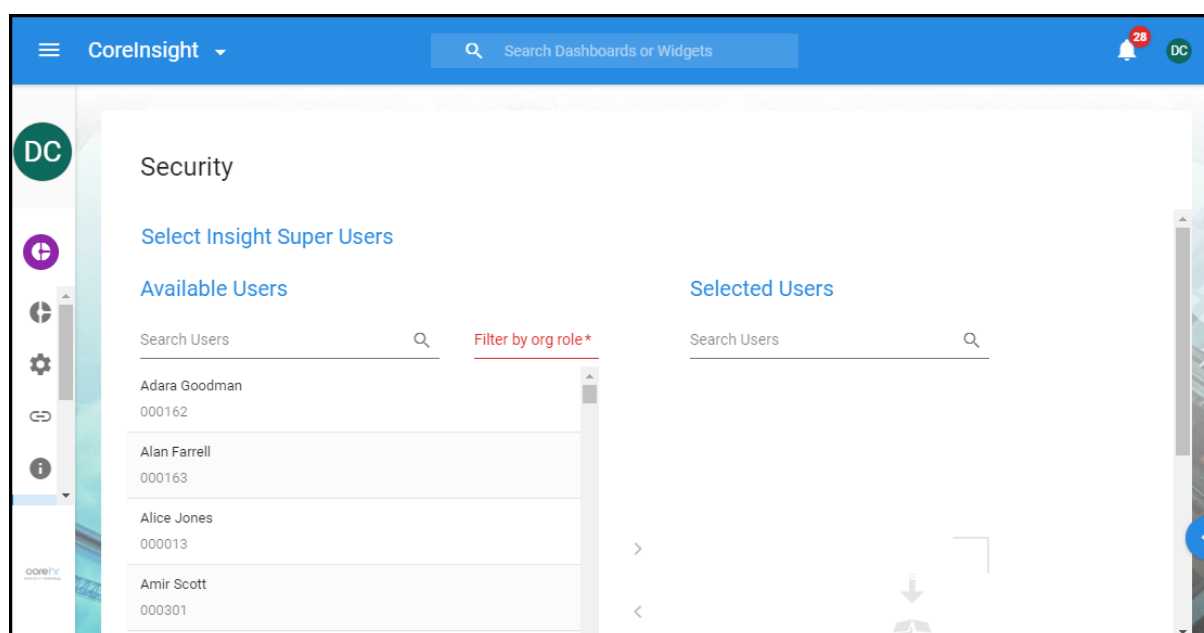

System	Menu Option	Screen Path / Explanation
CorePortal	Insight Admin	This enables the security widget to become available with the Insight dashboard.

To enable this 'Super User' access once the widget is enabled:

1. Quick Jump to the Security tab in CoreInsight.

2. The security super user screen appears on screen:

3. The table below outlines the items shown

Item	Description
Available Users	This is a list of users that can be given the super user access in Insight.
Selected Users	This is a list of the users that already have the super user access assigned to them.
Search Users	This allows you to search existing users based on their forename and surname.
Filter by Org Role	This allows you to filter a group of users based on their assigned Org Role in the system.

4. Select one or more users to assign the super user access to.

5. Use the   buttons to move users across to the selected list of users.

6. Click the **Save** button

7. Super User access is assigned successfully.
