2.0	2 nd June 2020	Peter Travers	Updated section 3.2.2 with correct steps.

1. Overview

1.2. Purpose of the Guide

This document provides guidance on the *Themes* functionality in CorePortal. This includes the following:

- What are themes and how are they used?
- How to review existing themes.
- How to create new themes.
- How to assign different themes for different companies.
- How to configure the CorePortal Login page.

1.3. What are Themes?

The *Themes* feature on CoreHR allows you to change the appearance of the CorePortal UI, to align this to your organisation's own branding requirements.

 **Note:** This is applicable to Modern UI only.

CoreHR provides a number of built-in themes. You can decide to use one of these themes or to create new themes, specific to your organisation.

If an organisation comprises of more than one company, different themes can be created and assigned to each company as required.

The following items can be defined per theme:

- Primary Colour
- Secondary Colour
- Card opacity level
- Background opacity level
- Upload a background image
- Upload customer logo

These items are reviewed in greater detail in [2.2 Create a New Theme](#).

When a new theme is created / existing theme updated, you are able to preview the new settings before assigning them to a given company within the organisation or applying it as the default theme for all users.

1.4. Login Screen

The CorePortal login screen is not controlled by the theme settings. See [3. Configuring the CorePortal Login Screen](#) for guidance on what can be configured and how this is done.

1.5. Browser Requirements

Users using the following browsers can fully experience the themes:

- Google Chrome
- Safari
- Firefox
- Microsoft Edge

Themes use modern browser features that are not available to Internet Explorer 11. Users on Internet Explorer 11 will see the following customisations only:

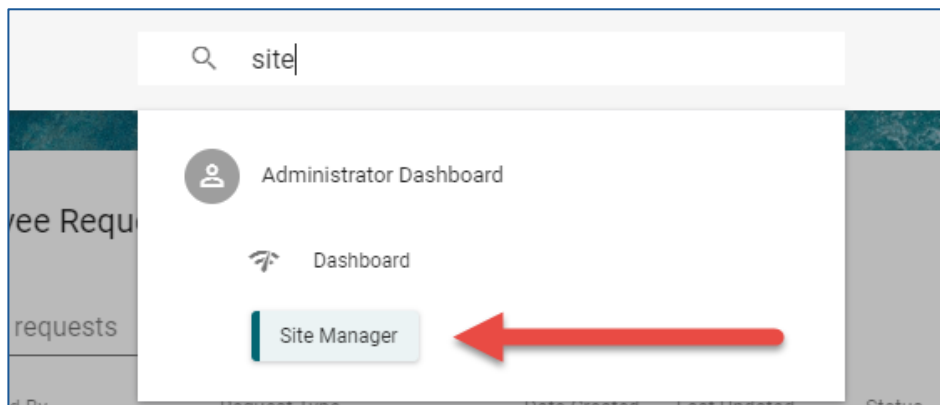

- Background image
- Customer logo
- Application bar
- Widget edges

2. Configuring Themes on CorePortal

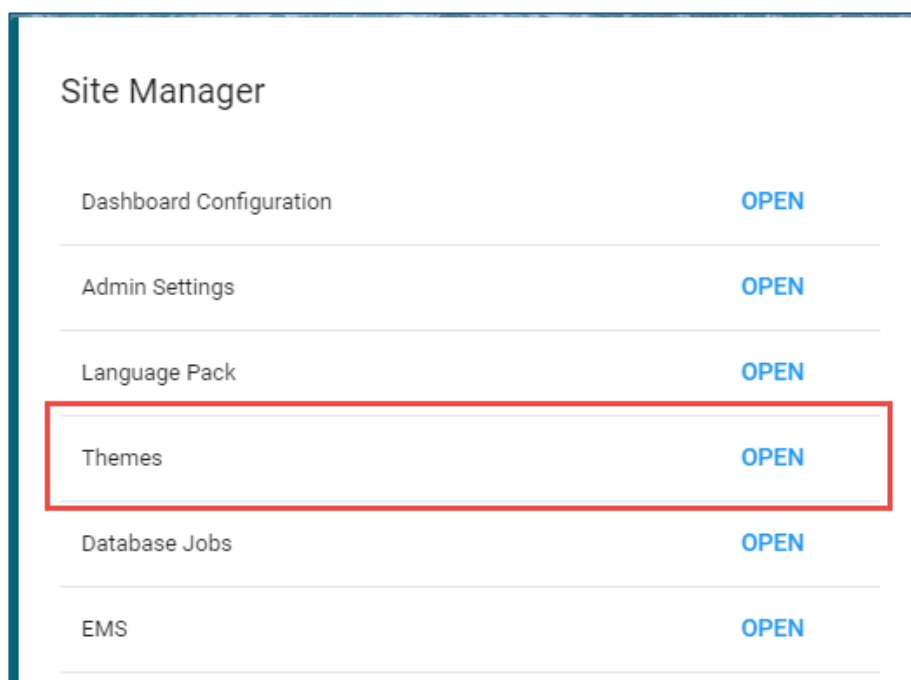

2.1. Preview Existing Themes

To access all of the themes that are currently set up on CoreHR, follow these steps:

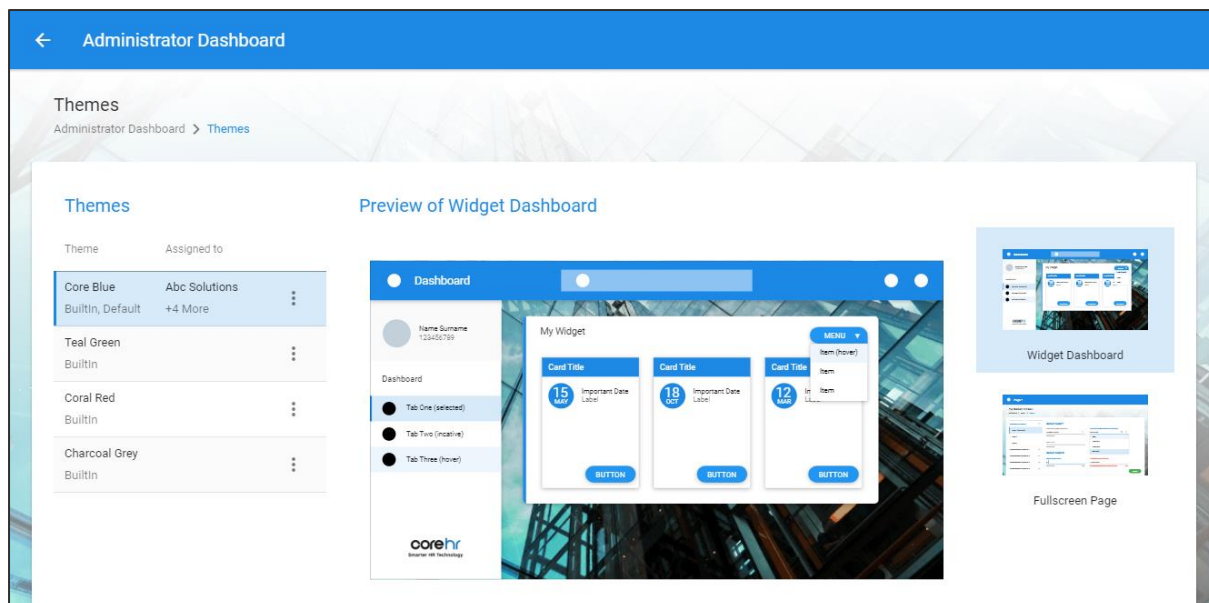

1. Quick jump to the *Site Manager* widget.

2. Click **Open** for the *Themes* option.

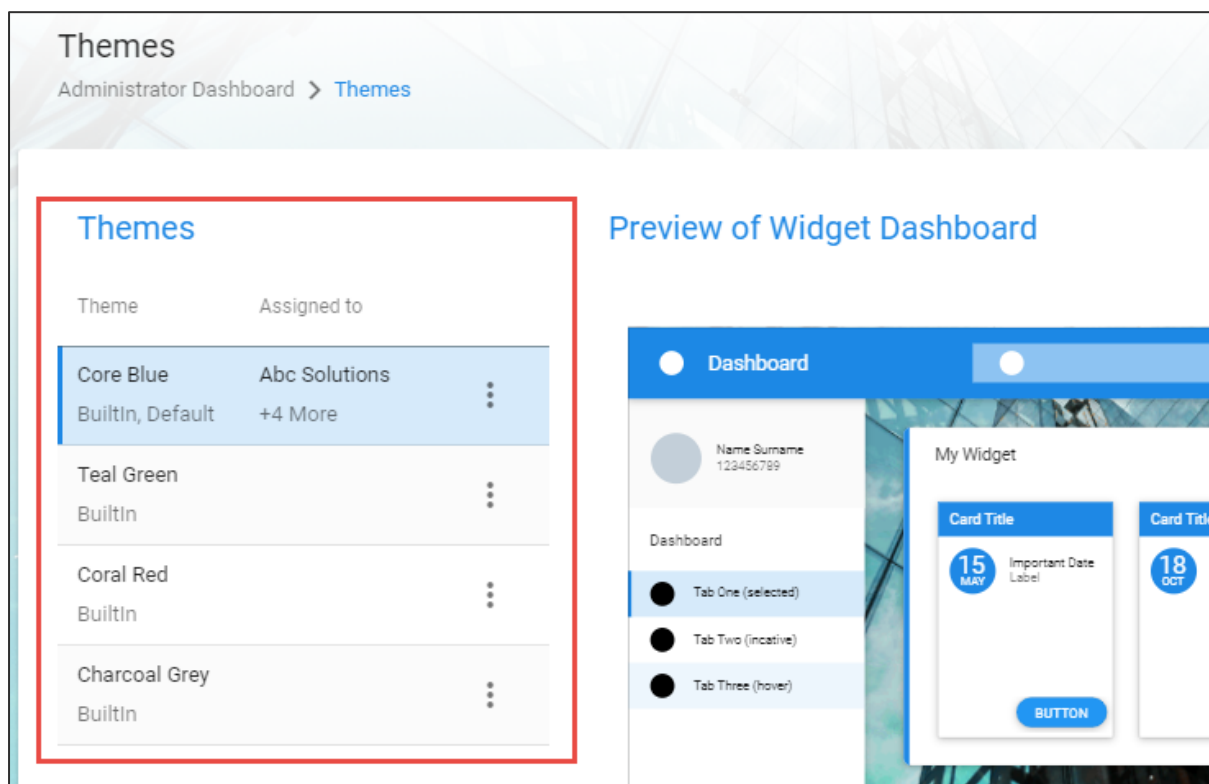

The *Themes* screen opens. All existing themes are available to view on this screen.

These are listed under *Themes* at the left side of the screen. This includes:

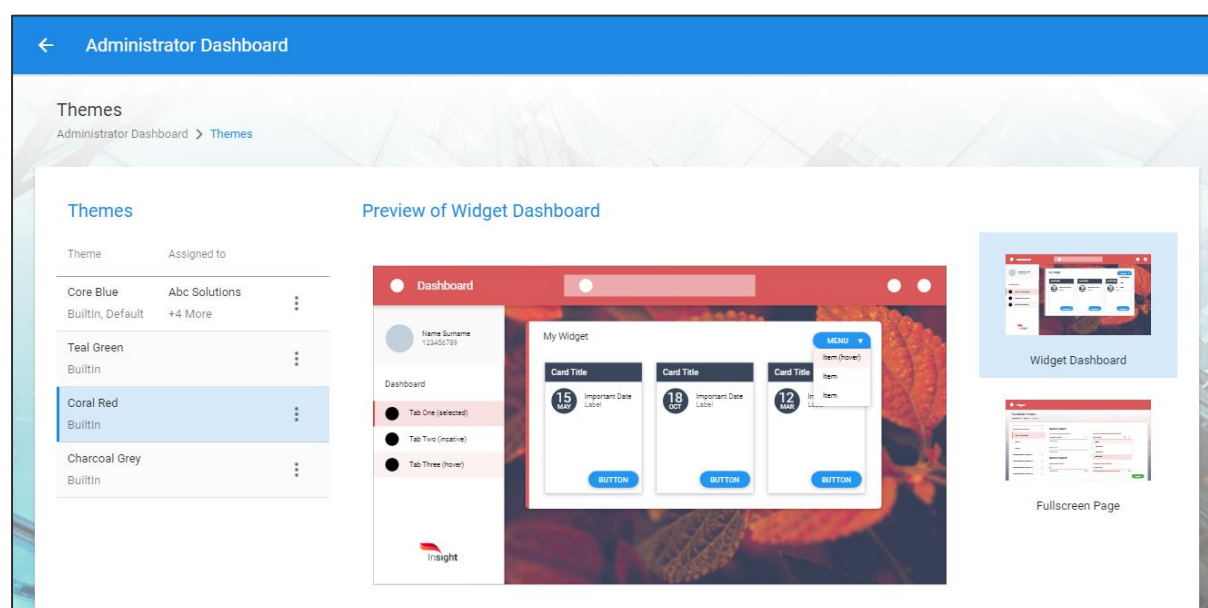

- Themes provided out of the box by CoreHR i.e. built-in.
- New themes created by your organisation i.e. custom.

Additional information is provided beneath each theme name. See the table on the next page for a list of possible options.

Item	Description
Builtin	This is an out-of-the-box theme provided by CoreHR. - These cannot be edited or deleted. - New themes can be created as a copy of these.
Custom	This is a theme created by a user in your organisation, specific to your requirements. - These can be edited or deleted. - New themes can be created as a copy of these.
Default	This is the default theme. - Only 1 theme can be the default at any given time. - This is the theme that all users will be presented with, unless they are part of a company that has been assigned a different theme.
Assigned to	This shows the company / companies that the theme has been assigned to.

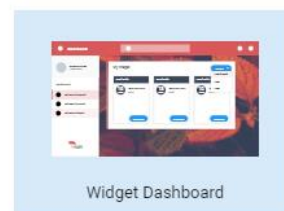

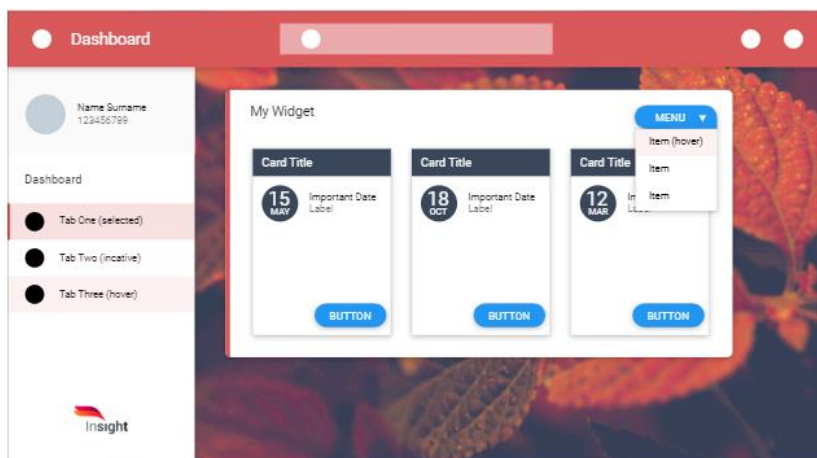

- Click on any of the options listed under *Themes*, to preview that theme on screen.
For example, click on “Coral Red”.
The preview updates to display that theme.

There are 2 options for preview: *Widget Dashboard* and *Fullscreen Page*. These are listed to the right of the screen.

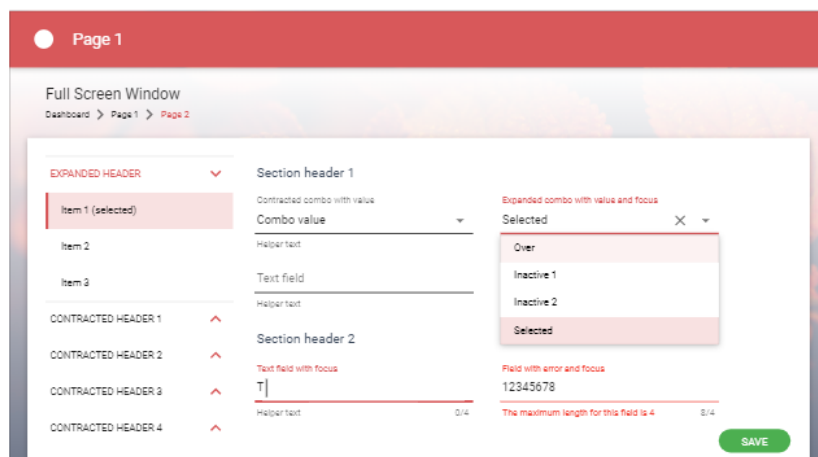

- Widget Dashboard.** Click on this to preview an example of a CorePortal dashboard, using the selected theme. This provides a view of how the theme is applied to elements including: the administration bar, the tabs, widgets etc

Preview of Widget Dashboard

- Fullscreen Page:** Click on this to preview an example of a full CorePortal screen using the selected theme. This provides a view of how the theme is applied to elements including: the administration bar, breadcrumb trail, menus, labels, drop-down lists etc.

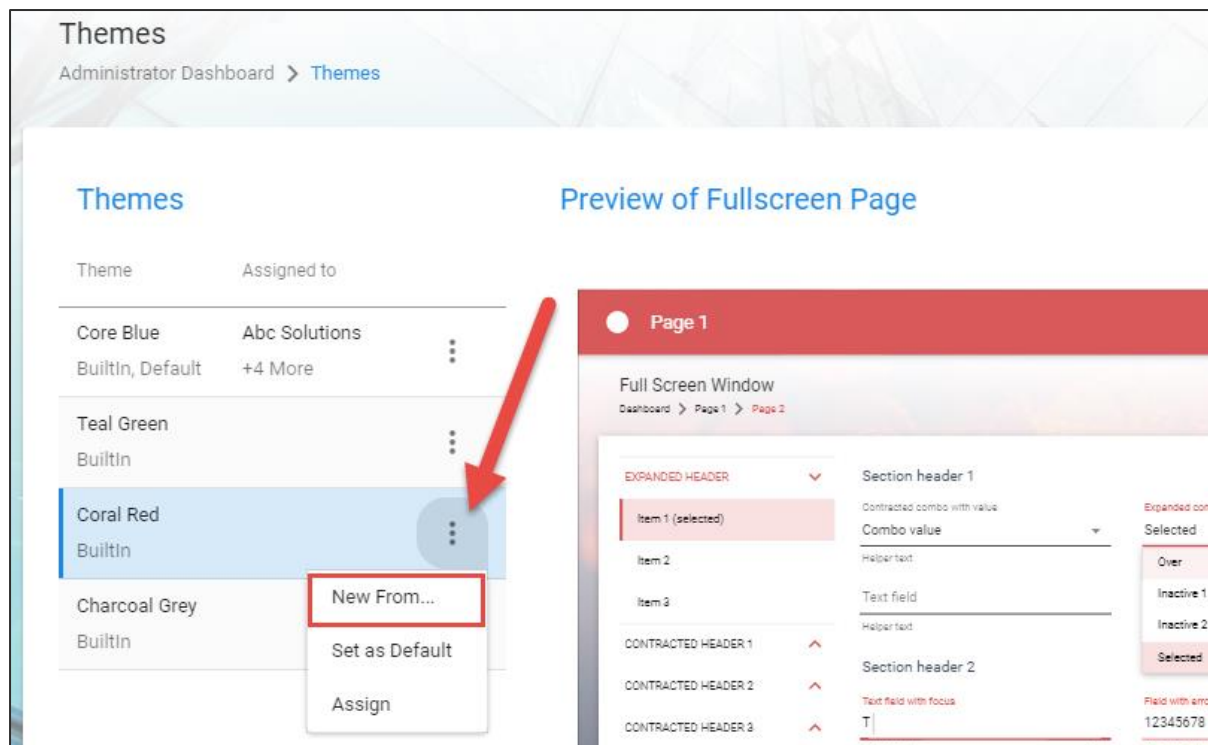

Preview of Fullscreen Page

2.2. Create a New Theme

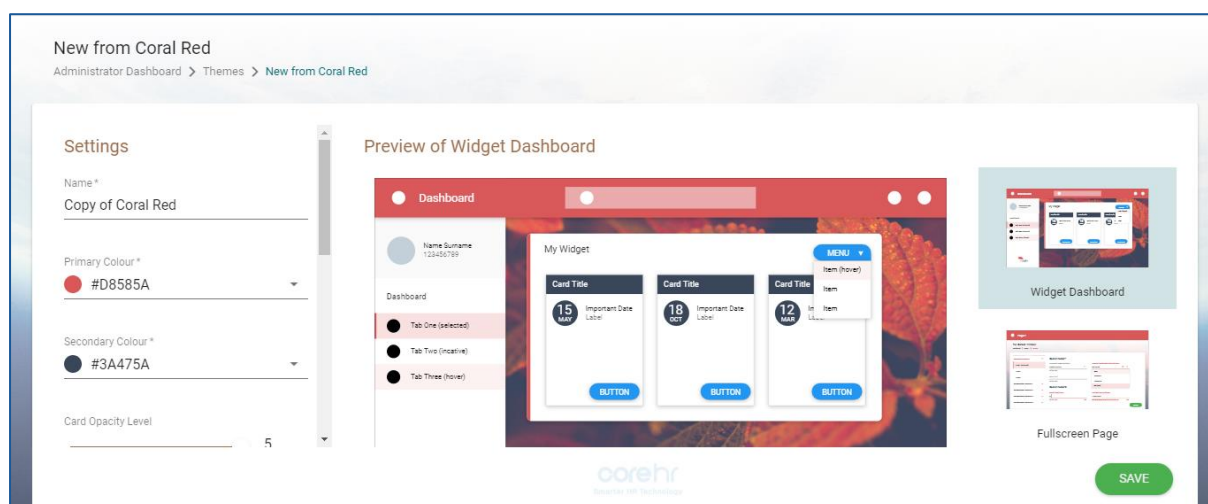

New themes are created by copying an existing theme and amending the required settings. Follow these steps to create a new theme.

- On the **Themes** screen, select the theme that will be copied and click the  button.
- Select the option **New From**.

The *New From Theme* screen opens.

- All configurable settings are managed under *Settings* at the left side of the screen.
- The *Preview* section of the screen will show real time updates to the theme settings, once they are changed but before they are saved. You can click on both **Widget Dashboard** and **Fullscreen Page** to preview changes as they are made.

3. Update the settings required for the new theme.

a. Update the *Name*.

This is the name for your new theme. This defaults to “Copy of Theme” e.g. “Copy of Coral Red” and should be overwritten with a meaningful description. A max of 50 characters is allowed here.

b. Update the *Primary Colour*.

This is the main colour for the theme. The preview options will display where this colour is used.

Click the drop-down menu and select the required colour. There are two options available to select the required colour:

Option 1: ‘Core’ - This provides a full set of preconfigured colour codes that you can scroll through and select.

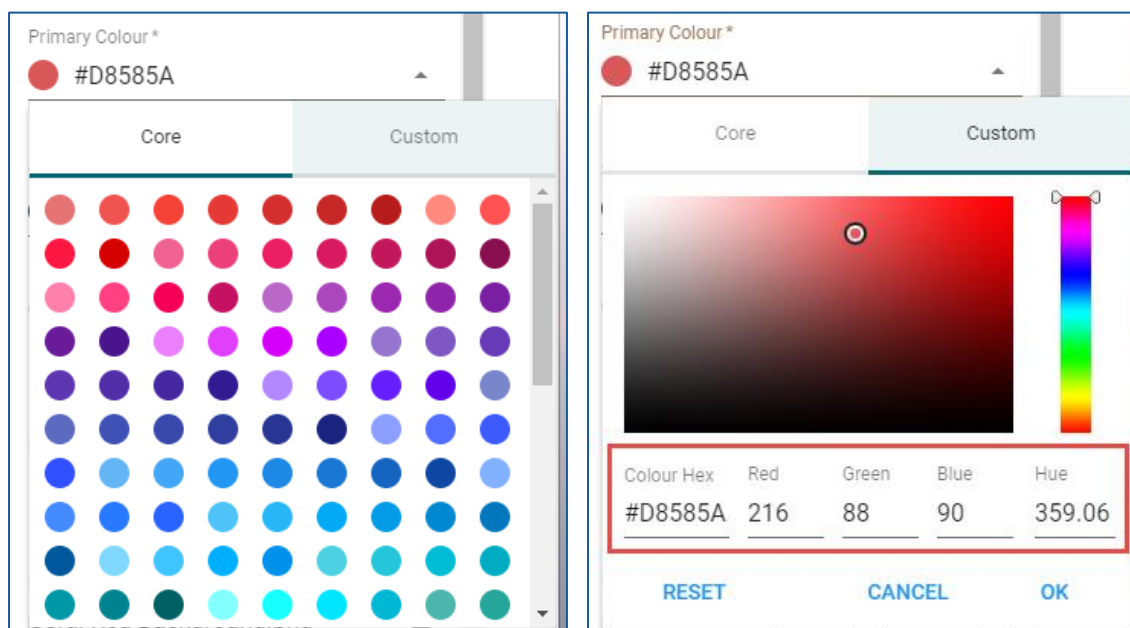

Option 2: ‘Custom’ - This provides the option to define your own required colour codes using the following options:

- Hex Colour Code
- Red / Green / Blue i.e. RGB
- Hue

Click on **Reset** to return to the last saved colour.

Click **Cancel** to exit without making a change.

Click **OK** to save the new colour.

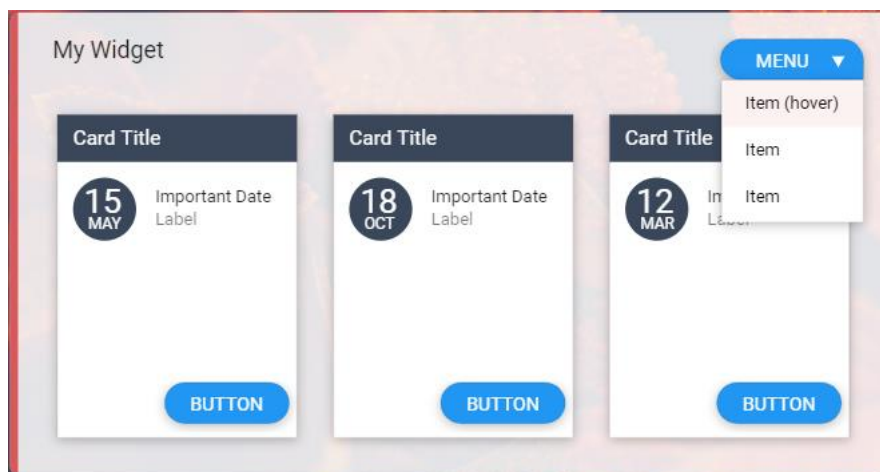

- c. Update the *Secondary Colour*.

This is the secondary colour for the theme. The preview options display where this colour is used. Follow the same steps as the *Primary Colour* selection.

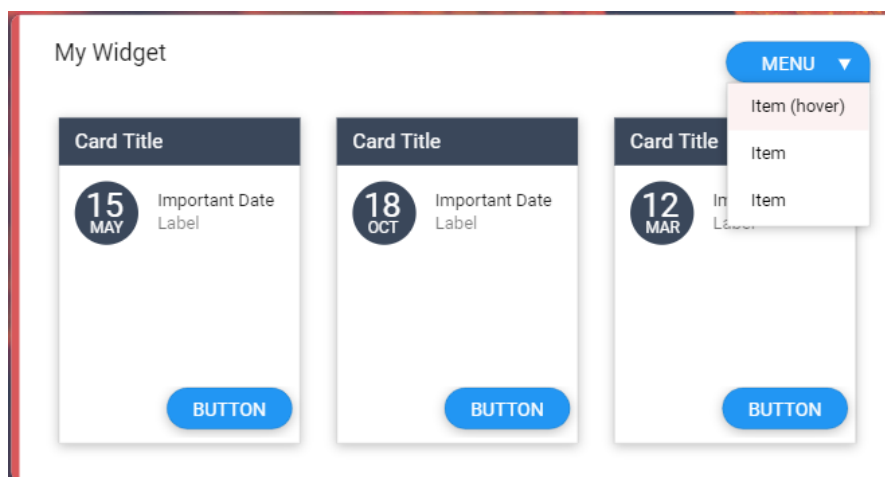

- d. Set the *Card Opacity Level*.

This controls the opacity of the cards on screen e.g. see the difference where this is set to 1 vs 5 for the sample widget:

Set to 1 (i.e. more transparent)

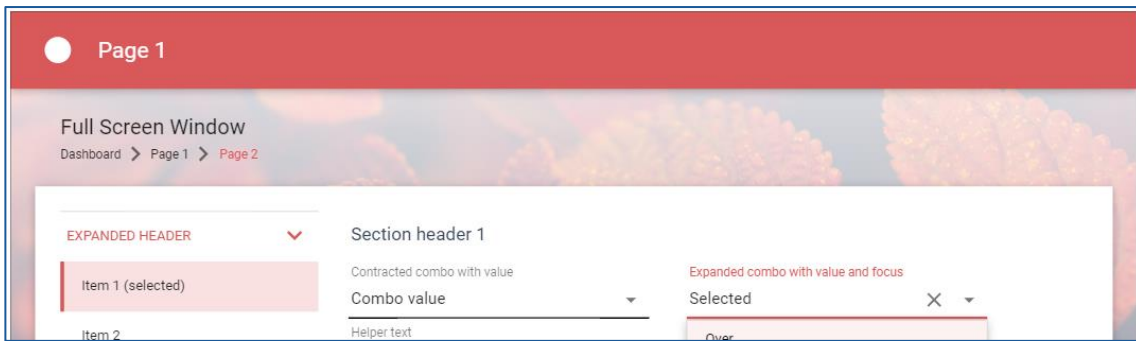

Set to 5 (i.e. more opaque)

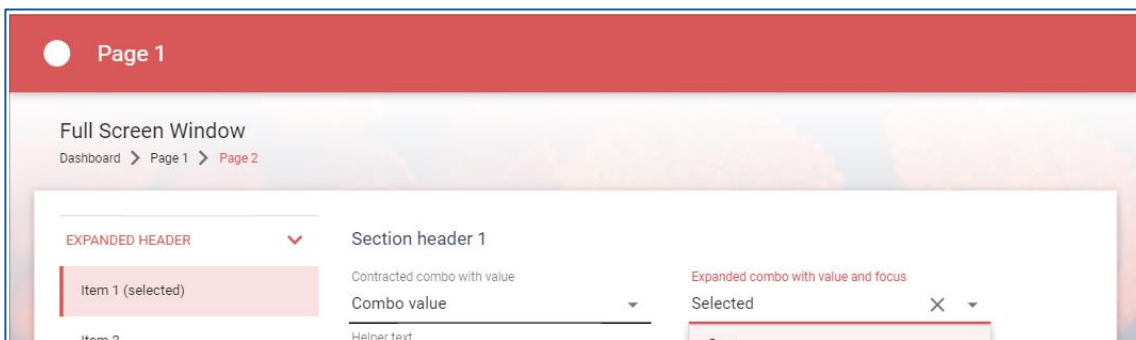

- e. Select the *Background Opacity Level*.

This controls the opacity background image on the fullscreen view e.g. see the difference where this is set to 1 vs 5 for the sample screen (next page):

Set to 1 (i.e. more transparent)

Set to 5 (i.e. more opaque)

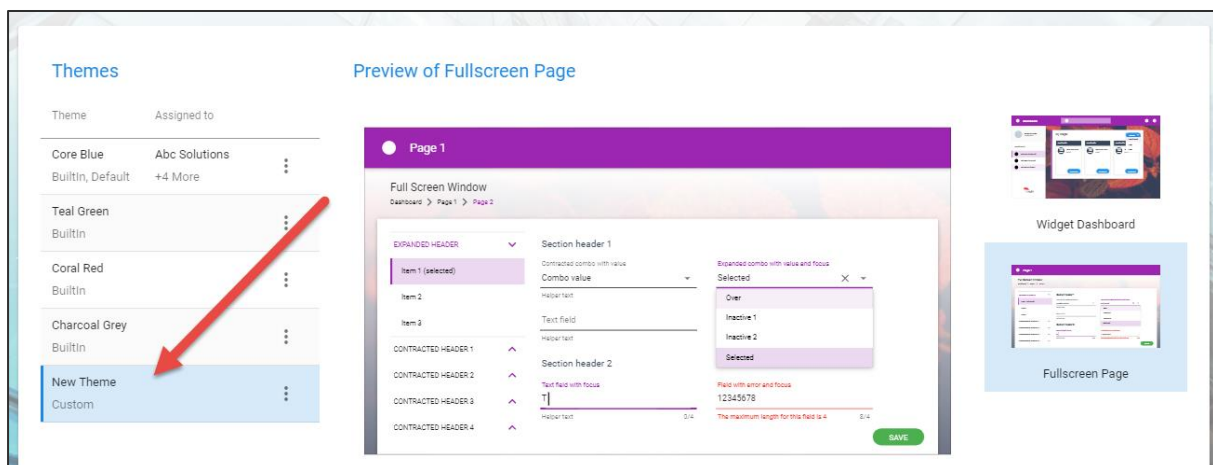

f. Upload a new *Background Image*.

g. Upload a new *Logo*.

The preferred file types are .PNG and .JPG. It is better to use .PNG with embedded transparency for logos. Both types have a server limit of 10MB, and we would recommend the smallest size possible.

4. Once all settings have been configured, click on the **Save** button to create the new theme. Alternatively, you can exit the screen without saving. If you do this, a new theme is not created. Once saved, the screen closes, and the new theme is now available on the list of *Themes*.

Next Steps

Once you have created a new theme, you should consider the following.

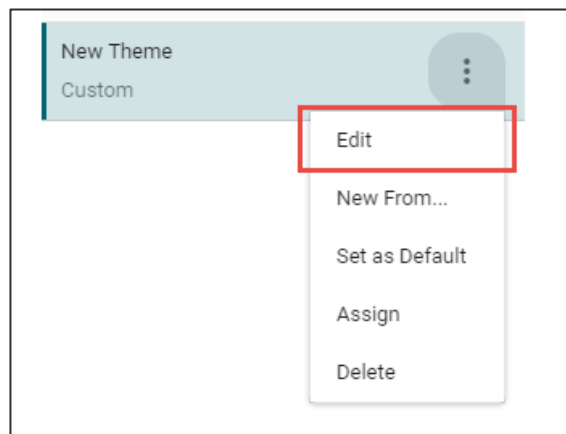

- Should this theme be set as the new default, for all users? If so, see steps in [2.4 Set as Default](#) for guidance on how to complete this.
- Is this theme for a specific company? If so, see steps in [2.5 Assign to Company](#) for guidance on how to complete this.
- Are multiple themes required for multiple companies? If so, repeat the process covered in this section to create additional themes.

2.3. Edit an Existing Theme

Note: Only custom themes can be edited. You cannot edit a 'builtin' theme.

Follow these steps to edit an existing custom theme.

1. On the **Themes** screen, select the required theme and click the  button.
2. Select the option **Edit**.

The *Editing Theme* screen opens.

3. Edit the settings as required.
All settings can be edited. Follow the guidance in section [2.2 Create a New Theme](#) for further guidance for each setting.
As settings are updated, these display in real time in the previews.
4. Once all settings have been configured, click on the **Save** button to apply the changes.
Alternatively, you can exit the screen without saving. If you do this, no changes are saved.
Once saved, the changes are visible to all users, using that theme.

2.4. Set as Default

The default theme, is the theme that is applied to:

- all users **OR**
- any users who are not using another theme based on their company.

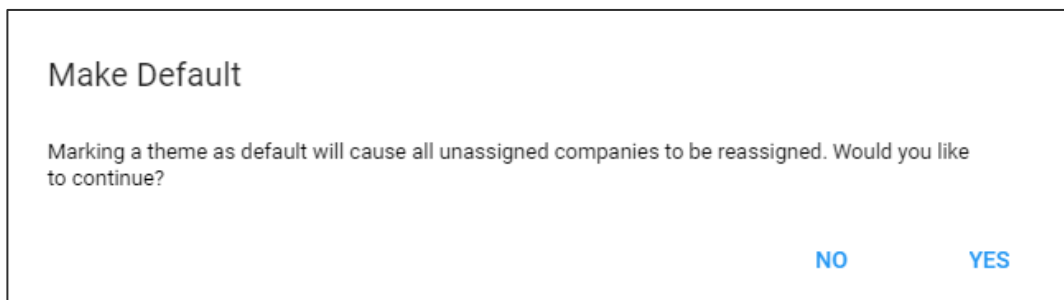

One theme must always be set as the default. The default theme must always be associated with a company.

- **Only 1 company on CoreHR?** Assign the default theme to that company.
- **Multiple companies on CoreHR?** Select a theme to use as the default. This ensures that if a user is not part of a company that uses a different custom theme, this will be applied for them.

Follow these steps to set a default theme:

1. On the **Themes** screen, select the theme that will be copied and click the  button.
2. Select the option **Set as Default**.

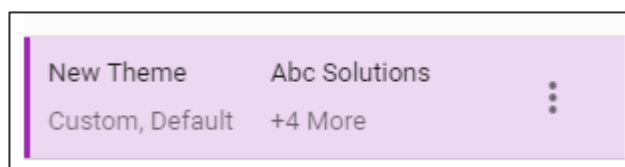

A warning message appears to prompt you to confirm you are happy to make this change.

3. Click **Yes** to continue.

The theme is automatically updated for all assigned users. If this theme is applicable to you, the screen will refresh to use the new theme. There is no requirement to logout for the change to take effect.

The information on the theme updates to display 'Default' and the number of companies now assigned.

2.5. Assign to Company

If your organisation has multiple companies, it is possible to create multiple themes and assign these to each company, to reflect different branding and logo requirements. The default theme is automatically assigned to all companies.

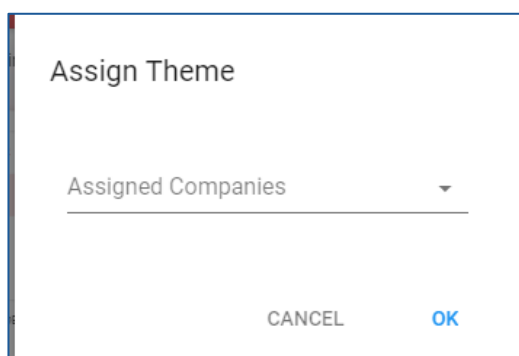

If an individual company requires a different theme, follow these steps for guidance on how this can be created and assigned to it.

1. Create a new theme.

Follow the instructions in [2.2 Create a New Theme](#) to complete this step.

2. Assign the theme to a new company.

- a. On the **Themes** screen, select the required theme and click the  button.
 - b. Select the option **Assign**.
 - c. Select the required company from the *Assigned Companies* list and click **OK**.
- If required, you can select multiple companies on that list.

3. The assigned company / companies are displayed under *Assigned To* for that theme, on the list of themes.

Themes

Theme	Assigned to	
Core Blue	Abc Solutions	⋮
BuiltIn, Default	+3 More	⋮
Teal Green		⋮
BuiltIn		⋮
Coral Red		⋮
BuiltIn		⋮
Charcoal Grey		⋮
BuiltIn		⋮
New Theme	Def Solutions	⋮
Custom		⋮

Preview of Fullscreen Page

2.6. Delete a Custom Theme

Note: Only custom themes can be deleted. You cannot delete a 'builtin' theme.

Follow these steps to delete an existing custom theme.

1. On the **Themes** screen, select the required theme and click the  button.
2. Select the option **Delete**.

If the theme being deleted has been assigned to a company, a message will pop up on screen to confirm that the affected company / companies will be reassigned to the default theme as part of this action.

Delete New Theme

This theme is assigned to the following companies:

Def Solutions

Upon deletion, the companies will be reassigned to the default theme with immediate effect.

Would you like to proceed?

NO

YES

3. Click **Yes** to proceed.

You cannot delete the default theme, even if this is a custom theme. If you need to delete a theme that is currently being used as a default, follow these steps:

1. Set a different theme as the default.
2. Delete the theme as required.

3. Configuring the CorePortal Login Screen

3.1. What is Configurable?

Note:

The configuration of the CorePortal login screen is managed separately to the themes. This means that the logo, background image and colour selection for the chosen default theme is not applied to the login page. See [3.2 How to Configure](#) for guidance on how to configure these items.

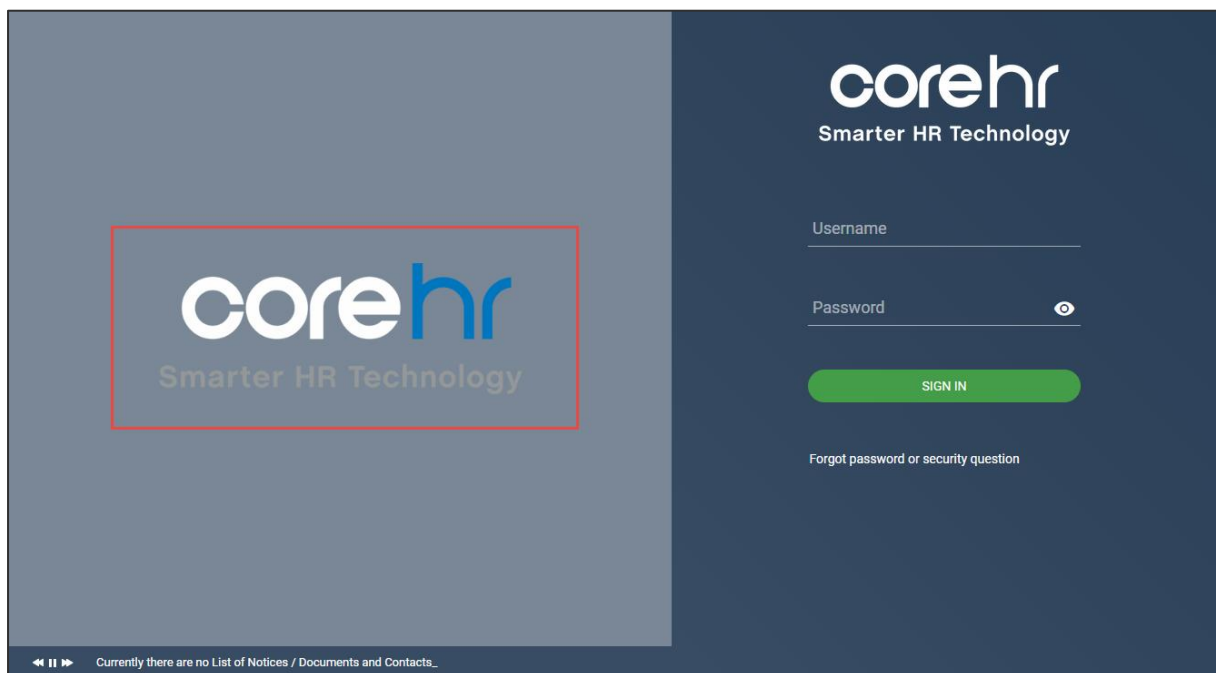

The following elements of the CorePortal login screen are configurable:

1. Primary Colour

Only one colour is set here e.g. the dark blue colour used in the screenshot below. Note that the section where the customer logo is displayed uses the same colour at a greater transparency.

2. Customer Logo

The customer logo is displayed here on screen.

3. Background Image

If a background image is used, this appears on the full screen. This is overlaid with the login section and the customer logo.

3.2. How to Configure

3.2.1. Change Primary Colour

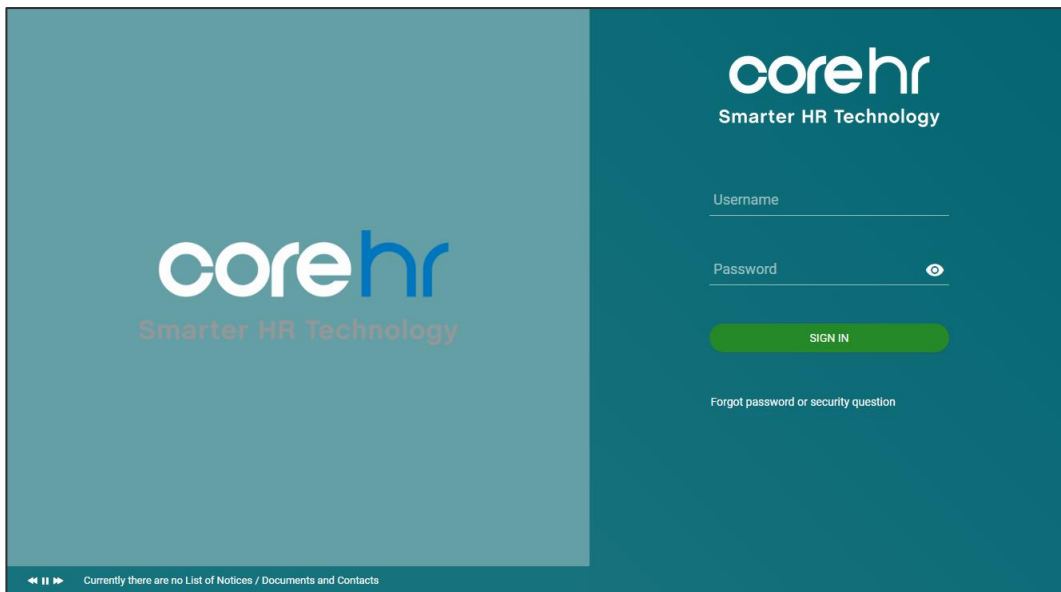

Follow these steps to change the primary colour of the login screen.

Note: You will need the hex colour code for the colour you wish to update this to.

1. Quick jump to the *Site Manager* widget.
2. Open *Admin Settings*.
3. Search for the parameter code "cp_theme_nav_colour".
4. Update the parameter.
 - a. Click **Edit**.
 - b. Provide the new code.
 - c. Click **Ok** to save.

The login page is updated to use that new colour code.

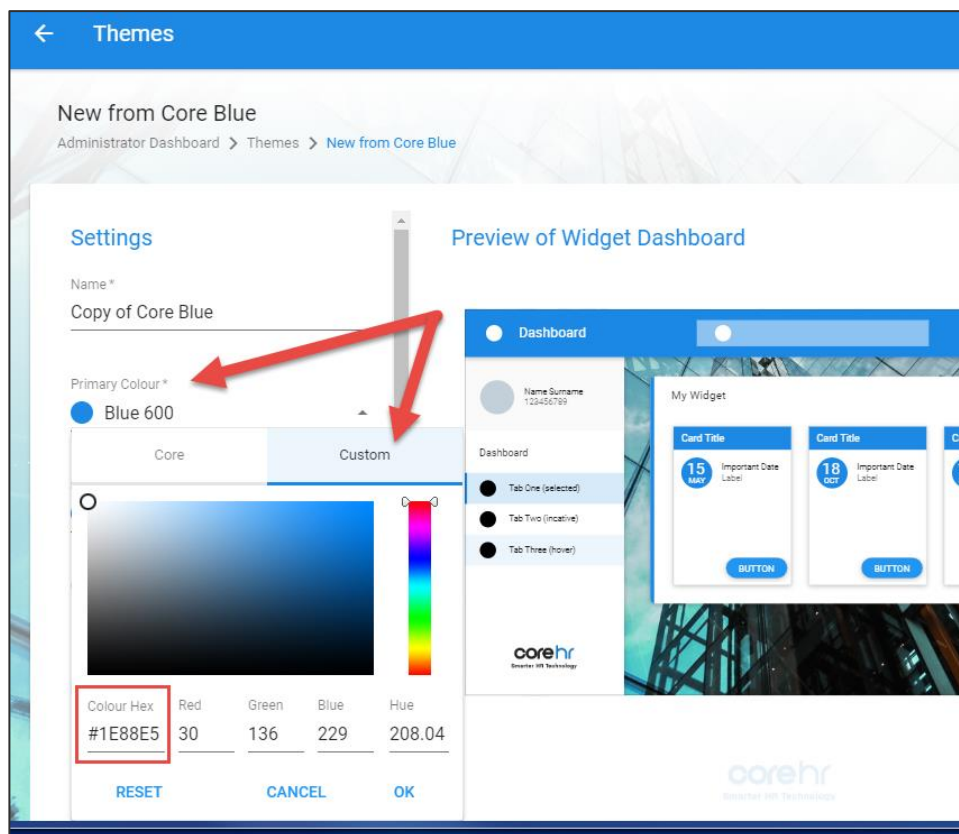

This change is applicable to all users.

This setting is completely separate to the theme settings applied to CorePortal. If you wish to update this colour to reflect a new colour that has been set for a default theme, follow these steps to retrieve the default hex colour code for the required theme. Use that colour to update the parameter, as per the steps above.

1. Quick jump to the *Site Manager* widget.
2. Open *Themes*.
3. Identify the required theme.

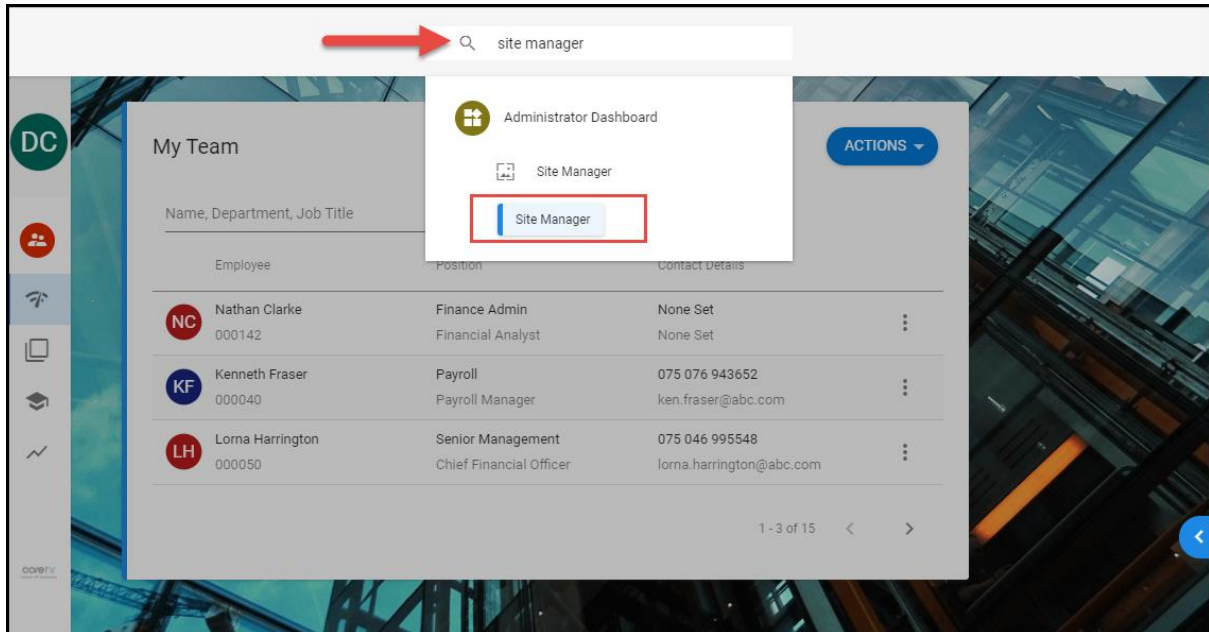

- a. For a 'builtin' theme, click the  button and select **New From**.
OR
 - b. For a 'custom' them, click the  button and select **Edit**.
4. Select the **Primary Colour**.
- a. Click the **Custom** option.
 - b. Copy the value from the *Colour Hex* field. This will begin with "#".
 - c. Click **Cancel** to close.
5. Close the screen without making any changes, by clicking back to the *Themes* option on the breadcrumb trail.

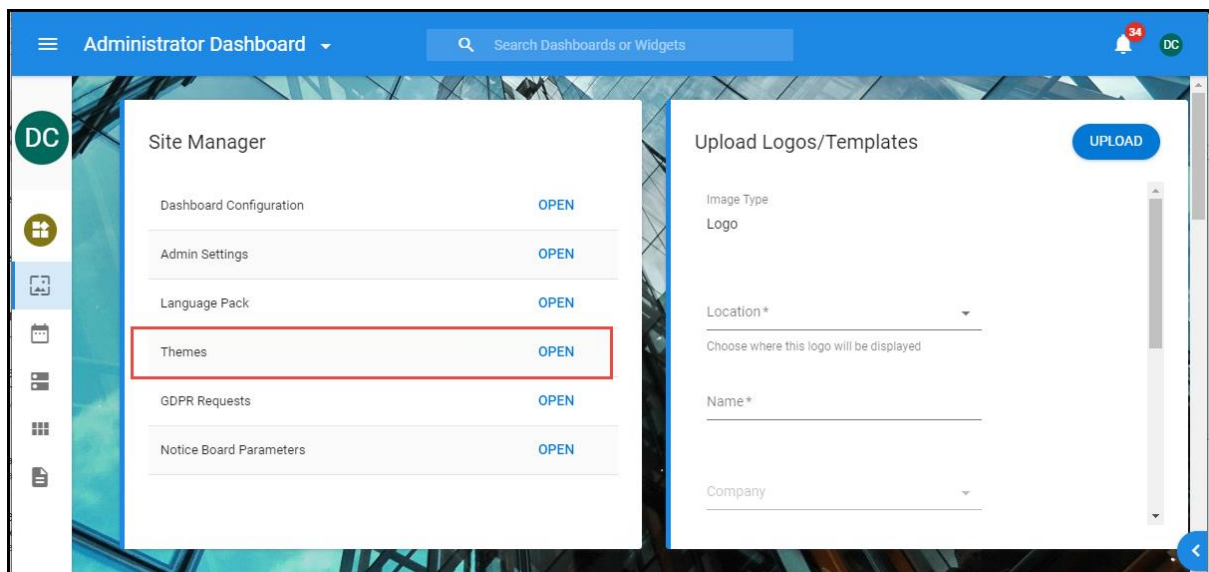

3.2.2. Upload New Login Page Logo and Background Image

Follow these steps to upload a new customer logo for the CorePortal login page.

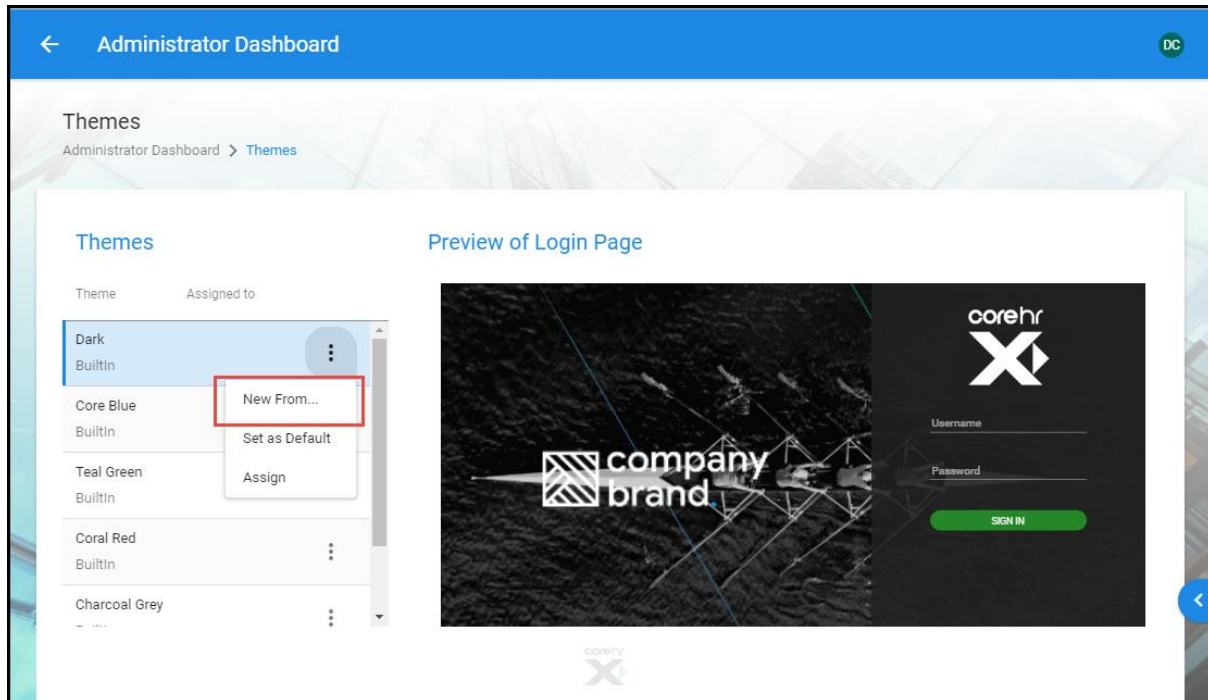

1. Quick jump to *Site Manager*

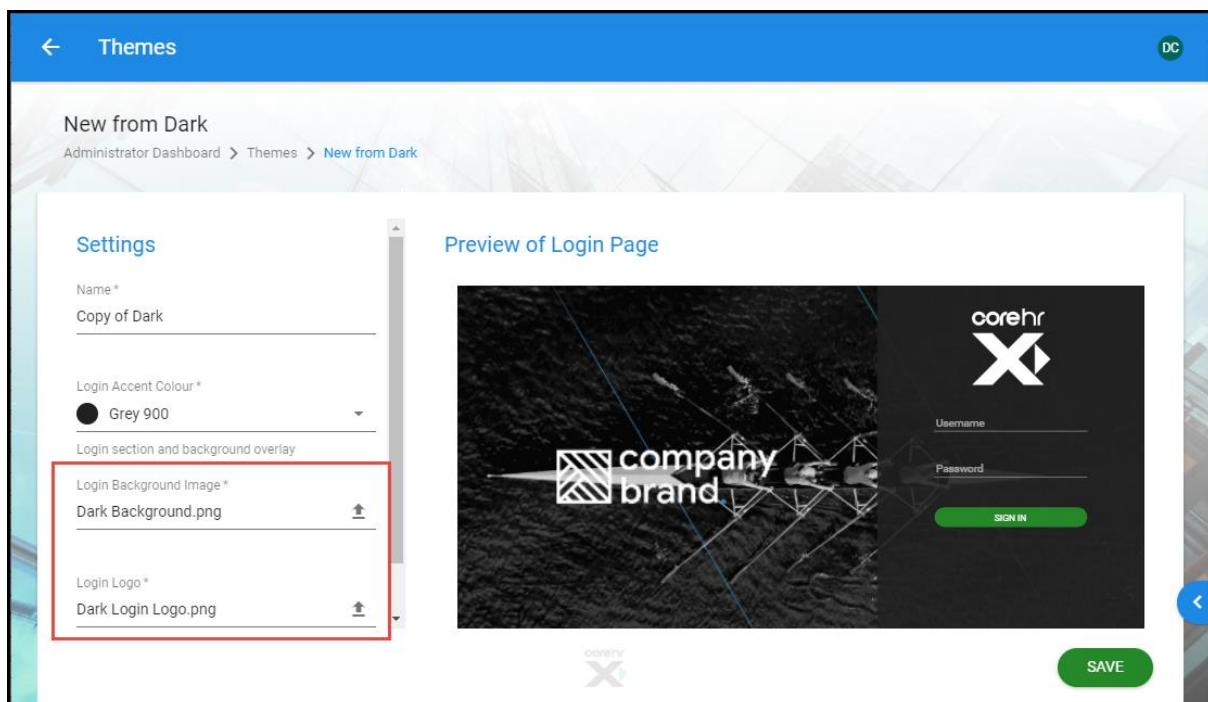

2. Click on the **Open** button corresponding to the *Themes* label on the *Site Manager* widget.

3. On the **Themes** screen, select the theme that the new logo needs to be applied to and click the  button.
4. Select the option **New From**.

5. The *New From Theme* screen opens

6. To upload a new *Login Background Image*:

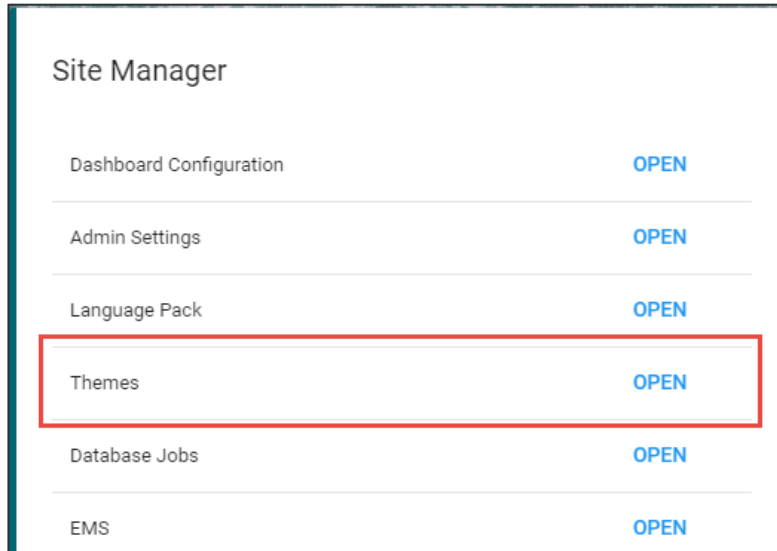

- Click the  button
- Browse for the required file or drag and drop it on to the upload window.
- Click **Ok**.

7. To upload a new *Login Logo*, repeat step 6.

8. To save all changes, click the **Save** button.

4. User Access to Themes

Users require the following 12 menu options in order to see and use the *Themes* option on the Site Manager widget i.e.

System	Menu Option
Web Services	Theme

Ensure that all 10 sub-menu items under “Theme” are enabled (these are enabled by default on selection of the main “Theme” menu option), so that users have full access to all tasks on the Themes screens i.e.

System	Menu Option
Web Services	Create
Web Services	Create assign
Web Services	Create default
Web Services	Create image
Web Services	Delete
Web Services	Delete assign
Web Services	Delete image
Web Services	Get
Web Services	Get themes
Web Services	Update

Ensure the additional menu option is also enabled.

System	Menu Option
Web Services	Get bytype
