| 3.0     | 15 <sup>th</sup> January 2020 | Brian O'Keeffe | Uploaded to People XD University |

# 1. Overview

## 1.1. The Purpose of the Document

The purpose of this document is to provide guidance to existing and upgrading customers on how to use the *Data Migration* functionality on People XD. This document also highlights the enhancements made in v28 (January 2021).

### **Note:**

This document does not cover the following:

- Completing *Data Migration Templates*; however, the section [Data Migration Template Helper Files](#) can be reviewed to learn how to download a helper file.
- The *Data Migration Update Facility Widget* which is used to update existing records. For further details, see the [Data Migration Update Facility](#) user guide.
- Configuring the *Data Migration Tool*. For further details, see the [Configuring the Data Migration Tool](#) user guide.

## 1.2. Overview of the Data Migration Tool

The *Data Migration Tool* uses both the *Data Migration Templates Widget* and *Data Migration Options Widget* to insert new records into People XD. The *Data Migration Process* is typically used when an organisation is initially implementing People XD.

This document covers the following areas:

- [How to locate the Data Migration Tool?](#)
- The *Data Migration Templates Widget*, including:
  - [The Data Migration Template Helper Files.](#)
  - [The Data Migration Templates.](#)
- The *Data Migration Options Widget*, including:
  - [Uploading Data Migration Files.](#)
  - [Edit an Uploaded Data Migration File.](#)
  - [Process the Uploaded Records.](#)
  - [Data Migration File Status.](#)
  - [Action Data Migration Files.](#)
- [The Data Migration File Upload Order and Prerequisite Configuration.](#)

### 1.3. What are the new V28 Data Migration Tool Enhancements?

Several new features have been introduced to the V28 Data Migration Tool (January 2021) to improve the user experience, these include:

- [Improved Security Options.](#)
- Bulk download Data Migration Helper and Template Files:
  - [Data Migration Helper Files.](#)
  - [Data Migration Template Files.](#)
- Upload Data Migration Template Files:
  - [Invalid Error Message on Template.](#)
- [Post Validation for People Management.](#)
- [Process the Uploaded Records](#), i.e. Background Processing.
- [Action Data Migration Files](#), i.e.
  - [Download Uploaded Data Migration Files.](#)
  - [Download Errors.](#)
  - [Unarchiving Data Migration Files.](#)
  - [Set Public/Private.](#)
  - [Cleardown Data Migration Files.](#)
- [The New and Enhanced Data Migration Template Files.](#)

### 1.4. Data Migrating Reference Data

Examples of *Reference Data* which can be migrated into People XD:

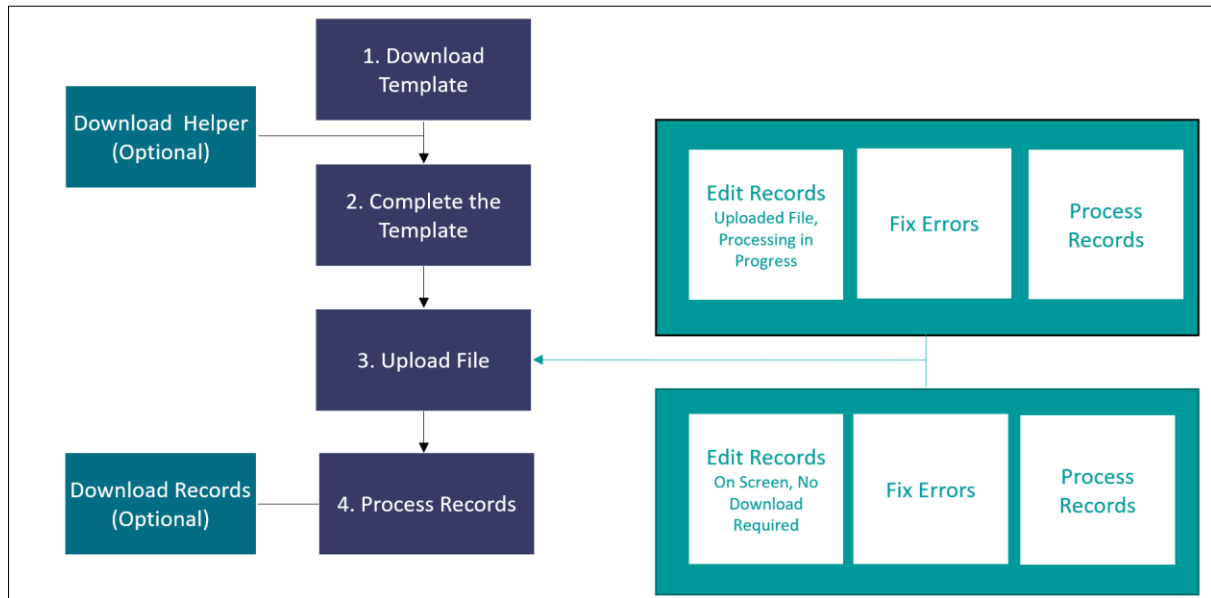

- Employees and their associated personal details.
- Contracts and their associated elements, including salary details.
- Occupational absences and payroll cumulative history.
- Selected reference data elements.

### 1.5. How Does the Data Migration Tool Work?

The *Data Migration Tool* provides a set of *Data Migration Templates*, which can be downloaded from XD and populated with system records. These files can then be uploaded into People XD. These records are then validated and processed so that the corresponding records are created on the system.

## 1.6. Overview of the Data Migration Process

The *Data Migration Process* on XD is completed in four main steps:

| # | Step                                  | Description                                                                                                                                                                                                                                                                 |
|---|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | <a href="#">Download Template</a>     | <ul style="list-style-type: none"> <li>Download the <i>Data Migration Template Files</i> from XD.</li> </ul>                                                                                                                                                                |
| 2 | <a href="#">Complete the Template</a> | <ul style="list-style-type: none"> <li>Open the <i>Data Migration Template File</i> in Excel.</li> <li>Update the <i>Data Migration Template</i> file with the required records.</li> <li>Save the <i>Data Migration Template File</i> as a CSV file.</li> </ul>            |
| 3 | <a href="#">Upload File to XD</a>     | <ul style="list-style-type: none"> <li>Upload the completed <i>Data Migration Template File</i> to XD.</li> </ul>                                                                                                                                                           |
| 4 | <a href="#">Process Records</a>       | <ul style="list-style-type: none"> <li>Update/edit records before <i>Processing</i>.</li> <li>Process each record in the <i>Data Migration File</i>.</li> <li>Resolve issues for any records that fail to load.</li> <li>Archive the <i>Data Migration File</i>.</li> </ul> |

### **Important Considerations:**

- Certain configuration must already be completed on XD before attempting to load a *Data Migration Template File*.
- The *Data Migration Process* requires the records to be supplied in a specific order and format. See section [Data Migration File Upload Order](#).
- Data Migration Template* files are provided to ensure that the records are supplied in an acceptable format for processing, see sections:
  - [The New and Enhanced Data Migration Template Files.](#)
  - [List of Other Data Migration Template Files.](#)

## 2. The Data Migration Tool

### 2.1. Overview

The *Data Migration Tool* consists of three *Data Migration Widgets*:

- [The Data Migration Templates Widget](#), including *Helper Files*.
- [The Data Migration Options Widget](#).
- The *Data Migration Update Widget*. For further details, see the [Data Migration Update Facility](#) user guide.

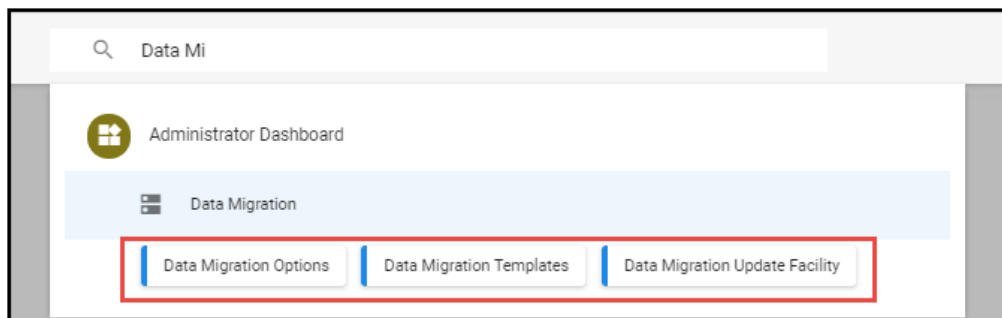

### 2.2. How to Locate the Data Migration Tool?

The three *Data Migration Widgets* are all available on the *Data Migration Tab* on the *Administrator Dashboard*.

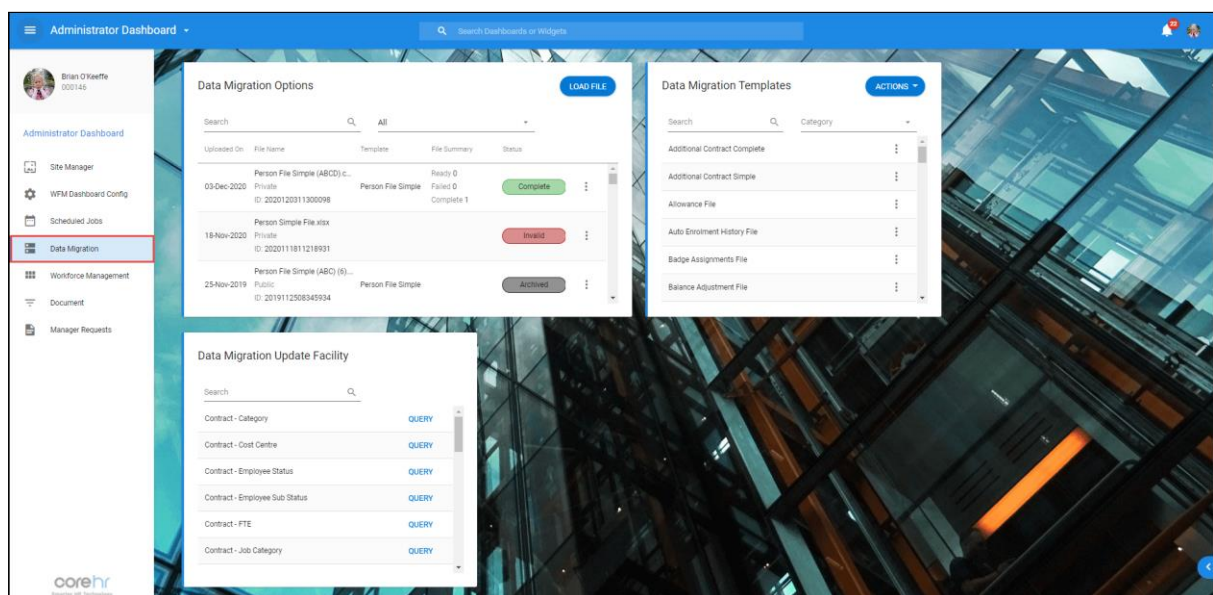

To access the *Data Migration Tool*:

1. Quick Jump to *Data Migration*.

The *Data Migration Widgets* display on the menu.

2. Click on any of these to jump straight to the corresponding widgets.

| Widget Name                    | Description                                                                                                                                                                     |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Data Migration Templates       | Use this widget to download <i>Data Migration Templates</i> and <i>Helper Files</i> .                                                                                           |
| Data Migration Options         | Use this widget to upload and process <i>Data Migration Template Files</i> .                                                                                                    |
| Data Migration Update Facility | Use this widget to bulk update selected employee, contract and reference data elements. For further details, see the <a href="#">Data Migration Update Facility</a> user guide. |

### 2.3. Improved Security Options

By default, the visibility of new *Data Migration Files* uploaded to the *Data Migration Tool* is restricted to the user who uploaded the *Data Migration File*. This restriction protects the confidentiality of the data. Data cannot be viewed or processed by other Data Migration users.

#### **Notes:**

- If required, the user can make their *Data Migration File* public. This means that the *Data Migration File*, including its contents, can be viewed by all Data Migration users.
- Existing *Data Migration Files*, uploaded before these V28 enhancements (January 2021), continue to be public. The owner of the *Data Migration File*, or a super user, can make the *Data Migration File* private.

#### 2.3.1. User Level Security

Menu option security controls users ability to complete the following tasks.

- View private files.
- Downloading files.
- Download errors.
- Unarchive files.

For further details, see the [Configuring the Data Migration Tool](#) user guide.

### 2.4. Template Level Security

Template level menu option security controls users ability to::

- Ability to *Process* a specific Data Migration File Template, i.e. get the data into XD.
- Ability to *Cleardown* a specific Data Migration File Template, i.e. delete the data out of XD.

For example, a user can be given permissions to process/cleardown *WFM Data Migration Files* without getting access to process/cleardown *People Management Data Migration Files*. For further details, see the [Configuring the Data Migration Tool](#) user guide.

## 3. The Data Migration Templates Widget

### 3.1. Overview

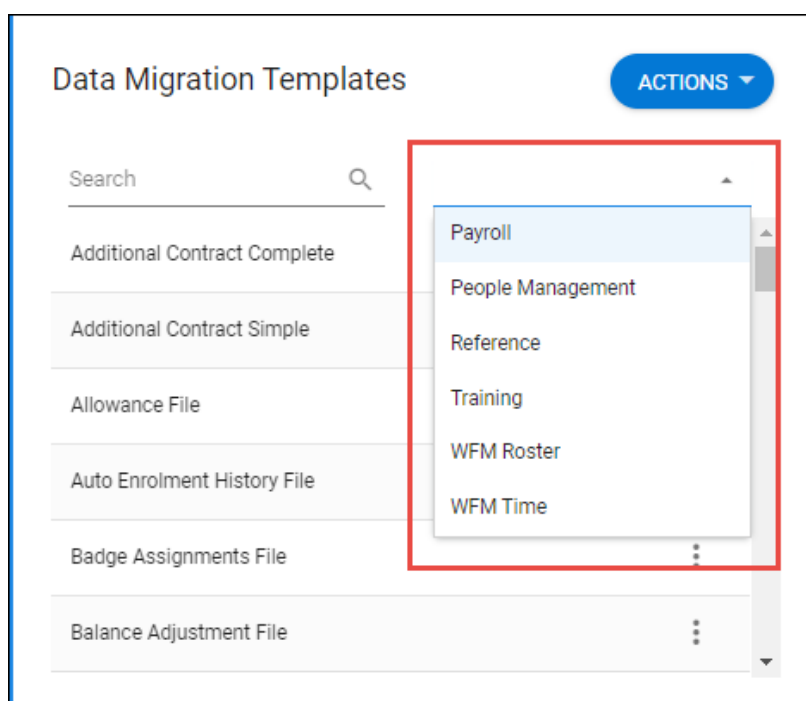

The *Data Migration Templates Files* and *Helpers Files* can be downloaded via the *Data Migration Templates Widget*:

| No. | Name                          | Description                                                                                                                                                                                                                                                                              |
|-----|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1   | Data Migration Template Files | Populate these Template Files with records to be uploaded to People XD. Each template must be completed in MS Excel, saved as a .CSV file and uploaded to People XD.                                                                                                                     |
| 2   | Data Migration Helper Files   | These Excel files provide additional information about how to complete the corresponding <i>Data Migration Template File</i> . This includes what fields are mandatory, the expected data types, and examples of the expected data input per column. These files are for reference only. |

### 3.2. Finding Data Migration Templates and Helper Files

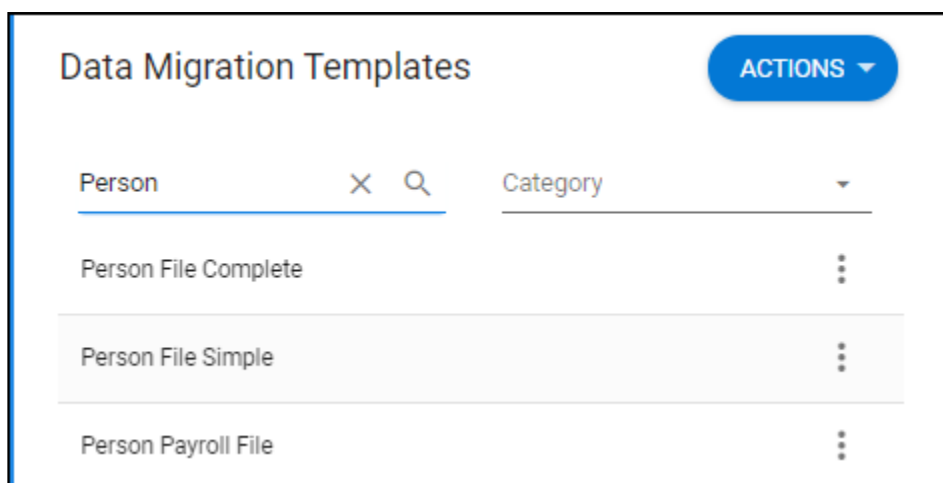

#### 3.2.1. Search by Categories for Helper Files and Templates

The *Data Migration Template Widget* includes the option to filter *Template Files* by *Category*. This enables you to filter the list of *Template Files* by module, e.g. "Payroll."

### 3.2.2. Search by Name for Helper Files and Templates

You can search the *Data Migration Template Widget* by name for the various *Templates* and *Helper Files*.

## 3.3. The Data Migration Template Helper Files

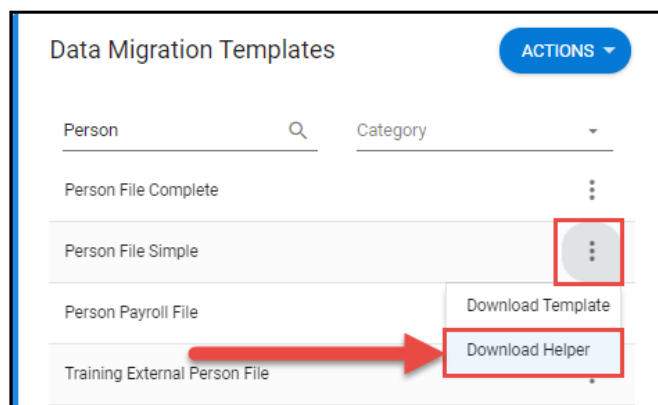

### 3.3.1. Overview

Download the *Data Migration Helpers Files* via the *Data Migration Templates Widget*. These Excel files provide additional information about completing the corresponding *Data Migration Template* file. The *Helpers Files* identify what fields are mandatory, the expected data type, and examples of the data input expected per column. These files are for reference only.

### 3.3.2. Download a Data Migration Helper File

To download a *Data Migration Helper File*, follow the below steps:

1. Click the  button that corresponds to the *Data Migration Helper File* selected to download.
2. Select **Download Helper**.

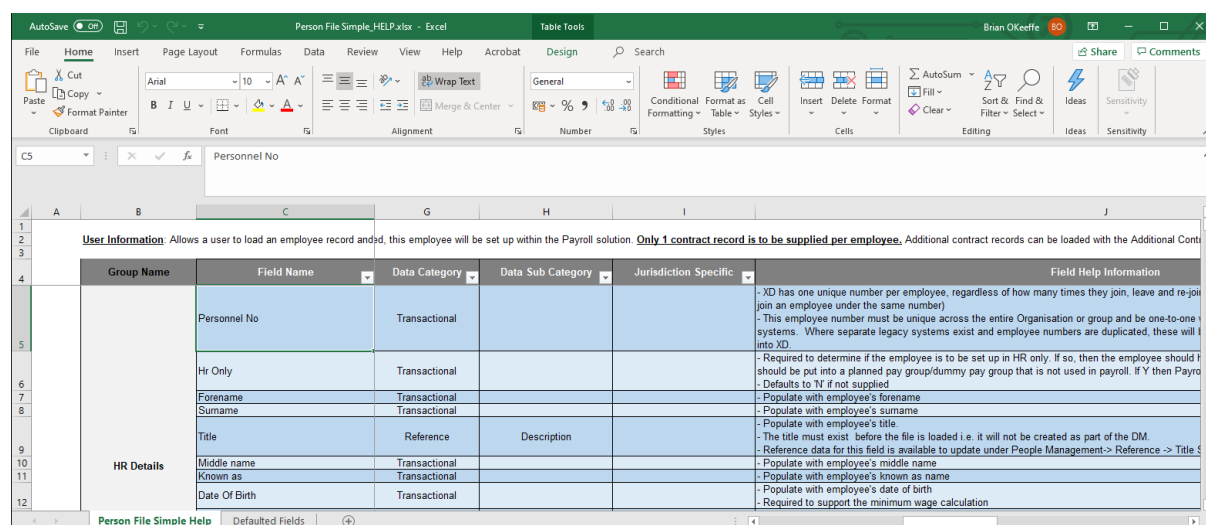

## Data Migration V28: Data Migration Tool - User Guide

3. The *Helper File* downloads as per your browser settings.
4. The *Helper File* downloads as a zipped file. Open this and extract the excel file.

The *Helper File* opens in Excel in an .XLSX format.

Each *Helper File* includes two tabs:

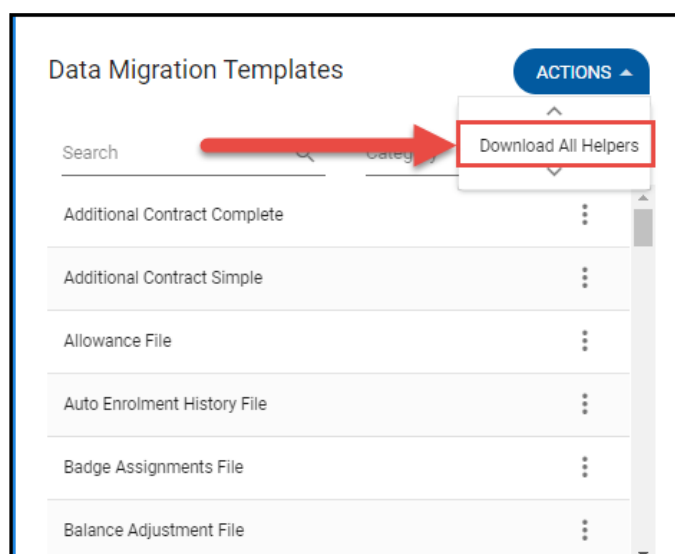

- **Template Help:** Guidance on populating each column in the template, including data type, field size, and useful hints.
- **Defaulted Fields:** If any elements of the employee / contract / reference data records which are defaulted, these are listed here. Not all *Data Migration Helper Files* include a Defaults Tab.

### 3.3.3. Bulk Download Data Migration Helper Files

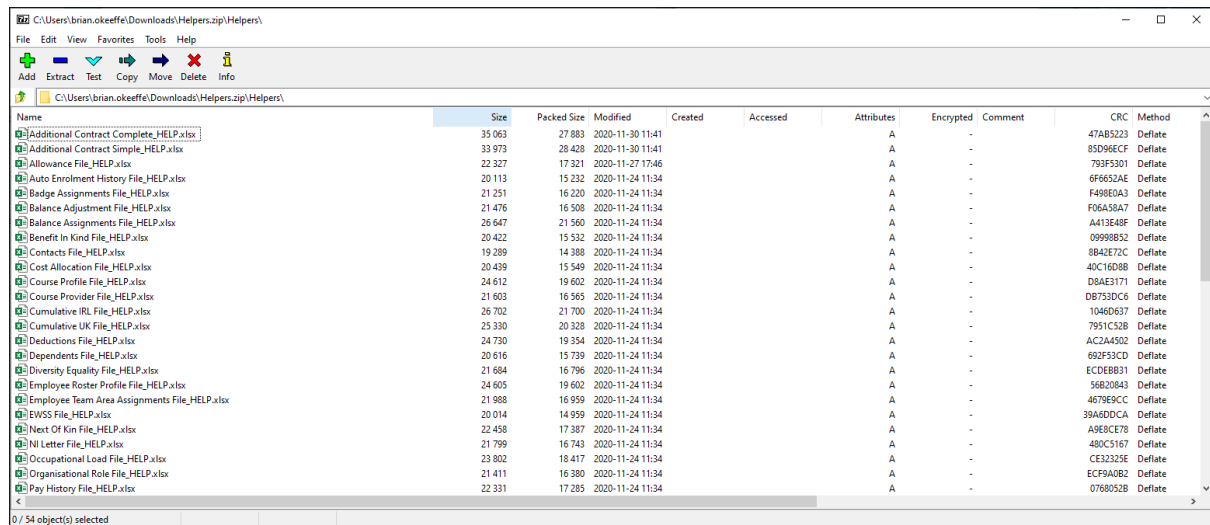

To download all *Data Migration Helper Files*, follow the below steps.

1. Click **Actions**.
2. Select *Download All Helpers*.

The helper files download in a zip file.

3. Extract the files to save them to your preferred location.

| Name                                          | Size   | Packed Size | Modified         | Created | Accessed | Attributes | Encrypted | Comment | CRC       | Method  |
|-----------------------------------------------|--------|-------------|------------------|---------|----------|------------|-----------|---------|-----------|---------|

### Note:

The *Download All Helper* option downloads the *Helper Files* from all *Modules*, regardless of the *Category* selected in the drop-down *Category* menu.

### 3.3.4. Defaulted Fields and Reference Data Generation

#### Reference Data Generation

In most of the *Data Migration Template Files*, the records to be uploaded require reference data items to be provided, e.g. if uploading the *Cost Allocation File*, the *Cost Centre Code* and *Cost Centre Description* are required.

If the reference data has already been configured on XD, then only the code is required. It is not necessary to provide the description. However, it is possible to define reference data elements in the *Data Migration File* that have not yet been configured on XD. If this occurs, the *Data Migration Process* automatically creates the reference data item on XD.

### Note:

Where a template allows for reference data items to be automatically created, this will be clearly explained in the corresponding *Helper File*.

The reference data is generated depending on the data supplied in the *Data Migration File* and the reference data already created. This is detailed in the corresponding *Helper File*. See an extract below from the *Helper File* for the *Cost Allocation File*:

| Field                   | Description                                                                                                                                                                                                                                                                                                                            |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Cost Centre Code        | Populate with the cost centre code if applicable <ul style="list-style-type: none"> <li>The reference data for this needs to exist if only the cost centre code is populated, i.e. it will not create reference data.</li> <li>The reference data will be created if both the cost centre code and description is provided.</li> </ul> |
| Cost Centre Description | Populate with the cost centre description if applicable <ul style="list-style-type: none"> <li>The reference data is created if only the cost centre description is provided.</li> <li>The reference data is created if both the cost centre code and description is provided.</li> </ul>                                              |

### Defaulted Fields

When populating *Data Migration Template Files*, specific fields have been excluded from the *Data Migration Template File* and are automatically set to a default value on upload.

Where this occurs, this will be clearly explained in the corresponding *Helper File* on the 'Defaulted Fields' tab.

This is logically applied as to what default value is set, e.g.

- This may be a common value for all records.
- or
- This may be set to a specific value based on other details supplied for the record.

#### **Note:**

Where data is defaulted for employee / contract / reference records created, this is clearly explained in the corresponding Helper File.

## 3.4. The Data Migration Templates

### 3.4.1. Overview

You can download *Data Migration Template Files* from the *Data Migration Templates Widget*. Once downloaded, populate the *Data Migration Template Files* with records to upload to People XD. Complete each *Data Migration Template* in MS Excel, saved as a CSV file, and then uploaded to XD.

#### **Note:**

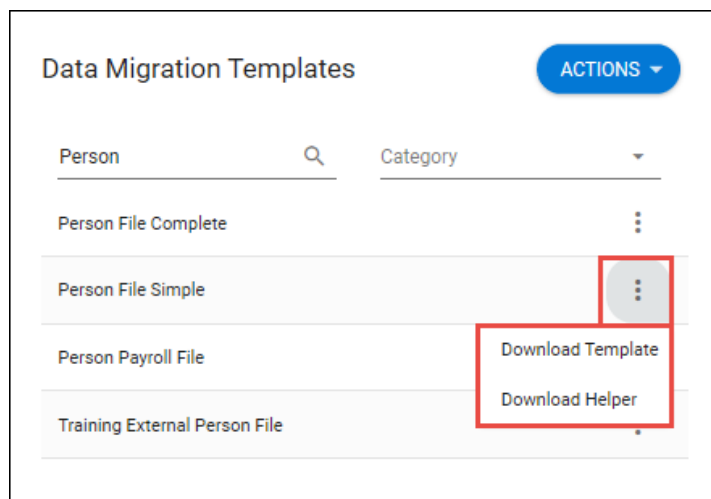

For a full list of *Data Migration Template Files*, see the following sections:

- [The New and Enhanced Data Migration Template Files.](#)
- [List of Other Data Migration Template Files.](#)

### 3.4.2. Download a Data Migration Template File

To access and download *Data Migration Template Files*:

1. Use the *Search Field* to search for the required *Data Migration Template File* by name or use the scroll bar.
2. Select  next to the *Data Migration Template File* you want to download.

3. Select **Download Template**.

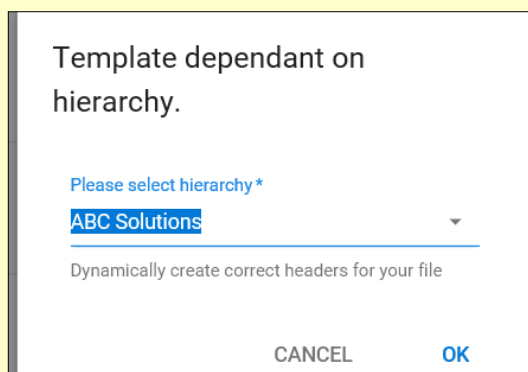

The *Data Migration Template File* downloads per your browser settings.

#### **Note:**

If downloading a contracts type template (e.g. *Person File Complete*, *Person File Simple*), the following prompt appears.

- a. Select the hierarchy against which that the contracts will be uploaded.
- b. Click **OK**.

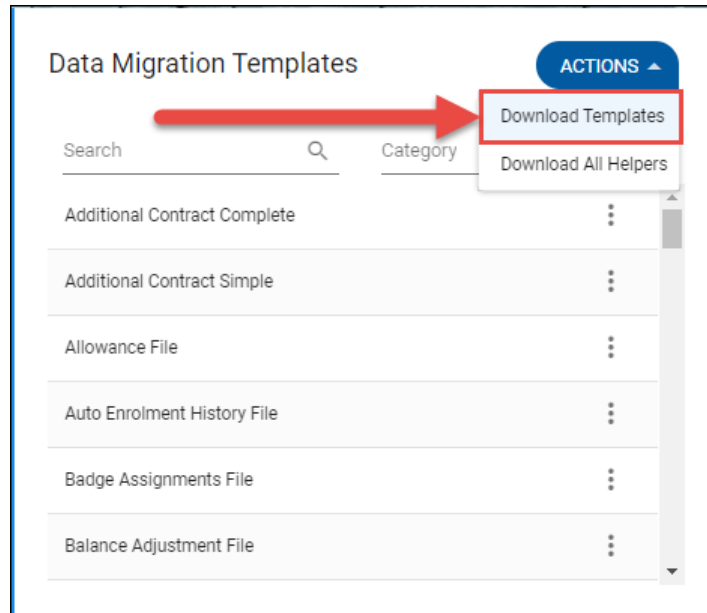

### 3.4.3. Bulk Download Data Migration Template Files

#### Download all Data Migration Template Files

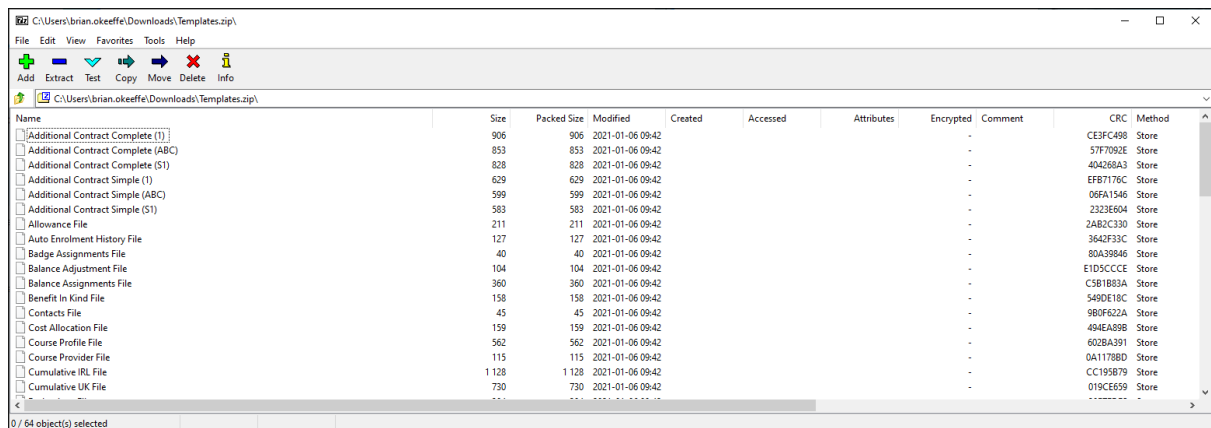

To download all *Data Migration Template Files*, follow the below steps:

1. Click **Actions**.
2. Select *Download Templates*.

The *Data Migration Template Files* download in a zipped file.

3. Extract the files to save them to your preferred location.

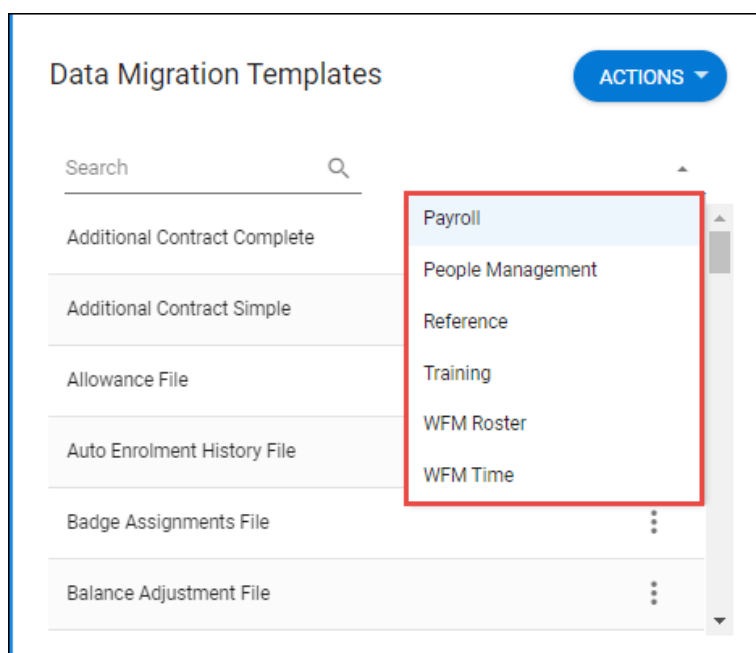

#### **Note:**

To download all *Data Migration Template Files*, ensure that no *Category* is selected in the drop-down *Category* menu.

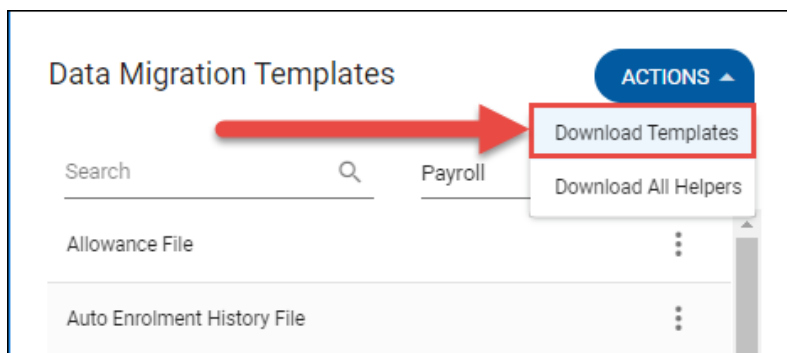

### Download Data Migration Template Files by Module

To download *Data Migration Template Files* by module:

1. Select a module from the drop-down Category menu, e.g. Payroll.

2. Click **Actions**.
3. Select *Download Templates*.

The *Data Migration Template Files* download in a zipped file.

4. Extract the files to save them to your preferred location.

### 3.4.4. Open Data Migration Template in MS Excel

1. Open the template in MS Excel.
  - a. Open MS Excel.
  - b. Browse to open the downloaded *Data Migration Template File*.

Excel defaults to search for ".xls" type files. Ensure that the file type is updated to "All Files" so that the downloaded template appears.

- c. Use the 3-step *Import Wizard* to import the *Data Migration Template File* in the required format correctly.
  - i. On step 1, ensure that the file type = *Delimited*:

Text Import Wizard - Step 1 of 3

The Text Wizard has determined that your data is Fixed Width.  
If this is correct, choose Next, or choose the data type that best describes your data.

Original data type

Choose the file type that best describes your data:

☒ **Delimited** - Characters such as commas or tabs separate each field.

☐ Fixed width - Fields are aligned in columns with spaces between each field.

Start import at row: 1 File origin: 437: OEM United States

☐ My data has headers.

Preview of file C:\Users\deirdre.loneragan\Downloads\Person File Simple (ABC).

|   |                                                                            |
|---|----------------------------------------------------------------------------|
| 1 | Person File Simple (ABC)                                                   |
| 2 | Personnel No Hr Only Forename Surname Date Of Birth Gender Social Security |
| 3 |                                                                            |
| 4 |                                                                            |
| 5 |                                                                            |

Buttons: Cancel, < Back, Next >, Finish

- ii. On step 2, select **Other** and enter "|" (pipe character).

Text Import Wizard - Step 2 of 3

This screen lets you set the delimiters your data contains. You can see how your text is affected in the preview below.

Delimiters

☐ Tab

☐ Semicolon

☐ Comma

☐ Space

☒ **Other:** |

☐ Treat consecutive delimiters as one

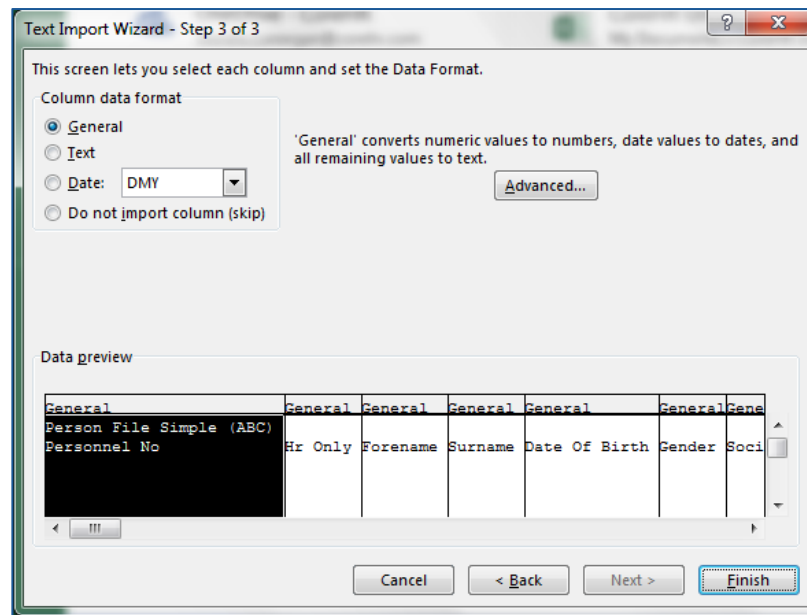

Text qualifier: "

Data preview

|                          |              |         |          |         |               |        |                 |
|--------------------------|--------------|---------|----------|---------|---------------|--------|-----------------|
| Person File Simple (ABC) | Personnel No | Hr Only | Forename | Surname | Date Of Birth | Gender | Social Security |
|--------------------------|--------------|---------|----------|---------|---------------|--------|-----------------|

Buttons: Cancel, < Back, Next >, Finish

- iii. On step 3, no further action is required. Default settings can be applied.

- iv. Click **Finish**.

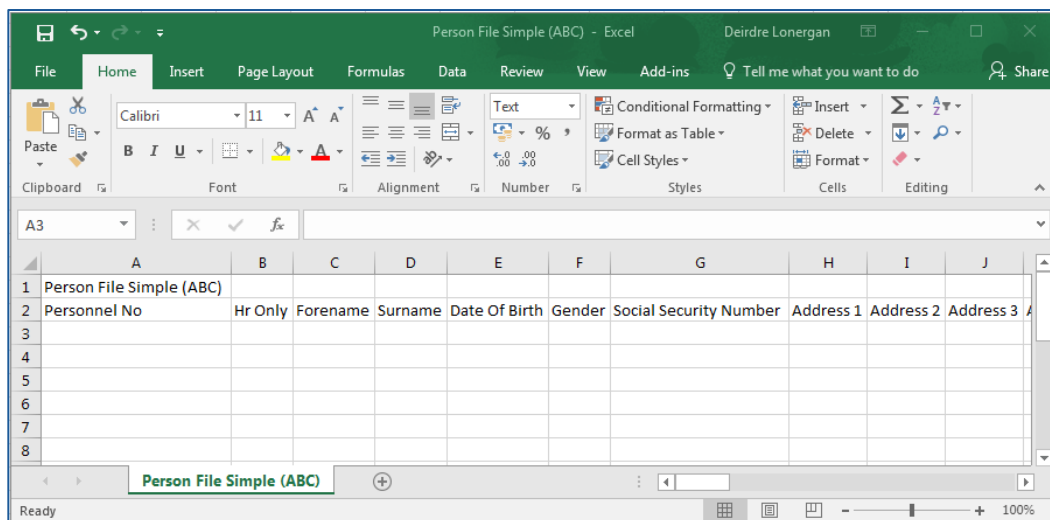

- d. The template should open with two rows:

- i. Row 1 = Template Name.
- ii. Row 2 = Individual Columns for each data element.

### **Note:**

Do not update the first two rows of the template. These rows are critical to the upload process. Any changes to these 2 rows will result in an error when attempting to upload the file to XD.

- **Row 1:** The template type, e.g. "Person File Simple (*hierarchy name*)".
- **Row 2:** These are the column headers. During upload, the system maps these to the required element. The system uses the column headers to understand what template file is being uploaded.

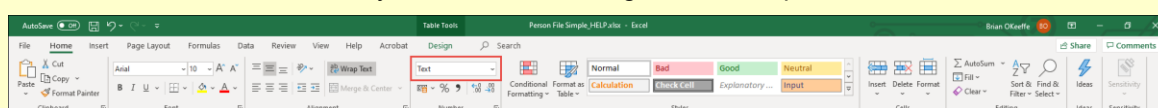

### 3.4.5. Complete the Data Migration Template

Add the required records to the *Data Migration Template File*. Each row of the *Data Migration Template File* represents an individual record, e.g. an employee, a contract etc. Refer to [The Data Migration Template Helper File](#) for guidance on how to complete each record.

#### **Note:**

- It is recommended to select all columns and update the type from “General” to “Text.”
- This ensures that any data fields that require a leading zero are not be automatically updated by MS Excel. For example, if this update isn’t applied and a *Personnel Number* of “000321” is entered, Excel automatically removes the leading zeros and update the data to “321.”

### 3.4.6. Export Completed Template as .CVS file format.

To export a completed *Data Migration Template File* in Excel:

1. Ensure your computer is configured to use the Pipe "|" as a List Delimiter before exporting as CSV. See the section [Configure PC Settings to use Pipe List Separator](#).
2. In Excel, go to *File > Save As*.
3. Export the *Data Migration Template File* in a .CVS format.

#### **Note:**

- Only a .CSV file format that is recognised when uploading.
- It is important to save the file using the *File > Save As* option and selecting .CSV file type each time the file is amended. This ensures the file saves in the correct format.
- The name of the file is not important. The file can be saved using any name required. The system identifies the file using the template name in row 1.

### Using Pipe "|" Delimiter for CSV Files

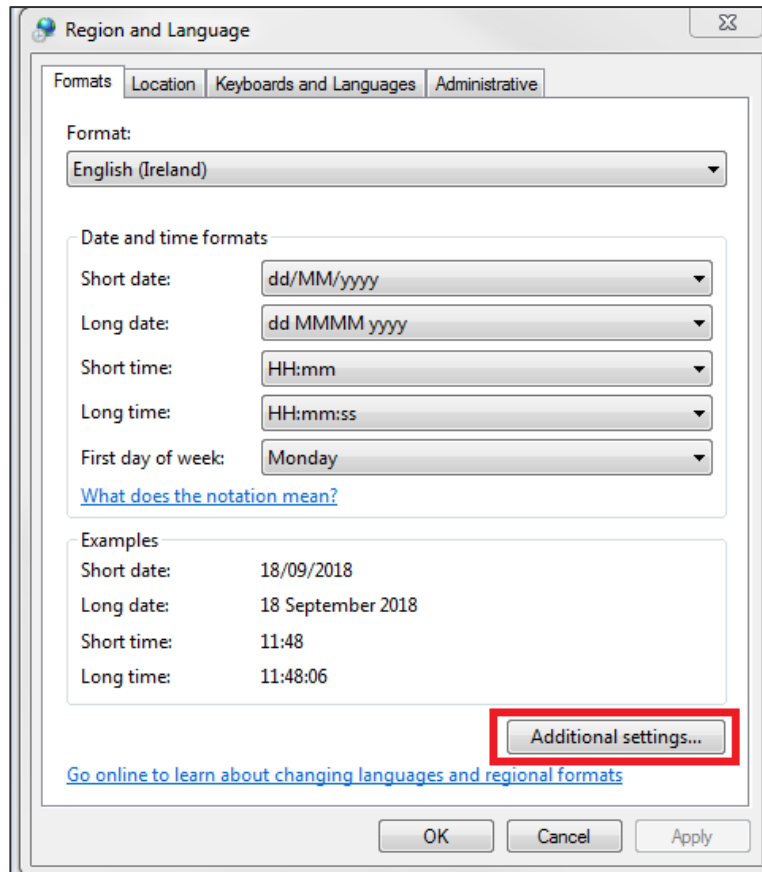

The *Data Migration Tool* uses *Pipe Delimited* CSV files only. Files uploaded to the *Data Migration Tool* must be *Pipe Delimited*. It is essential to configure your PC to create CSV files using the "|" separator and not a comma. If not done, the *Data Migration Tool* does not recognise the *Data Migration Template File*, and it will fail to upload.

### Configure PC Settings to use Pipe List Separator

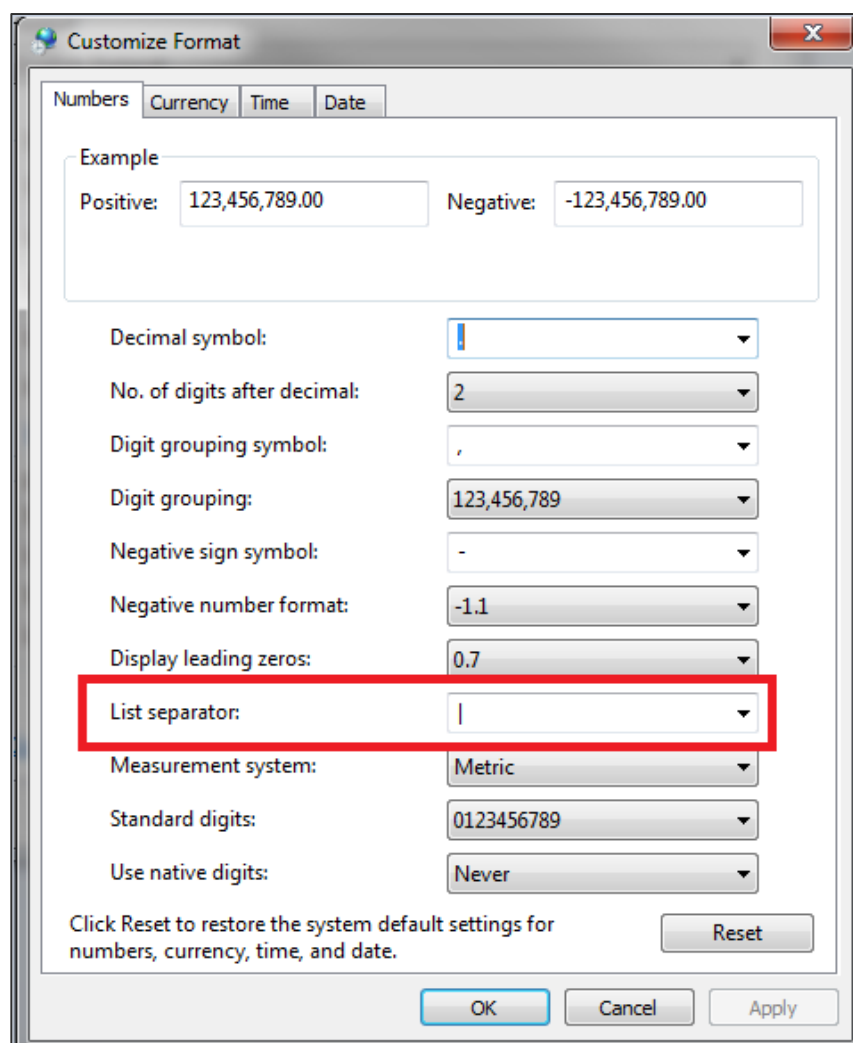

This is a once-off step to configure your computer's settings to ensure that the "|" character is used as a list separator when you create a CSV file.

To check and update the List Separator setting on your PC:

1. Open the *Control Panel*.
2. Open *Region and Language*.
3. Click the **Additional Settings** button.

4. Find the *List Separator* field and update this to "|", i.e. pipe.  
If the "|" is already there, no action is required.

5. Click **Apply**.
6. Click **OK**.
7. Click **OK**.
8. Exit the Control Panel.

## 4. Data Migration File Upload Process

### 4.1. Prerequisite Configuration

The following configuration must first be completed on XD before uploading *Data Migration Files*:

| # | Prerequisite Configuration   | Why?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|---|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | Org Structure Levels Defined | <p>The Org Structure is linked to the employees' contracts.</p> <ul style="list-style-type: none"> <li>This must be configured before any employee records can be loaded using the <i>Person File Simple</i> or <i>Person File Complete</i> file templates.</li> <li>When downloading a template, the Org Structure must be provided so that the template directly reflects the Org Structure elements and linked hierarchy that has been defined.</li> <li>The hierarchy does not have to be defined on XD. | 7 | UDFs                               | If loading UDF records for an employee / contract, the corresponding <i>User Defined Object</i> needs to be set up on XD first. These will not be created automatically during the upload process.                                                                                                                                                       |

#### 4.2. Data Migration File Upload Order

Once all prerequisite configuration has been completed, it is possible to start uploading the *Data Migration Files*. Files should be uploaded in a specified order. Many *Data Migration Files* depend on records to have been created during an earlier load, e.g. the employee records need to be uploaded so that other files can be loaded for these employees.

| Order | Template Name                                             | Why?                                                                                                                             |
|-------|-----------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| 1     | Position Rate Details                                     | Should be loaded first if the customer is using pay scales. Ensures reference data is available to assign to an employee record. |
|       | Pay Scale Point                                           | Should be loaded first if the customer is using pay scales. Ensures reference data is available to assign to an employee record. |
|       | Shift Types                                               | Should be loaded before <i>Work Group</i> file, <i>Shift Types</i> can be specified on <i>Work Group</i> records.                |
|       | Work Groups                                               | Ensures reference data is available to assign to an employee record.                                                             |
| 2     | Person File Simple / Person File Complete                 | It creates the employee records and substantive contracts and sets them up on Payroll (if a payroll employee).                   |
|       | Additional Contract Simple / Additional Contract Complete | It creates any additional non-substantive contracts for an employee.                                                             |

| Order | Template Name                         | Why?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       |                                       | <p>Upload additional contracts for employees. Includes Post Validation, the file now validates the information in the file against the locked/linked levels specified on the post profile definition.</p> <div>  <b>Note:</b> <ul style="list-style-type: none"> <li>This complete version includes columns for both code and description for all reference data elements.</li> <li>This should not be used to load an employee's substantive contract (catered for in the Person Simple file or Person Complete File).</li> <li>Many fields are defaulted on upload. See helper file for full list.</li> </ul> </div> |
|       | Cumulative IRL AND Cumulative UK file | Employee cumulative / year to date figures for payroll calculations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| 3     | NI Letter History                     | Only applicable to the UK.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 4     | Pay History                           | Optional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|       | Qualifications                        | n/a                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

### 4.3. Post Validation for People Management

The *Person* and *Additional Contract Data Migration Files* now validate the information against the locked/linked levels specified on the *Post Profile Definition*. This helps maintain the integrity of the data loaded into XD.

#### **Example:**

If a *Post Profile* is locked to a *Department*, and a different *Department* is specified on the *Person File*, then the record fails validation.

| Active | Effective Date | Post Number | Post Title |
|--------|----------------|-------------|------------|
| Active | 01-Apr-2017    | 502248      | Operations |

|                            |                 |                 |
|----------------------------|-----------------|-----------------|
| Organisational Structure   | Structure *     | Abc Solutions   |
| Post Details               | Company *       | Abc Solutions   |
| Cost Allocations           | Division        | Shared Services |
| Pension Schemes            | Management Unit | Human Resources |
| FTE Maintenance            | Department      | HR3 - Training  |
| View Appointments          | Cost Centre     | Cost Centre ▼   |
| Terms And Conditions       | Location        | Location ▼      |
| Certificate Of Sponsorship | Work Group      | Work Group ▼    |

The *Person File* can overwrite other levels against the *Post Profile*, so validation will not apply.

#### **Example 2:**

The *Company* and *Management Unit* are locked/linked levels on the *Post Profile Definition*, and the *Person File* specifies the *Company*, the *Management Unit* and the *Location*.

- The *Person File* fails if the *Company* or *Management Unit* do not match the *Company* or *Management Unit* on the *Post Profile Definition*.
- However, if the *Company* or *Management Unit* on the *Person File* does match, and the *Location* does not match the *Location* on the *Post Profile Definition* – No error generates, the *Person File* creates the employee with the *Location* specified.

## 5.

## 5. The Data Migration Options Widget

### 5.1. Overview

The *Data Migration Options Widget* displays all *Data Migration Templates* files. The widget displays files previously uploaded, files in the process of being uploaded, and files you attempted to upload but have the incorrect file format.

The *Data Migration Options Widget* is used to complete the following tasks:

- [Review of Data Migration History.](#)
- [Check Data Migration File Status.](#)
- [Upload Data Migration Files.](#)
- [Edit an Uploaded Data Migration File.](#)
- [Process the Uploaded Records.](#)
- [Resolve/Ignore Errors in Records.](#)
- [Action Data Migration Files](#), i.e.
  - [Download Uploaded Data Migration Files.](#)
  - [Download Errors.](#)
  - [Archiving Data Migration Files.](#)
  - [Unarchiving Data Migration Files.](#)
  - [Set Public/Private.](#)
  - [Cleardown Data Migration Files.](#)

#### 5.1.1. The Data Migration Options Widget Columns

The *Data Migration Options Widget* contains the following columns:

| Data Migration Options |                                                                   |                    |                                   |            | LOAD FILE |
|------------------------|-------------------------------------------------------------------|--------------------|-----------------------------------|------------|-----------|
| Search                 |                                                                   | Open               |                                   |            |           |
| Uploaded On            | File Name                                                         | Template           | File Summary                      | Status     |           |

### 5.1.3. Review of Data Migration History

The *Data Migration Options Widget* provides a full list of all *Data Migration Files* uploaded to XD, including the [Data Migration File Status](#). For files that are "Complete" or "Cleared Down" it is not possible to view the actual records.

Details displayed are the:

- Uploaded On (date).
- File Name.
- Template.
- File Summary (New to v28).
- Status.

The screenshot shows the 'Data Migration Options' interface. It features a search bar, a 'LOAD FILE' button, and a table with the following data:

| Uploaded On | File Name                            | Template           | File Summary                      | Status     |
|-------------|--------------------------------------|--------------------|-----------------------------------|------------|
| 26-Aug-2020 | Person File Simple (7265)<br>Private | Person File Simple | Ready 4<br>Failed 0<br>Complete 0 | Processing |
| 26-Aug-2020 | Person File Simple (7265)<br>Private | Person File Simple | Ready 0<br>Failed 0<br>Complete 4 | Complete   |
| 25-Aug-2020 | Person File Simple (7265)<br>Private |                    |                                   | Invalid    |

5.1.4. Data Migration File Status

The *Data Migration Options Widget* displays the current *Status* of each of the *Data Migration Files*.

| Data Migration Options |                                                                  |                    |                                    |            | LOAD FILE |
|------------------------|------------------------------------------------------------------|--------------------|------------------------------------|------------|-----------|
| Search                 | Open                                                             |                    |                                    |            |           |
| Uploaded On            | File Name                                                        | Template           | File Summary                       | Status     |           |
| 04-Dec-2020            | Person File Simple (1234).csv<br>Private<br>ID: 2020120411312546 | Person File Simple | Ready 0<br>Failed 0<br>Complete 2  | Complete   | ⋮         |
| 04-Dec-2020            | Person File Simple (123).csv<br>Private<br>ID: 2020120411312522  | Person File Simple | Ready 1<br>Failed 0<br>Complete 1  | Processing | ⋮         |

| Status       | Description                                                                                                                                                                                                                        |
|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Open         | The uploaded files are pre-filtered by default to display 'Open' files. Open files are files with a status of 'Ready', 'In-Progress', 'Failed', 'Complete', 'Processing', 'Uploading', 'Invalid' or 'Error'.                       |
| All          | This option displays all uploaded files, including files which have been <i>Cleared Down</i> or <i>Archived</i> .                                                                                                                  |
| Archived     | The <i>Data Migration File</i> has been archived by a system user. The file may be unarchived by a super user with the correct security permissions.                                                                               |
| Cleared Down | The <i>Data Migration File</i> has been cleared down from People XD. The contents of this file can no longer be accessed, but a record of <i>Data Migration File</i> upload retained on the <i>Data Migrations Option Widget</i> . |
| Complete     | Every record in the uploaded <i>Data Migration File</i> is processed. Applicable record status = Complete.                                                                                                                         |
| Error        | An unexpected <i>Error</i> occurred when the <i>Data Migration File</i> was processed; contact a People XD consultant or customer support for assistance. Applicable record status = Ready.                                        |
| Failed       | The <i>Data Migration File</i> has been partially processed, but at least one record has failed. Applicable record status = Ready, Complete, Failed.                                                                               |
| Ready        | The <i>Data Migration File</i> is ready to process. The <i>Status</i> of every single record in the <i>Data Migration File</i> is set to 'Ready'.                                                                                  |

| Status           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| In Progress      | <p>The <i>Data Migration File</i> has been uploaded to XD and is currently being processed. Not all records have been data migrated, i.e. some or all records are still "Ready." Applicable record status = Ready, Complete.</p> <p>The <i>Data Migration File</i> will remain in this <i>Status</i> until all records have been processed, i.e.</p> <ul style="list-style-type: none"> <li>Complete: All records are "Complete."</li> <li>Failed: One or more records have "Failed."</li> </ul> |
| Invalid          | The uploaded <i>Data Migration File</i> has an unrecognised template, or an invalid line or character is in the <i>Data Migration File</i> .                                                                                                                                                                                                                                                                                                                                                     |
| Processing (New) | The uploaded <i>Data Migration File</i> contains records which are still being processed. For example, the user opted to 'Process All Records', which takes time to run. Once finished, the <i>Status</i> updates to 'Complete' or 'Failed.' Applicable record status = Ready, Complete, Failed.                                                                                                                                                                                                 |
| Ready            | The uploaded <i>Data Migration File</i> is ready to be processed, but <i>Processing</i> is not started.                                                                                                                                                                                                                                                                                                                                                                                          |
| Uploading        | The <i>Data Migration file</i> is still uploading and is not yet ready to be processed. Once this step is finished the <i>Status</i> of the <i>Data Migration File</i> will change to 'Ready'.                                                                                                                                                                                                                                                                                                   |
| Complete         | Every record has been processed, and the <i>Data Migration process</i> is 'Complete.'                                                                                                                                                                                                                                                                                                                                                                                                            |

## 5.2. Upload Data Migration Files

Complete the following steps to upload a completed *Data Migration Template File* to XD:

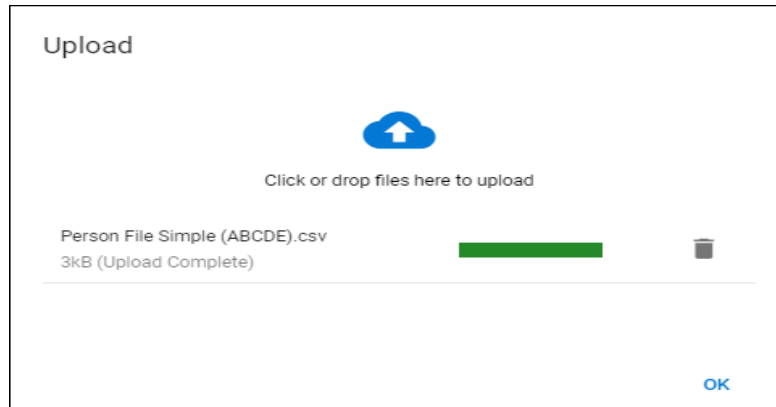

1. On the *Data Migration Options* widget, click **Load File**.

The screenshot shows the 'Data Migration Options' widget. At the top right, there is a blue button labeled 'LOAD FILE' which is highlighted with a red rectangle and a red arrow pointing to it. Below the button is a table with columns: 'Uploaded On', 'File Name', 'Template', 'File Summary', and 'Status'. The table contains three rows of data:

| Uploaded On | File Name                                                          | Template           | File Summary                      | Status      |
|-------------|--------------------------------------------------------------------|--------------------|-----------------------------------|-------------|
| 03-Dec-2020 | Person File Simple (ABCD).c...<br>Private<br>ID: 2020120311300098  | Person File Simple | Ready 0<br>Failed 0<br>Complete 1 | Complete    |
| 18-Nov-2020 | Person Simple File.xlsx<br>Private<br>ID: 2020111811218931         |                    |                                   | Invalid     |
| 25-Nov-2019 | Person File Simple (ABC) (6)....<br>Public<br>ID: 2019112508344844 | Person File Simple |                                   | In Progress |

2. In the *Upload* screen either:
  - a. Drag and drop the completed *Data Migration Template File*.OR
  - b. Browse for the completed *Data Migration Template File*.

3. Click **OK**.
4. Once uploaded, the *Processing* screen appears with the contents of the uploaded *Data Migration File*. All records will have an initial status of "Ready."

### **Note:**

If the *Data Migration File* has **less than 300 records**, then the *File Detail/Edit* screen displays as soon as the *Data Migration File* finishes loading. Suppose you close out of the *File Detail/Edit* screen without processing any records. In that case, the *Data Migration File Status* in the *Data Migration Options Widget* will be 'Ready.'

If the *Data Migration File* size is greater **than the 300 records**, to avoid People XD timing out when a file is uploaded, the user is redirected back to the *Data Migration Options Widget*.

Note the following:

- The *Data Migration File* displays on the *Data Migration Options Widget* with a status of 'Uploading.' It is not possible to interact with a file when the Status is 'Uploading.'
- Once XD has finished uploading/parsing the *Data Migration File*, the *Data Migration File* status changes to 'Ready.'
- When the Status of the file changes to 'Ready,' the *Data Migration* user can open the *File Detail/Edit* screen by selecting 'Edit' in the file menu.

If the file process returns with an *invalid error message*, there may be a formatting issue or an incorrect template. See section [Invalid Error Message on Template](#).

## Data Migration V28: Data Migration Tool - User Guide

Administrator Dashboard

Person File Simple

Open

| Uploaded On | File Name                                                         | Template           | File Summary                       | Status |
|-------------|-------------------------------------------------------------------|--------------------|------------------------------------|--------|
| 04-Dec-2020 | Person File Simple (ABCDE)....<br>Private<br>ID: 2020120411312504 | Person File Simple | Ready 17<br>Failed 0<br>Complete 0 | Ready  |

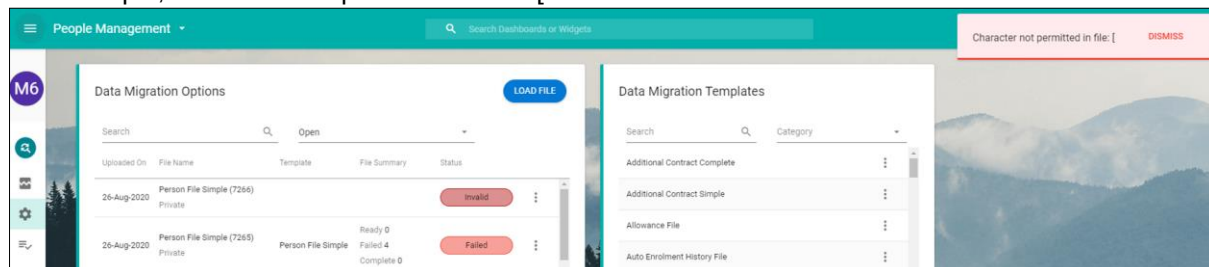

### **Note:**

Existing records which were uploaded using the old template, before the *Data Migration File Enhancements* (introduced in January 2021), can continue to be processed. The *File Detail* screen displays the additional fields as empty. [Download](#) the file to view records in the new template.

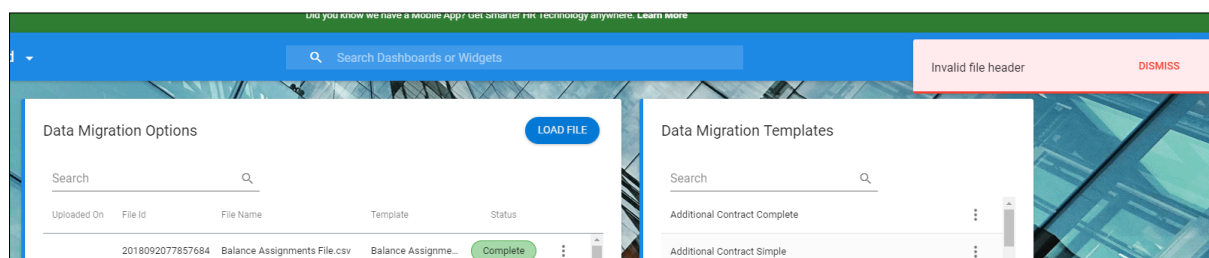

### 5.2.1. Invalid Template Error Messages

If a *Data Migration File* is uploaded in an incorrect format, or an incorrect *Data Migration Template File* is used, an error message displays on the screen. Templates are regularly improved. The most recent version of the new file template is available to download from [The Data Migration Template Widget](#).

For Example, Character not permitted in file: [

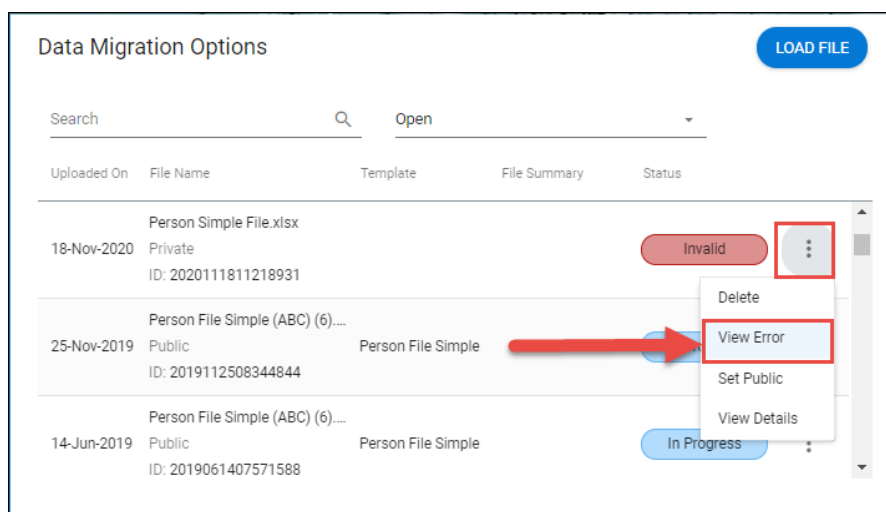

#### Invalid File Header

The *Data Migration File* displays in the *Data Migration Options Widget* with a status of 'Invalid.'

You can view the Invalid file error message by:

1. Select the  button next to the *Data Migration File*.
2. Select *View Error*.

**Error Message:** 'Invalid File Template. Please download the latest template from the Data Migration Template Widget'

Example of insufficient privileges Errors:

- The user does not have the 'create' menu security (e.g. 'create cumulative UK') for the data.
  - The user will be able to upload the *Data Migration File* (assuming format is ok). Processing screen will be displayed.
  - The user will not be able to 'process record'. 'Access Denied' message will be displayed on the screen.
- The user does not have the 'delete' menu security (e.g. 'delete cumulative UK') for the data.
  - The user will not be able to 'cleardown' the *Data Migration File*. 'Access Denied' message will be displayed on the screen.

**Note:**

For a full list of invalid file format error messages, see section [Invalid File Format Error Messages](#).

### 5.2.2. Automatic Removal of Leading and Trailing Spaces

Leading and trailing spaces are automatically removed when you upload a *Data Migration Template File*. This stops the creation of duplicate reference data.

Example:

.csv file viewed in Excel:

| Post Profile File (9990) |              |                |                       |                 |                        |                 |              |                     |                      |                             |  |

### 5.3. Edit an Uploaded Data Migration File

To open the *Data Migration File* and access the records for *Processing*:

1. Select  next to the *Data Migration Template* you want to Edit.
2. Select **Edit**.

3. The *File Processing* screen opens.

#### **Note:**

- All records that have been uploaded to XD can be edited on screen, before they are processed.
- File edits made within the *Data Migration Tool* are automatically saved, i.e. you can close *File Processing* screen and return to continue editing the file at a later time.

To edit any element of a record:

4. Click into the field.
5. Apply the change.
6. Click / tab out of the field.

| Goodman@b...  | 07700 900771 | 98765432 | 200500              |                |     |      |                               | 000146             | 01-Oct-2020 |          |                   |           |                                        |
| Goodman@b...  | 07700 900771 | 98765432 | 200500              |                |     |      |                               | 146                | 01-Oct-2020 |          |                   |           |                                        |

8. Confirm if the change should be applied to all records or just this one.

Rectify All

Change 1 other Reports To Manager fields from '146' to '000146'?

NO YES

9. Click **Yes** to update all records or **No** to update just the single record.

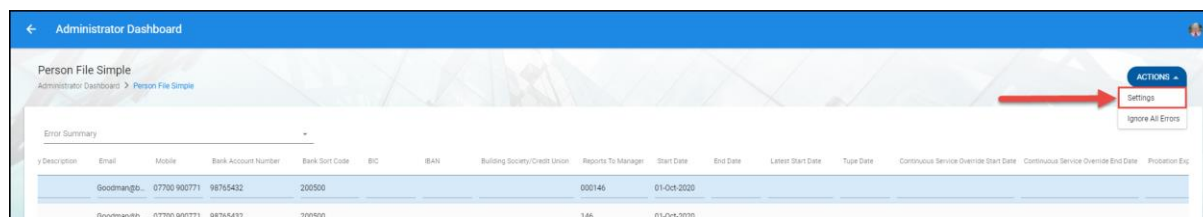

### **Note:**

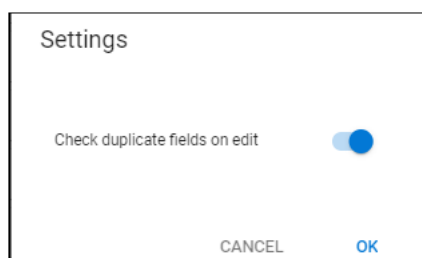

The 'Rectify All' prompt does not appear when updating every field on a file. This only appears for fields where the system identifies that it may be useful to bulk update the data to a matching value.

To prevent the 'Rectify All' prompt from appearing:

1. Select **Actions**.
2. Click **Settings**.

3. Update the *Check duplicate fields on edit* switch.
  - a. **Off** = The prompt does not appear.
  - b. **On** = The prompt appears (as per screenshot).

4. Click **OK** to save.

### **Note:**

This option defaults to **On**.

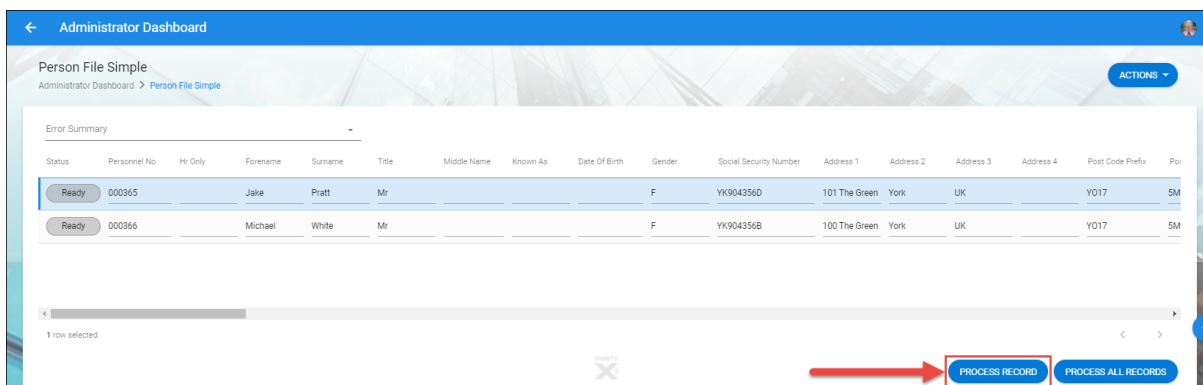

Changes made are saved for the current update item only and resets on exiting out of the screen.

## 5.4. Process the Uploaded Records

You can *Process All Records* on the screen or choose to *Process a Single Record*.

To process a single record:

1. Select the record on the screen.
2. **Click the Process Record button**

The single record updates to a *Status* of *Processing*, and then *Complete*.

### ! **Background Processing:**

When *Process All Records* is selected on the *File Detail/Edit* screen, the screen closes, and a background job kicks off.

### ! **Note:**

- This background job speeds up *Data Migration Processing*.
- Single row processing continues to happen on screen.
- You cannot *Edit* records while the *Data Migration File* is *Processing*.
- You are no longer confined to the *Data Migration Tool* while the *Data Migration File* is *Processing*, i.e. you are free to do other work on People XD.
- While the *Data Migration File* is *Processing*, the *Status* of the *Data Migration File* displays as 'Processing.'
- While the *Data Migration File* is *Processing*, it is not possible to interact with the *Data Migration File*.
- Once the job finishes, the *Status* of the *Data Migration File* updates to either 'Complete' or 'Failed.'
- Failed: At least one record in the file has failed to migrate into XD.
- Complete: All records in the file have successfully migrated into XD.
- Once *Processing* is 'Complete,' it is no longer possible to review the individual file records. The records have now been created on XD and are available to view on the corresponding screens.

### 5.4.1. Ignore Errors

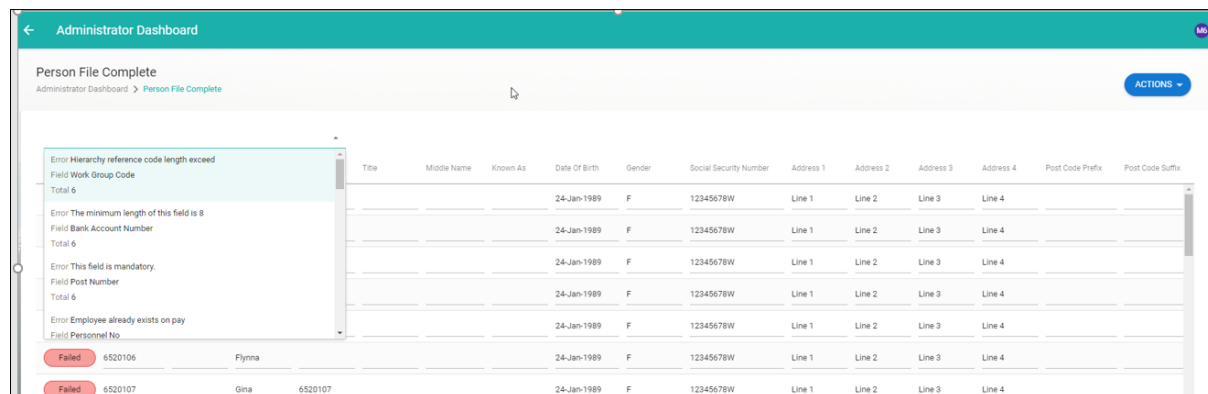

Users have the option to ignore all *Errors* in the *Data Migration File* to reprocess. This is useful in scenarios where:

- The same item caused lots of records to fail (e.g. Pay Group not set up in advance). Once the item is fixed, all *Errors* can be ignored, and the *Data Migration File* is reprocessed.
- Multi-line validation is applicable (e.g. cost allocation file).

### 5.5. Resolve / Ignore Errors in Records

The *Error Summary* drop-down list displays a list of the types of *Errors* found for a processed file, the field where the *Error* occurred and the number of records affected. This is only populated if there are "Failed" records for this *Data Migration File*. The *Total* for each *Error* type is the number of records that have failed for that reason.

Click on the message to filter the screen to show records that have that *Error* for that particular field. This can be a good first step in resolving the same *Error* for multiple records at once.

#### 5.5.1. Resolving an Error for Multiple Records

It is possible to resolve an *Error* for more than one record in bulk. This is applicable:

- where more than one record has failed to process for the same reason  
AND
- the same value should be applied to the erroneous field for that set of records.

To do this:

1. Use the *Error Summary* (see above) to filter the list to records that have failed for the same reason.
2. Click any of the failed records.
3. Click **Display Errors**. The *Row Errors* screen will display all *Errors* for that record, not just the *Error* selected on the *Error Summary* list.
4. For a common *Error*, resolve this for the record by providing a new value in *Updated Value*.
5. Click **Yes** on the *Rectify All* prompt to ensure the same change is applied to all records failing for the same reason that require the same value.

### **Note:**

This will update the field to the same data provided in *Updated Value* for all similar records. However, those records may still be “Failed” for another reason. Use the *Error Summary* to continue to filter the list to isolate “Failed” records, using the **Display Errors** button to resolve each record as required.

To download a full list of Errors to a CSV file, see section [Download Errors](#).

### 5.5.2. Fix Errors for a Single Record

When uploading the Data Migration file, the system processes one record at a time. If an *Error* is found with a record in the *Data Migration File*:

- This is flagged with a status of ‘Failed.’
- This will not be processed.
- The system will move on to upload the next record.

| Status   | Personnel No | HI Only | Forename | Surname | Title | Middle Name | Known-As | Date Of Birth | Gender | Social Security Number | Address 1     | Address 2 | Address 3 | Address 4 | Post Code Prefix | Post Code Suffix | Country Description | Nationality |
|----------|--------------|---------|----------|---------|-------|-------------|----------|---------------|--------|------------------------|---------------|-----------|-----------|-----------|------------------|------------------|---------------------|-------------|
| Failed   | 0003707      |         | Alex     | White   | Mrs   |             |          |               | F      | BE539608C              | 157 The Green | York      | UK        |           | YO17             | SMC              | UK                  | British     |
| Complete | 000371       |         | Joan     | Shields | Mrs   |             |          |               | F      | BE539608C              | 257 The Green | York      | UK        |           | YO17             | SMC              | UK                  | British     |

### **Note:**

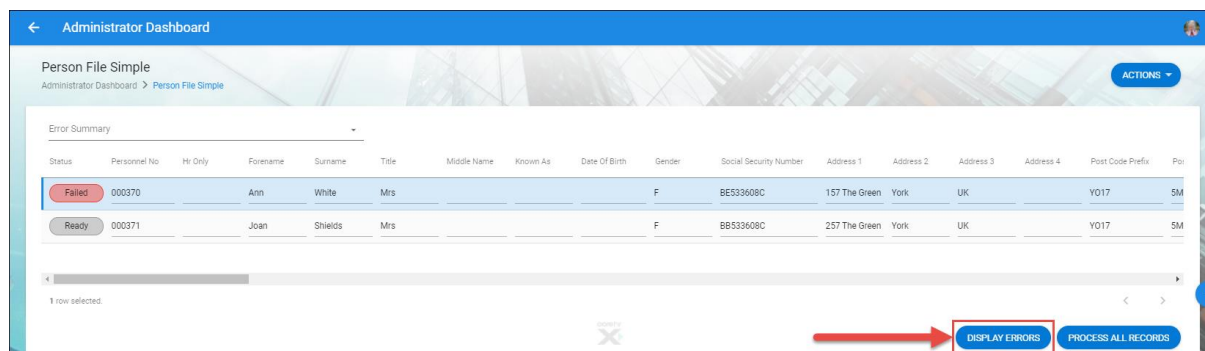

Not all errors may be found when the record is first processed. The system will validate for fields that are mandatory or conditional first. If any errors are found and resolved, the system may identify new errors during when it is reprocessing the updated record.

To review and resolve any *Errors* for a failed record:

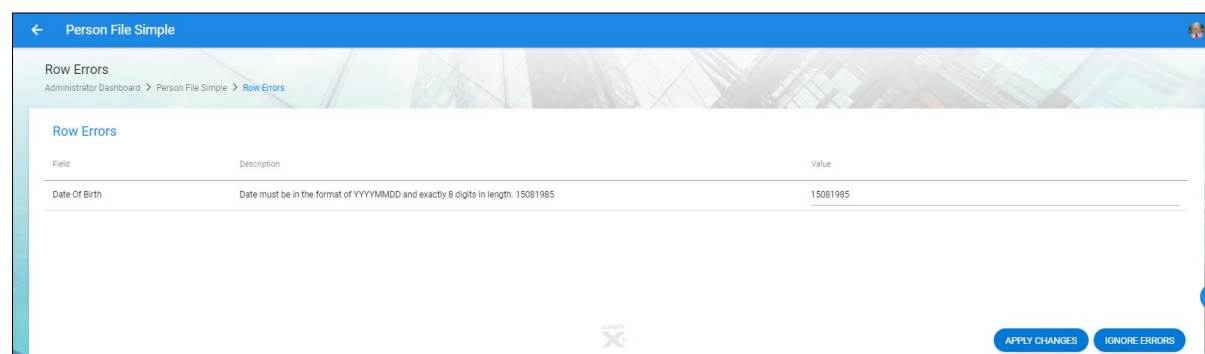

1. Click on the record.

### 2. Click **Display Errors**.

This only displays when a record has been selected, as Errors are only displayed for a single record on the *Row Errors* screen.

### 3. The *Row Errors* screen appears. The first *Error* found displays on the screen.

This table provides a description of the columns displayed on this screen.

| Column      | Description                                                                             |
|-------------|-----------------------------------------------------------------------------------------|
| Field       | The <i>Data Migration File</i> column on which the <i>Error</i> was found.              |
| Description | The <i>Error</i> message, i.e. the reason that the record failed to process.            |
| Value       | The invalid value currently held in that field. This data is causing the <i>Error</i> . |

### 4. Fix any *Errors* found by inputting valid data in the *Value* field, for each *Error*.

#### **Note:**

Clicking **Ignore Errors** allows you to exit the screen and clear the error / "Failed" status.

### 5. Click **Apply Changes**.

**Person File Simple**

Row Errors

Administrator Dashboard > Person File Simple > Row Errors

| Field         | Description                                                                     | Value       |
|---------------|---------------------------------------------------------------------------------|-------------|
| Date of Birth | Date must be in the format of YYYYMMDD and exactly 8 digits in length. 15081985 | 15-Aug-1985 |

APPLY CHANGES IGNORE ERRORS

### Note:

If there is more than one record that has failed for the same reason, the *Rectify All* prompt appears. This will copy the new value to that column for all other records with the same error and same "Current Value."

- Click **Yes** if this is suitable, e.g. an update to Work Group.
- Click **No** if this isn't required, e.g. Date of Birth which could be different for each record.

6. The Status will return to "Ready." This can now be processed again.

ACTIONS

Error Summary

| Status | Personnel No | Hr Only | Forename | Surname | Title | Middle Name | Known As | Date Of Birth | Gender | Social Security Number | Address 1     | Address 2 | Address 3 | Address 4 | Post Code Prefix | Post Code |
|--------|--------------|---------|----------|---------|-------|-------------|----------|---------------|--------|------------------------|---------------|-----------|-----------|-----------|------------------|-----------|
| Ready  | 000370       |         | Ann      | White   | Mrs   |             |          | 15-Aug-1985   | F      | BE533608C              | 157 The Green | York      | UK        |           | YO17             |           |

1 row selected.

PROCESS RECORD

PROCESS ALL RECORDS

7. If all *Errors* have been resolved, the record should successfully be migrated to XD.

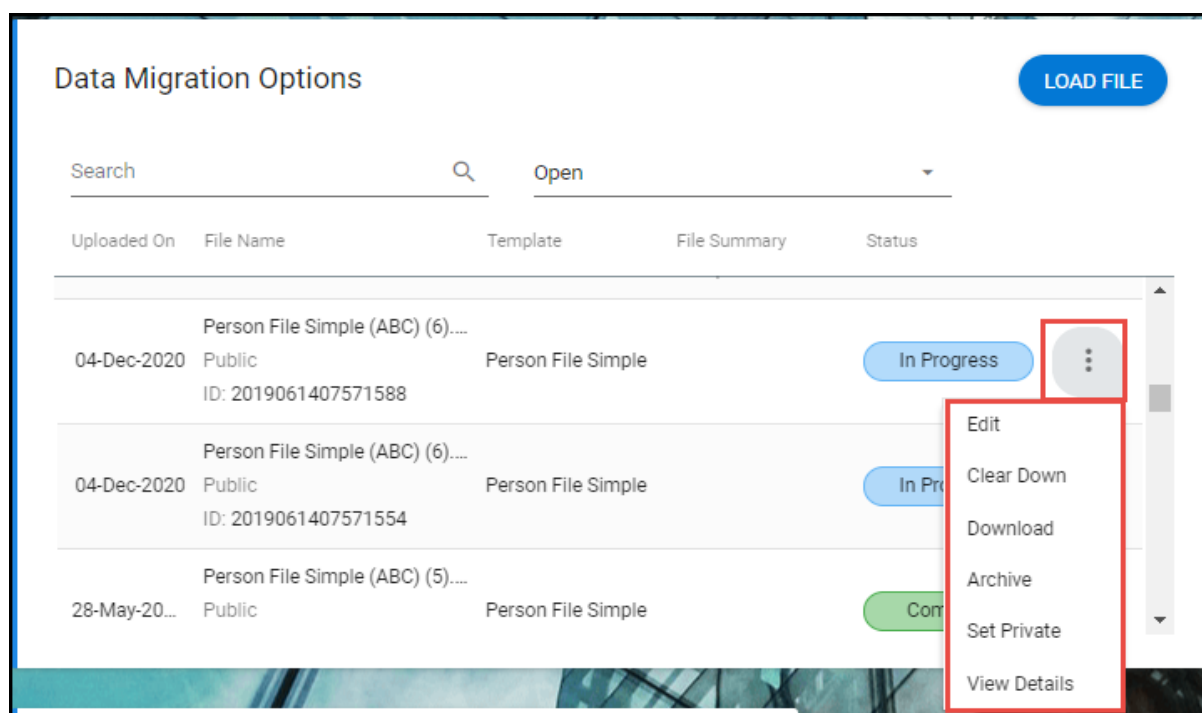

If *Errors* are found, and the record is "Failed" again, repeat the steps to display *Errors* and resolve.

## 5.6. Action Data Migration Files

You can action *Data Migration Files* in the *Data Migration Options Widget*. The action options available are dependent on the *Status* of the *Data Migration Files*.

To action a *Data Migration File* in the *Data Migration Options Widget*:

1. Select the  button next to the *Data Migration File*.

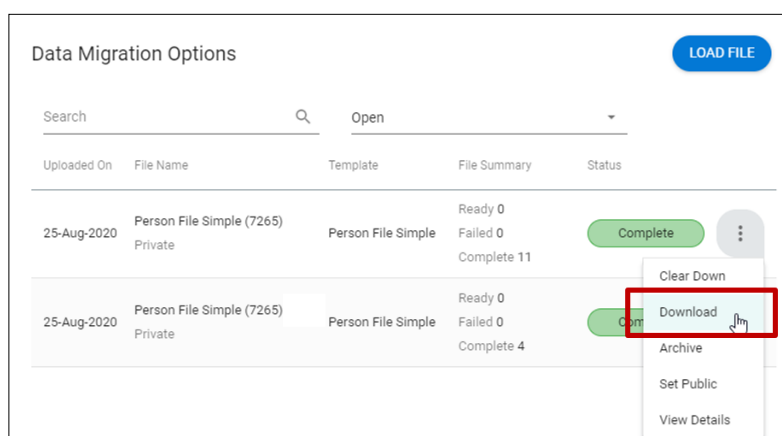

The action options available on each *Data Migration File* is dependant on the status of the *Data Migration File*.

| Action          | Description                                                                                                                                                                                                                                                                                     |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Edit            | You can edit a file where one or more records have failed during the processing procedure. See section <a href="#">Edit an Uploaded Data Migration File</a> .                                                                                                                                   |
| Clear Down      | You can clear down a <i>Data Migration File</i> , see section <a href="#">Clear down Data Migration Files</a> .                                                                                                                                                                                 |
| Download        | You can Download a <i>Data Migration File</i> as a delimited CSV file. See section <a href="#">Download Uploaded Data Migration Files</a> . This option is controlled by menu security, see the <a href="#">Configuring the Data Migration Tool</a> user guide for further details.             |
| Download Errors | An updated Data Migration File has a Failed Status; you can download the <i>Error</i> list to a CSV file. See section <a href="#">Download Errors</a> . This option is controlled by menu security, see the <a href="#">Configuring the Data Migration Tool</a> user guide for further details. |

| Action             | Description                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Archive            | Archiving a file allows the locking these records from further action. <i>Superusers</i> can reverse the <i>Archive Status</i> if required and view or action all Private and Public files. See section <a href="#">Archiving Data Migration Files</a> .                                                                                                                                      |
| Unarchive          | Where a Data Migration File has been archived, a user with appropriate menu security permissions may unarchive the file. See section <a href="#">Unarchiving Data Migration Files</a> . This option is controlled by menu security, see the <a href="#">Configuring the Data Migration Tool</a> user guide for further details.                                                               |
| Set Public/Private | The visibility of new files uploaded to the <i>Data Migration Tool</i> is restricted to <i>PRIVATE</i> . The Private/Public visibility is displayed under the <i>File Name</i> column. There is an option for the file owner to make a file 'Public'. Once enabled, <i>Superusers</i> can view <i>Private</i> files uploaded by other users. See section <a href="#">Set Private/Public</a> . |
| View Details       | You can view the File Details of any file. This includes the File ID and File Owner.                                                                                                                                                                                                                                                                                                          |
| Delete             | You can delete a File with a <i>Status</i> of <i>Invalid</i> .                                                                                                                                                                                                                                                                                                                                |
| View Error         | Where a file has failed to upload correctly, you can view the upload <i>Error</i> , e.g. Invalid Template.                                                                                                                                                                                                                                                                                    |

### 5.6.1. [Download Uploaded Data Migration Files](#)

Updated *Data Migration Files* can be downloaded from the *Data Migration Options Widget* for reference purposes or loading into another environment.

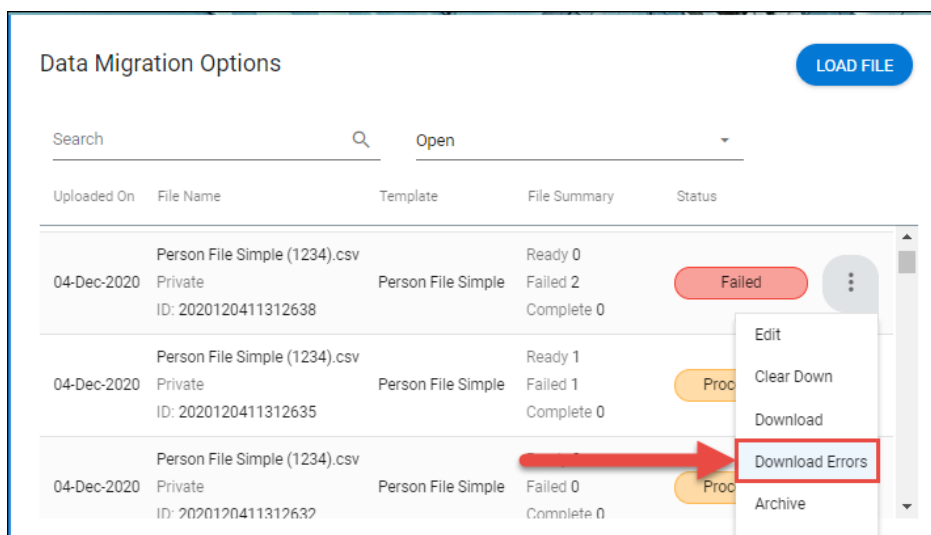

#### **Note:**

- The option to download from *Data Migration Files* is menu security controlled. This ensures that only authorised users can download data from the *Data Migration Tool*. See the [Configuring the Data Migration Tool](#) user guide.
- Templates are downloaded as pipe delimited CSVs.
- If any display issues occurs, try using an alternative web browser, i.e. Google Chrome.

### 5.6.2. Download Errors

Where an updated Data Migration File has a Status of Failed, you can download the *Error* list to a CSV file. Once downloaded, the *Error* list can be shared with the appropriate person, e.g. HR, Finance.

The CSV file lists the following details of the *Errors* that caused the *Data Migration File* to Fail:

|   | A                                                                               | B             | C           | D            | E | F |
|---|---------------------------------------------------------------------------------|---------------|-------------|--------------|---|---|
| 1 | Error Message                                                                   | Field Name    | Field Value | Personnel No |   |   |
| 2 | Date must be in the format of YYYYMMDD and exactly 8 digits in length. 15081985 | Date Of Birth | 15081985    | 371          |   |   |
| 3 | Employee already exists on pay                                                  | Personnel No  | 370         | 370          |   |   |
| 4 | Personnel Number already exists                                                 | Personnel No  | 370         | 370          |   |   |
| 5 |                                                                                 |               |             |              |   |   |
| 6 |                                                                                 |               |             |              |   |   |
| 7 |                                                                                 |               |             |              |   |   |

#### **Note:**

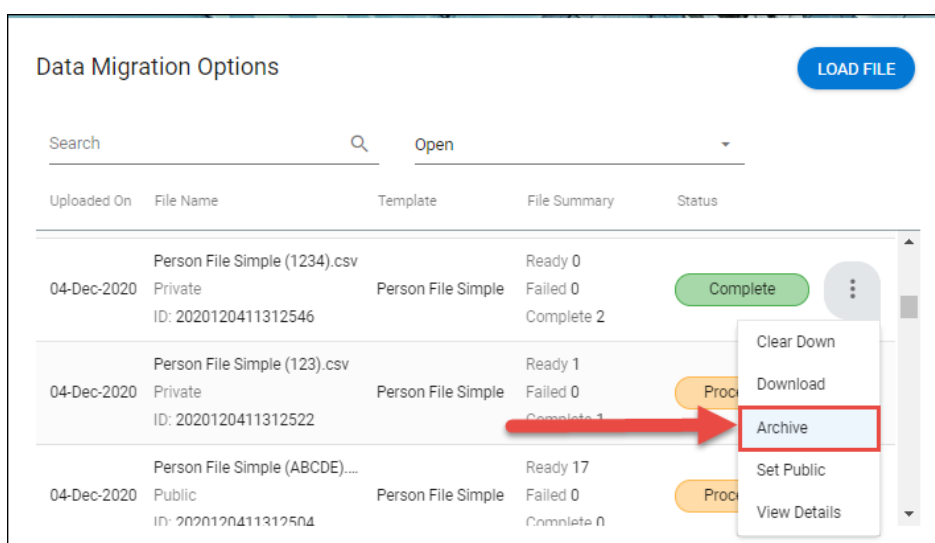

- The option to download errors from *Data Migration Files* is menu security controlled. This ensures that only authorised users can download data from the *Data Migration Tool*. See the [Configuring the Data Migration Tool](#) user guide.
- Templates are downloaded as pipe delimited CSVs.
- If any display issues occurs, try using an alternative web browser, i.e. Google Chrome.

### 5.6.3. Archiving Data Migration Files

Archived files are 'locked' from a data migration perspective. Their contents cannot be viewed or actioned in any way, i.e. can't be edited, processed, downloaded or cleared down. This protects the confidentiality of the data in the file and the integrity of data already loaded into XD. The following feature has been introduced:

- Archive: There is a new option to archive *Data Migration Files*.
  - Archived files are inactive from a Data Migration perspective and cannot be viewed, edited, processed, downloaded or cleared down regardless of security permissions.
  - This protects the confidentiality in the *Data Migration File* and the integrity/availability of data already loaded.
  - Super Users can access archived *Data Migration Files*.

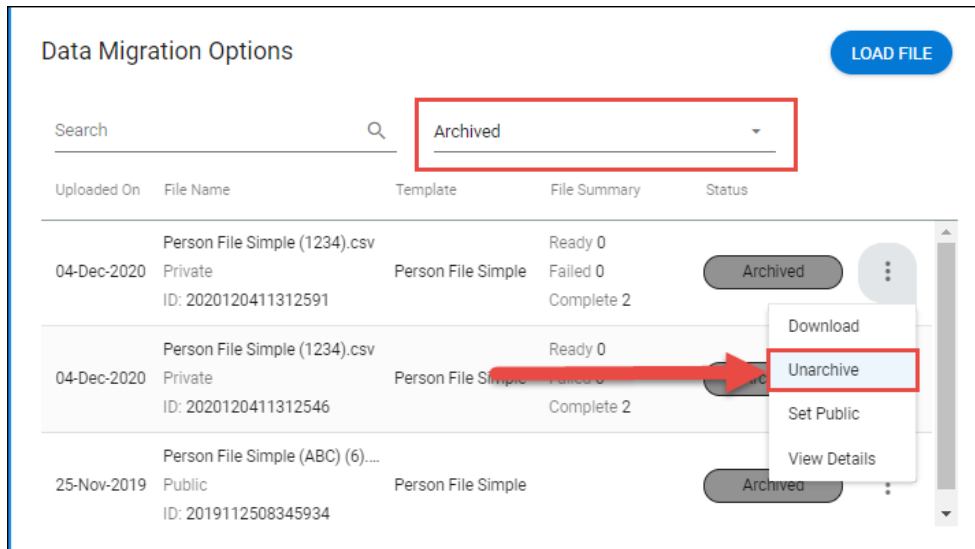

#### **Note:**

The option to archive *Data Migration Files* is menu security controlled. See the [Configuring the Data Migration Tool](#) user guide.

### 5.6.4. Unarchiving Data Migration Files

Where a *Data Migration File* has been archived, a user with appropriate menu security permissions may unarchive the file.

#### **Note:**

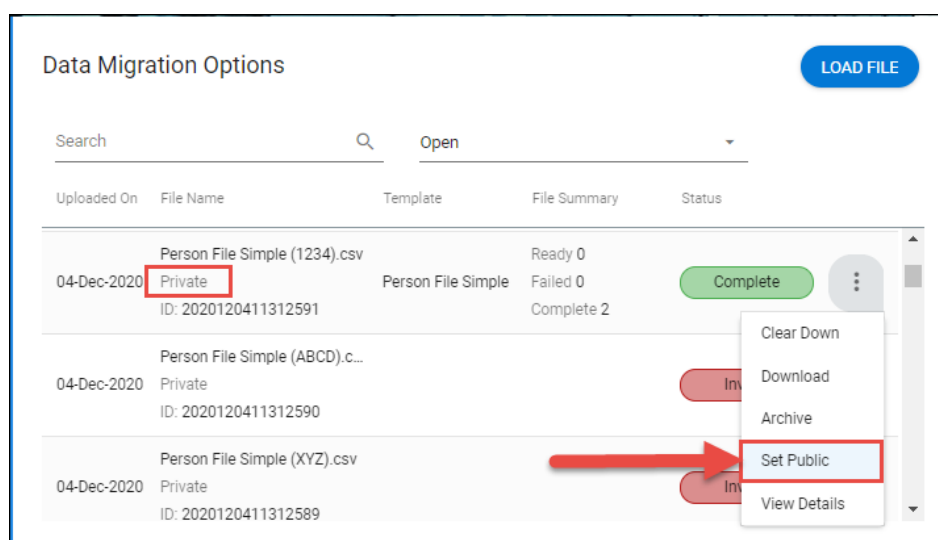

The option to unarchive *Data Migration Files* is menu security controlled. See the [Configuring the Data Migration Tool](#) user guide.

### 5.6.5. Set Private/Public

By default, the visibility of new from *Data Migration Files* uploaded to the *Data Migration Tool* is restricted to the user who uploaded the *Data Migration Files*. This enhanced feature helps customers protect the confidentiality, availability and integrity of their data.

There are two levels of file visibility.

- Private: By default, *Data Migration File* visibility is private, i.e. the *Data Migration File* is only visible to the user who uploaded it.
  - If required, the *Data Migration File* can be made public. Public files can be viewed by all users and actioned by users with the appropriate menu security.
  - Super Users can be given access to all *Data Migration Files*, including even private files. This access should be restricted and only used where required.
- Public: Any *Data Migration* user can view the *Data Migration File*, including the contents (Status permitting) and can action according to their security access (template level, user-level).

### **Note:**

- If required, the user can make the file public. This means that the file, including its contents, can be viewed by all Data Migration users.
- Existing files, uploaded before these enhancements, will continue to be public. If required, the owner of the file or a super user can make the files private.

### 5.6.6. Cleardown Data Migration Files

Using the Cleardown facility is **not recommended** for live customers or the following reasons:

- It risks deleting data that is not backed up.
- This data may be required for data protection and GDPR.

In the circumstances where data needs to be omitted from a report, as it is not currently relevant but must be retained, then change the Status to *Archived*.

Using the the Cleardown facility reverses any data migration actions completed for that *Data Migration File*, including the removal of:

- Records that have been processed and are now on the XD database.
- Any reference data items that were dynamically created as part of the process, if they are not linked to any other non-data migration records.

**Note:**

Take care when clearing down records to ensure all required data is cleared down. For example, both *Person Simple File* and *Allowances File* are loaded for the same set of employees. If only the *Person Simple File* is cleared down, the allowance records remains in the system and you may experience issues with corrupt data, as the system is missing the master file.

The following files cannot be cleared down:

- Person Payroll File
- Balance Assignments File
- RTI File

Note that the RTI file load works like an update. It updates fields on the employee record (rather than inserting a new record). Therefore, to resolve incorrect RTI fields being loaded for an employee it is possible to upload a new RTI file for the employee and this will override the previous changes.

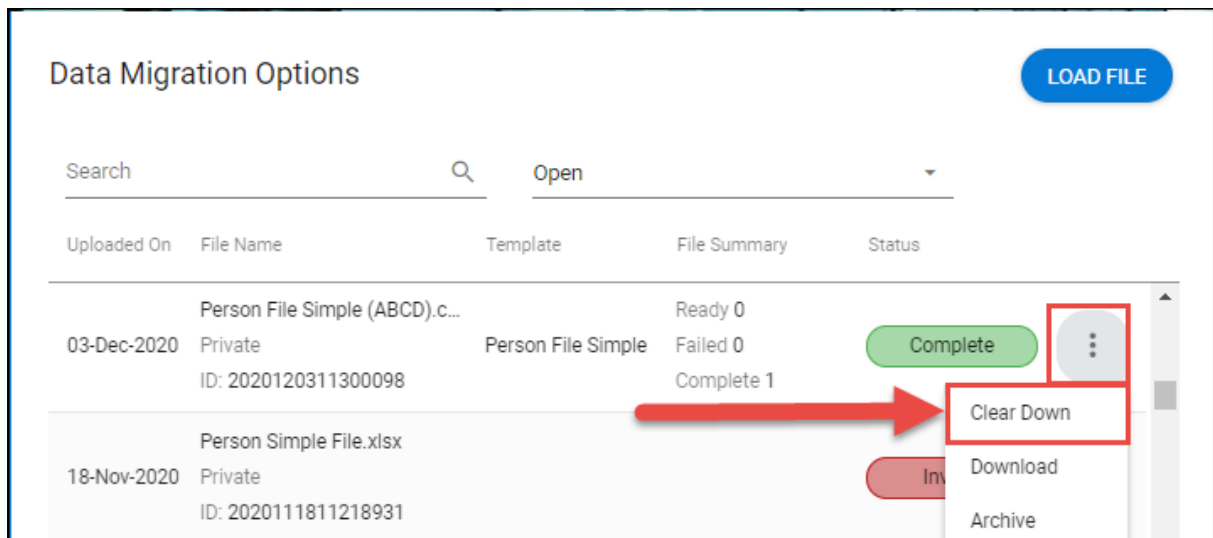

**Example:**

A 'Person Simple File has been uploaded to XD and fully processed.

- 50 employees have been created on XD.
- File status = 'Complete.'

To clear down a file:

1. Select the *Data Migration Options* Widget.
2. Click  and select **Clear Down**.

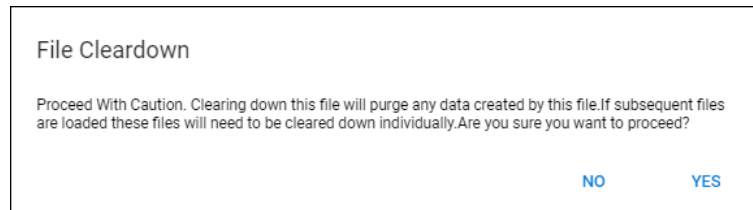

The screenshot shows the 'Data Migration Options' interface. At the top right is a 'LOAD FILE' button. Below it is a search bar and an 'Open' dropdown. The main part of the interface is a table with columns: 'Uploaded On', 'File Name', 'Template', 'File Summary', and 'Status'. There are two rows of data. The first row shows a file named 'Person File Simple (ABCD).c...' uploaded on '03-Dec-2020' with a status of 'Complete'. The second row shows a file named 'Person Simple File.xlsx' uploaded on '18-Nov-2020' with a status of 'Inv'. To the right of the table, there are buttons for 'Complete', 'Inv', 'Download', and 'Archive'. A red box highlights the 'More options' icon (three dots) next to the 'Complete' button, and a red arrow points to the 'Clear Down' option in the dropdown menu.

| Uploaded On | File Name                      | Template           | File Summary                      | Status   |
|-------------|--------------------------------|--------------------|-----------------------------------|----------|
| 03-Dec-2020 | Person File Simple (ABCD).c... | Person File Simple | Ready 0<br>Failed 0<br>Complete 1 | Complete |
| 18-Nov-2020 | Person Simple File.xlsx        |                    |                                   | Inv      |

3. The *File Cleardown* prompt will appear.

This outlines the impact of clearing down the *Data Migration File*. Click **Yes** to proceed or **No** to cancel.

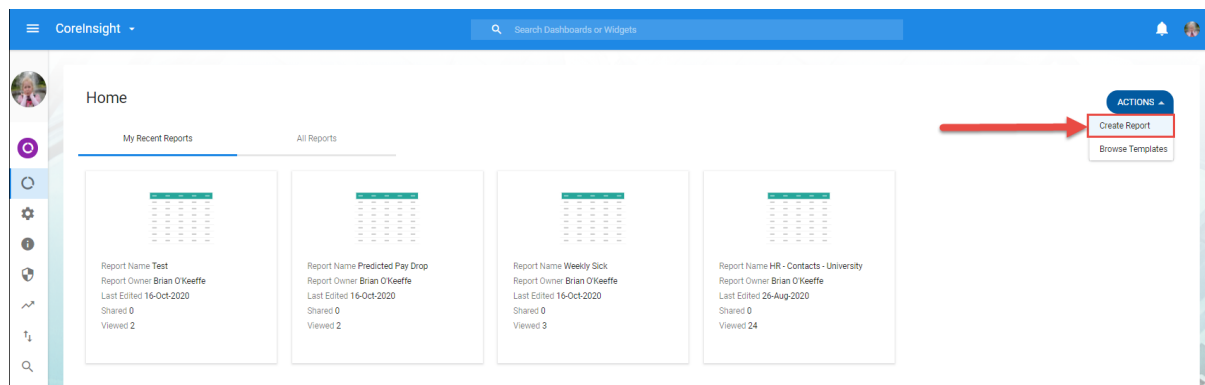

4. Once the cleardown is complete, the *Data Migration File* is no longer displayed in the open/default view but can be viewed if you change the filter to *Cleared Down*.

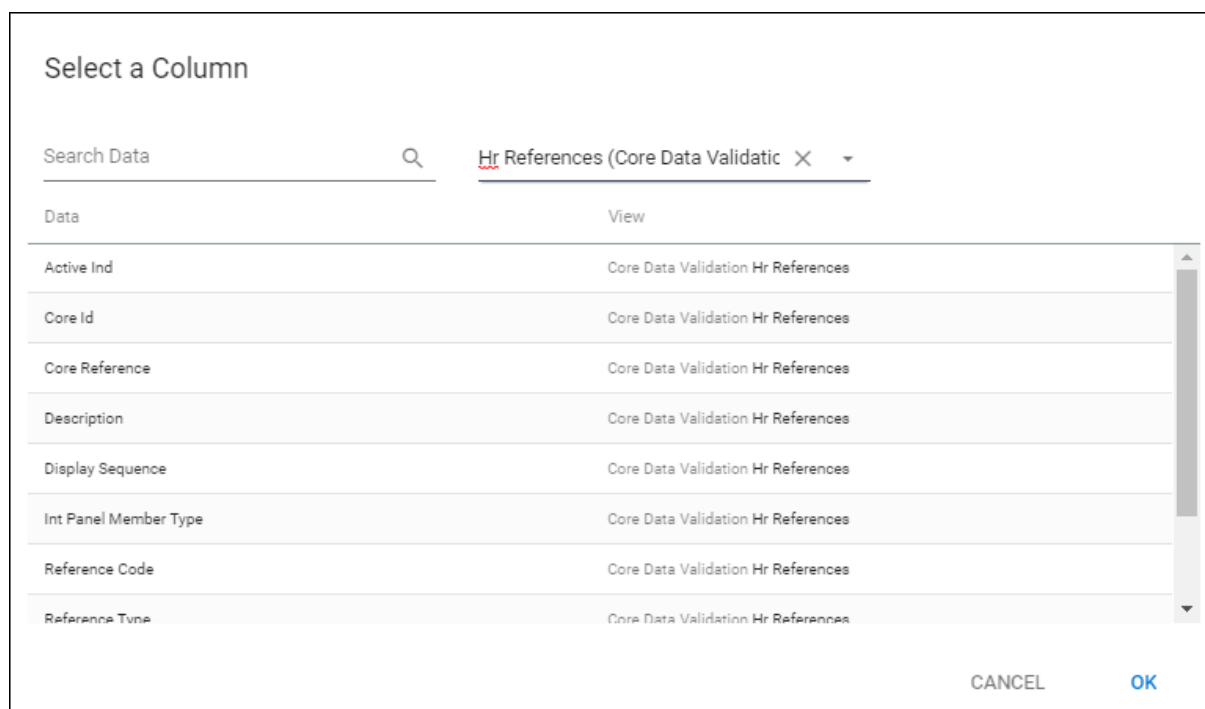

### 5.7. Insight

All reference data, including data uploaded through the Data Migration Tool, can be reported on through CoreInsight. To create a report on migrated data, select the HR References View:

1. Quick Jump to *CoreInsight > Report Wizard*.
2. Select **Actions**.
3. Select *Create Report*.

4. Add *Report Columns*.
5. Select from View = HR References.

6. Select a *Report Type* and name the *Insight Report*.

## 6. Appendix:

### 6.1. The New and Enhanced Data Migration Template Files

#### 6.1.1. Common

| Change Type | File Name    | Description                                                                                                                                          |
|-------------|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| New         | HR Reference | Allows a user to load reference data codes and description, e.g. Cost Centre reference data, Project reference data and Expense Code reference data. |

#### 6.1.2. People Management Files

| Change Type                                                                                                                                                      | File Name                                                                                                                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                  |                                                                                                                                         |

## 6.2. List of Other Data Migration Template Files

This section provides a list of other data migration template files that are available to download from XD:

| Template Name               | Description                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Auto Enrolment History File | Upload employee auto-enrolment history. File caters for configuration at either contract or employee level.                                                                                                                                                                                                                                                                                                                |
| Balance Adjustments         | File to facilitate loading Balance Adjustments into XD WFM                                                                                                                                                                                                                                                                                                                                                                 |
| Benefit in Kind File        | Upload employee benefit in kind assignments.                                                                                                                                                                                                                                                                                                                                                                               |
| Contacts File               | Upload contact details for employees.<br><div>  <b>Note:</b> <ul style="list-style-type: none"> <li>Any contact type that has been set up on XD can be uploaded for an employee using this file.</li> <li>Both the employee record and the contact type reference data must exist on XD, before records are uploaded.</li> </ul> </div> |
| Cost Allocation File        | Upload cost allocation details for an employee's contract. All cost allocation records must have a total of 100%.                                                                                                                                                                                                                                                                                                          |
| Deductions File             | Upload employee deductions.<br><div>  <b>Note:</b> <p>The required pay code must already exist on XD before records can be loaded for employees.</p> </div>                                                                                                                                                                             |
| Dependents File             | Upload employee dependant records.                                                                                                                                                                                                                                                                                                                                                                                         |
| Diversity Equality File     | Upload employee diversity and disability details.                                                                                                                                                                                                                                                                                                                                                                          |
| Next of Kin File            | Upload employee next of kin information.                                                                                                                                                                                                                                                                                                                                                                                   |
| Pay Scale Point File        | Upload pay scale point reference data.                                                                                                                                                                                                                                                                                                                                                                                     |

| Template Name              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                            |  <b>Note:</b><br>If using pay scales, this file should be uploaded first. See section <a href="#">The Data Migration File Upload and Prerequisite Configuration</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Person File Complete       | This file is used to create: <ul style="list-style-type: none"> <li>Employee records</li> <li>Their substantive contract</li> </ul>  <b>Note:</b> <ul style="list-style-type: none"> <li>If payroll details are provided, the employee will be set up on Payroll.</li> <li>This file caters for one contract per employee. Do not provide multiple rows per employee.</li> <li>This provides the same functionality as the 'Person File Simple.' However, this includes both 'Code' and 'Description' fields for reference data items.</li> <li>Many fields are defaulted on upload. See helper file for full list.</li> </ul> |
| Position Rate Details File | Upload position rate details data.  <b>Note:</b><br>If using pay scales, this file should be uploaded first. See section <a href="#">The Data Migration File Upload and Prerequisite Configuration</a> .                                                                                                                                                                                                                                                                                                                                                                                                                     |
| RTI File                   | Upload details that are required for UK employees to ensure that records are complete with all details required for RTI submissions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Shift Types File           | Upload shift-type reference data.  <b>Note:</b><br>This file should be one of the first loaded to XD. See section <a href="#">The Data Migration File Upload and Prerequisite Configuration</a> .                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Statutory Pay Profile File | Upload an employee's statutory pay profile.<br>This is used to capture details of any statutory pay (particularly maternity) that has been recorded/paid in legacy systems, in the current tax year.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| User Defined Fields File   | Upload employee / contract user defined field records.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Template Name | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
