1. Overview

1.1. Purpose of the Guide

The purpose of this document is to provide an overview of the *Employee Onboarding* functionality in People Management and how this is used. This includes:

- What is Employee Onboarding and when it used by employees?
- The difference between 'new starter onboarding' and 'existing employee cross-boarding'.
- An overview of the *Social Hub* dashboard.
- Detailed guidance on the main elements of the *Social Hub* dashboard and how they may be used.
- Tracking employee onboarding progress as a manager or hr administrator.

Employee Onboarding is highly configurable to ensure that every organisation can manage the onboarding and cross-boarding experience based on their own requirements. This document does not cover configuration guidance. For full training on how to set up and configure each element of Employee Onboarding, see the *Employee Onboarding v28: How to Configure - User Guide*.

1.2. What is Employee Onboarding?

Employee Onboarding is a platform that supports onboarding guidance for new joiners and re-joiners, while also supporting continuous onboarding guidance for existing employees. For example:

- New starter onboarding for employees joining or re-joining the organisation.
- Cross-boarding for existing employees who move to new contracts, appointments, and/or teams.
- The requirement to release new *Checklist Items* to existing employees.
- A platform encouraging existing employees to engage with their wider team.

Employees can commence onboarding before they join the organisation i.e. before their start date or rehire date. If this is the case, the employee will need a CorePortal account (to be created in the same way as you generally issue CorePortal accounts). However, they will only have access to the *Social Hub* until their start date has elapsed. They will not be able to access any other part of the CorePortal e.g. *Employee Dashboard* won't be available to them until they have started.:

1.3. Onboarding vs Cross-Boarding

The table below explains the difference between onboarding and cross-boarding, including important considerations regarding the use of [Checklists](#) for both scenarios.

Scenario	Explanation
Onboarding	An employee is joining an organisation for the first time, or is a rehire. Checklist Considerations: • Global <i>Checklist Items</i> with no restrictions can be made available to the employee to complete. • If there are <i>Checklist Items</i> present that have been restricted to only be seen by employees within a <i>Criteria Group</i> the employee resides in, these items are available for the employee to complete.
Cross-boarding	An existing employee is given a new contract, for example, moving from one role to another role within the organisation: Checklist Considerations: • If there are <i>Checklist Items</i> present that have been restricted to only be seen by the employee while in their old role, these <i>Checklist Items</i> are no longer relevant, therefore, are no longer available for the employee to complete. • If there are <i>Checklist Items</i> present that have been restricted to only be seen by the employee upon entering their new role, these <i>Checklist Items</i> are now relevant, therefore, are available for the employee to complete.

2. Employee Onboarding Overview

2.1. How to Access the Social Hub Dashboard

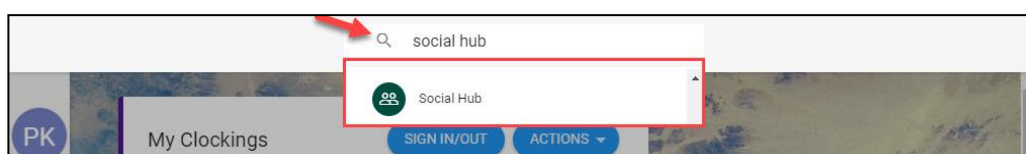

Employee Onboarding is presented to employees via the *Social Hub* dashboard within *CorePortal*. This dashboard is accessible to all employees who have the required menu access, once it is enabled. It is always accessible, therefore, not just accessible to employees who are completing onboarding.

- If there are any tasks that require completion by the employee, they are automatically directed to *Employee Onboarding* upon logging into *CorePortal*.
- If there are no tasks to be completed, then the employee's regular dashboard is defaulted upon logging into *CorePortal* e.g. *Employee Dashboard*, *Manager Dashboard*.
- If a new joiner starts the onboarding process before their first day, they only have access to *Employee Onboarding*, and no ability to access other dashboards until their join date.

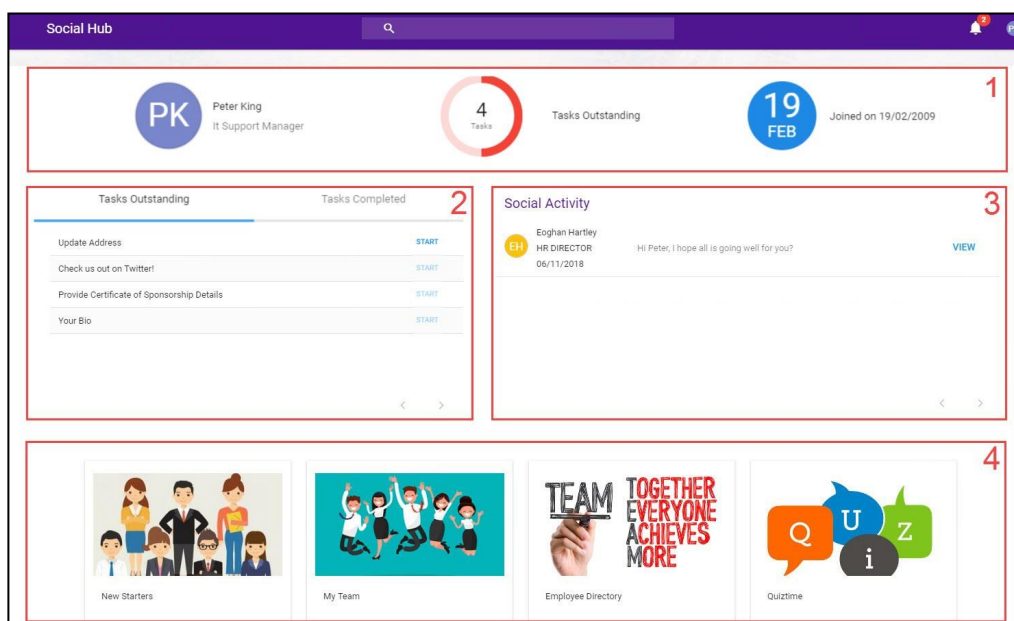

Note: If an employee commences *Employee Onboarding* before their join date, a *CorePortal* account must be created, in the same way, as if the employee started on their join date or after.

To access the *Social Hub* dashboard:

Quick jump to *Social Hub*.

The *Social Hub* dashboard displays.

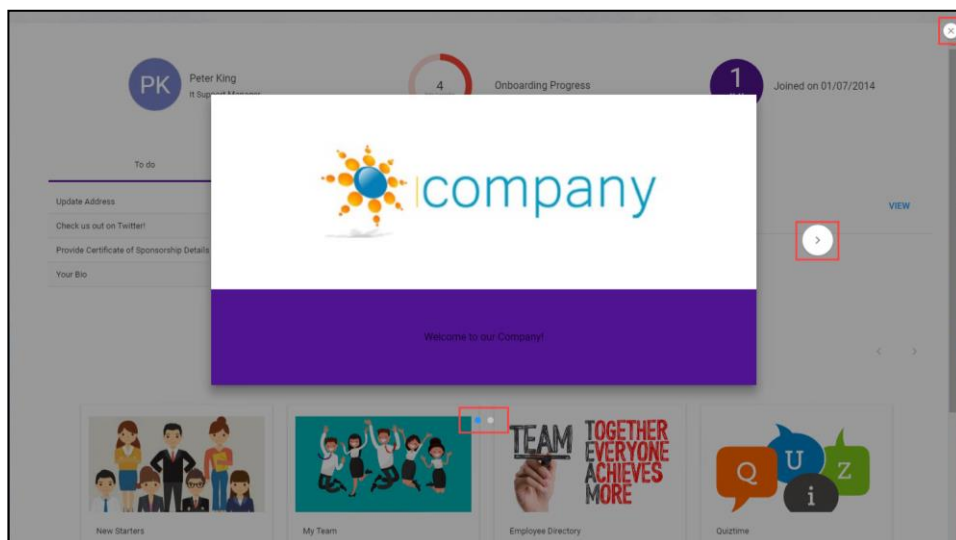

2.2. Welcome Board

A *Welcome Board* can be configured to display within *Employee Onboarding*. This board only displays for new joiners (i.e. new starters and rehires) and is displayed when the dashboard is opened. The board comprises of *Cards*, that are determined by configuration and restriction rules. Card types include: *Logo Cards*, *Team Cards*, and *Message Cards*.

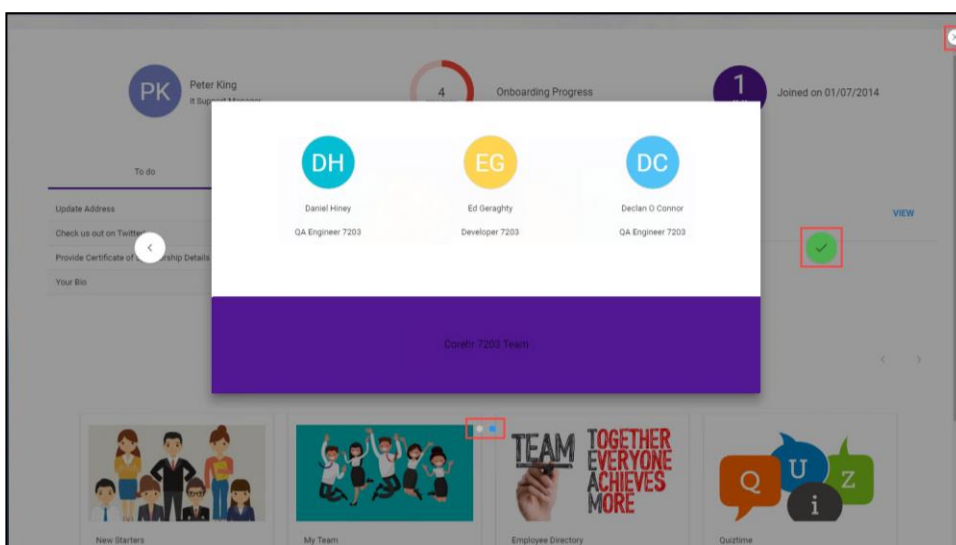

The *Welcome Board* continues to display until the employee selects the green tick that displays after moving through the sequence of cards. The employee can also select the **X**, to close the board without acknowledging completion until a future time.

The below screenshots provide a *Welcome Board* example, with a *Logo Card* and *Team Card* added.

Logo Card

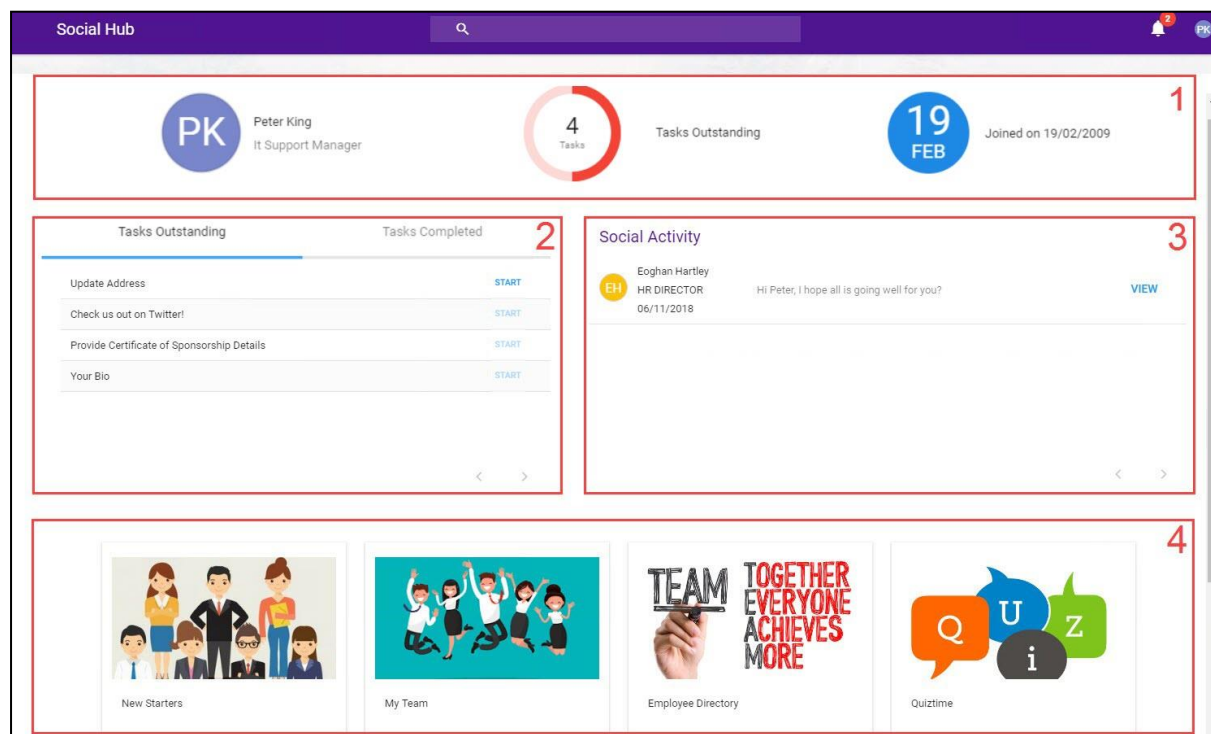

Team Card

3. Social Hub Dashboard Overview

The *Social Hub* dashboard comprises of 4 main elements, listed below:

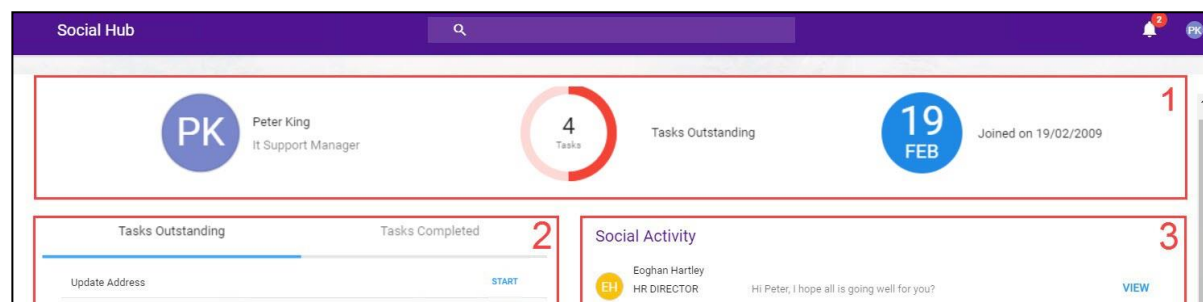

1. Information Header
2. Checklist
3. Social Activity
4. Content Pages

3.1. Information Header

The information header is located at the top of the *Social Hub* dashboard, this is highlighted in *Section 1* of the screenshot below. This section displays 3 main elements:

- Employee name and position
- Onboarding progress
- Employee start date

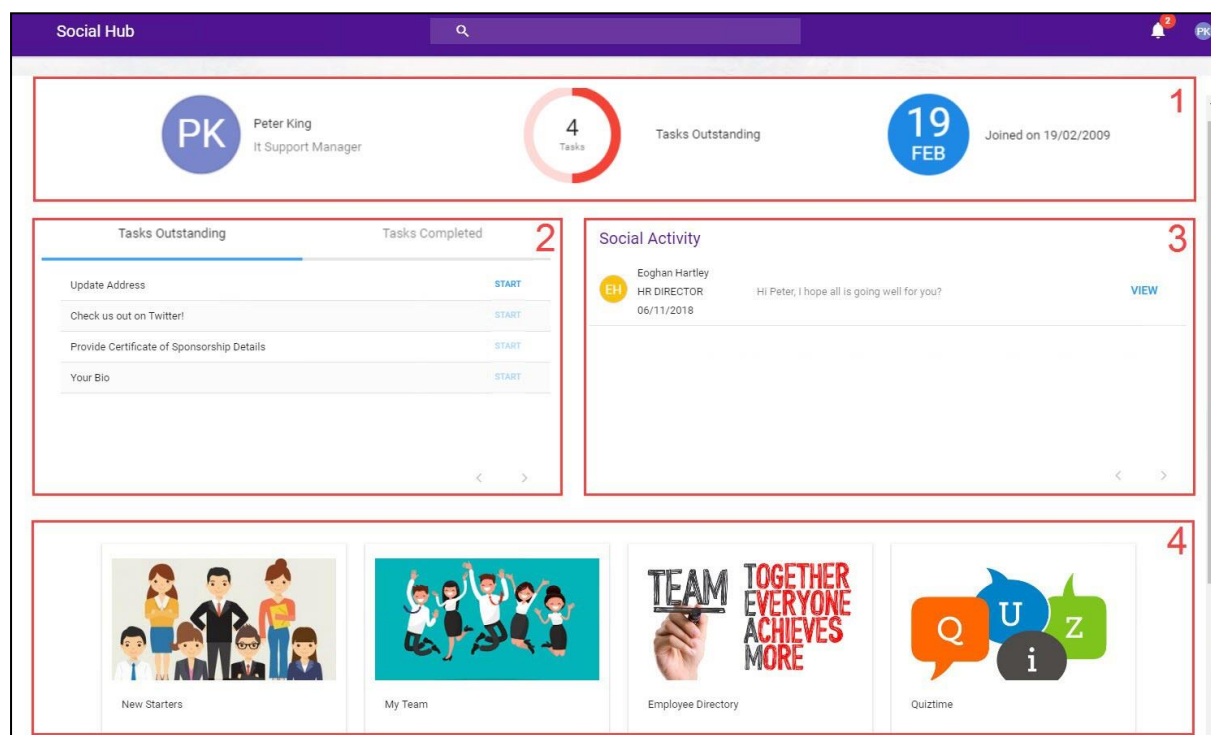

Note: The *Information Header* reflects the employee's substantive contract information.

Screen Element	Explanation
Name and Position	This section within the information header displays the: - Employee photo - Employee name: The name reflects the employee's preferred / 'known as' name, if input on the employee record. - Employee job title: The job title reflects the employee's new job title, in the scenario of a new starter or re-joiner. For an existing employee, it reflects their current job title regardless of whether they are completing <i>cross-boarding</i> checklist items for a position they may be moving into in the future.
Onboarding Progress	The <i>Onboarding Progress</i> section displays the number of items remaining for the employee to complete. This section counts down in real time, as the employee completes their checklist items. The colour of the <i>Onboarding Progress</i> circle changes from red to green upon completion of all checklist items. Once green, it displays the number of items they have completed i.e. the count of items in the completed tab and the text changes from "Tasks Outstanding" to "Tasks Completed".
Start Date	The start date section always reflects the employee's join date. For example, the date in which they: - First joined. - Were rehired. This section does not reflect the cross-boarding date. For example, a new position start date the employee may be moving into. If an employee is completing <i>Employee Onboarding</i> as a new joiner <u>before their start date</u>, this section displays the number of days to go before their join date. After the employee has joined, then this section displays their join date. By hovering the cursor over the date image, this section displays the year of joining.

3.2. Checklists

The checklist section is located on the mid-left of the *Social Hub* dashboard. This is highlighted in *Section 2* of the screenshot below. This section holds 2 main checklist tabs:

- Tasks Outstanding
- Tasks Completed

3.2.1. Checklists Overview (Tasks Outstanding List)

The checklist allows the user to complete all *Checklist Items* that require completion for the typical onboarding scenarios, listed below:

- Starter/Re-hire Onboarding
- Cross-boarding
- Ad-hoc checklist items

The employee is required to complete the *Checklist Items* in sequence, for example, if an employee completes the first *Checklist Item*, this then unlocks the next item for completion, and the full list continues in this sequence. This ensures that employees review and complete important steps before completing another. For example, it may be important for an employee to review the organisational policy documents before updating their bank account details.

Note: *Checklist Items* that are not yet accessible in the list are not clickable and have the **Start** button greyed out.

Tasks Outstanding	Tasks Completed
Upload Profile Photo	START
Update Next of Kin	START
Update Equal Opportunity	START
Update Address	START
Update Bank Details	START
< >	

It is possible to configure *Checklist Items* to only be available after an employee start date (join date or re-join date). If this configuration is in place, the *Checklist Items* are still displayed on the *Tasks Outstanding* checklist but remain locked until the applicable date.

Note:

- This restriction is only applicable to new starters or re-joiners. If an employee is completing cross-boarding, requiring completion of a checklist item with this restriction enabled for new starters or re-joiners, it is still accessible for cross-boarding employees.
- Employees are required to complete the *Checklist Items* in sequence, therefore, *Checklist Items* that are only available after an employee start date should be positioned appropriately within the list.

3.2.2. Completed Items

When a user completes a checklist item it will move into the *Tasks Completed* tab. Within the *Tasks Completed* tab they will be able to access the information that they uploaded to review but will not be able to change it.

Tasks Outstanding	Tasks Completed
Upload Profile Photo	VIEW
< >	

The *Tasks Completed* tab displays completed items regardless of whether the employee has moved positions within the organisation, which in turn assigns them a new checklist to complete, with exception to the following:

- Past completed *Checklist Items* are cleared for re-joiners.
- If an administrator deletes a checklist item, it is also removed from the completed list.
- Items that are re-released are no longer present in the *Tasks Completed* list, until completion.

3.2.3. Onboarding Scenarios

Employee Onboarding can support both new starter and continuous onboarding scenarios, for example:

New Starter Onboarding

If an employee is joining the company for the first time, or is a rehire:

- Global *Checklist Items* with no restrictions can be made available to the employee to complete.
- If there are *Checklist Items* that have been restricted to only be seen by employees within a *Criteria Group* the employee resides in, these items are available for the employee to complete.

Continuous Onboarding

If an existing employee is given a new contract e.g. moving from 'Department A' to 'Department B':

- Global *Checklist Items* with no restrictions can be made available to the employee to complete.
- If there are *Checklist Items* that have been restricted to only be seen by employees within a 'Department A' defined *Criteria Group*, these *Checklist Items* are no longer relevant, therefore, are no longer available for the employee to complete.
- If there are *Checklist Items* that have been restricted to only be seen by employees within a 'Department B' defined *Criteria Group*, these *Checklist Items* are now relevant, therefore, are available for the employee to complete.

3.2.4. Considerations for Checklist Items

The below table outlines possible checklist scenarios when updating employee contracts / appointments.

Scenario	Explanation
Multi Contracts	If an employee has 2 contracts that are assigned different checklists, then checklist items from both posts appear for the user to complete. The order that the checklist items appear in is determined by the order they are specified on the checklist configuration. Checklists should be configured with global items present first, which every employee completes. This minimises the creation of duplicate checklist items assigned to diverse groups.

Contract Updates: Retrospective	If an employee's contract is updated with a retrospective date or is effective as of today, then any checklist items restricted to their previous contract are no longer be available. For example, the employee is no longer in that position, therefore checklist items applicable to that position are no longer relevant. In this scenario: • Global items are still available for the employee to complete. • If checklist items, specific to their new contract information, are configured on the system, the employee can now see these items.
Contract Updates: Future	• If a person has their contract updated with a future date, then any checklist items restricted to the future sequence will not be available until that date. • Global items will still be available for them to complete.
Replacements: Retrospective	If an employee's contract is replaced with another appointment, with a retrospective date or effective as of today, then any <i>Checklist Items</i> restricted to their previous appointment will no longer be available. For example, they are no longer in that position, therefore checklist items applicable to that position are no longer relevant. In this scenario: • Global Items will still be available for them to complete. • If there are checklist items present, specific to their new appointment, the user can now see these items.
Replacements: Future Appointments	If an employee's current appointment is replaced with another future effective dated appointment, then: • If there are checklist items specific to the future appointment, then these are displayed for the employee to complete, before they move into their new role. • If there are checklist items specific to their existing role to be completed, these remain listed until the date in which they move to the new appointment.
Additional Appointments	Any additional appointments added to an employee record assigns new <i>Checklist Items</i>, if items exist that are specific to that appointment, regardless of date being: • Past • Present

	Future
Move: Same Criteria Group Restrictions	If an employee has <i>Checklist Items</i> assigned, specific to their current appointment, and if the appointment is then updated or replaced but reflects the same <i>Criteria Group</i> restriction, then nothing will change in their <i>Tasks Outstanding</i> or <i>Tasks Completed</i> list. For example, the <i>Checklist Items</i> are completed and are not re-released.

3.2.5. Checklist Item Restrictions

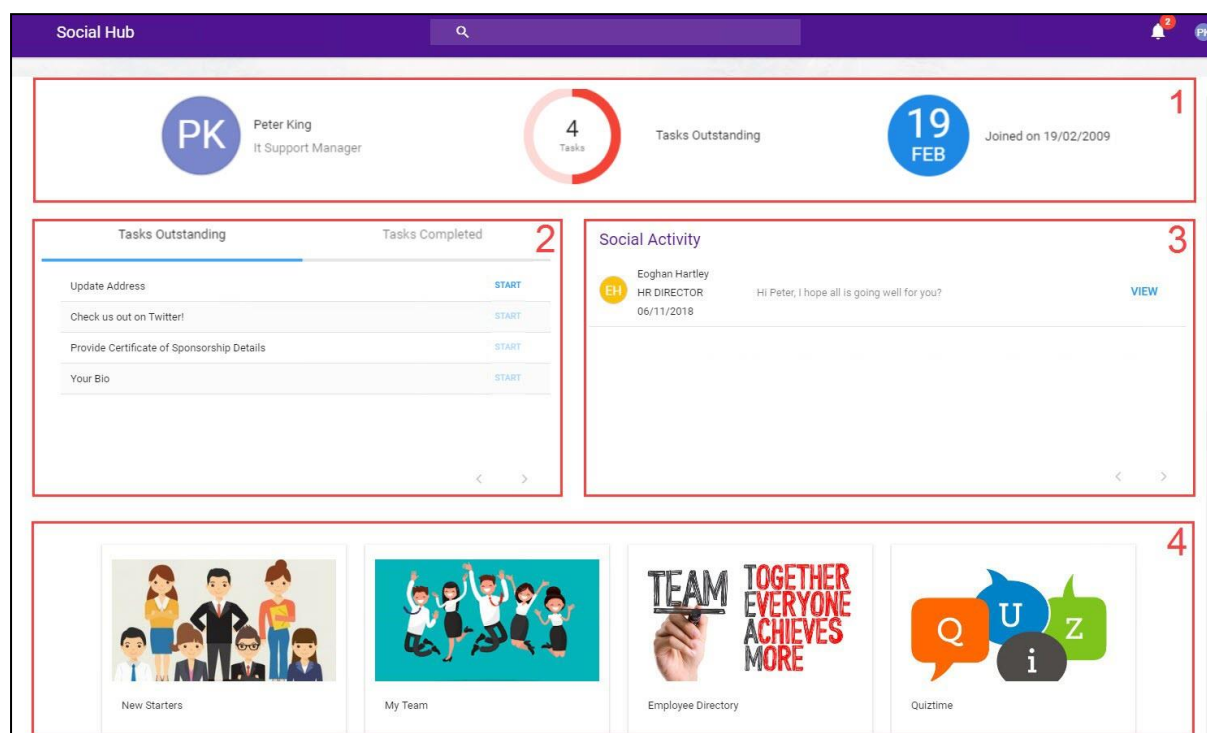

It is possible to define restriction rules to add to *Checklist Items*.

- If added to a *Checklist Item*, the item only displays to employees who reside within the *Criteria Groups* it is restricted to.
- If the *Checklist Item* does not have restriction rules applied, then it is available to all employees, provided it is active.

For further information, see the **Configuring Employee Onboarding v27** user guide.

3.3. Social Activity

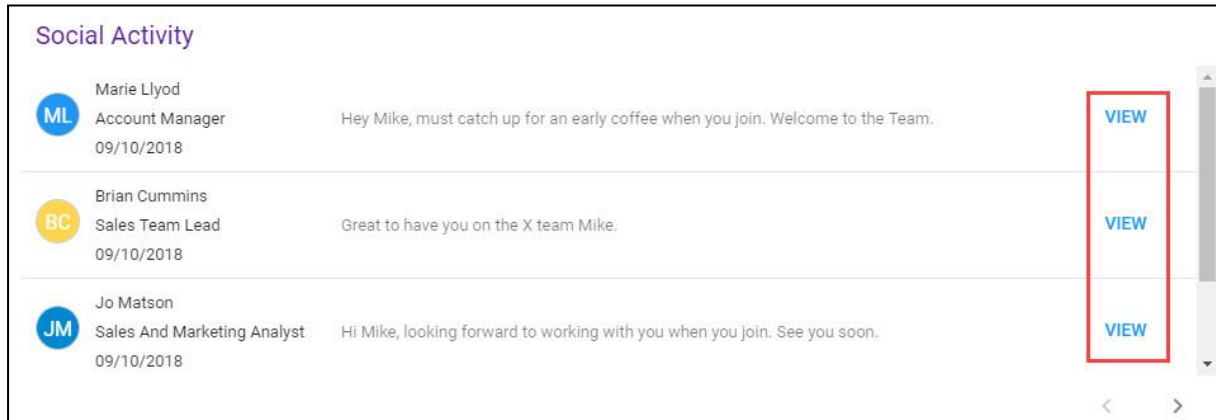

The *Social Activity* section is located on the mid-right of the *Social Hub* dashboard. This is highlighted in *Section 3* of the screenshot below.

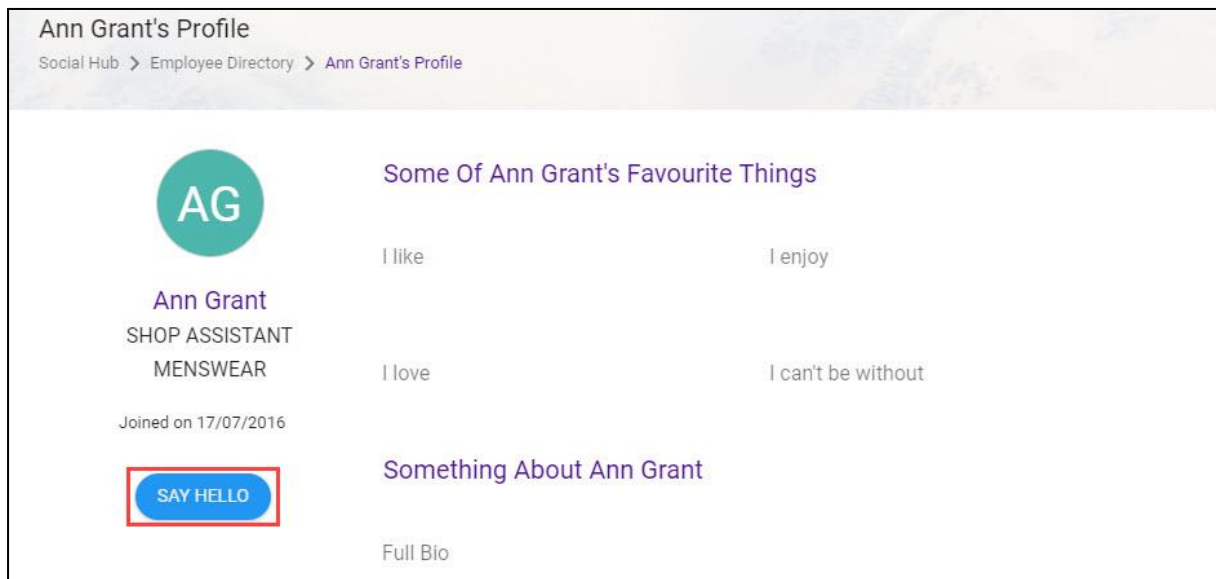

The *Social Activity* section displays messages sent directly to the employee. This section provides new joiners with a friendly social welcome from:

- Their team members
- Their wider organisation
- HR or their manager

The most recent messages are displayed at the top of the message list. The employee can also directly access the *Employee Bio* of the person who left the message by selecting the **View** button.

These messages are left by other employees who have viewed the *Employee's Bio*, and by selecting the **Say Hello** button. This is highlighted in the screenshot below:

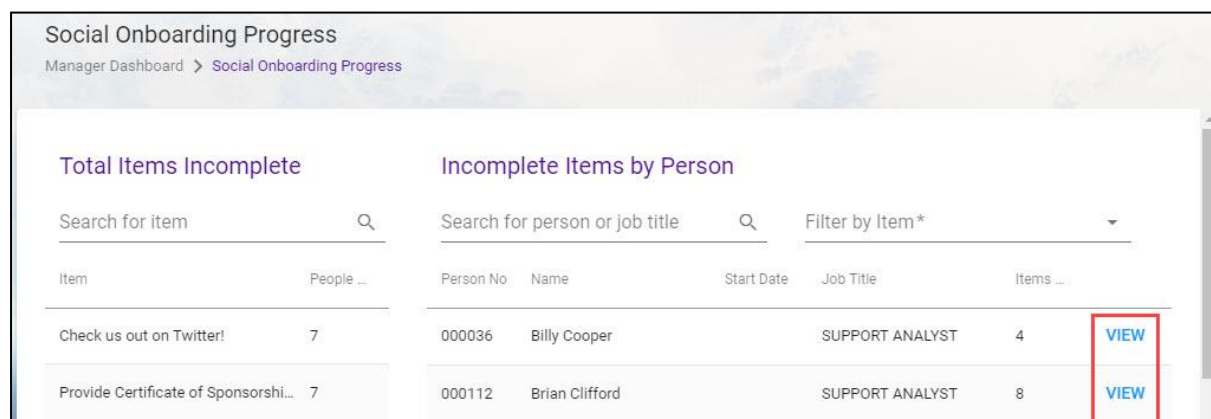

It is also possible for a manager or hr administrator to message an employee via the *Onboarding Progress* screen. This screen is available from the *My Team* widget:

1. Go to your *My Team* widget.
2. Click **ACTIONS**.
3. Select *Employee Onboarding*.

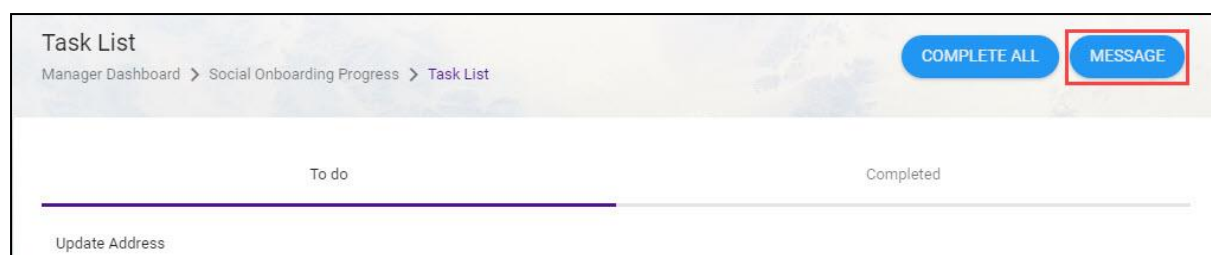

The *Onboarding Progress* screen displays.

4. Select **View**, on the applicable employee record.

The *Task List* screen displays.

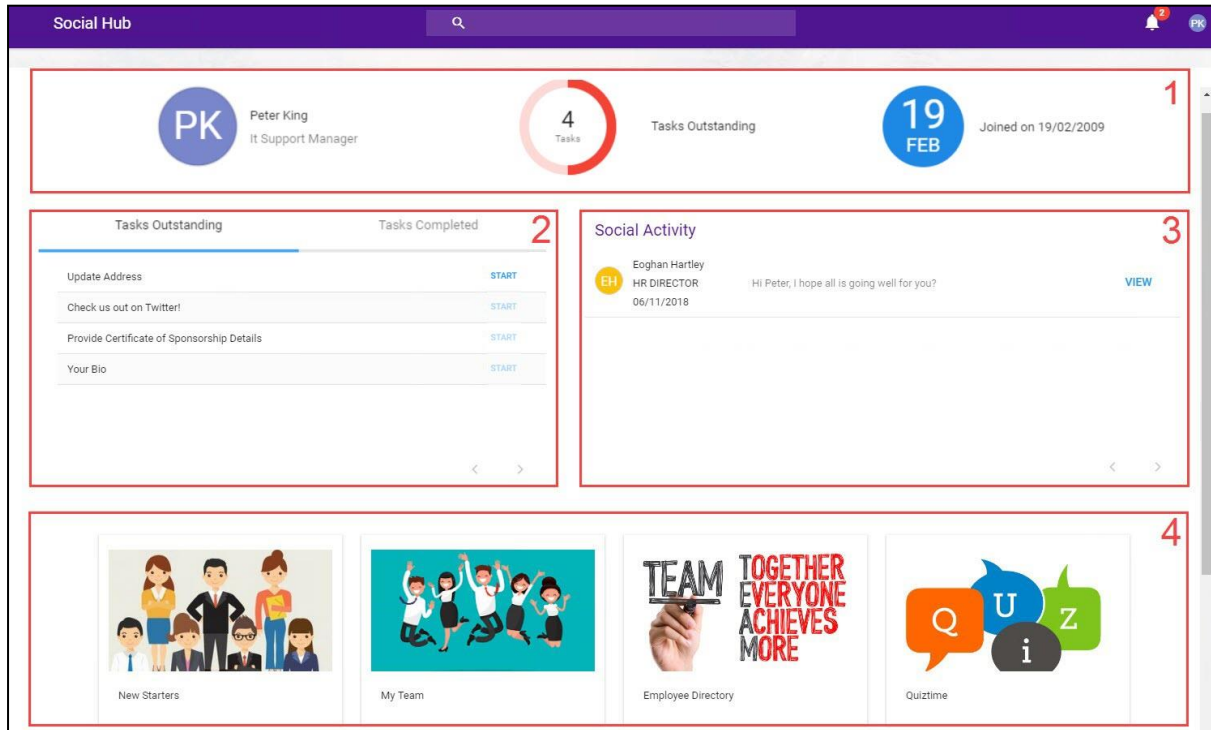

5. Select **MESSAGE**.

3.4. Content Pages

The *Content Pages* are located at the bottom of the *Social Hub* dashboard. This is highlighted in *Section 4* of the screenshot below. This section can display:

- System Pages
- Custom Pages

This content that displays at the bottom of the *Social Hub* dashboard, is dependent on the Social Hub dashboard configuration, this configuration determines:

- What *Content Pages* appear on the *Social Hub* dashboard.
- The order in which *Content Pages* appear.
- What *Content Pages* are restricted to specific *Criteria Groups*.

Note: The *Team Page* is an exception here. For this screen to display, the user must belong to team that has been configured via the *My Team Configuration*. A *Team Page* is only visible to employees who match the restriction rules assigned to it.

View section [5 Pages](#), for more information on page types that can be displayed on in this section of the *Social Hub* dashboard.

4. Pages

There are two main types of pages within *Employee Onboarding*:

- *System Pages*: Out of the box pages.
- *Custom Pages*: User created pages.

4.1. System Pages

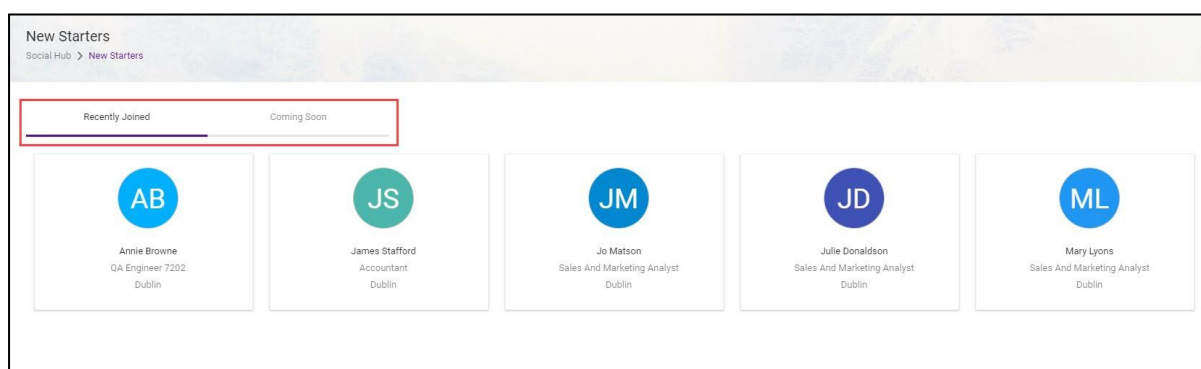

This section provides a brief overview for each type of *System Page* available.

4.1.1. New Starters

The *New Starters* page displays all active employees who reside within same employee directory definition as the user. This has two tabs:

- *Recently Joined*: Displays employees who joined within the last 30 days.
- *Coming Soon*: Displays employees who will be joining in the next 30 days.

This page displays new starters and re-joiners only, it does not redisplay existing staff who may be moving through different employee directory definitions (i.e. new contracts, new teams).

4.1.2. My Team Area

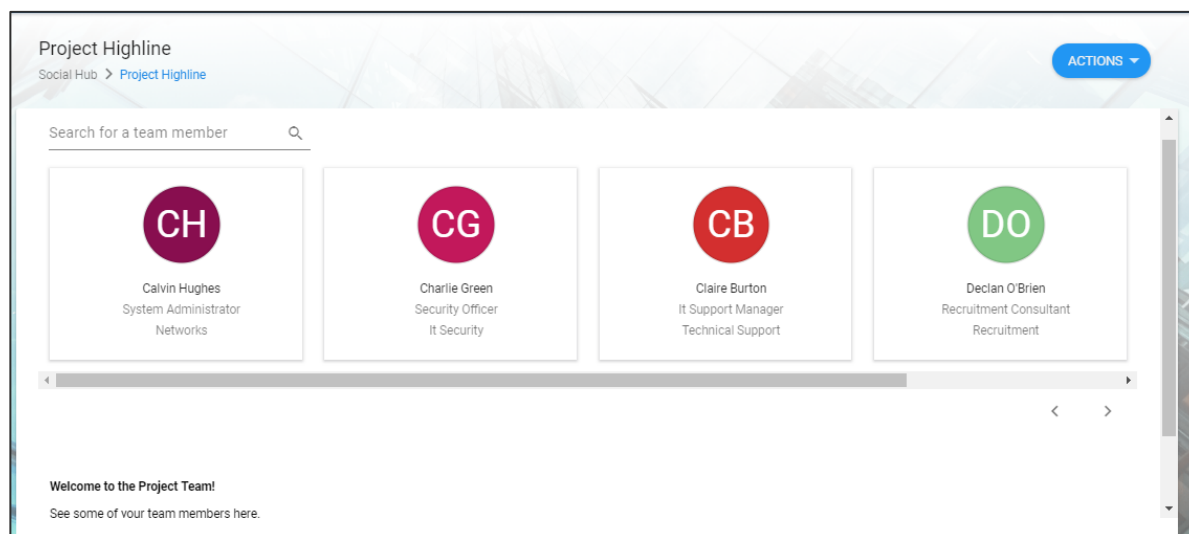

It is possible to configure cross-functional teams within *Employee Onboarding*. This feature provides the ability to define broader cross-functional teams, which gives a better reality of working within an organisation e.g. members of multiple departments working together on a shared project. It provides the ability for team members to create and share content on their own team's *Team Page*, which is only visible by members of that team.

Employees accessing their *Team Page* can:

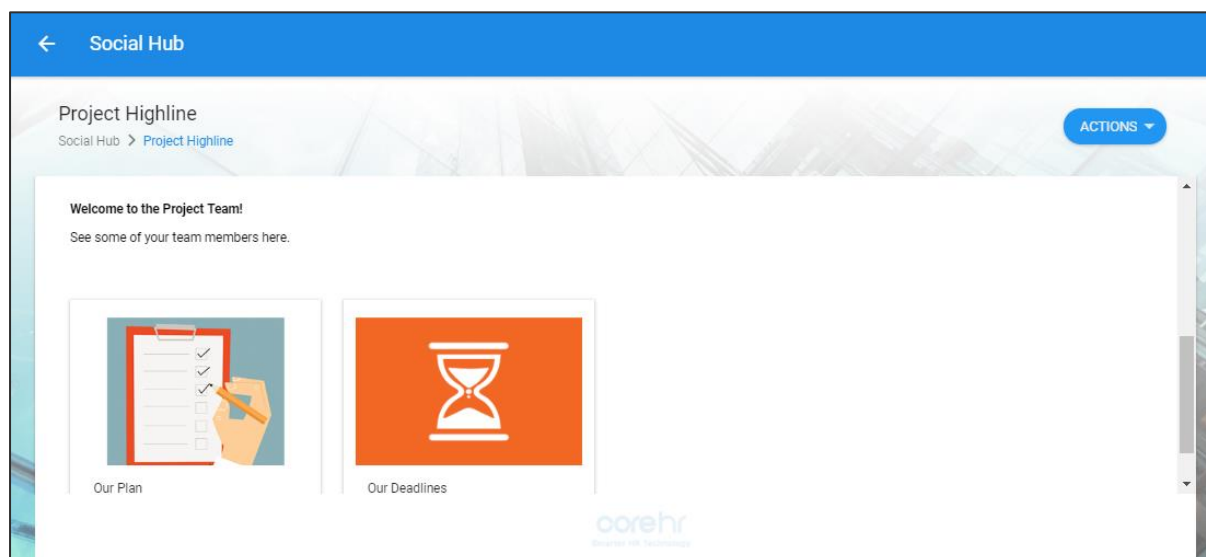

- View an overview/description of their team.
- View other members of their team.
- View team specific content.

- Add team specific content.

The screenshot below highlights the team overview and team description sections of the *Team Page*.

The screenshot below highlights the team page content section of the *Team Page*.

For further information on how to set up the *My Team* pages, see the **Configuring Employee Onboarding v27** user guide.

4.1.3. Employee Directory

The *Employee Directory* page gives employees visibility of other employees that are part of their organisation. Employees can search for, and view colleague *Employee Bios*. When employees view this page, other employees visible to them are based on the *Directory Level* configuration.

This page comprises of 3 main tabs, listed below:

- *Everyone*
- *Team Chart*
- *Suggestions*

Everyone Tab

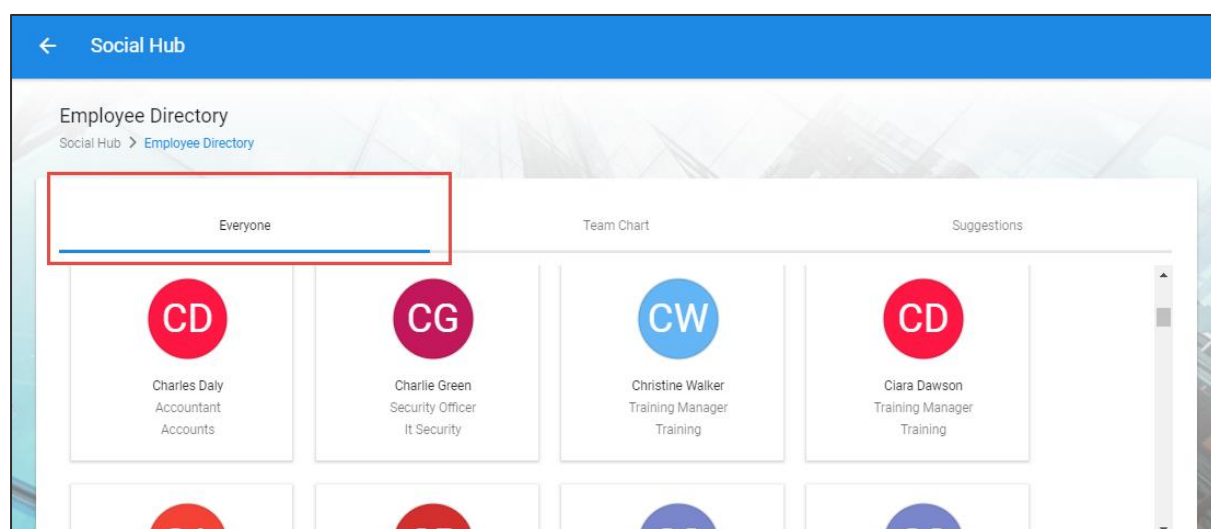

The *Everyone* tab displays all active employees who reside within same employee directory definition as the user. For example, if the *Employee Directory Level* set to “Company”, an employee viewing the screen who resides within ‘Company A’, can see all active employees in ‘Company A’.

Note:

- The employee’s *name* (or known as name), surname, and job title are displayed.
- The *Organisation Level* displayed is controlled within *Employee Bio Configuration*. See the ***Configuring Employee Onboarding v27*** user guide for further details.
- If an employee has 2 active appointments, they still only appear once. The detail on this page is based on their substantive contract.

The below screenshot provides an example of the *Everyone* tab, on the *Employee Directory* page.

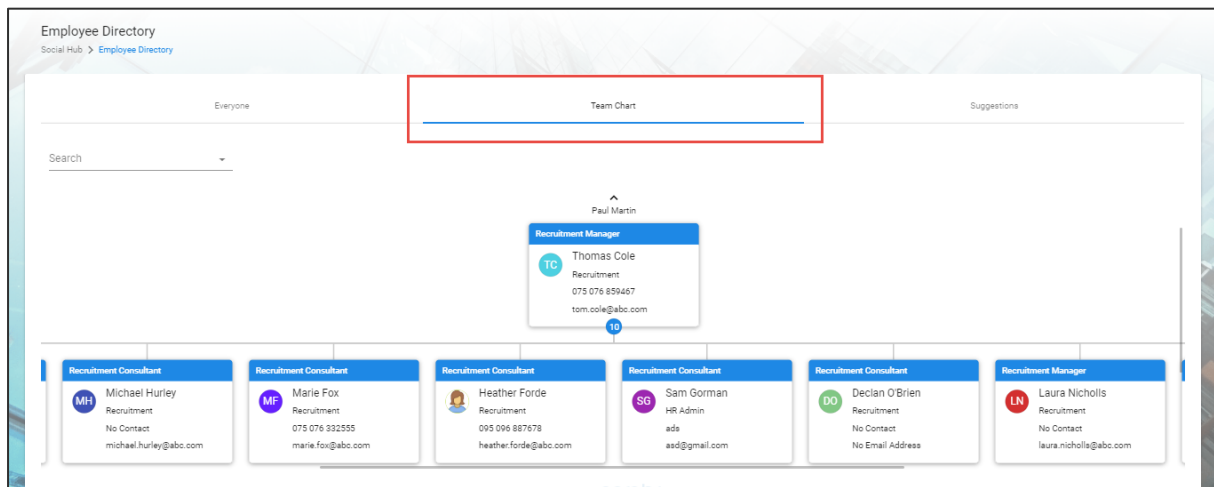

Team Chart Tab

The *Team Chart* tab displays the *Org Chart* specific to the employee. The *Org Chart* displayed is based on the *Org structure* that the employee belongs to.

By default, the *Org Chart* focuses on the employee’s own position within the organisation. An exception to this is that:

- The *Org Chart* does not focus on the employee's own position for new joiners who have not yet started, as the org chart reflects active employees only.
- In that scenario, the *Org Chart* defaults to the root of the org structure. For example, the CEO.

Suggestions Tab

The *Suggestions* tab displays all active employees who reside within same employee directory definition as the employee. The descending listing order is determined by the number of interests in common other employees have with the employee.

Employees that appear as *Suggested*, are only displayed if they have specified the same interest as the employee. For example:

- User Interest 1 = Employee Interest 1
- User Interest 2 = Employee Interest 2
- User Interest 3 = Employee Interest 3
- User Interest 4 = Employee Interest 4

Note 1:

The interests match criteria is not case sensitive, for example:

- 'Dog' = 'DOG'

The text specified in the employee interests must match, for example:

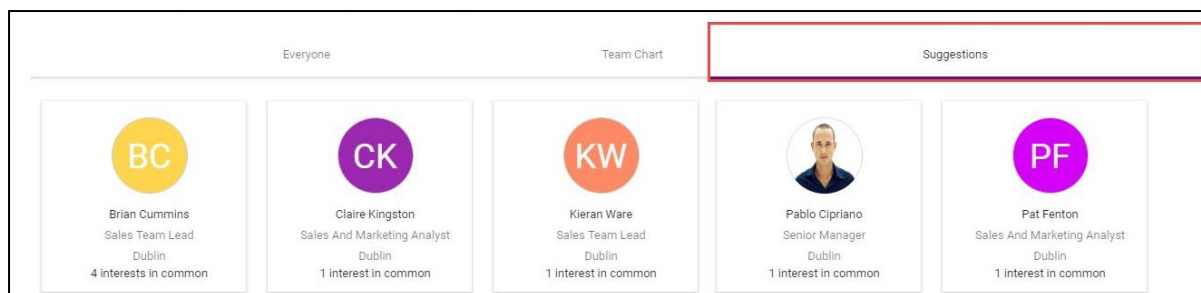

- 'Dog' does not match 'Dogs'

Note 2:

- The employee's *name* (or known as name), surname, and job title are displayed.
- The *Organisation Level* displayed is controlled within *Employee Bio Configuration*. See the **Configuring Employee Onboarding v27** user guide for further details.
- If an employee has 2 active appointments, they still only appear once. The detail on this page is based on their substantive record.
- The number of *interests in common* is displayed on *Suggested* employees.

The below screenshot provides an example of the *Suggestions* tab, on the *Employee Directory* page.

4.1.4. Quiz

The *Social Quiz* page displays team members to the employee, based on team configuration (based on the *Employee Onboarding My Team Configuration* setup). The page picks random members from the employee's team, listing at least one team member as the correct answer, for the question that is being asked.

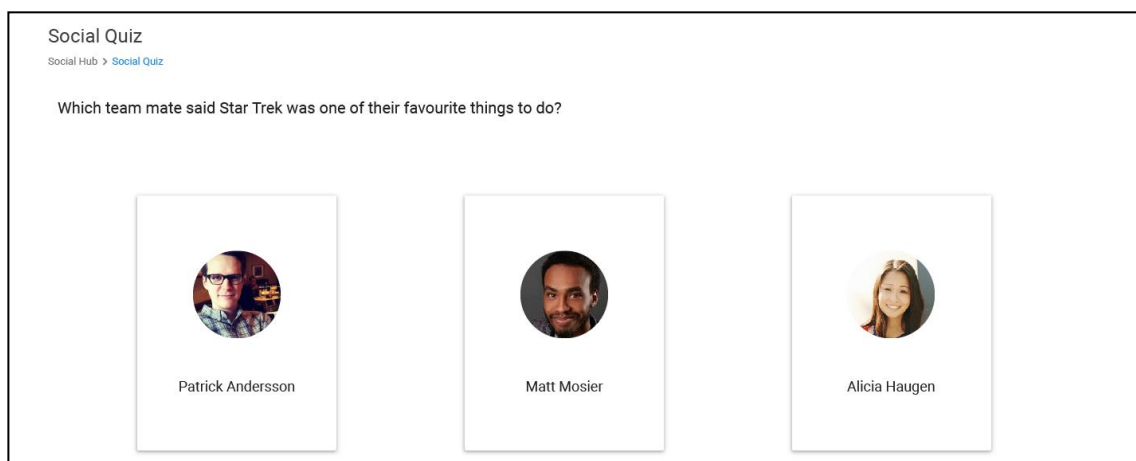

Questions asked in the *Social Quiz* page:

- Are configured via *Social Quiz Configuration* (see the **Configuring Employee Onboarding v27** user guide for further details).
- Include a team member that has populated their *Employee Bio* with information that relates to the question. For example, if the question type is 'Interests', then team members must have interests entered in their *Employee Bio*, for them to be randomly picked as an answer for the *Social Quiz*.

To complete the Social Quiz:

- The employee must select a team member as a correct answer.
- Upon selecting, correct and the incorrect team members display.
- The employee can then select the **Next** button to attempt further questions.
- Upon completion of all questions, a score summary and message display.

The below screenshot provides an example *Social Quiz* question. The question type is 'Interests'.

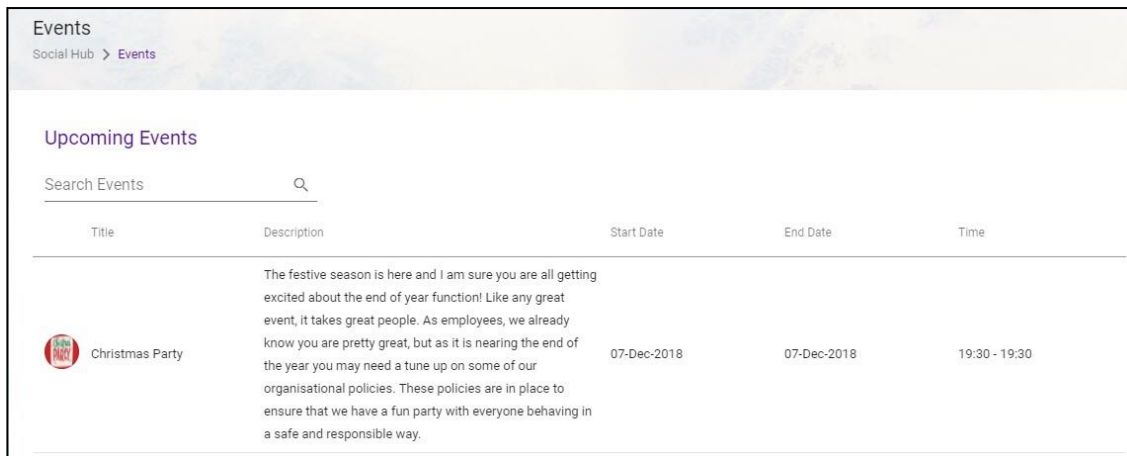

4.1.5. Events

The *Events* page displays global events that have been added via *Event Configuration*. Events display for all employees who view this page. See the ***Configuring Employee Onboarding v27*** user guide for further details on how to set up *Events*.

The *Events* page displays:

- Future events
- Events in ascending order

Events				
Social Hub > Events				
Upcoming Events				
Search Events				
Title	Description	Start Date	End Date	Time
 Christmas Party	The festive season is here and I am sure you are all getting excited about the end of year function! Like any great event, it takes great people. As employees, we already know you are pretty great, but as it is nearing the end of the year you may need a tune up on some of our organisational policies. These policies are in place to ensure that we have a fun party with everyone behaving in a safe and responsible way.	07-Dec-2018	07-Dec-2018	19:30 - 19:30

4.1.6. FAQ

The *FAQ* page displays all frequently asked questions with their corresponding answers, that have been configured via *FAQ Configuration* (see the ***Configuring Employee Onboarding v27*** user guide for further details on how to set these up). Employees who view the *FAQ* page via *Employee Onboarding* can also select an option called **Ask a Question**. The **Ask a Question** option allows employees to submit a short question, which is delivered to a specified HR email address. The HR email address is specified in the *Configured HR Email* section of *FAQ Configuration*.

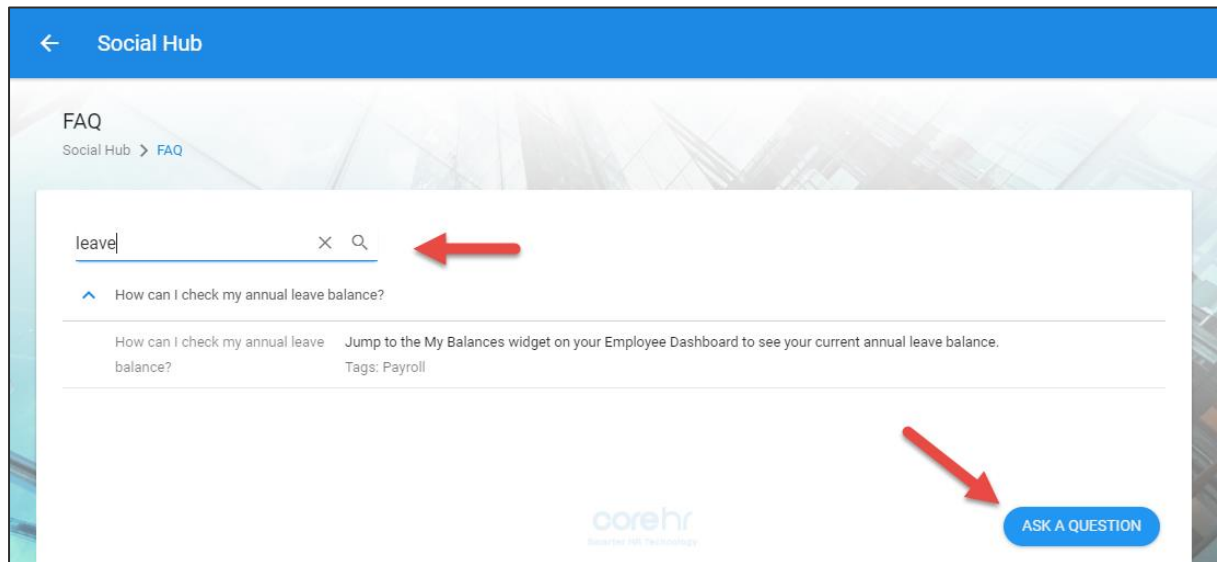

Note:

- The **Ask a Question** option does not initiate a 2-way conversation within *Employee Onboarding*. There is no 2-way communication within the *FAQ* page.
- The sender's address references the *Email* contact type held on the *Employee Bio*.
- Only one *FAQ* page can be created and added to the *Social Hub* dashboard.
- If an organisation requires separated *FAQ* pages for different areas of the business, it is possible to:
 - Collate all questions within the one *FAQ* page.
 - Create restricted [Custom Pages](#) that contain questions and answers, specific to the *Criteria Groups*.

Employees can search the *FAQ* page by entering a search string to return questions/answers. The results are dependent on search string matches in the:

- Question
- Answer
- Tag

The below screenshot provides an example of a *FAQ* page.

4.2. Custom Pages

This section provides a brief overview each type of *Custom Page* available.

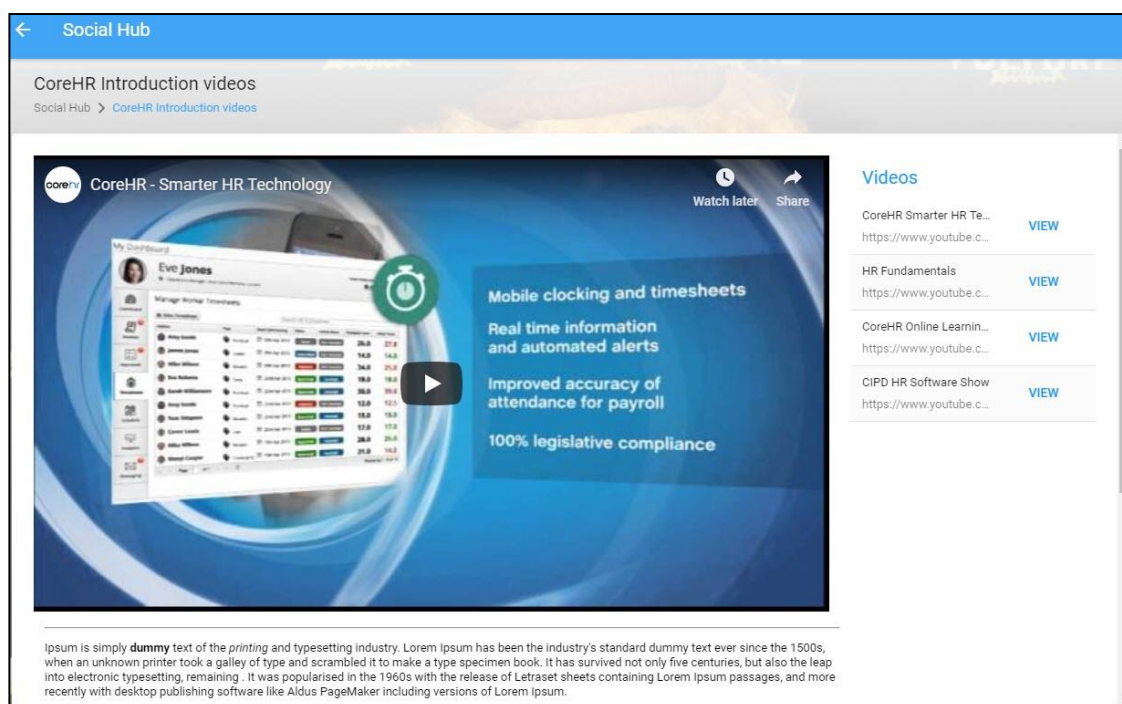

4.2.1. Text

A custom text page displays general text only. The below screenshot details an example text page.

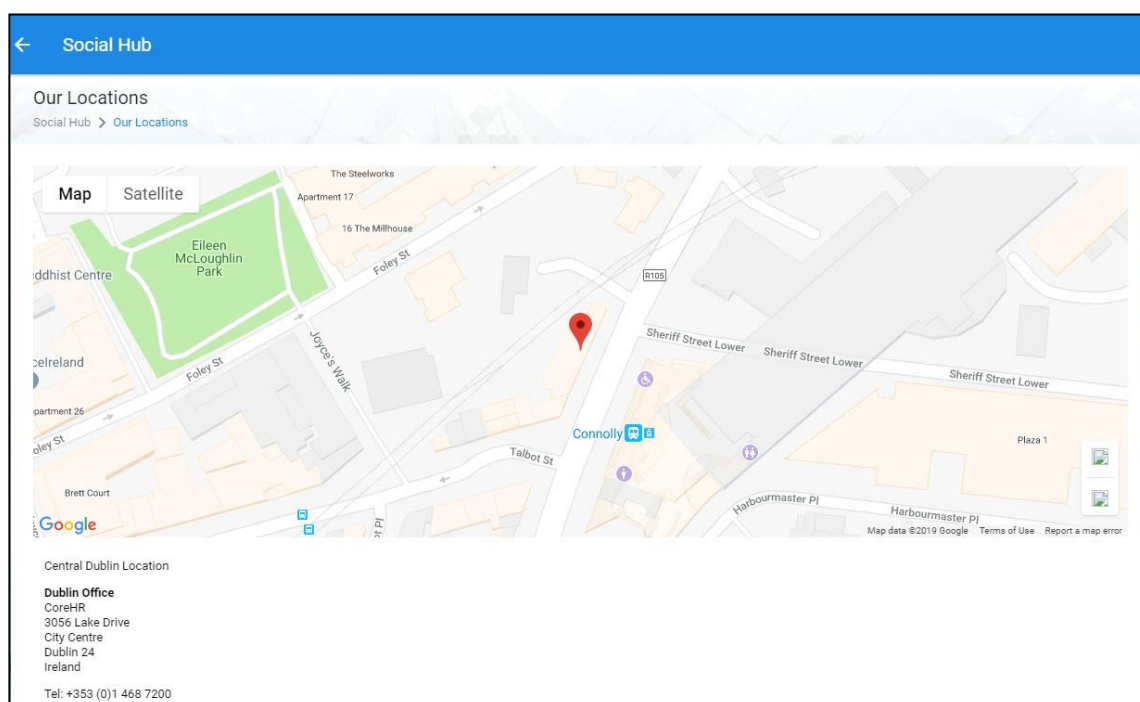

4.2.2. Video

A custom video page displays an external embedded video, along with general text. The below screenshot details an example video page.

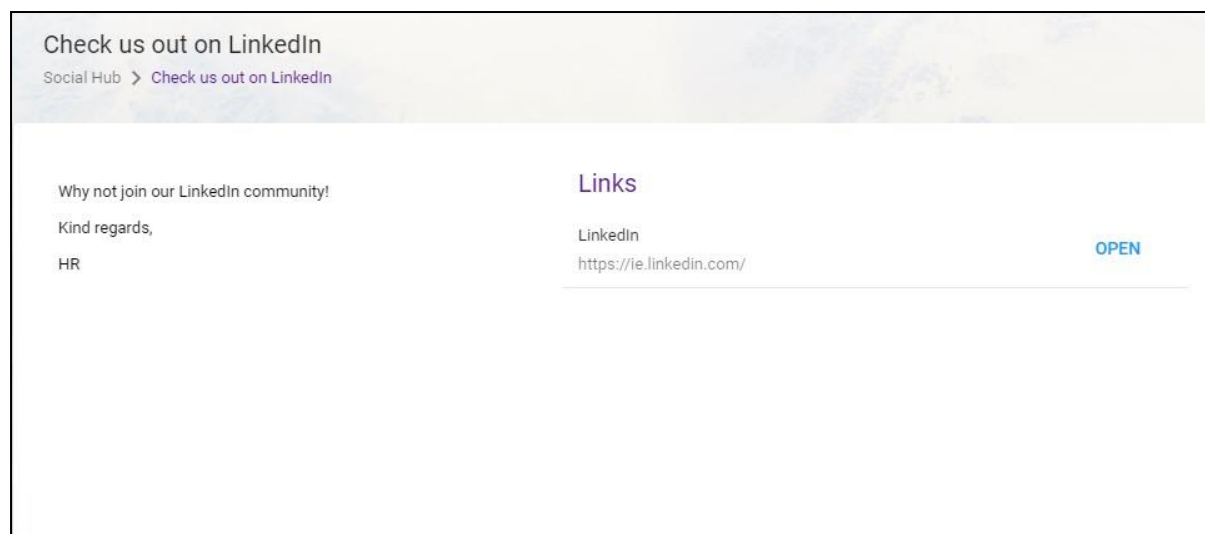

4.2.3. Map

A custom map page displays a specified map with pin addresses, along with general text. The below screenshot details an example map page.

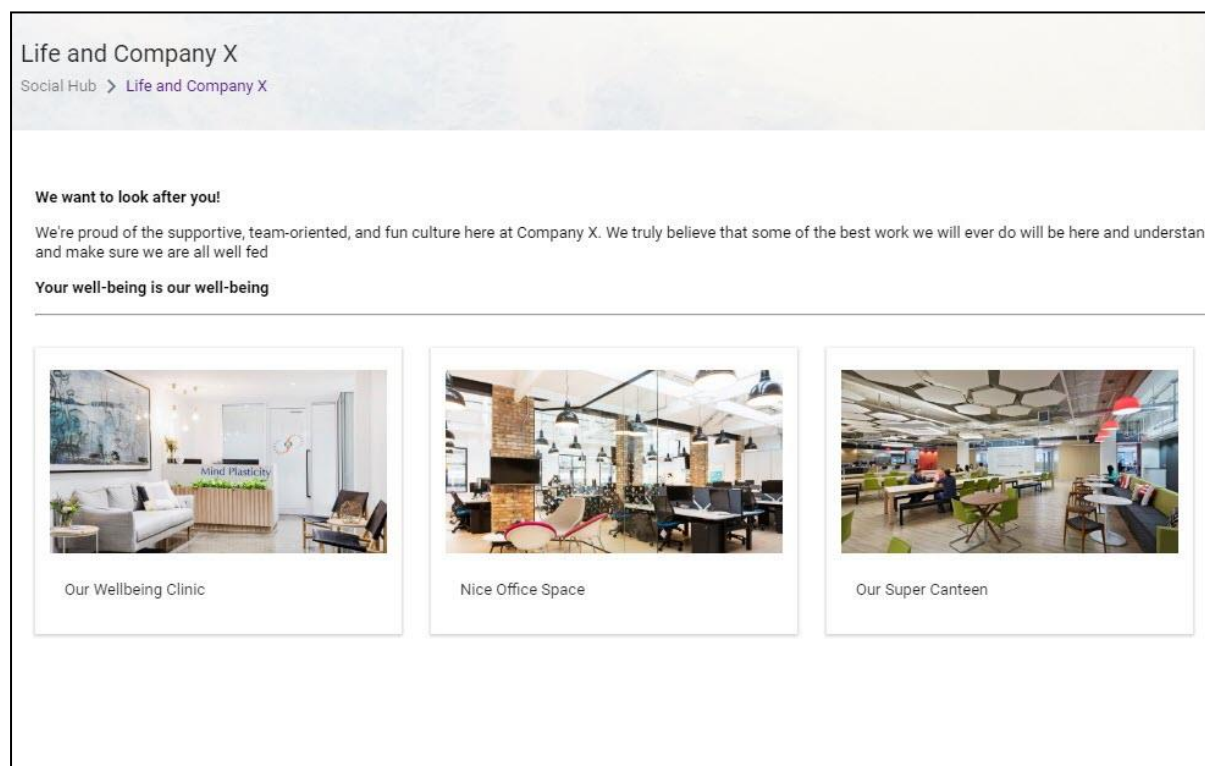

4.2.4. Link

A custom link page displays external links, along with general text. The below screenshot details an example link page.

4.2.5. Image

A custom image page is an image-based page with photo titles, along with general text. The below screenshot details an example image page.

5. Notifications

The *Notifications* feature creates system generated summary emails. The two main types of notification emails are *Weekly* and *Daily*. These notification emails are configured via *Notifications* (see the ***Configuring Employee Onboarding v27*** user guide for further details on how to set these up).

Note: These notifications are sent directly as emails to the employee. They are not sent via the CorePortal Notification Centre.

5.1. Weekly Summary Emails

Weekly summary emails can be sent to employees if:

- They have uncompleted *Checklist Items*.
- If an employee is starting within the organisation and joining their team in the next 14 days.

5.2. Daily Summary Emails

Daily emails can be sent to all employees who have been assigned a new *Checklist Item* to complete.

6. Employee Onboarding Progress

The *Employee Onboarding Progress* screen is available to both hr administrators and managers.

Hr administrators have access to this via the *Command Centre* widget. This provides a view of all outstanding checklists for employees that the administrator has access to (based on HR System Users).

Command Centre		NEW STARTER
Employees 118 Currently Active Employees VIEW	Onboarding 1016 Pending VIEW	
Transfers 1 Transfers Pending VIEW	Starters 1 Starters Pending VIEW	
Applicants 7 Applicants VIEW	Leavers 0 Leavers Pending VIEW	
Salary Approvals 51 Salaries Pending VIEW	Probation 0 Probations Pending VIEW	

Managers can access this for their employees via the My Team widget.

1. Click **Actions**.
2. Select **Employee Onboarding**.

This provides a view of all outstanding checklists for employees that directly report to the manager.

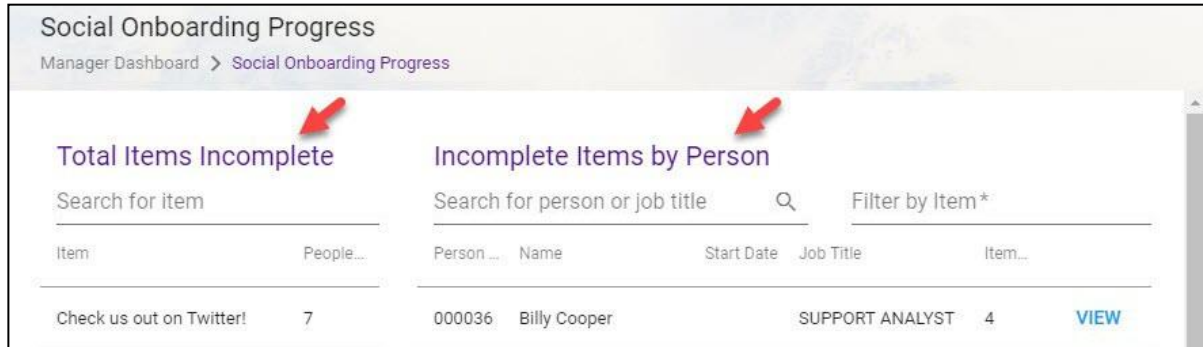

My Team			
Name, Department, Job Title		My Team	ACTIONS
Employee	Position	Contact Details	
BC Brian Clifford 000112	Recruitment Recruitment Administrator	078 554 112455 brian.clifford@abc.com	View Scheduler New Employee Successful Applicants Social Onboarding Transfers
HF Heather Forde 000054	Recruitment Recruitment Consultant	095 096 887678 heather.forde@abc.com	⋮
MF Marie Fox 000031	Recruitment Recruitment Consultant	075 076 332555 marie.fox@abc.com	⋮

Note: The outstanding *Checklist Items* are identified by an automatic system overnight job. For example, if the *Next Of Kin* field is incomplete by several employees, then *Next Of Kin* appears on the list.

There are two main sections on the *Onboarding Progress* screen, outlined below.

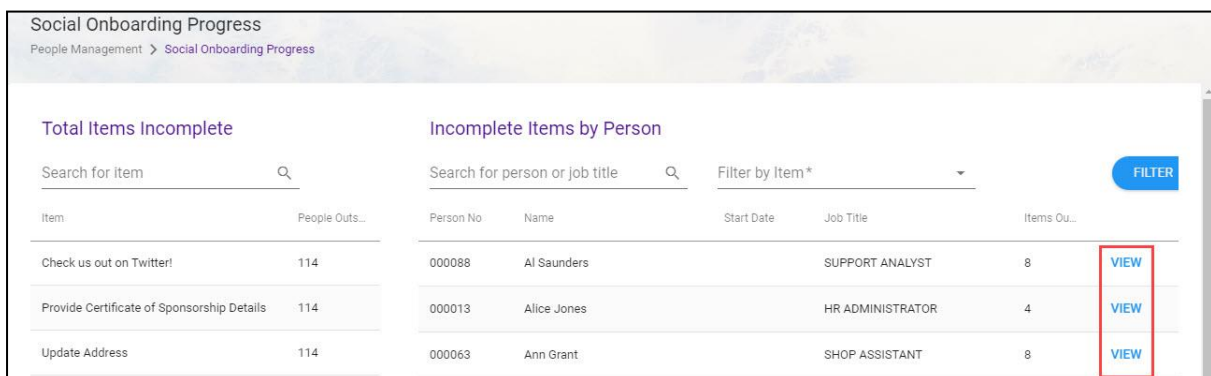

- **Total Items Incomplete:** Each individual checklist item + the number of employees who have that item as outstanding.
- **Incomplete by Person:** All employees I have access to on the screen, a summary of the # of outstanding items on their checklist.

Note:

- The *Total Items Incomplete* and *Incomplete Items by People* listings are dynamic. For example, if 2 people have the *Next Of Kin* checklist item outstanding, and one is marked as complete by employee, manager, or administrator, the *Onboarding Progress* screen listings update accordingly.
- If new checklist items are created, released and are outstanding checklist items for several employees, these items appear on the *Onboarding Progress* screen when the overnight job runs.

From here, you can select **View** on each employee record.

By select **View**, the *Task List* screen displays. This screen lists all *Checklist Items* in the employee's *Tasks Outstanding* and *Tasks Completed* lists.

From this screen, it is possible to complete the following actions:

- **Complete All:** Marks all Checklist Items as complete for the employee.
- **Message:** Send a message to the employee. This message displays on the employee's *Social Activity* section of their *Social Hub* Dashboard (i.e. as referenced in [3.3 Social Activity](#)).

7. Importing Pre-V27 Onboarding Checklists (Upgrades Only)

Organisations who are adopting the Modern UI and have used a pre-v27 version of *Onboarding Checklists*, have the facility to import their previous *Checklist Items* before enabling *Employee Onboarding*.

- This import is not mandatory, it is recommended you opt to create the *Checklist Items*, and custom content from scratch to give an optimal experience to employees.
- If you have imported previous *Checklist Items*, you can edit these items after the import process, as well as adding additional content.
- If you plan to import, it is recommended to do this before creating new checklist items, as doing so afterwards could lead to duplication.

Note: It is important to note that, if an organisation has multiple checklist profiles in the old onboarding solution, then these default checklist items are imported as global items.

- If these items are left as 'global', the items display for all employees even though they may have completed onboarding already via another non-default checklist profile, or as part of their own profile.
- It is recommended to create new checklist items for *Employee Onboarding* and not import old checklist items.
- If you decide to import, to prevent this scenario from occurring after import, you must review all default checklist items that have been created as global. It is then possible to action the following, as necessary:
 - Restrict the items
 - Make the items inactive
 - Delete the items. However, if employees have completed a default profile pre-upgrade this might be an issue.

For full training on how to import existing checklists, see the *Employee Onboarding v28: How to Configure User Guide*.
