2.0	28 th Sept 20	People XD University	Updated Document

2. Overview

2.1. The Purpose of the Document

The purpose of this document is to provide guidance on how to use the data migration functionality on People XD and highlight the enhancements made in v28 to support existing and upgrading customers.

This includes:

- What is the data migration tool and when is it used?
- How to complete a data migration.
- How to resolve errors during upload.
- How to clear down files (reverse the migration) for uploaded files and processed records.

This document does not provide detailed guidance on how to complete each of the data migration templates. Refer to the [helper files](#) that can be downloaded from the *Data Migration Templates* widget.

The *Data Migration Update Facility* widget is not covered in this document. Please refer to the **Data Migration Update Facility** user guide.

2.2. What is the Data Migration Tool?

The data migration process typically occurs when an organisation is initially implementing XD and is used to bulk import their records.

This includes:

- Employees and their associated personal details.
- Contracts and their associated elements, including salary details.
- Occupational absences and payroll cumulative history.
- Selected reference data elements.

This tool provides a set of 26 data migration templates. These can be downloaded from XD and populated with actual system records. These files can then be loaded to XD, validated and processed so that the corresponding records are created on the system.

2.3. Data Migration vs Updates

The data migration tool is used to insert new records to XD. This is not used to change / update existing records. Both the *Data Migration Templates* and *Data Migration Options* widgets are used for this process.

The *Data Migration Update Facility* widget is used to update existing records. Please refer to the **Data Migration Update Facility** user guide.

3. Overview of v28 Enhancements

This is a collection of enhancements which together deliver a faster, slicker and more complete Data Migration experience within the Modern UI.

These updates did not happen during General Release but within the new continuous release process in XD. If you are not an Early Adopter then please refer to updates in XD Hub for self-service configuration of Data Migration improvements.

Listed below is an overview of Data Migration Enhancements:

Faster 'Process All' Processing:

The 'Process All' functionality, which is used to migrate all records in a file into XD, now runs in the background. This is important because it speeds up processing time and removes the requirement for the DATA MIGRATION user to remain on the file screen while the file processes.

See Background Processing of Files

Enhanced templates:

Additional fields have been added to a number of templates to support Customer migration requirements. For example, contract fields such as Category, Sub-Category and Reason are now available in the Person file.

[See v28 Release Notes for Template Changes](#)

File Privacy by Default:

The visibility of new files uploaded to the **Data Migration** Tool will be restricted, by default, to just the user who uploaded the file. This protects the confidentiality of the data in the file by ensuring that it cannot be viewed or processed by another Data Migration user.

See New to v28 - Data Migration Options Widget

Person/Additional Contract Post Validation:

The Person and Additional Contract files now validate the contract details against the 'locked levels' on the post profile. For example, if a post profile is locked to a department and a different department is specified on the Person file, then the record will fail validation. This helps maintain the integrity of the data being loaded into XD.

See Data Migration – People Management & Post Validation

Download Files:

Data Migration files can now be downloaded as a pipe delimited CSV file. This means that any changes required can be made directly in XD – in response to onscreen validation errors for example – and then the updated file can be downloaded for reference purposes or for the purposes of loading into another environment. This saves the user from loading a file, processing the file, hitting validation errors, amending the file offline, loading the new file, processing the new file and hitting subsequent errors and so on. The option to Download files is menu security controlled.

See New to v28 – File Download & Importance of the Pipe “|” Delimiter for CSV Files

New templates:

Several new Data Migration files have been added including a Post Profile file and additional WFM files. This enables Customers to complete a typical migration using a single tool.

[See v28 Release Notes for Template Changes](#)

Archive Files:

Data Migration files can now be archived. Archived files are 'locked' from a data migration perspective and their contents cannot be viewed or actioned in anyway (i.e. can't be edited, processed, downloaded or cleared down). This protects the confidentiality of the data in the file and the integrity of data already loaded into XD.

See New to v28 - Data Migration Options Widget

3.1. Mandatory Changes to v28

After the General release date of new data migration functionality is introduced to all v28 customer environments. The changes will automatically apply to anyone on the latest XD release, for more information on this please refer to Release Notes v28 for our latest information on continuous releasing and XH Hub for new feature packs information.

If you are actively using the Data Migration tool, you will need to take steps to avoid disruption to your Data Migration processing.

Note:

You must update your current Data Migration menu profile to include the new webservice menu security items required to support the Data Migration enhancements.

The fastest way to do this is to search for 'datamigration%v2' and enable all options. Please refer to the Configuration Guide for details of these menu security items.

3.2. New to v28 Background Processing of Files

Overview

Once a file is uploaded to the Data Migration tool, the user can opt to process a single row individually (PROCESS RECORD) or all rows together (PROCESS ALL RECORDS) from the File Detail.

Previously, all processing happens on-screen. If a user navigates away from the screen then processing stops. Single row processing continues to happen on-screen but 'all records' processing happens as a background job. The User no longer needs to pause all other tasks while processing completes

Processing

PROCESS ALL RECORDS

When a user opts to **PROCESS ALL RECORDS** the File Detail screen will close & a 'background' job will kick off to process all the records on the file. While the job is processing, the status of the file on

the Data Migration Options widget will read:

Processing

It is not possible to interact with the file in anyway while the file is processing. Once the job finishes the status of the file will update to either 'Complete' (all records successfully migrated into XD) or 'Failed' (at least one record has failed).

3.3. New to v28 Data Migration Files, New & Enhanced

New Files have replaced old templates, New Files have been added and some Templates have been improved.

The most recent version of the new file templates are downloaded from the Data Migration Template widget.

This allows the user to load additional information into XD e.g. YTD Voluntary Deduction information, Training Course information.

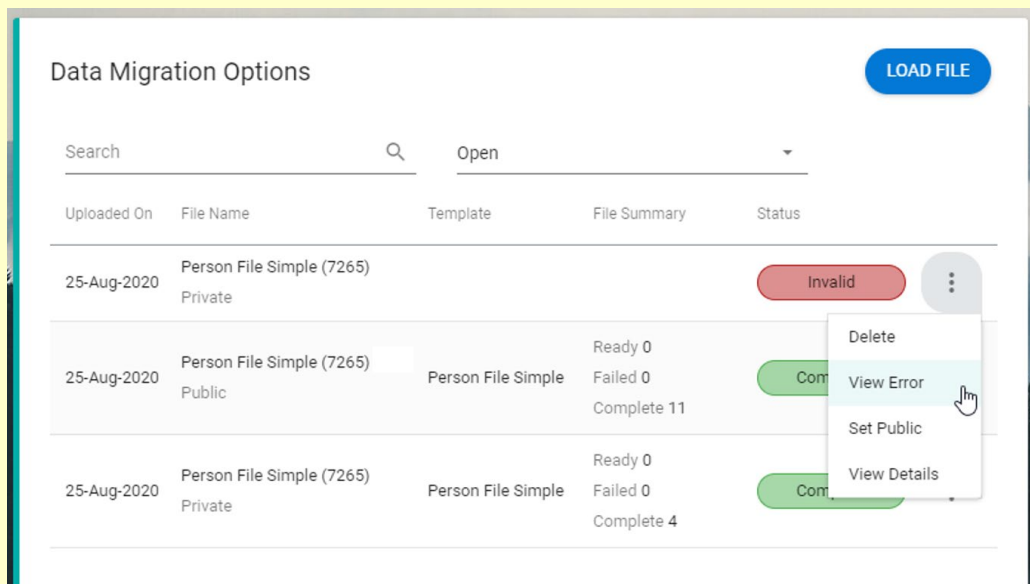

The following files have been updated.

- Person Simple/Complete files
- Additional Contract Simple/Complete files
- Qualification file
- UK Cumulatives file
- IRE Cumulatives file
- (Contracts) Pension file
- Balance Assignment file

Note:

Old Templates will not work, this will return an 'invalid' message

Error Message: ' Invalid File Template. Please download the latest template from the Data Migration Template widget'

Automatic Removal Leading and trailing spaces are automatically removed when the user uploads a file. Stopping the creation of duplicate reference data.

Existing records which were uploaded using the old template before the Data Migration File Enhancements can continue to be processed. The File Detail screen will display the additional fields empty and if you choose to download the file then the file will be represented in the new template. **See Overview of the Data Migration Process**

Data Migration Template Widgets, now include the option to filter by template ‘Category’ This enables the user to filter the list of data migration templates to just view templates relating to a product e.g. WFM Roster.

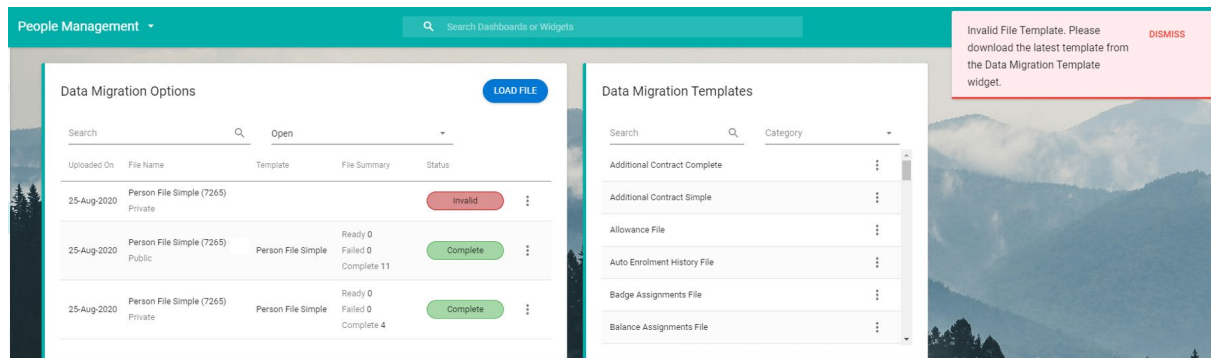

3.3.1. Attempting to load an invalid or old template

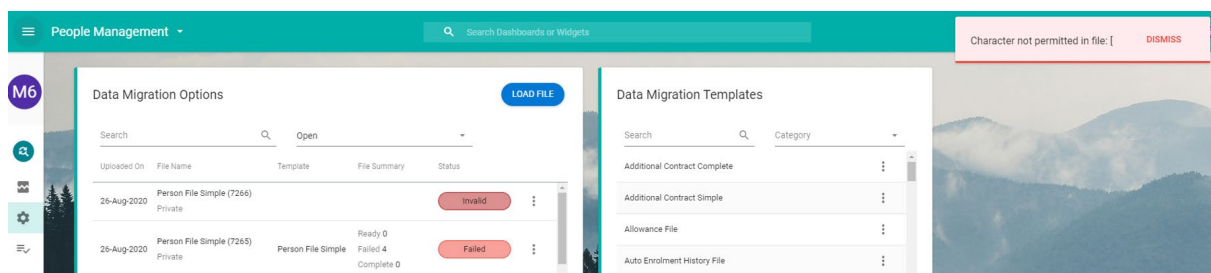

Module V#: Document Title - User Guide

A message will be displayed explaining the file template is invalid and prompting the user to download the latest version of the template. The file will also be displayed in the Data Migration Options widget with a status of 'Invalid'.

For Example, Invalid File Template: Please download the latest template from the Data Migration Template widget

For Example, Character not permitted in file: [

3.3.2. Invalid File Format Error Messages

Error Message	Cause
File name cannot exceed 100 characters	The name of the file is too long.
Invalid line on file	This error will be displayed if the number of pipes on the line does not match the number of pipes in the header Note: The error will include the line number. The line number count includes the two header rows so will match back to the line number in excel.

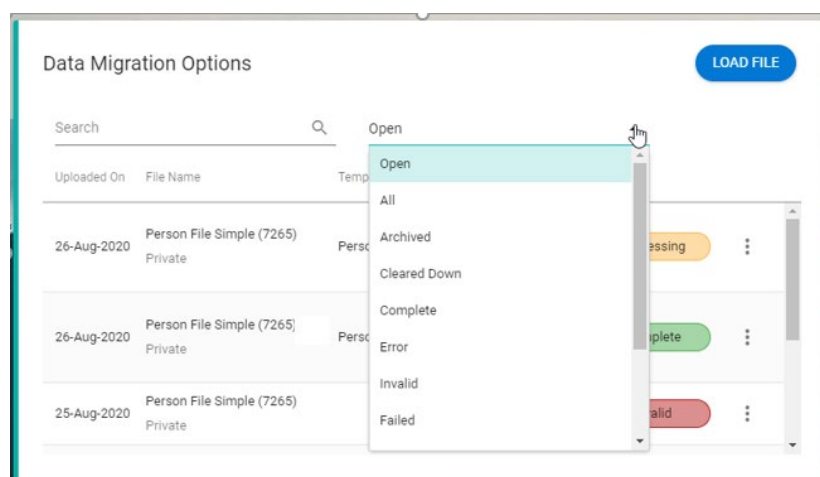

Error Message	Cause
	The Upload/Parsing process will stop and display an error on the first invalid line it encounters i.e. if there are multiple invalid lines on the file you are only told about the first one it hits.
Double quotes not permitted in file	This error will be displayed if the file contains double quotes Note: The Upload/Parsing process will stop and display an error when it encounters the first 'double quotes' error i.e. if there are multiple instances of 'double quotes' you are only told about the first one it hits.
Character not permitted in file	This error will be displayed if the file contains [or] Note: The Upload/Parsing process checks for 'double quote' errors first i.e. if there are both 'double quotes' and 'invalid characters' in the file then you won't see the 'invalid character' error until all the 'double quotes' errors have been resolved. The Upload/Parsing process will stop and display an error when it encounters the first 'invalid character' error i.e. if there are multiple instances of 'invalid character' you are only told about the first one it hits.
Invalid File Template. Please download the latest template from the Data Migration Templates widget.	This error will be displayed if: • It is an older version of the template • The file is comma delimited as opposed to pipe delimited • The File Name header row has been removed • The Column header row has been removed • A column is missing from the file • A column name has been changed Note: Download the new template to prevent this error message. Other than Org. Structure driven files (e.g. Person, Post Profile & Additional Contract) where the structure code is displayed in

Error Message	Cause
	the File Name header, the text in the File Name header row is irrelevant – but the row still has to exist. For Org. Structure driven files, the Structure Code in the File Name header row is used to match the file back to the applicable Org. Structure. The Column header is used work out what Template the file relates to. In order to match the file back to the to the applicable Template Definition, the DATA MIGRATION tool does the following: Checks how many columns are in the Column header Compares the text in the Column header to the text of all the Templates Definitions with the same number of columns.

3.4. New to v28 Data Migration Options Widget

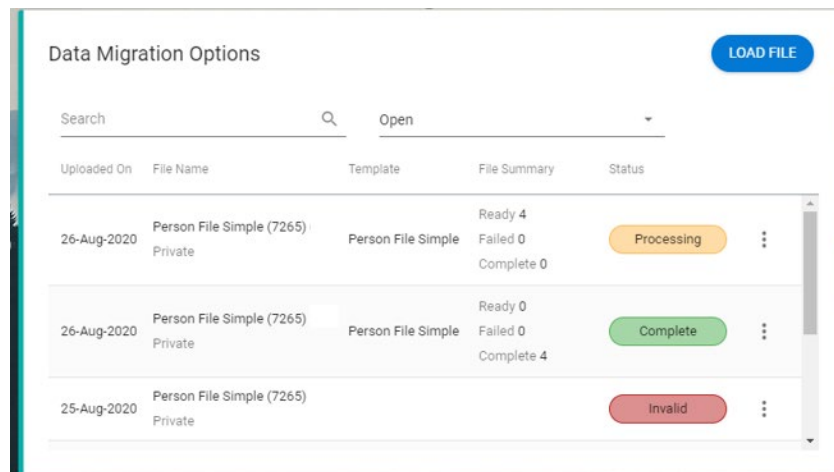

There has been a large amount of changes in the Data Migration Options Widget listed below:

1. **Ordered by 'Uploaded On'** date field, where files will be listed with the most recently loaded file at the top of the list.
2. **Pre-filtered by default** to display 'Open' files with an option to filter by a specific Status. Open files are files with a status of 'Ready', 'In-Progress', 'Failed', 'Complete', 'Processing', 'Uploading', 'Invalid' or 'Error'.

3. **File Summary** is now displayed on the Data Migration Options widget, allowing the user to see immediately how many records in the file are 'Ready', 'Complete' or 'Failed'.

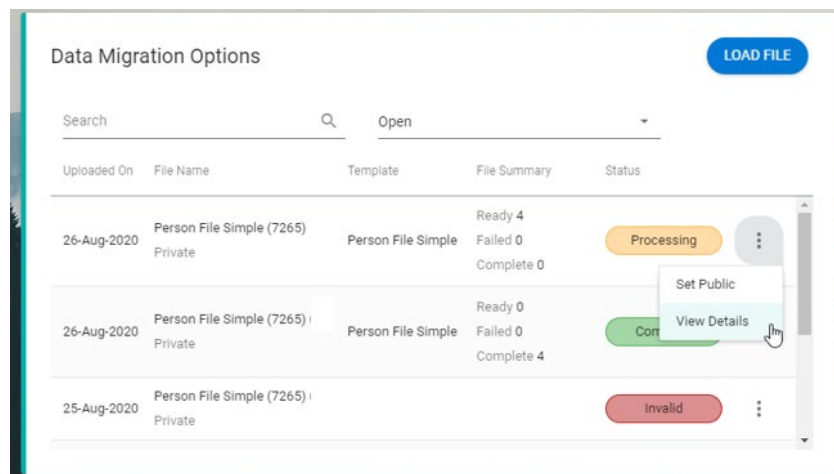

Note: The File Summary is only displayed for files processed after the Data Migration Enhancements have been released.

The screenshot shows the 'Data Migration Options' interface. At the top right is a blue 'LOAD FILE' button. Below it is a search bar and an 'Open' dropdown menu. The main part of the interface is a table with the following columns: 'Uploaded On', 'File Name', 'Template', 'File Summary', and 'Status'. There are three rows of data. The first row shows a file uploaded on 26-Aug-2020, named 'Person File Simple (7265) Private', with a status of 'Processing'. The second row shows a file uploaded on 26-Aug-2020, named 'Person File Simple (7265) Private', with a status of 'Complete'. The third row shows a file uploaded on 25-Aug-2020, named 'Person File Simple (7265) Private', with a status of 'Invalid'. Each row has a three-dot menu icon to its right.

Uploaded On	File Name	Template	File Summary	Status
26-Aug-2020	Person File Simple (7265) Private	Person File Simple	Ready 4 Failed 0 Complete 0	Processing
26-Aug-2020	Person File Simple (7265) Private	Person File Simple	Ready 0 Failed 0 Complete 4	Complete
25-Aug-2020	Person File Simple (7265) Private			Invalid

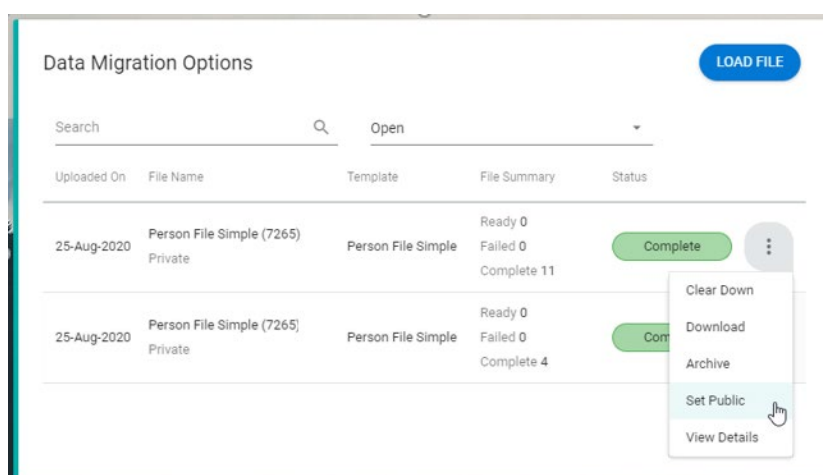

4. **View Details**, File ID and File owner displayed under the 'View Details' option.

This screenshot is similar to the previous one, but it highlights the 'View Details' option in the three-dot menu for the second row (the 'Complete' status file). The menu is open, showing 'Set Public' and 'View Details' options. A mouse cursor is pointing at the 'View Details' option.

Uploaded On	File Name	Template	File Summary	Status
26-Aug-2020	Person File Simple (7265) Private	Person File Simple	Ready 4 Failed 0 Complete 0	Processing
26-Aug-2020	Person File Simple (7265) Private	Person File Simple	Ready 0 Failed 0 Complete 4	Complete
25-Aug-2020	Person File Simple (7265) Private			Invalid

5. **File Privacy by Default**, the visibility of new files uploaded to the Data Migration Tool will be restricted, by default, to the user who uploaded the file. The Private/Public visibility is displayed under the File name. Also, there is an option for the file owner to make a file 'Private' or 'Public'. Superusers will be able to view Private files other than the owner once enabled in security. **See Superuser in Security Section**

6. **Download a file**, as delimited CSV files is also included in the enhancements, and this is controlled by menu security also. **See New to v28 – File Download**
7. **Invalid files**, for example an unrecognised template or an invalid line or character are in the file. There are shown in the Data Migration widget now for visibility. **See Invalid File Format Error Messages**
8. Failed Status, where the file as 1 or more failed records where the file may have stayed in progress now the file updates to 'Failed' instead of remaining at 'In Progress'
9. Option to 'Archive' a file, locking these records from further action on data migration. Super Admin users can reverse Archive Status where needed and view or action all files, Private and Public.

Note: Security Requirements

Ability to Archive files - Archived files are inactive from a Data Migration perspective and cannot be viewed, edited, processed, downloaded or cleared down. This protects the confidentiality of the data in the file and the integrity/availability of data already loaded.

File Privacy by Default - New files uploaded are private by default and only visible to user that uploaded them.

Download Files – File Download has to be enabled in security for Superusers and users alike **see New to v28 – File Download**

3.5. New to v28 File Download

The ability to download an updated data migration file as a pipe delimited CSV file.

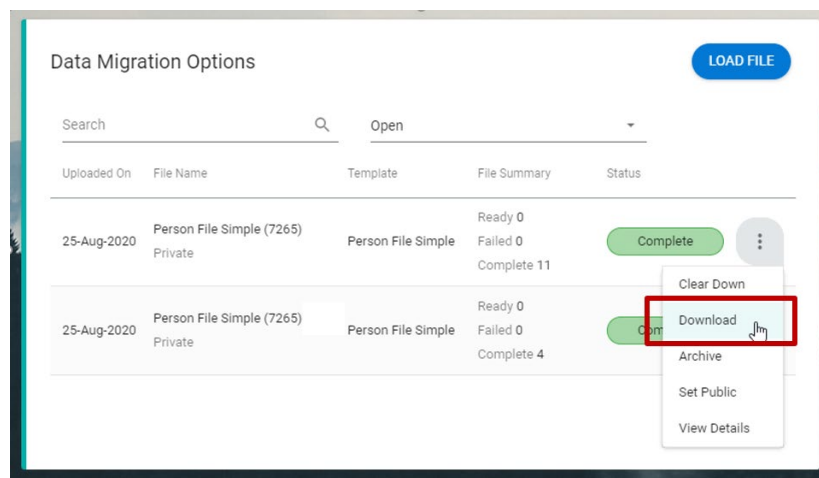

This means that any changes required can be made directly in XD – in response to onscreen validation errors for example.

Updated files can be downloaded for reference purposes or for the purposes of loading into another environment.

Note:

The option to download files is menu security controlled. This ensures that only authorised users have the ability to download data from the Data Migration tool. **See User Level Security**

The file is located in downloads, is named including date and time stamp and the length of time to download is reflective of the amount of data included in the file. Large files will take longer to download.

3.6. New to v28 File Statuses

Status	Description
Ready	All records in the file are ready to process.
Uploading	The Uploading Process is still being completed to the data migration tool and has not yet fully uploaded and ready to process. Once this step is finished the status of the file will change to 'Ready'.
Processing	New Status where the records are still being migrated this is the In Progress status once processing starts, we now have migrated the records and processing has begun. For Example, the user opted to 'process all records' & these take time to run. Once finished the status will change to Complete or Failed.
Error	An unexpected error occurred when the file was processed, this status means the file needs to be reviewed for mistakes, including incorrect records or formatting.
Invalid	The file has an unrecognised template or an invalid line or character are in the file.
Failed	One or more of the records in the file has failed to migrate, if the processing is not possible and needs to be restarted the user is updated that there is a processing issue and status changes from 'In Process' to 'Failed'
Archived	Archived files are 'locked' from all data migrations. Their content cannot be viewed or actioned. Including edited processed downloaded or cleared down. This protects the confidentiality of the data in the file and the integrity of data already loaded into XD

3.7. New to v28 Data Migration for People Management & Post Validation

Overview

Post Validation is new to the v28 release. This file now validates the information in the file against the locked/linked levels specified on the Post Profile definition.

Note: Other items specified against the Post Profile can be overwritten by the Person file so validation will not apply. *For Example: If only the Company & Mgt. Unit are locked/linked levels on the Hierarchy and if the Post Profile definition specifies the Company, the Mgt. Unit and the Location*

The person file will error if the Company or Mgt. Unit does not match the Company or Mgt. Unit on the Post Profile definition.

However, if the Location on the Person file does not match the Location on the Post Profile definition, then no error will generate and the employee will be created with the Location specified on the person file (regardless of the Location specified on the Post Profile definition).

3.7.1. Person Simple file, Additional Contract file

The Person and Additional Contract files now validate the contract details against the 'locked levels' on the post profile.

For example

If a post profile is locked to a department and a different department is specified on the Person file, then the record will fail validation. This helps maintain the integrity of the data being loaded into XD.

OR

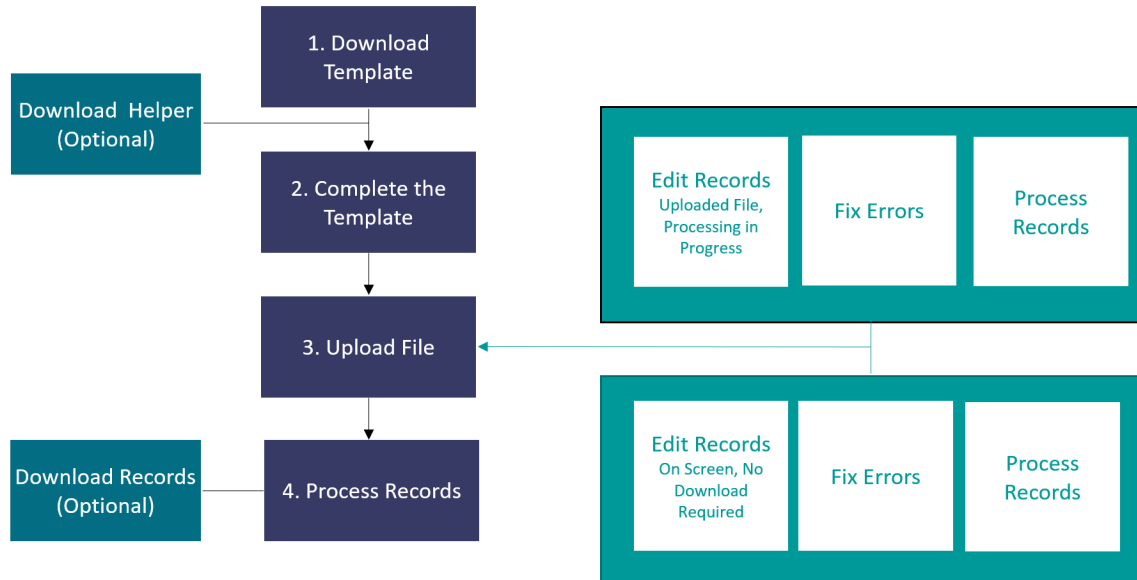

If only the Company & Mgt. Unit are locked/linked levels on the Hierarchy and if the Post Profile definition specifies the Company, the Mgt. Unit and the Location, the person file will error if the Company or Mgt. Unit does not match the Company or Mgt. Unit on the Post Profile definition.

3.8. New to v28 Other Improvements Include:

- File edits made within the Data Migration tool are saved even when user leaves the file/tool.
- Uploading large files has been improved so that potential timeouts are reduced See Uploading Status
- Insight view so that it is possible to report on all reference data created by a Data Migration in a single report.
 - CoreInsight > Report Wizard
 - Enter 1. Report Type
 - Enter 2. What Business Areas would you like to report on? & What views would you like to use in your report?
 - Enter 3. Report Columns

4. Overview of the Data Migration Process

The data migration process on XD is completed in four main steps:

#	Step	Description
1	Download Template	Download the data migration template file from XD.
2	Complete the Template	Open the template in excel. Update the template with the required records. Save as a CSV file.
3	Upload File to XD	Upload the completed file in CSV format to XD.
4	Process Records	Update / edit records before processing. Process each record in the data migration file. Resolve issues for any records that fail to load.

Important Considerations:

- The data migration process requires the records to be supplied in a specific order and format. Therefore, template files are provided to ensure that the records are supplied in an acceptable format for processing to be created on XD.
- There are many data migration template files available on XD, each used to upload different record types. The full list of these is available in [2.8 What Templates are Available?](#).
- Certain configuration must already be completed on XD before attempting to load a data migration file. Furthermore, there is a recommended order that should be followed when loading files to XD. More details on this available in [2.9 File Upload Order & Pre-Requisite Configuration](#).

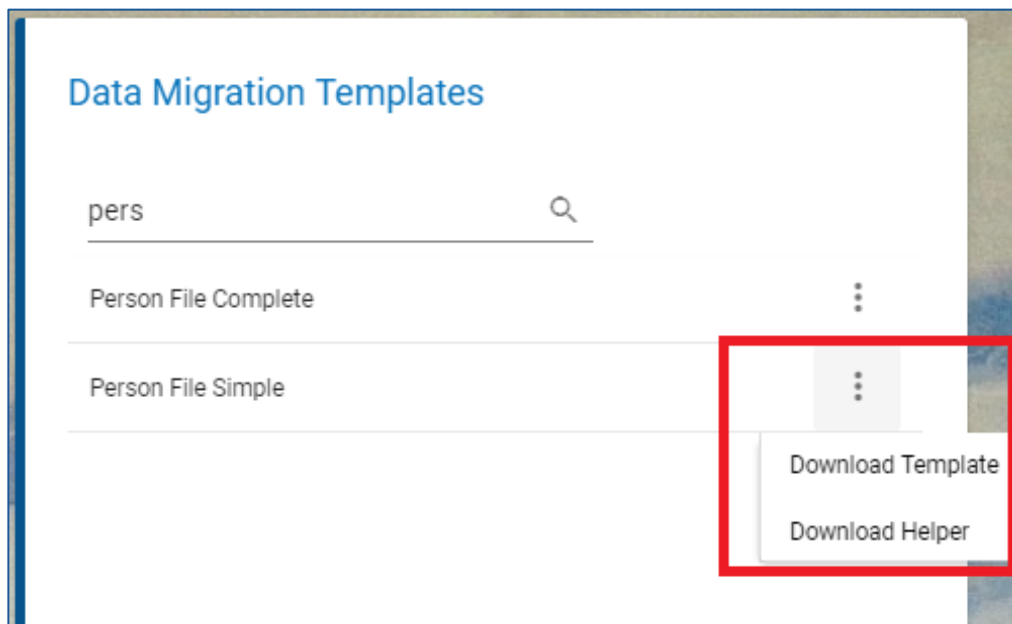

- Downloading Records is new to v28 and only available to Super User and User profiles that have been authorised access to download functionality. **See File Download**

4.1. What are Templates and Helpers?

There are 2 types of documents that can be downloaded via the *Data Migration Templates* widget.

1. **Templates:** These are the template files that will be populated with the actual records to be uploaded to XD. Each template will be completed in MS Excel, saved as a .CSV file and uploaded to XD.
2. **Helpers:** These excel files will provide additional information about how to complete the corresponding template file including what fields are mandatory, the expected data type and examples of the kind of data input expected per column. These files are for reference only and will not be uploaded to XD.

Both files are available to download per template on the *Data Migration Templates* widget:

4.2. Importance of the Pipe “|” Delimiter for CSV Files

The Data Migration Tool uses pipe delimited CSV files only.

Templates are downloaded as pipe delimited CSVs from CorePortal. Guidance is provided on how to open these in MS Excel in [2.2 Download a Template](#).

Data Migration files must be saved by you as a pipe delimited CSV. Your PC is defaulted to use a specified character when saving a CSV file. This is automatically applied on save and is not something that you can specify when saving the file.

Before completing any Data Migration Templates, you should first check your PC to confirm that a pipe “|” character is specified as the ‘List Separator’. Guidance on how to check and update this is provided in [Appendix: Update PC Settings to Pipe List Separator](#). This ensures that every time you create a CSV file, the “|” character is used to separate each field.

Note:

- This is a once off task to update your PC.
- If you do not check this, your PC may be using another character e.g. a comma, tilde etc. CSV files using any other list separator will fail to load to the Data Migration Tool.

5. How to Complete a Data Migration

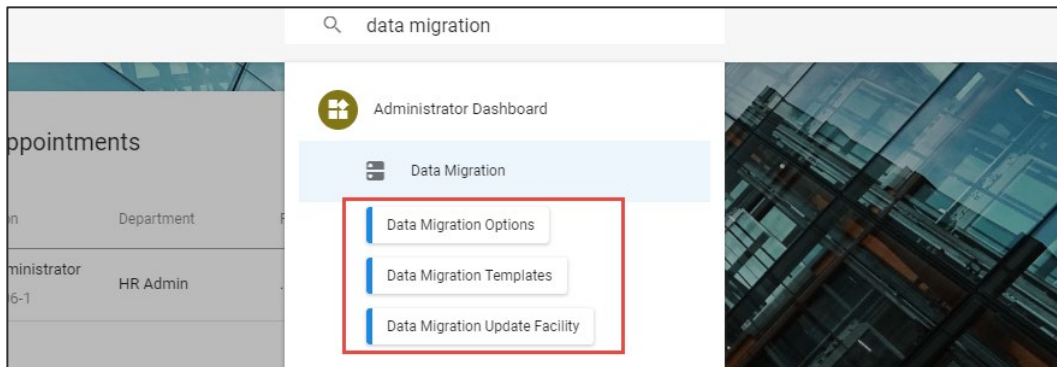

5.1. Locating the Data Migration Tool

The 3 data migration widgets are all available on the *Administrator Dashboard > Data Migration* tab.

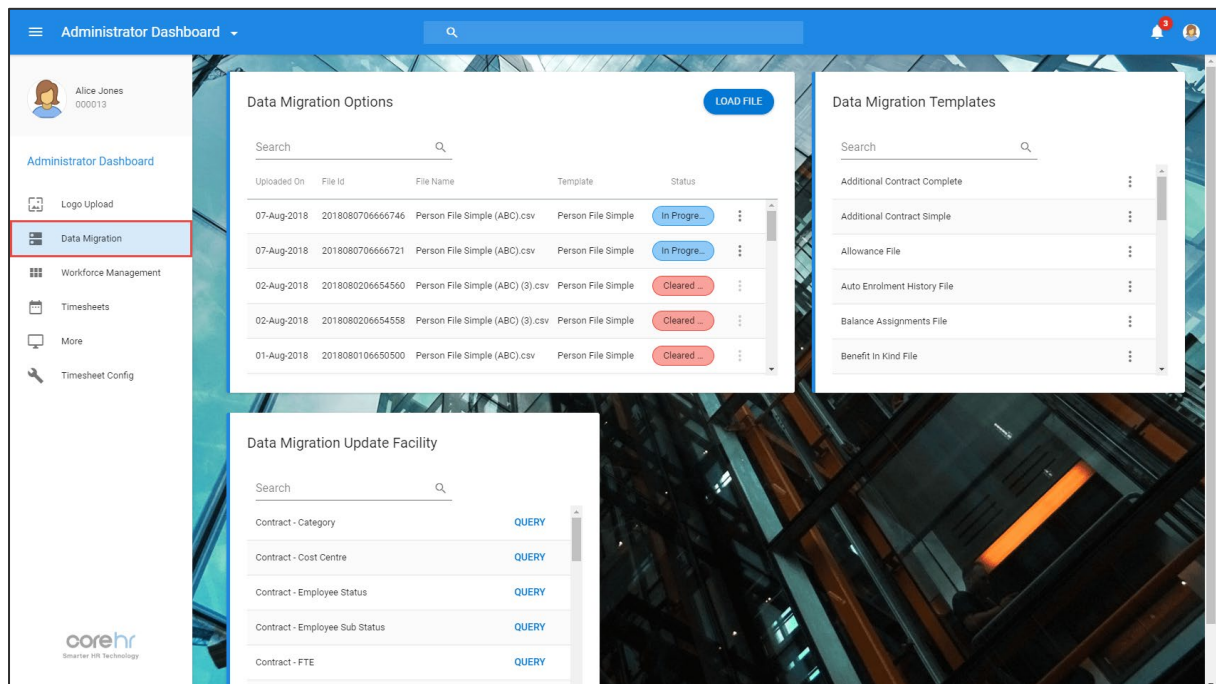

To access the data migration tool:

1. In the Quick Jump menu type “Data Migration”.

The 3 data migration widgets are displayed on the menu.

2. Click on any of these to jump straight to the widgets.

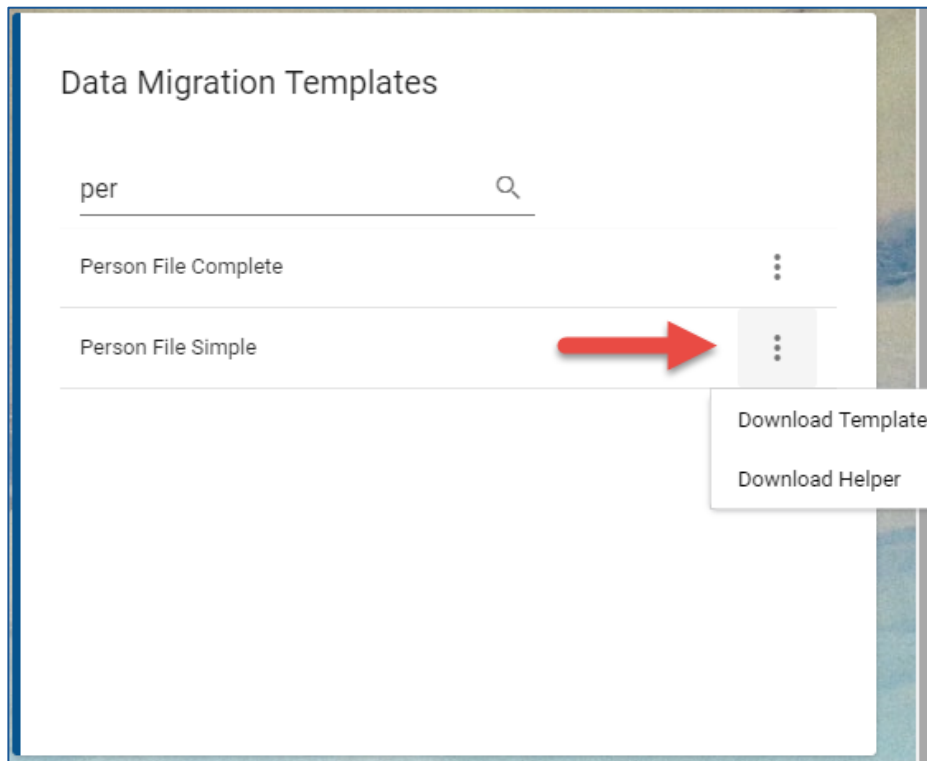

Widget Name	Description
Data Migration Templates	Used to download template and helper files.
Data Migration Options	Used to upload and process data migration files.
Data Migration Update Facility	Used to bulk update selected employee, contract and reference data elements. Refer to the Data Migration Update Facility user guide.

5.2. Download a Template

Follow the steps below to download a template file:

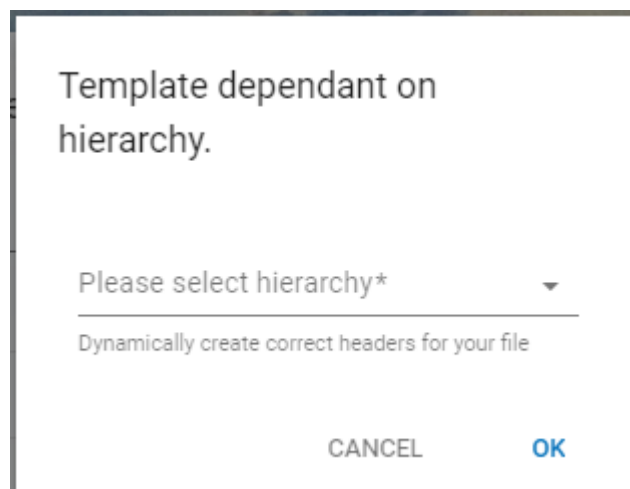

1. On the *Data Migration Templates* widget, search for the template required.

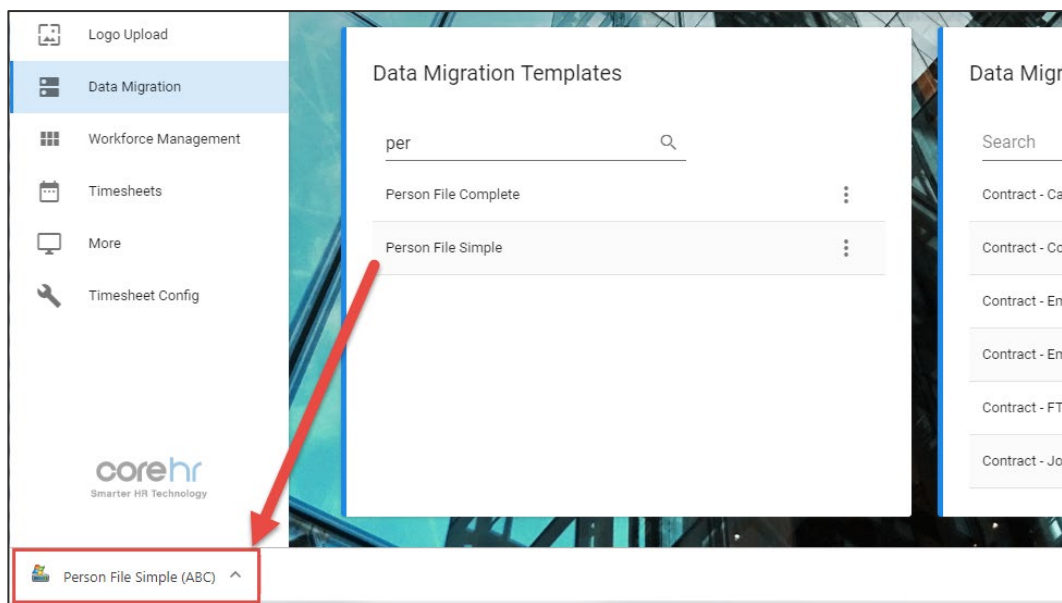

2. Click  and select **Download Template**.

If downloading a contracts type template e.g. *Person File Complete* or *Person File Simple*, a prompt will appear.

- a. Select the hierarchy that the contracts will be uploaded against.
- b. Click **OK**.

3. The template file will download per the browser settings.

4. Open the template in MS Excel.

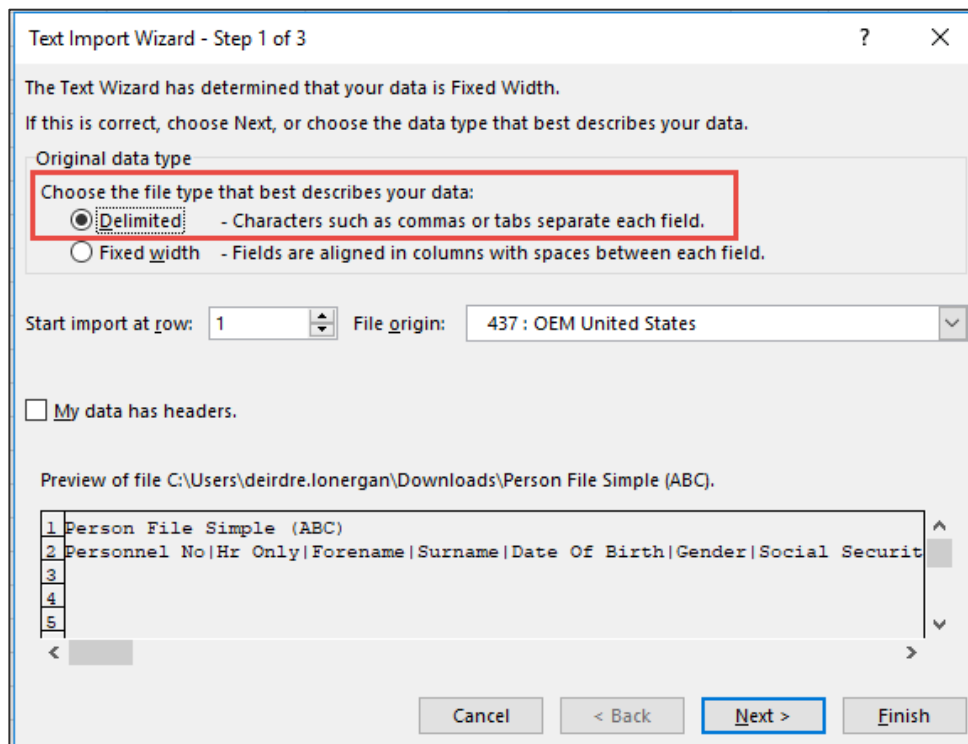

a. Open MS Excel.

b. Browse to open the downloaded file.

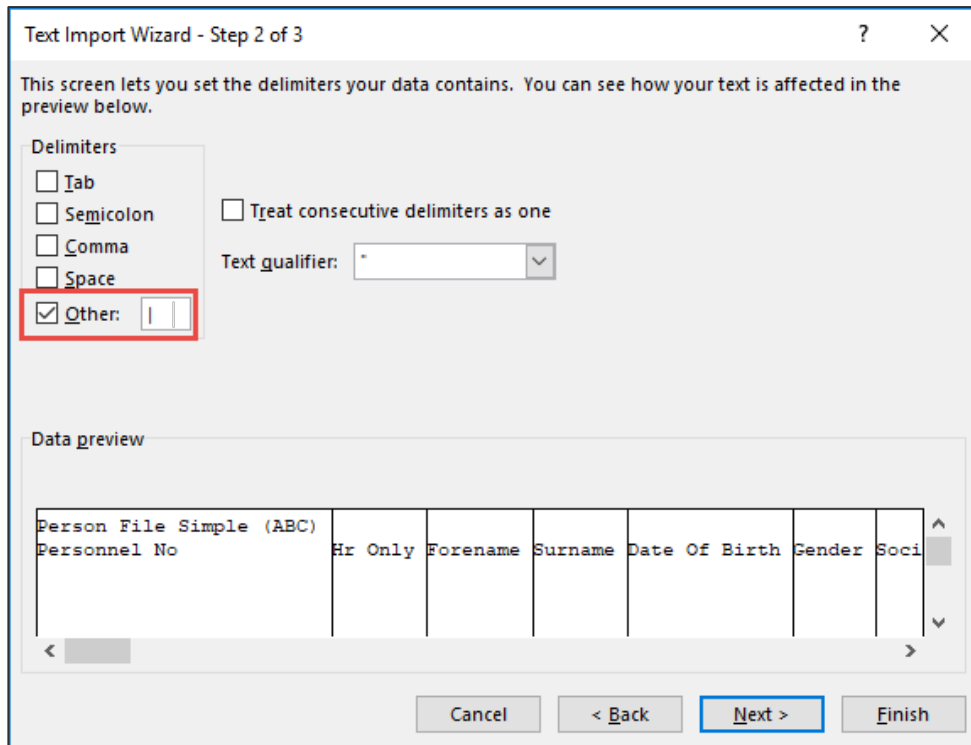

Excel will default to search for “.xls” type files. Ensure that the file type is updated to “All Files” so that the downloaded template will appear.

c. Use the 3-step import wizard to correctly import the template in the required format.

i. On step 1, ensure that the file type = *Delimited*:

- ii. On step 2, select **Other** and enter “|” (pipe character).

This screen lets you set the delimiters your data contains. You can see how your text is affected in the preview below.

Delimiters

- ☐ Tab
- ☐ Semicolon
- ☐ Comma
- ☐ Space
- ☒ Other: |

☐ Treat consecutive delimiters as one

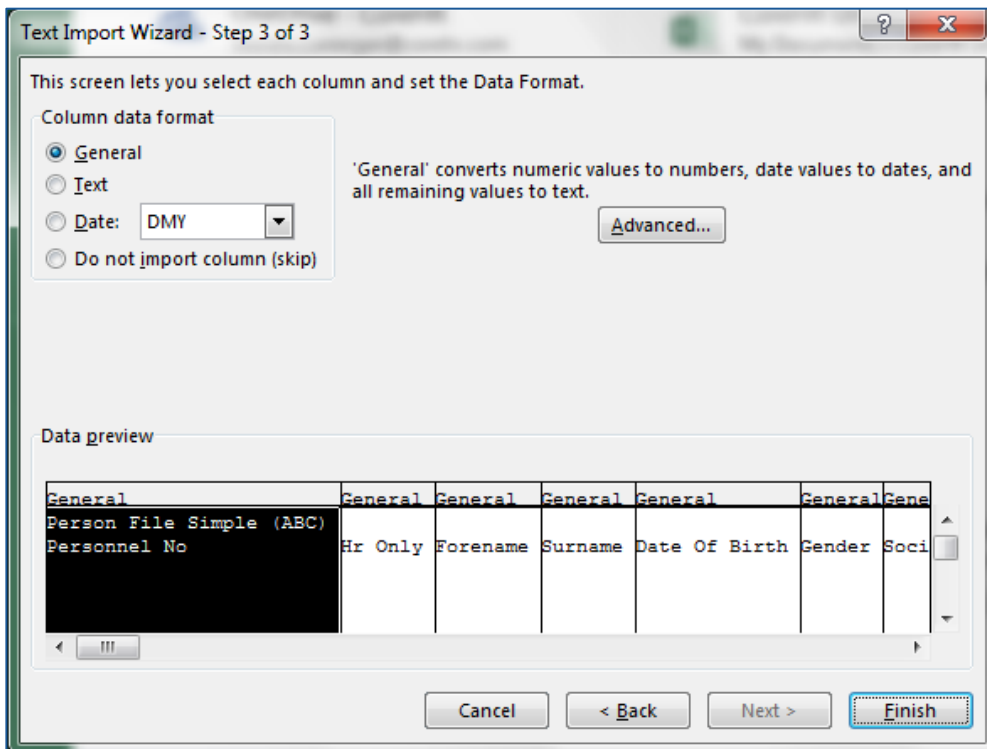

Text qualifier: " v

Data preview

Person File Simple (ABC)	Hr Only	Forename	Surname	Date Of Birth	Gender	Soci
Personnel No						

Buttons: Cancel, < Back, Next >, Finish

- iii. On step 3, no further action is required. Default settings can be applied.

This screen lets you select each column and set the Data Format.

Column data format

- ☒ General
- ☐ Text
- ☐ Date: DMY v
- ☐ Do not import column (skip)

'General' converts numeric values to numbers, date values to dates, and all remaining values to text.

Advanced...

Data preview

General	General	General	General	General	General	Gene
Person File Simple (ABC)	Hr Only	Forename	Surname	Date Of Birth	Gender	Soci
Personnel No						

Buttons: Cancel, < Back, Next >, Finish

- iv. Click **Finish**.

- d. The template should open with 2 rows:
 - i. Row 1 = Template Name
 - ii. Row 2 = Individual Columns for each data element

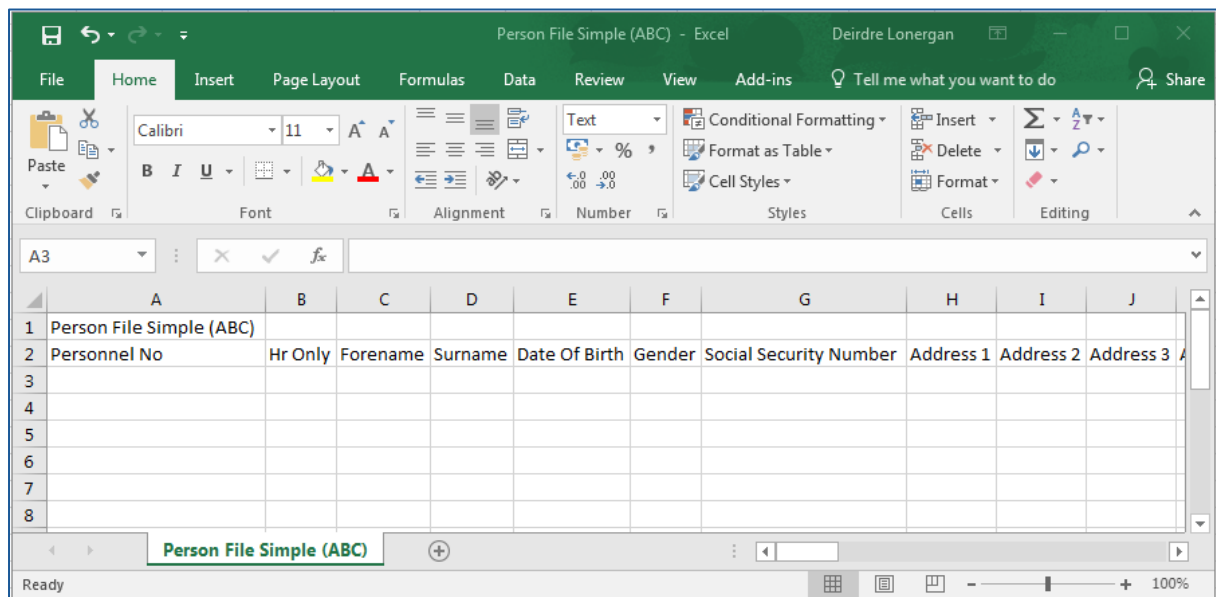

Note:

Any changes to these 2 rows will result in an error when attempting to upload the file to XD. Do not edit or delete these first 2 rows.

- 5. Save the imported file as a .CSV file.

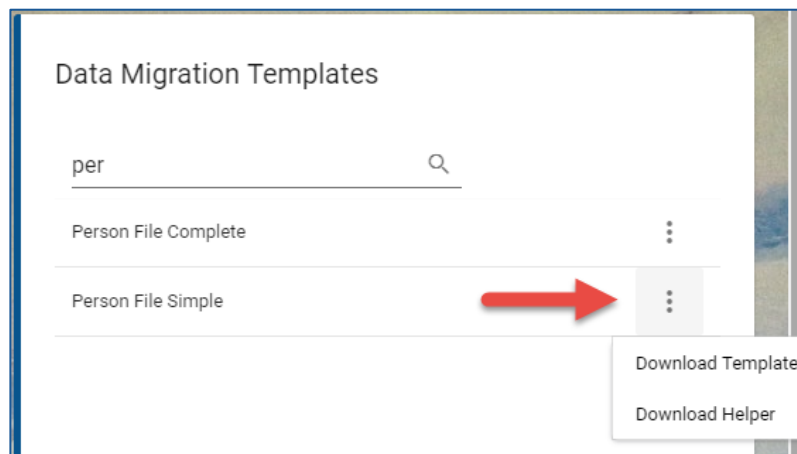

The file can be saved using any name required, as this is not referenced during upload.

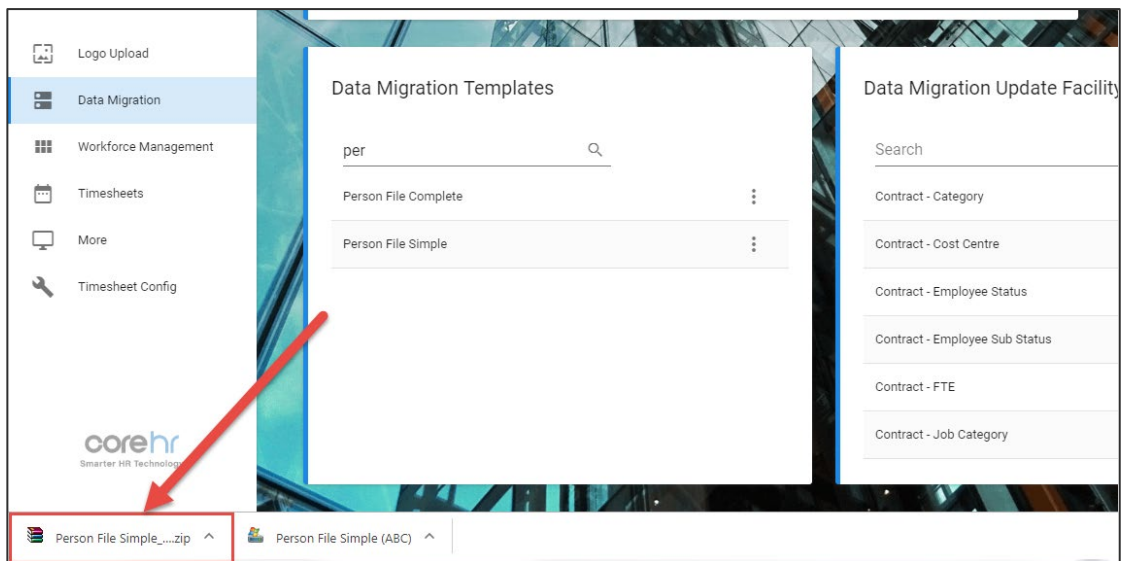

5.3. Download the Helper

Follow the steps below to download a helper file:

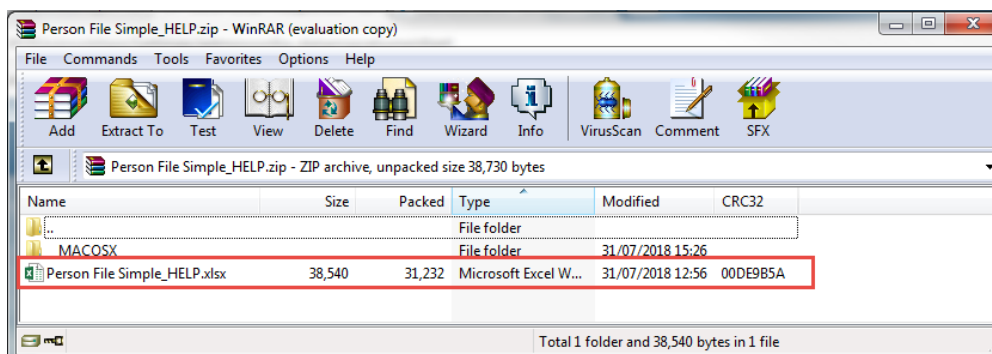

- 1. On the *Data Migration Templates* widget, search for the template required.

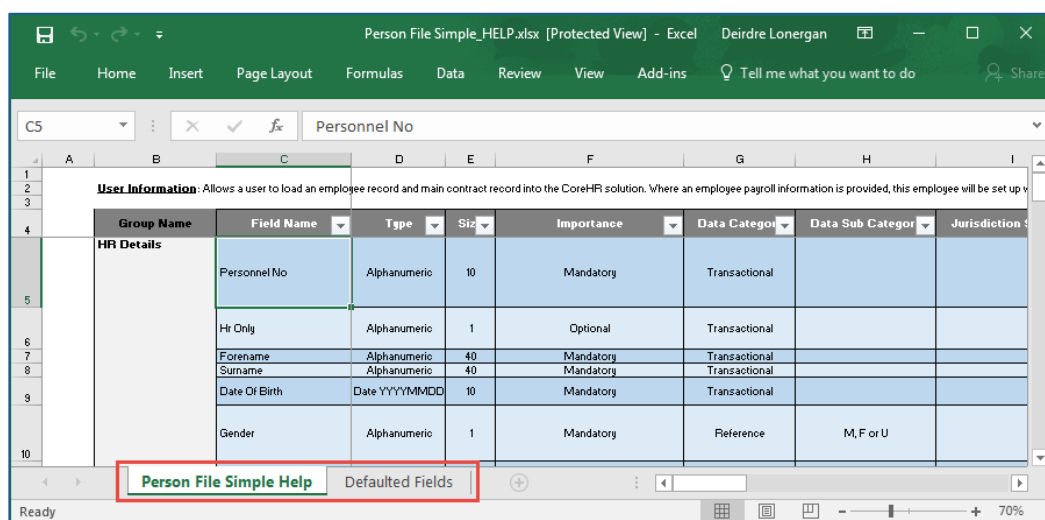

2. Click  and select **Download Helper**.
3. The helper file will download per the browser settings.

4. The helper file will download as a zipped file. Open this and extract the excel file:

Each helper file includes 2 tabs:

- **Template Help:** Guidance on how to populate each column in the template including data type, field size and useful hints.
- **Defaulted Fields:** If any elements of the employee / contract / reference data record are defaulted, those will be listed here.

5.4. Complete the Template

The first 2 rows of each template must not be updated. These rows are critical to the upload process:

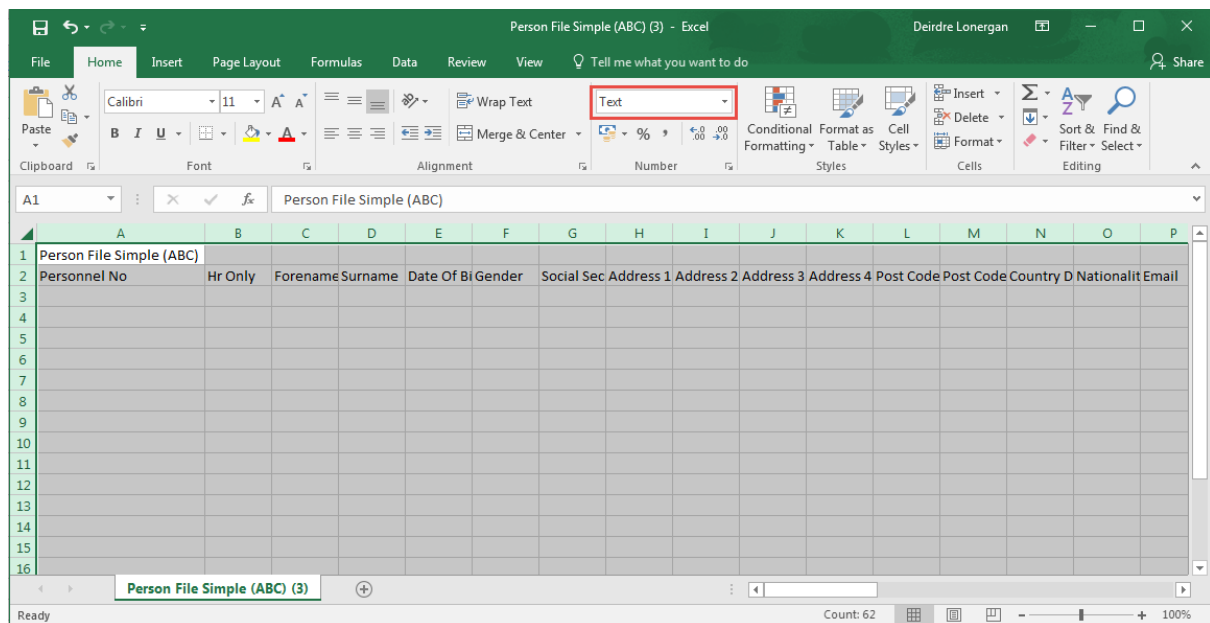

- **Row 1:** The template type e.g. “Person File Simple (*hierarchy name*)”. The system will use this to understand what template file is being uploaded.
- **Row 2:** These are the column headers. During upload, the system will map these to the required element.

Note:

Any changes to these 2 rows will result in an error when attempting to upload the file to XD.

It is also recommended to select all columns and update the type from “General” to “Text”. This will ensure that any data fields that require a leading zero, will not be automatically updated by excel. For example, if this update isn’t applied and a Personnel No of “000321” is entered, excel will automatically remove the zeros and update the data to “321”.

Follow these steps to complete the data migration file using this template:

1. Add the required records to the file.

Each row of the file represents an individual record e.g. an employee, a contract etc.

Refer to the helper file for guidance on how to complete each record.

2. Save the file as a .CSV.

This is the required file format and the only format that will be recognised when uploading.

The name of the file is not important. The system will identify the file using the template name in row 1. Therefore, the file can be saved using any title required.

Note:

It is important to save the file using the *File > Save As* option and selecting .CSV file type, each time the file is amended, to ensure that this saves in the correct format.

5.5. Uploading Status

To avoid the UI timing out when a file is uploaded into the Data Migration tool, the user is re-directed back to the Data Migration Options (Upload Facility) widget if the file size is greater than the 300 record threshold.

When a file is uploaded into the XD Data Migration tool (user clicks 'ok' on the 'Upload' modal)

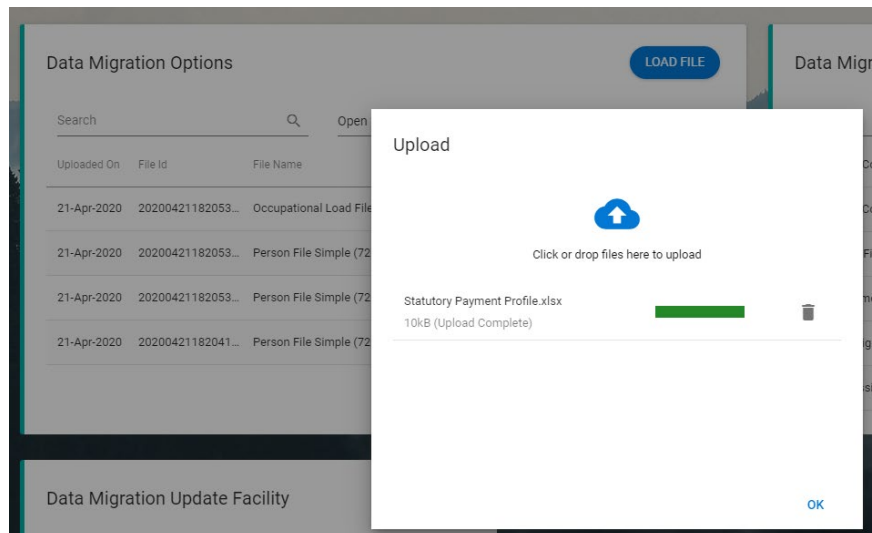

If the file has (less than) < 300 records then:

- The File Detail/Edit screen will be automatically displayed as soon as the file finishes loading.
- If the user closes out of the File Detail/Edit screen without processing any records then the status of the file in the Data Migration Options widget will be 'Ready'

If the file has (more than) > 300 records then:

- The file will be displayed in the Data Migration Options (Upload Facility) widget with a status of 'Uploading'. Once XD has finished uploading/parsing the file –the status of the file will change to 'Ready'. It is not possible to interact with a file when the status is 'Uploading'.
- When the status of the file changes to 'Ready', the Data Migration user will be able to open the File Detail/Edit screen by selecting 'Edit' in the file menu.

The 300 record threshold is not configurable.

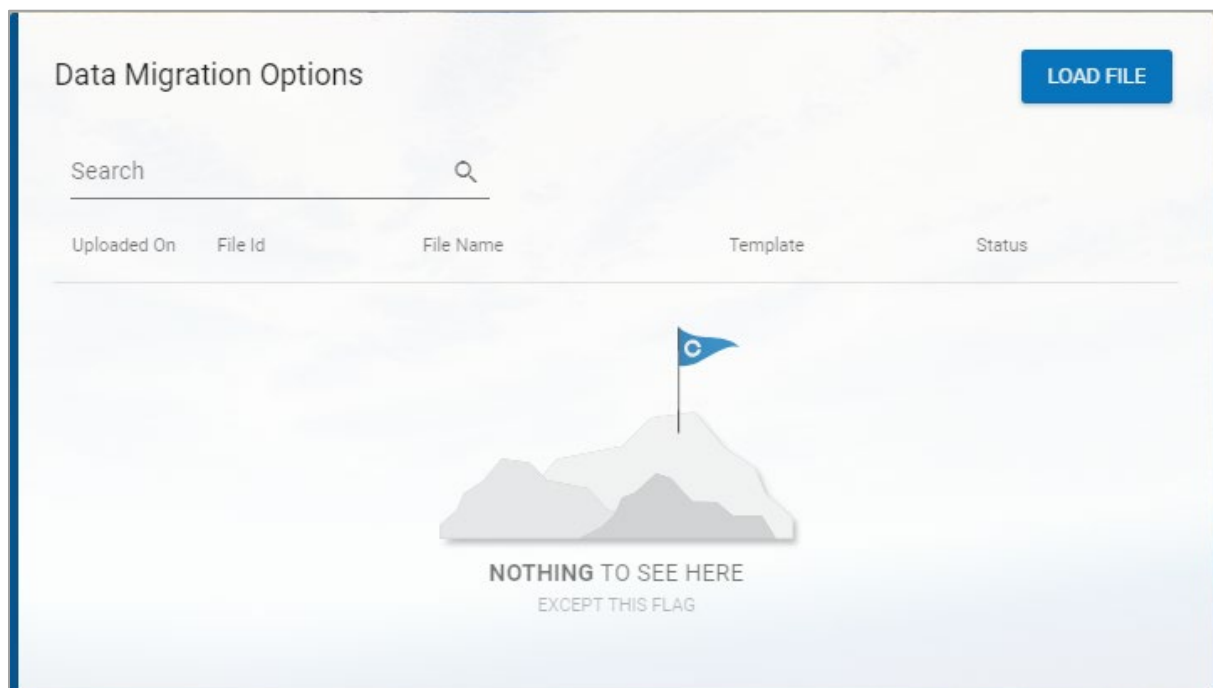

5.6. Upload the Template

5.6.1. Load the Template File

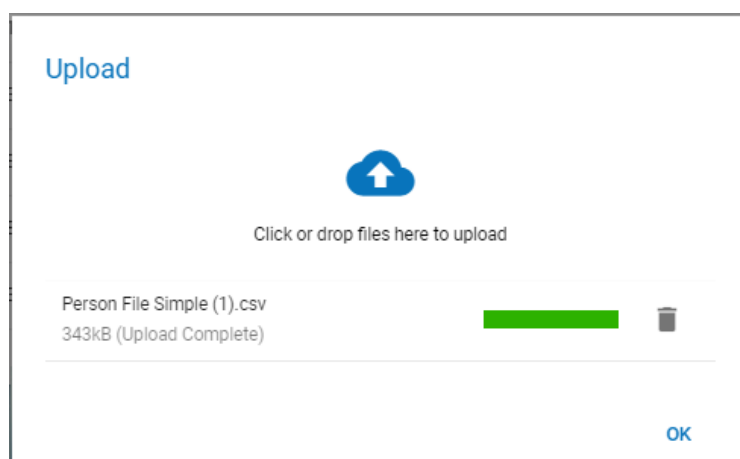

Complete the following steps to upload a completed data migration template file to XD:

1. On the *Data Migration Options* widget, click **Load File**.

2. In the *Upload* screen either:
 - a. Drag and drop the completed template file.OR

- b. Browse for the completed template file.

3. Click **OK**.
4. Once uploaded, the processing screen will appear with the contents of the uploaded file. All records will have an initial status of “Ready”.

Note:

If this screen fails to appear i.e. you are returned to the *Data Migration Options* widget, this is usually because the CSV file uploaded is not pipe “|” delimited. Follow the steps provided in [Appendix: Update PC Settings to Pipe List Separator](#) to update your computer settings to ensure that the pipe “|” delimiter is used when saving CSV files. You will then need to resave your file as CSV, so that “|” is used.

PROCESS ALL RECORDS

Note:

At this stage the file has been uploaded to XD and is ready to process. The records have not yet been uploaded to the XD database.

At this stage you can begin to process the records (see [2.5.2 Processing the Records](#)).

Alternatively, you can exit the screen by clicking the  at the top left to return to the *Administrator Dashboard*.

The file will be available on the *Data Migration Options* widget, with a status of “In Progress”.

Data Migration Options					LOAD FILE
Search 					
Uploaded On	File Id	File Name	Template	Status	
02-Aug-2018	2018080206654558	Person File Simple (ABC) (3).csv	Person File Simple	In Progress	

Note:

In-Progress files, originally loaded using the old template, can continue to be processed. However, this file will display (Edit view) in the new template format.

5.6.2. Processing the Records

Step 1: Edit the Uploaded File

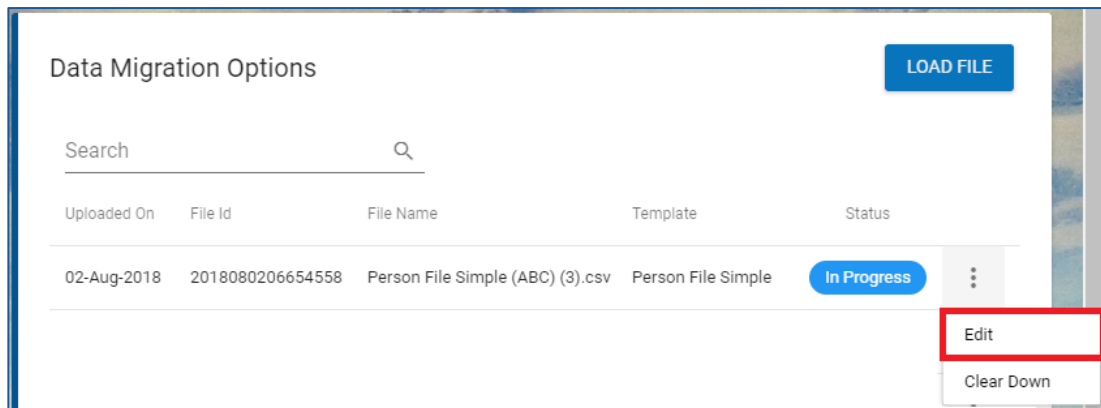

To open the file and access the records for processing:

1. On the *Data Migration Options* widget, search for the required file.
2. Click  and select **Edit**.

Note:

‘Edit’ is only available for files that have a status of “In Progress”.

3. The file processing screen opens.

Step 2: Edit Records on Screen (Optional)

All records that have been uploaded to XD can be edited on screen, before they are processed.

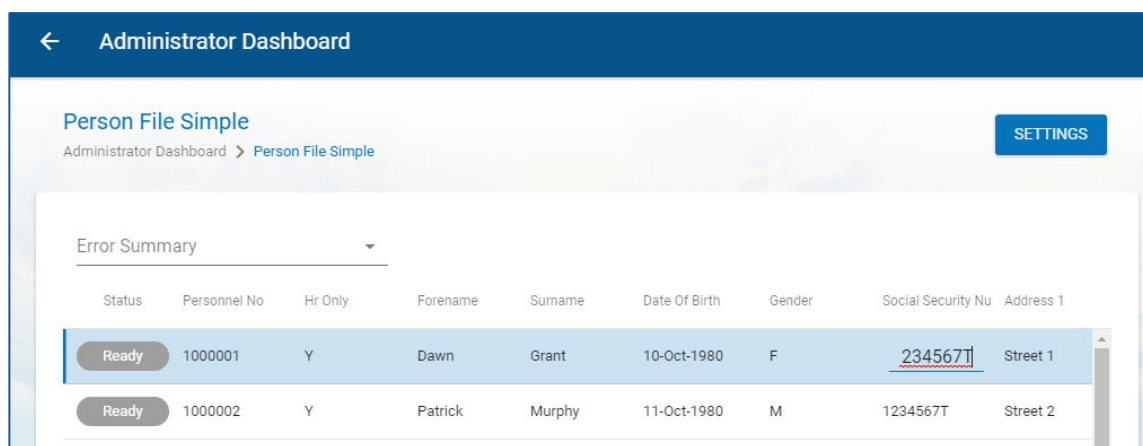

Note:

It is not possible to save any changes made to the uploaded records on this screen. If you exit this screen, any changes made will be lost for records that have not yet been processed.

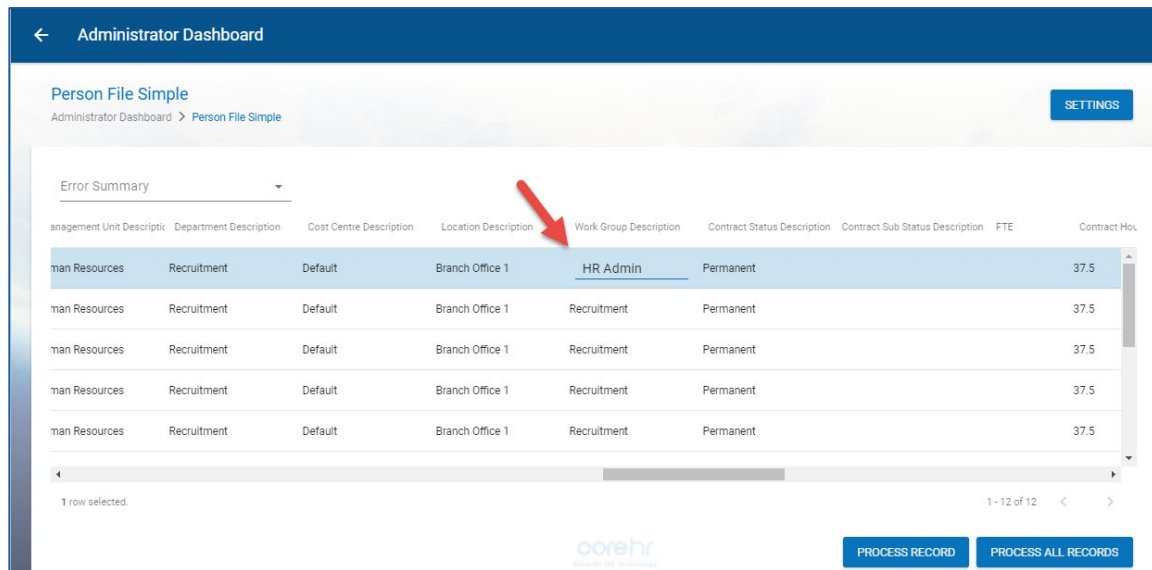

To edit any element of a record:

1. Click into the field.
2. Apply the change.
3. Click / tab out of the field.

It is possible to edit multiple records in one go e.g. change the Work Group field for all records. To do this:

1. Make a change to the field for one record.

1 row selected.

1 - 12 of 12

PROCESS RECORD PROCESS ALL RECORDS

2. Confirm if the change should be applied to all records or just this one.

Rectify All

Change 11 other Work Group Description fields from 'Recruitment' to 'HR Admin'?

NO YES

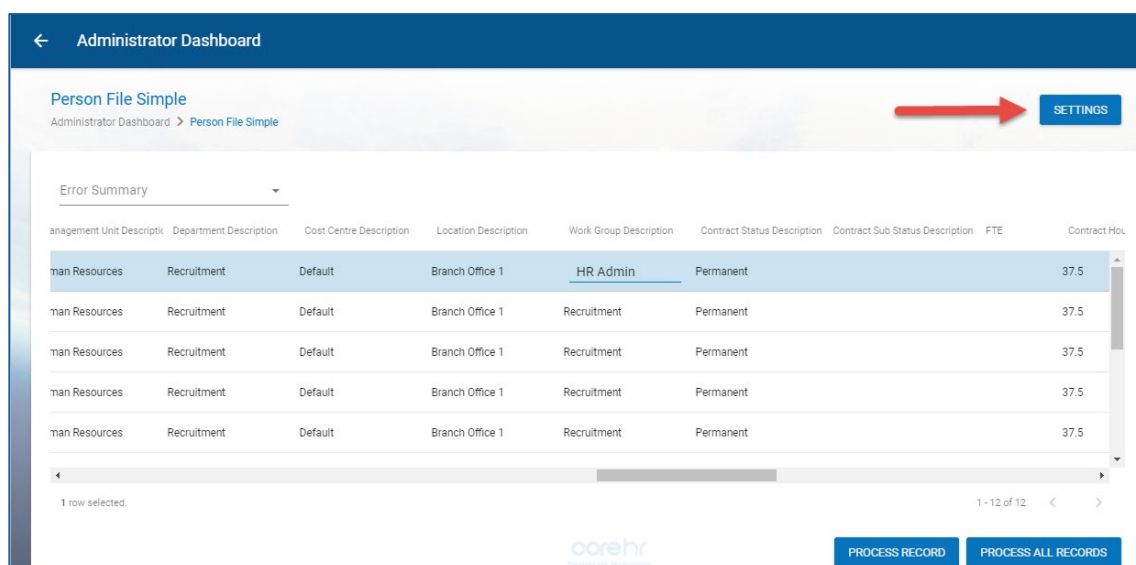

3. Click **Yes**.
4. All records will be updated.

**Note:**

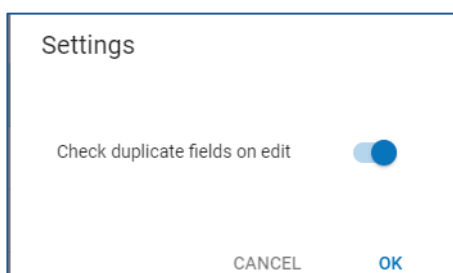

The 'Rectify All' prompt will not appear when updating every field on a file. This will only appear for fields where the system identifies that it may be useful to bulk update the data to a matching value.

The *Rectify All* prompt can be switched on / off. To do this:

1. Click **Settings**.

2. Update *Check duplicate fields on edit* switch.
 - a. Switch **on** for *Rectify All* prompt to appear.
 - b. Switch **off** for the *Rectify All* prompt not to appear and it will not be possible to update multiple records at once.

3. Click **OK** to save.

Note:

This is defaulted to ON.

Changes made are for the current file only and will need to be reapplied if you exit the file.

Step 3a: Process Single Record

To process an individual record:

1. Click the individual record on screen. The row is highlighted in blue.
2. Click **Process Record**.

PROCESS ALL RECORDS

Step 4: File Upload Status is “Complete”

Once all records in a file have been fully processed and have a status of “Complete”, the file status will also be “Complete”.

- In this status, it is no longer possible to review the individual file records.
- The only option available is “Clear Down”. See [2.6 Clear Down Data Migration Files](#) for further guidance on this option.

If any records have not been processed, the status will remain at “In Progress”.

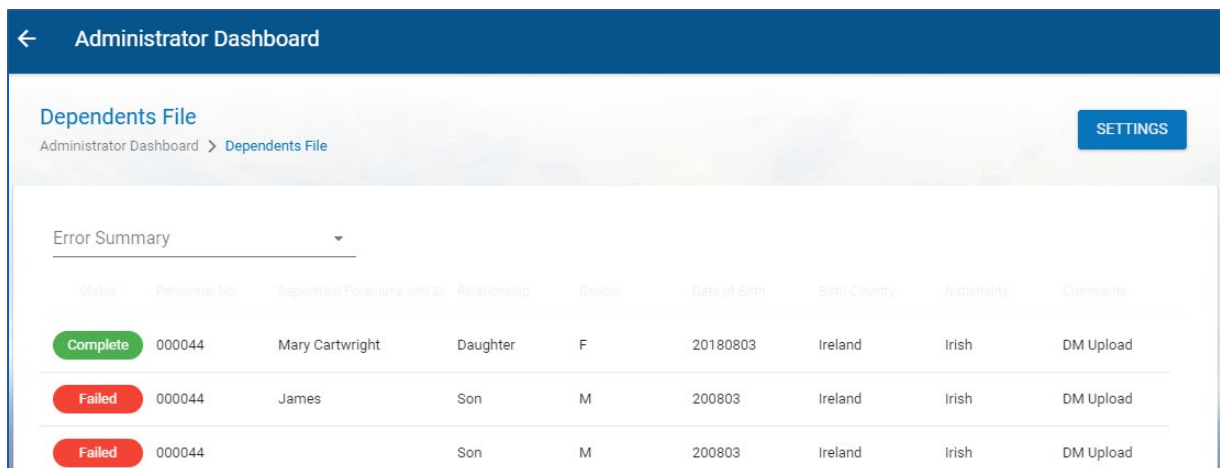

- Completed records will still appear. However, these will not be reprocessed.
- Records that were “Failed” following previous processing will be reset and “Ready” to process again.

5.6.3. Fixing Upload Errors

Fix Errors for a Single Record

When uploading the Data Migration file, the system will process one record at a time. If an error is found with a record in the file:

- this is flagged with a status of “Failed”.
- this will not be processed.
- the system will move on to upload the next record.

Note:

Not all errors may be found when the record is first processed. The system will validate for fields that are mandatory or conditional first. If any errors are found and resolved, the system may identify new errors during when it is re-processing the updated record.

To review and resolve any errors for a failed record:

1. Click on the record.
2. Click **Display Errors**

This will only display when a record has been clicked, as errors are only displayed for a single record at a time on the *Row Errors* screen.

The screenshot shows the 'Administrator Dashboard' with a 'Dependents File' section. Below the section header is a table with columns: Status, Personnel No., Dependent Forename and St., Relationship, Gender, Date of Birth, Birth Country, Nationality, and Comments. The table contains three rows. The first row is 'Complete' with status 'Complete'. The second and third rows are 'Failed' with status 'Failed'. A red arrow points to the 'DISPLAY ERRORS' button at the bottom right of the table. Below the table, it says '1 row selected.' and '1 - 3 of 3'.

Status	Personnel No.	Dependent Forename and St.	Relationship	Gender	Date of Birth	Birth Country	Nationality	Comments
Complete	000044	Mary	Daughter	F	20180803	Ireland	Irish	DM Upload
Failed	000044	James	Son	M	200803	Ireland	Irish	DM Upload
Failed	000044		Son	M	200803	Ireland	Irish	DM Upload

3. The *Row Errors* screen will appear. All errors found during the processing of that record will be listed on screen.

The screenshot shows the 'Row Errors' screen. It has a header 'Row Errors' and a breadcrumb 'HR Admin > Dependents File > Row Errors'. Below the header is a table with columns: Field, Description, Current Value, Updated Value, and Null Value. The table contains two rows of errors. The first row is for 'Dependent Forename' with the description 'This field is mandatory.' and a toggle switch. The second row is for 'Date of Birth' with the description 'Date must be in the format of YYYYMMDD and exactly 8 digits in length.' and a toggle switch. At the bottom right, there are two buttons: 'APPLY CHANGES' and 'IGNORE ERRORS'.

Field	Description	Current Value	Updated Value	Null Value
Dependent Forename	This field is mandatory.			☐
Date of Birth	Date must be in the format of YYYYMMDD and exactly 8 digits in length.	08		☐

This table provides a description of the columns displayed on this screen.

Column	Description
Field	The data migration file column that the error was found in.
Description	The error message i.e. the reason that the record failed to process.
Current Value	The invalid value currently held in that field. This data is causing the error.
New Value	Blank. Input valid data here.

- Fix any errors found by inputting valid data in the *New Value* field, for each error.
If the value should be blank, switch on the **Null Value** indicator.

Clicking **Ignore Errors** allows you to exit the screen and clear the error / “Failed” status. The status will return to “Changed” and the record can be reprocessed.

← Dependents File

Row Errors
HR Admin > Dependents File > Row Errors

Row Errors

Field	Description	Current Value	Updated Value	Null Value
Dependent Fore...	This field is mandatory.		Peter	☐
Date of Birth	Date must be in the format of YYYYMMDD and exactly 8 digits in length.	08	20180808	☐

APPLY CHANGES **IGNORE ERRORS**

- Click **Apply Changes**.

Note:

If there is more than one record that has failed for the same reason, the *Rectify All* prompt will appear. This will copy the new value to that column for all other records with the same error and same “Current Value”.

- Click **Yes** if this is suitable e.g. an update to Work Group.
- Click **No** if this isn’t required e.g. Date of Birth which could be different for each record.

- The status will return to “Ready”. This can now be processed again.
- If all errors have been resolved, the record should successfully be migrated to XD.

If errors are found and the record is “Failed” again, then repeat the steps to display errors and resolve.

corehr Smarter HR Technology

[DISPLAY ERRORS](#) [PROCESS ALL RECORDS](#)

The *Total* for each error type is the number of records that have failed for that reason e.g. in the screenshot below there are 12 records that have failed for the same reason of an “Invalid Pay Group”.

The screenshot shows the 'Administrator Dashboard' with a 'Person File Simple' section. A table lists records with columns: Forename, Surname, Date Of Birth, Gender, Social Security Nu, Address 1, Address 2, and Ad. An error summary overlay is visible on the left, listing three errors: 'Error Invalid pay group' (Total 12), 'Error The maximum length of this field is 1' (Total 12), and 'Error Alphanumeric characters only.' (Total 1). The table shows records for Dawn Swanson, Patrick Murphy, Claire Lynam, James Smith, and Tim O'Connor. The record for Patrick Murphy is highlighted. At the bottom, there are buttons for 'DISPLAY ERRORS' and 'PROCESS ALL RECORDS'.

Forename	Surname	Date Of Birth	Gender	Social Security Nu	Address 1	Address 2	Ad
Dawn	Swanson	10-Oct-1980	F	1234567T	Street 1	Town Name	
Patrick	Murphy	11-Oct-1980	M	1234567T	Street 2	Town Name	
Claire	Lynam	12-Oct-1980	F	1234567T	Street 3	Town Name	
James	Smith	13-Oct-1980	F	1234567T	Street 4	Town Name	
Tim	O'Connor	14-Oct-1980	F	1234567T	Street 5	Town Name	

Click on the message to filter the screen to only show records that have that error. This can be a useful first step in resolving the same error for multiple records at once.

Resolving an Error for Multiple Records

It is possible to resolve an error for more than one record in bulk. This is applicable:

- where more than one record has failed to process for the same reason
AND
- the same value should be applied to the erroneous field for that set of records.

To do this:

1. Use the *Error Summary* to filter the list to records that have failed for the same reason.
2. Click any of the failed records.
3. Click **Display Errors**. The *Row Errors* screen will display all errors for that record, not just the error selected on the *Error Summary* list.
4. For the common error, resolve this for the record by providing a new value in *Updated Value*.
5. Click **Yes** on the *Rectify All* prompt to ensure the same change is applied to all records failing for the same reason that require the same value.

**Note:**

This will update the field to the same data provided in *Updated Value* for all similar records. However, those records may still be “Failed” for another reason. Be sure to use the error summary to continue to filter the list to isolate “Failed” records, using the **Display Errors** button to resolve each record as required.

5.6.4. Template Statuses Overview for Files and Records

This section provides an overview of the various statuses that can be applied to a data migration file and the records within that file, during processing on XD.

Data Migration File Statuses

Status	Description	Options
Ready	The file is ready to process. The status of every single record in the file is set to 'Ready'.	Ready
In Progress	The file has been uploaded to XD and is ready to process. Not all records have been data migrated i.e. some or all records are still “Ready”. The file will remain in this status until all records have been processed i.e. all records are “Complete”. Note: Status will change to Error if there is an unexpected error while processing this is new to v28	Edit and Clear Down
Complete	Every record has been processed and is “Complete”.	Clear Down
Cleared Down	File has been cleared from XD but a record of file upload is available to review on the Data Migrations Option Widget	None
Uploading	The Uploading Process is still being completed to the data migration tool and has not yet fully uploaded and ready to process. Once this step is finished the status of the file will change to 'Ready'.	
Processing	New Status where the records are still being migrated this is the In Progress status once processing starts, we now have migrated the records and processing has begun. For Example, the user opted to 'process all records' & these take time to run. Once finished the status will change to Complete or Failed.	
Failed	The file has been partially processed but at least one record has failed.	
Error	An unexpected error occurred when the file was processed, this status means the file needs to be reviewed for mistakes, including incorrect records or formatting.	

Invalid	The file has an unrecognised template or an invalid line or character are in the file.	
Archive	The file	

Record Status

Status	Description
Ready	The record is ready to load but not started i.e. Process Record / Process All Records button has not been clicked.
In Progress	Process Record / Process All Records has been clicked. The record is either currently loading or waiting to be loaded.
Failed	The record failed to load. Click Display Errors button to review and resolve issues found.
Complete	Record processed without error and committed to the database. Record is now on XD.

5.6.5. Cancelling the Load

Cancelling the update process can be completed via 2 options:

1. Exit out of the screen.
2. Click the cancel button (only available while records are processing).

The screenshot shows the 'Administrator Dashboard' with a 'Person File Simple' section. A red box labeled '1' highlights the back arrow in the top left. The main area displays a table of records with columns for ID, Name, Date, Gender, Address, and Town Name. The first four rows are marked as 'Failed'. A red box labeled '2' highlights the 'CANCEL' button at the bottom right, next to 'DISPLAY ERRORS' and 'PROCESS ALL RECORDS' buttons. The bottom of the screen shows the 'corehr' logo and '1 row selected'.

**Note:**

- Only records that are “Ready”, “In Progress” or “Failed” will be cancelled.
- If any records are processed and flagged as “Complete”, these will not be undone.
- If any records are “Failed” and a change has been applied via *Display Errors > Row Errors* but not processed, these changes are lost.
- If any changes have been made to the records, these are not saved and will need to be applied again before the file is processed

5.7. Clear Down Data Migration Files

It is possible to clear down data migration files that have been loaded to XD. This will reverse any data migration actions completed for that file, including the removal of:

- records that have been processed and are now on the XD database.
- any reference data items that were dynamically created as part of the process, if they are not linked to any other non-data migration records.

The clear down will remove all records, regardless of the file or record status i.e.

File Status	Record Status	Clear Down Activity
In Progress	All “Ready”, none processed.	The entire file is cleared down and no longer available to process.
In Progress	Mix of “Complete”, “Failed” and “Ready”.	The entire file is cleared down and records are no longer available to process. Complete records will be removed from the XD database i.e. the data migration is reversed for those records.
Complete	All “Complete”.	Complete records will be removed from the XD database i.e. the data migration is reversed for those records

**Note:**

The following files cannot be cleared down:

- *Balance Assignments File*
- *RTI File*

Note that the RTI file load works like an update. It updates fields on the employee record (rather than inserting a new record). Therefore, to resolve incorrect RTI fields being loaded for an employee it is possible to upload a new RTI file for the employee and this will override the previous changes.

Example:

A 'Person Simple File' has been uploaded to XD and fully processed.

- 50 employees have been created on XD.
- File status = "Complete"

If the clear down is run for this file:

- The 50 employee records created on XD are deleted.
- Any reference data items that were automatically created during the load are deleted e.g. a new Employee Status (provided no other record on XD is using that reference data).
- The file itself is deleted from the XD database.
- The file history remains on the *Data Migration Options* widget.

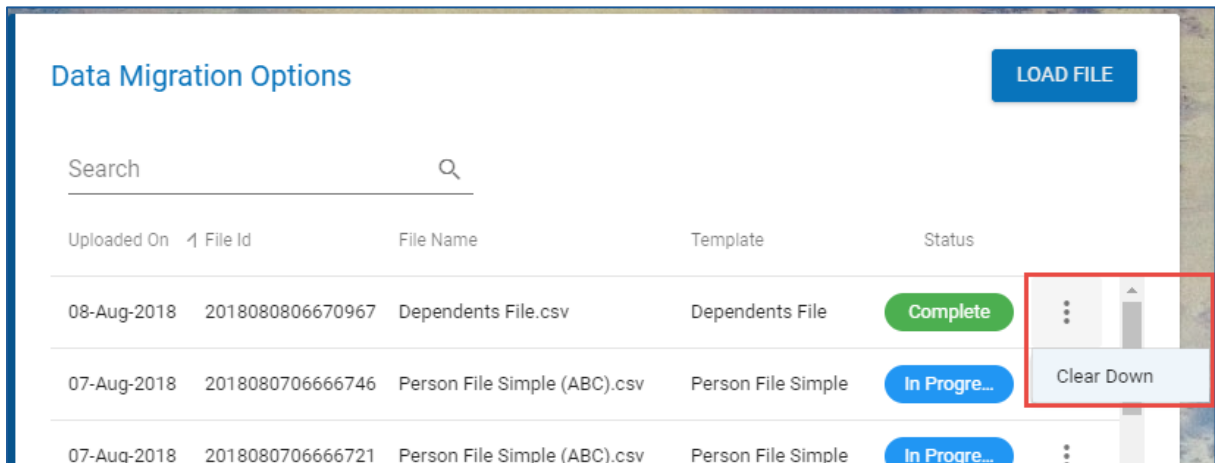

Note:

Take care when clearing down records, to ensure all required data is cleared down. For example, both *Person Simple File* and *Allowances File* are loaded for the same set of employees. If only the *Person Simple File* is cleared down, the allowance records will still remain in the system and you may experience issues with corrupt data, as the system is missing the master file.

To clear down a file:

1. Search for the file on the *Data Migration Options* widget.
2. Click  and select **Clear Down**.

Uploaded On	File Id	File Name	Template	Status
08-Aug-2018	2018080806670967	Dependents File.csv	Dependents File	Complete
07-Aug-2018	2018080706666746	Person File Simple (ABC).csv	Person File Simple	In Progre...
07-Aug-2018	2018080706666721	Person File Simple (ABC).csv	Person File Simple	In Progre...

3. The *File Cleardown* prompt will appear.
This outlines the impact of clearing down the file. Click **Yes** to proceed or **No** to cancel.

File Cleardown

Proceed With Caution. Clearing down this file will purge any data created by this file. If subsequent files are loaded these files will need to be cleared down individually. Are you sure you want to proceed?

NO

YES

4. Once the clear down has completed, the file status will update to “Cleared Down”:

Data Migration Options					LOAD FILE
Search Q					
Uploaded On	File Id	File Name	Template	Status	
08-Aug-2018	2018080806670967	Dependents File.csv	Dependents File	Cleared ...	⋮
07-Aug-2018	2018080706666746	Person File Simple (ABC).csv	Person File Simple	In Progre...	⋮
07-Aug-2018	2018080706666721	Person File Simple (ABC).csv	Person File Simple	In Progre...	⋮

5.8. Review Migration History

The *Data Migration Options* widget will provide a full list of all data migration files uploaded to XD, including all files in every status.

For files that are “Complete” or “Cleared Down” it is not possible to view the actual records. However, the file will continue to appear on the list to confirm that the file was completed / cleared down.

Details displayed are the:

- *Uploaded On* (date) **New to v28**
- *File Name*
- *Template*
- *File Summary* **New to v28**
- *Status*

Module V#: Document Title - User Guide

Data Migration Options					LOAD FILE
Search		Open			
Uploaded On	File Name	Template	File Summary	Status	
26-Aug-2020	Person File Simple (7265) Private	Person File Simple	Ready 4 Failed 0 Complete 0	Processing	
26-Aug-2020	Person File Simple (7265) Private	Person File Simple	Ready 0 Failed 0 Complete 4	Complete	
25-Aug-2020	Person File Simple (7265) Private			Invalid	

The search option provides the option to search on *File Name* only.

Data Migration Options					LOAD FILE

03-Aug-2018	2018080306658669	Diversity Equality File.csv	Diversity Equality F...	In Progre...	

5.9. What Templates are Available?

This section provides a list of the data migration template files that are available to download from XD, providing a brief description of what records are created when processing this file.

Template Name	Description
Alternate Teams	
Additional Contract Complete (Enhanced in v28)	Upload additional contracts for employees. Notes: • This complete version includes columns for both code and description for all reference data elements. • This should not be used to load an employee's substantive contract (catered for in the Person Simple file or Person Complete File). • Many fields are defaulted on upload. See helper file for full list.
Additional Contract Simple	Upload additional contracts for employees. Notes: • Same as Additional Contract Complete. • This simple version only requires reference data descriptions, not codes. • This should not be used to load an employee's substantive contract (catered for in the Person Simple file or Person Complete File). • Many fields are defaulted on upload. See helper file for full list.
Allowance File	Upload allowances associated with an employee's contract.
Auto Enrolment History File	Upload employee auto-enrolment history. File caters for configuration at either contract or employee level.
Badge Assignments (New File in v28)	The following additional fields were added: • Opening Accrued Entitlement • Accrued Entitlement Code • Opening Reserved Entitlement • Reserved Entitlement Code • Opening Balance • Balance Entitlement Code • Flexitime Indicator
Balance Adjustments	File to facilitate loading Balance Adjustments into XD WFM
Bank & BIC References (New to v28)	Bulk Uploading banking data, removing the need to set up manually and removing the possible errors of duplicate sort code and BIC References.

Template Name	Description
	The following fields have been added: • Bank Reference • BIC Reference
Balance Assignments File (New File in v28)	Upload employee balance assignments. File caters for both multi-appointment and non-multi appointment. Note: This is a brand new file to facilitate loading Balance Adjustments into XD WFM
Benefit in Kind File	Upload employee benefit in kind assignments.
Contacts File	Upload contact details for employees. Notes: • Any contact type that has been set up on XD can be uploaded for an employee using this file. • Both the employee record and the contact type reference data must exist on XD, before records are uploaded.
Cost Allocation File	Upload cost allocation details for an employee's contract. All cost allocation records must have a total of 100%.
Course Profile (Enhanced in v28)	Training Course Profile file
Course Provider (Enhanced in v28)	Training Course Provider file
Cumulative IRL File (Enhanced in v28)	Upload employee cumulative / year to date figures for payroll calculations. Note: This should be used for ROI employees only. The file automatically creates a history record for the following cumulative values: PAYE, USC, PRSI and if applicable ASC. For Customers going live mid-year, this means that the YTD value on the deduction section of the pay slip will be correct. Columns added: Previous ASC Earnings, Previous ASC
Cumulative UK File (Enhanced in v28)	Upload employee cumulative / year to date figures for payroll calculations. Note: This should be used for UK employees only. The file automatically creates a history record for the PAYE cumulative value. For Customers going live mid-year, this means that the YTD PAYE value on the deduction section of the pay slip will be correct.

Template Name	Description
	Columns added: Spbp To Date, Postgraduate Loan To Date, Postgraduate Loan Code, Taxable Redundancy/Sporting Testimonials Niable Pay, Taxable Redundancy/Sporting Testimonials NI Amount. Columns removed: St To Pt Ytd
Deductions File	Upload employee deductions. Note: The required pay code must already exist on XD before records can be loaded for employees.
Dependents File	Upload employee dependant records.
Diversity Equality File	Upload employee diversity and disability details.
Employee Team Area Assignment file (New file in v28)	Replaced file in v28, old CoreRoster Area Assignment file is no longer valid. Note: Appointment ID added to the file.
Employee Roster Profile file (New file in v28)	Replaced file in v28, old CoreRoster Employee Roster Profile file is no longer valid. The following improvements have been made: - Appointment ID added to the file. - Status of the Availability record set to approve (rather than pending, ct_person_contract_override.status)
HR Reference (New to v28)	Allows a user to load reference data codes and description e.g. Cost Centre reference data, Project reference data and Expense Code reference data.
NI Letter History (New to v28)	Loading National Insurance Letter History for employees who have multiple National Insurance Letters in the current tax year.
Next of Kin File	Upload employee next of kin information.
Occupational Load File (Enhanced in v28)	Load employee occupational/attendance history. This should be used to supplement the occupational absence configuration, as any sickness schemes which provide entitlement to a number of days will be affected by what is migrated in this file. Example: If an employee is entitled to 30 days of full pay, but has already used 10 days of that entitlement, those 10 days would be recorded in this file. In this file, you will migrate one line of absence per employee, per day. Note: This file now supports migration into WFM-only Occupational Absence solution (where XD Payroll is not used).

Template Name	Description
Pay History File (New to v28)	This file to supplement the UK and IRE Cumulative files This file is used to load Year-To-Date (YTD) information for specific paycodes such as voluntary deductions (e.g. Sports & Social membership) or pension contributions. These YTD values are recorded as history items against the previous pay period. If a Customer is going live mid year, then this information must be migrated in order to ensure that the YTD values on the deduction section of the payslip are correct. If required, this file can also be used to load detailed payroll history for certain paycodes per pay period. History records for the following paycodes cannot be loaded via the Payroll History file as history records for these items are automatically created from the Cumulative file: • PAYE • PRSI/NI • SSP/SMP/SAP/SPP/ASPP/SPBP/KIT Days • ASC • Student Loan/Postgraduate Loan
Pay Scale Point File	Upload pay scale point reference data. Note: If using pay scales, this file should be uploaded first. See 2.9 File Upload Order & Pre-Requisite Configuration.
Organisational Role (New to v28)	An employee's Reports to Manager is created as part of the Person Simple/Complete file.
Pensions File (Enhanced in v28)	Upload employee pension details. File caters for configuration at either contract or employee level.
Person Payroll (New to v28)	This file is intended for use where Payroll is implemented after HR/People Management. Note: This file updates the employee's HR record, it is not possible to clear this file down after loading. This file should not be used when Payroll is implemented at the same time as HR/People Management. The Person files allows for both HR details and Payroll details to be loaded at the same time.
Person File Complete	This file is used to create: • Employee records

Template Name	Description
	- Their substantive contract Notes: - If payroll details are provided, the employee will be set up on Payroll. - This file caters for 1 contract per employee. Do not provide multiple rows per employee. - This provides the same functionality as the 'Person File Simple', however this includes both 'Code' and 'Description' fields for reference data items. - Many fields are defaulted on upload. See helper file for full list.
Person File Simple (Enhanced in v28)	This file is used to create: - Employee records - Their substantive contract Notes: - If payroll details are provided, the employee will be set up on Payroll. - This file caters for 1 contract per employee. Do not provide multiple rows per employee. - This provides the same functionality as the 'Person File Complete', however this includes only the 'Description' fields for reference data items. - Many fields are defaulted on upload. See helper file for full list.
Provider Course Linkage file (Enhanced in v28)	Provider Course Linkage file
Training Provider Files (Enhanced in v28)	Training Provider Files
Training External Person File (Enhanced in v28)	Training External Person File
Post Pension (New to v28)	Replacement of the old Data Migration Tool Post Profile Pensions File
Post Profile (New to v28)	This is a 'complete' file - for reference data the Customer can specify codes, descriptions or both. Reference data is created (and if applicable added to the Org Structure data tree) where it does not already exist. As with the Person file, Organisational Structure code must be specified before downloading the file. The file is then dynamically created based on the Organisational Structure code provided.

Template Name	Description
Position Rate Details File	Upload position rate details data. Note: If using pay scales, this file should be uploaded first. See 2.9 File Upload Order & Pre-Requisite Configuration.
Qualification File (Enhanced in v28)	Upload employee qualification details.
RTI File	Upload details that are required for UK employees to ensure that records are complete with all details required for RTI submissions.
Roster Area Access file (New file in v28)	Replaced file in v28, old CoreRoster Area Access file is no longer valid.
Reference – Roster Area Structure File (New file in v28)	Replaced file in v28, old CoreRoster Area Structure file is no longer valid.
Recommended Teams file (New file in v28)	Replaced file in v28, old CoreRoster Recommended Team Area file is no longer valid.
Roster Rules file (New file in v28)	Replaced file in v28, old CoreRoster Area Staffing Requirements file is no longer valid.
Scheduled Training File (Enhanced in v28)	Scheduled Training Courses file
Shift Assignments File (New file in v28)	Replaced file in v28, old shift assignments file no longer valid.
Shift Types File	Upload shift type reference data. Note: This file should be one of the first loaded to XD. See 2.9 File Upload Order & Pre-Requisite Configuration.
Supplementary Addresses (New to v28)	This file is used to load additional address information for an employee if required (e.g. interview panel address). An employee's home address is loaded as part of the Person Simple/Complete file.
Statutory Pay Profile File	Upload an employee's statutory pay profile. This is used to capture details of any statutory pay (particularly maternity) that has been recorded/paid in legacy systems, in the current tax year.
Training History file (Enhanced in v28)	Training History Data Migration

Template Name	Description
User Defined Fields File	Upload employee / contract user defined field records. Notes: - The 'User Defined Object' must already be configured on XD before uploading. - The solution does not validate against the configuration of the UDF i.e. if you have configured a field as a list item and you load in a non-list item, the data migration solution will still allow this. Please take note of the valid fields on the UDF before loading this file.
Reference - Work Groups File (Enhanced in v28)	Upload work group reference data. The following fields have been changed from mandatory to optional: - Shift Type - Holiday Scheme Notes: 'Shift Type' and 'Holiday Scheme' reference data should be configured on XD first, so that it can be referenced in the file. - Selected fields will be defaulted on upload. See helper file for full list.
Work Group Assignments (New file v28)	Either the Work Group code or the Work Group description can be provided. - If only the Work Group code is provided, then the code must exist in before the file is loaded. - If only the Work Group description is provided, then a new Work Group will be created if the description does not already exist as a Work Group (a unique code will be automatically assigned). - If both a Work Group code & description are provided, then a new Work Group will be created if the code does not already exist as a Work Group.

5.10. File Upload Order & Pre-Requisite Configuration

The following configuration must first be completed on XD before uploading Data Migration files:

#	Pre-Requisite Configuration	Why?
1	Org Structure Levels Defined	The Org Structure is linked to the employee's contracts. - This must be configured before any employee records can be loaded using the <i>Person File Simple</i> or <i>Person File Complete</i> templates. - When downloading a template, the Org Structure must be provided so that the template will directly reflect the Org Structure elements and linked hierarchy that has been defined. - The hierarchy does not have to be defined on XD. Branches of the hierarchy will be created when processing the person or additional contract files, if they don't already exist.
2	Post Profiles Created	Every employee contract is linked to a <i>Post Profile</i>. - The corresponding <i>Post Number</i> is a required item on the <i>Person File Simple</i> or <i>Person File Complete</i> templates. - These must exist on the system so that the <i>Contract IDs</i> (<i>Appointment IDs</i>) will be correctly generated
3	Company Created	Company is a required element for the employee's HR contract record and payroll setup. - Default companies are pre-configured for UK and Ireland. - These should be reviewed to ensure they suit the organisation's requirements. - These codes should be referenced on the required files. Company reference data will not be created automatically during the upload process.
4	Pay Groups Created	Pay Group is a mandatory element on the <i>Person File Simple</i> or <i>Person File Complete</i> templates. - Baseline <i>Pay Groups</i> are pre-configured on XD. These should be reviewed to ensure they suit the organisation's requirements. - These codes should be referenced on the required files. <i>Pay Group</i> reference data will not be created automatically during the upload process.
5	Pay Codes Created	These must exist on the system in order to create employee salaries, allowances, balances etc.

		- Baseline <i>Pay Codes</i> are pre-configured on XD. These should be reviewed to ensure that they suit the organisation's requirements. - These codes should be referenced on the required files. <i>Pay Code</i> reference data will not be created automatically during the upload process.
6	Reports to Manager Rule Configured	This rule is pre-configured on XD. This should be reviewed to ensure it suits the organisation's requirements.
7	UDFs	If loading UDF records for an employee / contract, the corresponding <i>User Defined Object</i> needs to be set up on XD first. These will not be created automatically during the upload process.

Once all pre-requisite configuration has been completed, it is possible to start uploading the data migration files. Files should be uploaded in a specified order, as many of these will depend on records to have been created during an earlier load e.g. the employee records need to be uploaded, so that other files can be loaded for these employees.

Order	Template Name	Why?
1	Position Rate Details	Should be loaded first if the customer is using pay scales. Ensures reference data is available to assign to an employee record.
	Pay Scale Point	Should be loaded first if the customer is using pay scales. Ensures reference data is available to assign to an employee record.
	Shift Types	Should be loaded before Work Group file, so that Shift Types can be specified on Work Group records.
	Work Groups	Ensures reference data is available to assign to an employee record.
2	Person File Simple / Person File Complete	Creates the employee records, their substantive contracts and sets them up on payroll (if a payroll employee).
	Additional Contract Simple / Additional Contract Complete	Creates any additional non-substantive contracts for an employee.
	Cumulative IRL AND Cumulative UK file	Employee cumulative / year to date figures for payroll calculations
3	Allowances	These are pay affecting files.
	Deductions	These are pay affecting files.

	Pensions	These are pay affecting files.
	RTI	These are pay affecting files.
	Occupational Load	These are pay affecting files.
	Auto Enrolment History	These are pay affecting files.
	Benefit in Kind	These are pay affecting files.
	Cost Allocation	These are pay affecting files.
	Statutory Pay Profile	These are pay affecting files.
4	User Defined Fields	n/a
	Balance Assignments	n/a
5	Contacts	n/a
	Dependents	n/a
	Diversity Equality File	n/a
	Next of Kin	n/a
	Qualifications	n/a

5.11. Defaulted Fields and Reference Data Generation

5.11.1. Reference Data Generation

In most of the data migration template files, the records to be uploaded will require reference data items to be provided e.g. if uploading the *Cost Allocation File*, the *Cost Centre Code* and *Cost Centre Description* are required.

If the reference data has already been configured on XD, then only the code is required. It is not necessary to provide the description.

However, it is possible to define reference data elements in the file, that have not yet been configured on XD. If this occurs, the data migration process will automatically create the reference data item on XD.

Note:

Where a template allows for reference data items to be automatically created, this will be clearly explained in the corresponding helper file.

How the reference data is generated will depend on the data supplied in the file and the reference data already created. This is detailed in the corresponding helper file. See an extract below from the helper file for the *Cost Allocation File*:

Field	Description
Cost Centre Code	Populate with the cost centre code if applicable - The reference data for this needs to exist if only the cost centre code is populated i.e. it will not create reference data. - The reference data will be created if both the cost centre code and description is provided.
Cost Centre Description	Populate with the cost centre description if applicable - The reference data <u>will be created</u> if only the cost centre <u>description</u> is provided. - The reference data <u>will be created</u> if <u>both</u> the cost centre code and description is provided.

5.11.2. Defaulted Fields

In order to reduce the amount of effort involved in populating some of the data migration files, certain fields have been excluded from the file itself and will be automatically set to a default value on upload. Where this occurs, this will be clearly explained in the corresponding helper file on the 'Defaulted Fields' tab.

There is logic applied as to what default value is set e.g.

- This may be a common value for all records.

OR

- This may be set to a specific value based on other details supplied for the record.

Note:

Where data is defaulted for employee / contract / reference records created, this will be clearly explained in the corresponding helper file.

6. **Appendix: Update PC Settings to Pipe List Separator**

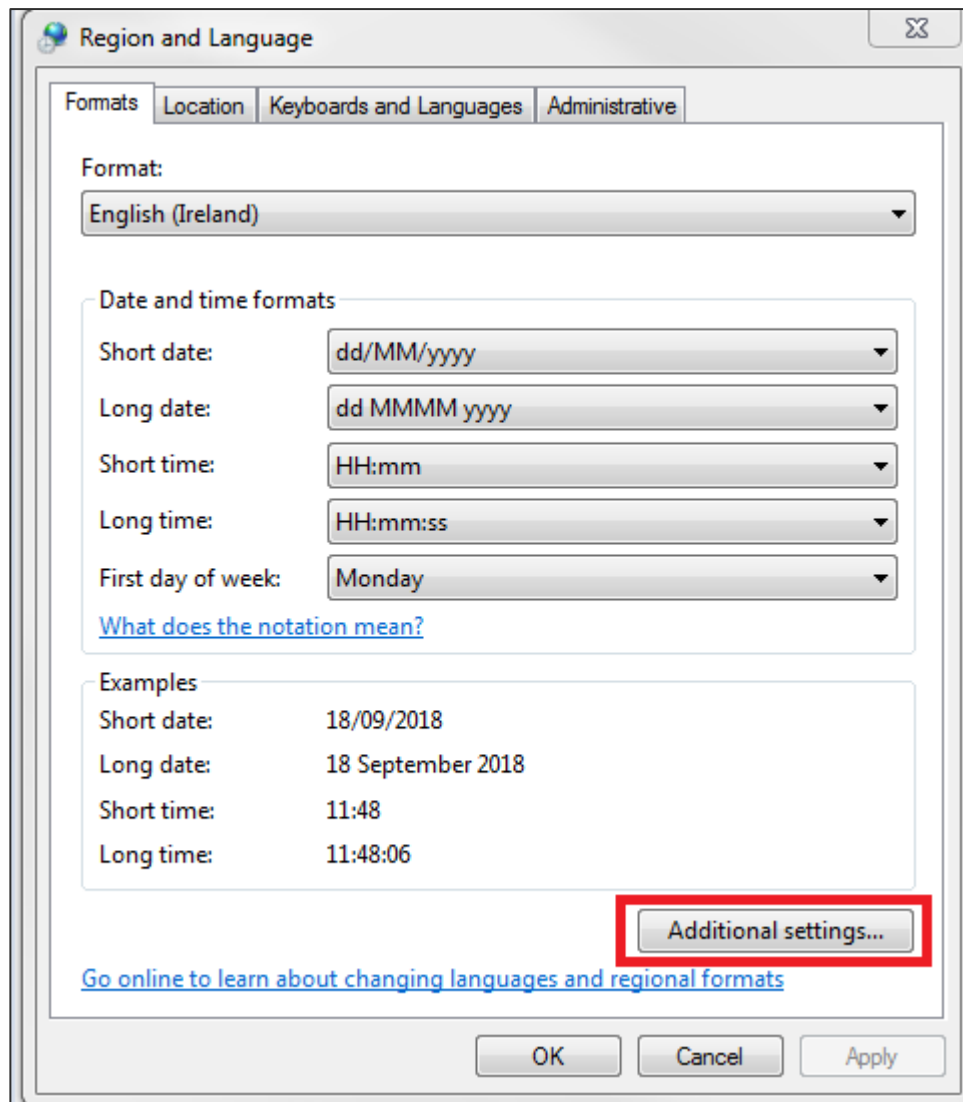

The CSV files that are uploaded to the Data Migration Tool must be pipe delimited. It is important to check that your PC is configured to create CSV files using the “|” separator and not a comma.

If this is not done, when saving a CSV file, another character e.g. a comma, will be automatically used as the field separator. The Data Migration Tool will not recognise the file and it will fail to upload.

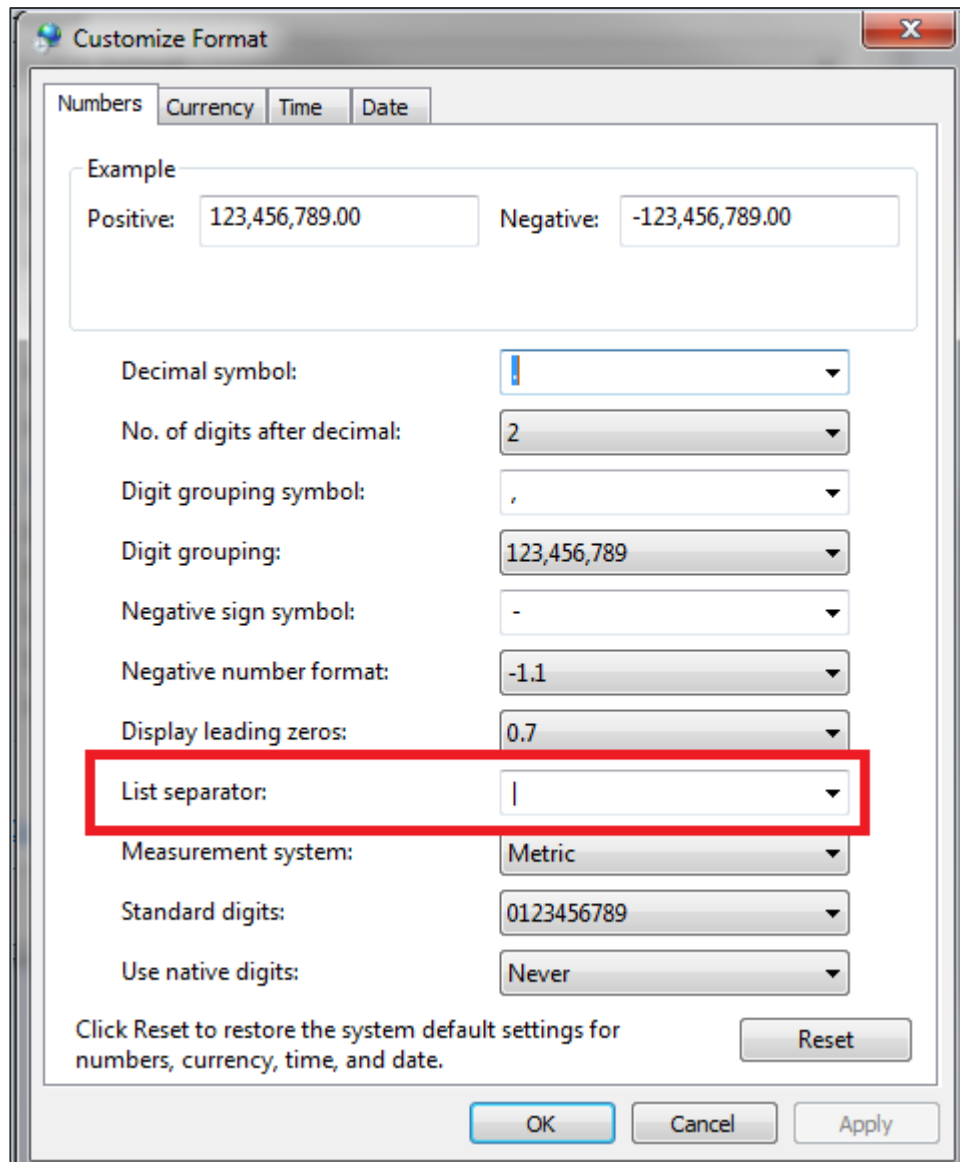

This is a once-off step to confirm/update the setting on your PC to ensure that the “|” character is used.

To check and/or update the List Separator setting on your PC:

1. Open the *Control Panel*.
2. Open *Region and Language*.
3. Click the **Additional Settings** button.

4. Find the *List Separator* field and update this to "|" i.e. pipe.
If the "|" is already there, no action is required.

5. Click **Apply**.
6. Click **OK**.
7. Click **OK**.
8. Exit the Control Panel.

6.1. Data Migration Tool Security

6.1.1. Protecting data.

Customers must protect the confidentiality, availability and integrity of their data.

The Data Migration tool cannot become a 'backdoor' to accessing data or disrupting live data.

As the capability of the Data Migration tool is expanded its usage broadens also.

How does the Data Migration tool facilitate protecting the confidentiality of data in a Data Migration file?

File visibility will be private by default. Files uploaded into the Data Migration tool will only be visible to the person that uploaded them.

Note:

- If required, the file can be made public. Public files can be viewed and, if the user has the appropriate menu security, actioned by other Data Migration users.
- A Super User can be given access to all files – even private files uploaded by other users. This access should be restricted and only used where absolutely required. Files uploaded previous to v28 will continue to be Public by default.
- There will be an option to mark the file private here will be an option to archive files. Archived files are inactive from a Data Migration perspective and cannot be viewed or downloaded regardless of security permissions/access.

There will be an option to archive files. Archived files are inactive from a Data Migration perspective and cannot be viewed or downloaded regardless of security permissions/access.

How does the Data Migration tool facilitate protecting the integrity & availability of the data loaded by the Data Migration tool?

As there is an option to archive files and the files are inactive they cannot be cleared down regardless of menu security access.

6.1.2. Template level security

The following security permissions are defined at the template level

- Ability to process a file of that type (i.e. get the data into XD)
- Ability to clear down a file of that type (i.e. delete the data out of XD)

This means that a user for example can be given permissions to process/clear down WFM Data Migration files without getting access to process/clear down People Management files.

6.1.3. File level security

The visibility of new files uploaded to the Data Migration Tool will be restricted, by default, to just the user who uploaded the file. This protects the confidentiality of the data in the file by ensuring that it cannot be viewed or processed by another Data Migration user.

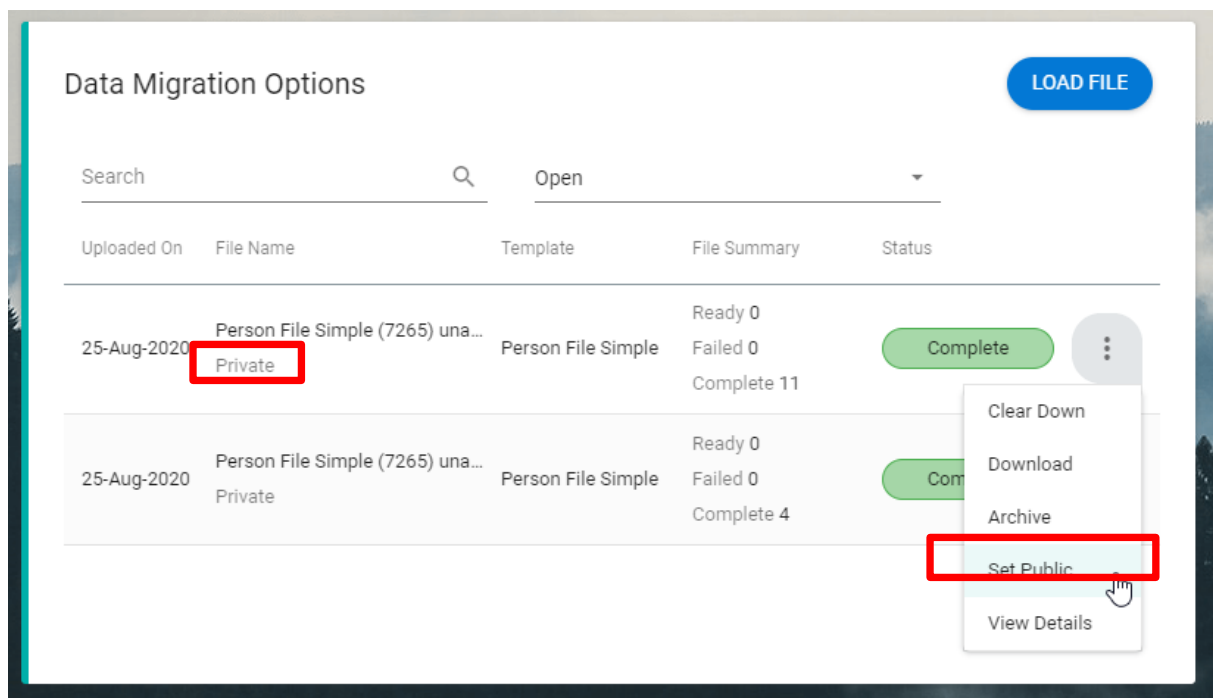

If required, the user can make the file public which means that the file, including its contents, can be viewed by all Data Migration users.

Existing files, uploaded before these enhancements, will continue to be public. If required, the owner of the file or a super user can make the files private.

There are two levels of file visibility.

Private: Only the person that uploaded the file can view it. From 'v28', newly uploaded files are private by default.

Public: Any Data Migration user can view the file including the contents (status permitting) and can action according to their security access (template level, functional level)

6.1.4. Functional level security

Viewing & editing files (subject to Private/Public visibility)

Downloading files

Archiving files

Set file private/public

Un-archiving files. This access should be restricted and only used if required.

Viewing Private files uploaded by someone else. This access should be restricted and only used if required.

6.1.5. User Level Security

Update User Allowance, to give users the option to Download files is menu security controlled.

To ensure that the user is authorised to download data from the Data Migration tool head to security and update the menu profiles.

Menu Profiles:

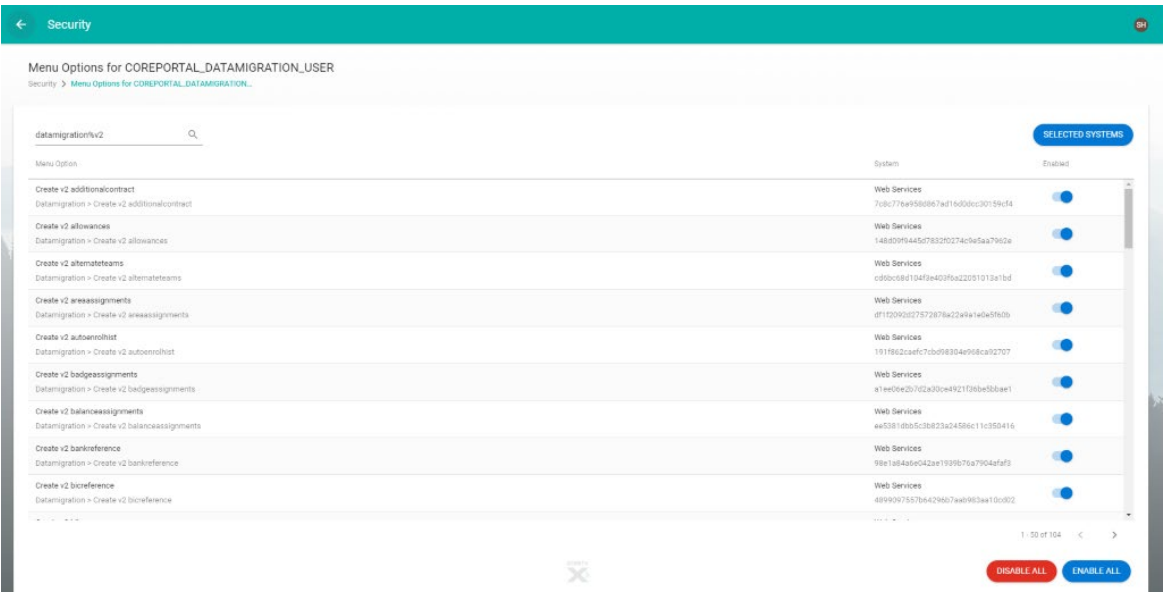

1. Navigate to Menu Profile widget
2. Locate your Data Migration Menu Profile. The standard Data Migration menu profile is called 'COREPORTAL_DATAMIGRATION_USER' but your organisation may use a different profile.
3. Choose 'Manage Menu Options'
4. Enter the following text into the search bar. This will return approx. 100 items.
datamigration%v2
5. Select 'Enable All'.

Optional. To adopt the new file download functionality, you will also need to grant access to the following menu security item:

Menu Option	System
Data Migration - Download	CorePortal

As Archived files are locked from a data migration perspective it is not possible to download Archived files by default. If required, a user can be given special explicit access to download 'Archived' files.

Menu Option	System
Data Migration - Download Archived	CorePortal

Where the file is showing as Public the option will appear as ‘Set Private’

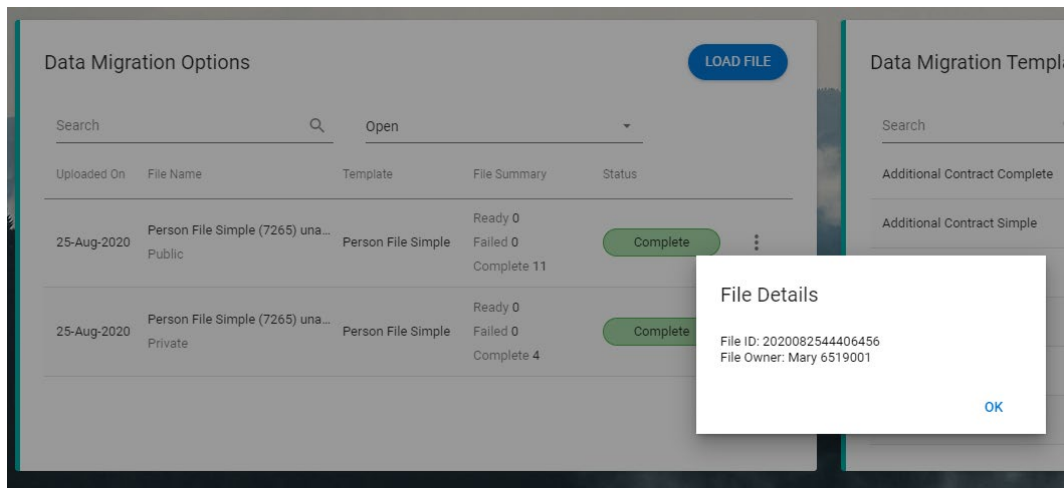

Archived files can be viewed via the Data Migration Widget but cannot be interacted with in any way regardless of security access/permissions.

6.1.6. Superuser

If required, a super user can be given access to view all files regardless of private/public status

It is recommended that this access is restricted and not provided to Data Migration users as standard (otherwise it would reduce control over who sees what).

Menu Option	System
Data Migration – View/Manage Private	CorePortal

6.1.7. File Downloads

Data Migration files can be downloaded as a pipe delimited CSV file. This means that any changes required can be made directly in XD The updated file can then be downloaded for reference purposes or for the purposes of loading into another environment.

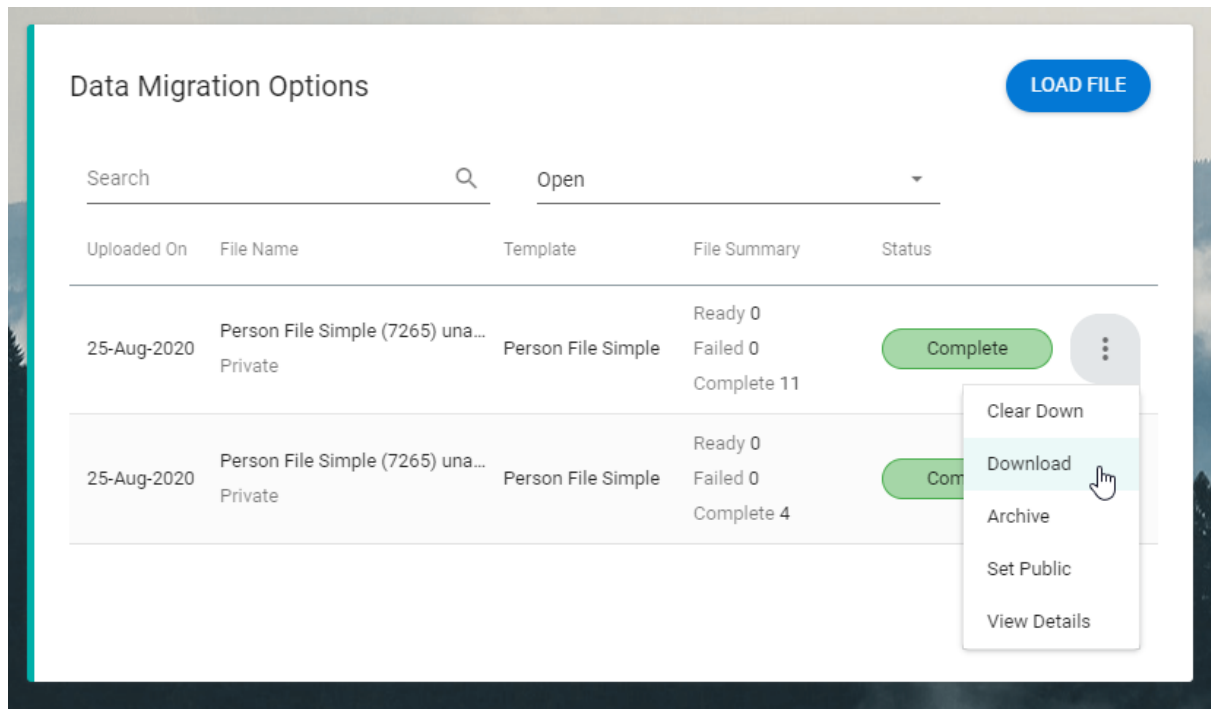

This saves the user from loading a file, processing the file, hitting validation errors, amending the file offline, loading the new file, processing the new file and hitting subsequent errors.

Note:

The option to Download files is menu security controlled. This ensures that only authorised users have the ability to download data from the Data Migration tool.

Menu Option	System
Data Migration - Download	CorePortal

The downloaded file will include a date/time stamp. The File may take a while to appear (depending on the size of the file). The file will be saved to the downloaded folder.

6.1.8. File Archive Functionality

Enhancements to v28 release include locking down interaction with legacy data migration files

Archived files are 'locked' from all data migrations. Their content cannot be viewed or actioned. Including edited processed downloaded or cleared down. This protects the confidentiality of the data in the file and the integrity of data already loaded into XD

1. Click on the ellipses
