1. Overview

1.1. Purpose of the Guide

This document provides guidance on how to use Insight including:

- How to access Insight.
- How to view reports.
- How to create new reports.
- How to manage reports e.g. updating report settings, sharing, scheduling etc.
- Configuration & user access required for Insight.

This is intended to provide general guidance on how to use Insight. This does not include:

- Product specific reporting.
- Advanced report examples.

1.2. What is Insight?

Insight is an in-application reporting tool to help employees and managers gain perspective on their business operations. It encompasses the process of transforming your People XD data into reportable datasets and visualising that data into reports, graphs and tables that expose valuable insights.

XD Insight is about visualising, understanding, and acting on data and provides users with the following features:

- A reporting homepage to view recent reports that you have created, view reports that have been shared with you, have a full searchable list of all reports you have access to, Users can view, edit, and clone reports with the ability to launch the Create Report Wizard.
- Users can create standard listing reports or cross tab reports. A report can be created from the various areas that are available to the user. E.g. Recruitment, Payroll, etc. The user can then select the fields they want as part of that report from the designated views within that area. If applicable, a user can edit, print, or export the report to excel.

- When editing a report, a user can edit a report to include or remove fields. It is possible to search fields and remove from the visual field list. The grid can be grouped or sorted by clicking on column headers.
- Calculations can be added to the report using the manage calculations option. A field can be selected as well as a set of functions that are available from the CoreHR function library to create a calculated field. This can also be used as part of the charts that can be generated
- Reports can be filtered based on columns that are part of the reporting area. Prompting can also be activated so a user can enter a value when a report is being run. E.g. Date ranges.
- Reports can be shared in read only mode to a list of users available in the sharing navigation section. This can be updated at any time to add or remove users from the list, as necessary. The report name can be updated as well as the description of the report. A user can restrict the number of rows coming back in a report to speed up the report. A user can also hide duplicate rows where this may occur based on the report settings.
- Multiple Chart types (Pie charts, Line charts and Bar charts) can be added to the report. These can be saved as widgets and made available to managers on the Manager Dashboard. A schedule can also be created to send to a designated set of users on a given frequency.

2. Insight Dashboard Overview

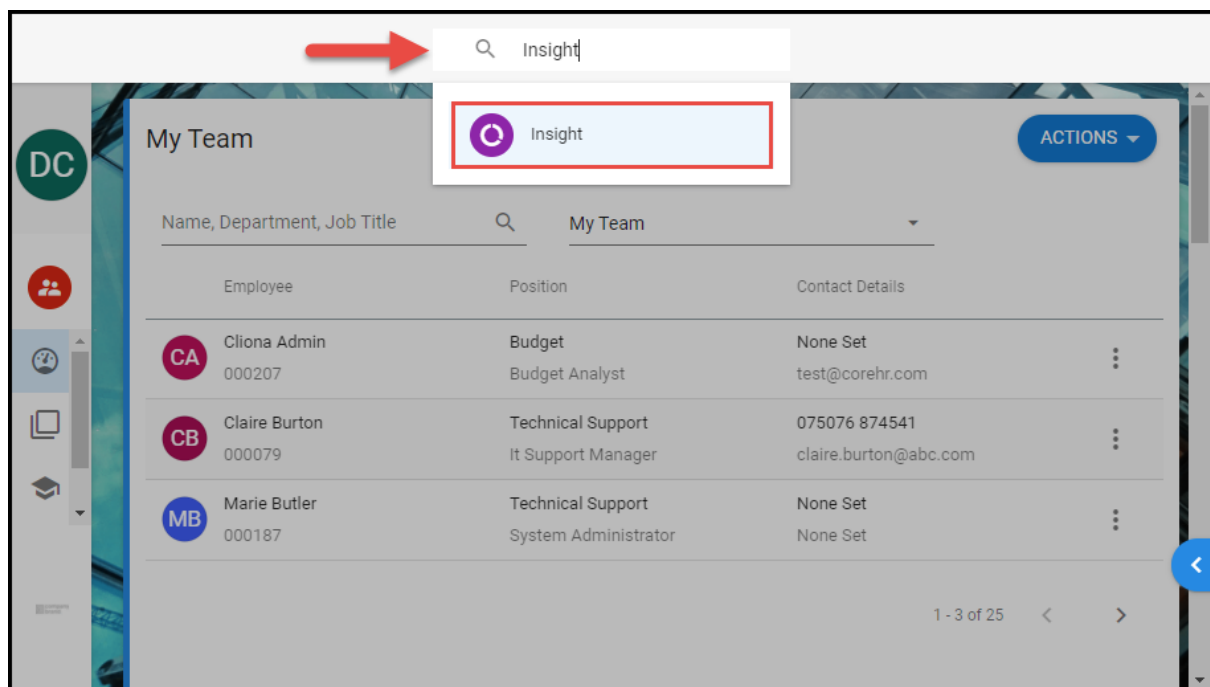

2.1. Dashboard Overview

This section provides an overview of the main Insight dashboard. This is where you can:

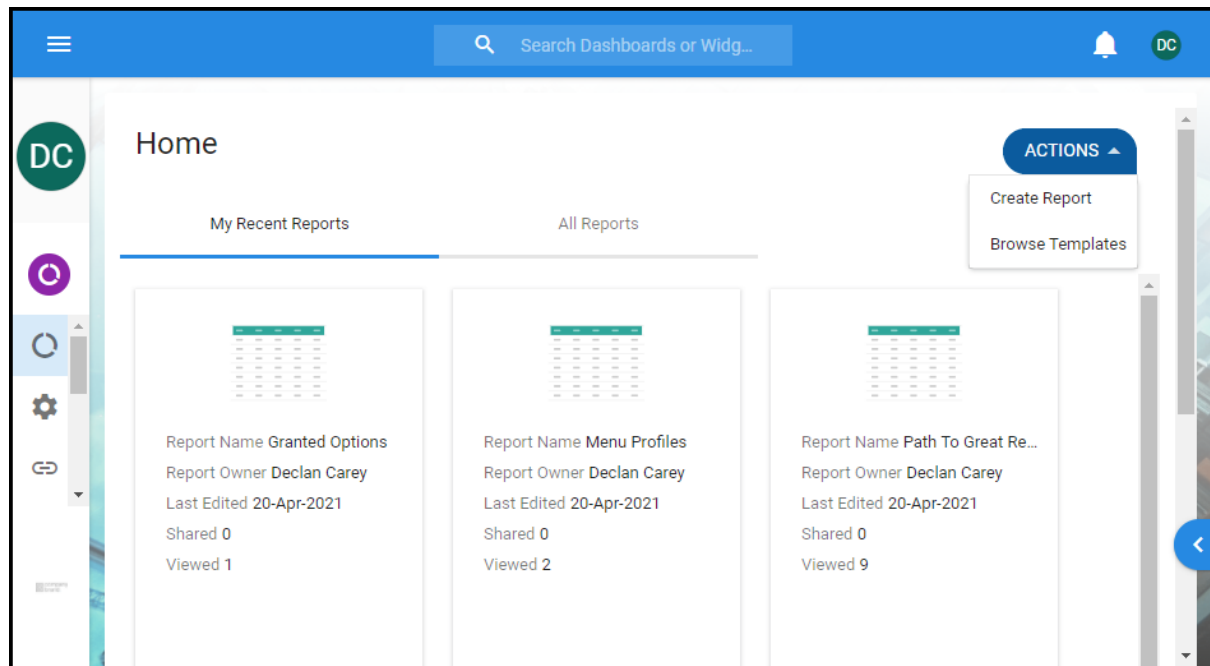

- View existing reports that you created, or which have been shared with you.
- Create new reports.
- Edit existing reports.
- Access advanced tasks such as importing reports, the *Reports Store* etc.

To access the Insight dashboard:

1. Quick Jump to Insight

2. The Insight dashboard appears on screen with 8 tabs available to be selected, as per the following image and table.

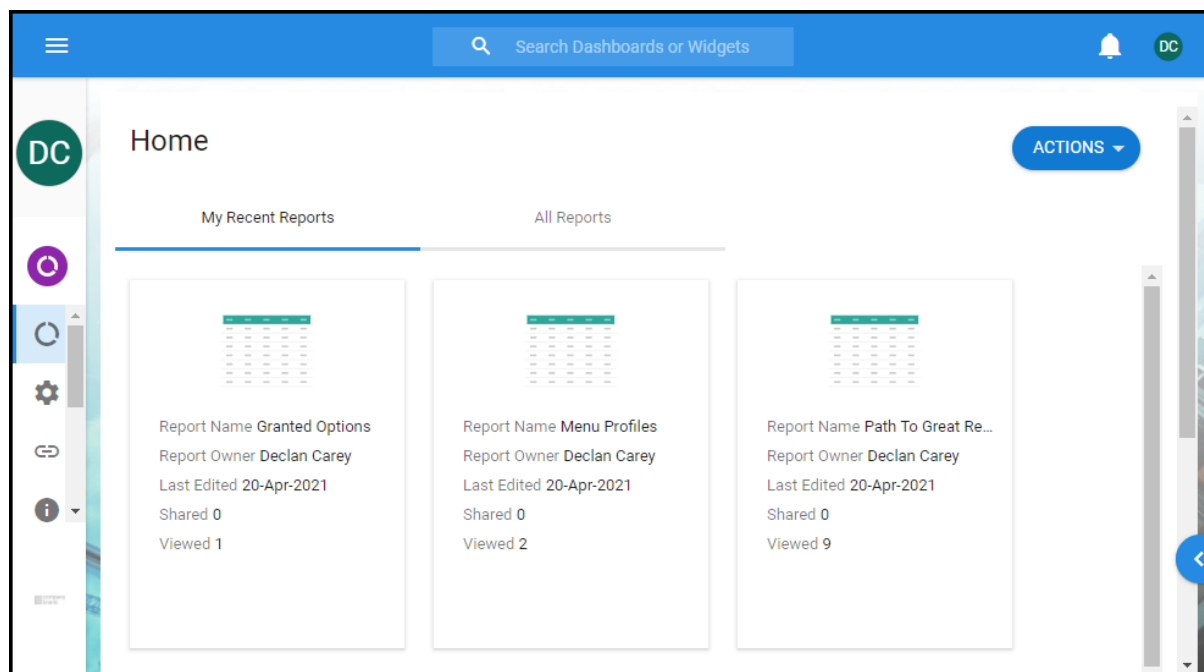

Tab	Description
Home	The main area for managing reports e.g. running a report, creating a new report, scheduling report exports & sharing reports with other users.
Admin Area	An administrative area that provides access to additional functions including importing reports & downloading standard reports.
iCues	This section allows you to manage all interfaces and create new interfaces.
Interfaces	This section allows you to manage all iCues and create new iCues.
Security	This section allows you to manage Insight Superusers.
Predictive Configuration	This section is used to run predictive analytic reports.
Discoverer Importer	This screen is used to import reports to Insight from BI (Oracle Discoverer).
Store	This provides access to the Report Store where you can search for and download reports created by other PeopleXD users, from the cloud.

2.2. Home Screen Overview

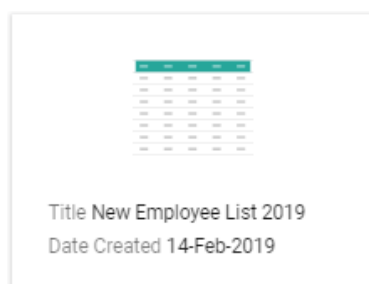

2.2.1. My Recent Reports

This section provides a scrollable list of the last 10 reports that you have recently opened - whether they were created by you or shared with you. Click on one of the reports to run the report.

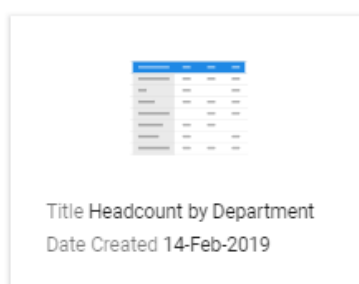

The following types of reports can be viewed and created in Insight:

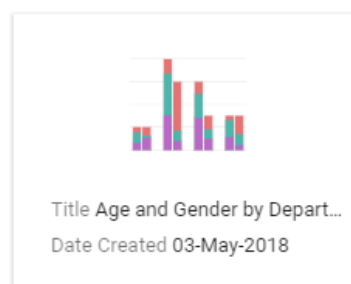

Tab Report

Pivot Table Report

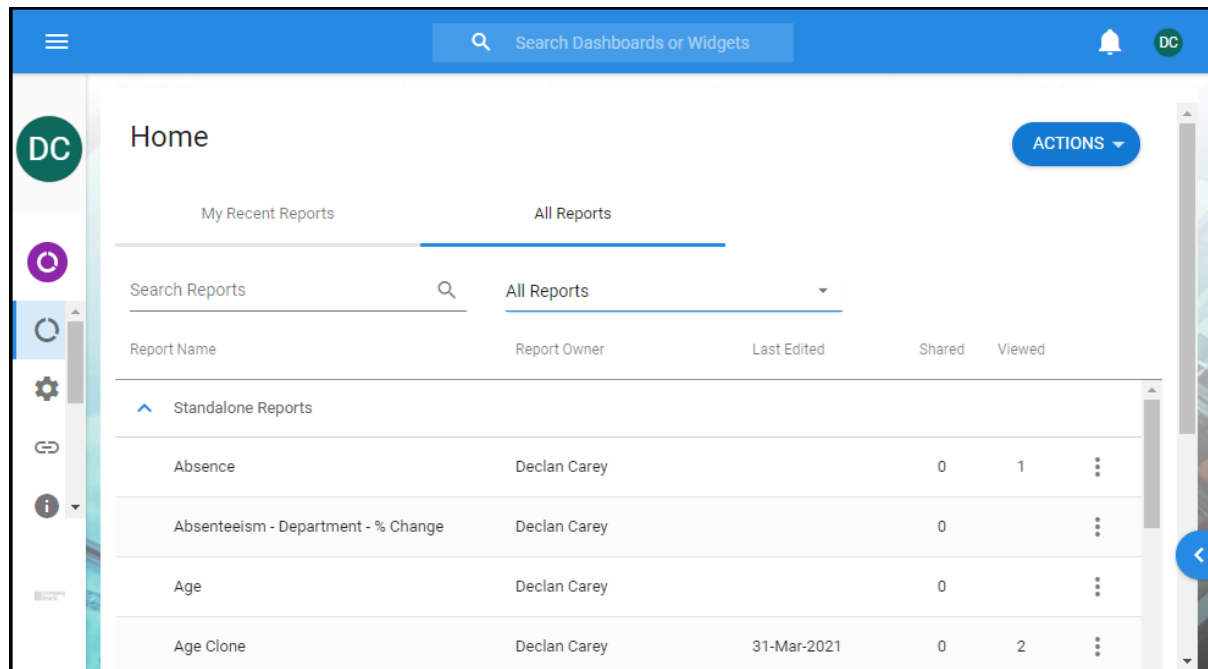

Report with Chart

2.2.2. All Reports

The section of the screen lists all of your reports. These are reports that:

- You have created.
- Have been shared with you.

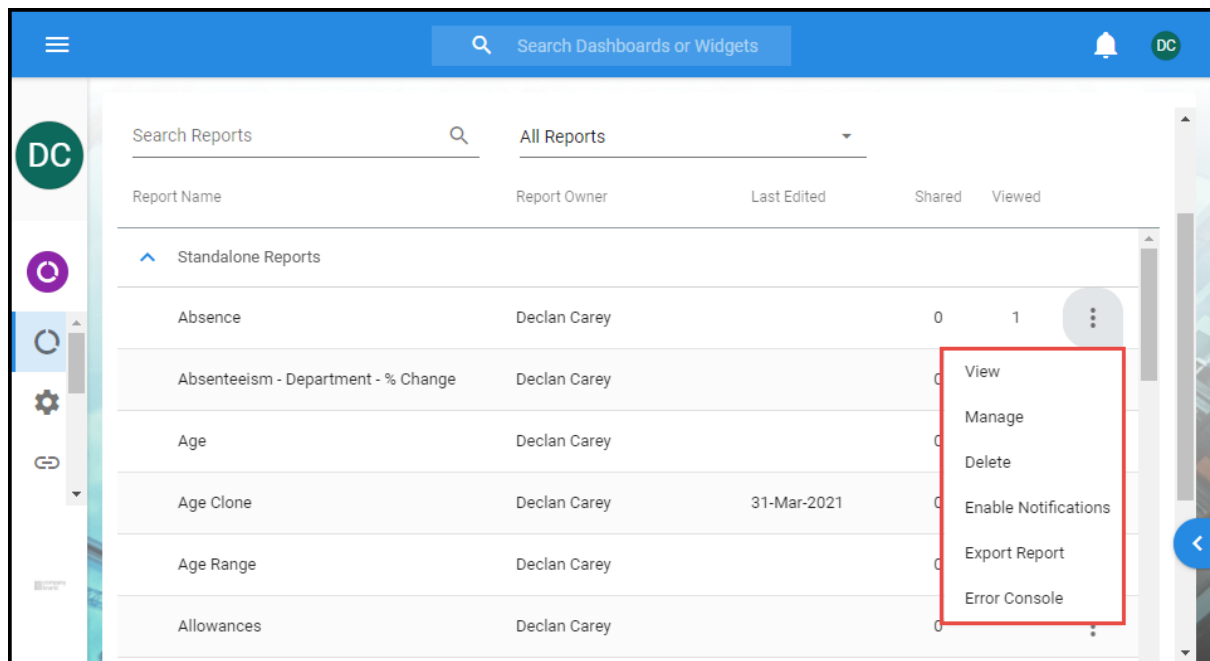

1. Use the *Search* field to do a keyword search based on the report name.
2. Use the *Dropdown list* to filter the list of reports to show the following types of reports

Report Type	Description
All Reports	This returns all Report Types.
Data Reports	These are standard tabular or cross-tabular reports.
Downloaded Reports	This returns all reports downloaded from the Store.
My Reports	This returns all reports created by you or where you are the Report Owner.
Published Reports	This returns reports that your user has published to the Store.
Scheduled Report	This returns reports that are currently going through a scheduling process.
Shared Reports	This returns reports that have been shared with other users.

3. The following items appear on this screen:

Item	Description
Report Name	This is the name of the report.
Report Owner	This is the person who created or owns the report.
Last Edited	This shows the date the last time the report was edited.
Shared	This returns the count of how many users this report is shared with.
Viewed	This returns the count of how many times this report was refreshed.

4. Clicking on the  button on carry out further tasks for each report. The following image and table outline these tasks briefly.

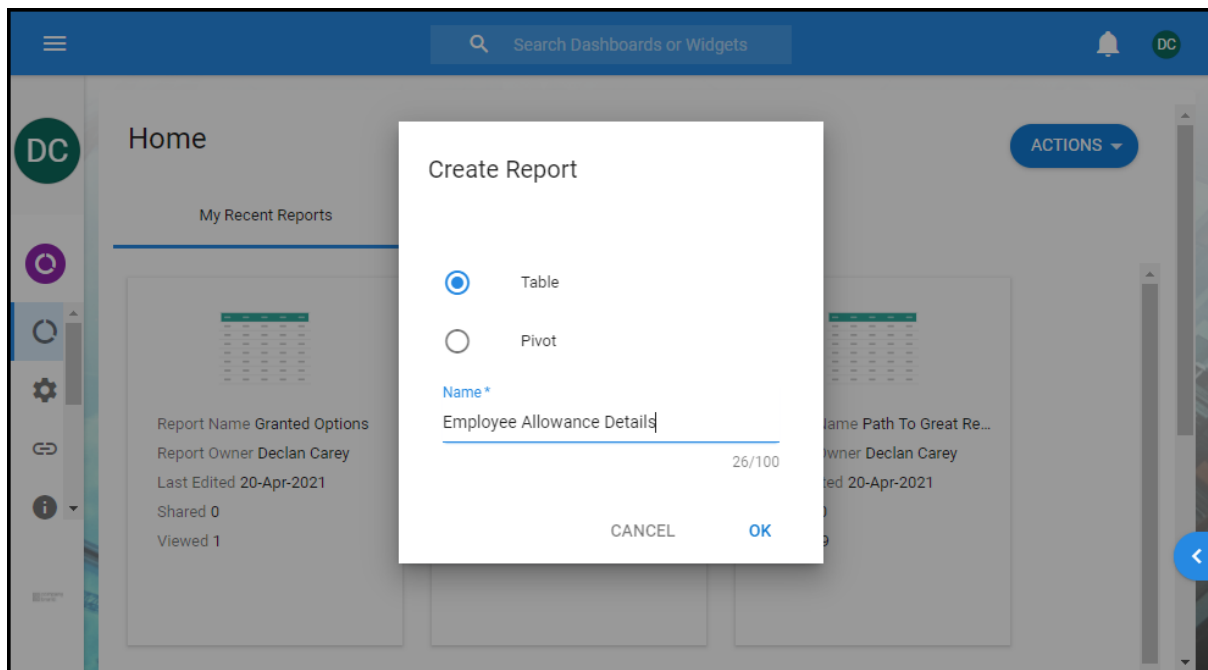

Item	Description
View	This allows you to view and refresh the data in the report.
Manage	This allows you to enter "Edit Mode" for the report.
Delete	This deletes the report from your dashboard and other users dashboards if it is shared.
Enable Notifications	This allows you to enable notifications to send on the report once the data is ready to view.

Item	Description
Export Report	This allows you to export the report as a .insight file type.
Error Console	This opens the Error Console where any errors may appear for the report.

2.2.3. Creating a Report

1. Click on the **Actions** button.
2. Click on the **Create Report** button to create a Table or a Pivot report.

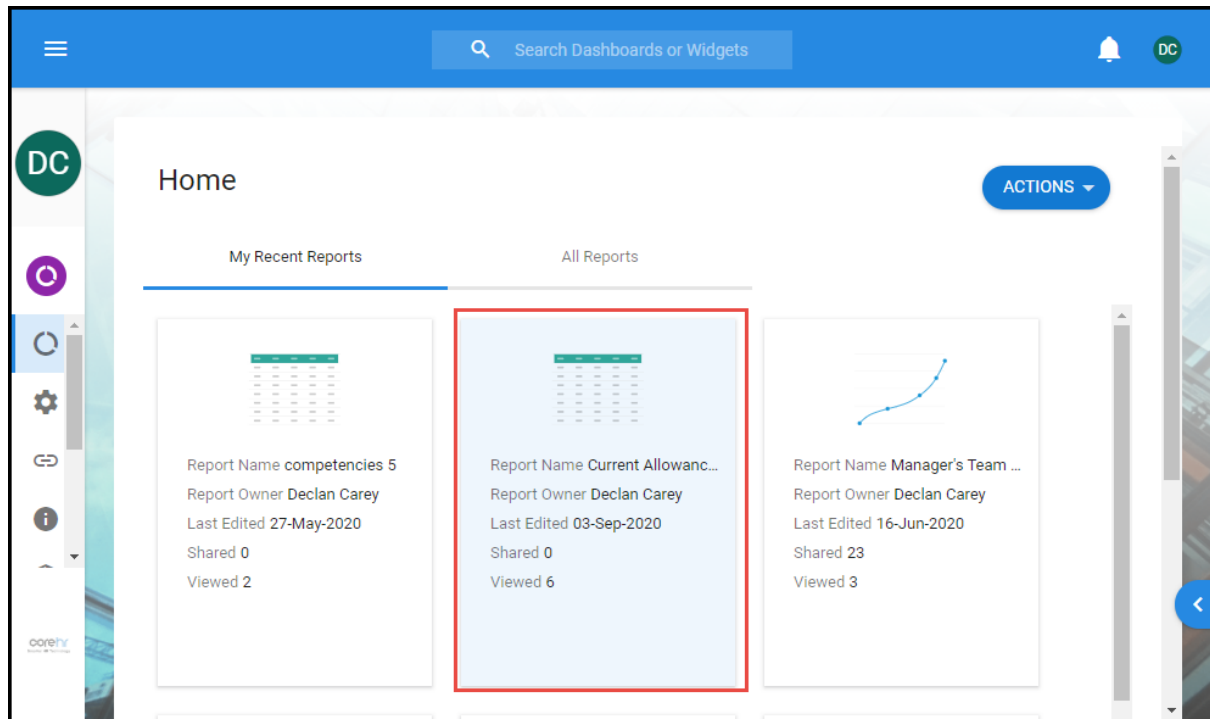

3. The process to create a new report is explained in detail in section [3. Creating Reports](#).

2.2.4. Viewing a Report

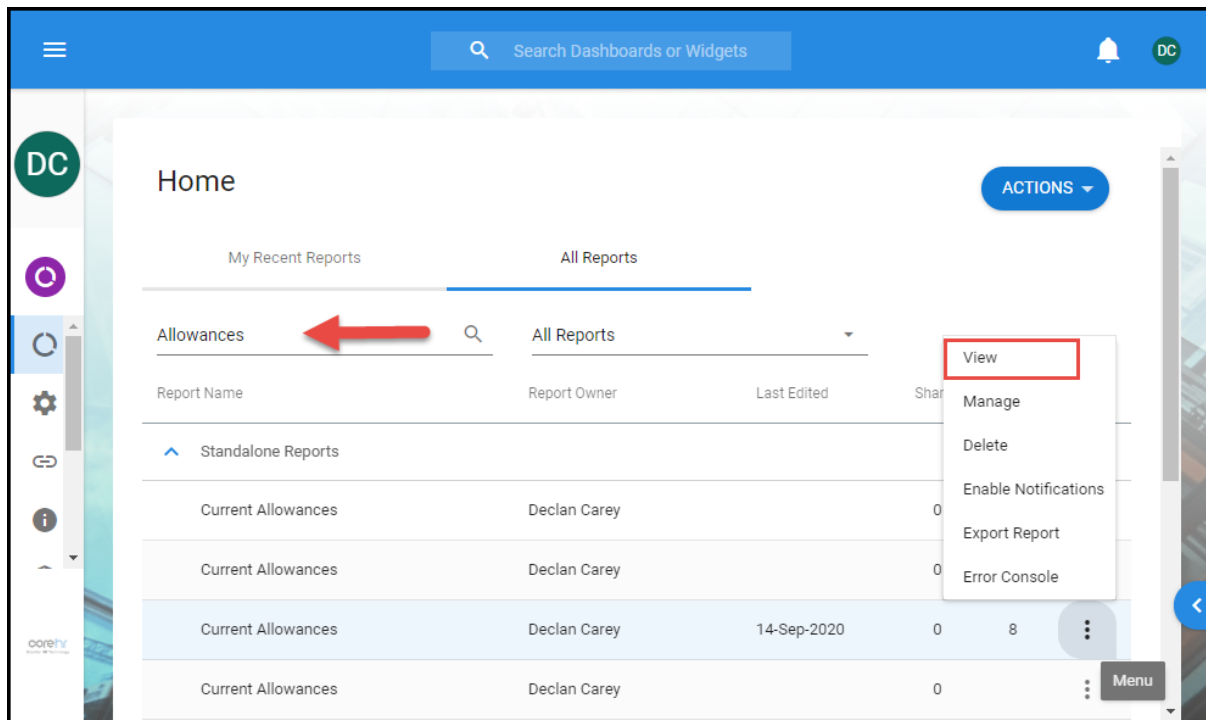

To view a report on the *Recent Reports* tab:

1. Under *Recent Reports*, click on the report.

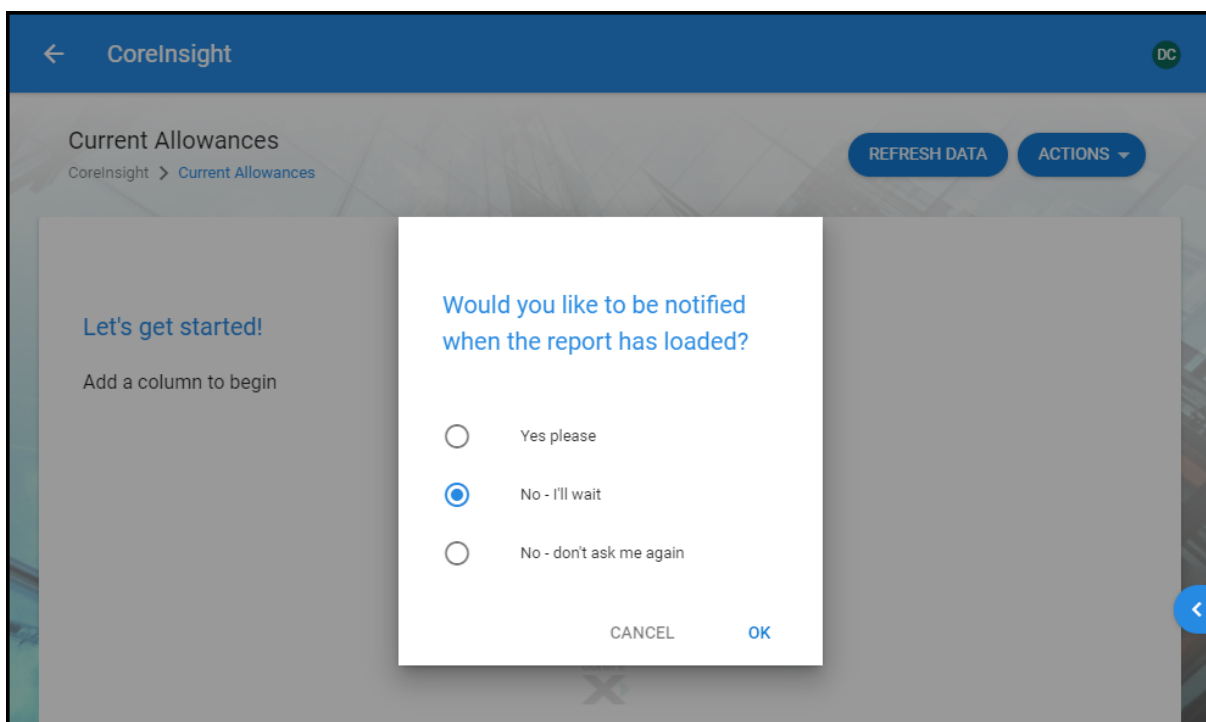

To view a report from the *All Reports* list:

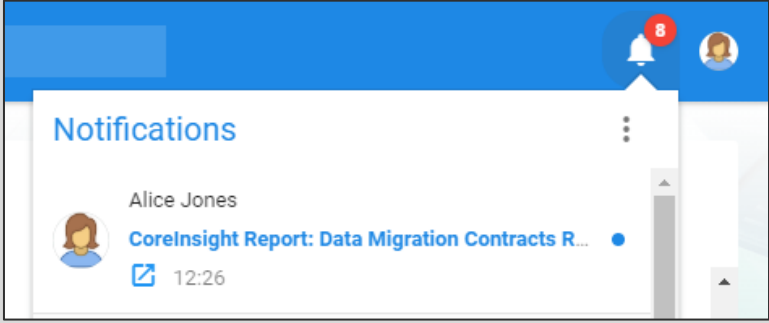

1. Search for the report.
2. Click the  button and click the **View** button.

3. If this is the first time that you have run the report, the following message appears.

4. Because the report is running for the first time, it may take a bit of time to retrieve the data and display the results on screen. Therefore, you are presented with 3 options:

Option	Explanation
Yes Please	You chose to exit the screen and be notified when the report is ready, - The report is generating in the background. During this time, you are free to leave Insight and complete any tasks as required. - A notification is provided in the <i>Notification Centre</i> when the report is ready for you to review. 
No - I'll wait	You wait for the report to generate. Depending on the report, this time taken to complete can vary. You can leave the screen while the report is being retrieved but there is no notification sent when it is ready.
No - don't ask me again	Selecting this option also means that you are not presented with this option again for this report. The only way to make this prompt appear again is to enable notifications for the report see section 5.5 Enable Notifications.

- If you have run this report before OR if you have selected the option "No - don't ask me again", the report opens on screen without this prompt.

Pay Group	Allowance Value	Pay Code	Start Date	
1	2500	3764	01-Sep-2020	⋮
1	3	9014	04-May-2017	⋮
1	100	9014	16-May-2017	⋮
1	20	9016	01-Nov-2011	⋮

6. The report data is displayed on screen. Depending on the size of the report i.e. how many rows and columns this includes, you may need to use the vertical and horizontal scrollbars to view the full set of data. The following table outlines the information shown on screen:

Item	Description
Date / Time	This shows the date and time that the report was last generated.
Refresh Report	See section 2.3 Cached Reports for further details on how to refresh report data.
Data Classification	If the report has been configured to include a data sensitivity classification, this is displayed at the top left of the report.
Actions button	The Actions button provides access to complete a number of tasks including: • Editing the report. • Sharing the report. • Exporting the report. • Showing / hiding report charts if these have been setup. • Printing the report. • Viewing error messages if the report has generated an error.

Item	Description
Record Count	This shows the number of rows returned on the report.

2.3. Cached Reports

In order to ensure that reports are available to you as quickly as possible, Insight caches the report data from the last time you ran it. This means when you view the report, you see data generated from the last time you ran the report. The date and time the report was last run is displayed at the top left of the report page.

This is only applicable if you have run the report at least once. If the report has never been run, then you are prompted to wait for the data to be retrieved for the first time.

In order to view the most up-to-date report data, you need to refresh the report. To do this:

1. Click the **Refresh Data** button.
2. Select your preferred notification option e.g. to be notified when the report is ready or to wait for the report to run.
3. Once the report has been refreshed, the date timestamp is updated.

Person Reference	Pay Group	Allowance Value	Pay Code	Start Date
000013	1	2500	3764	01-Sep-2020
000013	1	3	9014	04-May-2017
000013	1	100	9014	16-May-2017
000013	1	20	9016	01-Nov-2011

This Cache option is configurable. You can update this at a system level if the caching is to be on or off.

- This is on by default on install.

- If you switch this off, every time you open a report it re-runs to retrieve the latest data.

To view/update this parameter:

1. Quick jump to *Site Manager > Admin Settings*
2. Search for parameter "cp_insight_cache".
3. Click **Edit** to update the value:
 - a. Set to Y to cache reports.
 - b. Set to N to disable caching.
4. Save.

2.4. Employee Reference Quick Link

Whenever a *Person Reference / Personnel Number* field is included on an Insight report, a button is displayed for each report row, giving you the ability to jump to that employee's full HR, Payroll or Talent record.

The screenshot shows the 'CoreInsight' interface with the 'Current Allowances' report. The report title is 'Current Allowances' with a breadcrumb trail 'CoreInsight > Current Allowances'. There are 'REFRESH DATA' and 'ACTIONS' buttons. The data is as of 14-Sep-2020 11:47 (Record Count: 97). The table has the following columns: Person Reference, Pay Group, Allowance Value, Pay Code, and Start Date. The first row is highlighted in blue. A red arrow points to a menu icon in the first row, which opens a dropdown menu with the following options: Payroll Details, Personnel Details, and Talent Details.

Person Reference	Pay Group	Allowance Value	Pay Code	Start Date
000013	1	2500	3764	01-Sep-2020
000013	1	3	9014	04-May-2020
000013	1	100	9014	16-May-2020
000013	1	20	9016	01-Nov-2020

This prevents the need to exit the report and navigate through the system to view that record and also allows you to quickly jump back into the report, via the breadcrumb trail.

2.5. Report Timeout

XD automatically kills off Insight reports that run longer than 45 minutes/ The user that runs the report receives an email that their report has been stopped as it has exceeded the maximum duration.

Note: In most cases, poor-performing reports are joined to multiple areas and views that scan vast volumes of data. If you experience this report time out for a report that you have created, it is recommended that you review the report structure and edit, as necessary.

2.6. Automatic Refresh Option

On each report, the Automatic Refresh Option allows you to see the changes and data results on the fly while you are building the report. This is optional via the setting on each report. The report is autosaved once refreshed.

The screenshot shows the 'Insight' interface for a report titled 'Manager Dashboard Menu Options'. The report is set to 'Auto refresh on all changes', which is indicated by a blue toggle switch and a red rectangular highlight. The report displays a table of menu options with the following columns: Menu Profile, Menu Name, and Menu Id. The data is as of 29-Apr-2021 12:34 (Record Count: 3671). The table contains several rows of data, including menu profiles like 'COREPORTAL_MANAGER' and 'WS_ROSTER_MENU', and menu names like 'CorePortal - Administrator Document Upload' and 'ONBOARDING UPGRADE SCREEN'.

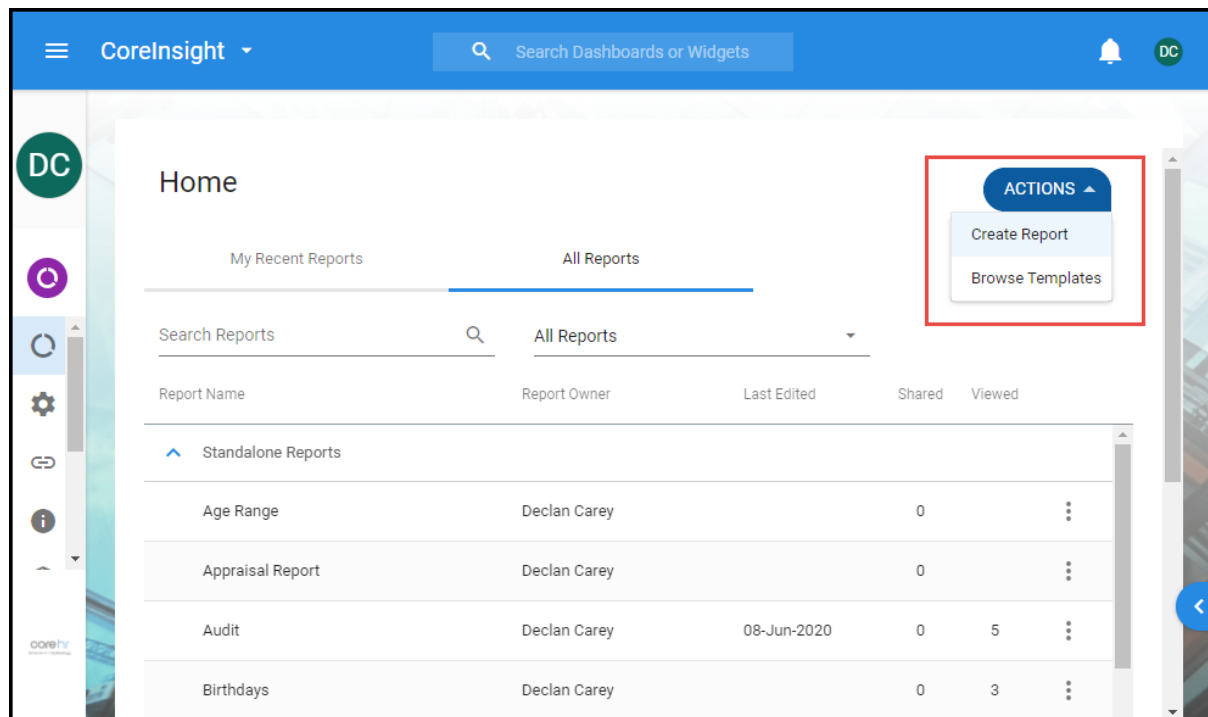

Menu Profile	Menu Name	Menu Id
COREPORTAL_MANAGER	CorePortal - Administrator Document Upload	MAIN_MENU.ADMIN_DOC_UPLOAD
COREPORTAL_MANAGER	CorePortal - Administrator Document Upload	MAIN_MENU.ADMIN_DOC_UPLOAD
COREPORTAL_MANAGER	ONBOARDING UPGRADE SCREEN	MAIN_MENU.UPGRADE_SCREEN
COREPORTAL_MANAGER	ONBOARDING UPGRADE SCREEN	MAIN_MENU.UPGRADE_SCREEN
COREPORTAL_MANAGER	CorePortal - Administrator Document Upload	MAIN_MENU.ADMIN_DOC_UPLOAD
COREPORTAL_MANAGER	Get shifts uncovered generate	WS_ROSTER_MENU.GET_SHIFTS_UNCOVI
COREPORTAL_MANAGER	Update shifts uncovered	WS_ROSTER_MENU.UPDATE_SHIFTS_UNCOVI

3. Creating Reports

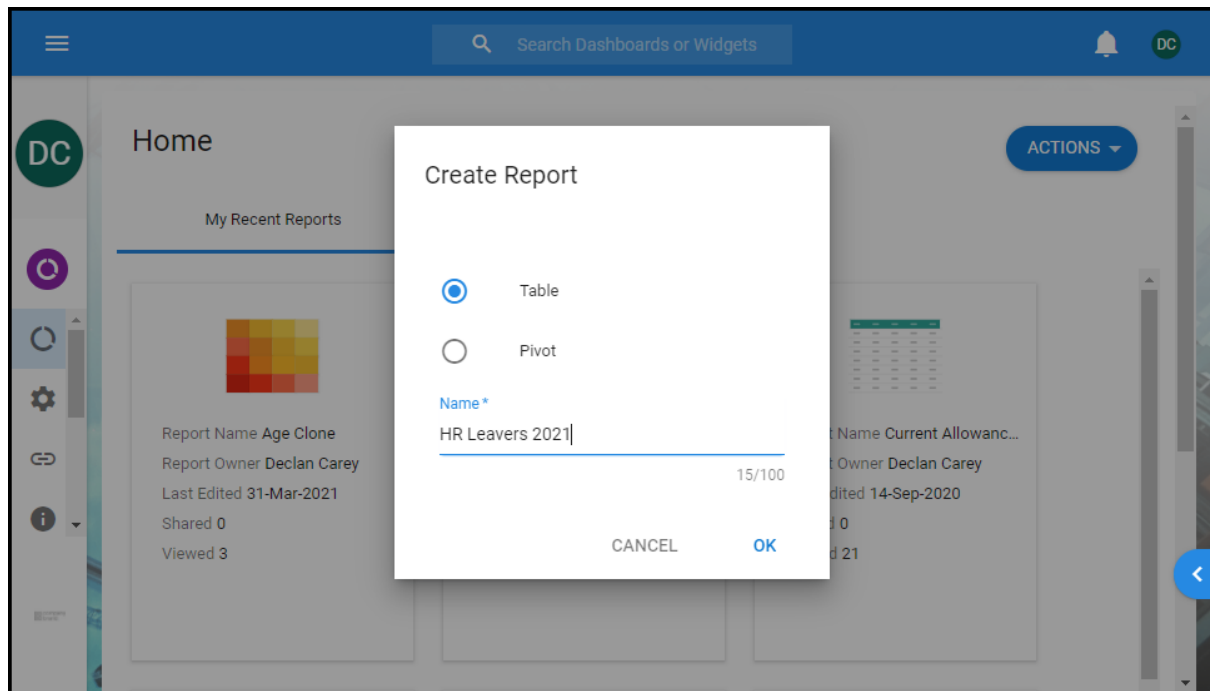

3.1. Creating a New Report - Table

Follow these steps to create a new table report.

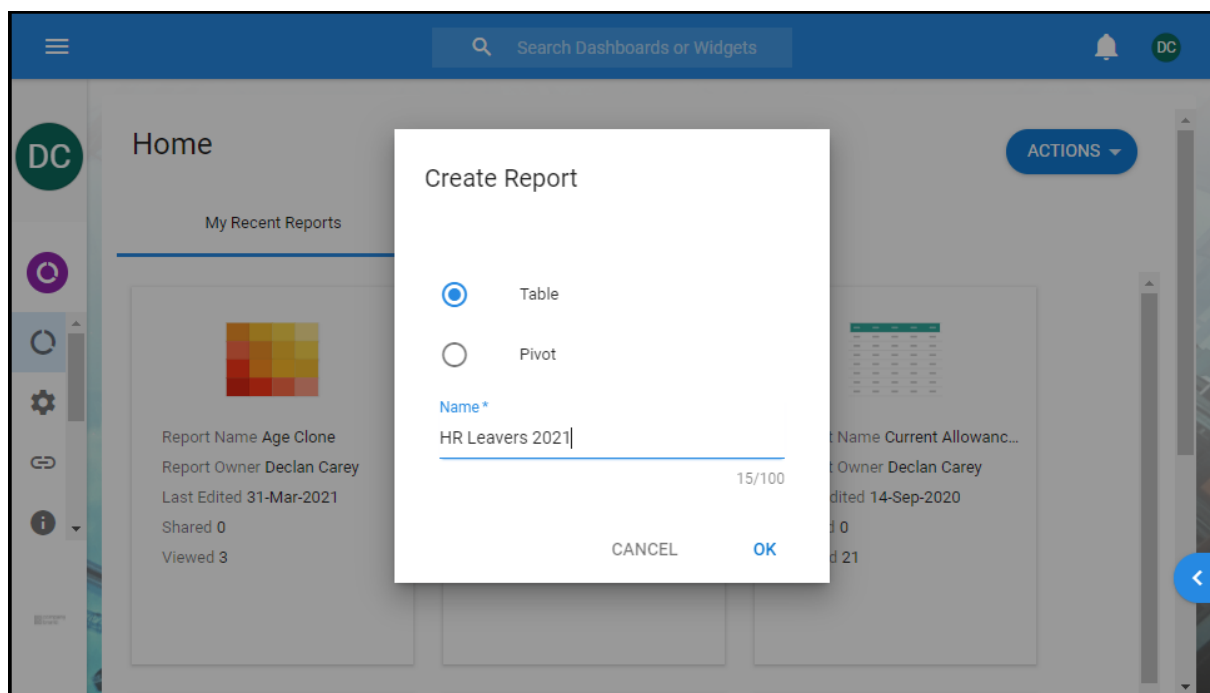

1. Quick Jump to Insight dashboard
2. On the Home tab, click on the **Actions** button.
3. Click on the **Create Report** button.

4. Select *Table* as the type of report to create.
5. Create the name of the report.

6. The report has been created successfully.

7. The following settings can be created, added to, and updated on a report by selecting one from the *Select a setting* drop-down option.
 - a. Columns
 - b. Filters
 - c. Formatting
 - d. Chart
 - e. Settings
 - f. Heading
 - g. Tabs
8. The report requires 1 column to be added initially before any other items can be modified or added. To do this, click on the **Add** button and select **Column**.

The screenshot shows the 'Insight' report interface for 'HR - Leavers'. The interface includes a header with a back arrow, the title 'Insight', and a 'DC' indicator. Below the header, there is a section for 'HR - Leavers' with a 'REFRESH DATA' button and an 'ACTIONS' dropdown menu. The main content area displays a table with columns: 'Person Reference', 'Forename And Surname', and 'Date Left'. The table contains three rows of data: 000365, Jake Pratt, 15-Jan-2021; 000224, Billy Jordon, 24-Jan-2021; and 000226, Megan Bull, 29-Jan-2021. A red box highlights the 'Select a setting' dropdown menu, which is currently set to 'Columns'. A red arrow points to the 'ADD' button, which is located above the table. The 'ADD' button has a dropdown menu with 'Column' and 'Calculation' options. The 'Column' option is selected, and a red arrow points to it. The interface also includes a 'Auto refresh on all changes' toggle switch and a 'Data as of' timestamp.

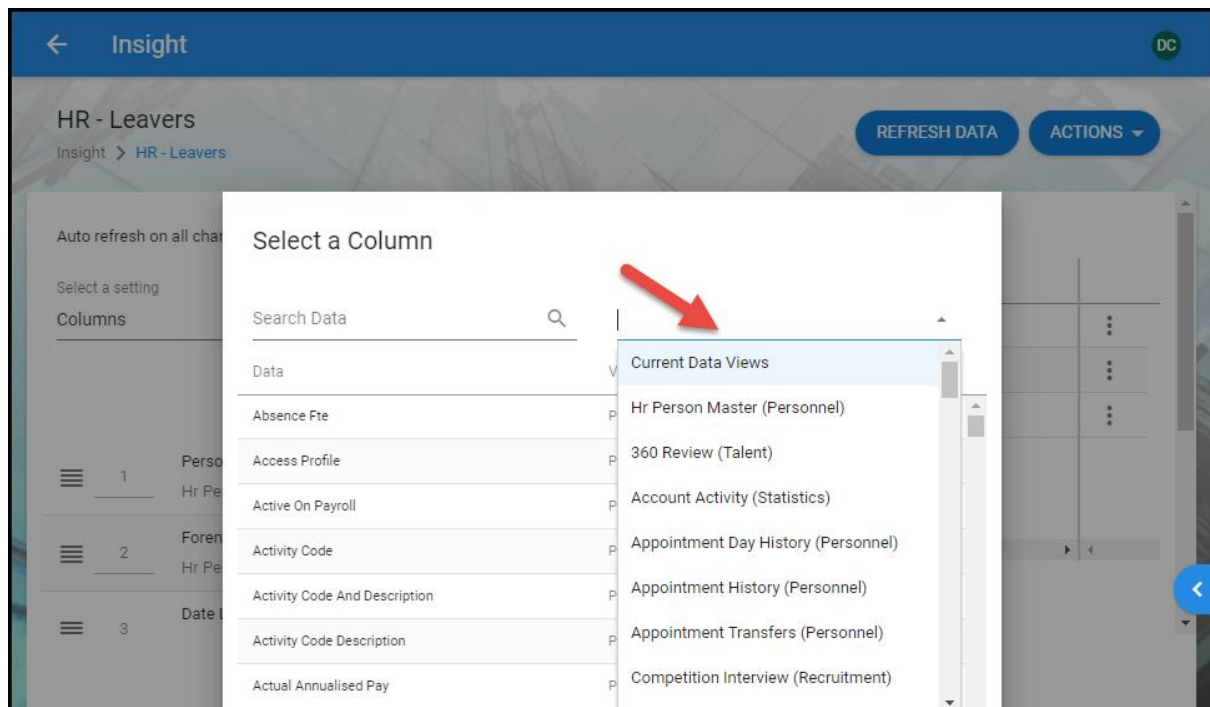

Person Reference	Forename And Surname	Date Left
000365	Jake Pratt	15-Jan-2021
000224	Billy Jordon	24-Jan-2021
000226	Megan Bull	29-Jan-2021

3.1.1. Adding a Column

In this step, select the XD product area(s) that report data is to be generated from e.g. is this a Payroll report, a HR report etc.

On the select a column screen, filter on the XD view that data is required to be reported on.

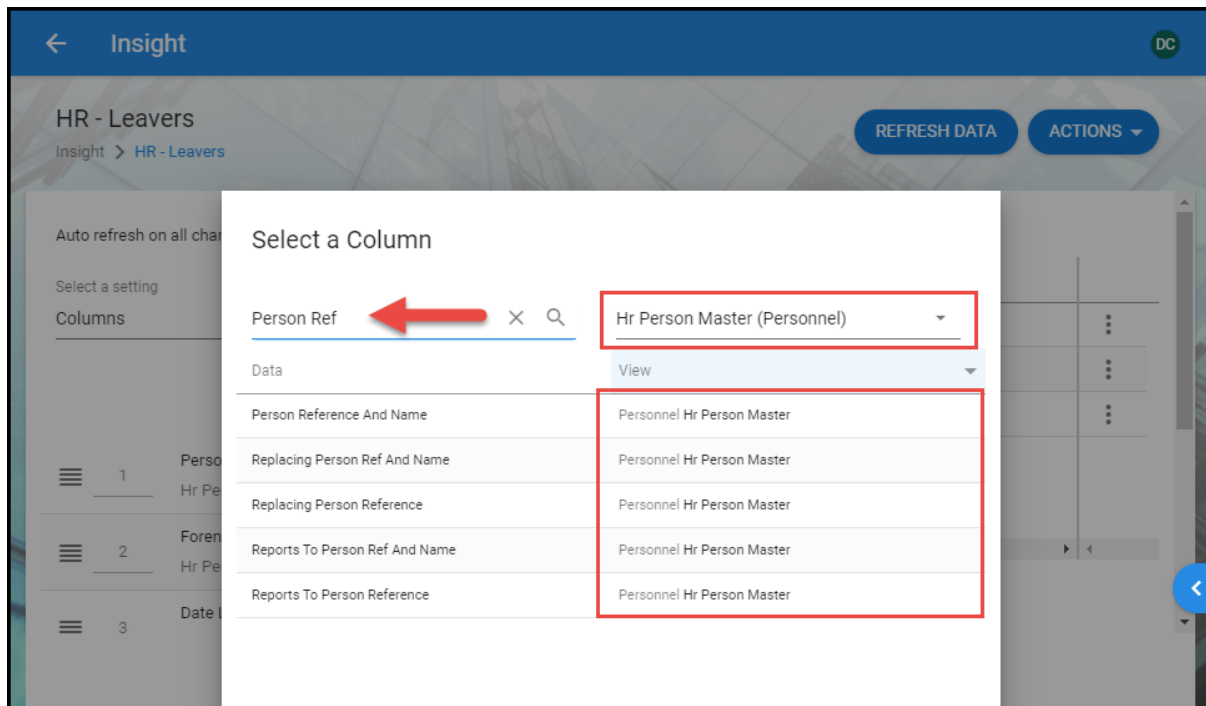

1. The *Current Data Views* return.

Note

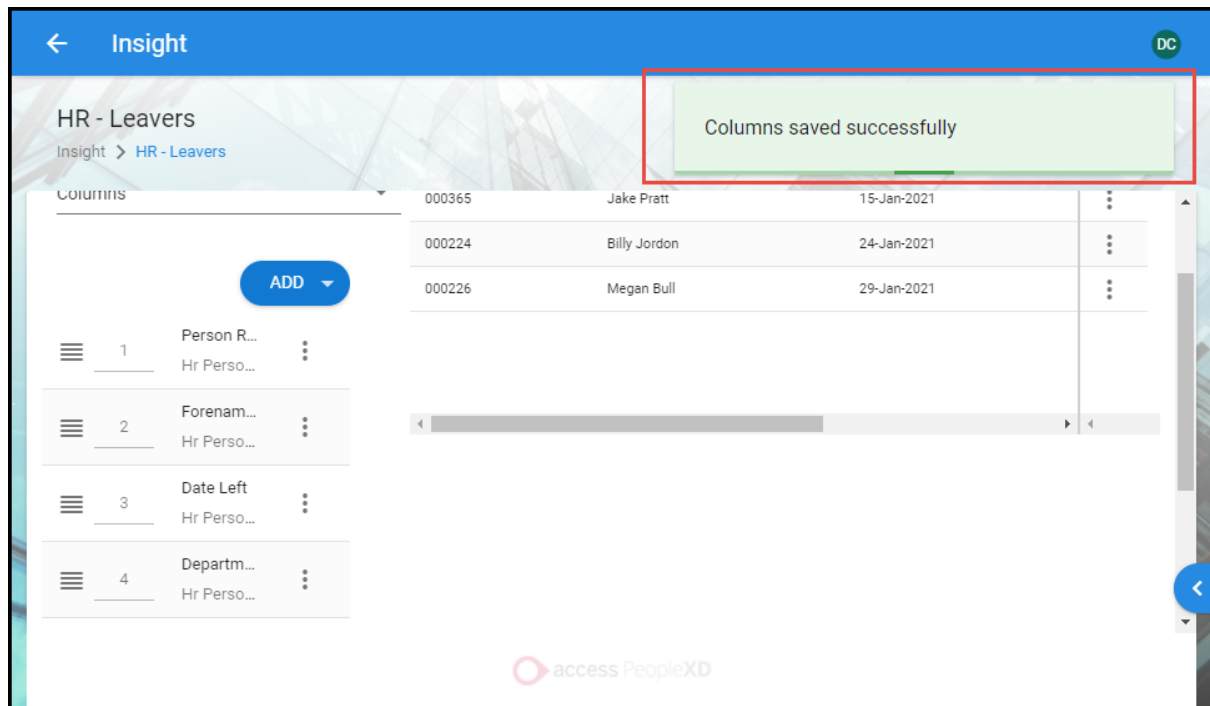

- The *Current Data Views* option show users current and real-time data which pull from XD views on the Database. For optimised performance, use this option.
- If you are building a report that looks at Historic Data, it is suggested to use the history tables, however your report can take longer to run if these are selected.

2. The other views are linked to all XD products and can return both current and historical data.
3. Once the View has been selected, search for the data item from the list on the left.

Note: Once you select a view, the list immediately updates to display all of the other views that are joined to the selected view, from both the current selected area and other areas (only if you have permission to report on those areas).

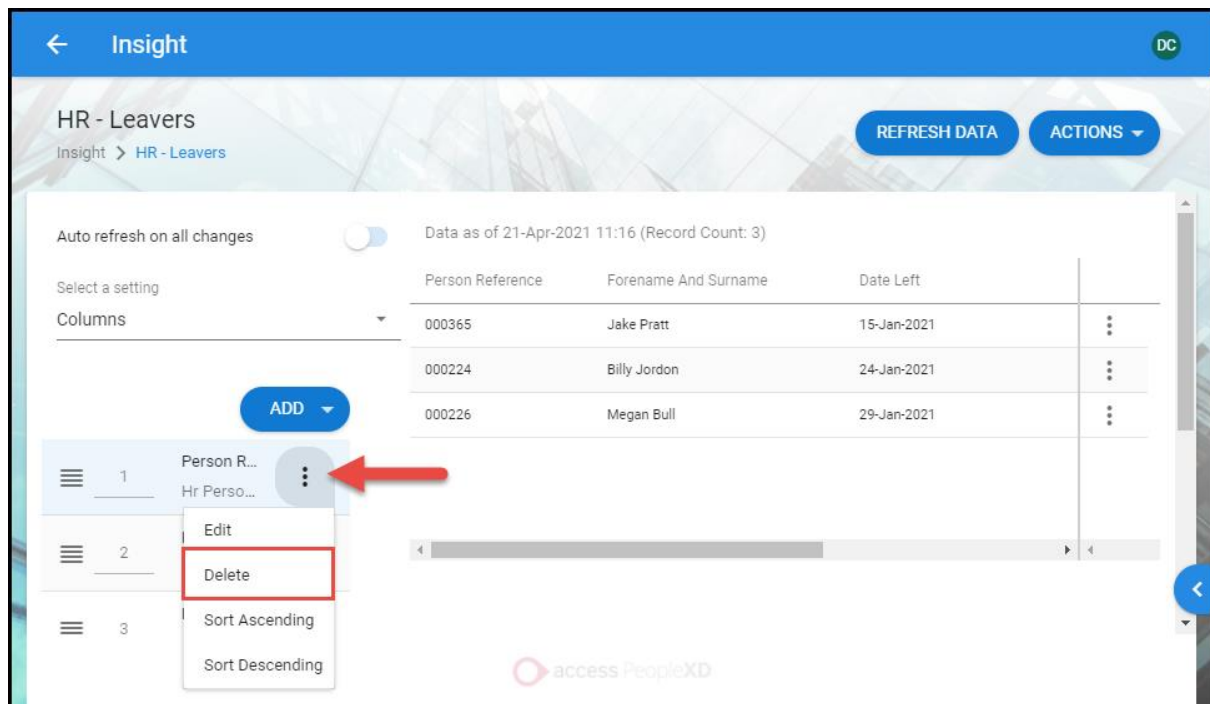

4. Keep building the report by adding more columns to the *Columns* section.
5. Select the Column by clicking on the Data item
6. Click **OK**.

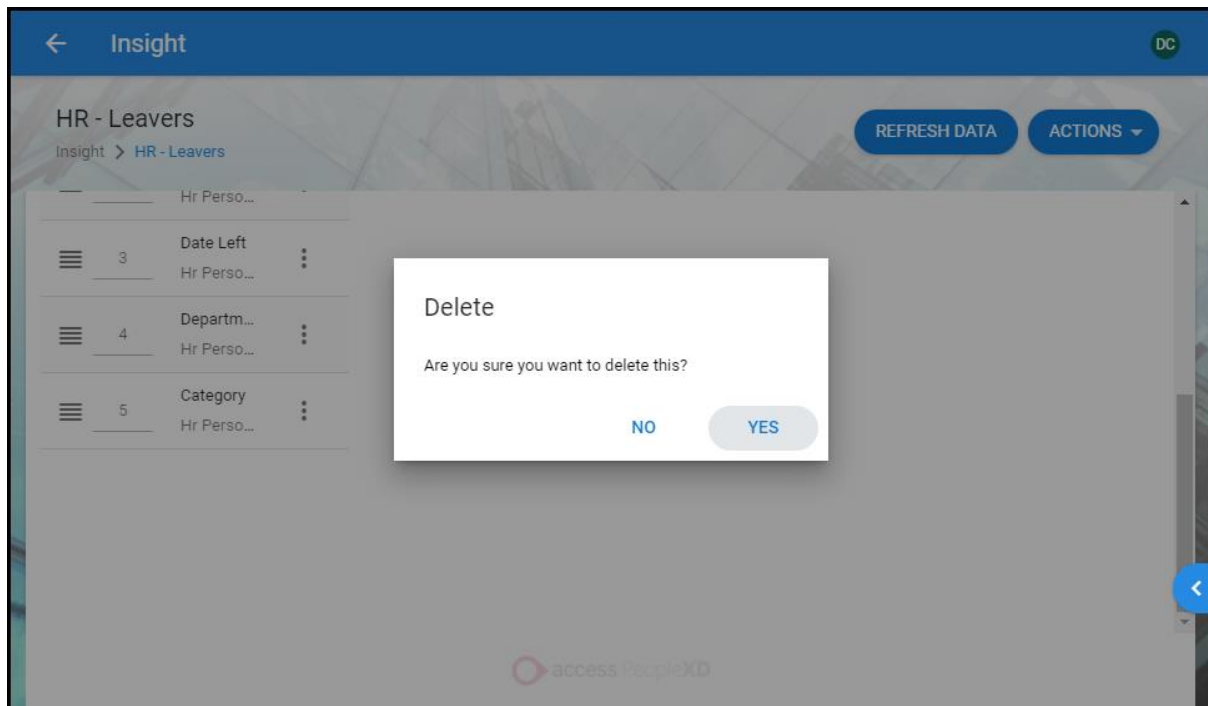

3.1.2. Removing a Column

To remove a column from a report:

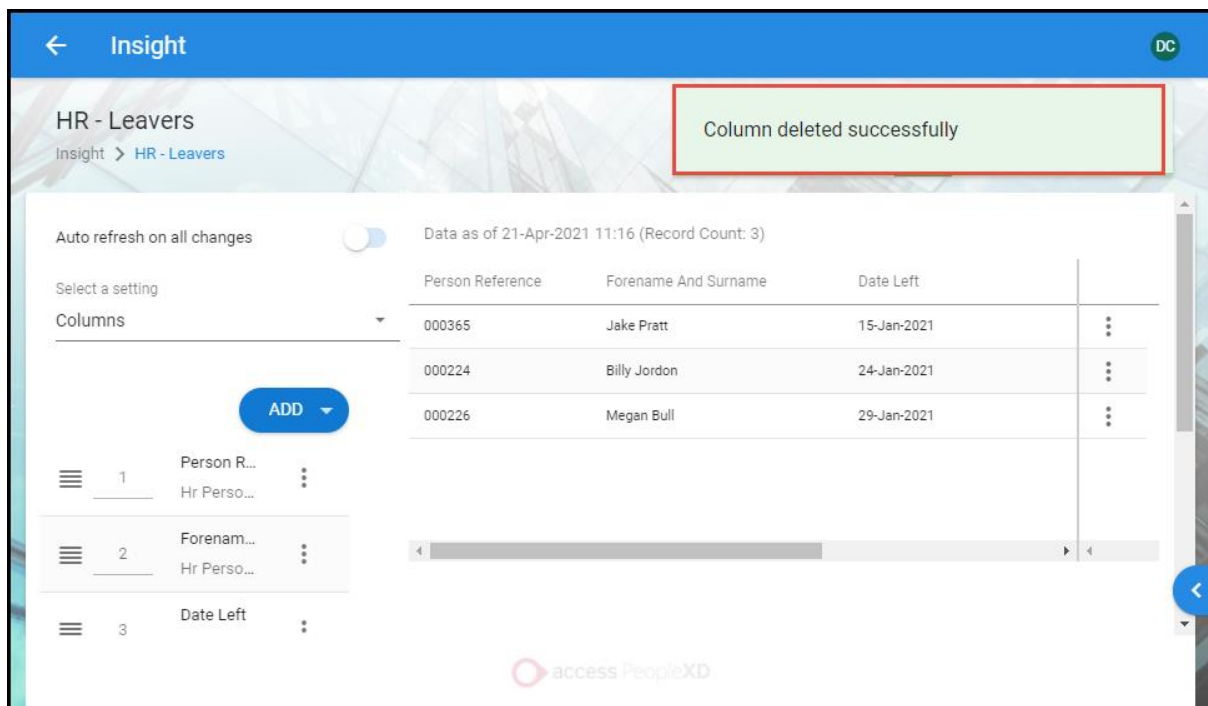

1. Click on the  button.
2. Click on the Delete button.

3. Confirm deletion by clicking the Yes button on the confirmation page.

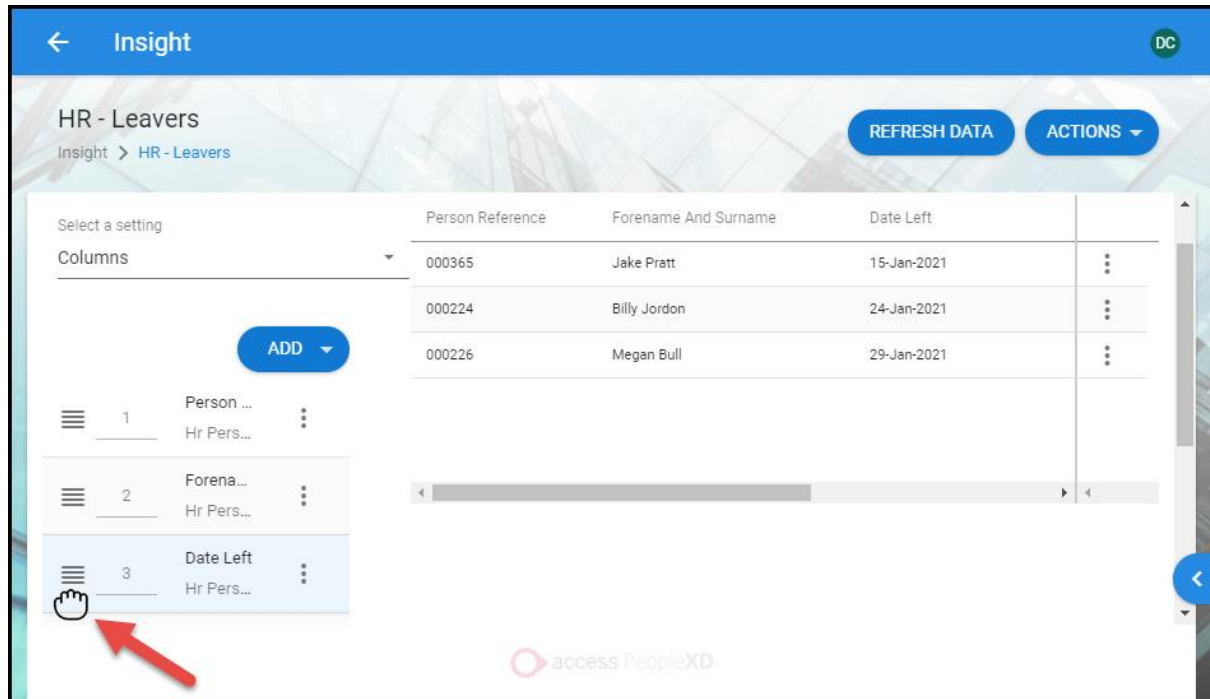

4. Column deleted successfully.

3.1.3. Re-Ordering a Column

To re-order a column on a report:

1. Use the  button to drag and drop a column to its required position.

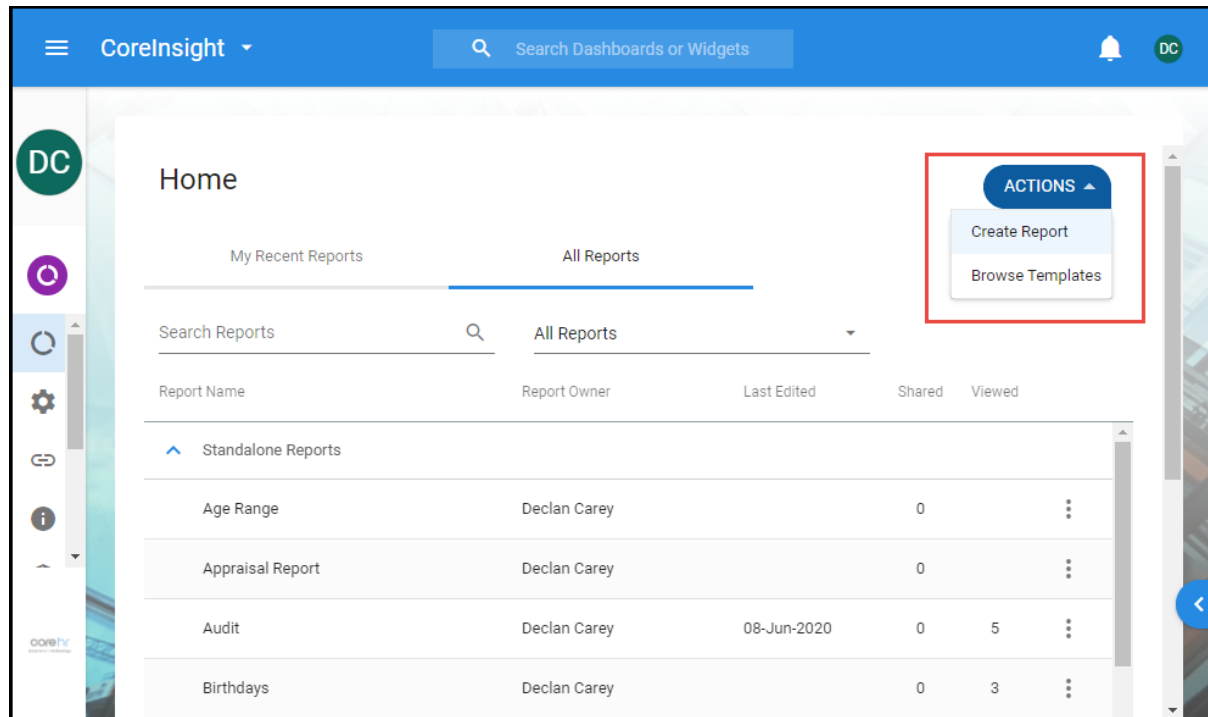

See section [4. Editing Reports](#) for full guidance on all of the settings available for the report.

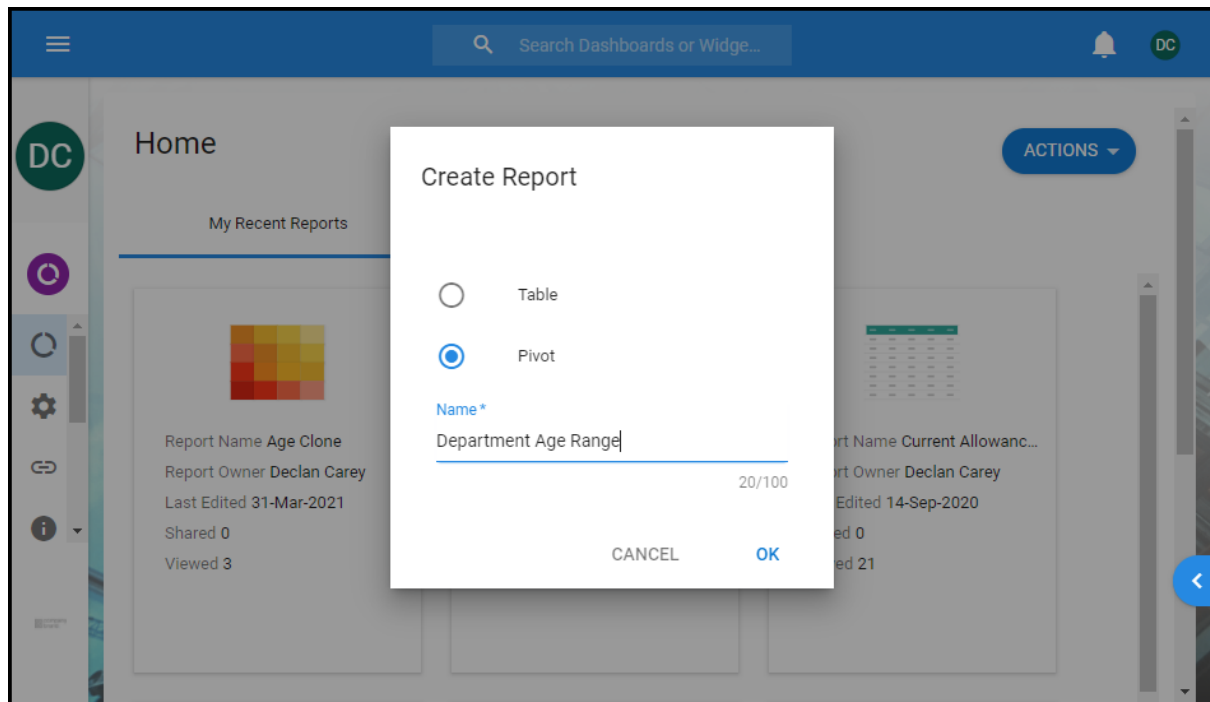

3.2. Creating a New Report - Pivot

Follow these steps to create a new table report.

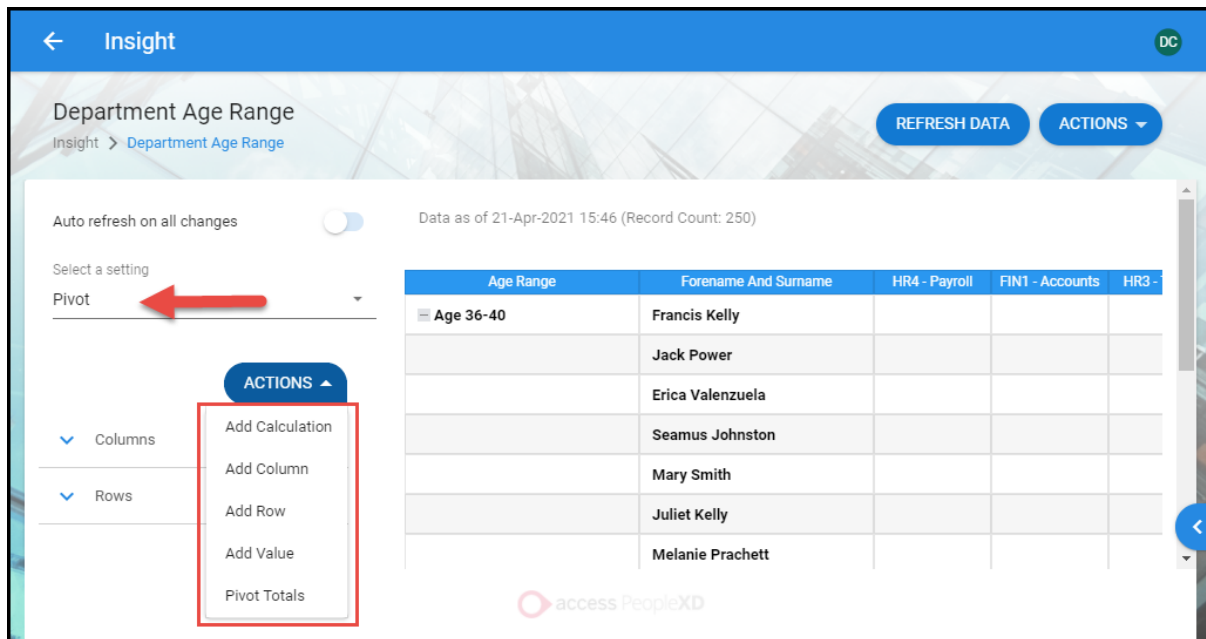

1. Quick Jump to Insight dashboard
2. On the Home tab, click on the **Actions** button.
3. Click on the **Create Report** button.

4. Select *Pivot* as the type of report to create.
5. Create the name of the report.

6. The following settings can be created, added to, and updated on a report by selecting one from the *Select a setting* drop-down option:
 - a. Pivot
 - b. Filters
 - c. Chart
 - d. Settings
 - e. Heading
 - f. Tabs
7. A Pivot report requires at least 1 column and 1 row to be added initially before any other items can be modified or added. To do this, click on the *Select a setting* option, ensure **Pivot** is selected, click the **Add** button and select **Column** or **Row**.

The screenshot shows the 'Insight' dashboard for the 'Department Age Range' report. The report is filtered by 'Age Range' (Age 36-40) and shows data as of 21-Apr-2021 15:46 (Record Count: 250). The 'Pivot' dropdown menu is open, showing options like 'Add Calculation', 'Add Column', 'Add Row', 'Add Value', and 'Pivot Totals'. A red arrow points to the 'Pivot' dropdown menu.

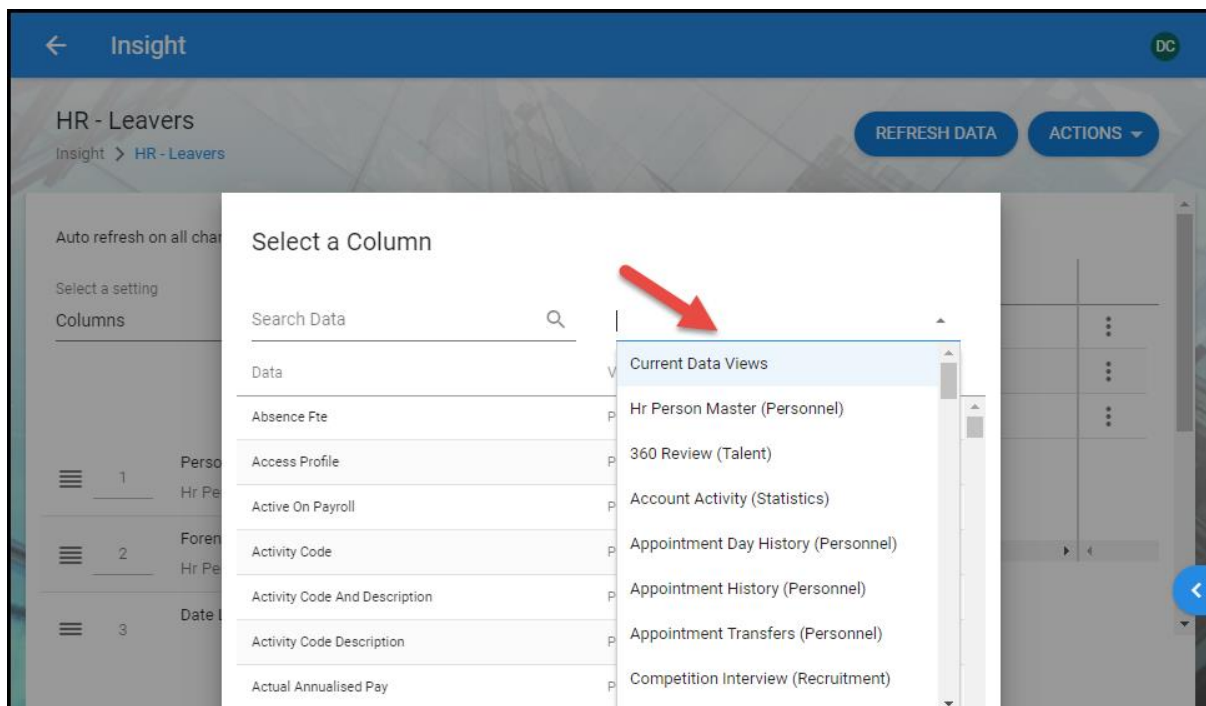

Age Range	Forename And Surname	HR4 - Payroll	FIN1 - Accounts	HR3 -
Age 36-40	Francis Kelly			
	Jack Power			
	Erica Valenzuela			
	Seamus Johnston			
	Mary Smith			
	Juliet Kelly			
	Melanie Prachett			

3.2.1. Adding a Column

In this step, select the XD product area(s) that report data is to be generated from e.g. is this a Payroll report, a HR report etc.

On the select a column screen, filter on the XD view that data is required to be reported on.

1. The *Current Data Views* return.

The screenshot shows the 'Insight' dashboard for the 'HR - Leavers' report. The 'Select a Column' dropdown menu is open, showing a list of data views. A red arrow points to the 'Current Data Views' option in the list.

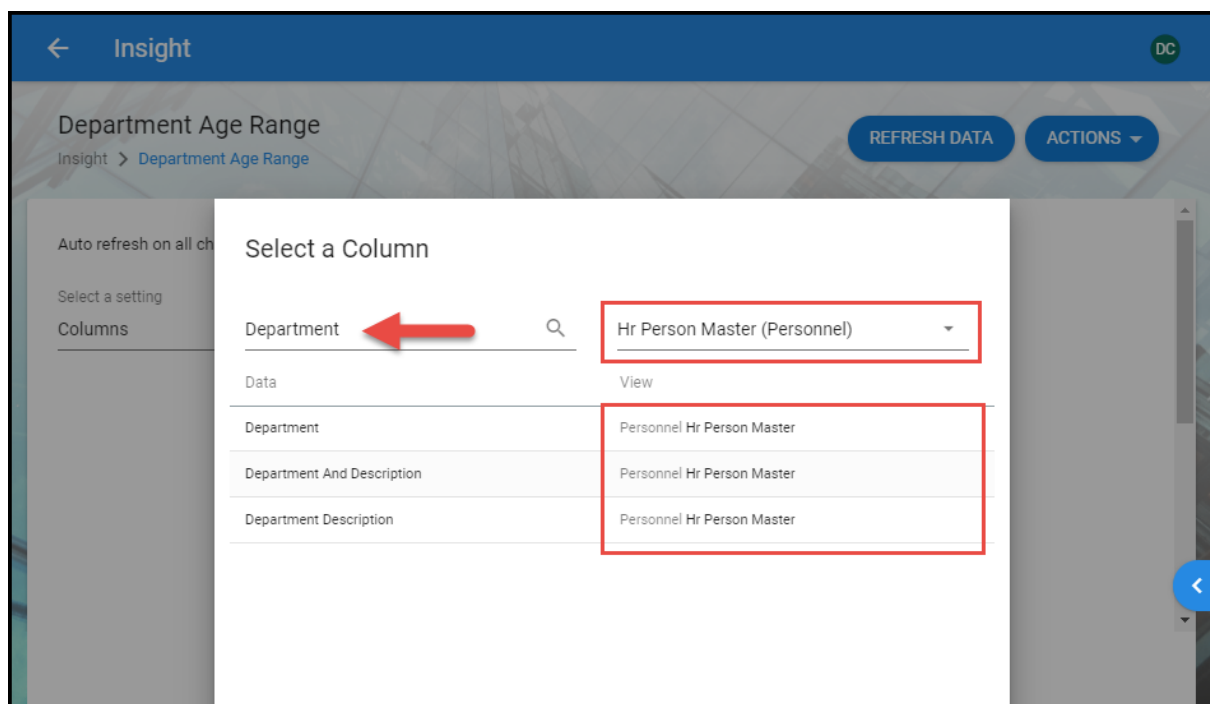

Search Data

- Keep building the Pivot report by adding more columns to the *Columns* section.
- Click **OK**.

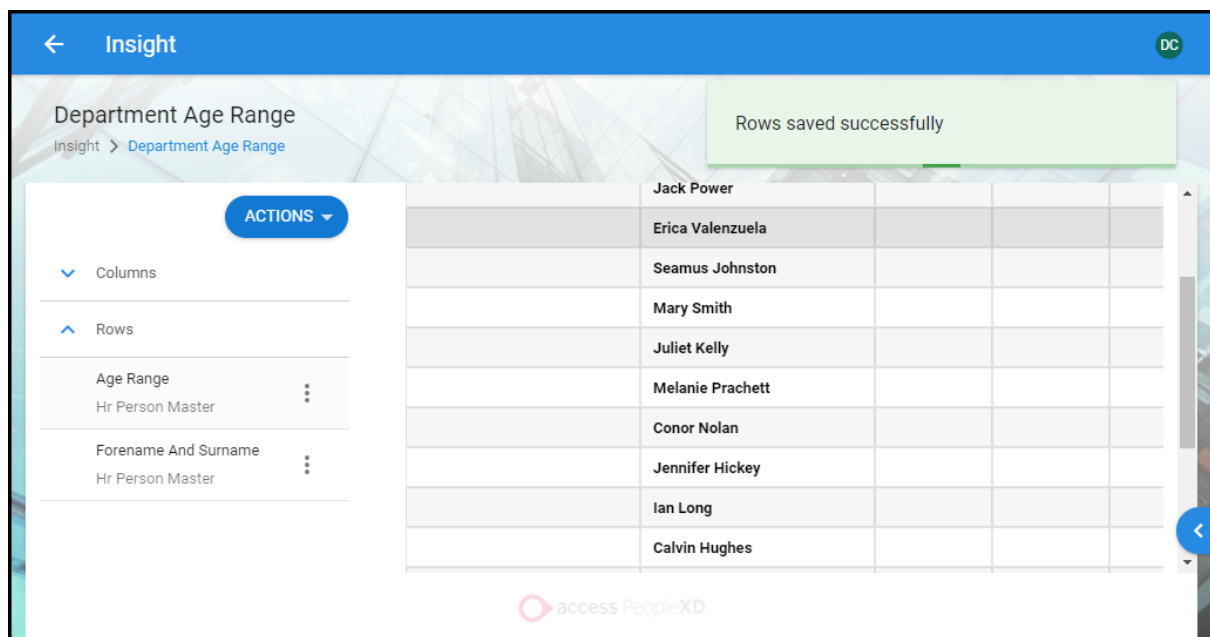

3.2.2. Adding a Row

To add a row, select the Row from the settings drop down and follow the below steps:

1. On the Select a Row screen, pick a suitable Data Item to add as a Row.

2. Click the **OK** button to add it to the report.
3. The row is then added to the report.

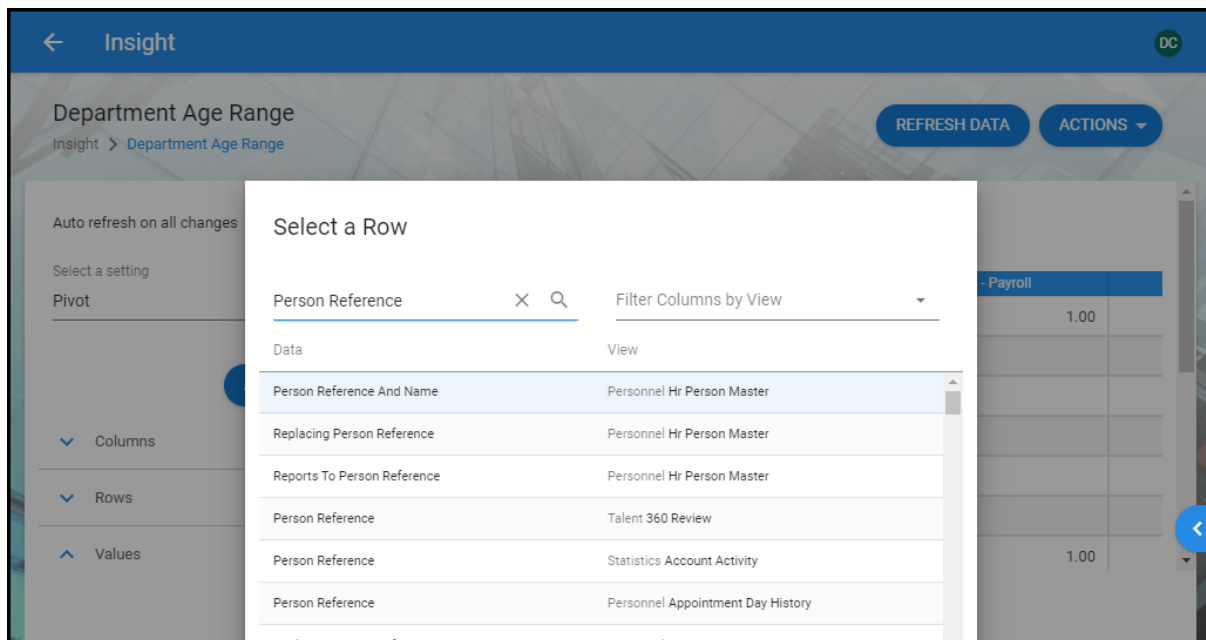

3.2.3. Adding a Value

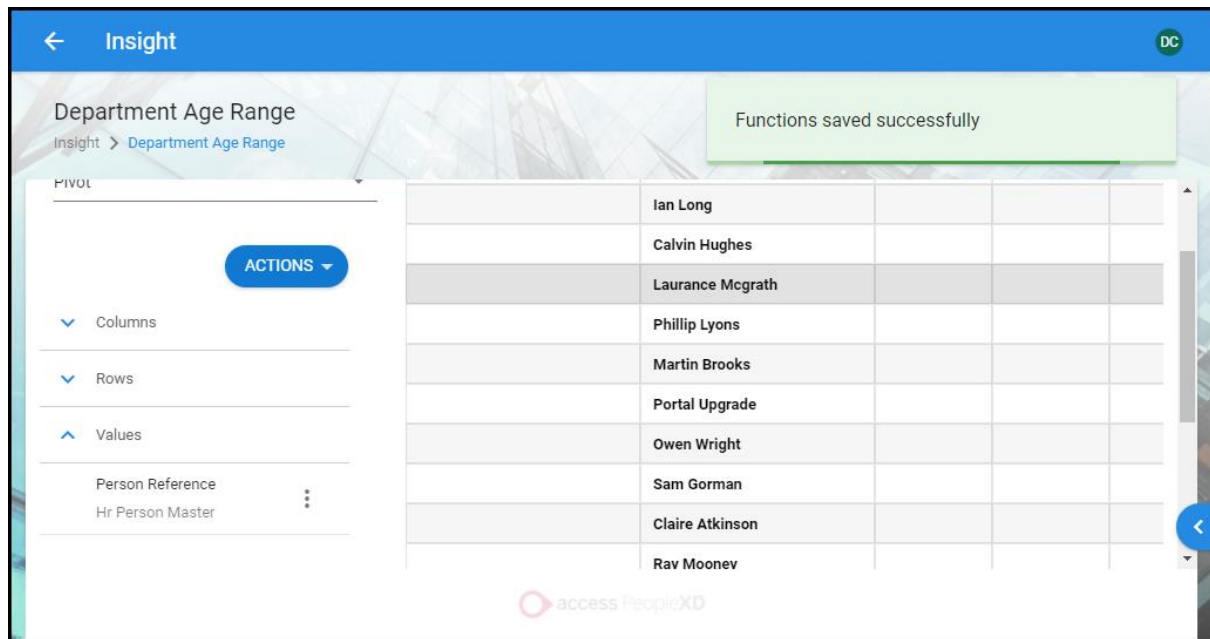

The *Value* option on a Pivot Grid takes a field that has numerical values that can be used for different types of calculations. This can also be used for text values i.e. instead of Sum, it gives a count.

To add a value, select the Value from the settings drop down and follow the below steps:

1. On the Select a Value screen, pick a suitable Data Item to add as a Value.

2. Click the **OK** button to add it to the report.
3. The value (function) is then added to the report.

HR4 - Payroll	Age 36-40	Jane Bell	000196

3.3. Clone an Existing Report

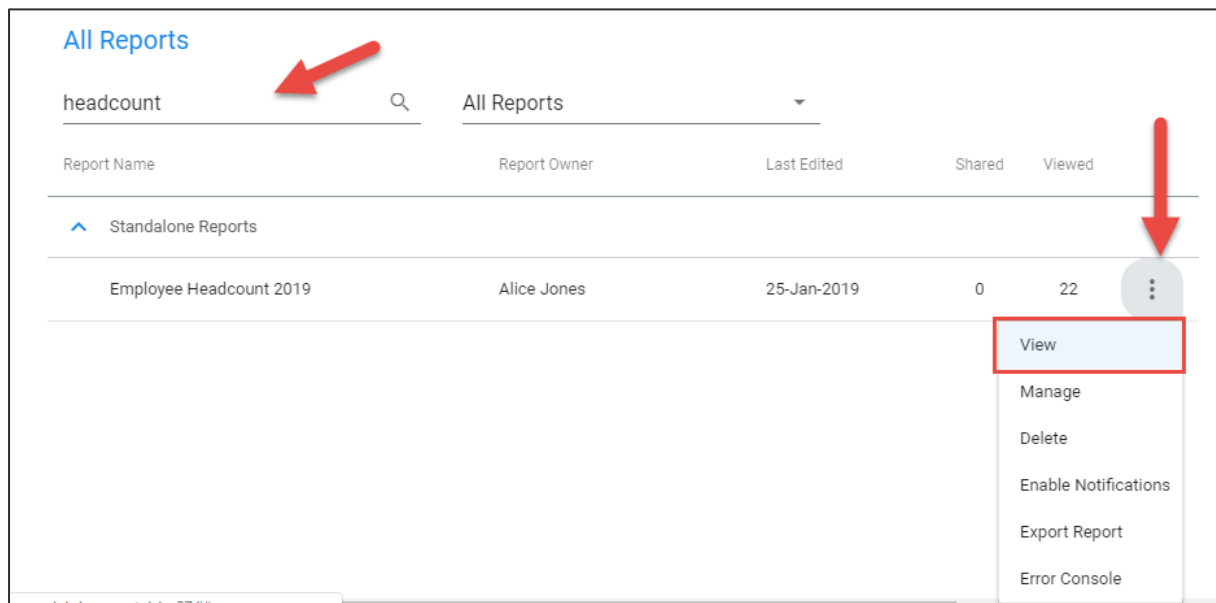

You can create a new report as a clone of an existing report. This is useful for a number of reasons:

- To save time in recreating a similar report to one you already have.
- If a report has been shared with you, but you are not the report owner then you cannot edit this. Creating a copy of the report allows you to edit your own version.

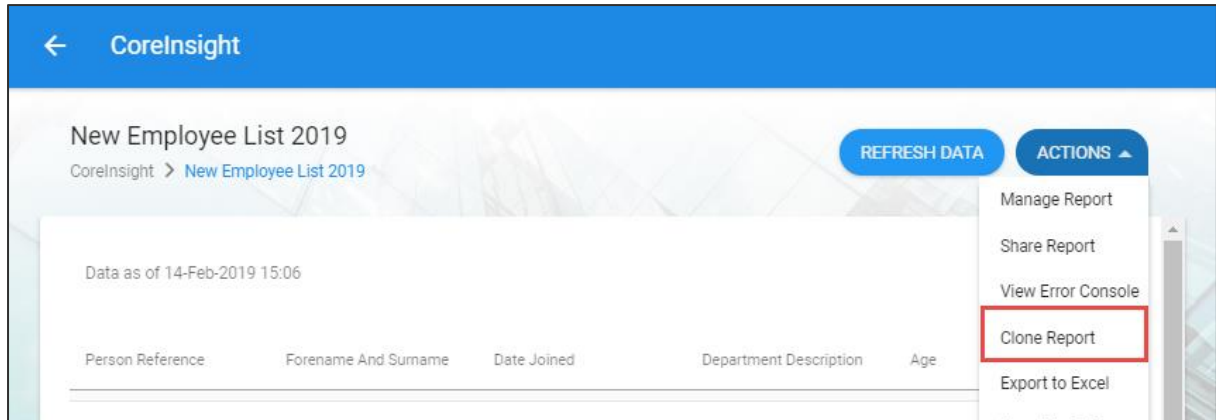

Both tabular and cross-tabular reports can be cloned.

To clone a report:

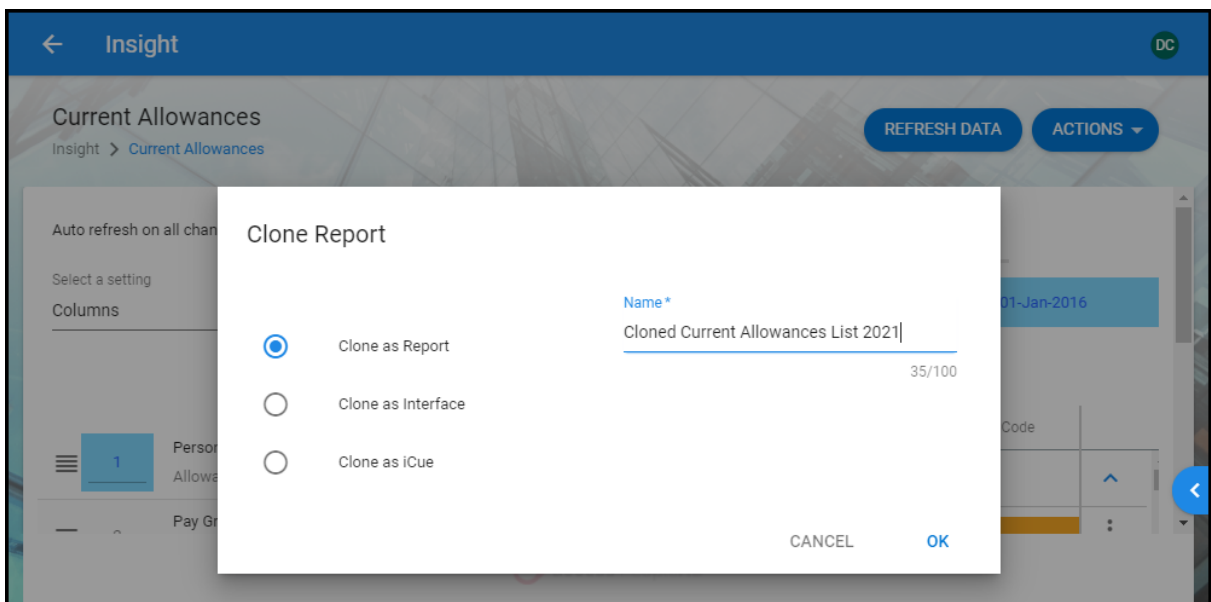

1. Search for the report.
2. Click the  button and select **View**.

3. Click **Actions** and select **Clone Report**.

4. Give the new report a name.

5. Click **OK**.

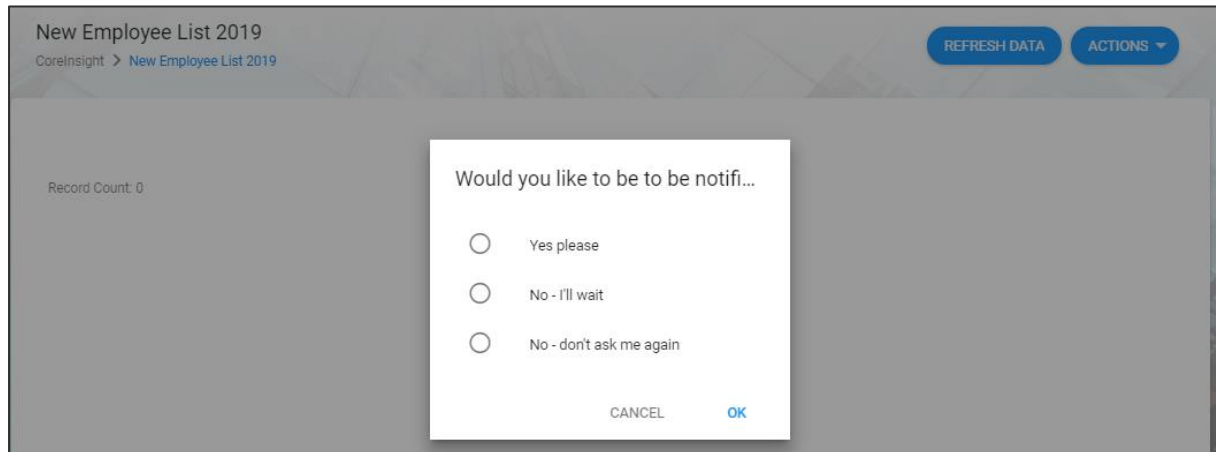

The report is created and saved with you as the *Report Owner*.

The report is run immediately. The notification prompt appears. Select your preferred option and view the report details once ready.

3.4. Running a Report

1. Click **Run Report**.

As this is the first time the report is being run, the notification pop-up appears. Select your preferred option and wait for the report to generate.

Once generated, the report data appears on screen.

The screenshot shows the 'New Employee List 2019' report page after the report has been generated. The page header includes a back arrow, 'CoreInsight', and the report title 'New Employee List 2019' with the breadcrumb 'CoreInsight > New Employee List 2019'. There are 'REFRESH DATA' and 'ACTIONS' buttons. Below the header, it says 'Data as of 14-Feb-2019 15:06'. The main content is a table with the following data:

Person Reference	Forename And Surname	Date Joined	Department Description	Age
000017	Paul Martin	01-Jan-2014	Senior Management	53
000018	Janine Clarke	02-May-2013	Compensation & Benefits	53
000019	Michael Hurley	01-Mar-2016	Recruitment	49
000020	Claire Jackson	12-Apr-2009	Compensation & Benefits	28
000021	Melanie Prachett	01-May-2006	Payroll	37
000022	Sam Lynch	26-Apr-2016	Finance Admin	47
000023	Cathy Looney	15-Feb-2019	Finance Admin	35

At the bottom of the page, there is a 'corehr' logo with the tagline 'Simplifying HR Technology'.

Once you have created the report, this is available on the *Insight > Home* page:

- My Recent Reports
- All Reports

XD Reporting: Insight Fundamentals

For all reports that you create, you are flagged as the *Report Owner* (see *All Reports* below).

The screenshot shows the CoreInsight dashboard interface. The top navigation bar includes a menu icon, the text 'CoreInsight', a search bar, and a notification bell with a red '7'. The left sidebar contains a user profile icon and several functional icons. The main content area is titled 'Home' and features a section 'My Recent Reports' with four report cards. The first card, 'Title New Employee List 2019' (created 14-Feb-2019), is highlighted with a red box. Below this is the 'All Reports' section, which includes a search bar with the text 'list 2019' and a dropdown menu set to 'All Reports'. A table below lists reports, with the first entry, 'New Employee List 2019' by 'Alice Jones', highlighted with a red box. The table has columns for 'Report Name', 'Report Owner', 'Last Edited', 'Shared', and 'Viewed'.

Report Name	Report Owner	Last Edited	Shared	Viewed
Standalone Reports				
New Employee List 2019	Alice Jones		0	2

4. Editing Reports

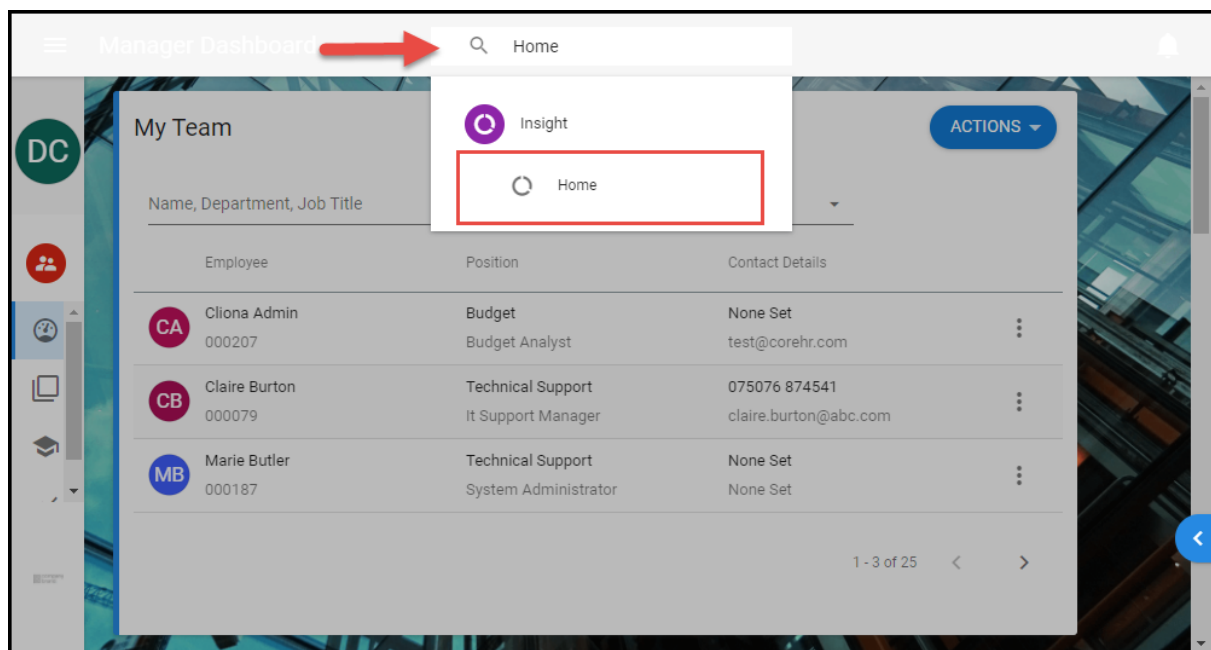

4.1. Accessing Edit Mode

All reports are be edited once in *Edit Mode*. There are number of ways to access this mode throughout Insight.

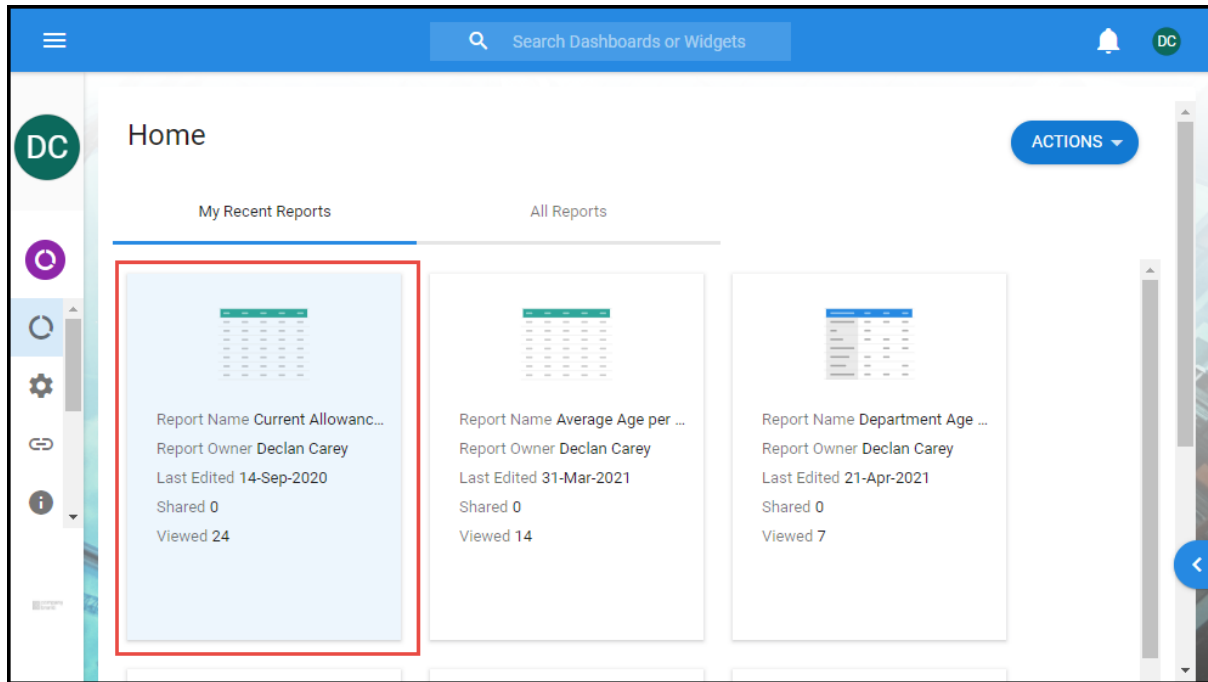

4.1.1. My Recent Reports

To edit a report on the My Recent Reports tab, follow the below steps.

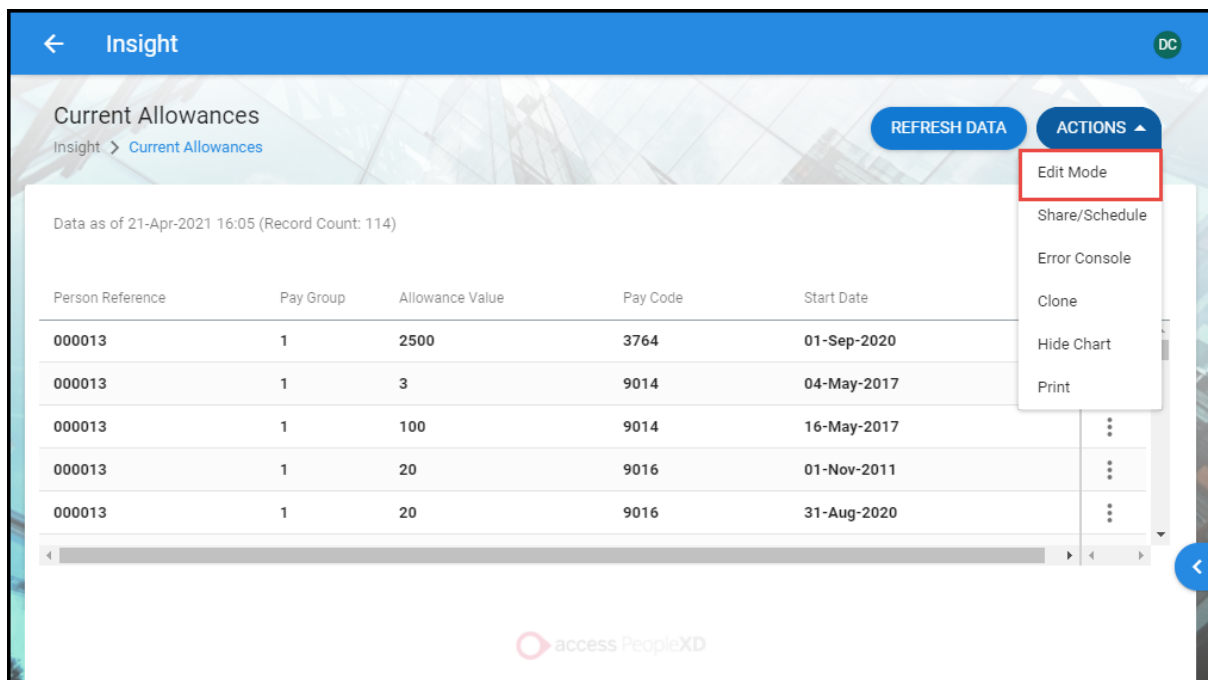

1. Quick Jump to the Home section on the Insight Dashboard.

2. On the *My Recent Reports* tab, click into the Report that is to be edited.

3. Click the **Actions** button, and then click **Edit Mode**.

4. The Report opens in Edit Mode.

4.1.2. All Reports

To edit a report on the All Reports tab, follow the below steps.

1. Quick Jump to the Home section on the Insight Dashboard.

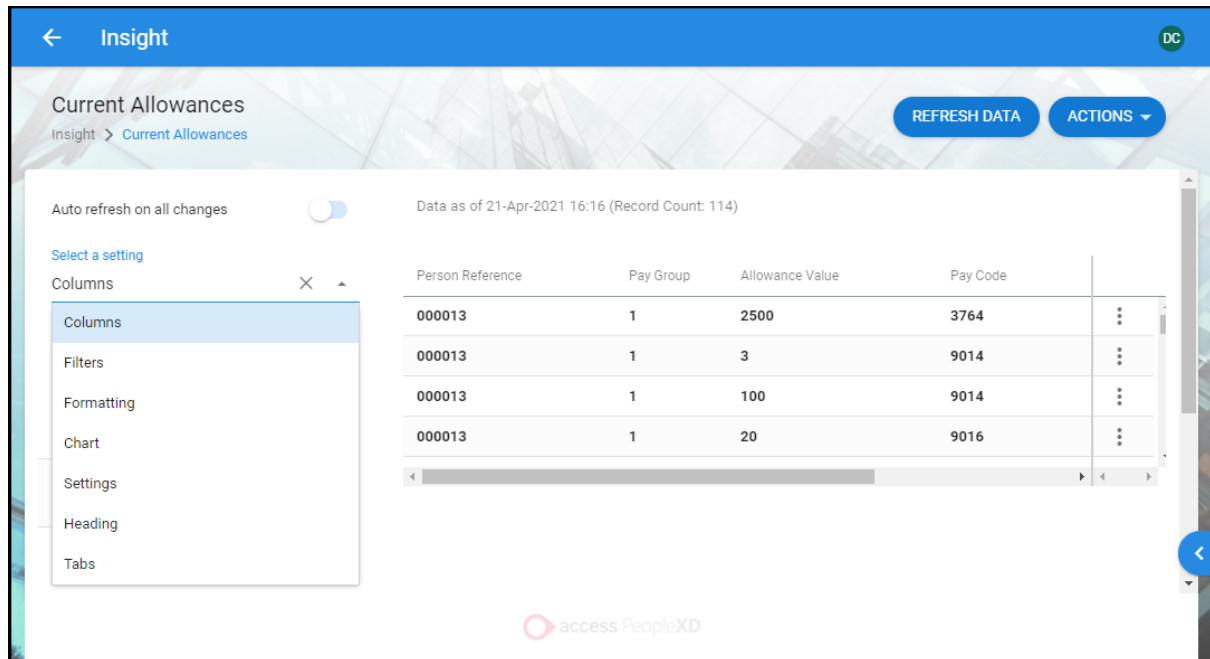

2. On the *All Reports* tab, search for the report to be edited.
3. Click the button and select **Manage**.

4.2. Edit Mode Screen Overview

The left-hand side of the screen provides a list of configuration options for the report. Each of these are covered in detail in the section [4.4 Edit Mode Options](#).

The following image shows the *Settings* for a Table report.

4.3. Refreshing a Report

Whenever a change is made to a report setting, click the **Refresh Data** button. This updates the report to bring back the latest information from the database, according to the report settings.

The screenshot shows the 'Insight' interface for a report titled 'Department Age Range'. The breadcrumb trail is 'Insight > Department Age Range'. In the top right corner, there is a 'REFRESH DATA' button (highlighted with a red box) and an 'ACTIONS' dropdown menu. On the left sidebar, there is a toggle for 'Auto refresh on all changes', a 'Select a setting' dropdown with 'Pivot' selected, and an 'ACTIONS' button. Below this, there are sections for 'Columns' (showing 'Department And Descripti...' and 'Hr Person Master') and 'Rows' (showing 'Age Range'). The main data area shows 'Data as of 21-Apr-2021 16:19 (Record Count: 250)'. The data is presented in a table with the following columns: 'Age Range', 'Forename And Surname', 'HR4 - Payroll', and 'FIN1'. The table contains several rows, including summary rows for age ranges and individual employee records.

Age Range	Forename And Surname	HR4 - Payroll	FIN1
Age 36-40		7.00	
Age 26-30		2.00	
Age > 70	Simon Harris		
	Joe Bloggs		
	Ert Ert		
	Ella Smith		
	Jennifer Cartwright	1.00	
	Ella Smith2		

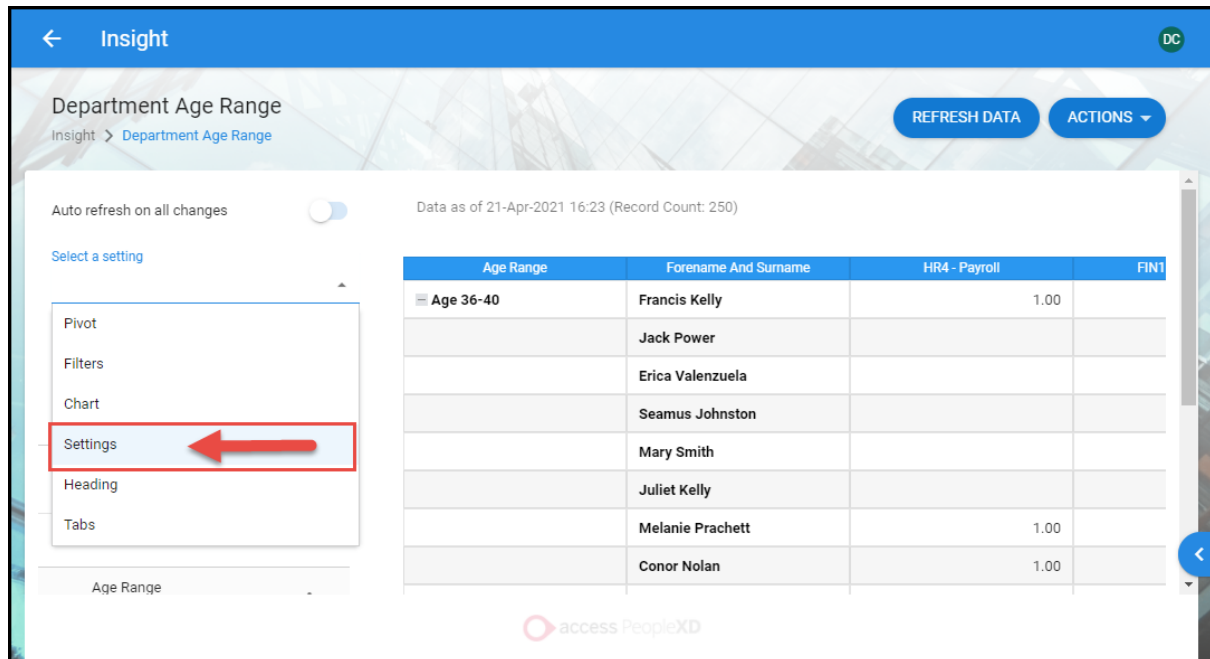

Note:

All changes are saved automatically, and when this occurs an alert appears on screen to confirm that the changes have been added. To view the updated data after the changes, click the **Refresh Data** button as advised above.

4.4. Edit Mode Options

4.4.1. Settings

Initially, review the Report settings by clicking on the Settings option within Edit Mode. The image and table below outlines the details included on this screen.

Setting	Description
Report Settings	
Report Name	The name of the report.
Report Description	This allows you to provide additional information about the report. This can be displayed on the <i>Report Store</i> if the report is uploaded there.
Number of Rows	This is the maximum number of rows that is returned for the report. - This defaults to 250 to help with the faster retrieval of report data. - However, if you expect the rows to be > 250, ensure to update this here.
Controls and Classification	
Access Type	This is used to define whether the report data is based on admin, manager, or employee level access.

Setting	Description
	• <i>Administrator</i>: Report on data based on your existing CoreHR system access. • <i>Manager</i>: Report on your team's data. • <i>Employee</i>: Report on your own record.
Data Classification	This is used to set a data sensitivity label on the report. This displays when the report is previewed on Insight and also on exports and printed versions.
Hide Duplicate Rows	Switch this on to automatically hide duplicate rows on the report.
Make Data Available as Widget	Use this to make the report available as a widget to be shared on CorePortal dashboards.

Make Data Available As A Widget

You can share reports on other dashboards in XD Portal e.g. Employee Dashboard or Manager Dashboard. When a report runs in this way, only the data that the user has access to is returned i.e. based on the report access type and your data access.

1. Within XD Insight, go to the report in question.
2. Select *Edit Mode*.
3. Go to *Settings*.

5. Quick Jump to Dashboard Configuration.

6. Select the Dashboard to add this widget to and search for it on the Tab Widget section of the screen.

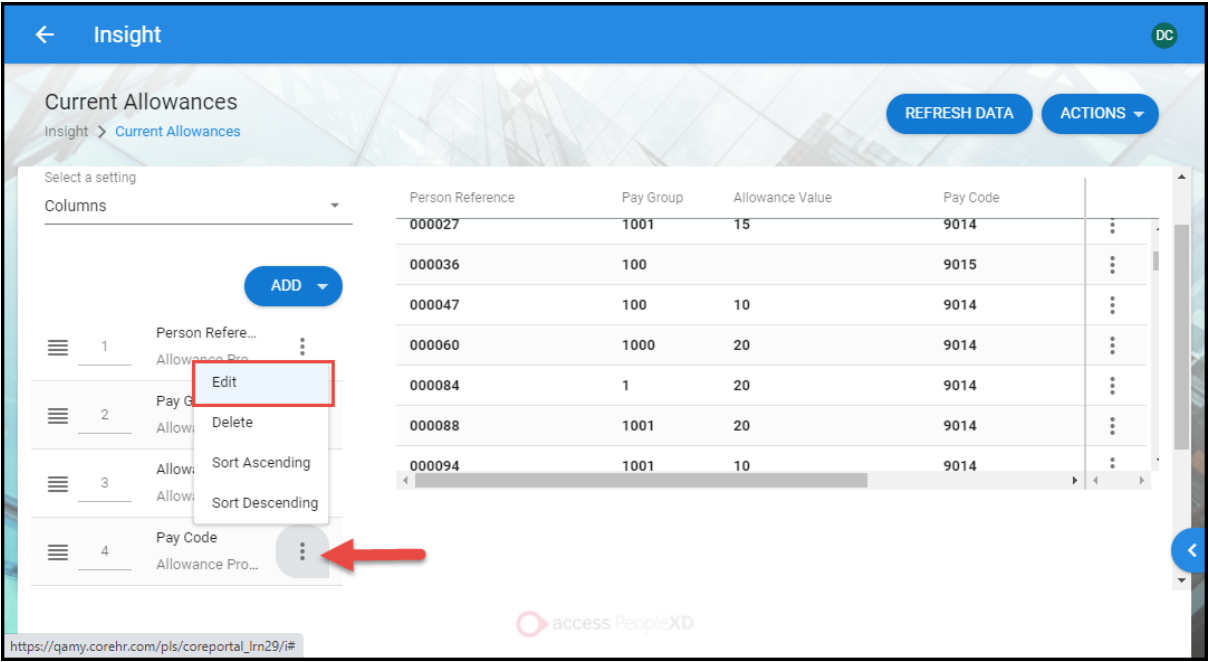

7. The report is now available as a widget on the dashboard you have assigned it to.

4.4.2. Columns

Columns can be edited in the same way as they were created, therefore review the following steps.

- Adding a Column
- Removing a Column
- Re-ordering a Column

1. Click on the *Columns* option on the *Select a setting* drop-down menu.
2. Click on the  button and click on **Edit**.

The screenshot shows the 'Current Allowances' report in the Insight interface. The 'Columns' dropdown menu is open, displaying a list of columns: 'Person Reference', 'Pay Group', 'Allowance Value', and 'Pay Code'. The 'Edit' option is highlighted in a red box. A red arrow points to the three dots menu icon for the 'Pay Code' column. The table below shows the data for these columns.

Person Reference	Pay Group	Allowance Value	Pay Code
000027	1001	15	9014
000036	100		9015
000047	100	10	9014
000060	1000	20	9014
000084	1	20	9014
000088	1001	20	9014
000094	1001	10	9014

3. The *Edit Column* screen opens. The image and table below highlights what is editable.

The screenshot shows the 'Edit Column' modal in the Insight application. The modal is titled 'Start Date'. It contains the following fields and controls:

- Report Column Name ***: A text input field containing 'Start Date'.
- Hide Column**: A checkbox.
- Group Column**: A checkbox.
- Total Type**: A dropdown menu.
- Total Label**: A text input field.
- Column Name**: A label indicating the internal column name is 'START_DATE'.
- CANCEL** and **OK** buttons at the bottom right.

The background shows a list of columns with 'Start Date' selected. The list includes columns like 'Person Reference', 'Pay Group', 'Allowance', 'Pay Code', and 'Start Date'.

Setting	Explanation
Report Column Name	This is the text that displays as the column header on the report.
Hide Column	Enable this to hide the column from displaying on the report.
Group Column	This is used to group report row by this column. See Column Grouping below for an example of how this is used
Total Type	This is used to add total calculations to the column. See Column Totals below for further details.
Total Label	This is linked to the selected <i>Total Type</i> . See Column Totals below for further details.

Note: The original *Column Name* and *View Name* are displayed at the end of the screen for your reference.

Column Grouping

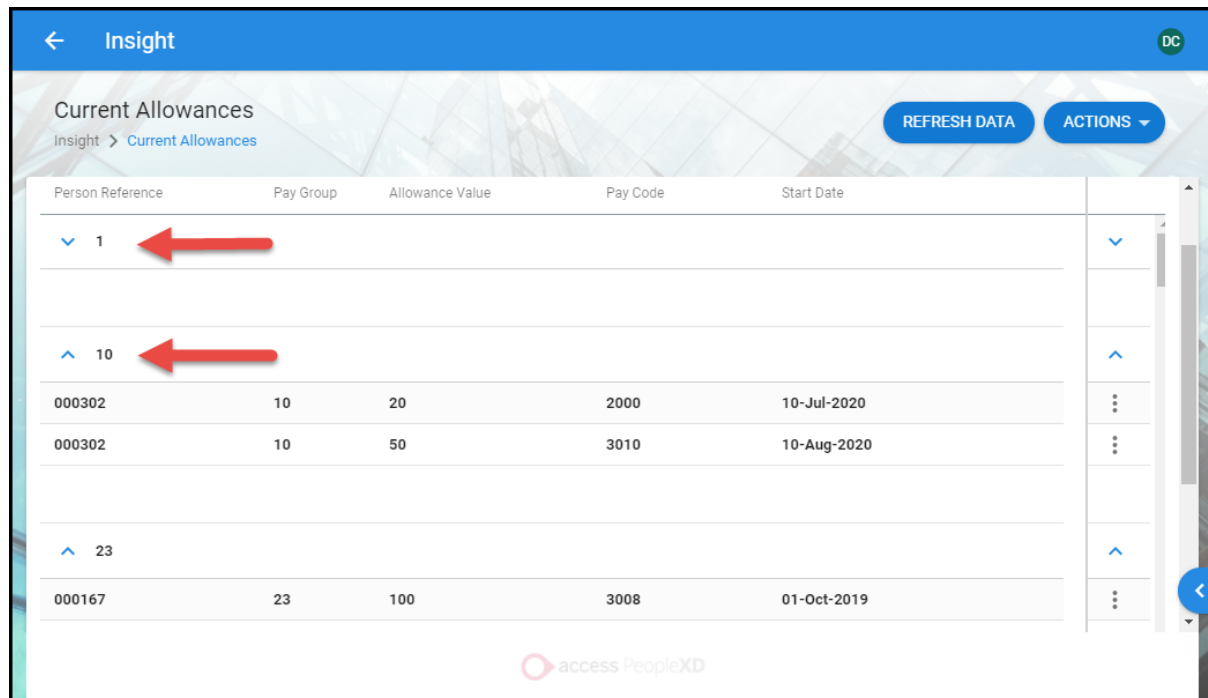

This is used to group report records under a common record value.

- For example, the report below has the **Group Column** indicator enabled for the *Pay Code* item.
- When the report is generated, a grouping is applied - see the new rows added below.
- Under each of these rows, all of the records in that department are displayed.
- You can use the arrows to expand or collapse the grouped records as you review the report.

The screenshot shows the 'Pay Group' configuration dialog box overlaid on the 'Current Allowances' report page. The dialog has the following fields and options:

- Report Column Name ***: A text input field containing 'Pay Group'.
- Hide Column**: An unchecked checkbox.
- Group Column**: A checked checkbox, highlighted with a red rectangle.
- Total Type**: A dropdown menu.
- Column Name**: A text input field containing 'PAY_GROUP'.
- Total Label**: A text input field.
- CANCEL** and **OK** buttons at the bottom right.

The background shows the 'Current Allowances' report with a table of columns and rows. The 'Pay Group' column is highlighted in the table.

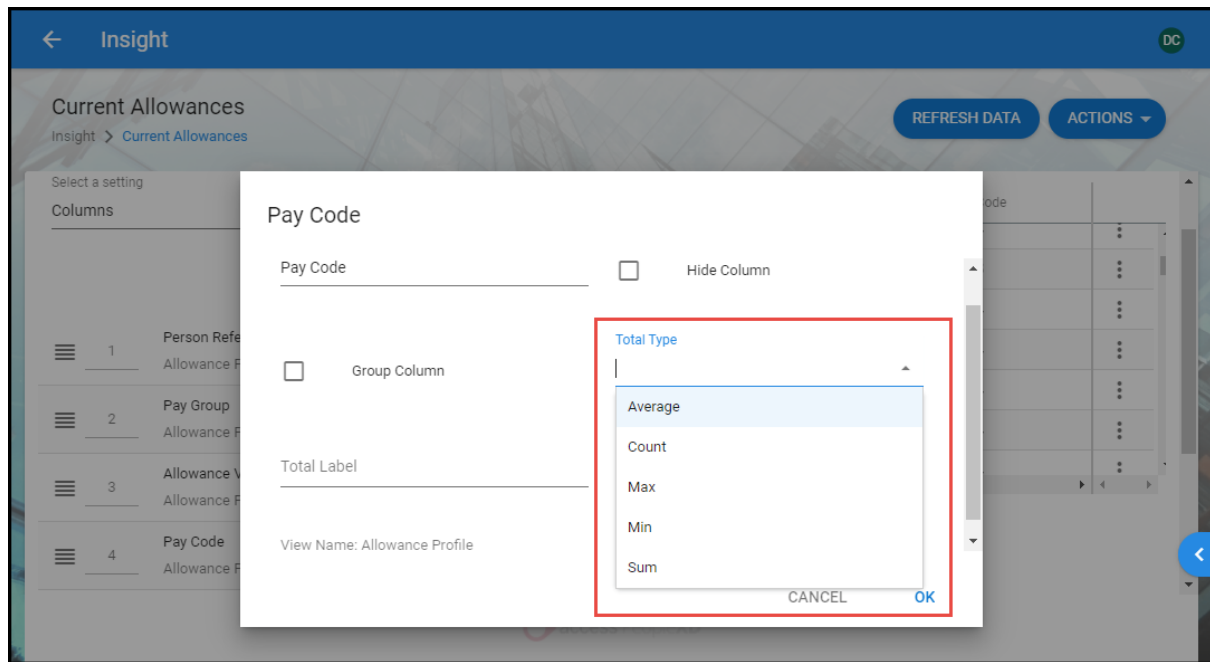

Person Reference	Pay Group	Allowance Value	Pay Code	Start Date
1				
10				
000302	10	20	2000	10-Jul-2020
000302	10	50	3010	10-Aug-2020
23				
000167	23	100	3008	01-Oct-2019

Column Totals

On the *Total Type* item, the aggregate options available are:

- Average (numeric fields only)
- Count (numeric fields only)
- Sum (numeric fields only)
- Max (numeric and date fields)
- Min (numeric and date fields)

Totals can be added to any column.

1. Select the *Total Type* from the drop-down list.
 - a. Average
 - b. Count
 - c. Max
 - d. Min
 - e. Sum
2. Update the *Total Label* that appears on the report next to the calculated total.
3. Click **OK**. Changes are saved.
4. **Refresh Data** on the report

See an example of a report that has 2 types of totals:

- A count of *Person Reference*.
- The average *Age*.

Person Reference	Forename And Surname	Date Joined	Department Description	Age
000046	Lucy Black	25-Apr-2016	Budget	47
000043	Amy Carr	01-May-2014	Budget	0
000042	Derek McDonald	01-Apr-2016	Budget	45
000073	Ella Smith	08-Sep-2016	Ceo	2
000072	Ella Smith	08-Sep-2016	Ceo	2
000014	Jason Smith	01-Jan-2004	Ceo	43
000125	Gillian Morris	01-Oct-2017	Compensation & Benefits	26
000110	Sub Sum	10-Feb-2018	Compensation & Benefits	28
Count 137.00				Average 29.25

4.4.3. Tabs

Tab Overview

Reports can be created to include multiple tabs. If a report contains more than one tab, these are displayed at the top of the report i.e.

← Insight DC

Current Allowances
Insight > Current Allowances

REFRESH DATA ACTIONS

1 2 3

Current Allowances Current Deductions Ended Allowances

Data as of 21-Apr-2021 17:30 (Record Count: 114)

Person Reference	Pay Group	Allowance Value	Pay Code	Start Date
000013	1	2500	3764	01-Sep-2020
000013	1	3	9014	04-May-2017
000013	1	100	9014	16-May-2017
000013	1	20	9016	01-Nov-2011
000013	1	20	9016	31-Aug-2020

access PeopleXD

Click on each tab to view the corresponding report.

- Each tab is essentially a standalone report. Therefore, when opening a tab for the first time (or if the tab has been edited since you last viewed it), the notification prompt appears.
- Reports therefore have different “Data as of” timestamps.

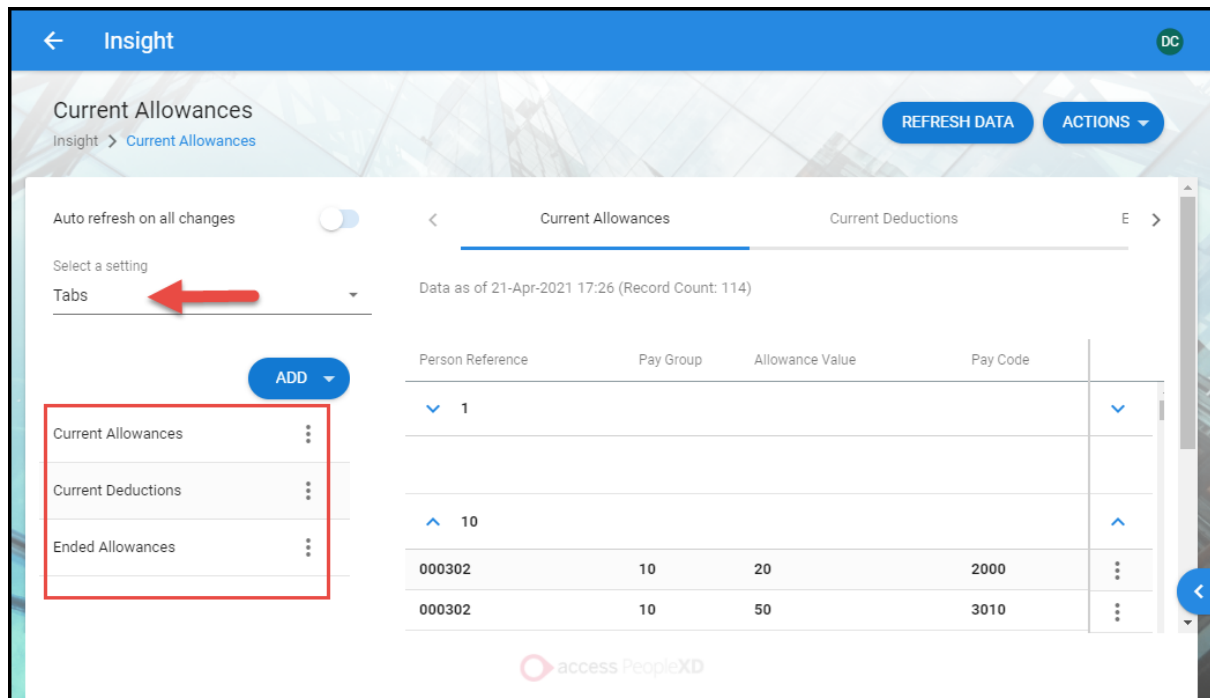

Reports can include both a mix of tabular and cross-tabular reports.

Each tab can be run using a completely separate business area / view configuration.

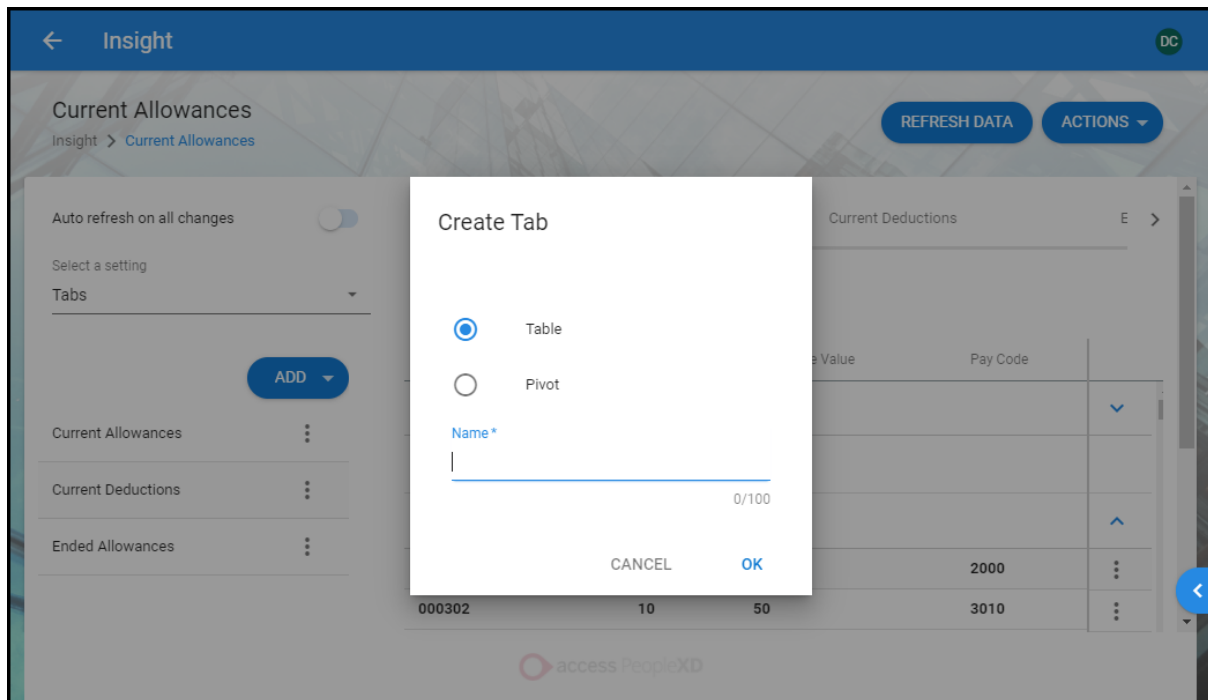

Add a Tab to a Report

Follow these steps to add a new tab to a report.

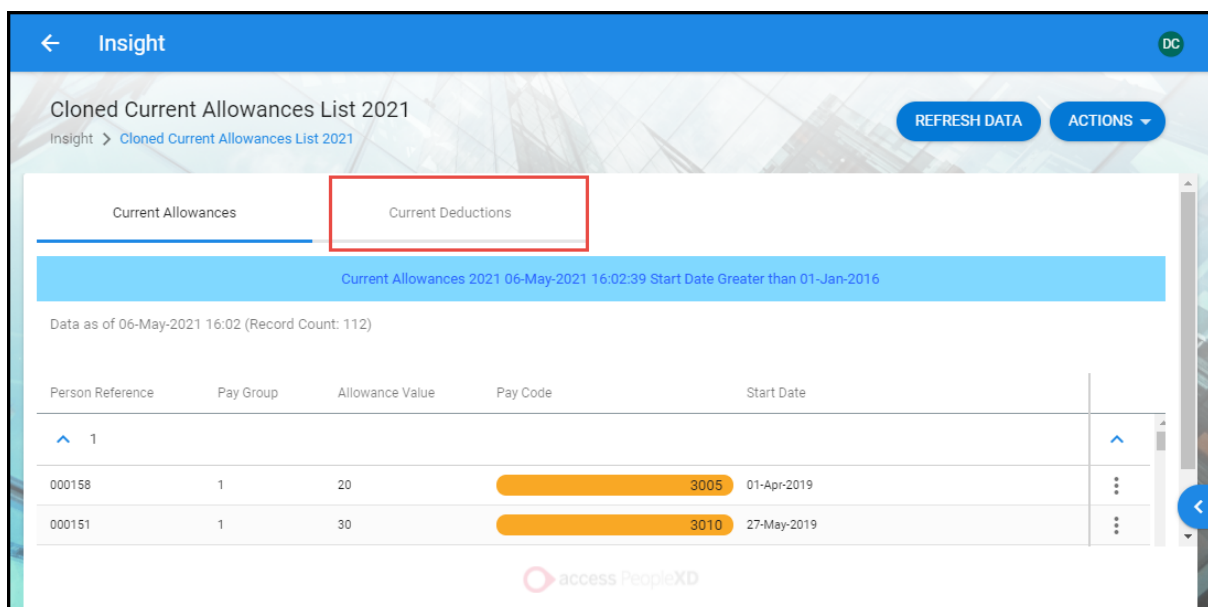

1. Open the *Edit Mode* screen for the report.
2. Select **Tabs** from the Setting drop-down list.

3. Click the **Add** button.
4. Enter in the new Tab name, and whether it is a Table or a Pivot report.

4. Complete the standard Report creation steps to setup the new Tab correctly.
 - a. The new tab is listed at the top of the screen.
 - b. Click this to view the new report.

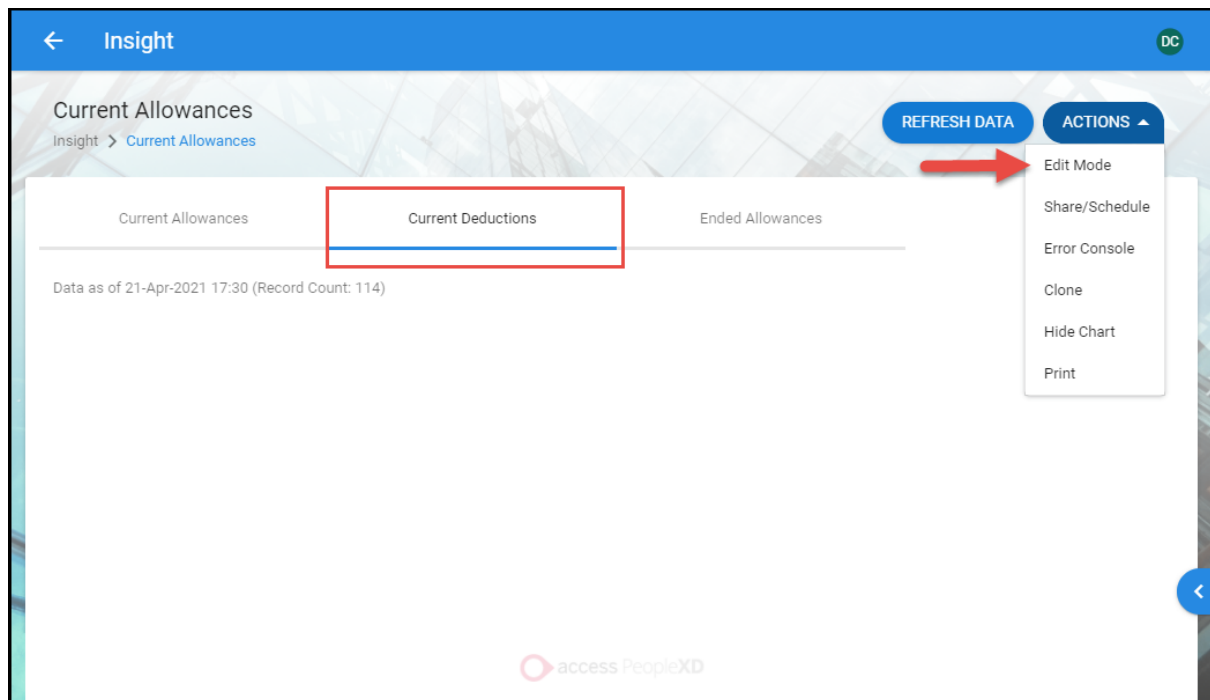

5. Click on the new Tab on the Report.
6. The tab refreshes with new data.

Edit Report Settings for Individual Tabs

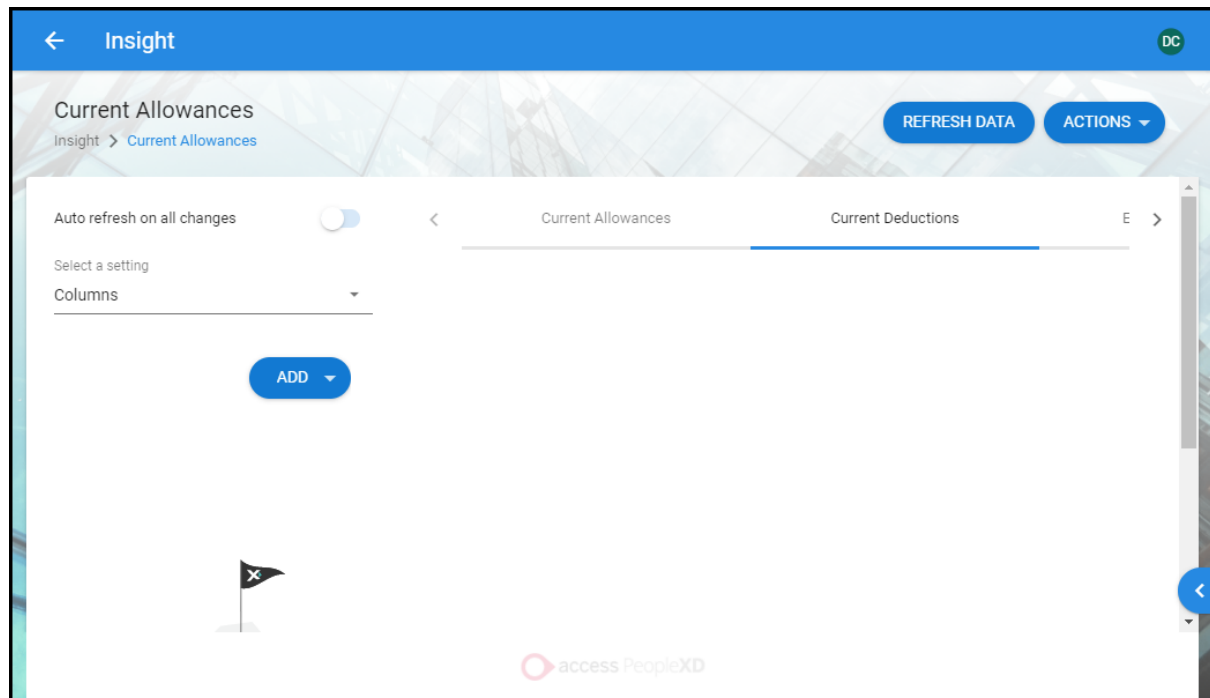

Each tab is treated as an individual report. Therefore, each one has a unique set of settings on the *Edit Mode* screen.

Follow these steps to access the *Edit Mode* screen for an individual tab.

1. Click the tab, to view that tab's report data.

2. Click **Actions** and select *Edit Mode*.
3. On this screen any settings changes you make are for the chosen tab.

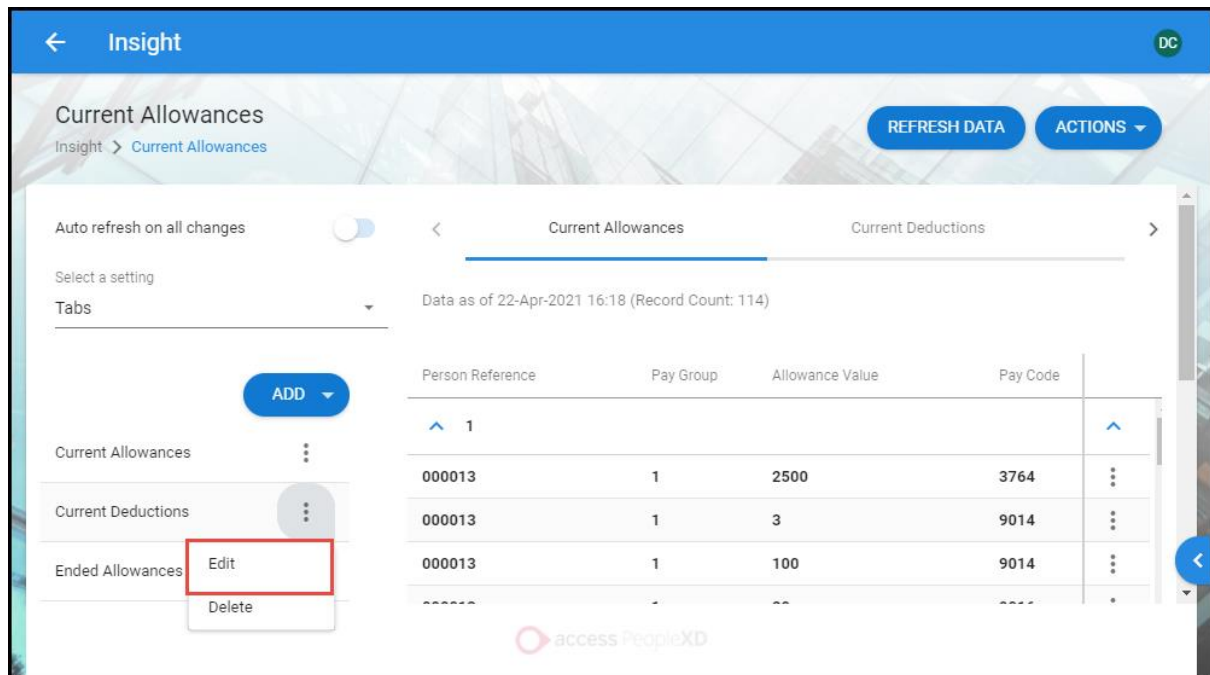

The *Tabs* menu is available, and this gives you the option to:

1. Add a new tab.
2. Change the tab names or order of display.

Change Tab Order

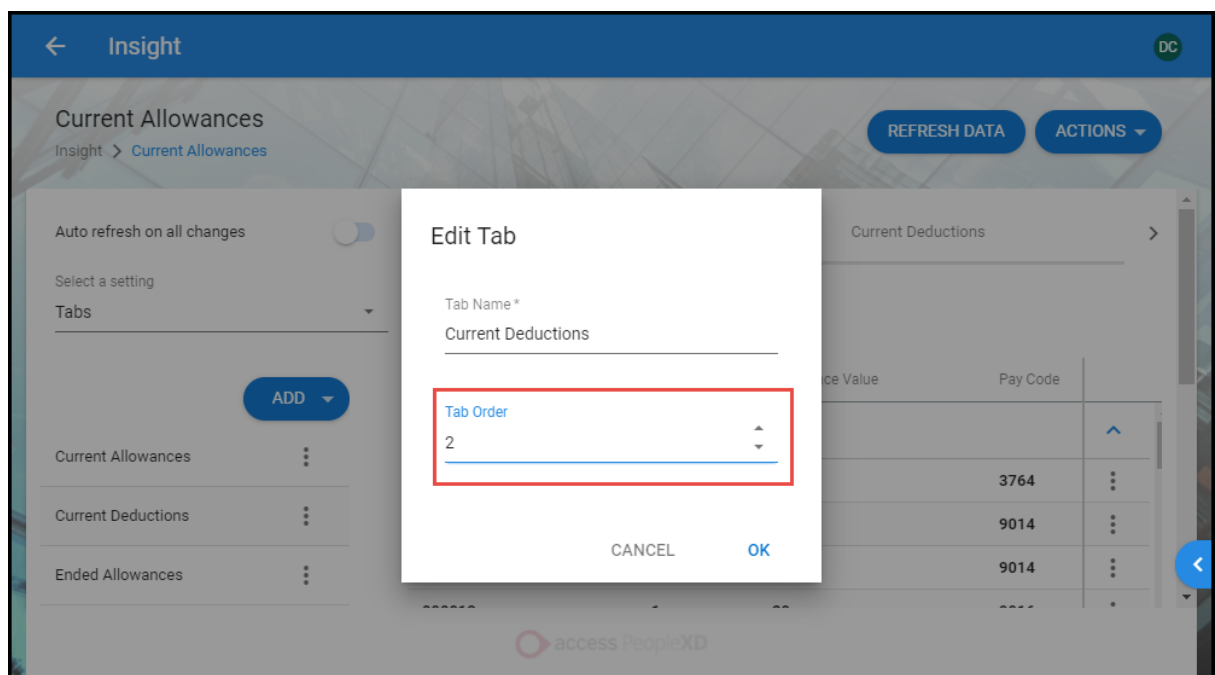

Follow these steps to change the order that tabs display:

1. Enter *Edit Mode* for any of the tabs.
2. Select **Tabs** from the Settings drop-down list.
3. Click **Edit** for the tab to be renamed.

7. Update the *Tab Order*.

- a. This automatically updates the other tabs to a new *Tab Order*.

4. Click **OK** to save.

Delete a Tab

Follow these steps to delete a report tab:

1. Enter *Edit Mode* for any of the tabs.
2. Select **Tabs** from the settings drop-down list.

XD Reporting: Insight Fundamentals

3. Click **Edit** for the tab to be renamed.
4. Click **Delete** for the required tab.

The screenshot shows the 'Current Allowances' report in the XD Reporting: Insight Fundamentals interface. The interface includes a sidebar with 'Current Allowances', 'Current Deductions', and 'Ended Allowances'. The 'Current Allowances' tab is selected, and a context menu is open with 'Edit' and 'Delete' options. The main area displays a table of allowances with columns: Person Reference, Pay Group, Allowance Value, and Pay Code. The table shows three rows of data for Person Reference 000013.

Person Reference	Pay Group	Allowance Value	Pay Code
000013	1	2500	3764
000013	1	3	9014
000013	1	100	9014

5. Confirm the deletion on the prompt.
The tab is deleted, and changes are saved automatically.

4.4.4. Filters

Filters Overview

Filters are used to help restrict or limit the data returned in order to create a more meaningful report rather than a straightforward data extract for example

- All employees in *Department X*.
- All employees with a *Date Joined* in 2021.

You can create nested filters. For example, a filter could be used to return all employees that left in January 2019, using a filter on their leave date:

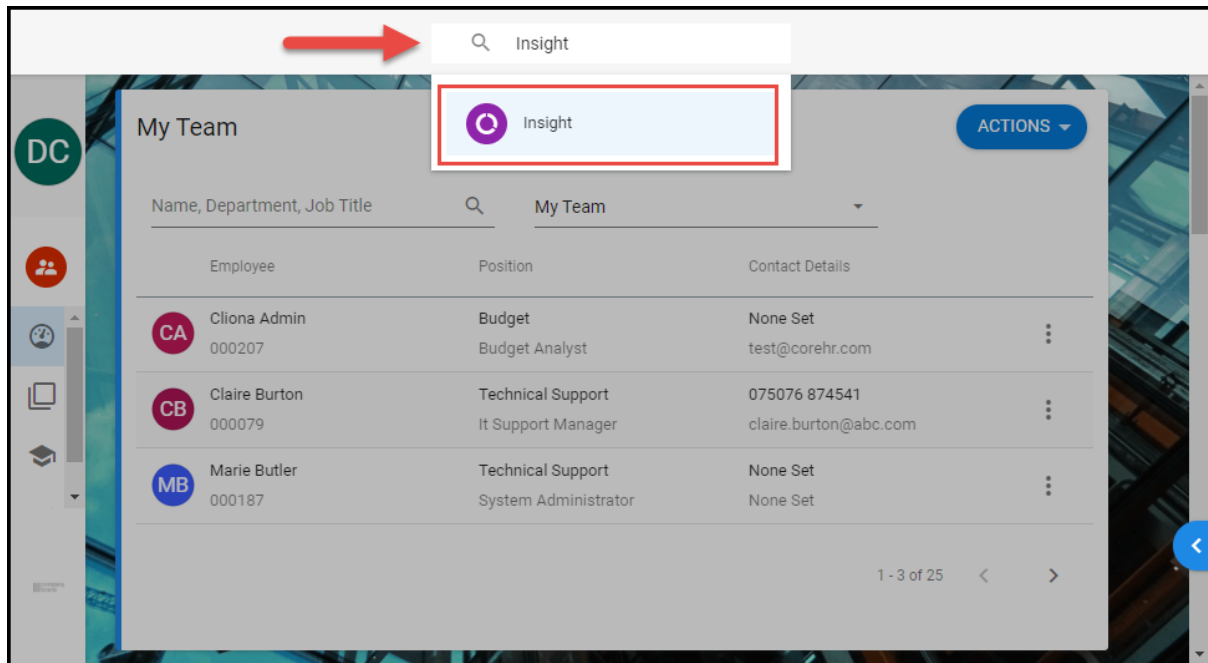

- On or after 1st Jan 2019
- On or before 31st Jan 2019

Prompts can be added to a filter. This means that when the report is run, a prompt is shown on screen asking for the value to filter by e.g. "Enter Year" or "Select the Pay Period". This approach is useful as the report is dynamic and can be run to display different data sets every time, rather than pre-filtering of specific values.

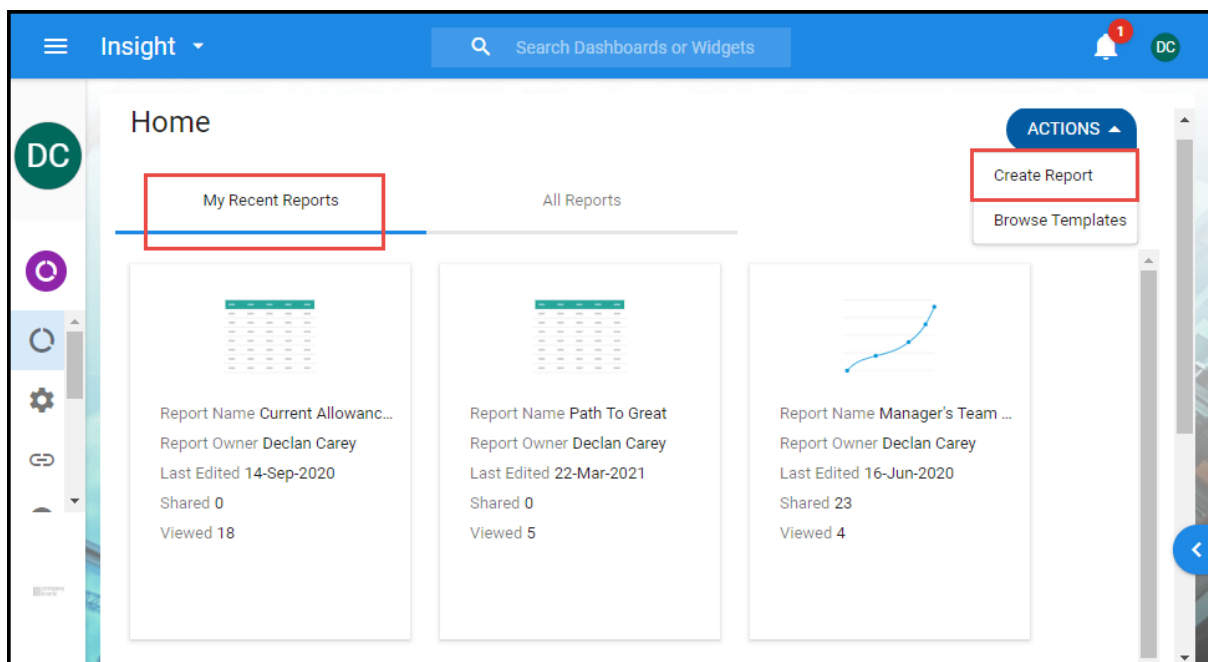

Accessing Filters

To access the Filters for a new or existing Report on Insight, follow the below steps.

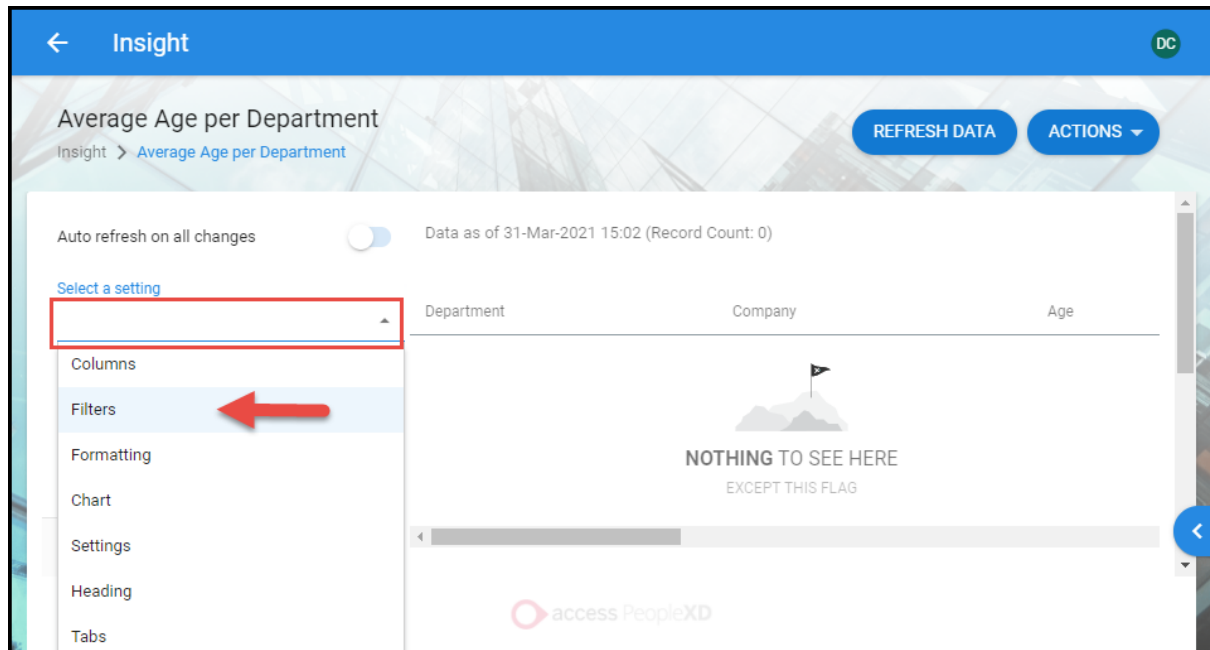

1. Quick Jump to Insight.

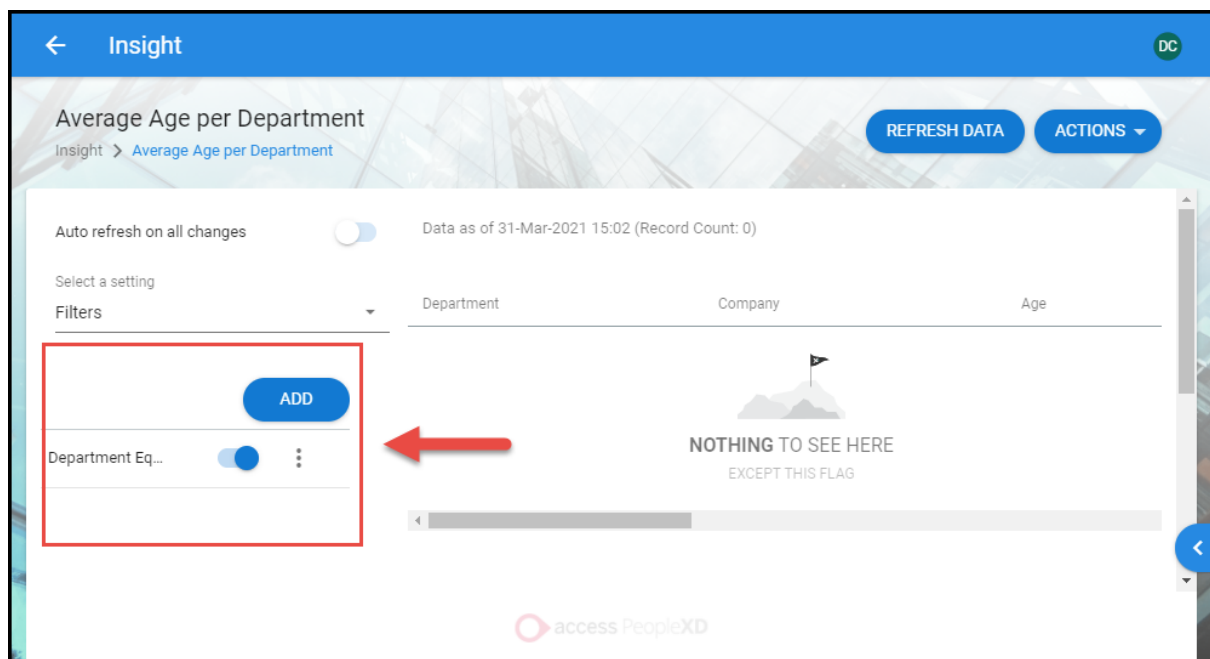

2. On the Home tab, select an existing report from the *My Recent Reports* tab or create a new report using the **Actions** button.

3. Within the *Edit Mode* of a Report, to open the Filters setting.

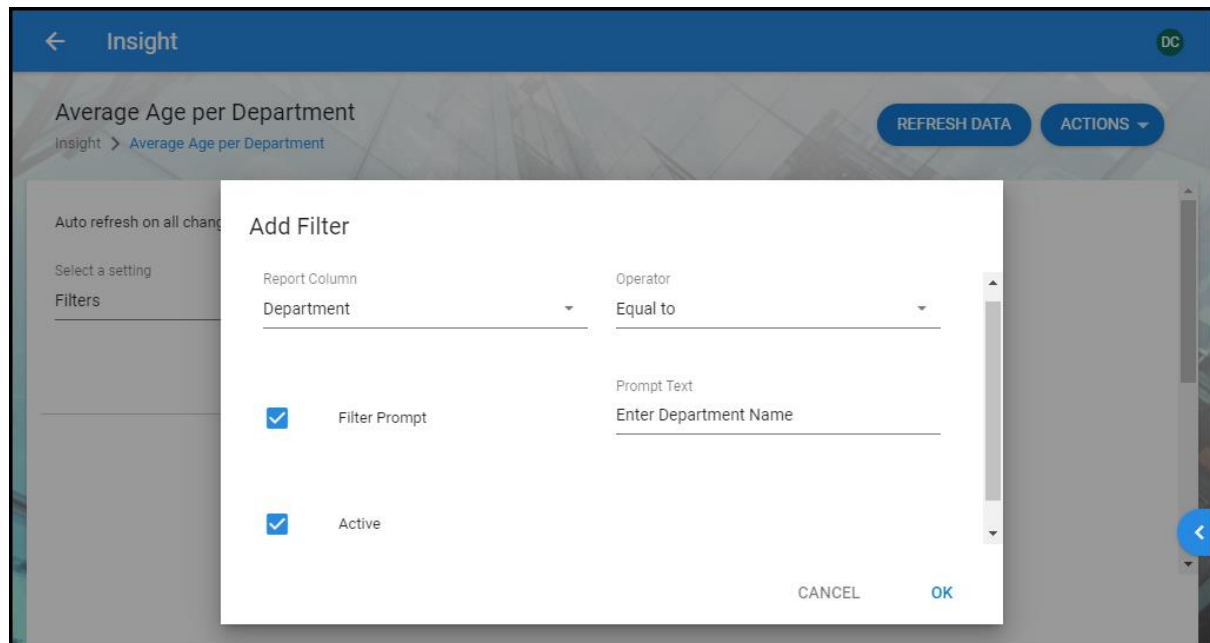

4. The Filters configuration area opens on screen, showing any existing filters and with the **Add** button available to use.

Creating a Filter

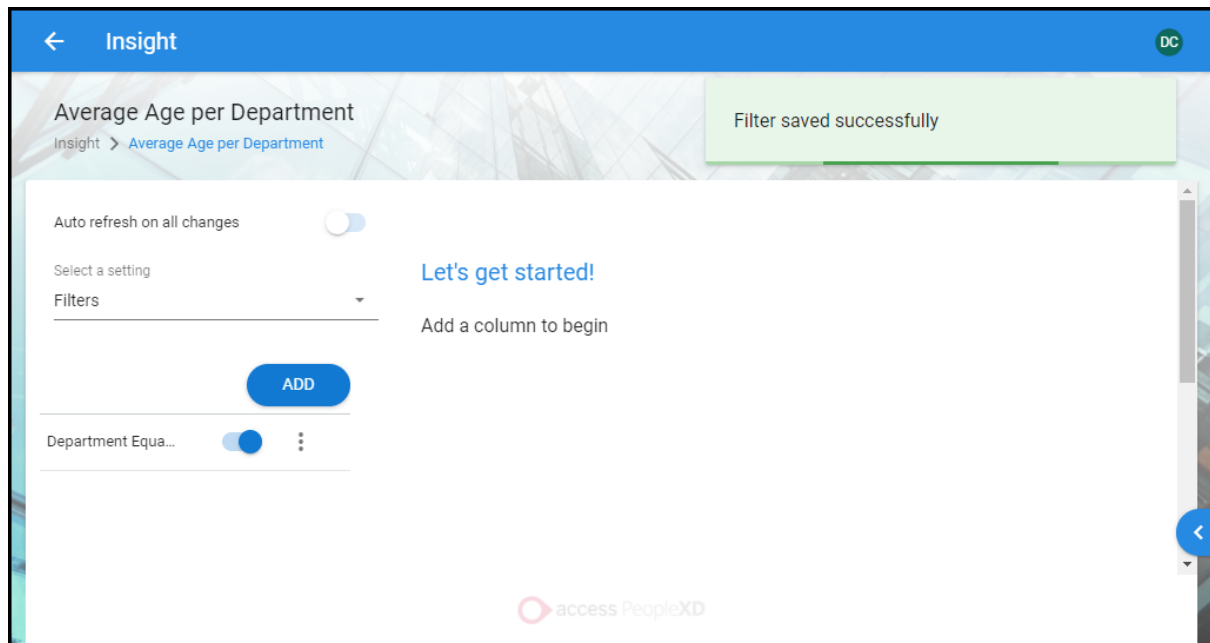

Follow these steps to add a filter to a report:

1. Enter *Edit Mode* for a Report
2. Select **Filters Setting** and click **Add**.
3. The *Add Filter* screen opens.

5. Select the Report column from the report to filter on.
 - a. This list displays columns that are included on the report at the top. If you need to filter based on a column not included in the report, other columns are available to be selected on the list. That way you can apply a filter to it, but it does not appear on the report.
6. Select the Operator
 - a. This is how the filter is applied to the select column e.g. where something is equal to, less than, after etc. Depending on the column selected the Operator list differs. This is because there are different operators for different data types e.g. Text, Numeric or Date.
 - b. If using the options "In the list" or "Not in the list", a comma needs to be inserted to separate the list of items in Filter Text to compare against.

7. Select a *Filter Prompt* if required. See Filter Prompts for further details.
8. Ensure **Active** is selected.
9. Click **OK** to save.
10. The filter is created and listed on the *Filter* screen.

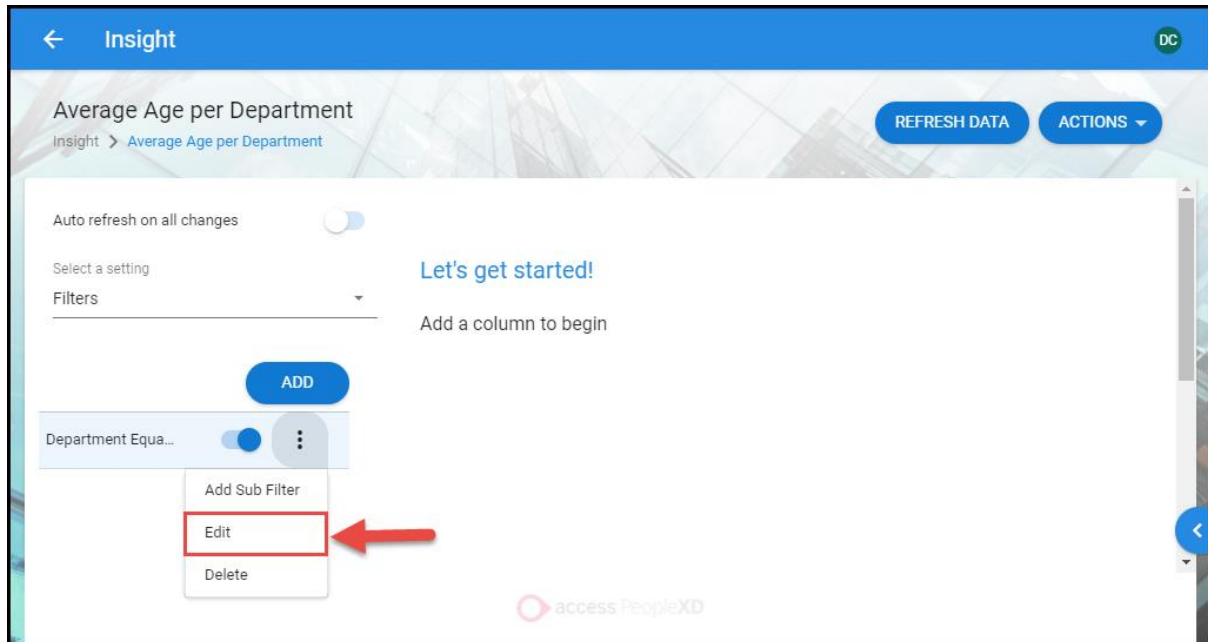

Creating a Prompt

Prompts can be added to a filter. This means that when the report is run, a prompt shows on screen asking for the value to filter by e.g. "Enter Year" or "Select the Pay Period". This approach is useful as the report is dynamic and can be run to display different data sets every time, rather than pre-filtering of specific values.

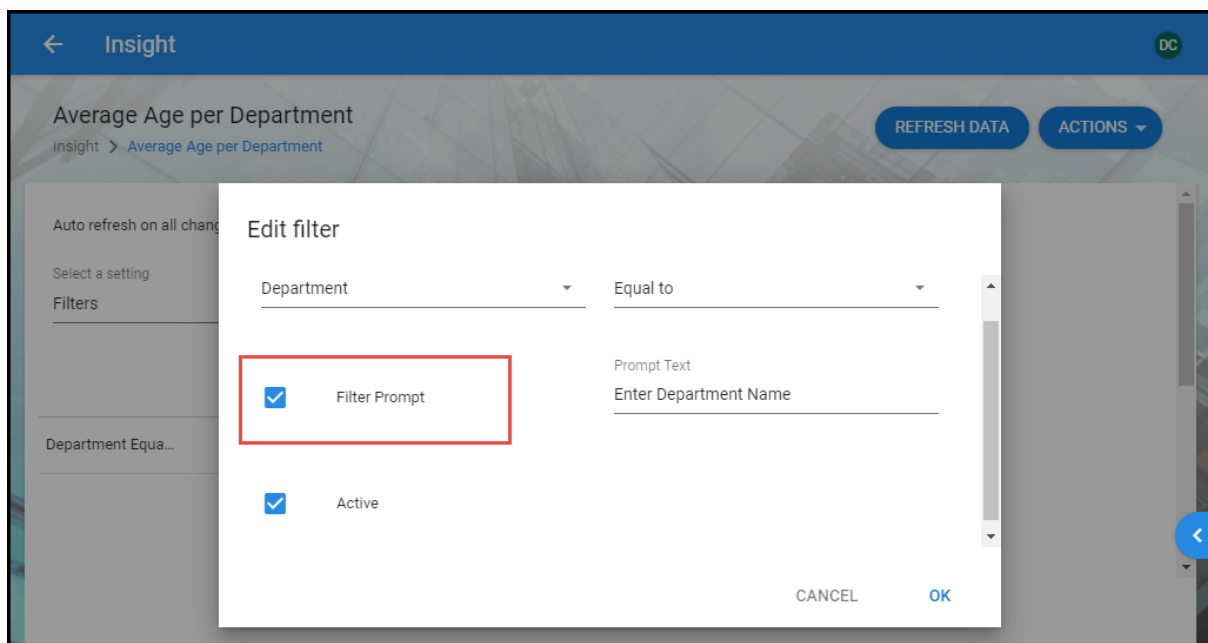

Follow these steps to add a prompt to your report.

1. On the Filter screen, click on the Edit button against the selected Filter.

2. Select **Filter Prompt**.

- Enable this to ensure that a prompt appears when the report is run, requesting you to input the required value.

3. Provide the *Prompt Text*.

- This is the message that appears to the user when running the report guiding them to provide the value.

4. Ensure **Active** is selected.
5. Click **OK**. The filter is saved automatically.
6. Filters that include prompts can be identified on the *Filters* screen as having the *Prompt Text* in brackets.

Average Age per Department

Insight > Average Age per Department

Auto refresh on all changes ☐

Select a setting

Filters

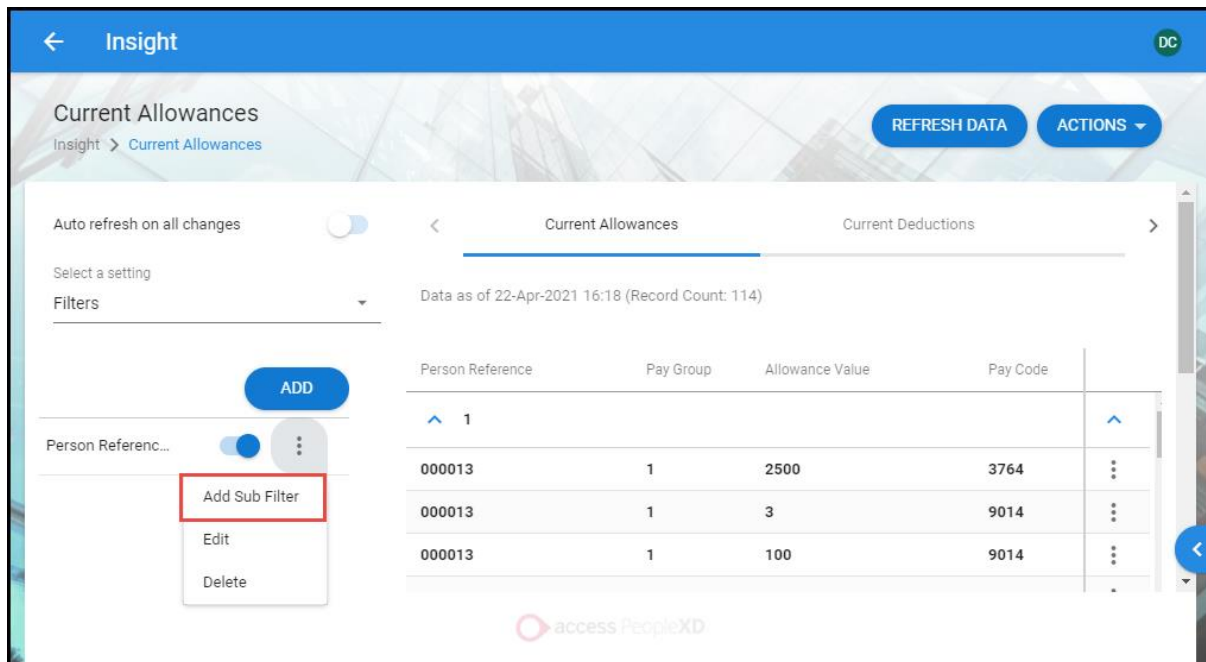

ADD

Department Equal to (Enter Department Name)

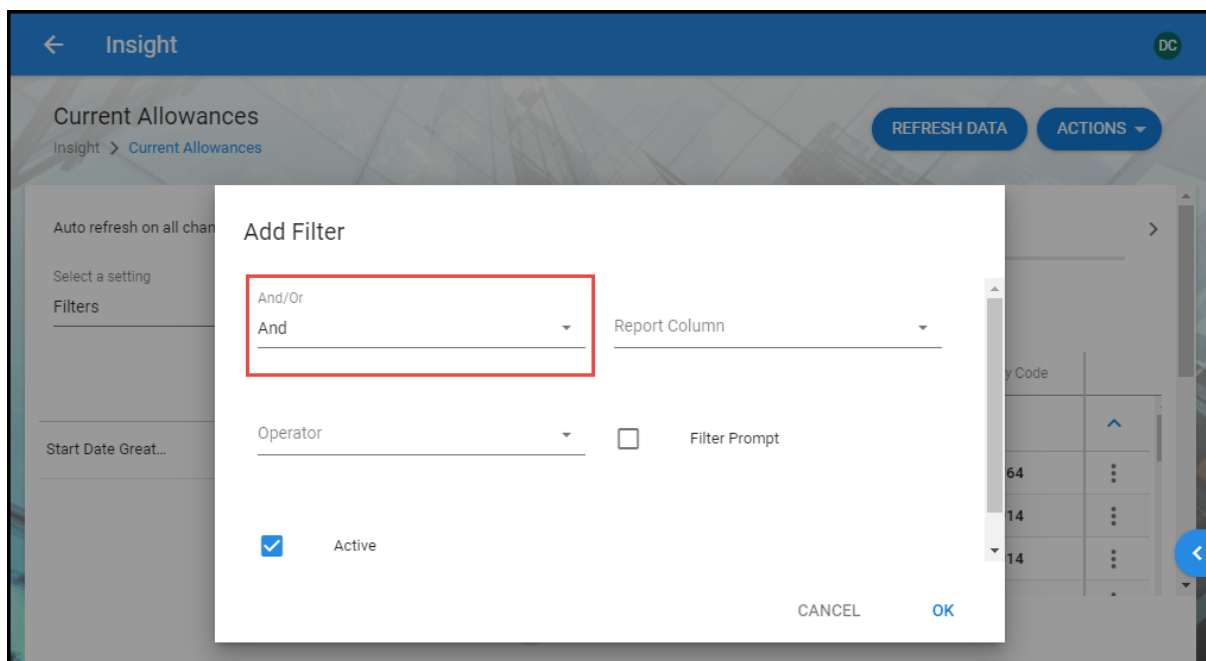

Nested Filters / Sub Filters

Follow these steps to create nested filters i.e. filters that contains some “and / or” conditions.

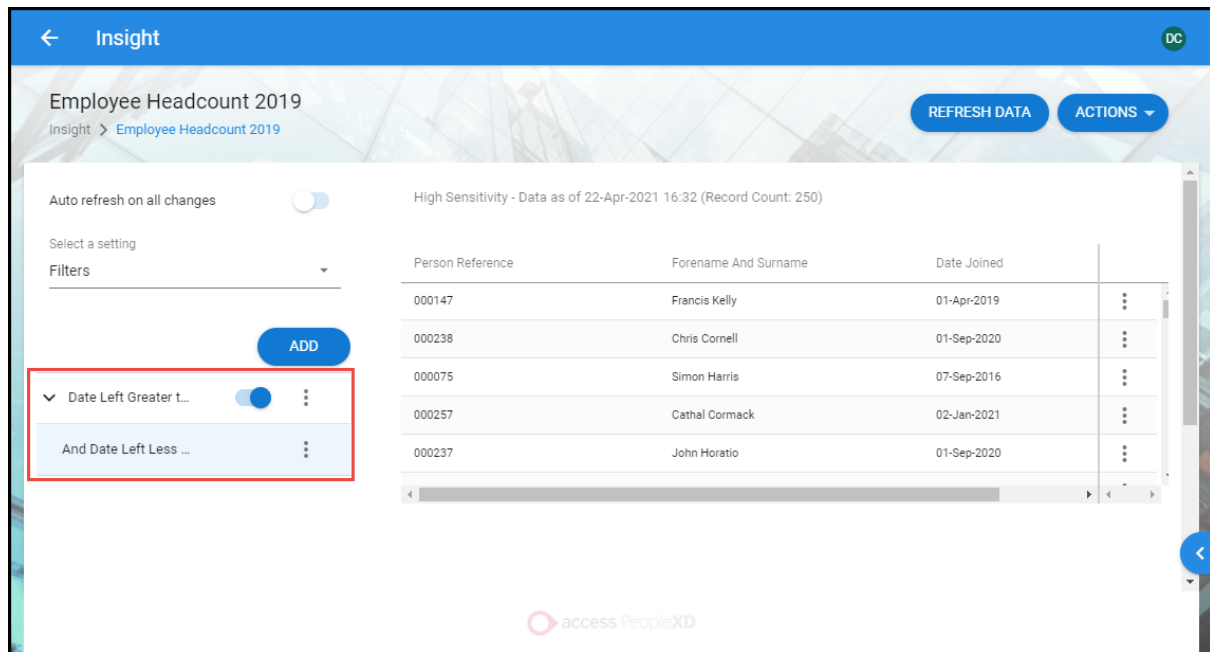

1. On the Filter option within the Settings drop-down list in Edit Mode, click the button for the filter and select **Add Sub Filter**.

2. The *Add Filter* screen includes a new **And / Or** field. Select the required option.
3. Fill out the rest of the filter elements and click **OK**.

7. The new filter is listed on the *Filters* screen, grouped beneath the original one.

8. Repeat as required. You can add additional sub filters to the original filter, or an existing sub filter.

Updating Filters

On the *Filters* screen you can do the following for each filter:

- Click the  button and select **Edit** to update the filter settings e.g. to change the operator and value.
- Click the  button and select **Delete** to delete the filter completely.
- Unselect the **Active** indicator to ensure that it is not applied when the report is run but keep the filter for use at a future time.
- Select the **Active** indicator to reactivate a filter and ensure it is applied with the report is run.

On Screen Filtering

You can apply filters to report columns when viewing the report. These are only set for the duration that you are viewing the report and are not saved for the future.

1. Click the column header.
2. Select **Filters**.
3. The list of options depends on the column type e.g.
 - Dates include options for *Before*, *After* and *On*.
 - Numbers include *Less Than*, *Greater Than* and *Equals*.
 - Text fields include a list of all possible option on the report.
4. Set the filter.

The report updates immediately.

4.4.5. Calculations

What are Calculations?

Calculations are used to define a new value / column to add to a report. These are a useful way to apply some initial data analysis on the report upfront.

Possible uses of a calculation

- Concatenate multiple fields into a single column.
- Project column data e.g. a date + 30 days, a value + 10% etc.

Once created, a calculation is effectively a new report column. As such it can be filtered on, used in a prompt, formatted, added to a chart etc.

 **Note:** Full guidance on how to create calculations are found in the XD Reporting: Insight Smart Calculation Builder - User Guide

4.4.6. Sorting

Sorting allows you to control the order in which records are displayed on the report.

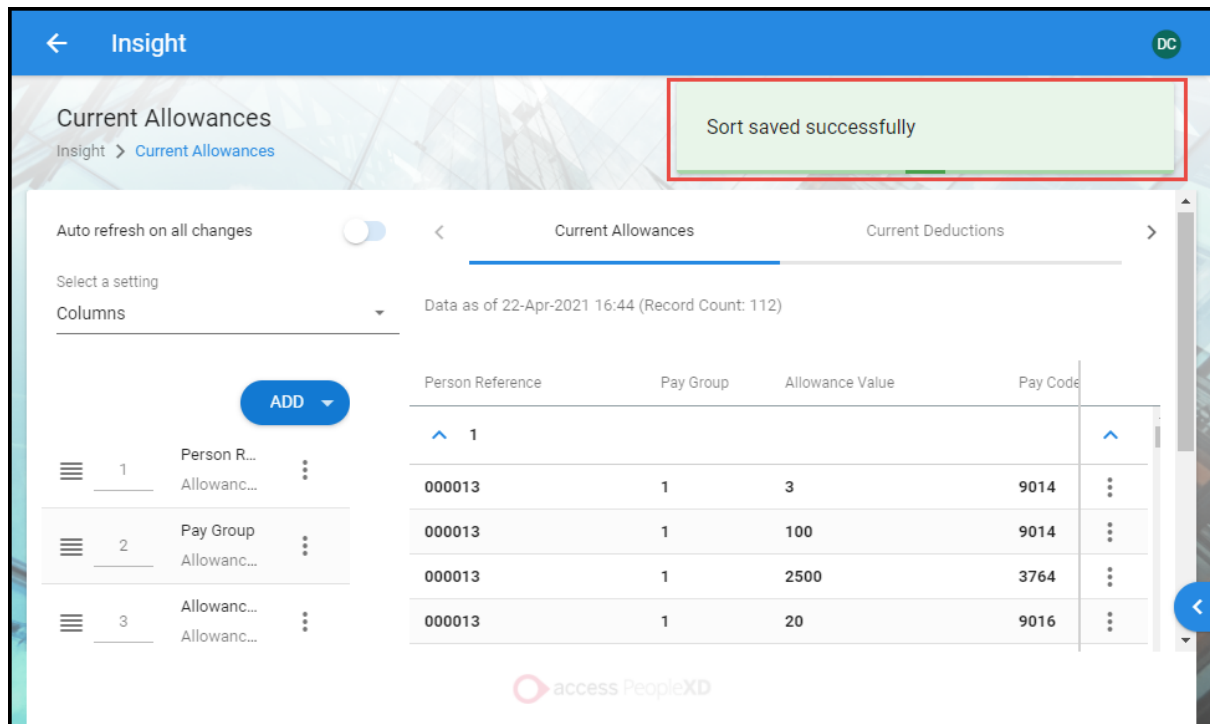

To add a column sort rule to a report:

1. Enter Edit Mode for the report.
2. Select **Columns** from the Settings drop-down list.
3. Select the column in question to be sorted.
4. Click the button and select Sort Ascending or Sort Descending.

The screenshot shows the 'Current Allowances' report in the Insight interface. The 'Columns' settings menu is open, showing options to 'Sort Ascending' and 'Sort Descending' for the 'Person Reference' column. The main table displays four rows of allowance data.

Person Reference	Pay Group	Allowance Value	Pay Code
000013	1	3	9014
000013	1	100	9014
000013	1	2500	3764
000013	1	20	9016

5. The Sort is saved automatically.

4.4.7. Charts

Charts Overview

Charts can be added to reports to provide a visual snapshot of the report data. When a chart is added to a report, this is displayed at the top of the report. There is an option to show / hide this when viewing the report. If you have multiple report tabs, different charts can be added to each tab.

See the table below for the list of *Chart Types* available for tabular and cross tabular reports.

Report Type	Chart
Tabular	Bar
	Column
	Line
	Pie
Cross Tab	Area
	Bar
	Column
	Heat Map

Report Type	Chart
Cross Tab	Multi Line
	Radar
	Scatter
	Stacked Bar
	Stacked Column

Add a Chart

Follow these steps to add a chart to a report.

1. Open Edit Mode for the report.
2. Select **Chart** from the settings drop-down list.

3. Give the chart a name in *Chart Title*.
4. Select the *Chart Type* (see list of options in table above).
5. Select the X and Y axis for the column.
E.g. for average age by department, X-axis is *Department Description* and Y-axis is *Age*.
You can only select columns that have been added to the report.
6. Select the function type.
E.g. Average, Count, Sum.
7. Click **Save**.

8. Click Refresh Data to create the Chart on screen.

9. Hover over a chart element to view the calculated value for that item.

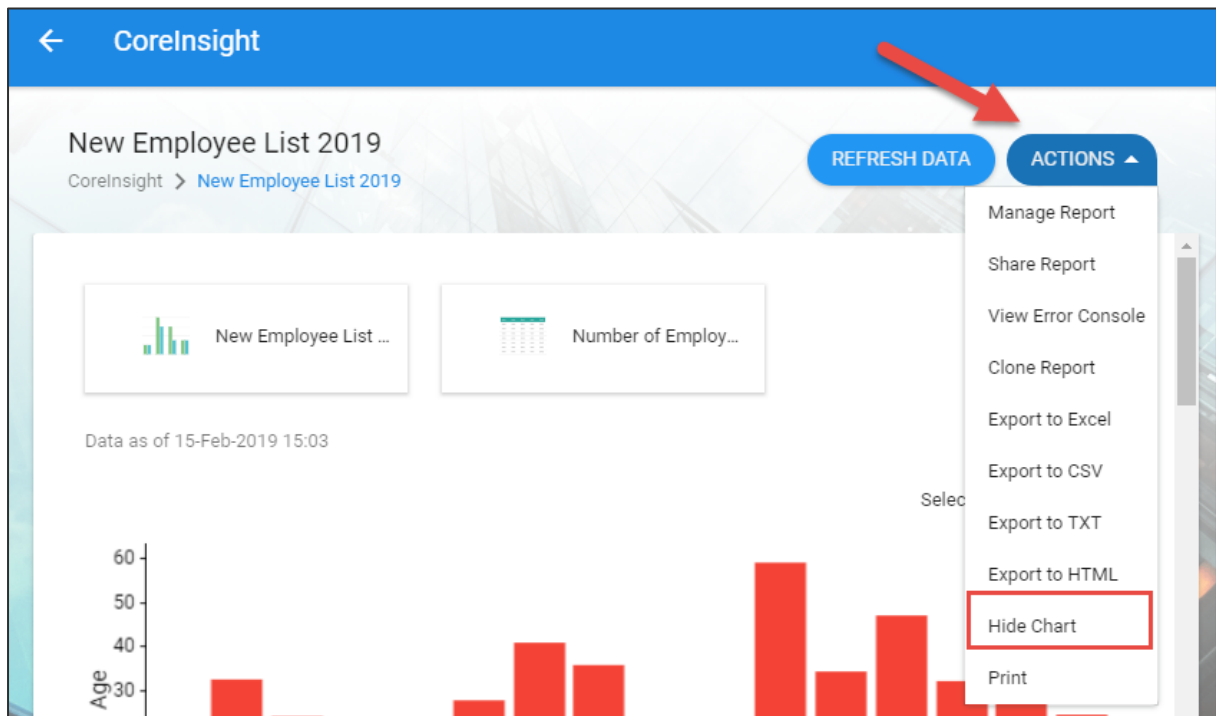

10. Click on a chart element to view records for the selected area.

Show / Hide Charts

You can choose whether to show or hide the chart when viewing a report. To do this:

1. Click **Actions**.
2. Select **Hide Chart** or **Show Chart**.

Updating Charts

On the *Filters* screen you can do the following for the chart:

- Update the chart by changing any of the settings on the *Chart* page and clicking **Save**.
- Delete the chart by clicking the **Delete** button at the end of the page.

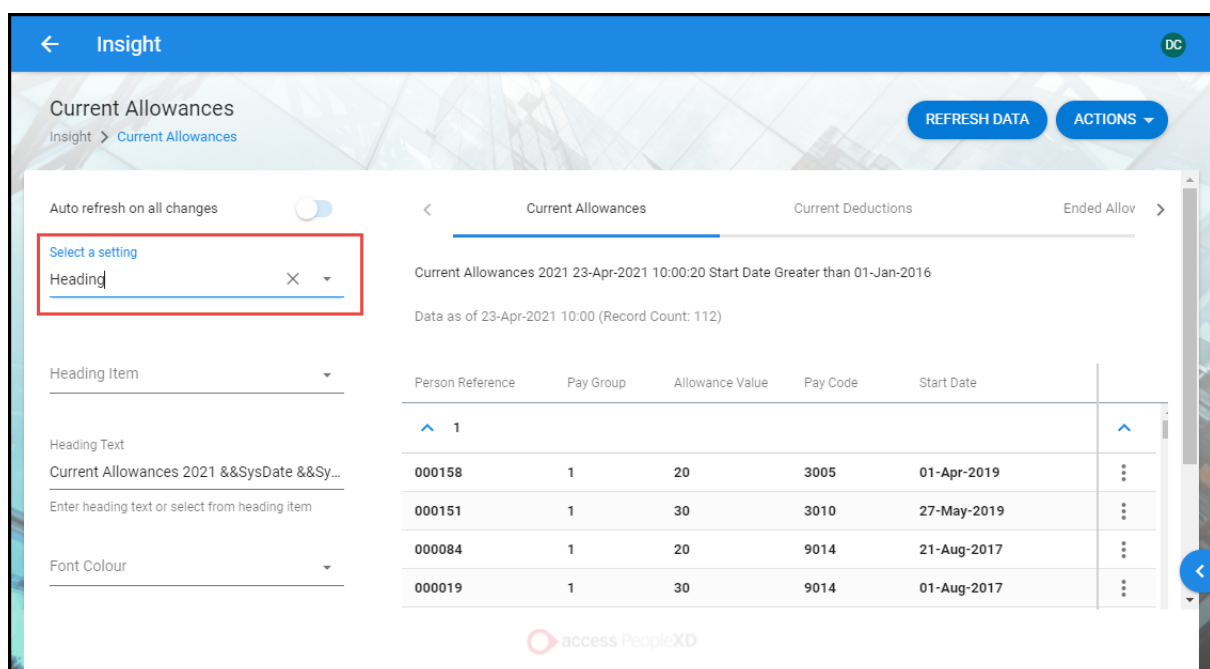

Save Chart as Widget

Charts can be saved as separate widgets. This follows the same configuration as section [Make Data Available as Widget](#).

4.4.8. Headings

On the Edit Mode of a report follow the below steps to add a heading to a report. It is particularly useful to add headings to reports with multiple tabs. This makes it clear to the user, which tab is being viewed.

1. Go to the *Heading* section of the Setting drop-down list screen.
 - a. This allows you to update the heading displayed on the report screen. By default, reports do not have a heading.
 - b. Ensure the correct tab has been selected before you create a heading.

2. To input a Heading with a free-text value, enter the text on the *Heading Text* field without selecting a *Heading Item*.
3. To input a Heading with any of the below Variable values, click on the Heading Item drop-down list.
 - a. System Date
 - b. System Time
 - c. Existing Report Conditions
 - d. Existing Report Parameters
4. The Heading is saved and click the **Refresh Data** button to see it appear on the report as shown below.

Update any or all of these on the heading and click **Refresh Data** to update the Report.

4.4.9. Column and Data Formatting

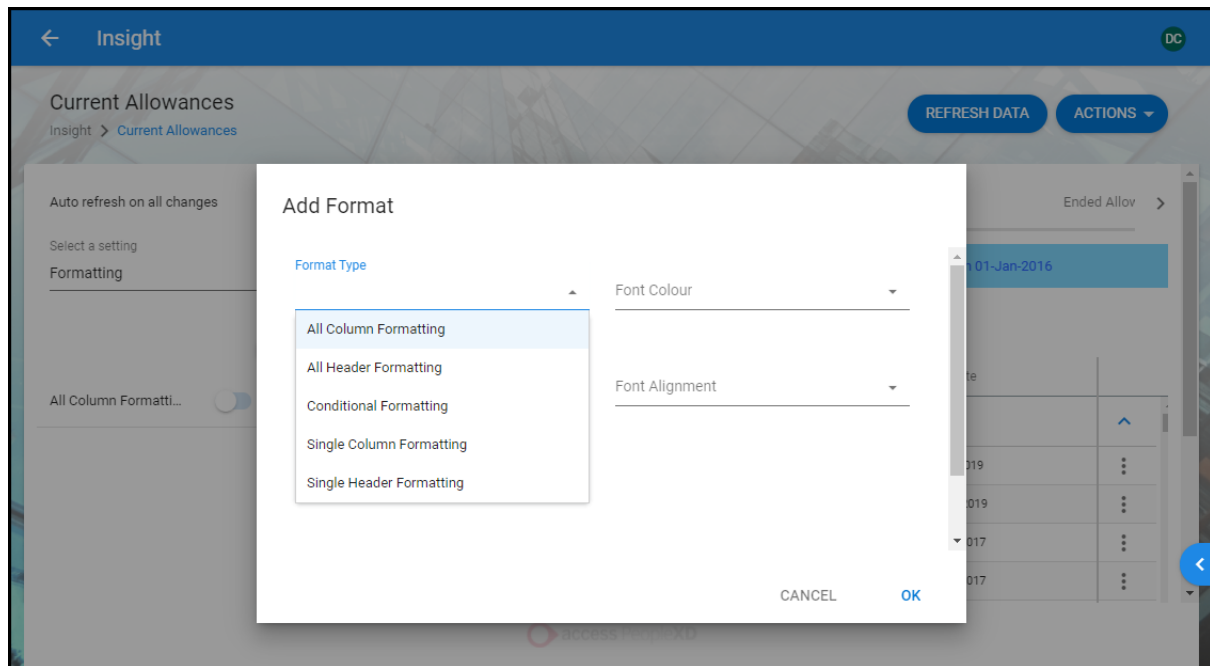

Formatting Overview

To apply Formatting to the report data, follow the below steps.

1. Go to the *Formatting* section of the Setting drop-down list screen within *Edit Mode* of a report.

2. Click on the **Add** button.
3. The *Add Format* screen appears.

4. The following table outlines the different *Format Types* available to select from.

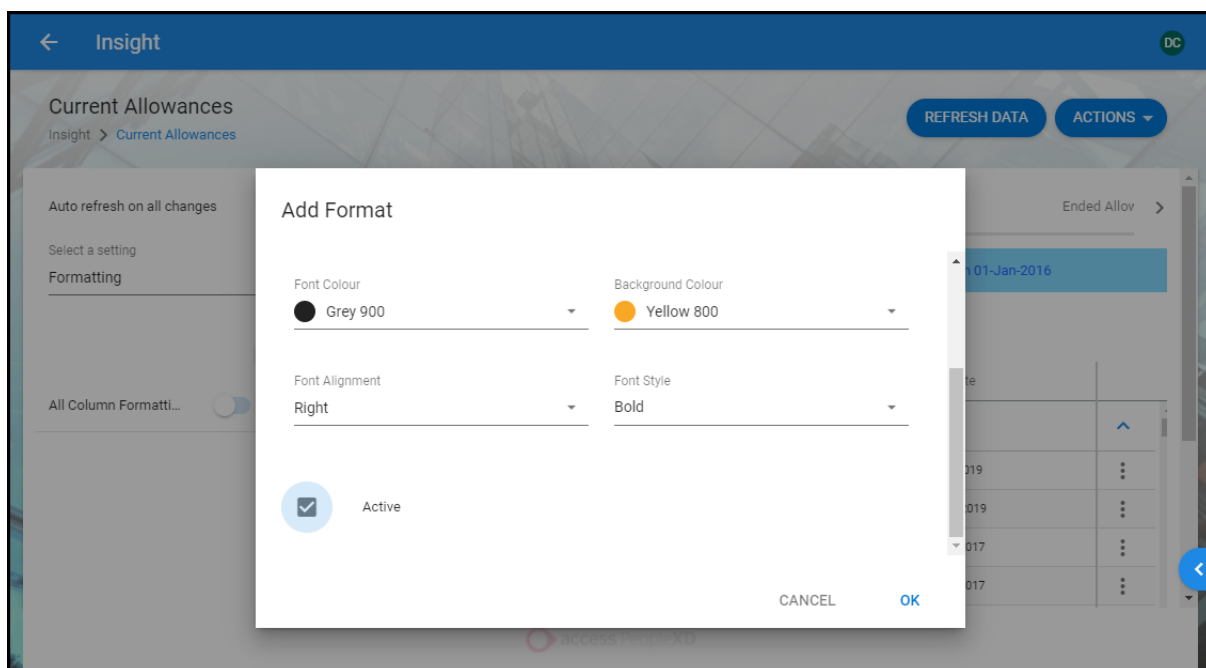

Format Type	Description
All Column	Applies to all report record data e.g. everything in the report grid.
All Header	Applies to all the column headers.
Single Column	Applies to all the record data in a single column.
Single Header	Applies to a single column header only.
Conditional Formatting	This is used to highlight where a report data field meets certain conditions e.g. a value is greater than a specified threshold. This is applied to all data fields in a given column that meet the conditions.

5. The following table outlines the different Format Items that can be updated on a Format Type. Depending on the type selected different options appear e.g.:

- For *Single Column*, *Single Heading* and *Conditional Formatting* you are required to select the column the formatting is applied to.
- For *Conditional Formatting* you also need to set the condition e.g. "greater than 100" in the *Operator* and *Filter Text* fields.

Format Item	Description
Report Column	This is the singular column the formatting is applied to.
Operator	Select from a list of a defined list of operators e.g. Equals to, Greater than, Between.
Filter Text	This is the text or number linked to the operator rule.
Font Colour	Select from a defined list of colours and shading effects.
Background Colour	Select from a defined list of colours and shading effects.
Font Alignment	Left, Centre, Right
Font Style	Bold, Italic, Underlined.
Active	Enable this to turn on the formatting for this item.

- Click the **Ok** button to save the formatting.

- Click the **Refresh Data** button to apply the formatting to the report. The image below shows a single column for Pay Code that has been formatted.

5. Other Report Actions

5.1. Delete a Report

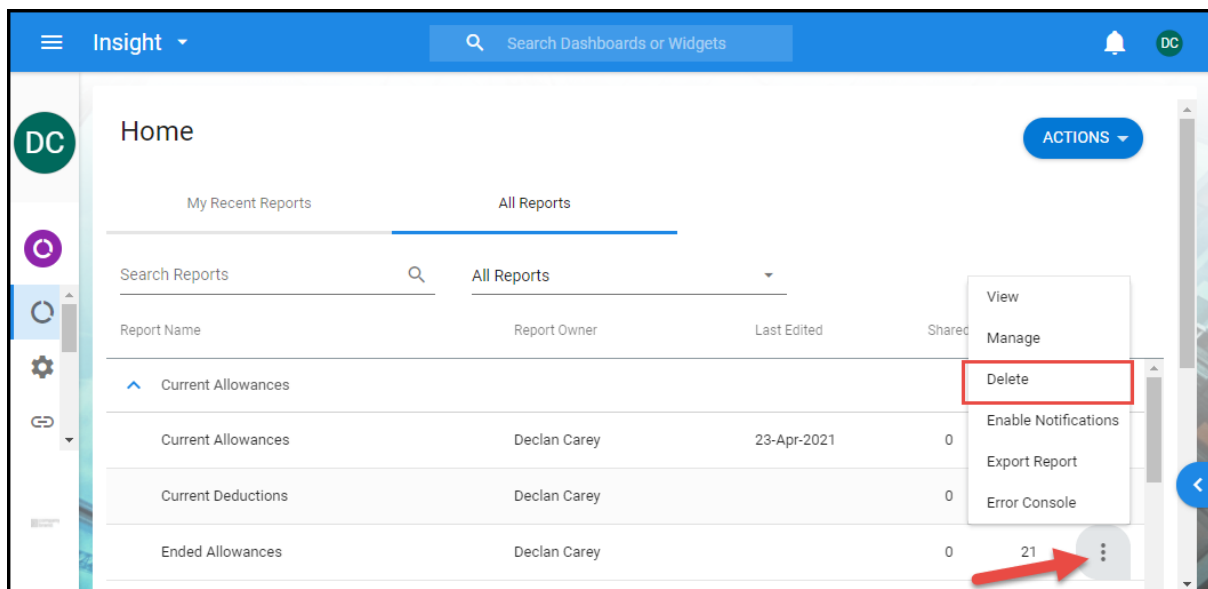

Note:

- If the report is shared with other Insight users, this is deleted for them also.
- If the report is uploaded to the *Report Store*, there is no impact. This continues to be available there.
- On the *Insight > Home* screen You cannot delete reports that you have not created. You can only delete reports where you are the *Report Owner*.
- If you have access to the *Admin Area* screen, you can delete reports created by other users.
- Once deleted, the report cannot be retrieved again.

Follow these steps to delete a report.

1. On the *Insight > Home* screen, search for the report under *All Reports*.
2. Click the  button and select **Delete**.

3. Say **Yes** to the prompt.
4. The report is deleted.

5.2. Export Reports

There are 4 export options available within XD Insight

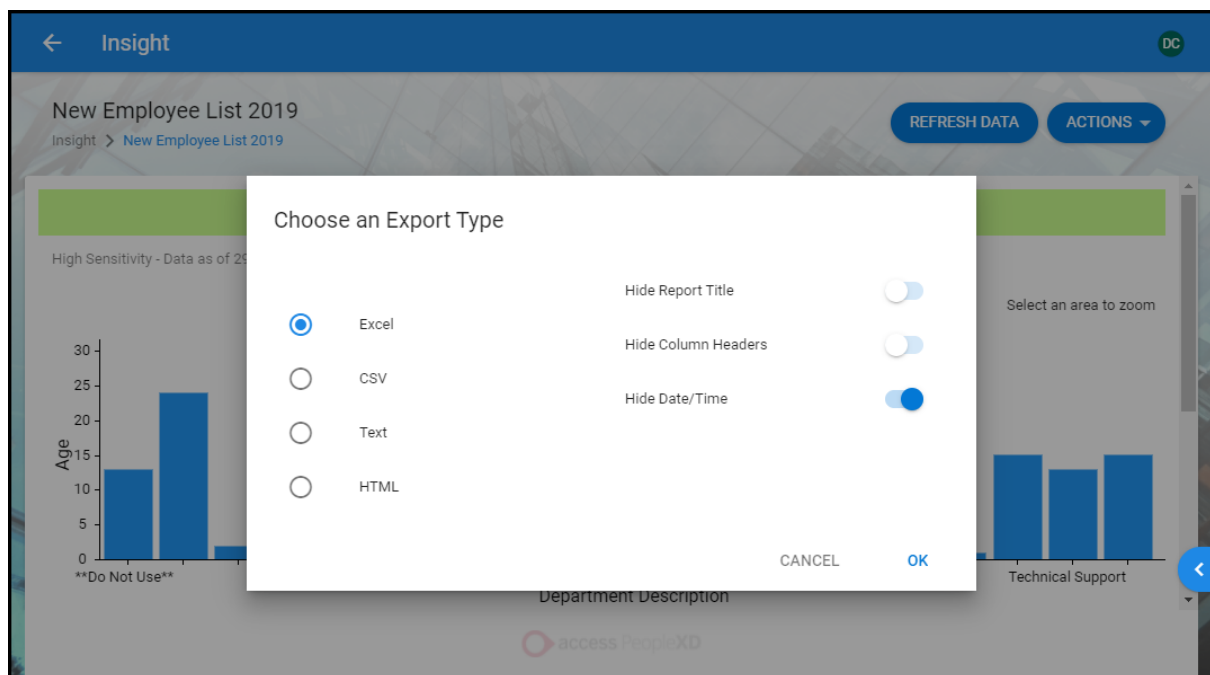

1. Export to Excel
2. Export to CSV
3. Export to TXT
4. Export to HTML

5.2.1. Export a Report

To export a report:

1. View the report.
You may want to refresh the data before completing an export to ensure that the data is current.
2. Click **Actions**.
3. Select the export option required i.e.
 - Export to Excel
 - Export to CSV
 - Export to TXT
 - Export to HTML

The exported file downloads as per your browser settings.

Note:

- If your report contains multiple tabs, only the current tab is exported.
- If your report includes a data sensitivity classification, this is included on all export types.
- Totals are not exported.
- Exports include all rows displayed on screen. This matches the max number of rows defined for the report on the *Manage Reports > Settings* screen.

5.2.2. Excel

The excel export file includes the page header if you have added one to the report.

Some basic formatting is also applied to the file e.g.

- Heading
- Column headers

Other formatting is not included.

	A	B	C	D	E	F
1	New Employee List 2019					
2	Person Reference	Forename And Surname	Date Joined	Department Description	Age

17	000130	Peter Lvons	01-Aug-18	Accounts	39	

5.2.3. CSV

The CSV file is typically opened in excel.

The report header is not exported, and no formatting is applied to this.

	A	B	C	D	E	F	G
1	Person Reference	Forename And Surname	Date Joined	Department Description	Age		
2	134	Charles Daly	05-Nov-18	Accounts	34

5.2.5. HTML

The excel export file includes the page header if you have added one to the report.

Some basic formatting is also applied to the file e.g.

- Heading
- Column headers

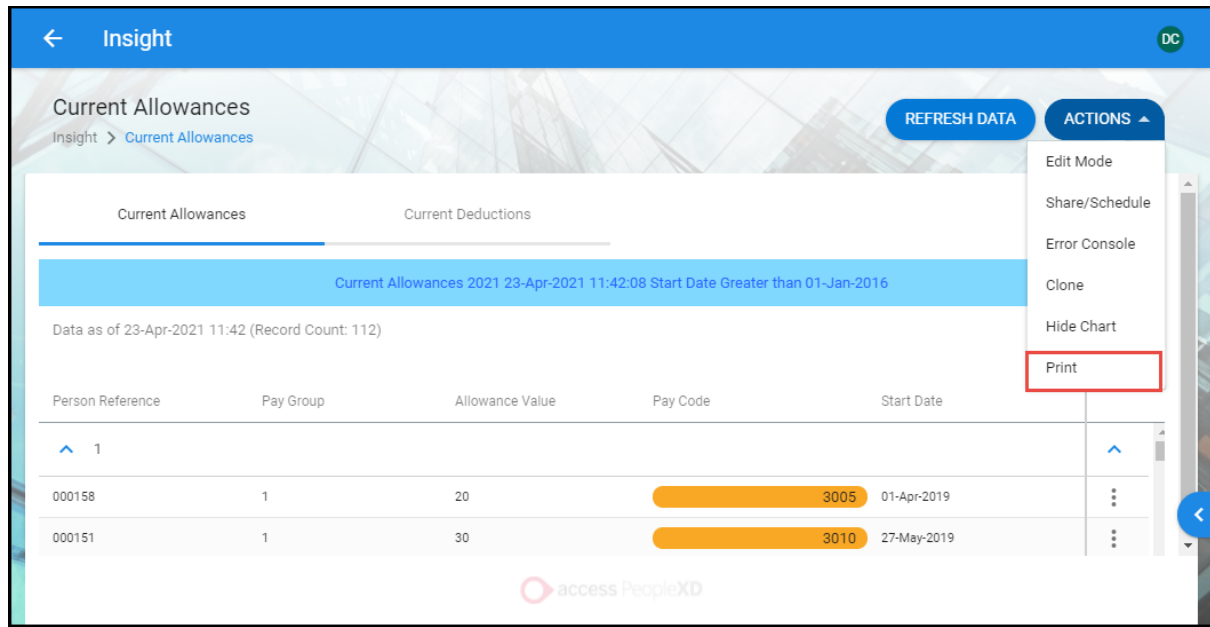

Person Reference	Forename And Surname	Date Joined	Department Description	Age
000134	Charles Daly	05-Nov-18	Accounts	34
000138	Noel Murphy	11-Feb-19	Accounts	29
000041	Richard Green	03-Mar-13	Accounts	54
000044	Darren Bailey	18-May-15	Accounts	42
000056	Laurance Mcgrath	04-Feb-16	Accounts	38
000092	Patrick O'Sullivan	25-Sep-17	Accounts	0
000096	Naomi Briggs	03-Jul-17	Accounts	31
000113	Patrick Lynch	08-Jan-18	Accounts	43
000114	Julie Smith	15-Jan-18	Accounts	29
000116	Derek O'Reilly	18-Feb-19	Accounts	39
000117	Patricia Hayde	01-Jan-18	Accounts	1
000118	Richard Phillips	19-Feb-18	Accounts	36
000120	Barry Smith	23-Feb-18	Accounts	30
000121	Jane Smith	26-Feb-18	Accounts	32
000130	Peter Lyons	01-Aug-18	Accounts	39
000137	Patrick Lynch	14-Aug-17	Accounts	45
000139	Peter Thompson	11-Feb-19	Accounts	30
000039	Susan Jennings	25-Jul-08	Accounts	33
000133	Martin Blake	05-Nov-18	Budget	34

Other formatting is not included.

5.3. Print Reports

To export a report:

1. View the report.
2. Click **Actions**.
3. Click on the **Print** button.

Note: You may want to refresh the data before completing an export to ensure that the data is current.

4. This prints as per your browser settings, for example see the image below from Google Chrome on a Windows 10 system.
 - a. When printing a report, the report is dynamically resized to fit into the page, as best as possible.
 - b. It is recommended when printing to ensure that the page layout is set to landscape.

XD Reporting: Insight Fundamentals

The screenshot shows the CorePortal web application interface. The main content area displays the 'Current Allowances' report for the period 2021-23-Apr-2021 11:42:08, with a record count of 112. The report is a table with columns: Person Reference, Pay Group, Allowance Value, Pay Code, and Start Date. The table is paginated, showing records 1 through 97. The right sidebar contains a print dialog with the following settings:

- Print: 8 sheets of paper
- Destination: EPSON WF-2830 Serie
- Pages: All
- Copies: 1
- Layout: Landscape
- Color: Color
- More settings: (expandable)

At the bottom of the print dialog are 'Print' and 'Cancel' buttons.

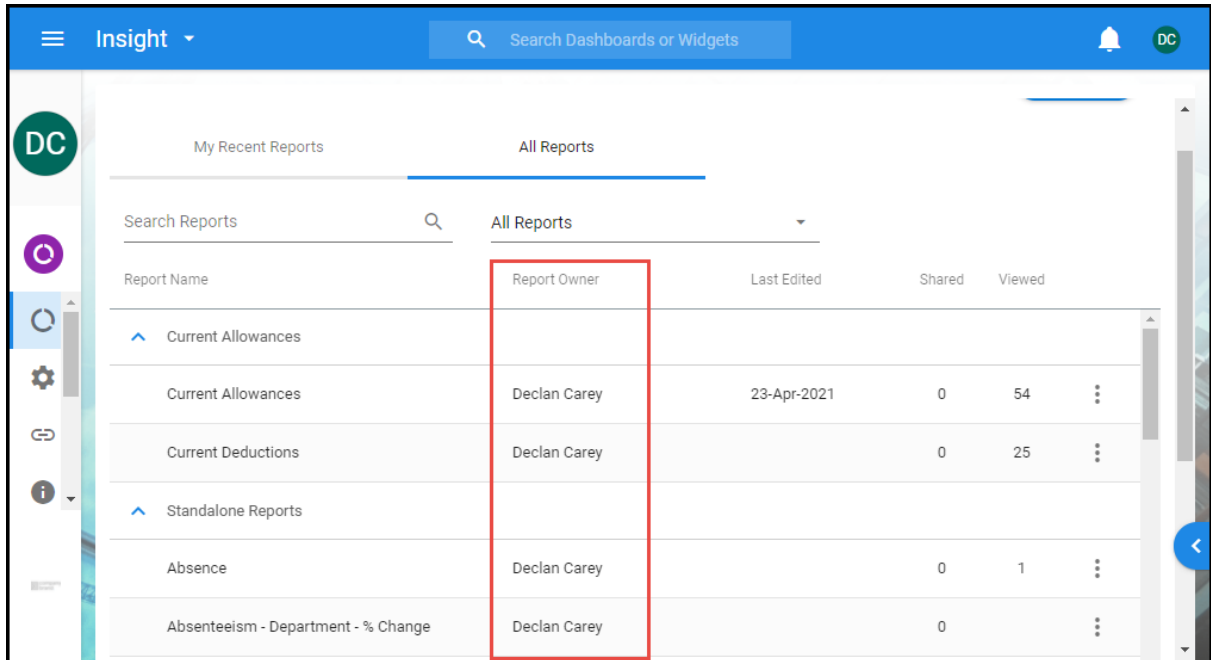

2. The printed version of the report includes:
 - a. The report header if you have added one.
 - b. Report totals if these have been added to the column.
 - c. Charts.

Note: If your report contains multiple tabs, only the report on the current tab is printed.

5.4. Sharing & Scheduling Reports

5.4.1. Sharing Reports

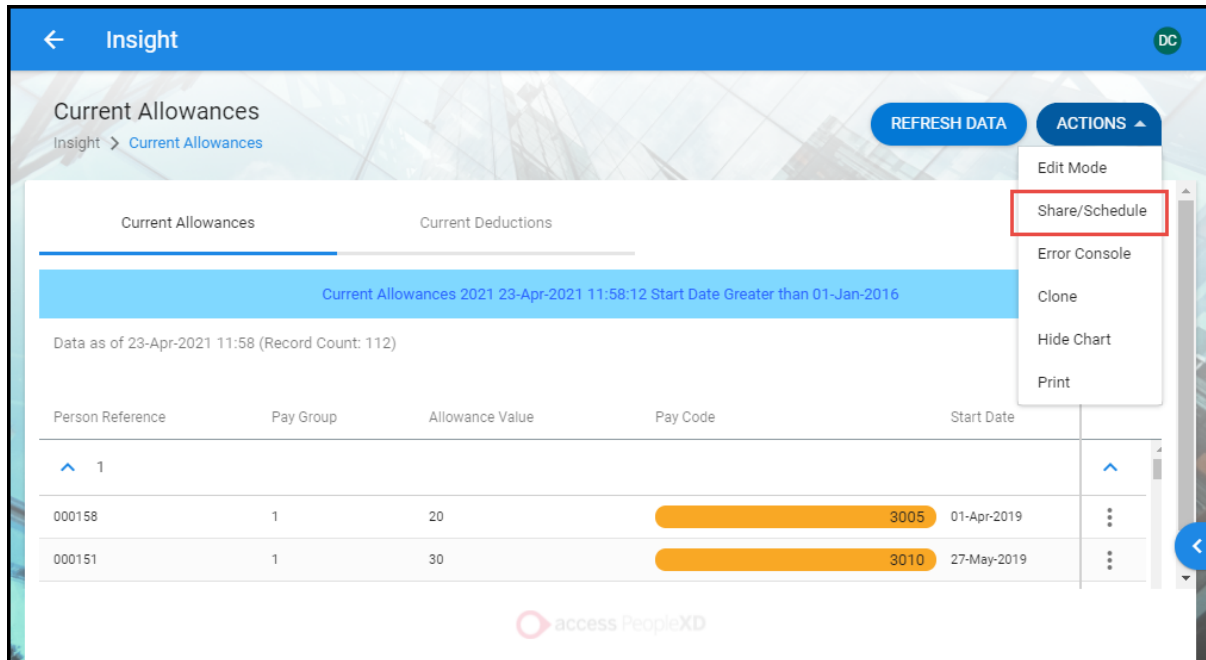

Reports that you create in XD Insight can be shared with other XD users. These are available to them on their *Insight > Home screen*, on the *All Reports* list. These can be identified as reports where their own name is not set as the *Report Owner*.

Report Name	Report Owner	Last Edited	Shared	Viewed
Current Allowances	Declan Carey	23-Apr-2021	0	54
Current Deductions	Declan Carey		0	25
Absence	Declan Carey		0	1
Absenteeism - Department - % Change	Declan Carey		0	

To share a report:

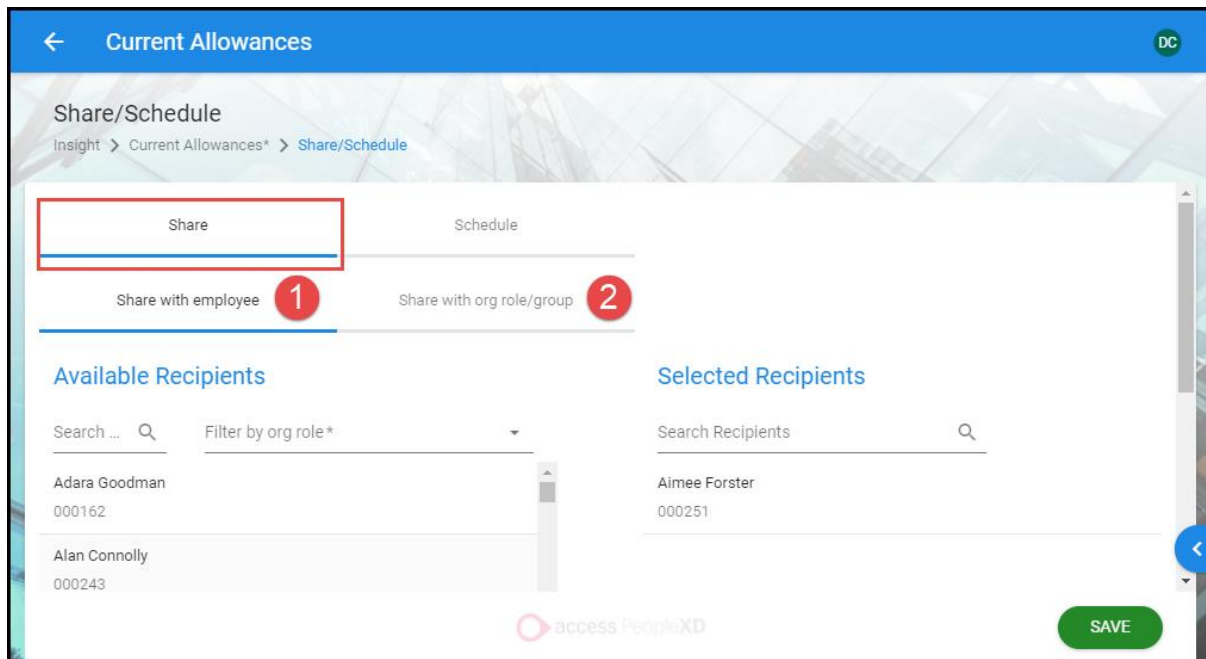

1. View the report.
2. Click **Actions** and select **Share / Schedule**

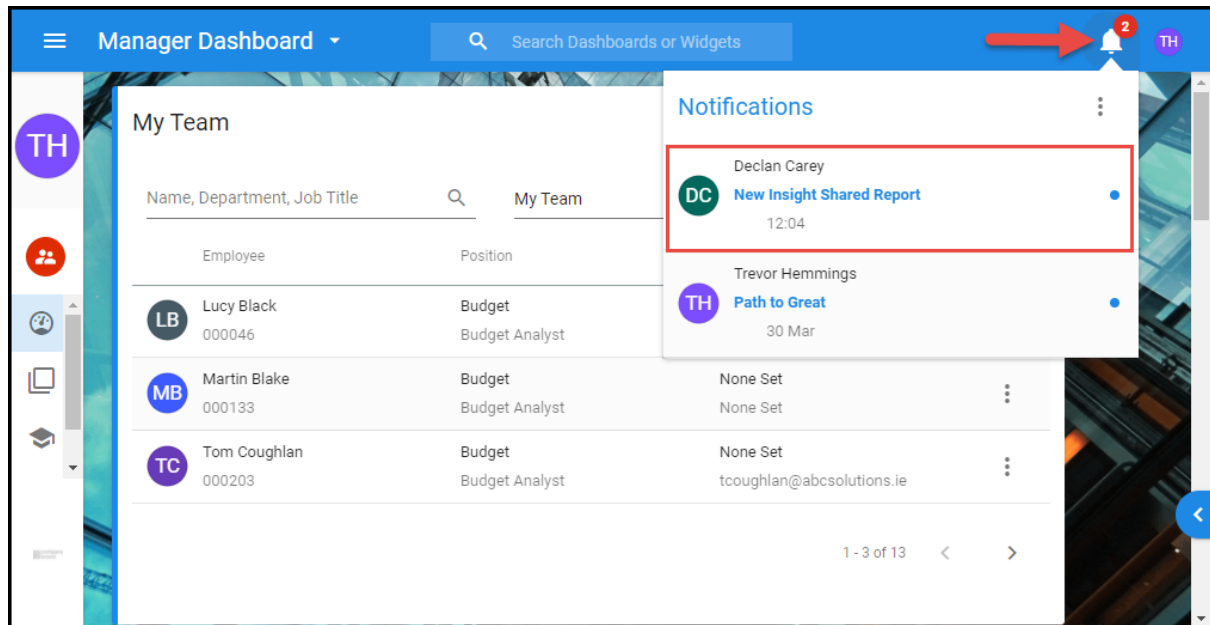

There are two options on the *Share Report* screen:

1. Share with Employee
2. Share with Org Role Group

Note: You can either share via the employee OR the org role group option. However, you cannot share with a mix of both.

When a report is shared with another user, they receive a notification in the *Notification Centre* as seen on the image below.

Sharing with Employees

This option allows you to search for and select the specific employees that you wish to share the report with. You can select one or many employees.

To share a report with specific employees:

1. Select the option **Share with Employee** tab.
2. Search for the employee(s) required. This is the full list of employees on the system.
3. Add them to the *Selected Recipients* list by using the   buttons.
4. Click **Save**.

access PeopleXD

SAVE

Note:

- If you chose the option to **Filter by Org Role**, all employees with that organisation role for any organisational group are automatically added to the *Available Recipients* list.
- This allows you to add all people with that role, and then manually remove any people that you do not want to share the report with.
- This creates a 1-to-1 share of the report with the selected employees. However, if new employees are awarded that org role OR any of these employees have that org role revoked, those changes are not reflected here. Therefore, it is recommended that org role-based report sharing is completed using the **Sharing with org roles / group** option instead.

Sharing with Organisational Roles

To share a report with employees using their assigned organisational role(s):

1. Select the option **Share with org role / group**.
2. Select the org role and org group required.

3. Click **Save**.

Note:

- The screen updates to show all employees who currently have that org role / org group assignment. These are the employees the report is shared with e.g. all users that have the role of "Reports to Manager" for any "Work Group".
- If the employee org role / group assignments change, this is automatically picked up on the report share e.g. if an employee org role assignment is ended, they no longer see that report, if a new employee is assigned the org role / group, they automatically see that role.

What Report Data can Users view?

When you run a report that has been shared with you, this only shows data based on your own data access e.g.

- User 1 has access to report on Payroll data for Pay Group A.
- User 2 has access to report on Payroll data for Pay Group B.
- User 1 creates a monthly payroll report and shares with User 2.
- When each user runs the report, they see different sets of data, relative to the pay groups they have access to.

Reports can be set with different *Report Access* settings i.e.

- Administrator
- Manager
- Employee

The data returned when you run the report reflect your own access, for the Report Access type e.g.

- If Manager, this shows report data for your team
- If Employee, this shows data related to your record.
- If Administrator, this is based on your People XD data access (e.g. pay group example above).

5.4.2. Scheduling Reports

Scheduling a Report allows it to be sent at repeated frequencies to an XD User via an email link.

To schedule a report with specific employees:

1. Select the **Schedule** tab.

2. Define when the report is to be scheduled to send. The table below gives details of the options on screen.

Field	Description
Start Date	The date from which the report starts to send.
End Date	After this date, the report is no longer sent.
Schedule Frequency	Select if the report is to be sent By Minute, Hourly, Daily, Weekly, Monthly, Yearly.
Recur Every	This is directly linked to the schedule frequency e.g. If Weekly, select the weekly recurrence e.g. every 1 week, every 2 weeks. If Hourly, select the hourly recurrence e.g. every 2 hours.
Time	Only required for Daily, Weekly and Monthly frequencies.

Field	Description
	Select the time of day the report is to be sent.
Day(s) if required	Only required for Daily, Weekly and Monthly frequencies. Select days required. Multiple days of the week can be selected e.g. you could choose to send on a Monday, Wednesday, and a Friday only.
Run report at scheduled time	This refreshes the data on the report at the stated time and day.

3. Click **Save**.

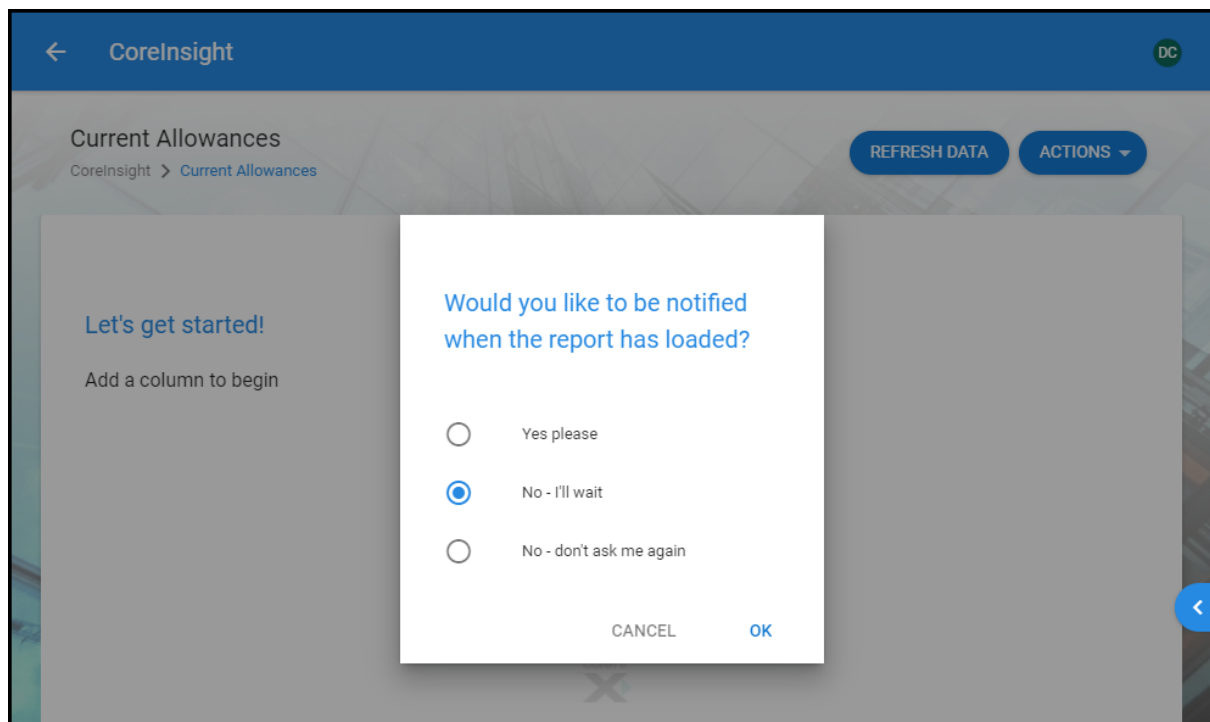

Note:

- It is recommended to schedule reports to send outside of your normal business hours.
- If you want to see the data at a point in time i.e. At 7am: the report runs to show the snapshot at that point in time and cache the data so you the data as of 7am.
- A report can only be scheduled for a max of 5 people if running at a specific time.

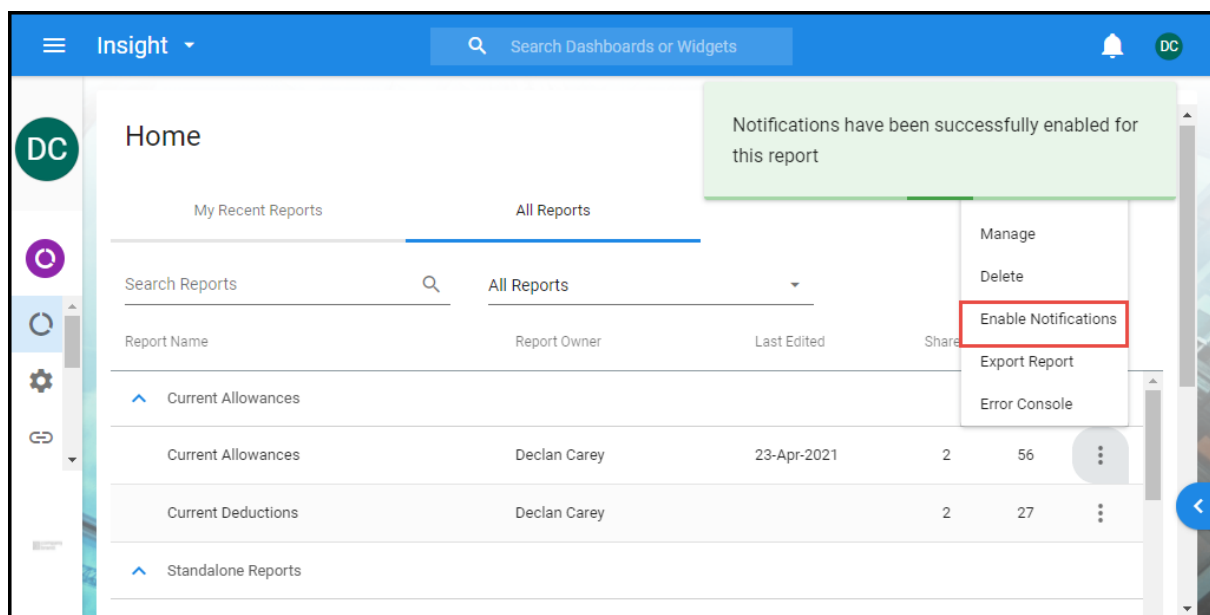

5.5. Enable Notifications

The first time that a report is run, the following prompt appears:

There is an option to re-enable the Notification prompt if required.

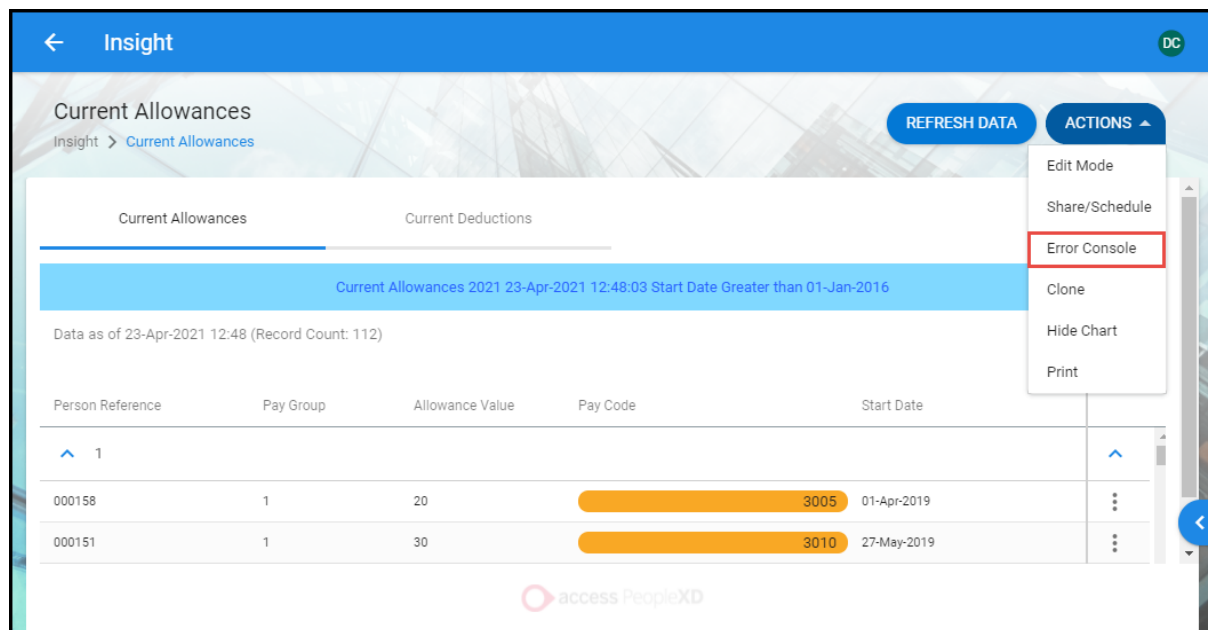

1. On the *Insight > Home* Screen, search for the report on the *All Reports* list.
2. Click the  button and select **Enable Notifications**.

5.6. Error Console

If a report generates an error on screen while it is running, the *Error Console* can be used to help identify the cause. To carry this out, follow the steps below.

1. When Viewing a report, click on the **Actions** button.
2. Select **Error Console**.

3. The *Error Console* screen appears.

← New Employee List 2019

Error Console: Number of Employees by Dept
CoreInsight > New Employee List 2019* > Error Console: Number of Employees by Dept

COPY QUERY

Click on a record to view details

Description	Run Time	Run By	Error Message

Error Details

ORA-00904: "CTCL_PERSON_MASTER"."AGE": invalid identifier

```
select count(*) from (select PRCL_HR_PERSON_MASTER.PERSON_REFERENCE V1,PRCL_HR_PERSON_MASTER.DEPARTMENT_DESCRIPTION V2,(count(CTCL_PERSON_MASTER.AGE) over (partition by PRCL_HR_PERSON_MASTER.PERSON_REFERENCE)) V3 from PRCL_HR_PERSON_MASTER ,CL_PERS_ACCESS_ALL_ADM where
```

4. The **Copy Query** button copies the SQL text that is displayed at the end of the screen for the selected query, so that you can paste this into text file or support query as needed.

Note:

If you receive an error like this, you may need to follow up with XD Customer Support. As part of that exercise, the error console for the report provides the following information that can be helpful when troubleshooting the cause of the error:

- Who ran the report?
- The date and time it was run.
- The error message.
- The SQL data used to build the report.
