1. Overview

1.1. Purpose of Guide

The purpose of this guide is to provide an overview of and the configuration associated with the *Workforce Management Roster* feature. Items covered include:

- Overview of the roster functionality
- Overview of roster calculation types
- Team area structure
- Employee assignments
- Base requirements
- General roster configuration
- Roster user access
- Roster links settings
- Area rules
- Auto roster
- Uncovered shifts

**Note:**

This guide provides information surrounding general *CoreRoster* configuration. For further information, view the *CorePortal Roster* User Guide on CoreHR University. The *CorePortal Roster* User Guide provides training on how to use Roster and additional configuration specifically for *CorePortal* setup.

1.2. What is Roster?

The *Workforce Management Roster* function ensures your organisation has employees rostered to their shifts in the correct place, at the correct time. This enables your organisation to successfully meet your business needs, therefore, matching business demand with resource supply. Features within the *Roster* function include:

- AutoRostering
- Roster creation and publishing
- Alerts for under/over staffing, budget variations, breaches of WTD
- Rostered versus contracted hours tracking
- Configurable validation rules
- Absence entitlement tracking and validation

It is possible to complete the following actions via *Workforce Management Roster*:

- Create *Roster* schedules for *Team Area*, per roster period.
- Review if an appropriate *Roster* schedule is in place for your *Team Area* and the applicable roster period.

- Adjust *Roster* schedules as necessary, to ensure that the appropriate level of staffing is provided for each day of the roster period. It is possible to complete the following actions for *Rosters*:
 - Create
 - View
 - Amend

As well as ensuring that an appropriate level of staffing is in place, the *Roster Details* screen also allows you to ensure the roster is not in breach of organisational rules that have been defined.

- For example, this ensures that employees do not breach their contract hours or the *Working Time Directive*.

The below screenshot shows the *Roster Details* screen.

1 - 11 of 11

Note:

It is common to configure *Roster* as a phase 2 implementation, with a *Time & Attendance* solution already configured in phase 1. Multiple key decisions made during the configuration of the phase 1 *Time & Attendance* solution may have a significant impact on the required *Workforce Management Roster* configuration. Therefore, it is essential to contact your CoreHR Project Team for configuration guidance.

1.3. Rostering Options

There are a number of roasting options available within the Roster solution. These options are listed below:

- Validation roasting
- AutoRoasting
- Demand based roasting

All *Rostering* options include a single view of *Roster* to include, visibility for employee:

- Working and rest days
- Absences
- Time exceptions
- Shift swaps
- Contract Hours
- Qualifications
- Job Titles
- Departments
- Employee Costs

All *Rostering* options also include the *Uncovered Shift* feature, allowing:

- the system to highlight last minute resource gaps and recommend replacements.
- shifts to be published onto *Employee Self Service*.

1.3.1. Validation Rostering Overview

For *Validation Rostering*, the employees are assigned a standard *Work Pattern* (cycle shift) in *Workforce Management*, therefore, the employees are already placed on their applicable shift coming into *Roster*.

Maintain Person Shift Type

Change Roster

Absences

Contract Details

For *Validation Rostering*, staff and resource requirements are configured to be held against the *Team Areas*. A *Roster Dashboard* is available to highlight KPIs such as:

- Over/under staffing based on cycle shifts versus staffing requirements.
- Cost of *Roster* versus budget, to ensure the schedule is accurately costed.
- *Working Time Directive* breaches.

Workforce Management

Roster Alerts

Workforce Management > Roster Alerts

Cost V Budget	0
Maximum Contract Hours	0
Infringing 1 in 4 Saturdays	0
Exceeding working time hours	0
Close to WTD breach	0

Validation Rostering Employee and Manager Self Service options include:

- MSS *Roster Dashboard* review and reporting.
- MSS *Time Exceptions Management*.
- ESS work schedule review and team absences.
- ESS *Shift Swap*, *Uncovered Shift* acceptance, and *Roster Availability*.

1.3.2. AutoRostering Overview

When *AutoRostering*, the system allows for an automatic *Roster* build process, that is run, based on the *Validation Rules* you have configured. The employees are assigned a *Rest Work Pattern* in *Workforce Management*; therefore, the employees are not already placed on their applicable shift coming into *Roster*.

The system then auto-assigns shifts to employees using the staffing requirements held against the *Team Area*.

To ensure the most appropriate employees are rostered to the applicable shifts, the system uses the full employee profile and *Contract Details* when auto-assigning shifts, to include:

- Contracted Hours i.e. ensuring contract hours are met
- Job title
- Qualifications
- Availability
- Absence records
- Fairness rules e.g. number of weekends worked
- Organisational compliance
- Working time directive
- Work permit dates

AutoRostering Employee and Manager Self Service options include:

- MSS *Roster Dashboard* review and reporting.
- MSS *Time Exceptions Management*.
- ESS work schedule review and team absences.
- ESS *Shift Swap*, *Uncovered Shift* acceptance, and *Roster Availability*.
- 'One Click' AutoRostering button.

1.3.3. Demand Based Rostering

When *Demand Based Rostering* is in use, staffing requirements are dynamically created using transactional data. Key metrics, such as the examples listed below, are used to automatically create the staffing requirements for a *Team Areas*:

- Sales
- Footfall
- Transactions
- Units
- Deliveries

Base Requirements, such as organisational opening/closing times, can also be used. For *Demand Based Rostering*, the system uses last year's metrics, that have been manually input or interfaced into the system via the *WFM Interface File*, to generate the anticipated demand for the coming weeks.

Generate Demand

 London

04 Mar 19 - 10 Mar 19

Team Area	Date	Start Time	End Time	Type	Description	Metric	Total	Total Secon...	Total People	Staffing De...
 NOTHING TO SEE HERE EXCEPT THIS FLAG										

0 - 0 of 0

GENERATE STAFFING DEMAND

CREATE RULES

In addition to this, the system can perform a trend analysis to automatically uplift or reduce the anticipated demand, based on the actual sales over the last number of periods.

This rostering type:

- automatically creates the staffing requirements, removing the need for you to manually change the resource needs during busy and/or quiet periods.
- can integrate with finance and EPOS systems, and data warehouses to interface a feed of data which is used to generate demand.

With *Demand Based Rostering*, the system allows for an automatic *Roster* build process, that is run, based on the demand generated. The employees are assigned a *Rest Work Pattern* in *Workforce Management*; therefore, the employees are not already placed on their applicable shift coming into *Roster*.

Shift Type	Name	Date Effective	Start Seq.	Cycle
REST	Rest Shift	15-MAR-2016	1	?

Shift Type	Start Date	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday
REST	201839	24-SEP-2018	REST	REST	REST	REST	REST	REST
REST	201840	01-OCT-2018	REST	REST	REST	REST	REST	REST
REST	201841	08-OCT-2018	REST	REST	REST	REST	REST	REST

The system then auto-assigns shifts to employees using the demand generated and held against the *Team Area*.

AutoRostering Employee and Manager Self Service options include:

- *MSS Roster Dashboard* review and reporting.
- *MSS Time Exceptions Management*.
- ESS work schedule review and team absences.
- ESS *Shift Swap*, *Uncovered Shift* acceptance, and *Roster Availability*.
- Full visibility of the organisations anticipated demand.
- 'One Click' *Demand Generation*.
- 'One Click' *AutoRostering*.

Note:

This document does not include configuration for Demand Based Rostering solutions. For further information, search for the Demand Based Rostering training material on CoreHR University.

2. Roster Calculation Types

2.1. Calculation Type Overview

There are a number of different calculation options that can be used within *Roster*, listed below:

- Standard *CoreTime* Calculation
- Stand Calculation – Multi Pattern: Non-clocking
- Roster Retail Calculation
- Retail Calculation – Deduct Exceptions

There are a number of important factors that must be taken into consideration when deciding on a calculation type for your *Roster* configuration, as the *Roster* calculation type implemented is dependent on your organisational needs. Items to consider may include:

- Is *Demand Based Rostering* required?
 - **Retail Calculation Only**
- Are *Split Rules* required?
 - **Retail Calculation Only**
- Is *AutoRostering to Contract* required?
 - **Standard and Retail Calculation**

 **Note:** It is advised to discuss your existing *Time and Attendance* solution configuration and your organisational requirements, with your CoreHR project team, to ensure the *Roster* solution configured is optimised to the highest potential of meeting your organisational requirements.

2.2. Standard Calculation

2.2.1. Overview

The *Standard Calculation* is used when there is a *Work Pattern* matching every combination of times that employees can work and have the associated calculation rules specified at the *Work Pattern* level. With this calculation type, employees can clock in or have their default hours generated.

For example, this calculation type can be used for when employees work on cycle shifts within a manufacturing organisation. Employees can clock in for their shifts and the overnight calculation runs to calculate against their *Work Pattern*.

 **Note:** The *Split Rule* cannot be used in conjunction with the *Standard Calculation*. The *Standard Calculation* ensures a one to one mapping with the *Roster Rules* and the employee shift.

2.2.2. Standard Calculation – Multi Pattern: Non-Clocking

The *Standard Calculation – Multi Pattern* calculation option is only available where employees are not clocking for their shifts. This calculation type ensures that the *Primary Pattern* and *Additional Pattern* default hours are summed together and are generated against the *Primary Pattern Pay Code*.

- Rostered hours are calculated for multi-patterns by summing the default hours specified on each *Primary* and *Additional Work Pattern*. Additional non-contract days are not calculated.
- Premium hours calculated, are taken from the *Primary Pattern* regardless of what is specified on the *Additional Work Pattern*.

The linking of *Team Areas* with *Cost Centres* with the *Multi Pattern* calculation is based on each employee being assigned one *Team Area* per day. If an employee is rostered to work across multiple *Team Areas*, on the same day, the system calculates all hours against the *Cost Centre/Team Area* associated with the *Primary Pattern* for that day.

The following *Absence* scenarios should be considered, regarding the use of *Standard Calculation – Multi Pattern*:

- Full day *Absences*, where *Primary* and *Additional* patterns are entered, use the default hours for all the *Primary* and *Additional* patterns.
- Additional non-contract hours are not calculated for default hours or *Absences*.
- Part day *Absences* calculate the duration of the absence only. However, do not calculate the standard hours segment when using the *Primary* hours or a combination of *Primary* and *Additional* hours.
- The calculation of company holiday hours remains unchanged.
- The calculation of partial *Absences* remains unchanged. The duration of the part day absence calculates, and the standard hours do not calculate for the day.
- All employee *Balances* are tracked in hours.

Note:

The following considerations should be taken into account for the configuration of the *Standard Calculation – Multi Pattern* calculation option:

- The default *Pay Code* should be the same on all *Work Patterns*. For example, Basic Pay.
- The *Extra Shifts* indicator on the *Roster System Params - Miscellaneous* tab, screen must be enabled.
- This configuration does not support the clocking calculation for *Work Groups* or employees.

2.3. Retail Calculation

2.3.1. Overview

The *Retail Calculation* option allows for two *Work Patterns* to be rostered in the day and allows for employees to clock in and out for their shifts daily. With this calculation option, full default hours are generated for the duration of the day, along with any relevant *Time Exceptions* that are generated in addition to these default hours.

The following table details how the *Retail Calculation* works with different system scenarios:

Scenario	How it Works:
One Pattern per Day	The system: - Checks if the employee has clocked in late for the day. - Checks if the employee has clocked out late for the day. - Generates the default hours for the day and generates any late in or early out <i>Time Exceptions</i>. If <i>Work Patterns</i> are adjoining: - The employee does not need to clock per pattern. - The system takes the first clock and the last clock time to calculate the day. - For example, pattern 1 - 09:00 to 13:00 pattern two 13:00 to 19:00 If <i>Work Patterns</i> are not adjoining: - The employee needs to clock per pattern, for example: - Pattern 1 – 09:00 to 13:00 - Pattern 2 – 16:00 to 19:00 - You do not have the ability to roster employees on the same <i>Work Pattern</i> multiple times in the one day. There is a restriction that each pattern can only be used once for an employee on the day. - The <i>Work Pattern</i> can calculate for a specified number of hours before the pattern start time and for a specified number of hours after the pattern end time. - The specified number of hours is configurable via the Base & Rest Work Patterns section.
Breaks	If there are breaks scheduled, the system calculates the total breaks for the day. If the employee clocks out, throughout the day, more than a specified time for the day, a break <i>Time Exception</i> is raised:

Scenario	How it Works:
	- Grace periods can be added to the total break times, this can be dependent on the number of breaks in a day, for example: 1 break grace period of 5 minutes. 2 breaks grace period 8 minutes. 3 breaks grace period of 10 minutes. If an <i>Untaken Break Pay Code</i> is configured, and employees do not clock for their break, the <i>Untaken Break Pay Code</i> calculates for the duration of all breaks on the day. The Work Pattern does not expect employees to clock to the actual break time. Therefore, breaks can be taken all at once or multiple clockings throughout the day once the duration does not exceed the total duration and grace period. However, if an employee does not take their full break duration, no <i>Time Exception</i> is raised, and the full duration will be deducted from the day.
Multiple Pattern Breaks	If an employee has an <i>Adjoining Work Pattern</i> on the day, the system tries to logically create one <i>Work Pattern</i> based on the pattern sequences assigned. This pattern is logically created by taking the following: - Before shift row on the first pattern. - Working time row from the first pattern. - Working time row from the second pattern. - After shift row from the second pattern. Breaks from both patterns are then added to the one pattern. The employee can then take the breaks any time between the start time of the first pattern and end time of the second pattern.
Full Day Absences	- The full day absence duration is recorded on the <i>Primary Pattern</i>, if an employee is rostered to work. - If <i>Unrostered Booking</i> is being used, full day absences calculate to the value of the employee's roster contract. - If an employee clocks in while on a full day absence, the below calculates: - Absence for the duration of the day. - Basic Hours for the duration of the day.

Scenario	How it Works:
	○ Late and Early out Time Exceptions.  Note: This calculation may require manual amending before the hours are transferred to payroll. access to see on CoreHR.
Part Day Absences	If a part day absence is booked, the <i>Roster</i> should be updated to reflect the hours the employee is working. <u>For example:</u> If an employee was rostered to work from 09:00 to 17:00 and books 3 AM hours <i>Annual Leave</i>, you must update the roster for the employee to start from 12:00 to 17:00. The system then calculates: • 3 hours <i>Annual leave</i> • 5 hours <i>Basic</i> If you do not update the <i>Work Pattern</i> to reflect the hours the employee is working this may have implications on <i>Payroll</i>. For example, the system then calculates: • 3 hours <i>Annual Leave</i> • 8 hours <i>Basic</i> • 3 hours <i>Late</i>
Working Time Directive	The <i>Retail Calculation</i> option always generates the default hours when calculating values. However, <i>Basic</i> hours may not always reflect the hours an employee has worked for the <i>WTD</i> calculation.

2.3.2. Retail Calculation Considerations

The *Retail Calculation* option does not use all elements of the Work Pattern configuration; therefore, you must ensure that the *Retail Calculation* caters for the required configuration you are applying to the *Work Pattern*.

- Multi Appointments are not supported in the Retail Calculation.
- The *Rounding* of basic hours, late in and early outs is not possible.
- *Fill Basic* on the *Work Pattern* is not applied.
- *Balances* must be tracked in hours.
- Daily Balances are not compatible.
- For days with absence less than one full day, the employee's *Roster* must be updated to reflect the time of the absence in the work schedule.

Time Exceptions are not deducted from the basic hours. This may impact overtime rates if using the Salary Rule. For example, if an employee has contracted hours of 39, and gets a salary for this:

If the employee, then works 42 hours in the week and has 2 hours late, the following is sent to payroll:

- 3 hours at the overtime rate.
- 2 hours late.
- 39 hours not sent to payroll, they are a salaried employee. Therefore, the employee may get paid a higher rate for overtime, as the *Time Exceptions* (late) are not offset against overtime hours.

2.3.3. Retail Calculation: Deduct/Reduce Exceptions

The *Deduct/Reduce Exceptions* additional option for *Retail Calculation* ensures the breaks and *Time Exceptions* are included in the calculation of basic hours, against the *Team Area*. This feature reduces the basic hours, where there is a *Time Exception* present, that is affecting these hours within the day.

Therefore, when the *Retail Calculation* is configured, and *Deduct/Reduce Exceptions* additional option is enabled, the *Time Exceptions* are deducted from the basic hours.

Scenario	How it Works:
Breaks	Breaks in the Retail Calculation work by allowing an employee to clock in and out at any time, once the employee does not exceed the break duration. The break is then deducted from the time slot it is scheduled in. An issue can arise where an employee clocks for breaks across multiple <i>Team Areas</i> in a day, as the break is deducted from the <i>Team Area</i>, the break is scheduled on rather than when the break was taken.

Scenario	How it Works:
	To resolve this issue, when the <i>Deduct/Reduce Exceptions</i> parameter is enabled, the break is then deducted from the slot when the break is taken. • Employees can still clock out for breaks at any time throughout the day, once the time clocked out does not exceed the break duration for the day. • If the employee clocks for a duration less than the full duration of the day, the difference is deducted from the <i>Team Area</i> in which the break is scheduled. • If an employee clocks for a duration greater than the duration of the breaks, the difference is deducted from the <i>Team Area</i> based on the last scheduled <i>Team Area</i> for the employee.
Public Holidays	Where shifts are rostered over midnight and are falling over a <i>Public Holiday</i>. A premium is applied to the hours that fall on the Public Holiday. For example, if a Public Holiday falls on the 2nd of July: • If the employee is rostered on the 1st of July into the 2nd of July 20:00pm to 08:00am. ○ The hours worked from 00:00am – 08:00am have the Public Holiday Premium applied. • If the employee is rostered from the 2nd of July into the 3rd of July 20:00pm – 08:00am. ○ The hours worked from 20:00pm – 00:00am have the Public Holiday Premium applied.

Deduct/Reduce Exceptions Configuration

To enable the *Deduct/Reduce Exceptions* feature, a parameter must be switched on for the changes to the *Retail calculation* to action.

This option is configured at *Work Group* level, to enable:

1. Go to *Backoffice > CoreTime/CoreRoster > System Params > Work Groups*.
2. Enter the applicable *Work Group*.
3. Select **General Parameters – 3**.
4. Tick on the *Deduct Absences Retail Calculation*.

The parameter is only available for selection if the *Roster Calculation Method* is set to **RETAIL**.

5. Click the  button to save.

Work Groups

3. Team Area and Structure Configuration

3.1. Team Area Overview

A *Roster Team Area* is created to logically group similar employees working within the same team. Teams within the *Team Area Structure* should ideally match the *Work Groups* defined in *Workforce Management*. For example, *Team Areas* might be based on the different departments in a retail store such as:

- Menswear
- Womenswear
- Household

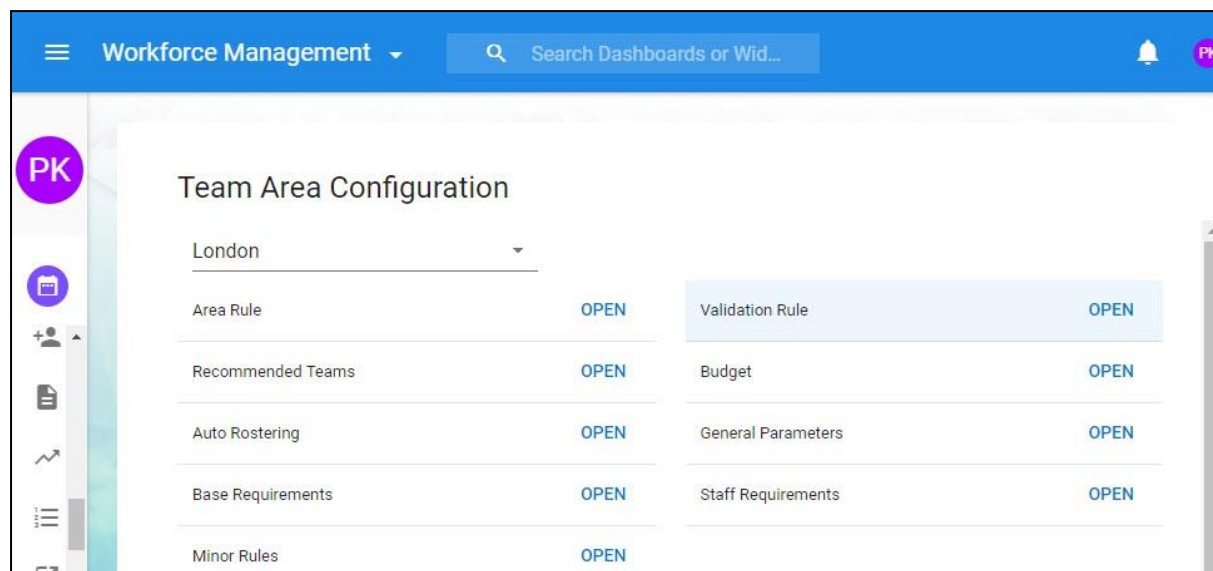

Depending on the needs of each Team Area, different rules and criteria can be assigned to each to ensure the team is adequately resourced. Therefore, *Roster* allows for rules to be assigned at *Team Area* level, allowing for variation in requirements for each team.

The *Team Area Configuration* screen can be used to create the *Team Areas* that appear within Roster. This screen allows you to define, the roster criteria at a team level, for example:

- Area Rules
- Validation Rules
- Budget
- Staff Requirements, etc.

These criteria are then applied to the *Team Area*, including any possible sub-teams in the organisational hierarchy. *Team Area* configuration must be assigned at team level for employees to be added to each team, during rostering. Shift dependencies, such as *Area Rule* and *Validation Rule* templates can be attached to the individual *Team Areas* with a date effective.

3.2. Structure Hierarchy Overview

The *Team Area Structure* represents the organisational hierarchy within your organisation.

- A manager may only be able to view the *Roster* information for the *Team Areas* that they have been assigned to.
- If a manager is assigned to more than one *Team Area*, it is possible to switch from one to another by selecting the *Team Area* they wish to view.

There are three significant elements that must be considered before creating *Team Areas*.

- Levels
- Team Area Code Structure
- Naming Convention

Note: *Team Areas* provide the foundational building blocks for *Roster*. Designing an accurate hierarchy is critical for configuration.

3.2.1. Team Area Levels

Roster allows for any number of Teams within the hierarchy, yet it is standard practise to limit *Team Area* levels to 4 or 5 to ensure the following:

- Optimum user experience
- Reduction in maintenance

The following table provides an example *Team Area Structure* breakdown. Four hierarchical levels have been agreed on for the 'CoreStore' example storage company. The organisation is broken down as follows:

Level	Title	Explanation
1	CoreStore Group	This is the highest level. Only 1 <i>Team Area</i> exists at this level.
2	Company	CoreStore Group is overall owner of two different types of companies. CoreStore and CoreLogistics. Therefore, employees either work in CoreStore or CoreLogistics, not both.
3	Location	This level represents the actual site. For example, CoreStore London or CoreLogistics Leeds.
4	Team Area	This level represents the areas within a site. For example, there are 6 sub-departments within CoreStore: • Storage Floor Team • Goods Inward/Outward Team • Security Team • Load Area Team • Heavy Goods Team • Safe Team

 **Note:** It would have been possible to add another level between the *Company* level and *Location* level to cover *Region*, i.e. UK/Ireland or South/East/West/North, however, for the purposes of the CoreStore example, the levels have been kept to 4.

3.2.2. Area Code Structure

Once the hierarchical levels have been confirmed, the *Team Area* coding conventions can be agreed.

Note: The *Team Area Code* can be a max of 6 characters.

The following table outlines the example *Area Code Structure* that has been defined for CoreStore:

Level	Team Area Code	Description
1	C	CoreStore Group
2	CS CL	CoreStore CoreLogistics
3	CS001 CS002 CS003 CL004 CL005	CoreStore London CoreStore Manchester CoreStore Liverpool CoreLogistics Brighton CoreLogistics Leeds
4	CS001A, CS002A, CS003A CS001B, CS002B, CS003B CS001C, CS002C, CS003C CS001D, CS002D, CS003D CS001E, CS002E, CS003E CS001F, CS002F, CS003F CL004G, CL005G	Storage Floor Team Goods Inward/Outward Team Security Team Load Area Team Heavy Goods Team Safe Team Planning Team

Example Breakdown

John Smith is assigned a *Home Team Area* of CS001A.

This means that John is assigned to:

- Level 1 – Storage Floor Team (A)
- Level 2 – London Location (001)
- Level 3 – CoreStore Company (S)
- Level 4 – CoreStore Group (C)

3.2.3. Naming Convention

It is important to note that the *CorePortal Roster* screens display *Team Area* descriptions only, and do not display reference codes. It is not essential to include the *Area Code* in your *Team Area* description, however, for searching for referencing purposes, it is recommended to include the *Area Code* in the *Team Area* description.

The below table outlines 3 different naming conventions for your Team Areas. Example 2 in the below table displays the *Team Area* name along with the *Area Code* in the *Team Area Description*. This is the recommend naming convention for your *Teams Areas*.

Example	Example Description	Team Area	Team Area Description
1	Team Area only	CS001A	Storage Floor Team
2	Team Area with reference code	CS001A	Storage Floor Team (CS001A)
3	Parent Team Area, Team Area, and reference code	CS001A	London Storage Floor Team (CS001A)

3.3. Creating Team Areas in Roster

The **Team Structure** option on the *Roster Links* widget provides the ability to create new team structures, maintain existing team structures, and modify team area settings, where required. It is possible to:

- Create new Team Structures
- Add a new Team Area
- Modify existing Team Structures

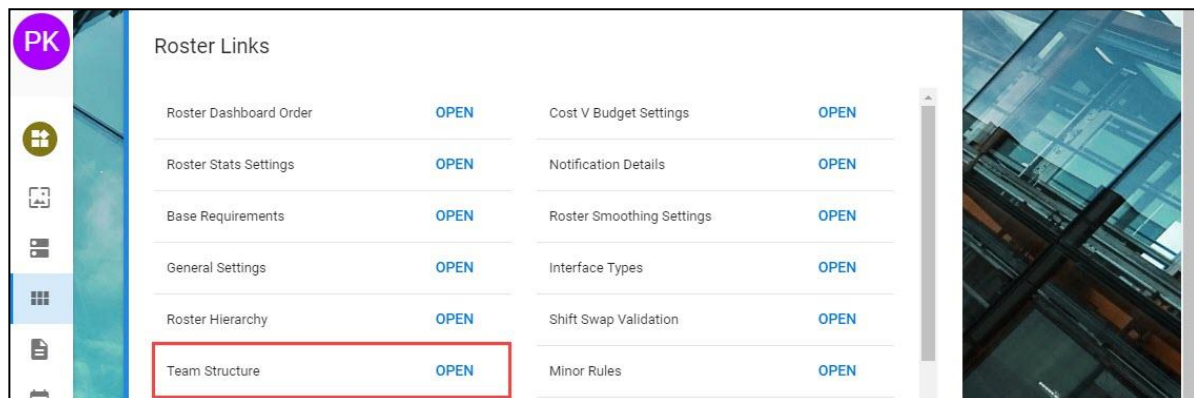

This provides the ability to maintain existing team structures, create new team structures and modify team area settings, where required. It is possible to:

- Add a new Team Area
- Create new Team Structures
- Modify existing Team Structures

3.3.1. Add Team Area

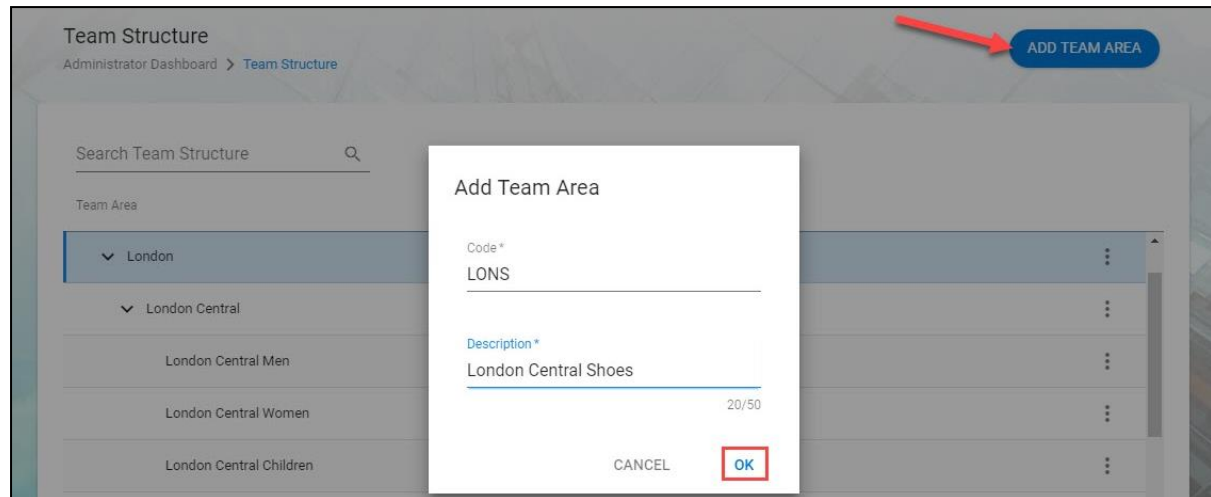

To view/edit the *Team Structure*:

1. Click **Open** on *Team Structure*.

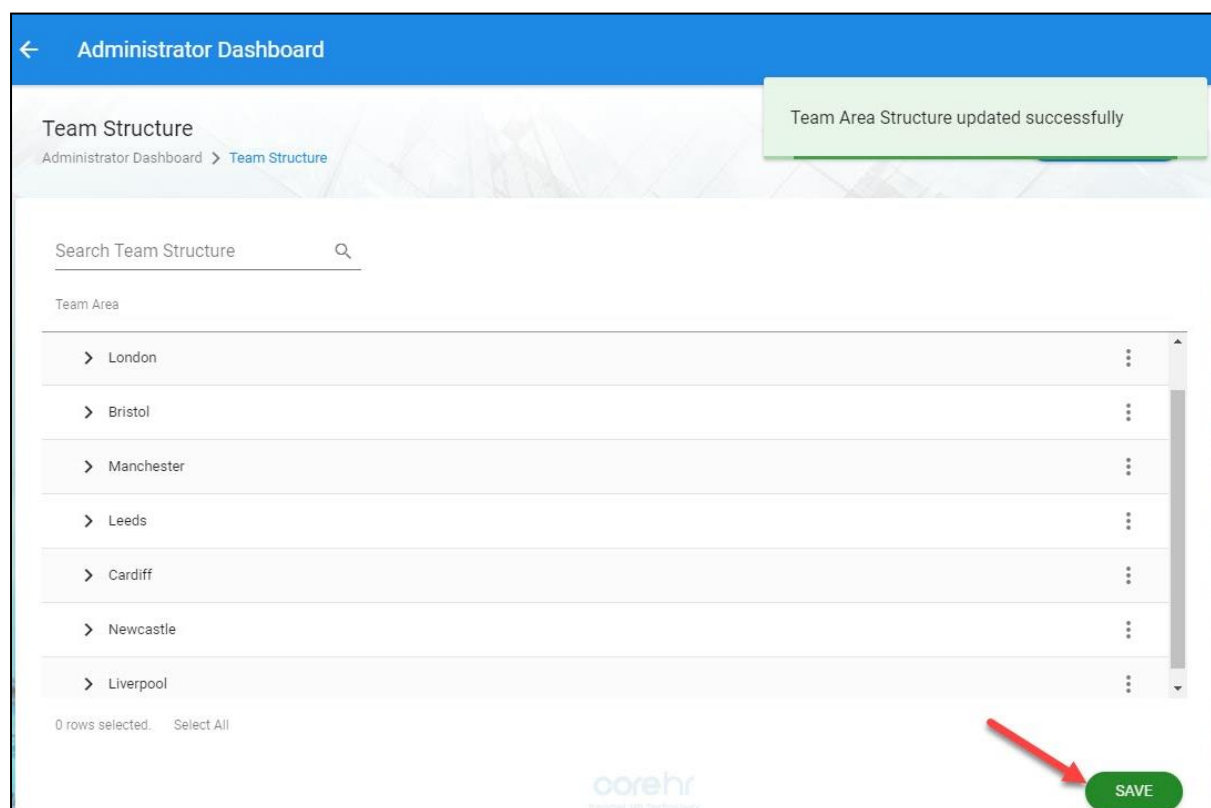

The *Team Structure* screen displays, presenting the current structure.

2. Here it is possible to add a new Team Area by clicking the **Add Team Area** button.
3. Enter the *Code*.
4. Enter the *Description*.
5. Click **OK**.

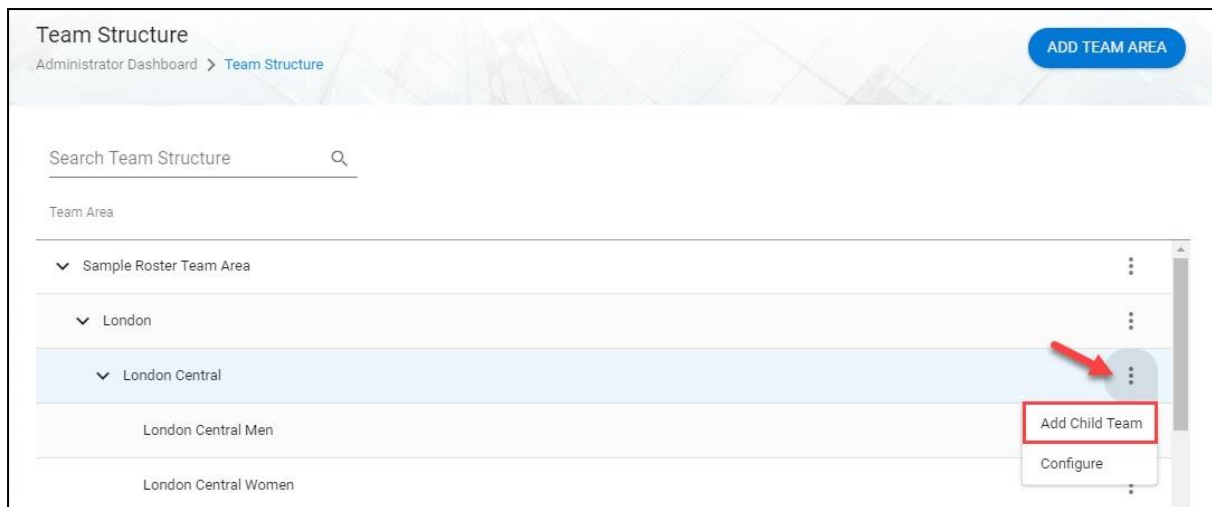

6. Click **Save**.

The newly created Team Area is not visible in the *Team Structure* window until it is added using the **Add Child Team** option.

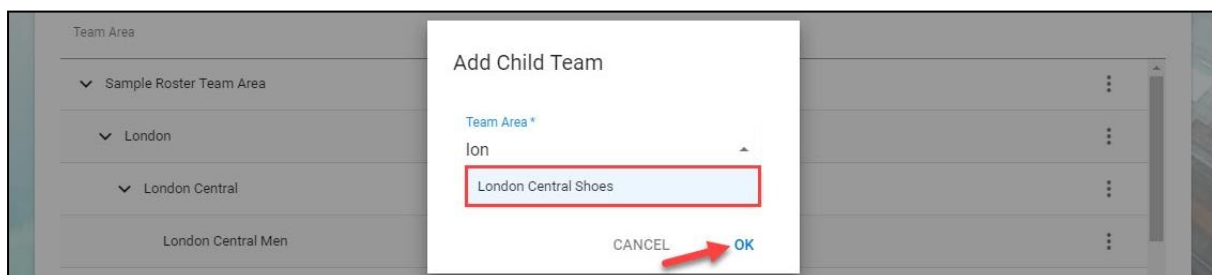

7. Click the  button on the *Parent Team Area*.
8. Select **Add Child Team**.

The *Add Child Team* pop-up displays.

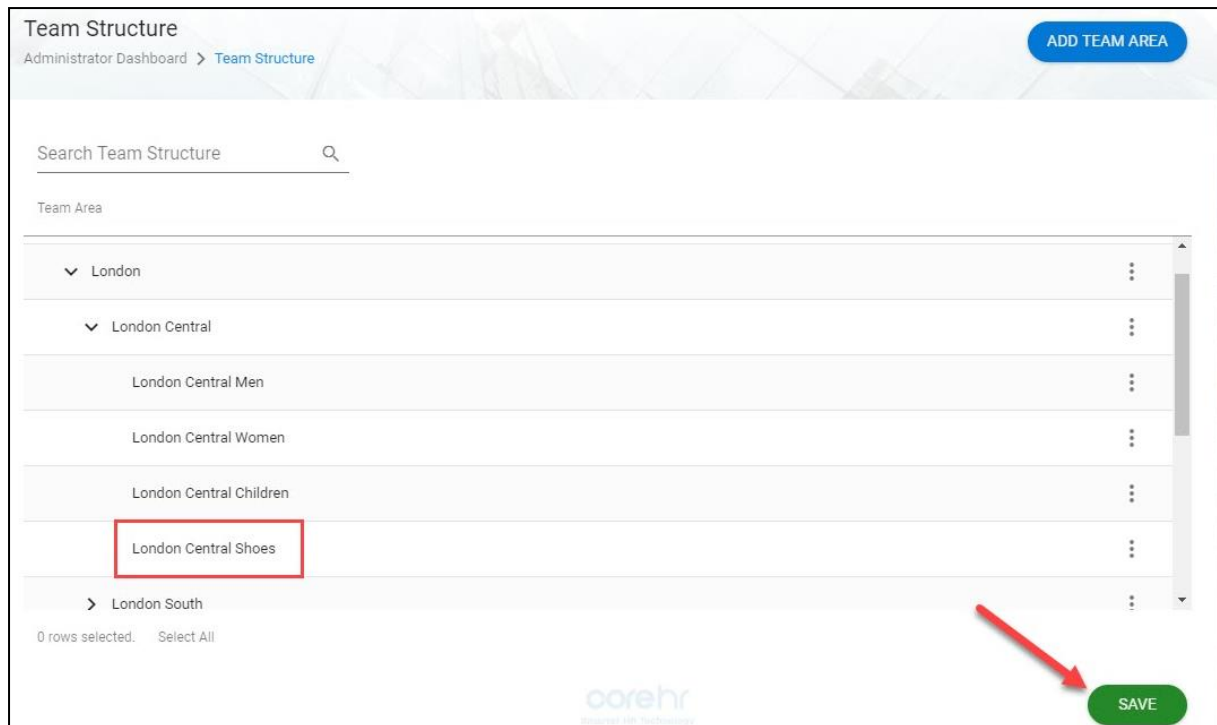

9. Select the valid *Team Area* to be added from the drop-down list, valid *Team Areas* will be shown when you start typing.
Valid *Team Areas* are teams not currently residing in the saved *Team Structure*.

10. Click OK to add the *Team Area* to the structure.

11. Click **Save** to confirm the addition.

If you do not want to save the addition of the *Team Area* to the *Team Structure*, close the screen.

3.3.2. Delete Team Area

1. To delete a *Team Area* from the *Team Area Structure*.

2. Select the  button on the applicable *Team Area*.
3. Click **Delete**.
4. Click **Save** here to confirm the deletion.

Note that any *Team Area* that holds a child *Team Area* cannot be deleted. The child *Team Areas* must be moved or deleted first.

If you do not want to save the deletion of the *Team Area* to the *Team Structure*, close the screen.

3.3.3. Considerations

- Team Areas can be moved around by dragging and dropping within the Team Structure window.
- A Team Area can be moved up levels or arranged in a different order at the same level.
- With the drag and drop functionality, it is possible to move Team Areas down a level within the structure, however, only as far as the current lowest level within the Team Structure.
- The **Configure** option shown below brings you to the *Team Area Configuration* screen. View section [Team Area Configuration](#) for further information.

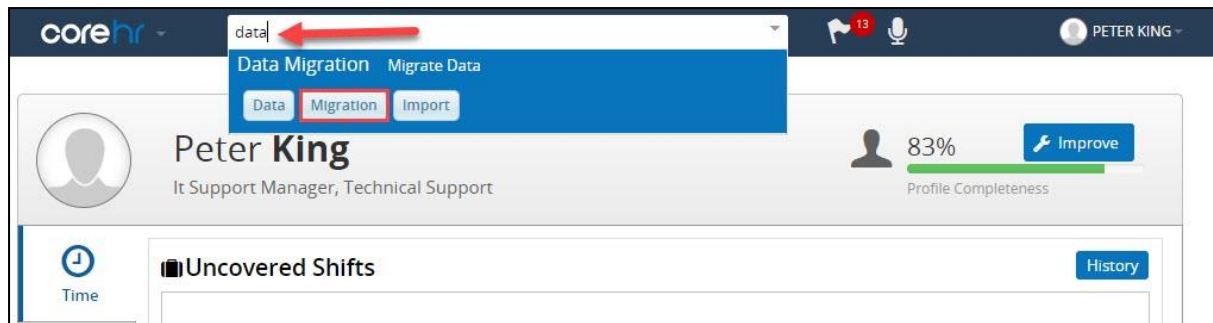

3.4. **Data Migration**

It is possible to create a new *Team Area Structure* via *Data Migration* within *CorePortal*. There are a number of items to consider when data migrating your *Team Area Structure*:

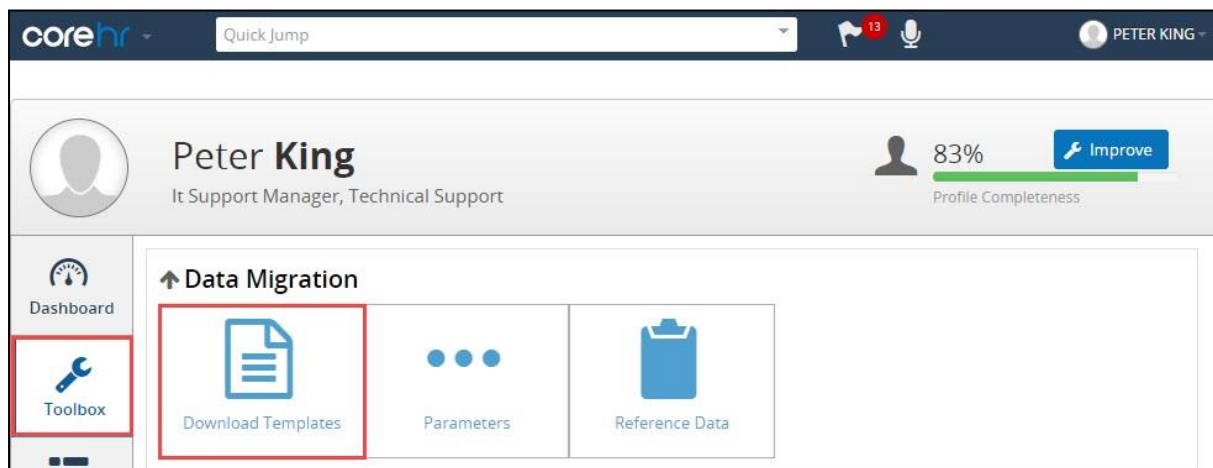

- If piloting small *Team Areas*, the entire *Team Area Structure* must still be loaded initially.
- It is possible to do all editing in a Microsoft Excel file initially, then convert to a .CSV file.
- It is important to follow the correct order of *Team Area Structure* in the .CSV file, for example:
 - Level 1
 - Level 2
 - Level 3
 - Level 4
 - Level 4
 - Level 2
 - Level 3
 - Level 4
 - Level 4
 - Level 4
 - Level 4
- Do not use any special characters. For example, use 'Cafe' instead of 'Café'.

To Data Migrate your Team Area Structure, first you must toggle to the Classic UI:

1. On the Classic UI, *Quick Jump to Data Migration*.

2. Click **Toolbox**.
3. Select **Download Templates**.

The Template Zip File now downloads to your machine.

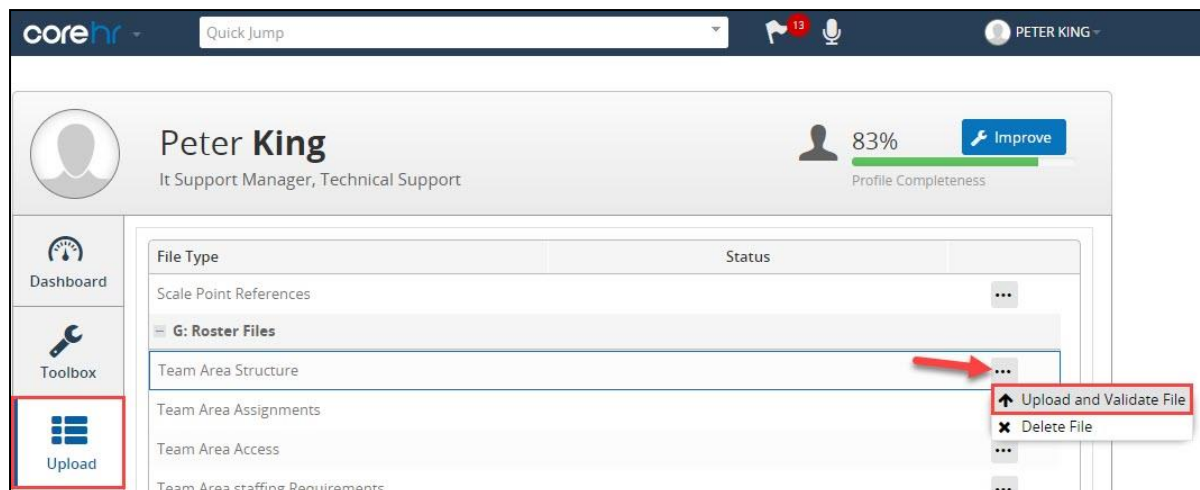

4. Search for the *HRIM06-DM Data Migration Template* for Roster Area Structure (AREA) template in the Zip file.
5. Populate the *Data Migration Template* with the completed *Team Area Hierarchy*.

The below details an example CSV file:

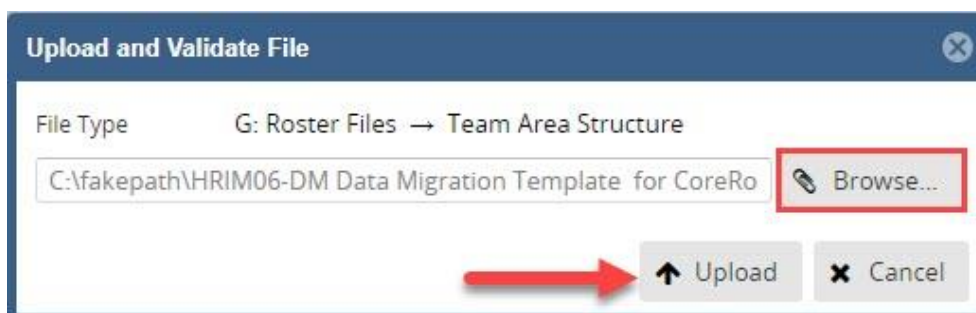

```
C,CoreStore Group,1
CS,CoreStore,2
CS001,CoreStore London (CS001),3
CS001A,London Storage Floor Team (CS001A),4
```

Next, to upload your .CSV file:

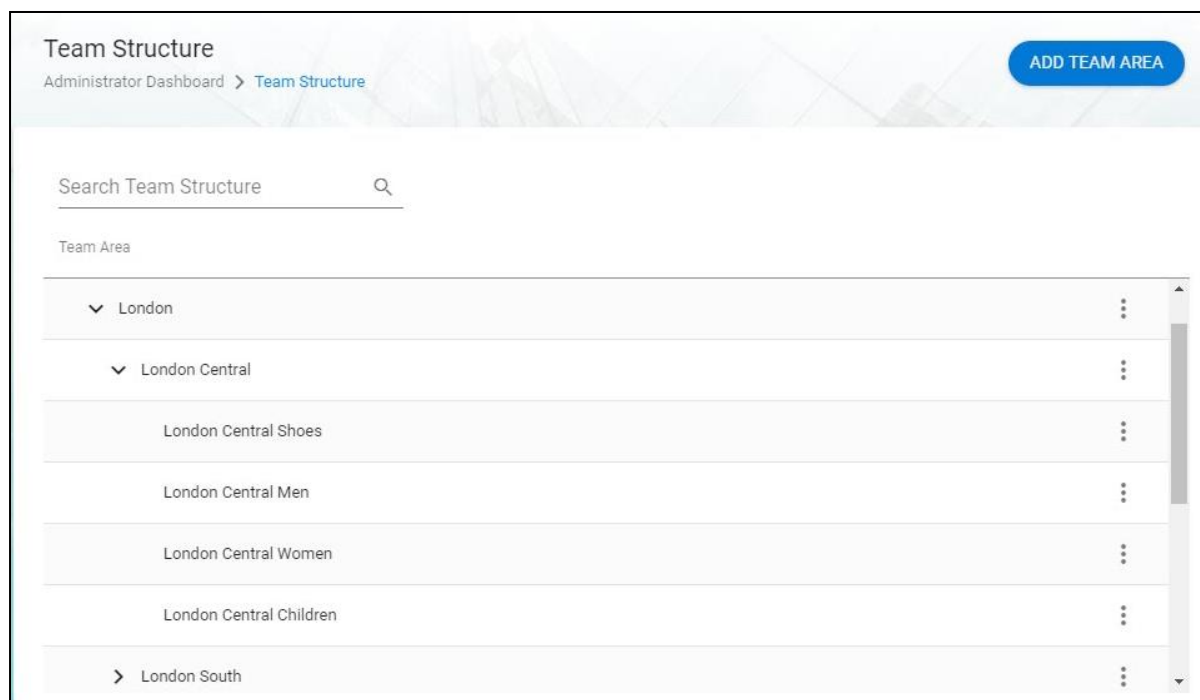

6. Click the **Upload** tab.
7. Select **Upload and Validate File**, on the *Team Area Structure File Type*

8. Click **Browse** to locate and load your file on screen.
9. Click **Upload**.

The below screenshot details the example *Team Area Structure* that has been successfully created via *Data Migration*.

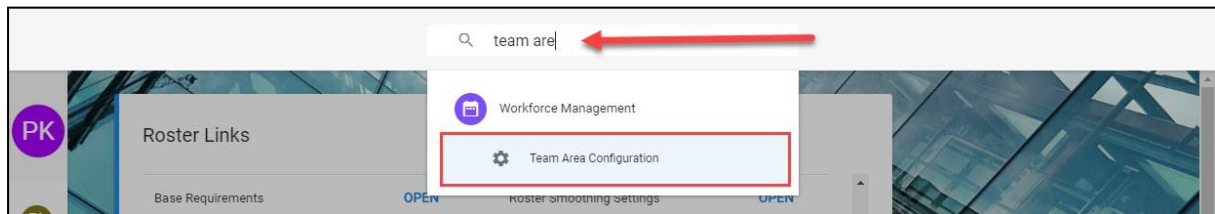

3.5. Team Area Configuration Screen

3.5.1. Recommended Teams

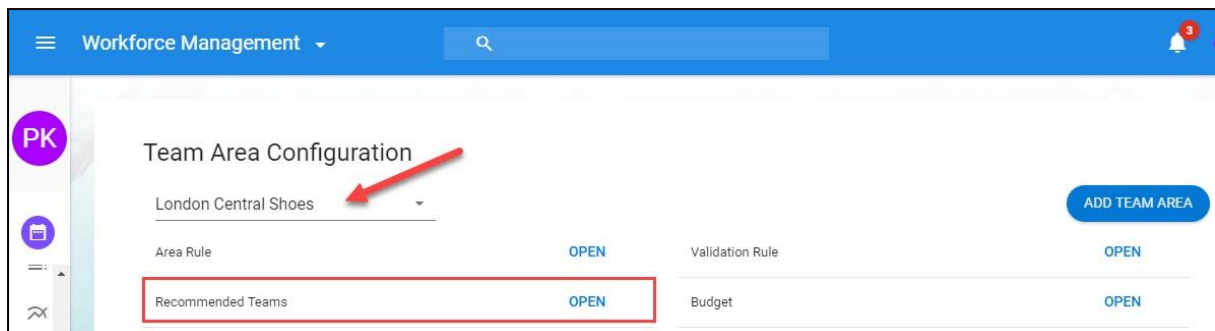

Recommended Teams can be attached to a *Team Area*. The *Recommended Teams* can be used to fill gaps in the roster, if the *Home Team Area* does not have enough capacity (employees) to meet staffing demand.

To add *Recommended Teams*:

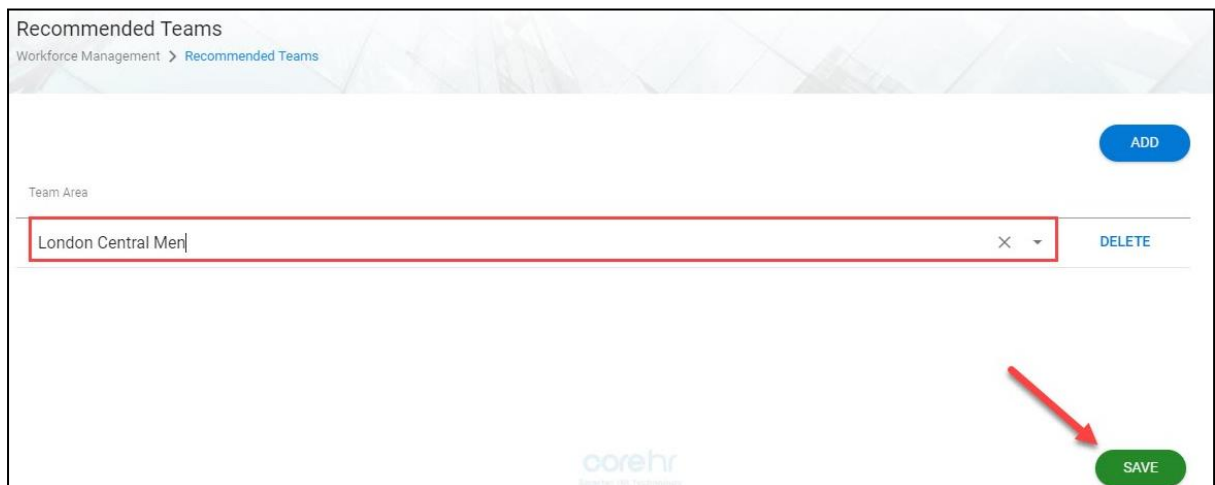

1. *Quick Jump to Team Area Configuration.*

2. Select the applicable *Team Area* from the drop-down list.
3. Select **Open** *Recommended Teams*.

4. Click **Add**.
5. Select the *Team Area* from the drop-down list.
6. Click **Save**.

In this example, the 'London Central Men' *Team Area* is now a *Recommended Team Area* for the 'London Central Shoes' *Team Area*.

Restrict Recommended Team Level

There is an *Admin Setting* available to restrict the *Recommended Team Areas* that are listed to view/select, to the lowest to lowest team levels you have access to.

Parameter	Description
cp_roster_restrict_rec	Restrict recommended teams to lowest team levels user has access to.

When this Admin Setting is:

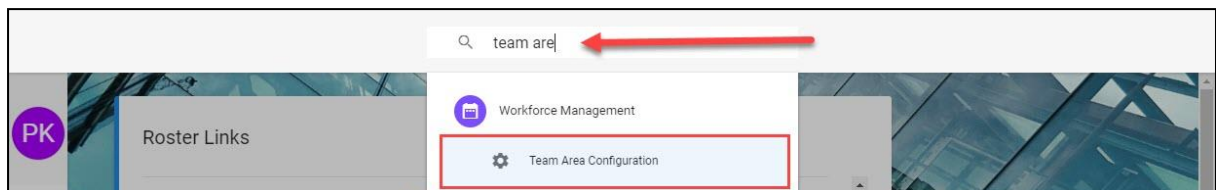

- Set to 'Y', you can only view/select *Team Areas* that you have access to in the lowest level. Therefore, higher levels (above the Home *Team Area*) in the hierarchy are not displayed.
- Set to 'N', you can view/select all *Team Areas* in the hierarchy drop-down list.

For further information surrounding Recommended Teams, view the Roster Before Period is Published training material on CoreHR University.

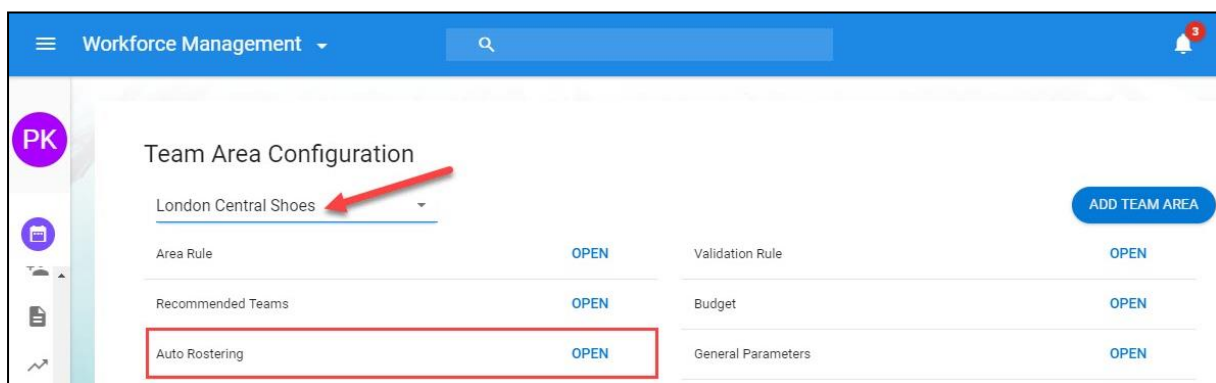

3.5.2. Auto Rostering

The *Auto Rostering* screen holds the configuration *Day Settings* and *General Settings* for Auto Rostering. To configure the Auto Rostering settings:

1. *Quick Jump to Team Area Configuration.*

2. Select the applicable *Team Area* from the drop-down list.
3. Select **Open Auto Rostering**.

The *Auto Rostering* screen displays.

On the *Day Settings* section of this screen, it is possible to prioritise your busiest days within the week. In this example the organisation prioritizes Friday and Saturday as the busiest days.

4. Enter the applicable priority for each day of the week.

For example, beginning with '1' for the highest priority, '2' for the second highest priority, '3' for the third highest priority. Etc.

The screenshot shows the 'Auto Rostering' screen with the 'Day Settings' section highlighted by a red box. The settings are as follows:

Day	Priority
Monday	7
Tuesday	6
Wednesday	5
Thursday	4
Friday	1
Saturday	2
Sunday	3

On the *General Settings* section of the screen, it is possible to specify the rules surrounding *Late Nights* and *Overnight* times.

5. Enter the *Late Night Time*.
6. Enter the *Number of Late Nights*.

This validation checks what the max Number of Late Nights is for the Team Area, and during Auto Rostering, scores the employee accordingly to ensure this rule is not breached. To ensure and employee does not get rostered for more than the specified number of late nights.

A late night is identified by the system, where the start or end time is after the *Late Night Time* field as set for the *Team Area*.

The screenshot shows the 'Auto Rostering' screen with both 'Day Settings' and 'General Settings' sections. The 'Day Settings' are as follows:

Day	Priority
Monday	1
Tuesday	1
Wednesday	1
Thursday	1
Friday	1
Saturday	1
Sunday	1

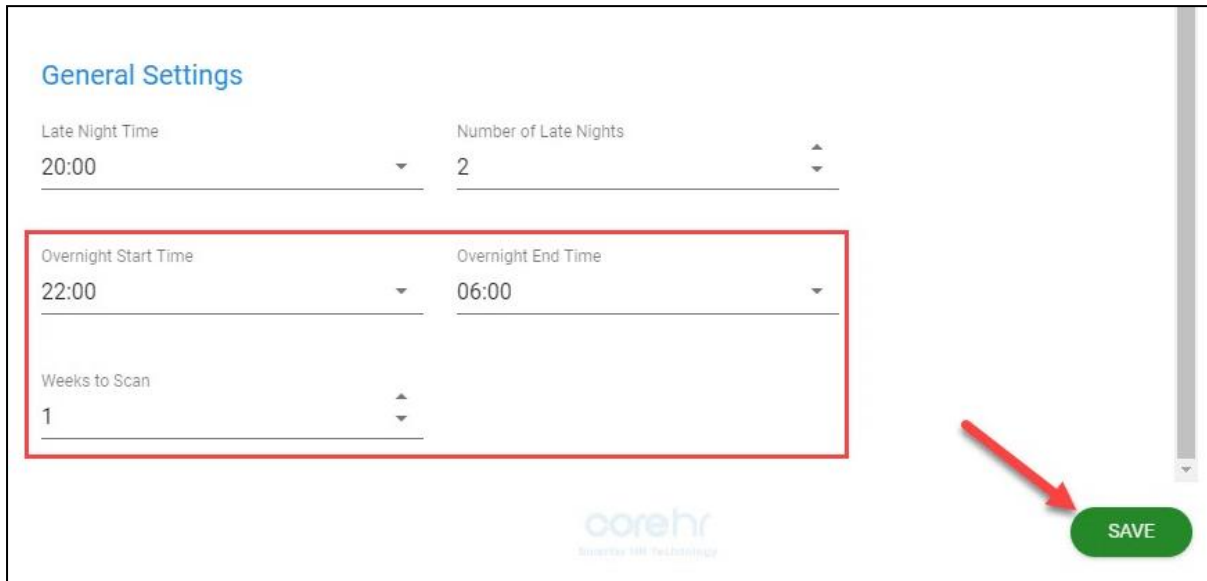

The 'General Settings' section is highlighted by a red box and contains the following information:

Setting	Value
Late Night Time	20:00
Number of Late Nights	2
Overnight Start Time	

7. Enter the *Overnight Start Time*.
8. Enter the *Overnight End Time*.
9. Enter the *Number of Weeks to Scan*.

This *Validation Rule* has been applied to ensure employees are not rostered to work on more than the specified number of overnight shifts in a rostering period. A night shift is identified where the start time of the shift is on or before the *Overnight Start Time* and the end time is on or after the *Overnight End Time* as held on the *Team Area*.

10. Click **Save**.

General Settings

Late Night Time: 20:00
Number of Late Nights: 2

Overnight Start Time: 22:00
Overnight End Time: 06:00

Weeks to Scan: 1

SAVE

3.5.3. Budget

The budget is assigned per *Team Area*. Here, it is possible to assign a set budget to groups of dates. These dates can be set on a daily, or a weekly level.

- To set on a daily level, you must enter the required dates for the budget into the *Start Date* and *End Date* fields.
- To set the required budget for a weekly level, you must enter the start date of the week in the *Start Date* field, generally the Monday, and the end date in the *End Date* field, generally the following Sunday.

To configure the *Team Area Budget*:

1. *Quick Jump to Team Area Configuration*.
2. Select the applicable *Team Area* from the drop-down list.
3. Select **Open Budget**.
The *Budget* screen appears.
4. Enter the *Start Date*.

5. Enter the *End Date*.
6. Enter the *Budget*.
7. Click **Save**.

Budget
Workforce Management > Budget

Start Date	End Date	Budget
15-Apr-2019	21-Apr-2019	100000

Buttons: ADD, DELETE, SAVE

Note:

It is also possible to upload daily and weekly *Budget* values for *Team Areas* via the *WFM Interface File*. For further information, view the WFM Interface file training material on CoreHR University.

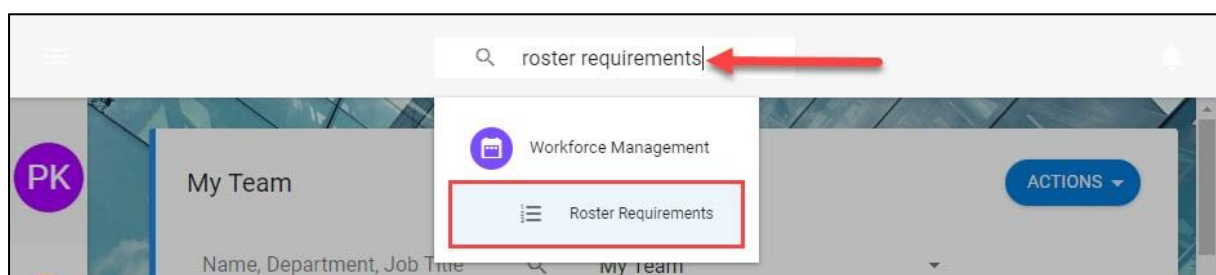

3.5.4. Staff Requirements

Staff requirements are effective for generating *Demand Based Rostering* on sales or other metrics. *Staff Requirements* are initially created via the *Roster Requirements* screen and are then assigned to *Team Areas* via the *Staff Requirements* option. For more detailed information and guidance, view the Demand Based Rostering training material on CoreHR University.

Create Roster Requirements

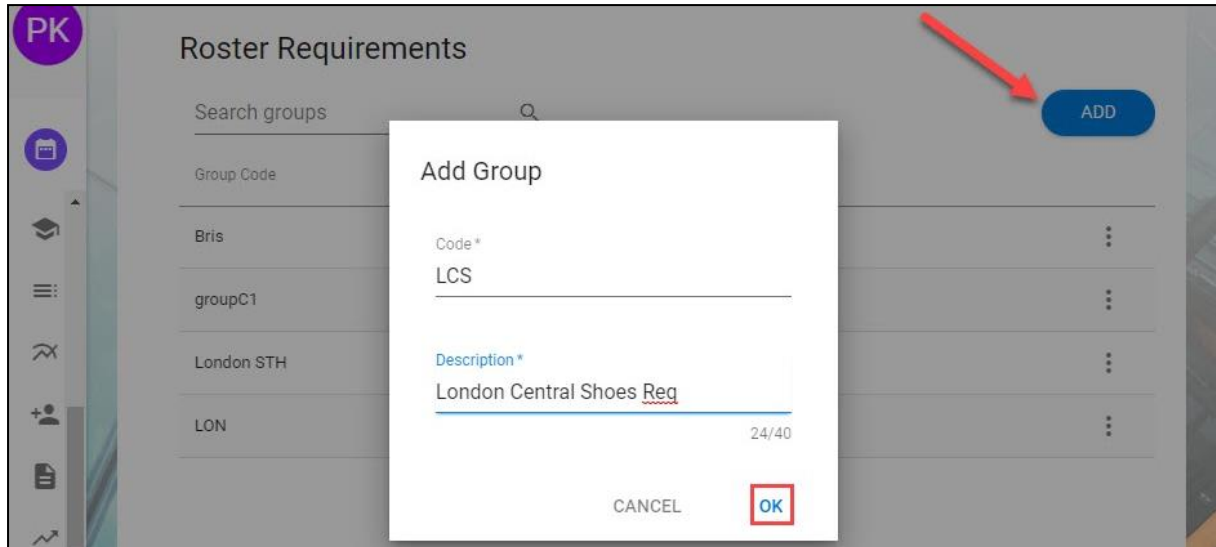

To create *Roster Requirements*:

1. *Quick Jump to Roster Requirements*.

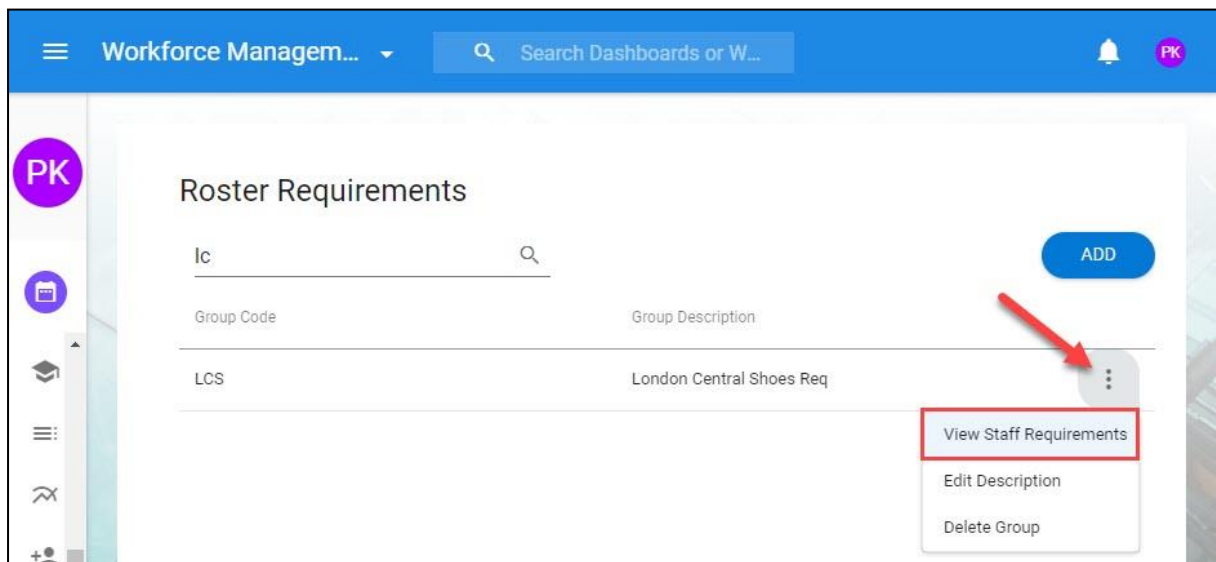

The *Roster Requirements* screen displays.

2. Click **Add**.
3. Enter the *Code*.
4. Enter the *Description*.
5. Click **OK**.

The *Group* is now present on the *Roster Requirements* screen.

6. Click the  button.
7. Select **View Staff Requirements**.

The *Staff Requirements* screen holds the groups of rules that are generated against the specified metric and applied to the *Team Area*.

8. Enter the applicable fields.
9. Click **Save**.

4. Employee Assignments

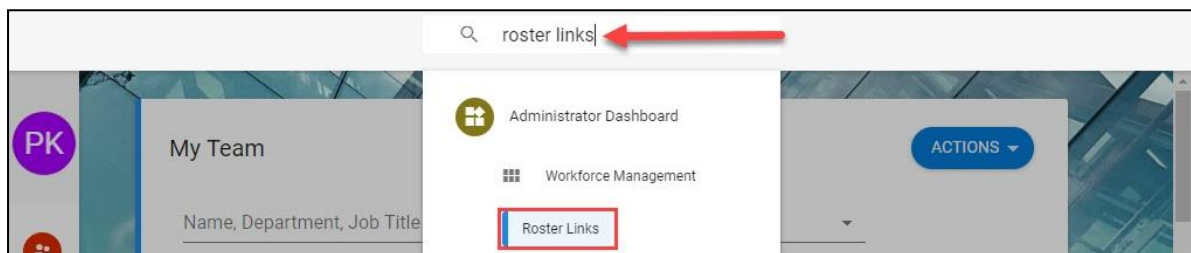

4.1. Team Area Assignment

All Roster employees must be assigned to a *Home Team Area* in order for them to display on the *Roster Details* screen. The *Team Area Assignment* screen on the *Roster Links* widget allows you to individually assign employees within your remit to *Team Areas*.

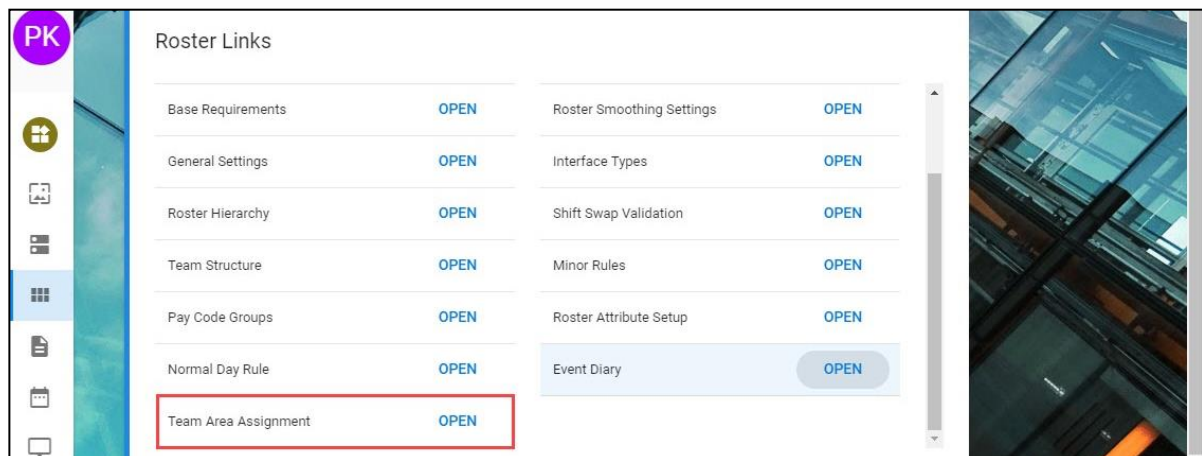

4.1.1. Assign Individual Employees

To assign an employee to a *Team Area*:

1. Quick jump to the *Roster Links* widget.

2. Click **Open** on *Team Area Assignment*.

The *Team Area Assignment* screen displays.

3. Select the applicable employee from the *Person* drop-down list.
4. Click the **Add** button.

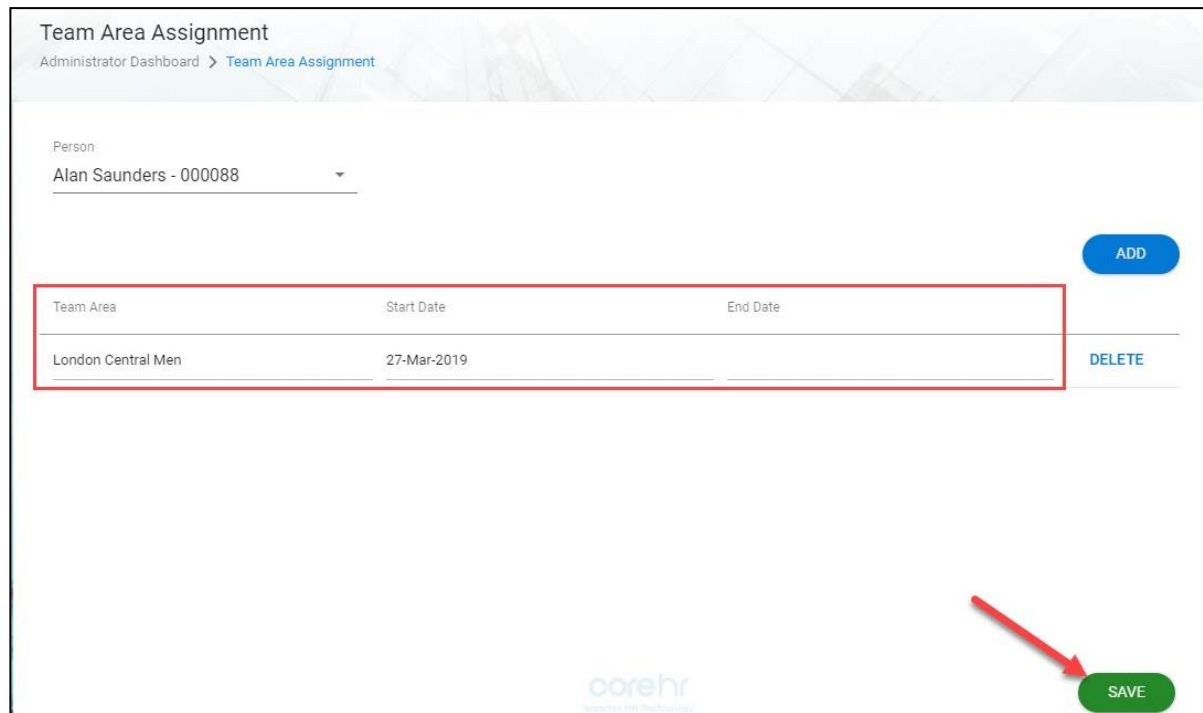

5. Select the applicable Team Area from the drop-down list.
6. Enter the *Start Date*.

The *Start Date* should match start date of the *Work Pattern* assignment.

7. Enter the *End Date*, if applicable.

There should only be a single open-ended row per employee, as employees can only have a single *Home Team Area*.

8. Click **Save**.

Note:

Team Area Assignments can also be completed via the *Data Migration* feature using the *HRIM06-DM Data Migration Template for CoreRoster Area Assignment (AreAss)* template.

The below details sample contents for *Team Area Assignment Data Migration* file.

```
000003,CN001A,02012019,
000004,CN001A,02012019,
```

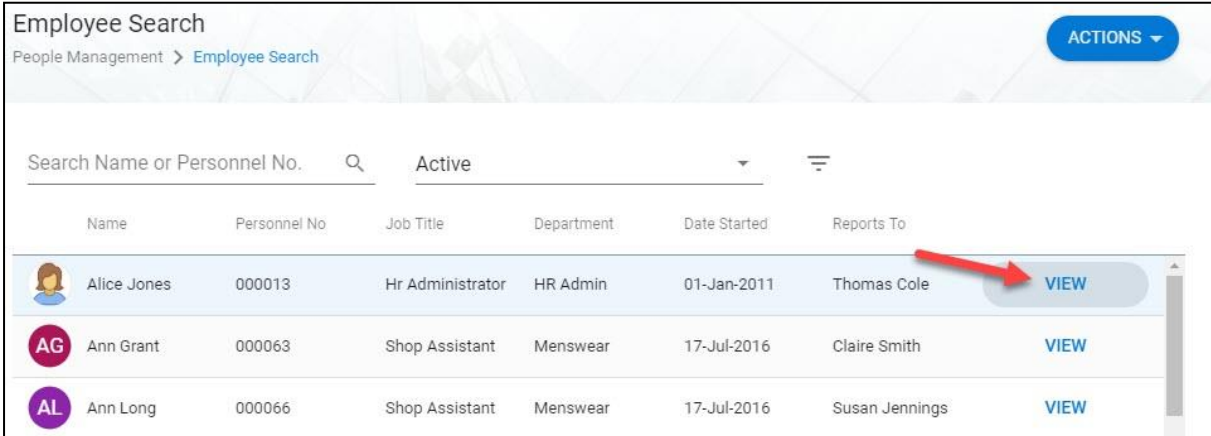

This can only be completed by toggling to the Classic UI.

4.2. Work Group

All Roster employees must be assigned to a *Work Group* within *Workforce Management*. Generally, employees would have previously been assigned to their *Work Groups* during the phase 1 *Time and Attendance* implementation. This *Work Group* should ideally match the employee's *Team Area* assignment.

It is possible to view and/or amend the employee's *Work Group* via *Contract Amendment* screen in *CorePortal*. To access this screen:

1. Quick jump to *Command Centre*.
2. Click **View Employees**.
3. Click View on the applicable employee.

PREVIOUS **SAVE**

The *Work Group* is now updated for the employee.

**Note:**

Work Group assignments can also be completed via the *Data Migration* feature using the *HRIM06-DM-702 Data Migration Template for Workgroup Assignments (WRG)* template. The below table details sample contents for *Work Group* assignment *Data Migration* file:

000003,,CS001A
000004,,CS001A

- If applicable, managers must to be granted the relevant *Org Role* access to the newly created *Work Groups* via *CorePersonnel*. For further information, view the Organisational Roles training material on CoreHR University.
- The *Work Group Code* must be configured in *CoreTime* before *Data Migration*.

This can only be completed by toggling to the Classic UI.

4.3. Work Group Configuration - Retail Calculation

The following items should be taken into consideration when configuring *Work Groups* for the *Roster – Retail Calculation*:

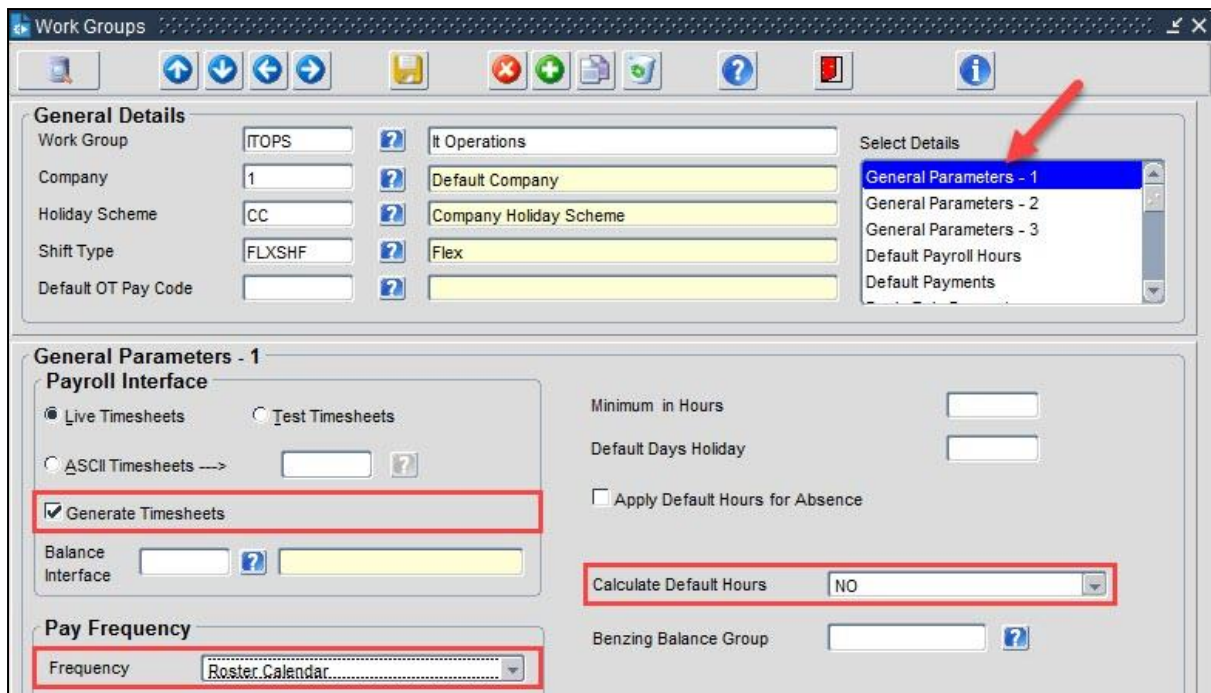

- Configure *Work Group Codes* and *Descriptions* to match *Roster Team Areas*.
- The *Generate Timesheets Indicator* must be enabled.
- The *Pay Frequency* can be set to a *User Defined Calendar (UDC)*, to be used for paying *Roster* employees only.
- The *Calculate Default Hours* field should be set to **No**.
- The *Calculate Clockings* indicator should enabled.
- The *Rostering Calculation Method* field should be set to **RETAIL**.

To configure a *Work Group* for the *Roster Retail Calculation*:

1. Go to *Backoffice > CoreTime/CoreRoster > System Params > Work Groups*.
2. Enter the *Work Group*.
3. Select **General Parameters – 1** from *Select Detail*.
4. Tick on the *Generate Timesheets* indicator.
5. Select the applicable *Pay Frequency* from the *Frequency* drop-down list.

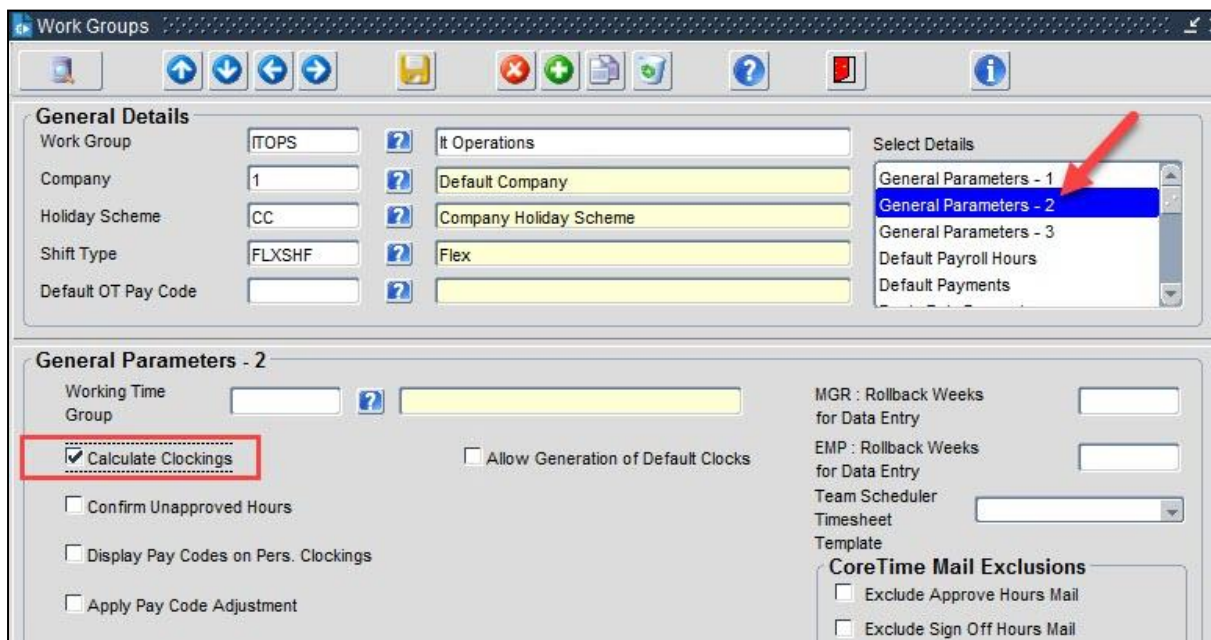

It is possible to set to a newly created *User Defined Calendar (UDC)* here, to be used for paying only *Roster* employees. In this example, a weekly *UDC* beginning on a Monday, similar to the standard *System Calendar* week is used. This facilitates the ability to *Generate Timesheets* for *Roster* employees, independent of *Non-Roster* employees.

6. Select **NO** from the *Calculate Default Hours* drop-down list.

The screenshot shows the 'Work Groups' application window. The 'General Details' section includes fields for Work Group (ITOPS), Company (1), Holiday Scheme (CC), Shift Type (FLXSHF), and Default OT Pay Code. The 'General Parameters - 1' tab is active, showing the 'Payroll Interface' section with 'Live Timesheets' selected, 'Generate Timesheets' checked, and 'Frequency' set to 'Roster Calendar'. The 'Calculate Default Hours' dropdown is set to 'NO'. The 'Select Details' list on the right includes 'General Parameters - 1', 'General Parameters - 2', 'General Parameters - 3', 'Default Payroll Hours', and 'Default Payments'.

7. Select **General Parameters – 2** from *Select Detail*.
8. Tick the *Calculate Clockings* indicator.

The screenshot shows the 'Work Groups' application window with the 'General Parameters - 2' tab active. The 'Calculate Clockings' checkbox is checked. The 'Calculate Default Hours' dropdown is set to 'NO'. The 'Select Details' list on the right includes 'General Parameters - 1', 'General Parameters - 2', 'General Parameters - 3', 'Default Payroll Hours', and 'Default Payments'.

9. Select **General Parameters – 3** from *Select Detail*.
10. Select **RETAIL** from the *Rostering Calculation Method* drop-down list.

11. Click the  button to save.

5. Base Requirements

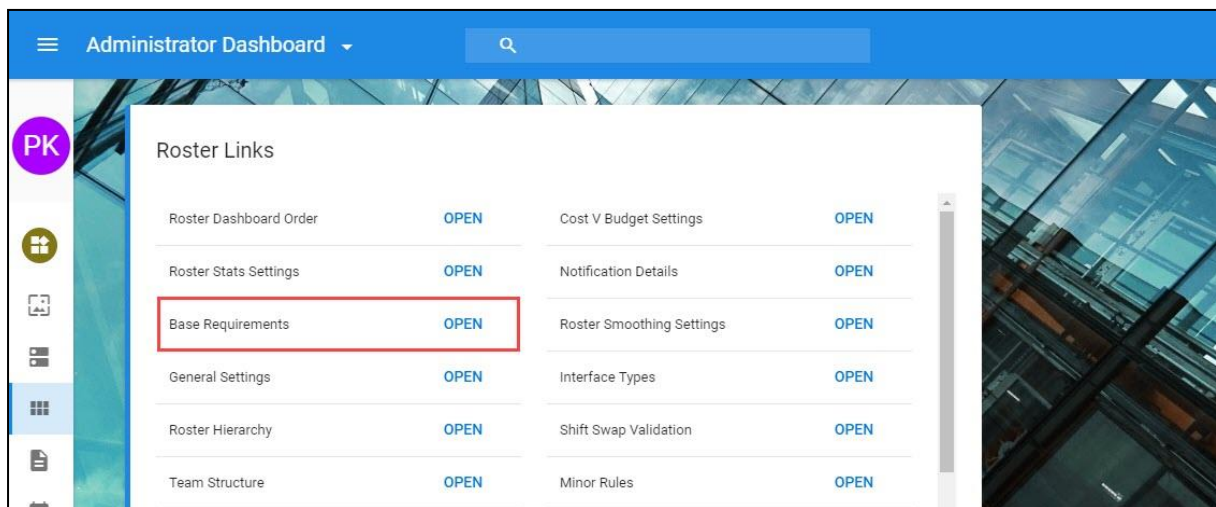

5.1. Create Base Requirements

Base Requirements are configured to determine the opening and closing times of the site. For this example, CoreStore sites:

- Open to the public at 10:00 and close to the public at 17:00 (*Trading Hours*).
- Working times run from 09:00 until 17:30 (*Opening Hours*).

To configure *Base Requirements*:

1. Quick jump to *Roster Links*.
2. Click **Open** on *Base Requirements*.

The *Base Requirements* screen displays.

3. Select the *Company* from the drop-down list.
4. Select the *Requirement* (Location) from the drop down list.
5. Specify the *Opening Hours* – *Opening Time* and *Closing Time* for each day.
6. If applicable, specify the number of:
 - Entrances
 - Escalators
 - Elevators
 - Doors

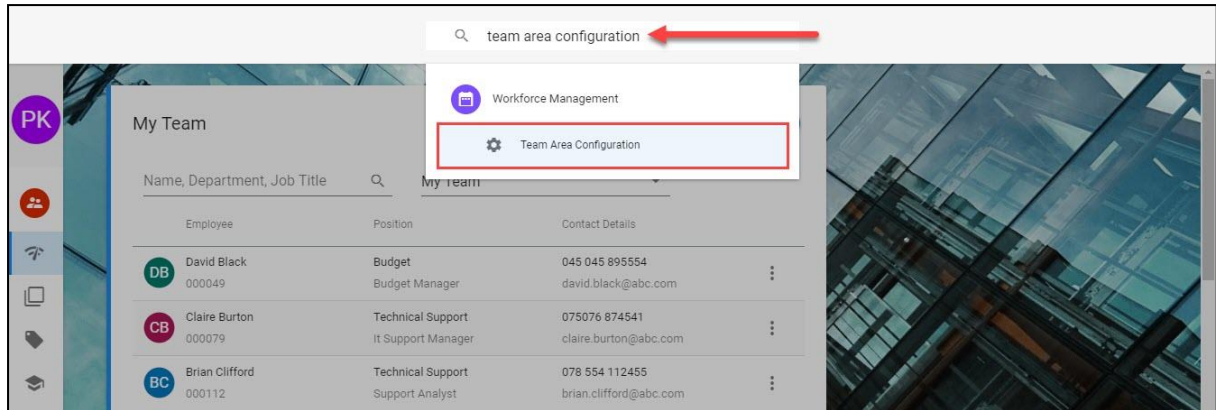

Note:

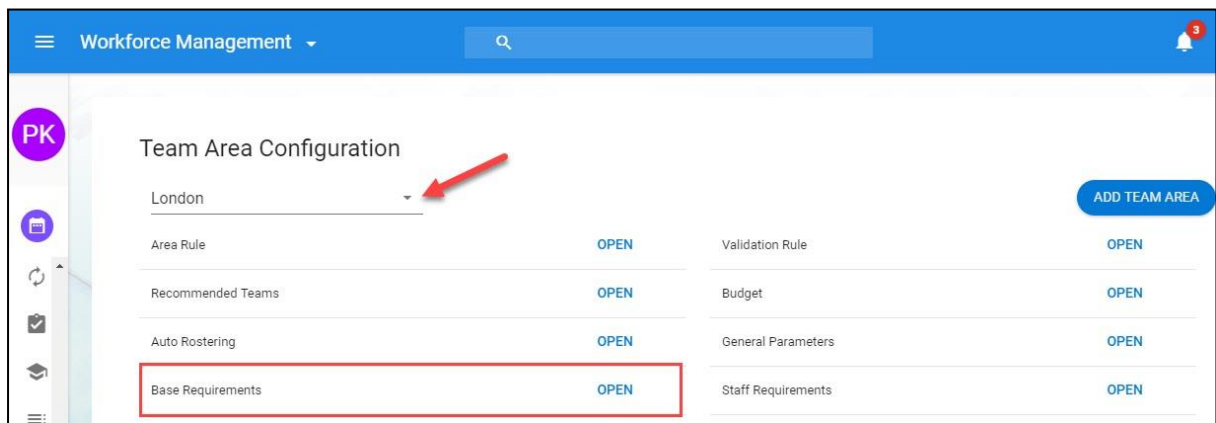

These fields are configurable and Language Packed. Therefore, it is possible to specify any requirements here. For example, number of checkouts, number of dressing rooms etc. For further information, view the [5.1.1. Field Language pack](#) section of this document.

Next, assign the *Base Requirements* to the applicable *Team Area*. In this example, the *Base Requirement* is assigned to the *London Team Area*.

1. Quick jump to *Team Area Configuration*.

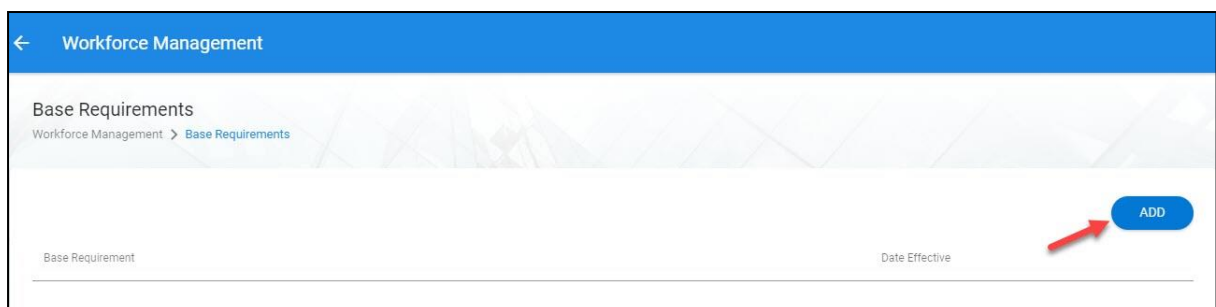

2. Select the applicable Team Area from the drop-down list.
3. Click **Open** on *Base Requirements*.

The *Base Requirements* screen displays.

4. Click **Add**.

A new row is created on screen.

5. Select the applicable *Base Requirement* from the drop-down list.
6. Enter a *Date Effective*.
7. Click **Save**.

Note:

It is possible for *Base Requirements* to be assigned to an upper level *Team Area* (parent *Team Area*), these requirements then flow down to the applicable lower level *Team Areas* (child/sub *Team Areas*).

5.1.1. Field Language Pack Configuration

It is possible to update any of the 4 variable field labels on the Base Requirements screen as outlined in the Create Base Requirements section of this document.

To do this, go to:

1. *Quick Jump to Site Manager*.

2. Click **Open Language Pack**.
3. Search for the label, in need of update.

Language Pack

Administrator Dashboard > Language Pack

Note: All labels are cached, this significantly improves performance for users. It should be rare that labels change regularly, and therefore, this caching is acceptable. This does mean that, for existing users it can take up to 72 hours for the changes to take affect, while new users will see the changes immediately (as no labels are cached). It's possible for existing users to clear their cache to see the changes immediately. We should also point out that, the changes made here will generate a new set of labels every 60 seconds, i.e., we group the changes made here and generate a new set of labels once every minute. Below we indicate when a new set of labels has been generated.

Labels last generated on 13-Apr-2019 23:15:20

number of entrances  English

Label	Default Label	Count	Updated On
Number of Entrances	Number of Entrances	1	

4. Click on the *Label* to edit.
 5. Enter the applicable label between the **** tags.
 6. Press **Enter** on your keyboard to save.
- Or click outside the field, on your screen.

6. General CoreRoster Configuration

6.1. CoreTime Dependencies Overview

There are a number of *CoreTime* elements that the successful implementation of *Roster* is dependent on. These items are detailed in the below table:

Dependency	Explanation
Calendar Start Date	- The start day of the <i>CoreTime Calendar</i> week must be defined early in an implementation project, as a significant amount of work is required to change this start day of the calendar week, once the project has started. - It is essential to ensure that this start day has been agreed on with you CoreHR Project Team, before implementing any stage of <i>CoreTime</i>, as this decision impacts the Roster solution greatly. - The baseline configuration for the start day of the <i>CoreTime Calendar</i> week defaults to Monday.
CoreTime-by-Person v CoreTime-by-Appointment	- The <i>CoreTime-by-Person</i> approach, which is a <i>Non Multi-Appointment</i> solution, is the most common solution implemented for <i>Roster</i>. - Unless a necessity, it is recommended to configure a <i>CoreTime-by-Person</i> solution, rather than a <i>CoreTime-by-Appointment</i> solution.
Work Groups Synced with Team Areas	To avoid any confusion regarding team/line manager links for various processes, for example, <i>Leave Requests Approval</i>: - It is recommended that an employee's <i>CoreTime Work Group</i> should match the employee's <i>Roster Team Area</i>. - Therefore, create the <i>Team Area</i> with the same <i>Reference Code</i> and <i>Description</i> as the <i>Work Group</i>.
Balances	- It is standard/recommended for <i>Balances</i> assigned to <i>Roster</i> employees, to be configured as <i>Hours Balances</i>. - If the <i>Roster Retail calculation</i> is being used, <i>Balances</i> configured as <i>Hours Balances</i> are mandatory. Therefore, <i>Balances</i> cannot be activated as <i>Days</i>.

6.2. Roster System Parameters – Back Office

To begin your *Roster* configuration, it is recommended to start with the *Roster System Parameters* screen.

Note: It is essential to contact your CoreHR Project Team for *Roster* configuration guidance. This is to ensure that the correct *System Data* is configured within your environment and that the configuration is optimised to best meet your organisational requirements.

To configure *Roster* via *Backoffice*:

1. Go to *Backoffice* > *CoreTime/CoreRoster* > *System Params* > *Roster Parameters* > *System Parameters*.
2. The *System Name* automatically populates.
3. Enter the applicable *Group Label*.
4. Enter the applicable *Person Label*.
5. Enter the *Default Balance*, if applicable.
6. Enter the applicable *Roster vs. Contract Balance Code*.
7. Enter the *Not Rostered Pattern*.
8. Enter the *Absence Pattern*.

This field is mandatory. Enter your baseline *Absence Work Pattern* here.

9. Enter the *Overtime Pay Code*, if applicable.

It is also possible specify other default *Pay Codes* for the following fields available on screen:

- Time in Lieu
- Non-Staff Calculation
- Saturday Overtime
- Sunday Overtime
- Company Holiday Overtime

The screenshot shows the 'Roster System Parameters' window. The 'General Parameters' section includes the following fields and values:

Field	Value
System Name	CoreTime 27.0.2 qa27
Group Label	Work Group
Person Label	Person
Default Balance	
Roster vs. Contract	RH
Not Rostered Pattern	REST
Absence Pattern	ABS
Overtime Pay Code	2003
Time in Lieu Pay Code	
Non Staff Calculation Pay Code	
Saturday OT Pay Code	
Sunday OT Pay Code	
Company Hol OT Pay Code	

Additional options include 'Roster Vs. Contract Hours (Roster Only)', 'Rest Pattern Standard', 'Absence Default', and a checkbox for 'Display Default Shift'.

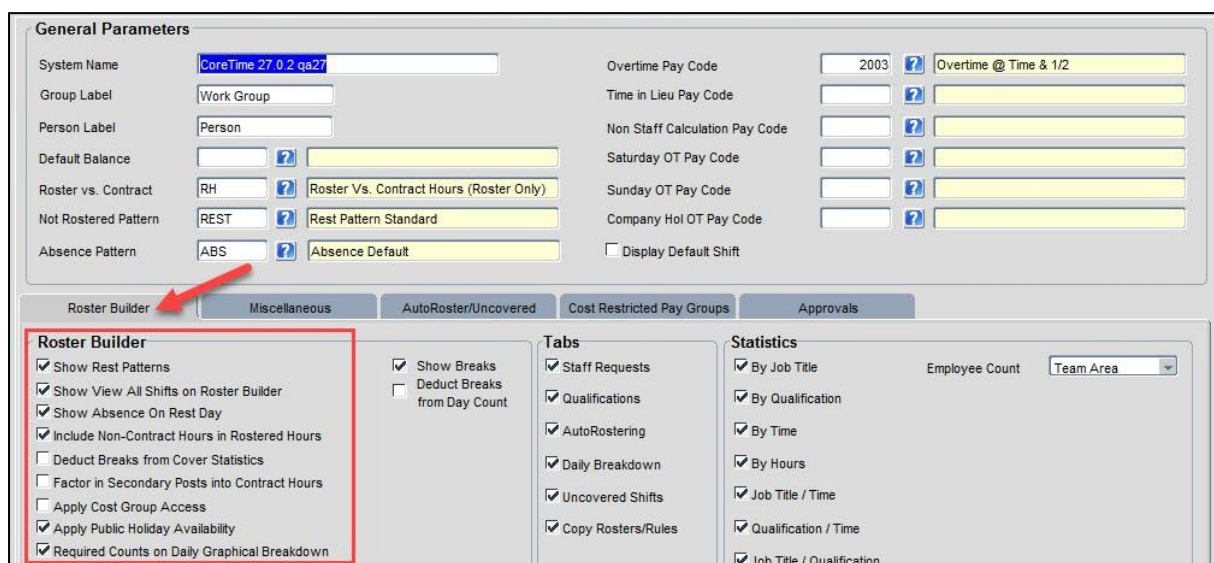

10. Click the **Roster Builder** tab.
11. Tick *Show Rest Patterns*, if applicable.

This is for clarity purposes, as *Rest Patterns* should be highlighted on *Roster Details* screen.

12. Tick *Show View All Shifts in Roster Builder*, if applicable.
13. Tick *Show Absence on Rest Day*, if applicable.
14. Tick *Include Non-Contract Hours in Rostered Hours*.
15. Tick *Deduct Breaks from Cover Statistics*, if applicable.

Note that deducting breaks from cover statistics may result in unclear totals, for example, if 0.95 of the shifts are covered, breaks account for 0.05 of the shifts.

16. Tick *Factor in Secondary Posts into Contract Hours*, if applicable.
17. Tick *Apply Cost Group Access*, if applicable.
18. Tick *Apply Public Holiday Availability*, if applicable.
19. Tick *Required Counts on Daily Graphical Breakdown*, if applicable.

Employee Count: Team Area

The *Statistics* section of this screen holds indicators, that when ticked, display the applicable grouping lists on the *Statistics* screen on the *CorePortal Workforce Management* dashboard. An example of this is shown in the below screenshot.

Description	Mon 04 Mar	Tue 05 Mar	Wed 06 Mar	Thu 07 Mar	Fri 08 Mar	Sat 09 Mar	Sun 10 Mar
	Req Rost	Req Rost	Req Rost	Req Rost	Req Rost	Req Rost	Req Rost
Staffing Summary							
Required by Time / Job Title							
Required by Job Title							
Required by Time							
Rostered by Team							
Rostered by Pattern							

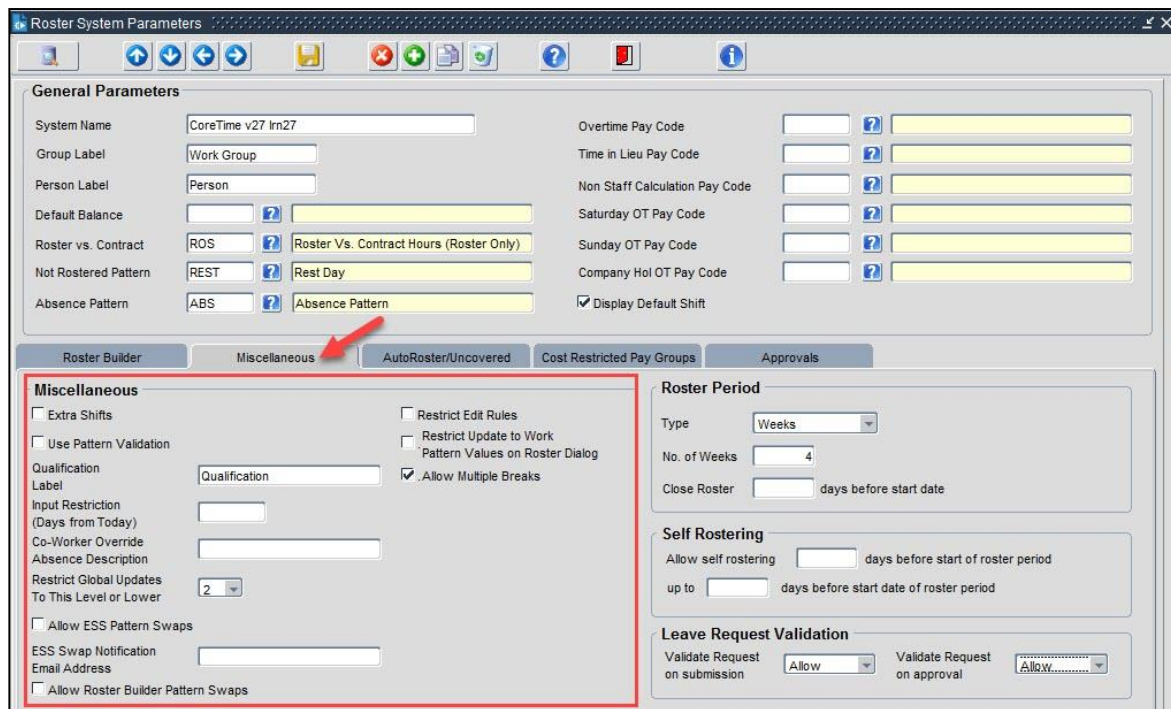

25. Tick the required *Statistics* indicators.

26. Select **Team Area** from the *Employee Count* drop-down list.

27. Next, click the **Miscellaneous** tab.

28. Restrict *Global Updates To This Level or Lower*, from the drop-down list, if applicable.

29. Tick *Allow Multiple Breaks*.

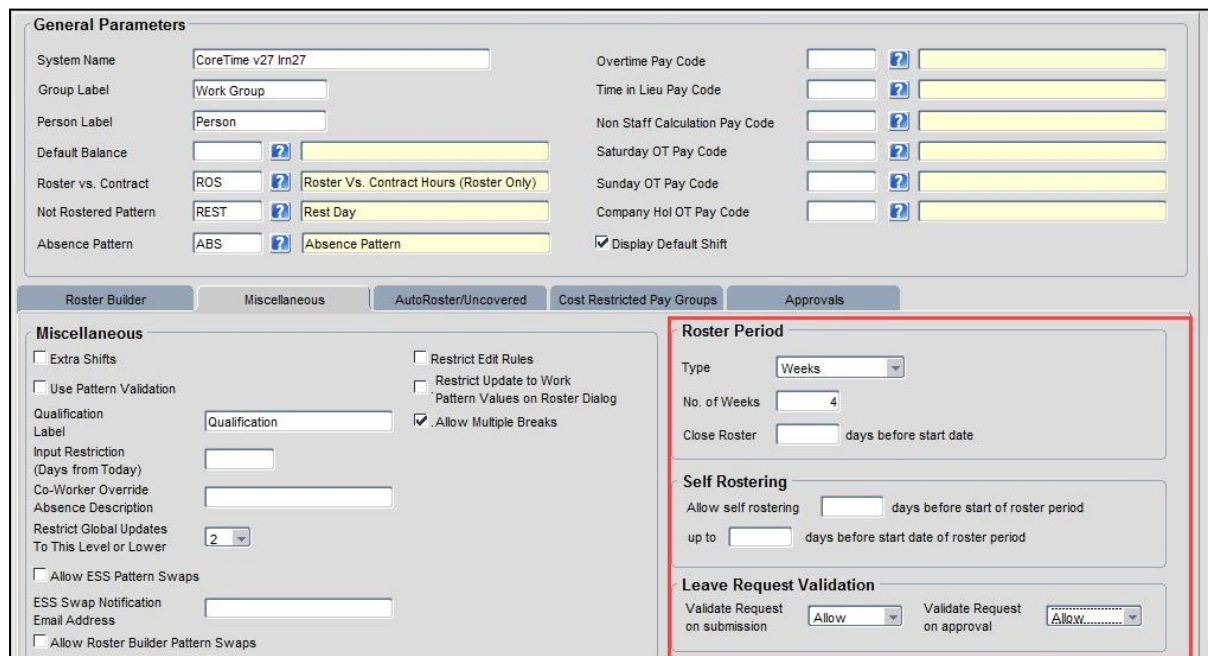

The screenshot shows the 'Roster System Parameters' window. The 'General Parameters' section includes fields for System Name, Group Label, Person Label, Default Balance, Roster vs. Contract, Not Rostered Pattern, and Absence Pattern. The 'Miscellaneous' tab is selected, and the 'Allow Multiple Breaks' checkbox is checked. A red arrow points to this checkbox. Other tabs include 'Roster Builder', 'AutoRoster/Uncovered', 'Cost Restricted Pay Groups', and 'Approvals'.

30. Select **Weeks** from the *Roster Period – Type* drop-down list.

31. Specify the *No. of Weeks*.

32. Select **Allow** from the *Validate Request on submission* drop-down list.

33. Select **Allow** from the *Validate Request on approval* drop-down list.

The screenshot shows the 'Roster System Parameters' window. The 'Roster Period' section is highlighted with a red box. It includes fields for Type (Weeks), No. of Weeks (4), and Close Roster (days before start date). The 'Self Rostering' section includes fields for Allow self rostering (days before start of roster period) and up to (days before start date of roster period). The 'Leave Request Validation' section includes fields for Validate Request on submission (Allow) and Validate Request on approval (Allow).

34. Click the **AutoRoster/Uncovered** tab.

The section highlighted below lists parameters relating to the *AutoRoster* and *Uncovered Shift* processes.

35. Tick *Display Requirements with Rule*.

It is recommended to discuss any additional requirements for the *AutoRoster* and *Uncovered Shifts* configuration with your CoreHR Project Team.

36. Specify the preference for employees for *Availability* while *Working* and *Resting*.

For example, 1 is the lowest preference and 10 is the highest preference.

37. Tick the applicable indicators for the *Publish Options*.

These *Publish Options* then display when publishing *Uncovered Shifts* in *CorePortal*.

38. Click the **Approvals** tab.

39. Tick the *Employee Availability Approval Process* indicator, if applicable.

40. Enter the applicable *Employee Availability Process Code*.

41. Tick the *Shift Swap Approval Process* indicator, if applicable.

42. Enter the *Shift Swap Process Code*.

43. Click the button to Save.

6.3. Control Parameters – Back Office

6.3.1. Select Detail – Rostering

To configure the **Rostering** section of *Control Parameters*:

1. Go to *Backoffice > CoreTime/CoreRoster > System Params > Reference A – C > Control Parameters*.
2. Enter the *Company*.
3. Select **Rostering** from *Select Detail*.

If the Retail Calculation is being used, you must configure the *Break Tolerance* section.

4. Enter the *Break Numbers* and the applicable *Tolerances*.
5. Tick *Pattern Type Validation on Rostering Screens* indicator.
6. Click the  button to Save.

2	10
3	15

6.3.2. Select Detail – Absence Parameters

Note: This corresponds with the *Retail Calculation* option only.

If the *Retail Calculation* option is being used, it is possible to configure the *Pay Code* that generates if an employee clocks in more than a specified number of minutes before they are *Rostered* to start.

These specified number of minutes is configurable, for example:

- The system could generate a 'Not Rostered – too early' *Pay Code*, if an employee clocks in earlier than 2 hours before their *Rostered* start time.
- The system could generate a 'Not Rostered' *Pay Code*, if an employee clocks in on a day that they are not rostered to work, like on their *Rest Day*.

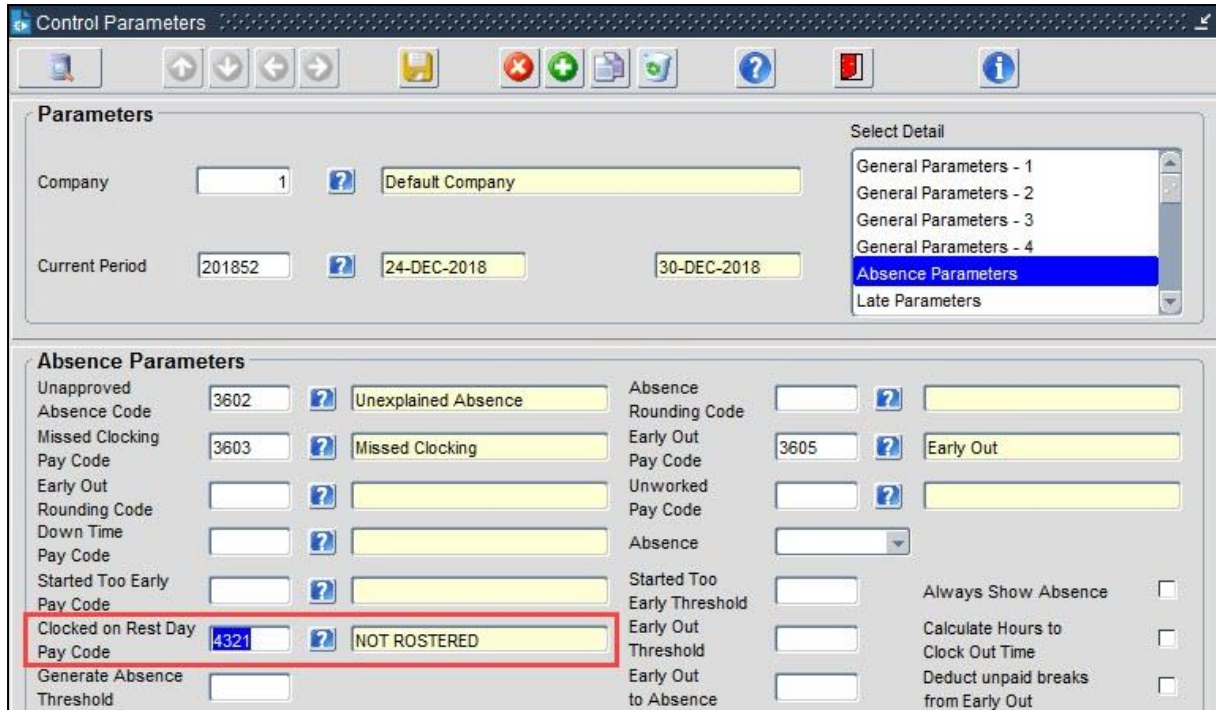

To configure the *Absence Parameters* section of *Control Parameters*:

1. Go to *Backoffice > CoreTime/CoreRoster > System Params > Reference A – C > Control Parameters*.
2. Enter the *Company*.
3. Select **Absence Parameters** from *Select Detail*.

The screenshot shows the 'Control Parameters' window. The 'Parameters' section at the top includes 'Company' (1) and 'Current Period' (201852, 24-DEC-2018 to 30-DEC-2018). The 'Select Detail' dropdown is open, with 'Absence Parameters' selected. The 'Absence Parameters' section contains various configuration fields for absence codes, rounding, thresholds, and display options.

The *Absence Parameters* section displays on screen.

4. Enter the *Clocked on Rest Day Pay Code*.

6.4.2. Auto Roster Settings Tab

Note: It is essential to contact your CoreHR Project Team for *Roster* configuration guidance. This is to ensure that the correct *System Data* is configured within your environment and that the configuration is optimised to best meet your organisational requirements. The following configuration is for example purposes only.

To configure *Auto Roster Settings*:

1. Select the **Auto Roster Settings** tab.
2. Switch on the *Fill employee hours to contract indicator*, if applicable.

For further information in the *AutoRoster* to Contract feature, view section [7.8 AutoRoster to Contract](#).

3. Switch on the *New Roster Calculation indicator*, if applicable.
4. Switch on the *One employee per rule indicator*, if applicable.

For further information in the One Rule feature, view section [7.6 One Rule](#).

5. Switch on the *Pattern on Uncovered Shift indicator*, if applicable.
6. Specify the *Minimum shift to fill in minutes*.
7. Click **Save**.

6.5. Person Maintenance – Generate Overtime

If using the *Retail Calculation* type, all employees who are involved in the calculation must be enabled to **Generate Overtime**.

To enable the *Generate Overtime* indicator:

1. Go to *Backoffice > CoreTime/CoreRoster > Pers Data > Person Maintenance*.
2. Enter the *Person*.
3. Tick on the *Generate Overtime* Indicator.
4. Click the  button to save.

The screenshot shows the 'Person Maintenance' window. At the top, there's a toolbar with various icons, including a save icon (floppy disk) which is highlighted with a red arrow. Below the toolbar, the 'Person Maintenance' section contains fields for 'Person' (000045), 'Name' (Claire Atkinson), 'Work Group' (FIN4), 'Shift Type' (37.50_001), and 'Dept.' (FIN4). To the right, there's a 'Select Detail' dropdown menu with options like 'General - 1', 'General - 2', 'Current Balances', 'Balance Setup', 'Badge Details', 'Picture', and 'Shift Types'. Below this, the 'General - 1' section contains fields for 'Pers. Type' (Permanent), 'Job Title' (Financial Analyst), 'Location' (Head Office), 'Cost Cen.' (Default), 'Expenses', 'Supervisor', 'P.I.N.', 'Mailbox', 'Generate Overtime' (checked), 'Site-Status' (Off-Site), 'Maintain Clockings', and 'Maintain Holidays' (checked). The 'Generate Overtime' checkbox is highlighted with a red box.

6.6. Work Patterns

6.6.1. Review Pre-Defined Work Patterns

Note: This corresponds with the *Standard Calculation* option only.

For the *Standard Calculation*, there is a *Work Pattern* matching every combination of times that employees can work. For example, when employees work on cycle shifts. Employees can then clock in for their shifts and the overnight calculation runs to calculate against their *Work Pattern*.

It is recommended to review all *Work Patterns* that are being used for *Roster*, to ensure employees are assigned to their correct *Work Pattern*, and that the correct shifts are generated for each employee in *Roster*.

6.6.2. Create Base Work Pattern

Note: This corresponds with the *Retail Calculation* option only.

For the *Retail Calculation* type a *Base Work Pattern* should be created for the employees to be placed on. Once the *Base Pattern* is created, it can then be specified on the applicable *Work Group(s)*.

To create a *Base Pattern*:

1. Go to *Backoffice > CoreTime/CoreRoster > System Params > Work Patterns*.
2. Enter the *Base Pattern Code*.
3. Enter the *Base Pattern Description*.
4. Enter the default *Pay Code*.
5. Enter the *Default Overtime Code*.
6. Enter the *Default Hours*.
7. Enter the *Default Start Time*.
8. Enter the *Default End Time*.
9. Tick on the *Retail Calculation* indicator.

The screenshot shows the 'Work Patterns' application window. The 'General Details' section is highlighted with a red box. It contains the following fields and values:

- Code: BASE
- Default Pay Code: 1005
- Default Overtime Code: 3601
- Default Hours: 7.50
- Default Start Time: 09:00
- Default End Time: 17:30
- Dormant: ☐
- Retail Calculation: ☒

The right-hand menu shows the following options:

- General (highlighted with a red arrow)
- Standard Hours
- Breaks
- Bonus Payments
- Premiums
- Misc. Options - 1
- Rostering
- Copy Pattern
- Time Based Bonus

The bottom section, also titled 'General', contains the following fields and checkboxes:

- Earliest Start Time:
- Overtime Override:
- Fill Basic Hours: ☐
- Fill Basic Before Thrs.: ☐
- Rest Pattern: ☐
- Flexi-Time Pattern: ☐
- Core Time Violations: ☐
- Split Default Hours: ☐

10. Select **Standard Hours**.

The *Standard Hours* section displays on screen.

For the *Base Pattern*, this section should have 3 *Standard Hour* rows:

- One for before the base hours on the shift.
- One for the base hours on the shift.

- One for after the base hours on the shift.

The screenshot shows the 'Work Patterns' application window. The 'General Details' section includes fields for Code (BASE), Default Pay Code (1005), Default Overtime Code (3601), Default Hours (7.50), Default Start Time (09:00), Default End Time (17:30), and Dormant (unchecked). The 'Standard Hours' section is a table with columns: Seq. No., Start Time, Late Grace, Eo Grace, End Time, No. of Hours, Rounding Code, Min. in Thresh., OT Seq., Pay Code, OFB Code, Description, and Recode to Default. The table has three rows, all with question marks in the Description column.

For the *Standard Hour* row before the base hours on the shift:

11. Enter Seq. No. '1'.
12. Enter the applicable *Start Time*.
13. Enter the applicable *End Time*.
14. Enter the *Min. in Thresh*.
15. Enter the applicable *Pay Code*.

The screenshot shows the 'Work Patterns' application window with the 'Standard Hours' section. The first row of the table is highlighted with a red border. The values in the first row are: Seq. No. 1, Start Time 00:01, Late Grace, Eo Grace, End Time 09:00, No. of Hours, Rounding Code, Min. in Thresh. 15, OT Seq., Pay Code 3601, OFB Code, Description Extra Hours Worked, and Recode to Default.

For the base hours *Standard Hours* row for the shift:

16. Enter Seq. No. '2'.
17. Enter the applicable *Start Time*.
18. Enter the applicable *Late Grace*.

19. Enter the applicable *EO Grace (Early Out)*.
20. Enter the applicable *End Time*.
21. Enter the applicable *Pay Code*.

Work Patterns

6.6.4. Assign Work Pattern to Employees

It is standard that employees in a *Retail Calculation* type *Roster* environment do not have a pre-defined daily roster. Therefore, employees must be assigned to a *Rest Work Pattern* shift type.

To assign a Work Pattern to an employee:

1. Go to *BackOffice > CoreTime/CoreRoster > Time Mgt > Maintain Person Shift Type*.
2. Enter the *Person*.
3. Enter the **REST** *Shift Type*.

Or any other applicable *Shift Type*.

4. Enter the *Date Effective*.

The *Date Effective* should be start day, of the first week, that *Roster* is being implemented.

5. Click the  button to save.

The *Shift Patterns* are now updated to reflect the *Shift Type* assignment. This is detailed in the screenshot below.

6.7. Area/Roster Rules

Roster Rules define the staffing requirements and employee demand that apply to *Roster* for the various *Team Areas*. Therefore, *Roster Rules* can be assigned to different *Team Areas*. These *Roster Rules* help ensure that the *Roster* generated meets all the necessary staffing requirements for the day.

Area/Roster Rule configuration considerations:

- It is standard to create individual *Area/Roster Rules* for each *Team Area*. Therefore, *Team Areas* can be assigned individual rules rather than sharing the same rule.
- Similar to *Team Areas*, a naming scheme for *Roster Rules* is recommended. It is common for the *Roster Rule Codes* to match the *Team Area Codes*.
- The *Priority Levels* setting on *Roster Rules* only refers to the order of display on *Statistics* screen. Setting this rule does not change the order of *AutoRoster*.

6.7.1. Create Area/Roster Rules

Roster Rules must be configured initially via *Back Office*. They can then be managed via *CorePortal*. Therefore, it is possible to **edit** and **assign** *Roster Rules* via *CorePortal*.

To create a new Roster Rule:

1. Go to *Backoffice > CoreTime/CoreRoster > System Params > Roster Parameters > Roster Rules*.
2. Enter the *Rule* code.
3. Enter the rule *Name*.
4. Click **Generate Default**.

The screenshot shows the 'Roster Rules' form. At the top, there are fields for 'Rule' (containing 'LCS') and 'Name' (containing 'London Central Shoes'). To the right of these fields are three buttons: 'Generate Default', 'Add Special Day', and 'Copy Rule'. A red arrow points to the 'Generate Default' button. Below the form fields is a table titled 'Rule Detail' with columns: Day, Type, Name, Pattern, Start, End, and Required. The table is currently empty.

Each day of the week is now displayed on screen.

It is possible to select each day individually, however, for the purpose of this example, the same rules are being applied to all days within the week.

5. Select **Each Day**.

The screenshot shows the 'Roster Rules' form after clicking 'Generate Default'. The 'Rule Detail' table now contains rows for each day of the week: Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday, and Public Holiday. The 'Day' column has a dropdown menu open, and 'Each Day' is selected, indicated by a red arrow. The other columns (Type, Name, Pattern, Start, End, Required) are empty.

The *Details for each day* pop-up displays.

6. Select the applicable *Rule Type* from the drop-down list.
In this example, *Job Title* is selected.
7. Select the applicable *Type Code* from the list of values.
8. Enter the *Pattern*.
9. Enter the *Start Time*.

10. Enter the *End Time*.
11. Enter the *Required* number of employees with this *Job Title*.
12. Enter the *Priority*, if applicable.
13. Click **OK**.

The screenshot shows the 'Roster Rules' dialog box. The 'Selection Criteria' section is highlighted with a red box. It contains the following fields:

Rule Type	Type Code	Pattern	Start	End	Required	Priority
Job Title	Shop Assistant	BASE	09:00	17:30	3.00	1

A red arrow points to the 'OK' button at the bottom of the dialog box.

The rule now populates for each day of the week (excluding *Public Holidays*). Repeat this process for each day to build up the required full staffing demand for the *Team Area*, that this rule will be assigned to.

14. Click the  button to save.

The screenshot shows the 'Roster Rules' dialog box with the 'Rule Detail' section expanded. The 'Each Day' row is highlighted. The 'Save' button is highlighted with a red arrow.

Day	Type	Name	Pattern	Start	End	Required
Each Day	Job Title	Shop Assistant	Base Pattern	09:00	17:30	3.00
Monday	Job Title	Shop Assistant	Base Pattern	09:00	17:30	3.00
Tuesday	Job Title	Shop Assistant	Base Pattern	09:00	17:30	3.00
Wednesday	Job Title	Shop Assistant	Base Pattern	09:00	17:30	3.00
Thursday	Job Title	Shop Assistant	Base Pattern	09:00	17:30	3.00
Friday	Job Title	Shop Assistant	Base Pattern	09:00	17:30	3.00
Saturday	Job Title	Shop Assistant	Base Pattern	09:00	17:30	3.00
Sunday	Job Title	Shop Assistant	Base Pattern	09:00	17:30	3.00
Public Holiday						

**Note:**

- *Job Title Codes* are created via the *Data Centre Widget – Reference Data* option in CorePortal.
- *Job Titles* are assigned to employees via their contract in *People Management*.

6.7.2. Area/Roster Rule Assignment

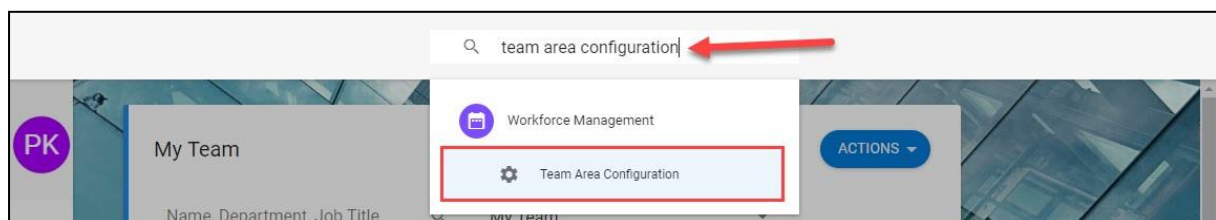

Area Rules can be assigned via *CorePortal*. It is recommended to assign *Area/Roster Rules* from the start day of the week.

**Note:**

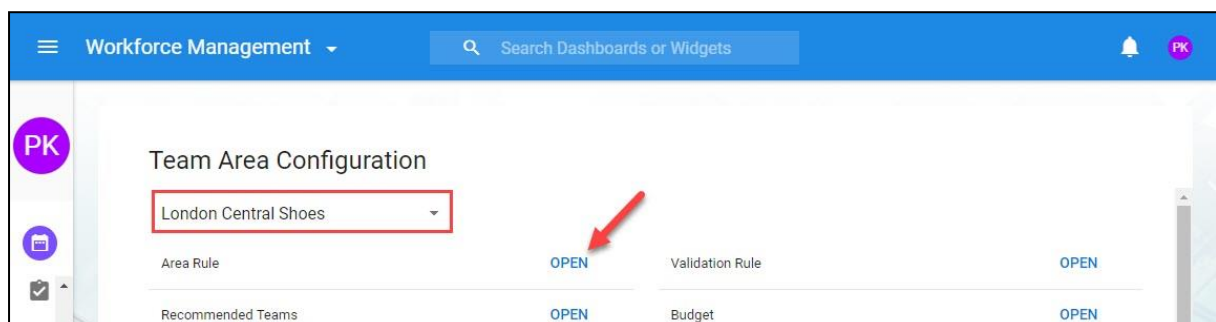

Roster/Area Rules are assigned to *Team Areas* at the lowest level. For example, the same level as employees are assigned to *Home Team Areas*.

To assign an *Area/Roster Rule* to a *Team Area*:

1. *Quick Jump to Team Area Configuration*.

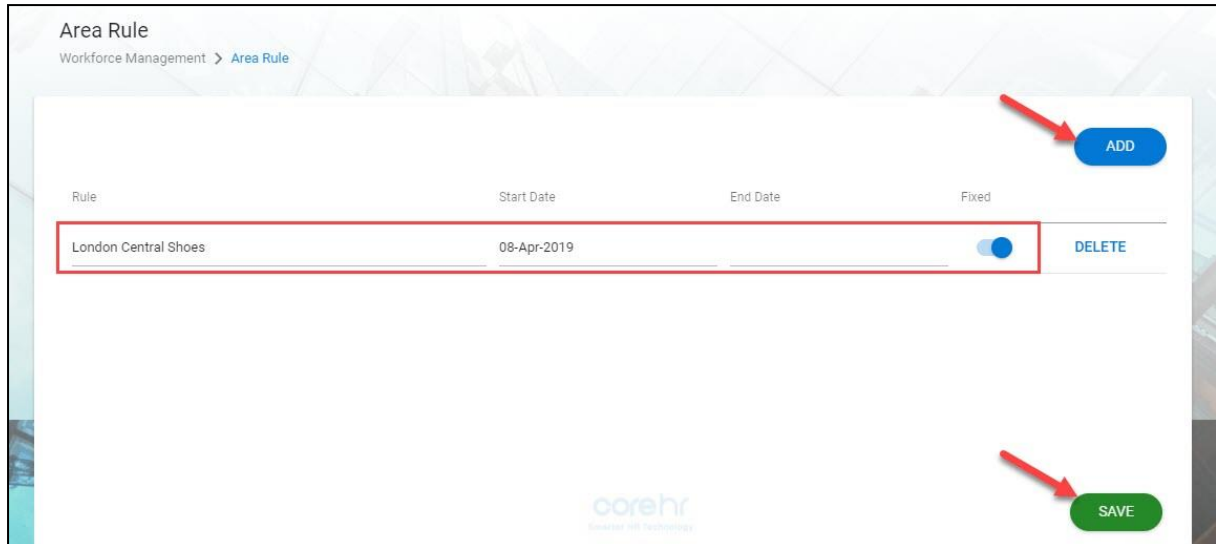

2. Specify the *Team Area* from the drop-down list.
3. Click **Open Area Rule**.

4. Click **Add**.
This creates a new row on the screen.
5. Select the *Area/Roster Rule* from the drop-down list.
6. Enter the *Start Date*.
7. Enter the *End Date*, if applicable.

8. Tick the *Fixed* indicator, if applicable.
9. Click **Save**.

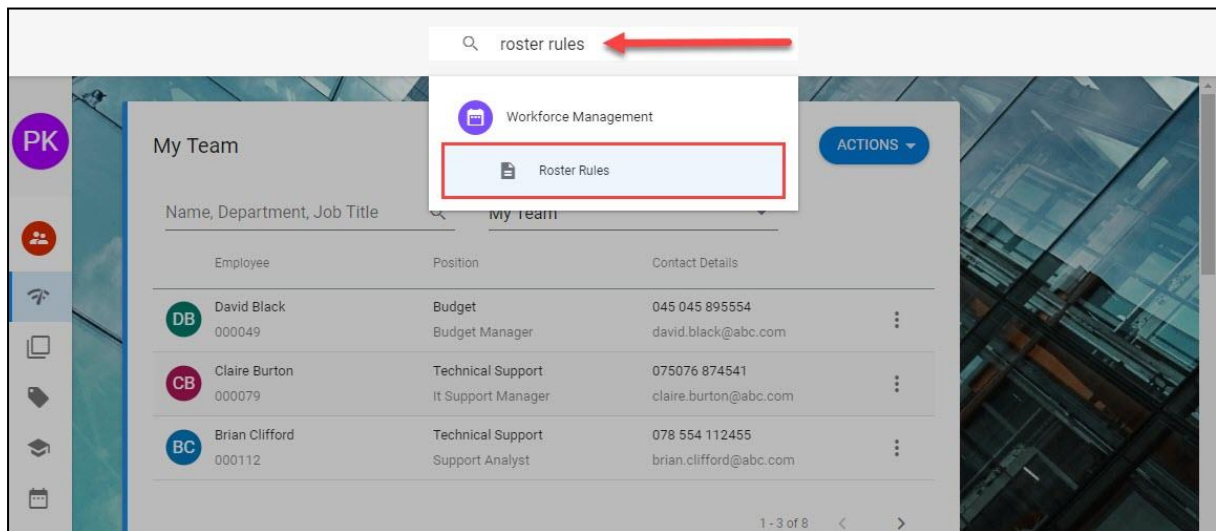

The *Area Rule* is now assigned to the *Team Area*.

6.7.3. View Area Rules

To view the *Area Rule* for the *Team Area*:

1. *Quick Jump to Roster Rules*.

The *Roster Rules* screen displays.

2. Select the applicable day or **All** days from the drop-down list.
3. Specify the *Team Area* and *Period*.
4. Click **Apply**.

In this example, the *Area Rules* from Monday to Sunday are displayed on screen.

Ensure you click the **Save** button after editing a *Roster Rule*.

6.8. One Rule

Note:

- This corresponds with the *Standard Calculation* or *Retail Calculation* options.
- If *Pattern Mapping* is enabled, employees will only be counted towards the day if they are *Rostered* to work on the specified shift, in line with having the required Qualification or Job Title.

When the One Rule feature is enabled, the AutoRoster ensures a one to one mapping with the *Roster Rules* and the employee selected to work that shift. When using with *AutoRoster*, it is recommended to set up rules based on *Job Titles* or *Qualification*. This option is also available at *Rule* level.

Example 1

- A 'Cashier' is required from 09:00 – 17:00.
- The example employee has the correct availability, therefore is selected to work the shift by *AutoRoster* from 09:00 – 17:00.

Example 2:

- A 'Cashier' is required from 09:00 – 17:00.
- The example employee only has availability to work from 09:00 – 16:00, however, passes the other *Validation Rules*.
- The employee is not *AutoRostered* to work, as they cannot work the full shift.

6.8.1. Configuration

To configure the *One Rule* feature:

1. *Quick Jump to Roster Links*.
2. Select **Open General Settings**.
3. Select the **Auto Roster Settings** tab.
4. Ensure the *Fill employee hours to contract* indicator is off.
5. Switch on the *New Auto Roster Calculation* indicator.
6. Switch on the *One employee per rule* indicator.
7. Click **Save**.

Note:

- Ensure that *Split Rule* option is not selected on the applicable *Area/Roster Rules*.
- To allow *One Rule* per person, a database parameter must be manually set by your CoreHR Project team.

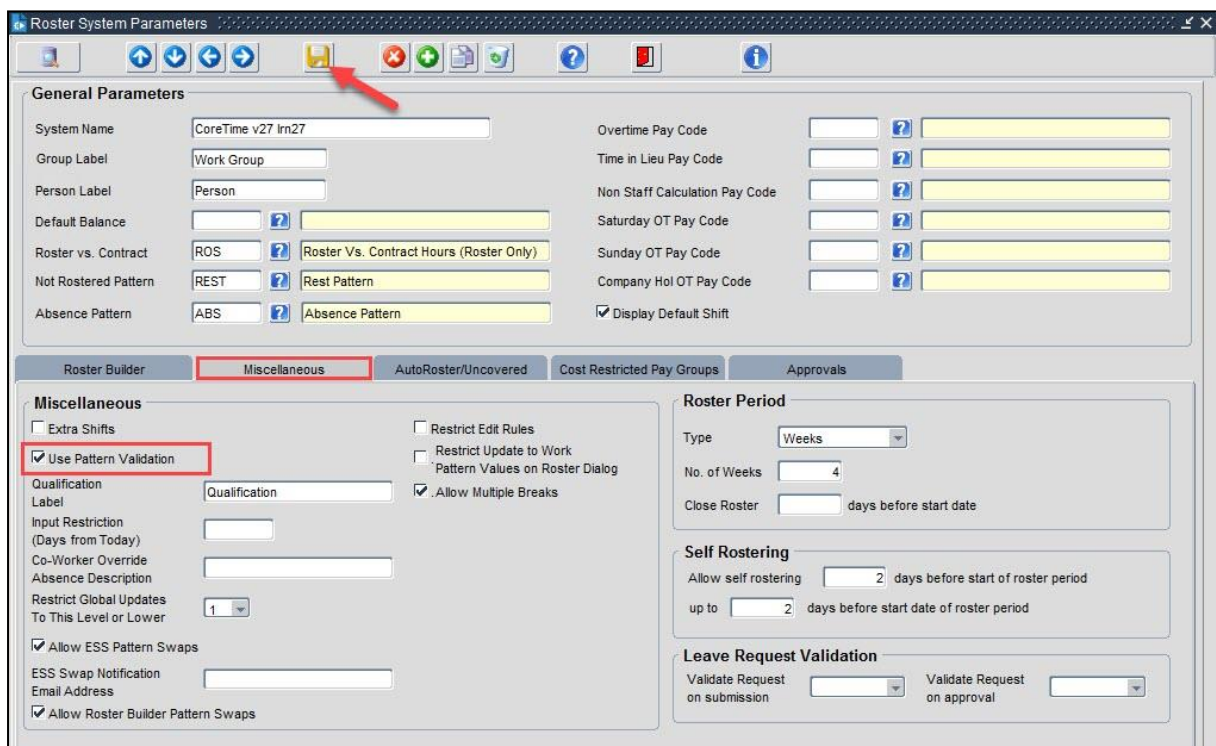

6.8.2. Use Pattern Validation

Note: This corresponds with the *Standard Calculation* option only.

The *Use Pattern Validation* indicator is a global setting that should be used in line with the *One Rule* feature. This indicator ensures that the employee only counts as covering the rule if they are Rostered on the shift, as identified by the rule.

To enable the Use Pattern Validation indicator:

1. Go to *Backoffice > CoreTime/CoreRoster > System Params > Roster Parameters > System Parameters*.
2. Select the **Miscellaneous** tab.
3. Tick on the *Use Pattern Validation* indicator.
4. Click the  button to save.

6.9. Split Rule

All rules used for a *Roster-to-Contract* solution must be configured as *Split Rule*. The *Split Rule* option allows for rules to be split out between different employees in the day. The following considerations relate to the *Split Rule*.

- *AutoRoster* completes multiple iterations to see what mix of employees best fill the rules.

- The *Split Rule* means that there is not a one-to-one relationship between a rule and an employee.

The following *AutoRoster* steps are conducted by the *Split Rule* feature:

1. See if employees can fill a full gap in the day.
2. Split shifts to suit employees' availability and check who can cover the shifts.
3. Extend out shifts at start of shift to cover gaps.
4. Extend out shifts at end of shift to cover gaps.
5. Try to fill gaps in the middle of the shifts.
6. The system then repeats steps 3, 4, and 5 multiple times until there is no further improvement.

Split Rule Example 1:

- A 'Shop Assistant' is required from 09:00 – 17:00.
 - The employee has the required availability and skills, therefore is selected to work the shift from 09:00 – 17:00.

Split Rule Example 2:

- A 'Shop Assistant' is required from 09:00 – 22:00.
 - The employee only has availability to work from 09:00 – 16:00, however passes the other *Validation Rules*.
 - The employee is not *Rostered* to work the shift, as the employee cannot work the full shift on the first check.
 - The rules are then split, and the employee is rostered from 09:00 – 16:00, however, a gap remains from 16:00 – 22:00.
 - The next iteration runs to find an employee to fill the gap from 16:00 – 22:00.

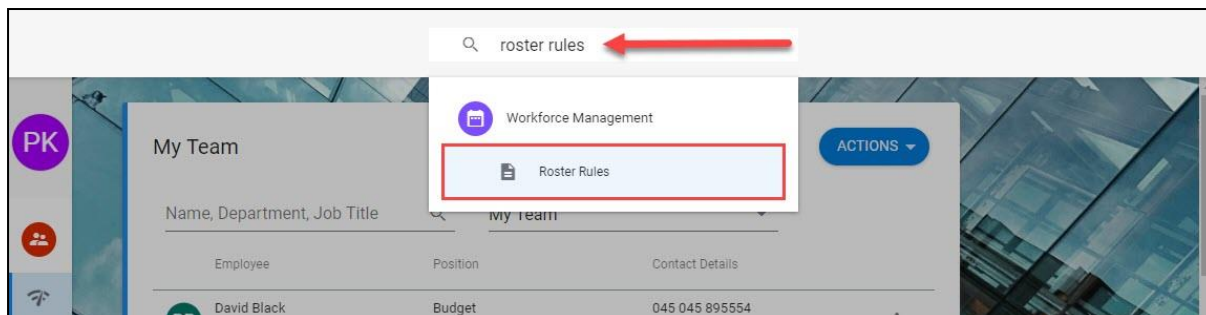

Note: The *Split Rule* feature:

- Should only be used where more than one employee can fill a rule, across a day.
- Should be switched on in line with *New Auto Roster Calculation*.
- Cannot be used if the *Only assign one employee per rule* indicator is enabled.
- Can be used in line with *Minimum shift to fill in minutes*, to ensure splitting shifts does not put an employee on a very short shift.
- Must be used in line with the *Retail Calculation*.

6.9.1. Enable a Split Rule for a Team Area

To enable the *Split Rule* feature for a *Team Area*:

1. *Quick Jump to Roster Rules.*

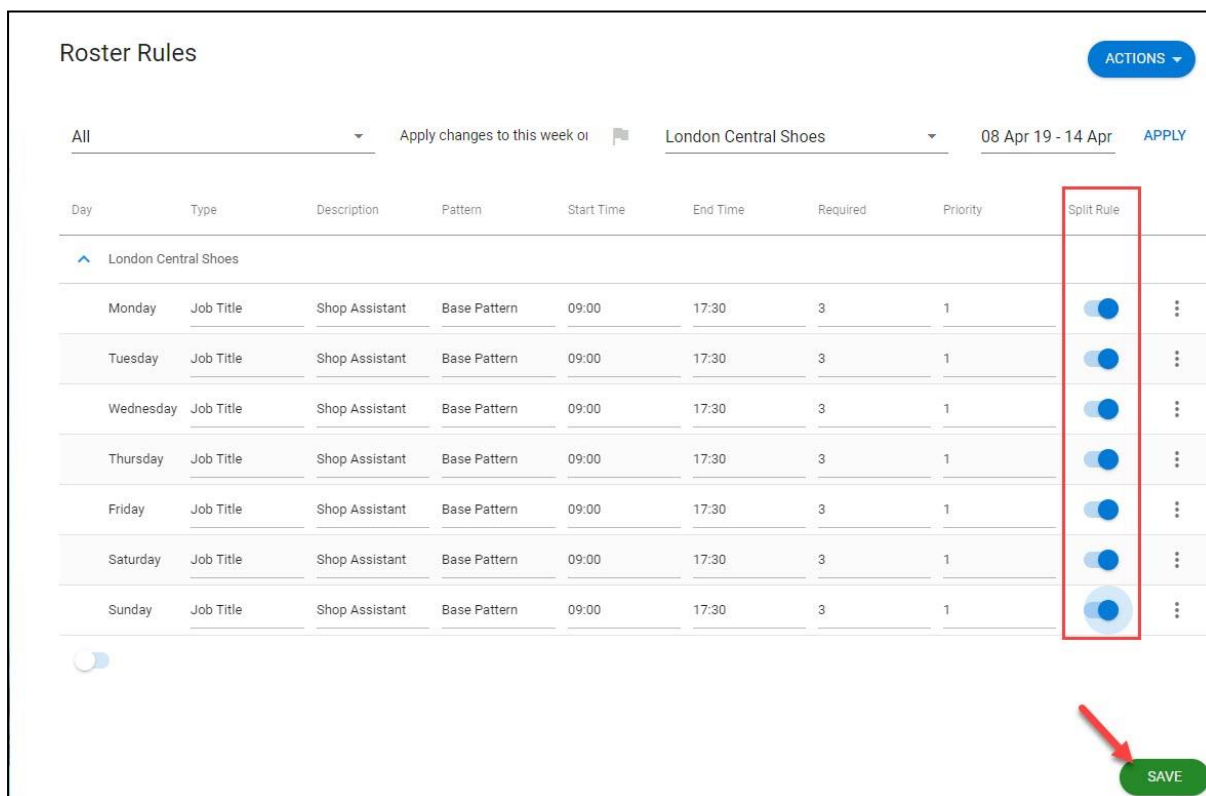

The *Roster Rules* screen displays.

2. Select the applicable day or **All** days from the drop-down list.
3. Specify the *Team Area* and *Period*.
4. Click **Apply**.

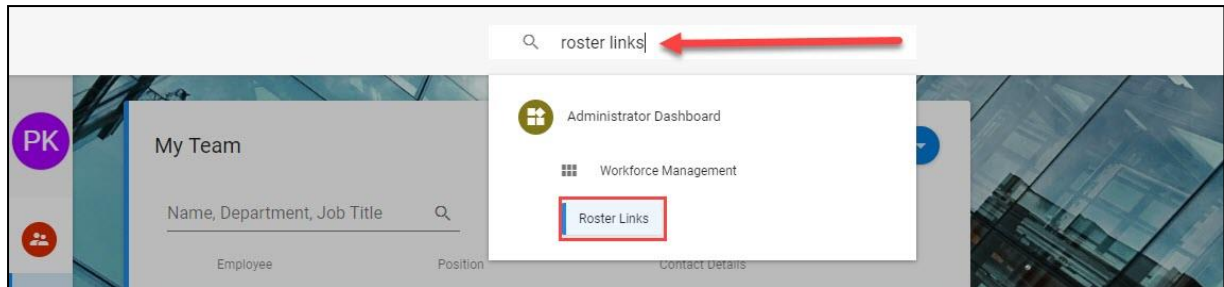

In this example, the *Area Rules* from Monday to Sunday are displayed on screen.

5. Enable to *Split Rule* indicator for the applicable rules.
6. Click **Save**.

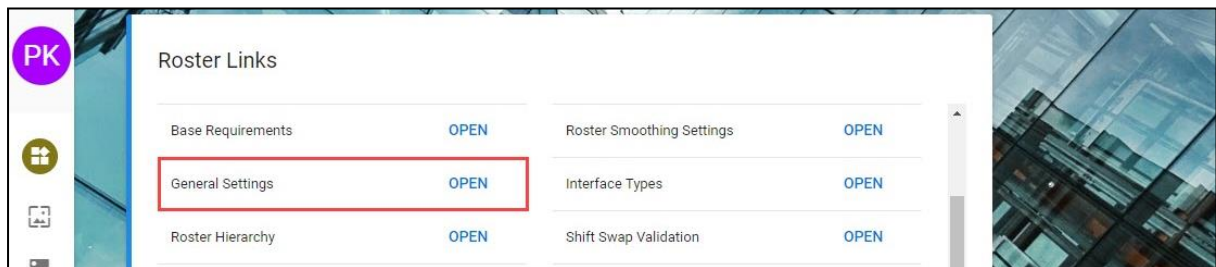

Next, to configure the *Auto Roster Settings*:

1. *Quick Jump to Roster Rules.*

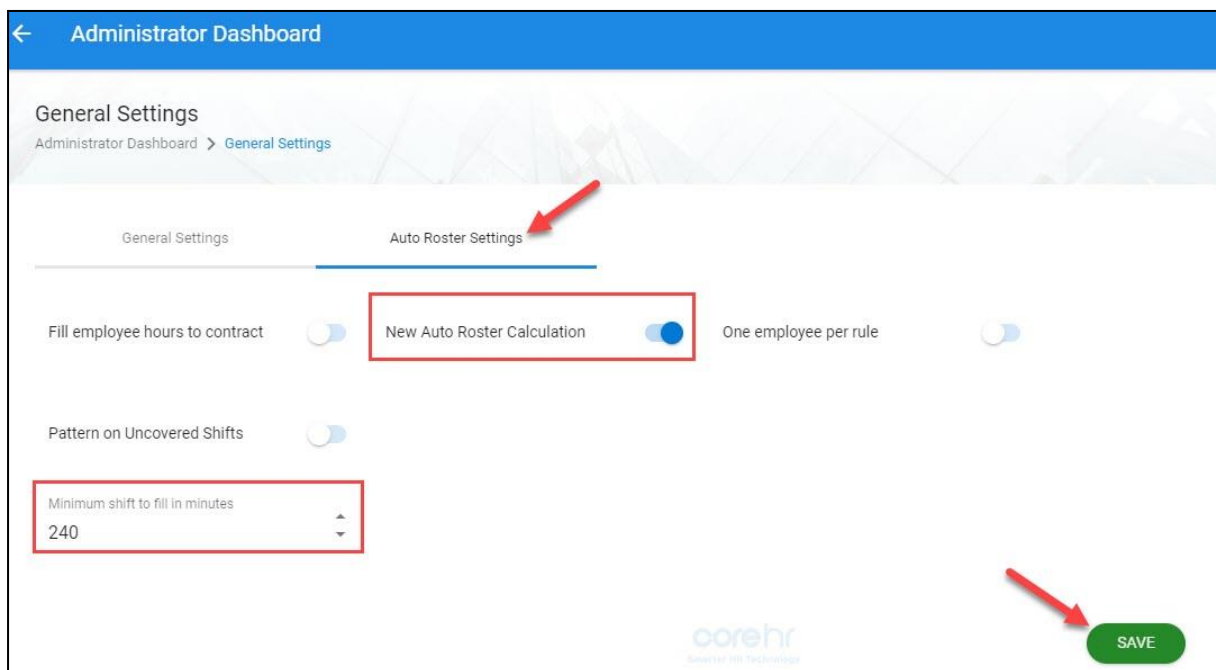

2. Select **Open General Settings**.

The *General Settings* screen displays.

3. Select the *Auto Roster Settings* tab.
4. Enable the *New Auto Roster Calculation* indicator.
5. Enter the *Minimum shift to fill in minutes*.
6. Click **Save**.

6.10. AutoRoster to Contract

The *AutoRoster to contract* feature means that the *AutoRoster* attempts to roster employees up to their contract hours, even if there is not a staffing demand required for all the hours.

- The system always attempts to roster the employees where there is a staffing demand gap or at the busiest times in the day based on the staffing demand.
- Once the *One Rule per employee* indicator is not selected, the system splits the rules out between different employees.

Where the *One Rule per employee* indicator is not selected, the steps completed by *AutoRoster* are as follows:

1. Determine the organisation opening/closing times.
This is to ensure that employees do not have their shift extended outside of the opening hours of the company if there is no demand on the day.
2. Determine if employees can fill a full gap in the day.
3. Split the shifts to suit employee availability and then check which employees can cover the shifts.
4. Extend out shifts at the start of the shift, to cover gaps.
5. Extend out shifts at the end of the shift, to cover gaps.
6. Try fill gaps in the middle of the shifts.
7. Repeat steps 4, 5, and 6 until there is no improvement.
8. Lengthen rules based on % required to cover e.g. 75% of the time.
9. Repeat step 8 until there are no further improvements.
10. Extend shift hours up to employee contract hours, where possible.

Note: The *AutoRoster to Contract* feature:

- Works in line with the *Split Rule* feature.
- Requires the following two indicators to be enabled:
 - *Fill employee hours to contract*
 - *Extend employee hours*
- Rosters employees to contract hours regardless of the rules configured.
For example, does not validate against a *Job Title*.
- Must be used in line with the *Retail Calculation*.
- Holds an option to decide if breaks should be included in the count of absence.
 - If **Off**, breaks will not be seen as a gap in the day for an absence.
 - If **On**, breaks will not be seen as a gap in the day.

There may be cases where employees are not rostered to contract. The most common explanations are:

- Employee does not have enough available hours.
- Employee exceeds max shifts in a week.
- Extending a shift causes an employee to work outside of opening hours.
- Adding new shifts may cause the employee to work less than the minimum hours in a day.
- Employee may exceed max hours in a day as per employee roster contract.
- Employee may breach WTD rules.
- Employees may break max days in a row.

6.10.1. Configuration

The *CorePortal* indicator to fill employee hours to contract must be enabled, to do this:

1. *Quick Jump to Roster Links.*
2. Click **Open General Settings.**
3. Select the **Auto Roster** tab.
4. Enable the *Fill employee hours to contract* indicator.
5. Enable the *New Auto Roster Calculation* indicator.
6. Enter the applicable *Minimum shift to fill in minutes.*

This should be entered to ensure employees are not rostered for less than the specified number minutes in a day. In this example, the employee cannot be rostered on a shift that is less than 4 hours.

7. Click **Save.**

The option to decide if breaks should be included in the count of absence, is located in the *Back Office*. To enable this indicator:

1. Go to *Backoffice > CoreTime/CoreRoster > System Params > Roster Parameters > System Parameters*.
2. Tick on the *Deduct Breaks from Cover Statistics*, if applicable.
3. Click the  button to save.

Note: Additional fields are available on an underlying database table, these need to be set by your CoreHR project team:

- Cut Off Tolerance

This identifies the percentage of demand that is needed before the system should try to fill a shift. For example, if this is set to '75', once the gap is 75% or more the system tries to fill the gap. If the gap is for 75% or less, the system does not try to fill the gap. If blank, this defaults to 75%. This field cannot be configured on screen.

- Shift Extend Limit

If an employee is rostered but does not yet meet their contract hours, and there is no demand required to extend the existing shifts, this field is populated to indicate how far out the system should extend a daily shift. For example, if this is set to '2', this allows the system to extend out the shifts by 2 hours daily. The end of the shift is extended first once the employee is available for the times and

6.11. Validation rules

The *Validation Rules* screen allows for the creation of *Roster Validation Rule Templates* that hold the rules which *Team Area Rosters* are validated against. These *Validation Rules* ensure that when the *Team Area Rosters* are created, there are no roster violations and the most appropriate employee is selected first when *AutoRostering*. These rules ensure that the team rosters created are not in violation of the organisational rules that you have defined. For example, rules can help ensure employees do not exceed their contract hours. Once a *Validation Rule Template* is defined, it can be assigned to the appropriate *Team Area(s)* at any stage.

Roster Validation Rule schemes allow you to:

- Configure / define the business logic that you wish *CoreRoster* to apply when automatically creating rosters to meet area demand.
- Define what real-time alerts/notifications you wish to see on your *Roster* in the event of any violations arising.

There are different types of rules in the *Validation Rules* section, these rule types are detailed in the table below:

Validation Rule Type	Explanation
Roster Rules / Alerts	The rules applied to the <i>Team Area</i> on any given day. These rules dictate what real-time alerts/notifications are flagged, when a <i>Roster</i> is in breach of specific criteria, that is specified as being of key importance to your organisation, for example: • Legislative criteria e.g. EU WTD, Average Hours Breach, EU WTD Daily Rest breach. • Organisational criteria e.g. Cost vs. Budget breach, Contract hours breach.
AutoRoster Rules	The rules that are checked when the <i>AutoRoster</i> process is running. These rules dictate what logic gets applied when the <i>AutoRoster</i> process is invoked to complete a <i>Team Area Roster</i>. For example, the business logic/rules you want the system to apply, when choosing the most appropriate employee to fill each <i>Roster</i> gap.
Uncovered Shift Rules	The set of validation rules that the system checks when the <i>AutoRoster</i> process has been run and there are still gaps in the <i>Roster</i>. These rules are normally more lenient than the <i>AutoRoster</i> rules. These rules dictate what logic gets applied when an <i>Uncovered Shift</i> arises.

Validation Rule Type	Explanation
	For example, the business logic/rules you want the system to apply when producing a scored list of employee recommendations to cover <i>Uncovered Shifts</i> .
Shift Swap Rules	The rules that are checked when the <i>Shift Swap</i> process is run. The employee available for selection can be shortlisted based on passing the <i>Validation Rules</i> . Employees who have failed validation are not available in the dropdown list for selection.
Leave Requests Rule	This rule dictates if a <i>Leave Request</i> can be approved, if it causes the day to become short staffed as a result of accepting the shifts.
Publish Shifts Rules	These rules dictate what logic gets applied when the manager <i>Publishes</i> a shift, and when an employee accepts a shift: For example, the business logic/rules you want the system to apply when choosing who the most appropriate employee is to fill each Roster gap.

The *Roster Rules/Alerts* are applied on and can be viewed via the *Roster Dashboard* screen. The colours for each of the columns on this screen are configurable. For example, flag as 'red' if overstaffed or 'orange' if understaffed, etc. For further information, view section [10.0. Roster Stats Settings](#).

Note: Recommendations for configuring *Validation Rules*:

- It is possible to create multiple *Validation Rule Templates*; however, it is recommended to restrict to a single *Validation Rule Template* for all *Team Areas*.
- Begin configuration with the minimum basic *Validation Rules* required and adjust from there.
- The more *Validation Rules* set as *Mandatory*, the smaller the spectrum of employees for satisfying the *Validation Rule* becomes. Therefore, it may be more beneficial to set a high weight on certain *Validation Rules* and disable the *Mandatory* option.

The below table outlines some example standard *Validation Rules* that are generally configured as *Mandatory*.

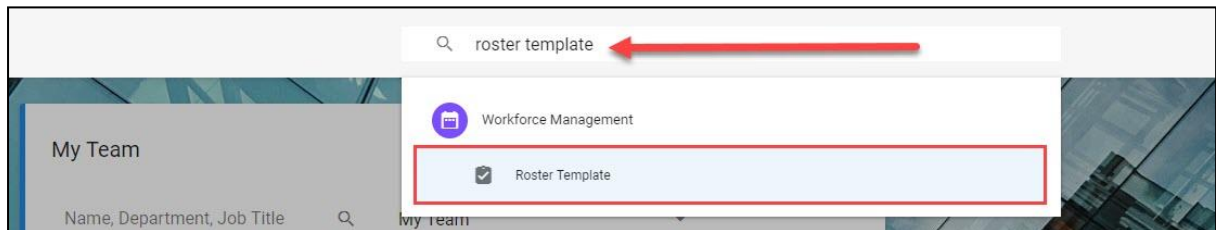

Validation Rule	Explanation
Autorostering: Work/Rest/Absent	Without this, the system will <i>Autoroster</i> employees even when booked absent.
Autorostering: Overlapping Shifts	Without this, the system will <i>Autoroster</i> employees even if already assigned a shift.

Validation Rule	Explanation
Autorostering: Available Days	Without this, the system will <i>Autoroster</i> employees even if explicitly unavailable on that day.
Autorostering: Available Times	Without this, the system will <i>Autoroster</i> employees even if explicitly unavailable for the duration of the shift.

6.11.1. Create a Validation Rule Template

To create a *Validation Rule Template*:

1. *Quick Jump to Roster Template.*

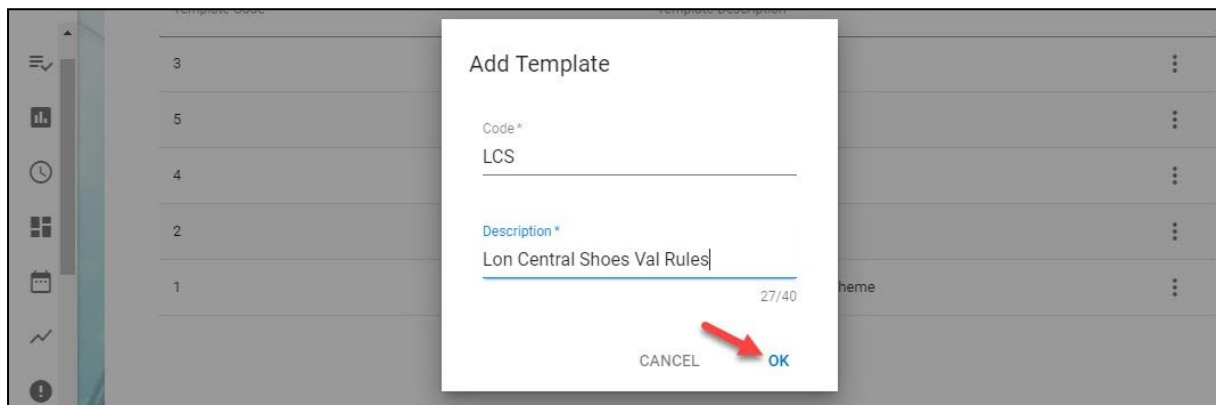

The *Roster Template* screen displays.

All current *Validation Rule Templates* are displayed.

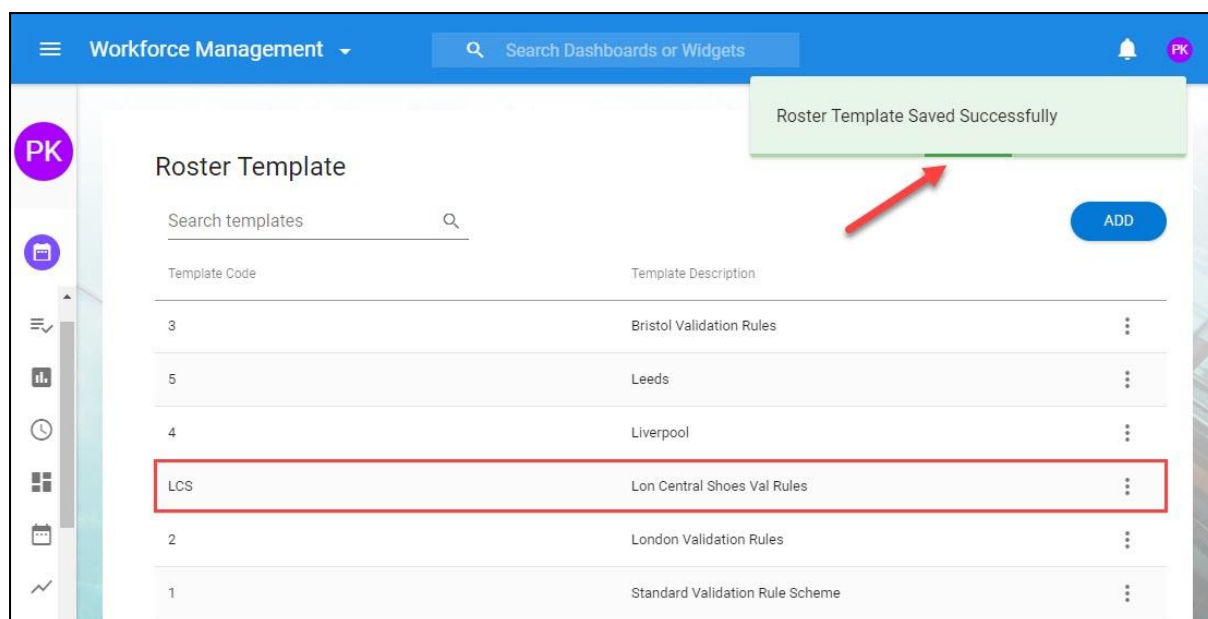

2. Click **Add**.

3. Enter the template *Code*.
4. Enter the template *Description*.

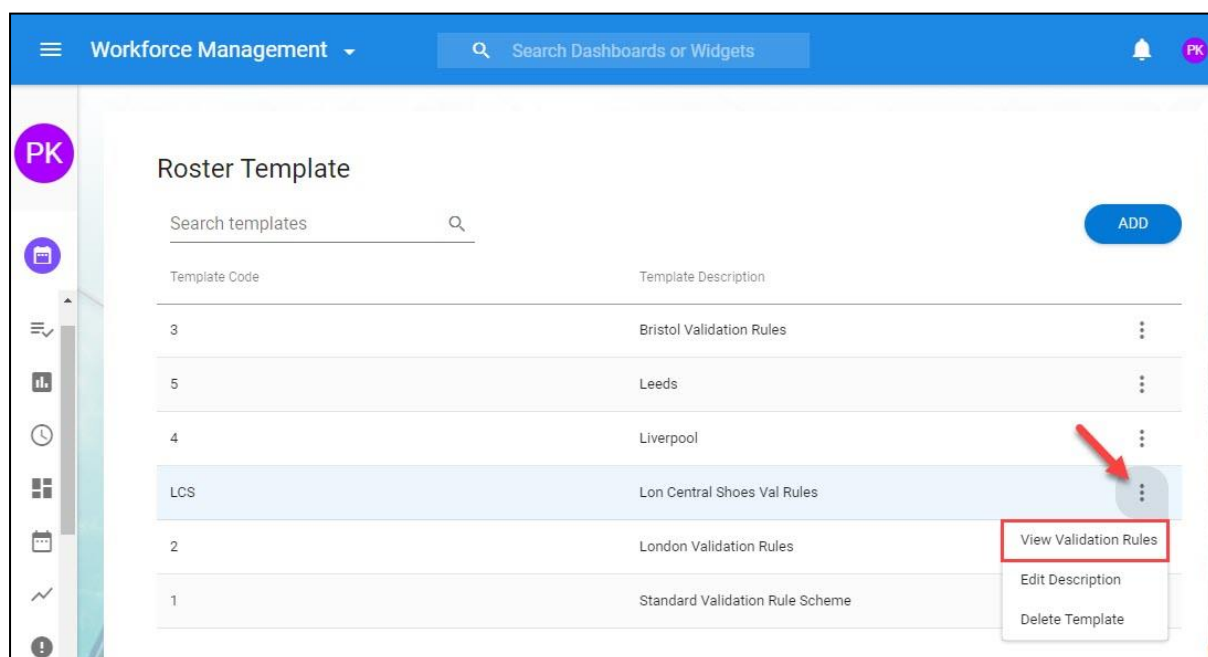

The *Validation Rule Template* is now displayed on the *Roster Template* screen.

5. Click the  button on the applicable template.

6. Select **View Validation Rules**.

The *Validation Rules* screen displays.

7. Ensure the applicable rules are ticked as **Selected**.

If the *Mandatory* indicator is ticked, once an employee breeches this rule they automatically fail the *Roster* process and cannot be rostered to work.

8. Click **Save**, once all applicable rules have been selected.

6.12. Employee Availability (Contract Details)

It is possible to use contract details in conjunction with *Validation Rules*, to determine employee availability and/or suitability for rostering to a shift. A *Roster Contract Type* screen is accessible via the *Back Office*, that allows you to create a *Contract Type* and apply it to rostering employees.

Roster Contract Type

Contract Type: BCT Name: Base Contract Type

Details

Max. Hours per Day: 10.00

Standard Hours per Day: 7.50

Daily Contract Hours: 7.50

Max. Shifts per Week: 5

Weekly Contract Hours: 37.50

Availability

	Start	End
Monday	08:00	20:00
Tuesday	08:00	20:00
Wednesday	08:00	20:00
Thursday	08:00	20:00
Friday	08:00	20:00
Saturday	08:30	18:00
Sunday	11:00	17:00
Late Nights		☒
Max. No. of Sundays		1
Number of Late Nights		2

The *Contract Types* that are created hold contract details and availability information. When the *Contract Type* is then assigned to an employee via the *Contract Details* screen available via *Roster Details*, that employee then adopts all the attributes of that contract type, for example, availability.

- You would not need to manually enter the contract details or daily availability information for each employee, if the roster *Contract Type* setup is correct, it can be specified for the employee.
- If an employee availability or contract information differs from the roster *Contract Type* information, then it is possible for you to update these fields manually.

7. Roster User Access

7.1. System User Access

To access *Roster*, managers require a *CorePortal* account with access to the *Workforce Management* dashboard, that is linked to their employee record. Administrators should already have a *Back Office* user account to action this. To create a *Manager Self Service (MSS)* username:

1. Go to *Back Office > CoreTime/CoreRoster > System Params > System Users*.
2. Select **Manager Self Service** from the *Access Type* drop-down list.
3. Enter the applicable *Username*, or select from the list of *Usernames*, accessible via the  button. The *MSS Username* must be the same as the employee's personnel number.

Once entered, the *Company* and *Person* fields automatically populate with the applicable information.

4. Click the  button to save.

[illegible]

7.2. Team Area Access

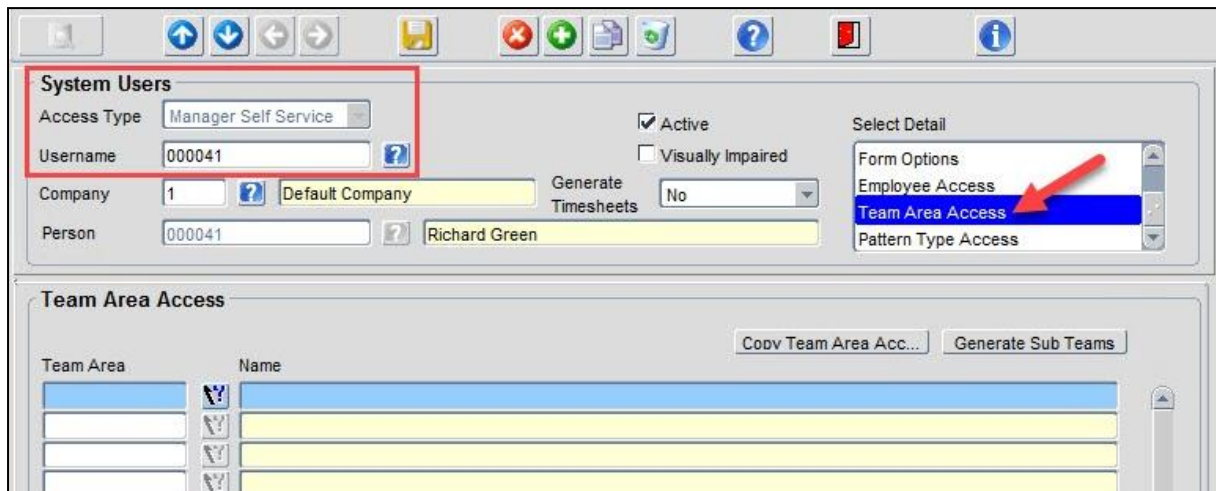

Managers require the relevant *Team Area* access to view their teams. To grant access to the applicable *Team Areas* for a manager:

1. Go to *Back Office > CoreTime/CoreRoster > System Params > System Users.*
2. Select **Manager Self Service** from the *Access Type* drop-down list.

3. Enter the applicable *Username*, or select from the list of *Username*s, accessible via the  button.
4. Select **Team Area Access** from *Select Detail*.

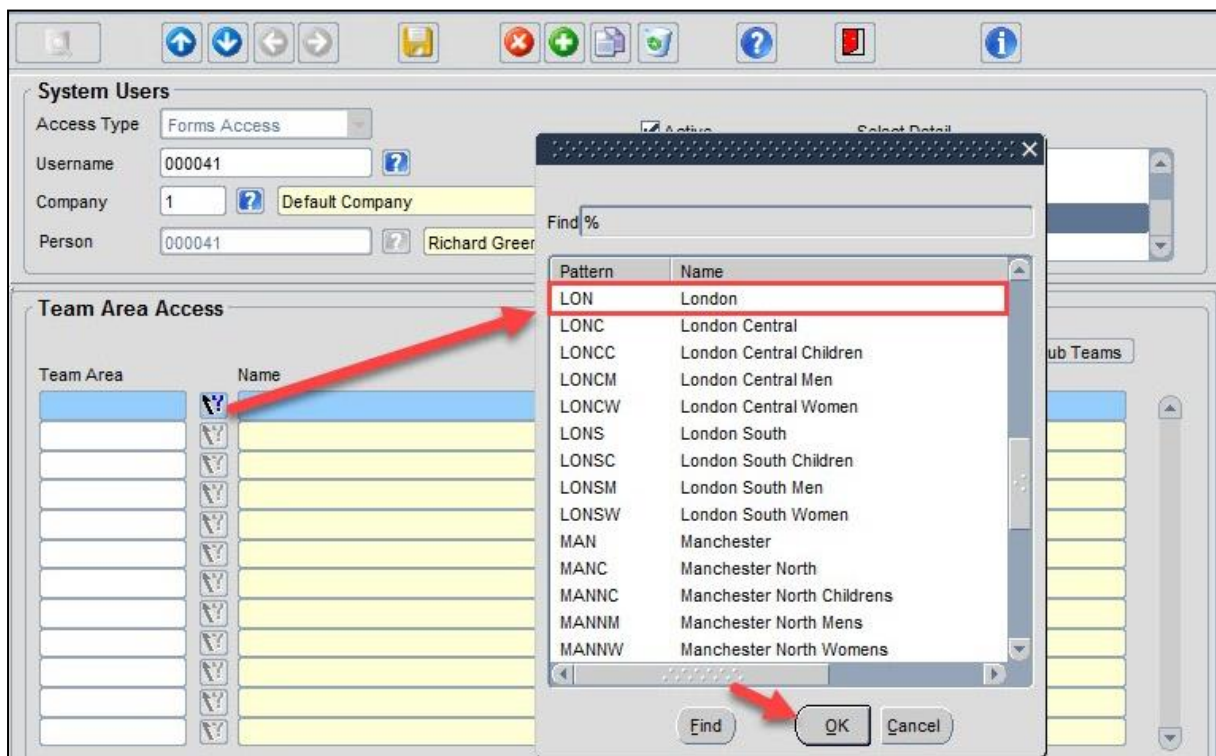

The *Team Area Access* section of the screen displays. Here is it possible to:

- **Copy Team Area Access** from this user another *MSS Username*, so that user has the same *Team Area Access* the one currently on-screen.
- Manually add individual *Team Areas*, applicable to this user.

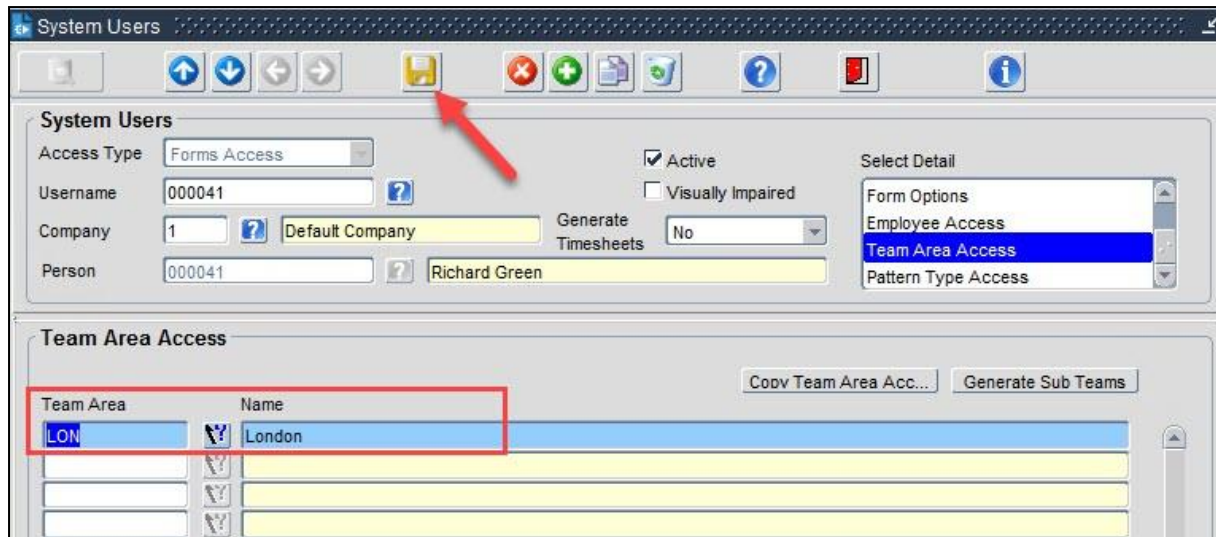

To manually add applicable *Team Areas*.

5. Enter the *Team Area* code, or click the  button, and select from the *Team Area* list.
6. Select the applicable *Team Area*, then click **OK**.

The *Team Area* is now presented on the list.

7. Click the  button to save.

Team Area Access

Copy Team Area Acc... Generate Sub Teams

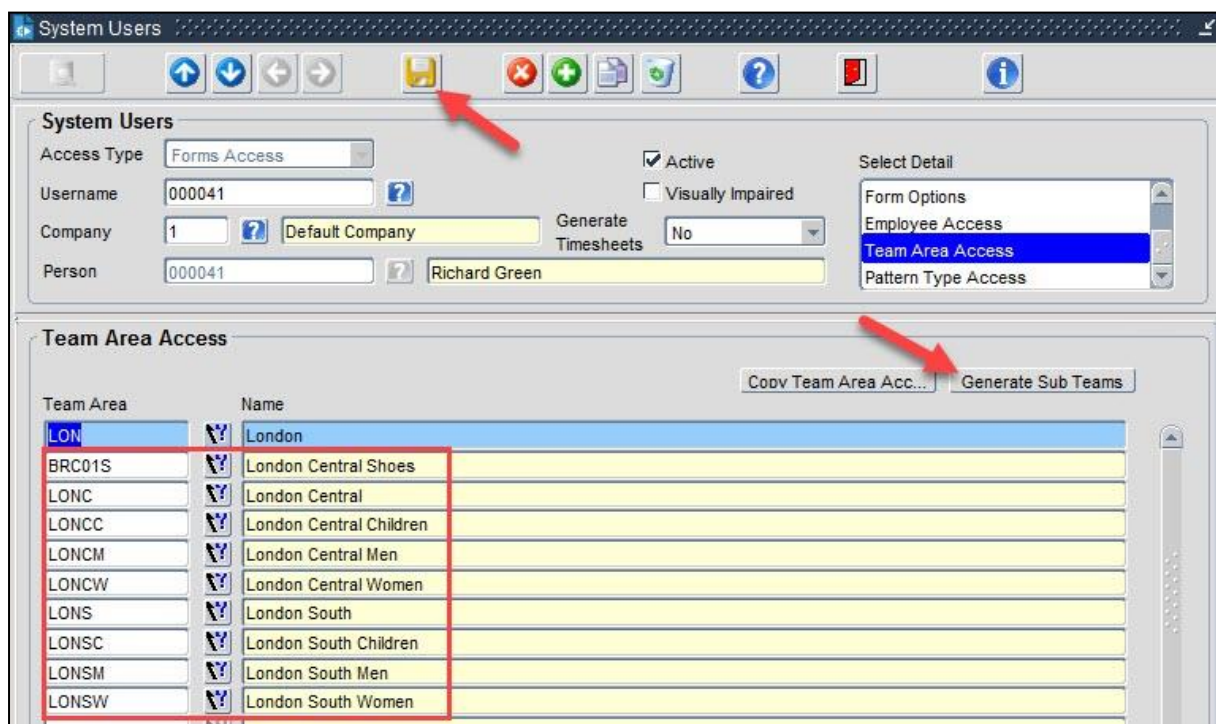

Team Area	Name
LON	London
BRC01S	London Central Shoes
LONC	London Central
LONCC	London Central Children
LONCM	London Central Men
LONCW	London Central Women
LONS	London South
LONSC	London South Children
LONSM	London South Men
LONSW	London South Women

To **Copy Team Area Access** from this user to another *MSS username*:

1. On the *Team Area Access* screen section, select **Copy Team Area Access**.

The screenshot shows the 'System Users' window. In the 'Team Area Access' section, the 'Team Area' is set to 'LON' and the 'Name' is 'London'. A red arrow points to the 'Copy Team Area Access' button, which is located next to the 'Generate Sub Teams' button.

The *Transfer Team Area Access* pop-up displays.

2. Enter the *Allocate To employee* number or click the  button and select from the list of usernames.
3. Click **Allocate**.

In this example user 000059 now has the same level of team area access as user 000041.

The screenshot shows the 'System Users' window with the 'Team Area Access' section. A 'Transfer Team Area Access' pop-up is displayed over the 'Team Area Access' table. The pop-up has two fields: 'Allocate From' (set to 000041) and 'Allocate To' (set to 000059). A red arrow points to the 'Allocate' button in the pop-up.

Note:

It is standard configuration that administrator users have access to all *Team Areas* and manager users only have access to their own *Team Areas*.

7.3. Menu Profile Access

Managers and administrators require the relevant menu access assigned to their menu profiles to view rostering screens. To add *Menu Options* to the applicable *Menu Profile*:

1. Quick jump to *Security*.
2. Select **Menu Profiles**.
3. Search for the applicable menu *Profile*.
4. Select **Manage Menu Options**.

7.4. Pattern Type Access

Managers require access to the *Rostering Pattern* type. This corresponds with the *Pattern Type Validation on Rostering Screens* indicator during *Rostering Control Parameter* configuration.

The screenshot shows the 'Control Parameters' window. In the 'Parameters' section, 'Company' is set to '1' and 'Current Period' is '201852'. The 'Rostering' section is expanded, showing several checkboxes. The checkbox 'Pattern Type Validation on Rostering Screens' is checked and highlighted with a red rectangle. Other checkboxes include 'Multi-Pattern Framework', 'Pattern Type Validation on CoreTime Screens', 'Enable Team Area/Cost Centre Linking Calculation', 'Apply Work Pattern Mapping', and 'Do not show Parent Work Pattern selection in CoreTime'. A 'Break Tolerance' table is also visible on the right.

Break	Number	Tolerance

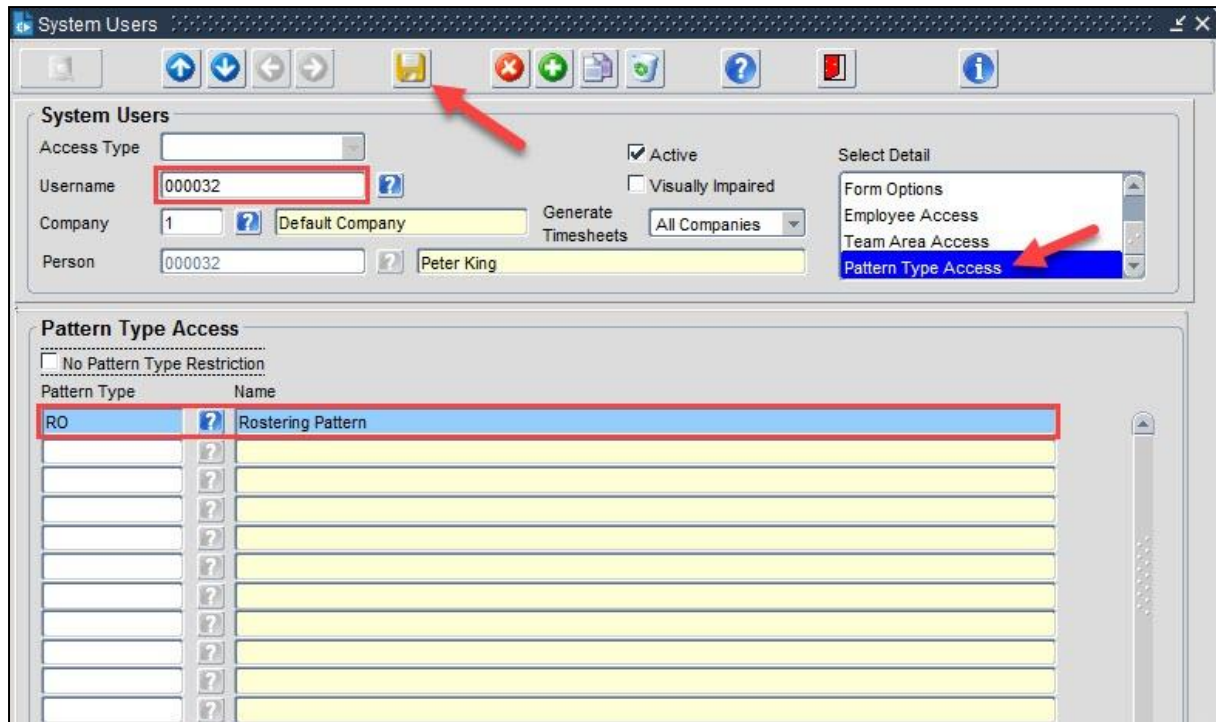

The *Pattern Type* specified for user access should correspond with the *Rostering Pattern Type* assigned to the applicable *Work Pattern*.

The screenshot shows the 'Work Patterns' window. In the 'General Details' section, 'Code' is 'BASE', 'Default Pay Code' is '1005', 'Default Overtime Code' is '3601', 'Default Hours' is '7.50', 'Default Start Time' is '09:00', and 'Default End Time' is '17:30'. The 'Rostering' section is expanded, showing 'Pattern Type' set to 'RO' and 'Rostering Pattern' selected. The 'Rostering Availability' section is also visible on the right.

Pattern Type	Rostering Pattern
RO	Rostering Pattern

To assign *Pattern Type Access*:

1. Go to *Back Office > CoreTime/CoreRoster > System Params > System Users*.
2. Select **Manager Self Service** from the Access Type drop-down list.
3. Enter the applicable Username, then tab.
4. Select **Pattern Type Access** from *Select Detail*.
5. Enter the *Pattern Type*.
6. Click the  button to save.

The screenshot shows the 'System Users' window. The 'Access Type' is set to 'Manager Self Service'. The 'Username' field contains '000032'. The 'Company' is '1' and the 'Person' is 'Peter King'. The 'Select Detail' dropdown is open, showing options: 'Form Options', 'Employee Access', 'Team Area Access', and 'Pattern Type Access'. The 'Pattern Type Access' option is selected. Below this, the 'Pattern Type Access' section shows a table with columns 'Pattern Type' and 'Name'. The first row is highlighted in blue and contains 'RO' and 'Rostering Pattern'.

Pattern Type	Name
RO	Rostering Pattern

7.5. Rating & Hourly Rate Field Access

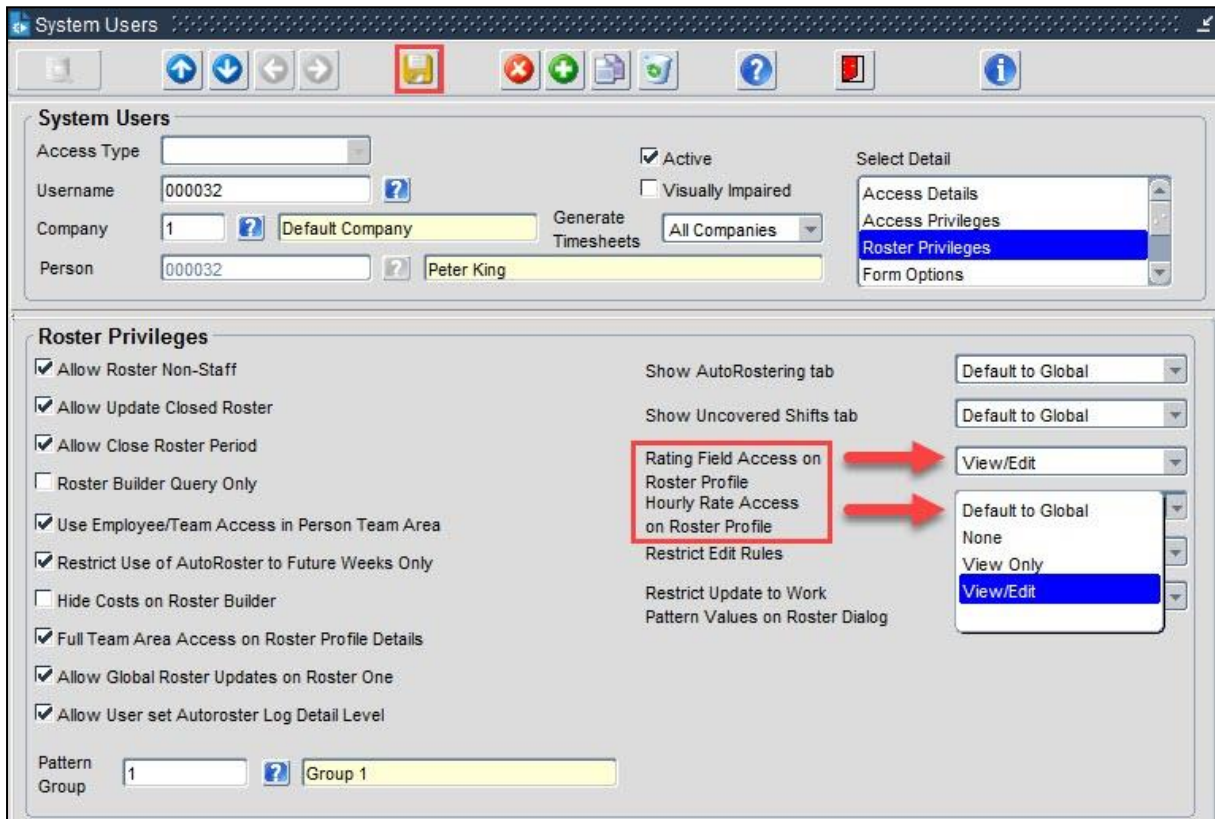

To assign access to the *Rating* and *Hourly Rate* field as detailed in section [8.8.2. Update Contract Details](#), go to:

1. *Back Office > CoreTime/CoreRoster > System Params > System Users*.
2. Select **Manager Self Service** from the Access Type drop-down list.
3. Enter the applicable Username, then tab.
4. Select **Rostering Privileges** from *Select Detail*.
5. Select the applicable access type from the *Rating Fields Access on Roster Profile* drop-down list. The following options are available:
 - Default to Global – Defaults to globally configured access.
 - None – No access to the fields.
 - View Only – Can only view the fields but not edit.
 - View/Edit – Can view and edit the fields.

6. Select the applicable access type from the *Hourly Rate Access on Roster Profile* drop-down list. The following options are available:

- Default to Global
- None
- View Only
- View/Edit

7. Click the  button to save.

The screenshot shows the 'System Users' window with the 'Roster Privileges' section expanded. The 'Rating Field Access on Roster Profile' and 'Hourly Rate Access on Roster Profile' fields are highlighted with a red box. Red arrows point from this box to the 'View/Edit' option in the dropdown menu. The 'View/Edit' option is also highlighted in blue in the dropdown list.

8. Additional Configuration on Roster Links Widget

General Roster System Parameters are configured in *CorePortal* via the *Roster Links* widget. To access the *Roster Links* widget.

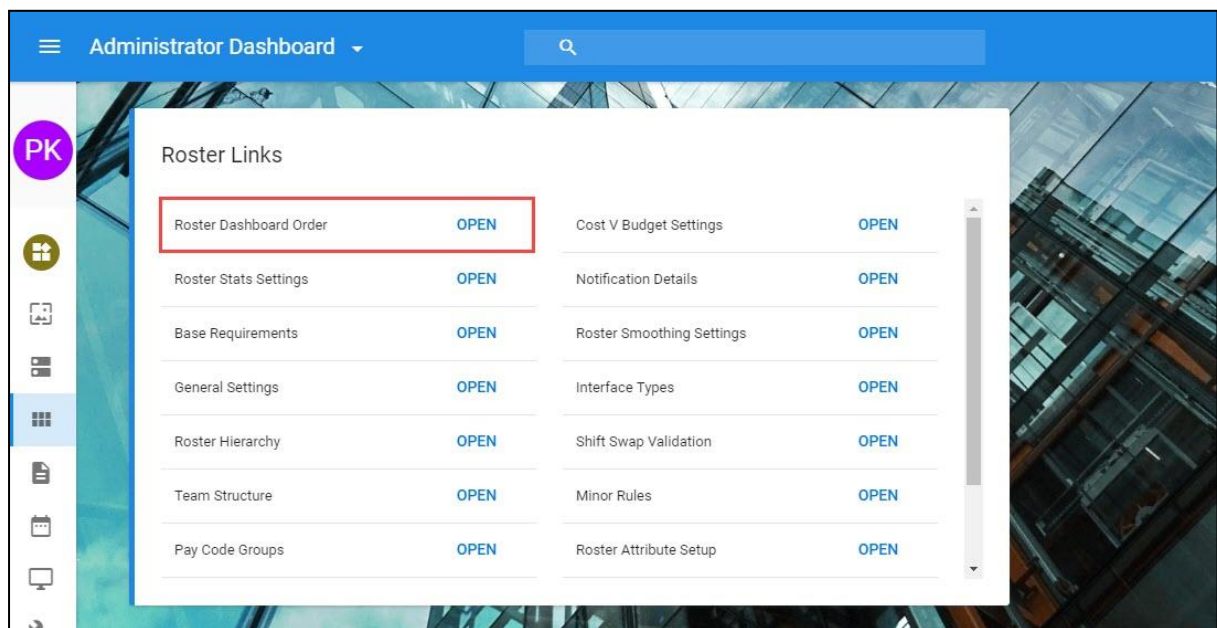

1. *Quick Jump to Roster Links.*

8.1. Roster Dashboard Order

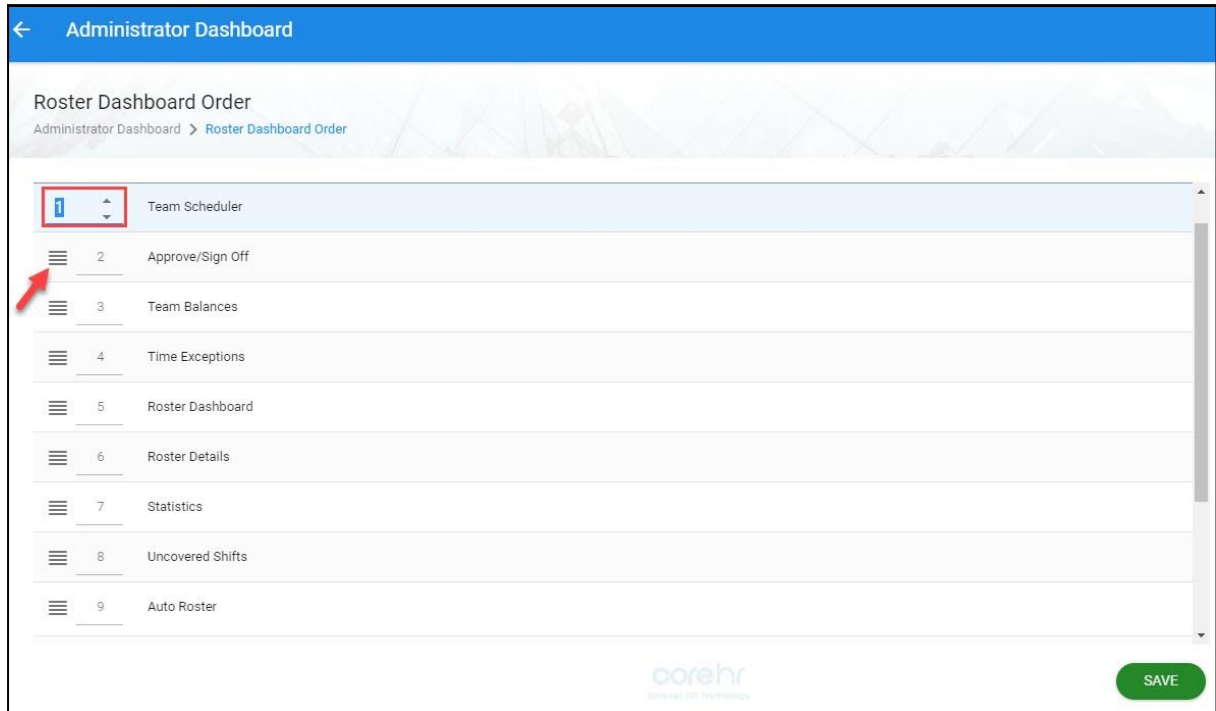

To configure the order that items are listed on the *Workforce Management* dashboard:

1. Click **Open** on *Roster Dashboard Order*.

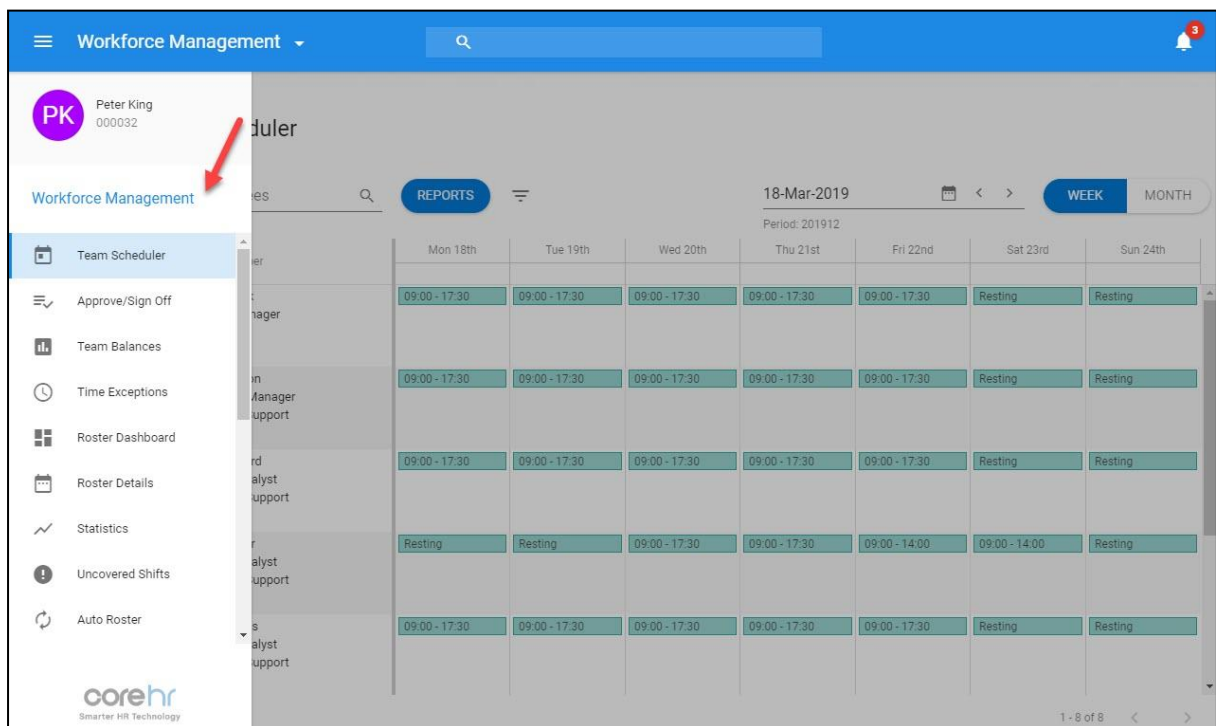

The *Roster Dashboard Order* screen displays.

2. Here is possible to re-order the items that display on the *Workforce Management* dashboard.
 - a) Click the number on the applicable item and edit it; OR
 - b) Click the  button to drag the applicable item up and down the list.
3. Click **Save**, once complete.

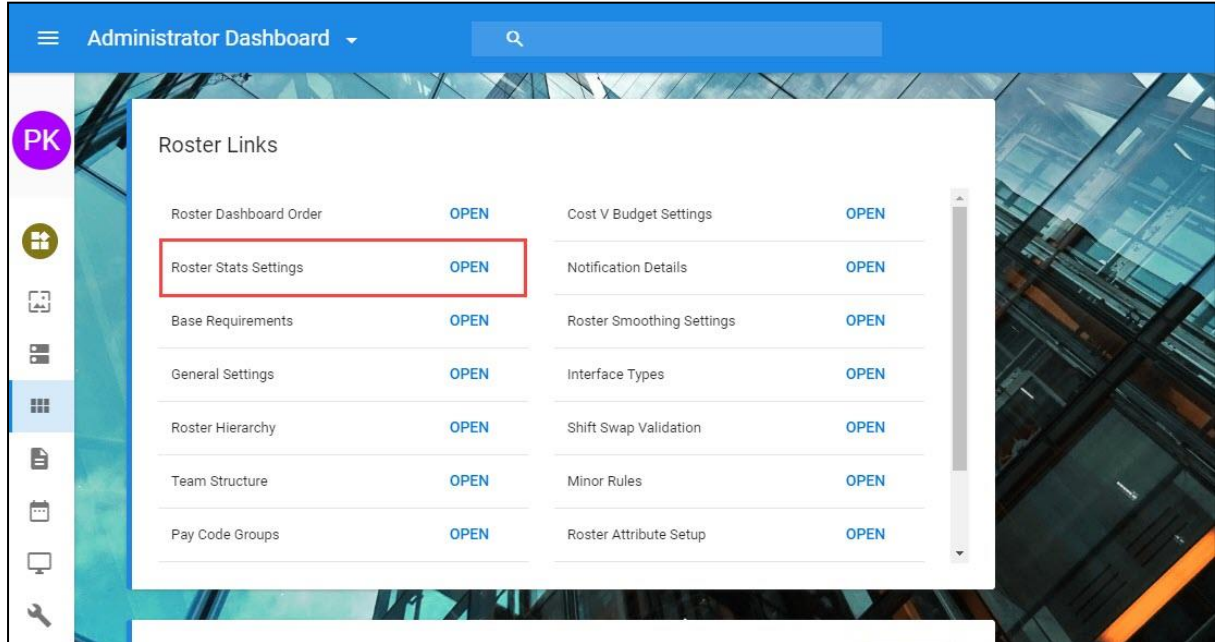

The dashboard items now display in the defined order.

8.2. Roster Stats Settings

Each statistic on the *Roster Dashboard* can be colour coded at a company level. To configure the *Roster Dashboard* screen on the *Workforce Management* dashboard:

1. Click **Open** on *Roster Stats Settings*.

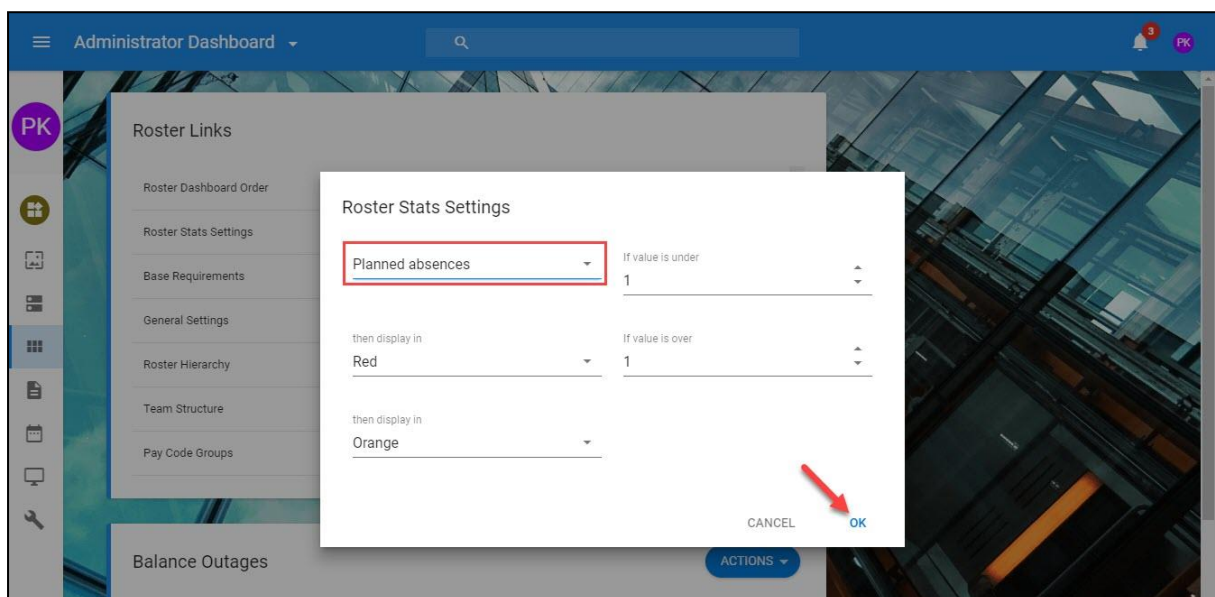

The *Roster Stats Settings* screen displays.

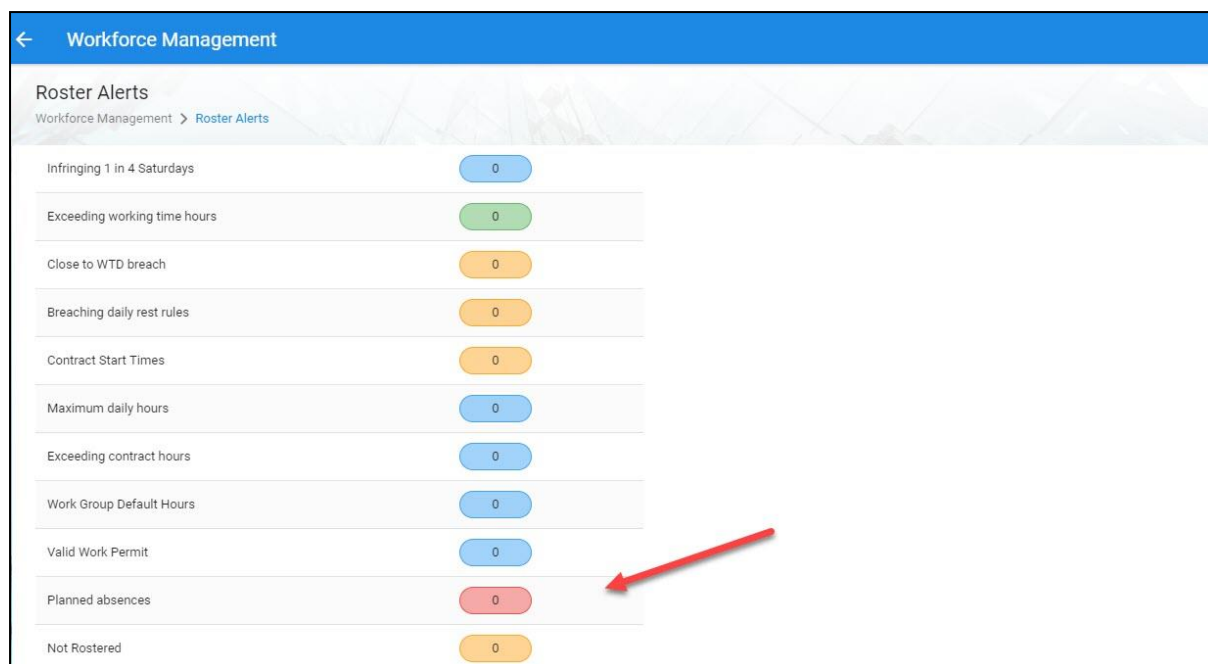

Here is possible to select the statistic to add colour coding to.

2. Select the value under and over to highlight the Statistic

For example, it is possible to highlight a statistic in green if the value is over 1 and highlight the statistic in red if the value is under 1.

Based on the configuration this highlights the value in the specified colour, on the Roster Alerts screen.

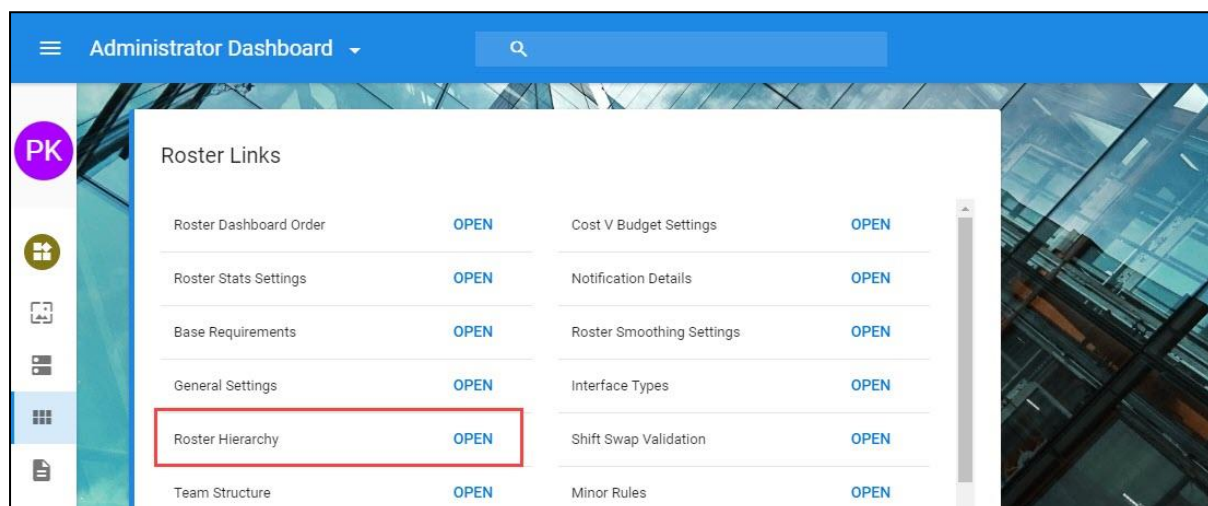

Workforce Management	
Roster Alerts	
Workforce Management > Roster Alerts	
Infringing 1 in 4 Saturdays	0
Exceeding working time hours	0
Close to WTD breach	0
Breaching daily rest rules	0
Contract Start Times	0
Maximum daily hours	0
Exceeding contract hours	0
Work Group Default Hours	0
Valid Work Permit	0
Planned absences	0
Not Rostered	0

8.3. Roster Hierarchy

This option allows you to label the levels within the *Team Area Hierarchy*. This makes it possible to identify what level on the hierarchy you are viewing on the *Roster Dashboard*, each level on the hierarchy can be assigned a different description depending on the hierarchy structure.

1. Click **Open** on *Roster Hierarchy*.

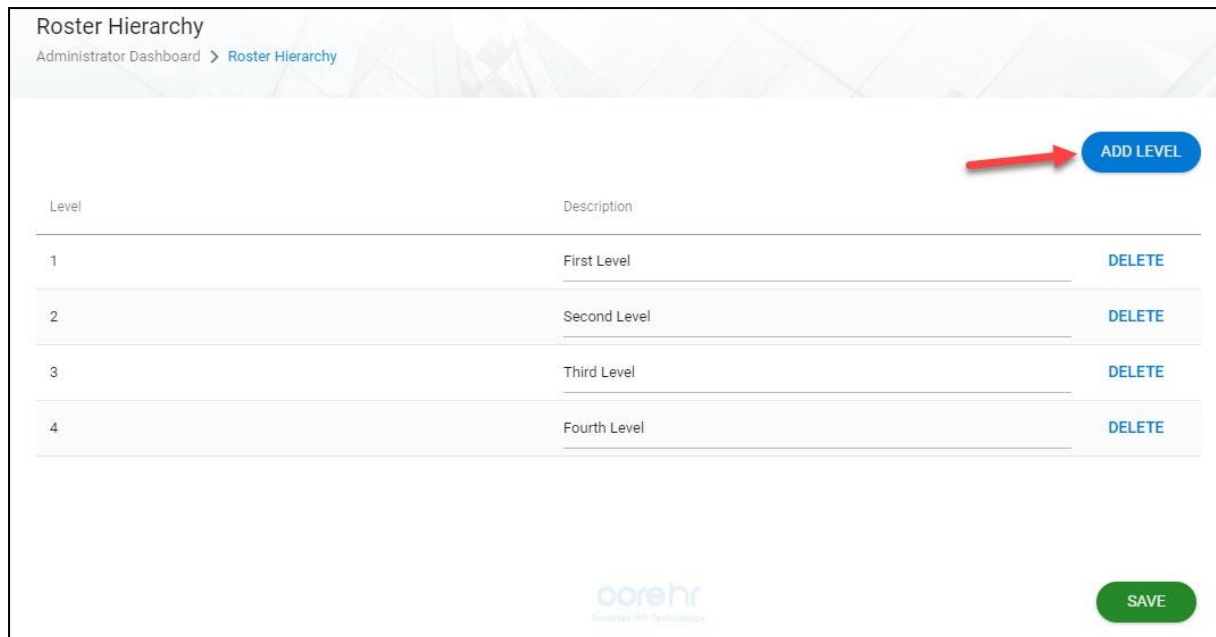

Administrator Dashboard	
Roster Links	
Roster Dashboard Order	OPEN
Roster Stats Settings	OPEN
Base Requirements	OPEN
General Settings	OPEN
Roster Hierarchy	OPEN
Team Structure	OPEN
Cost V Budget Settings	OPEN
Notification Details	OPEN
Roster Smoothing Settings	OPEN
Interface Types	OPEN
Shift Swap Validation	OPEN
Minor Rules	OPEN

The *Roster Hierarchy* screen displays.

2. Click the **Add** button.

This adds a new row to the screen, where it is possible to add a description/label for the level.

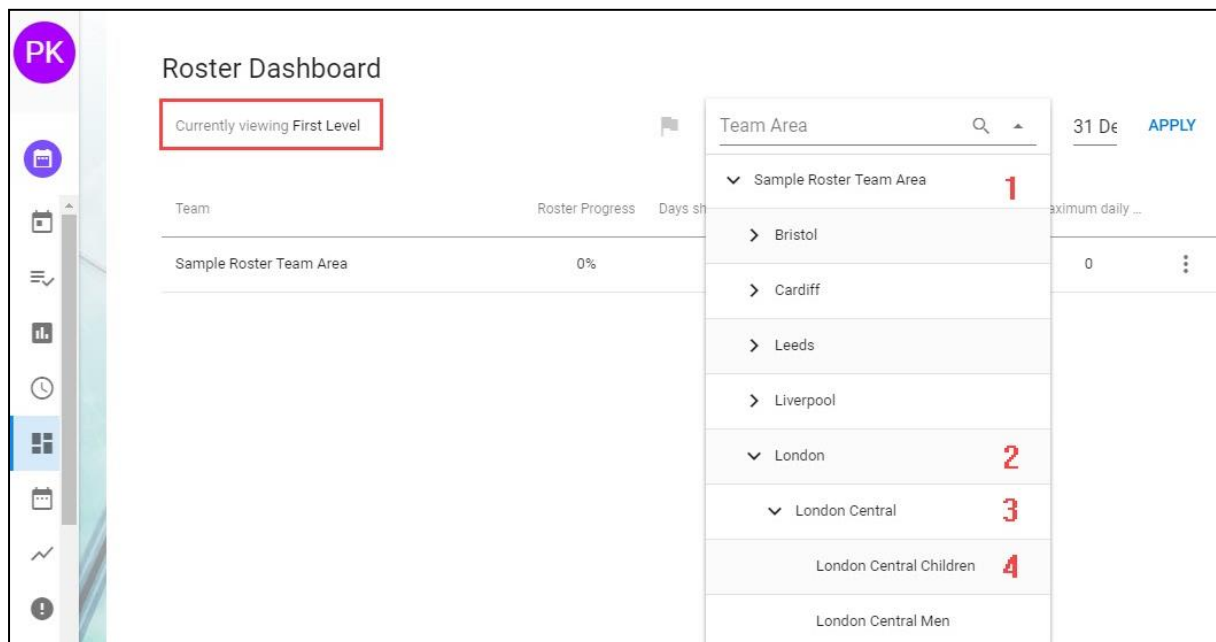

- Once all the applicable levels are added, click **Save**.

For this example, there are 4 levels of *Team Areas* which have been labelled as follows:

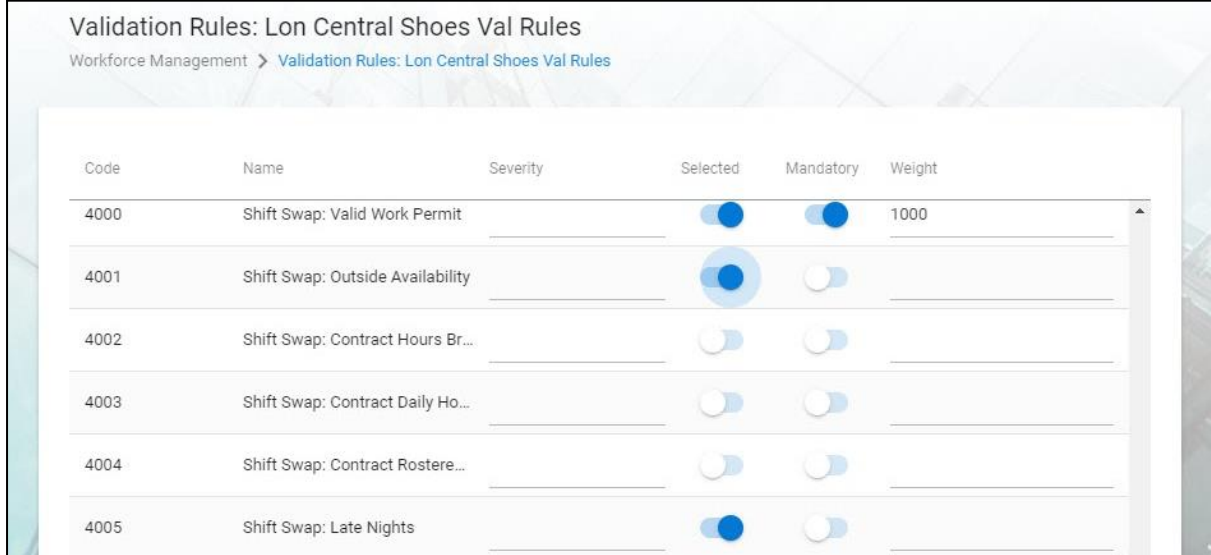

- First Level
- Second Level
- Third Level
- Fourth Level

When viewing these *Team Areas* on the *Roster Dashboard*, the *Team Area* level is displayed.

8.4. Shift Swap Validation

Shift Swap specific Validation Rules are configured via the Validation Rules screen accessible on the Workforce Management dashboard. The Validation Rules screen is shown in the image below. For further information, view section [7.8. Validation Rules](#).

Code	Name	Severity	Selected	Mandatory	Weight
4000	Shift Swap: Valid Work Permit		☒	☒	1000
4001	Shift Swap: Outside Availability		☒	☐	
4002	Shift Swap: Contract Hours Br...		☐	☐	
4003	Shift Swap: Contract Daily Ho...		☐	☐	
4004	Shift Swap: Contract Rostere...		☐	☐	
4005	Shift Swap: Late Nights		☒	☐	

The below table details some commonly used Shift Swap specific Validation Rules. Note, this is not an extensive list.

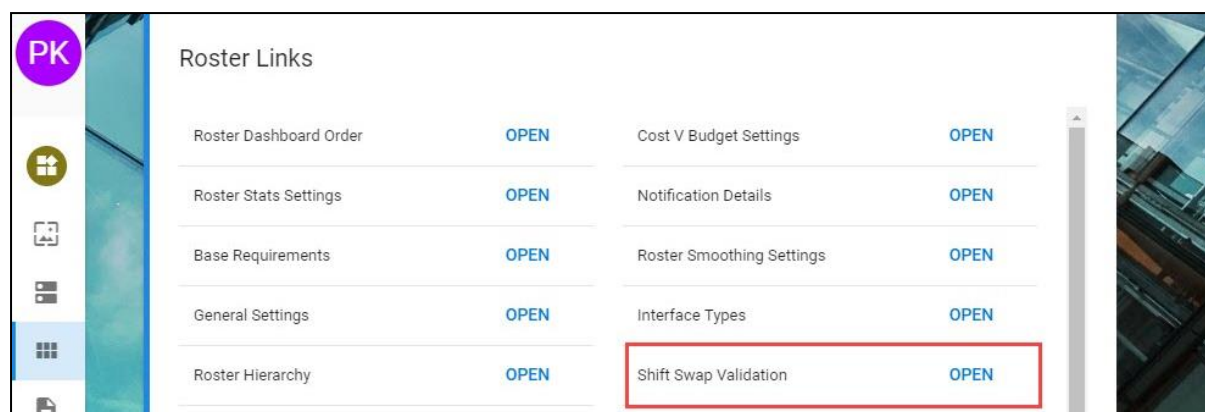

Validation Rule	Explanation
4002 Contract Hours Breach	Neither employee (requester or swap target) will exceed their weekly contracted hours with the shift swap.
4014, 4016, 4017 Work time Directive rules	Neither requester or target employee breaches the work time directive rules defined for the company.
4022 Cannot swap with a person on Leave	Employees who have scheduled leave periods on the swap date will not appear in the list.
4024 Overlapping Shifts	Employee cannot propose a swap to a person where the target employee or the requester would inherit a pattern that overlaps with their pattern for that day.
4039 Max 39 hours	Neither requester or target employee will have rostered hours exceeding 39 hours for the week after the swap.
4502 Recommended team areas	Employee can propose a swap to a person in another team area if that team area is designated as a recommended team for the home team area. Recommended team area is defined in the team area config on the workforce management page.
4533 Under contract hours	Neither the requester nor the target employee will be under their contracted weekly hours after the swap.

Validation Rule	Explanation
4551 Job Deviation	The target employees must have the same job title as the requester in order to appear in the list of eligible employees.

8.4.1. Shift Swap Validate On

It is possible to enable the *Validation Rules* at different stages of the *Shift Swap* process. These settings determine at which process in the workflow the *Validation Rules* are applied. To configure the validation levels:

1. Click **Open** on *Shift Swap Validation*.

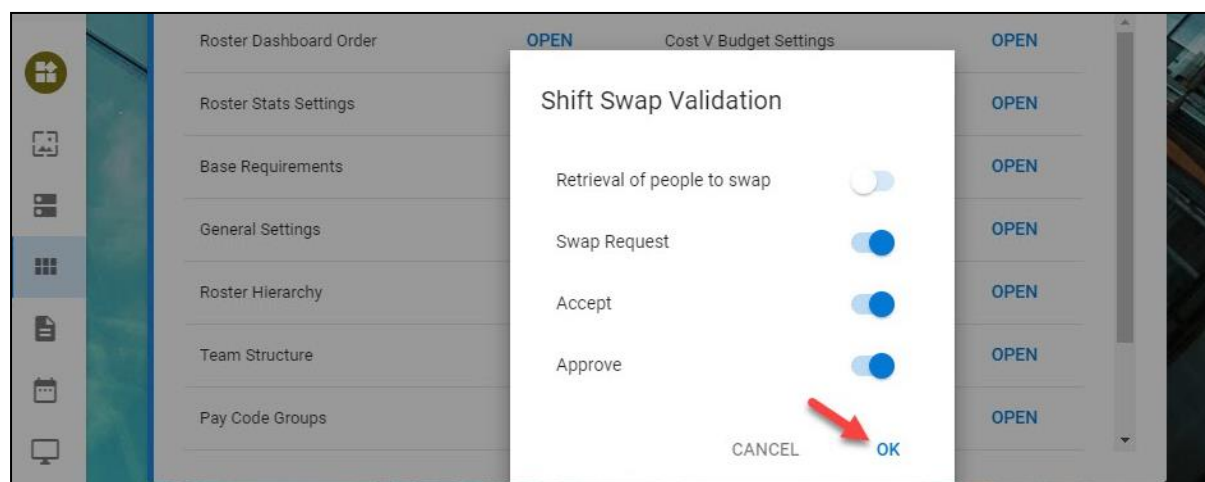

2. Enable the applicable indicators on screen.

In this example, the following indicators have been enabled. Therefore, the Validation Rules are applied at these stages of the process.

- Swap Request
- Accept
- Approve

3. Click **OK**.

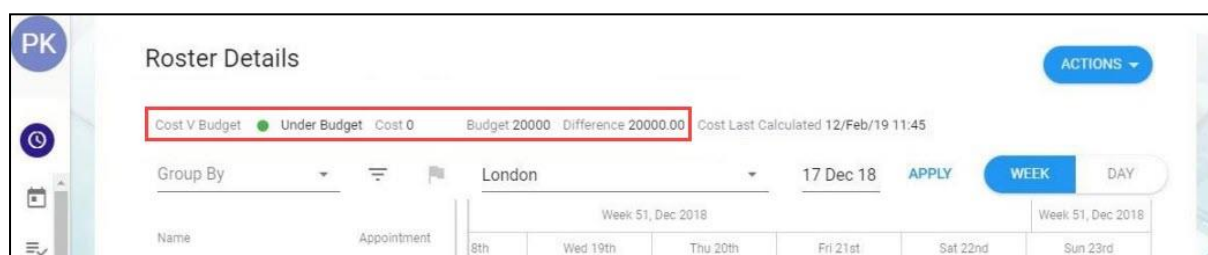

8.5. Normal Day Rule

For further information, view the Public Holidays – Normal vs Non-normal days training material on CoreHR University.

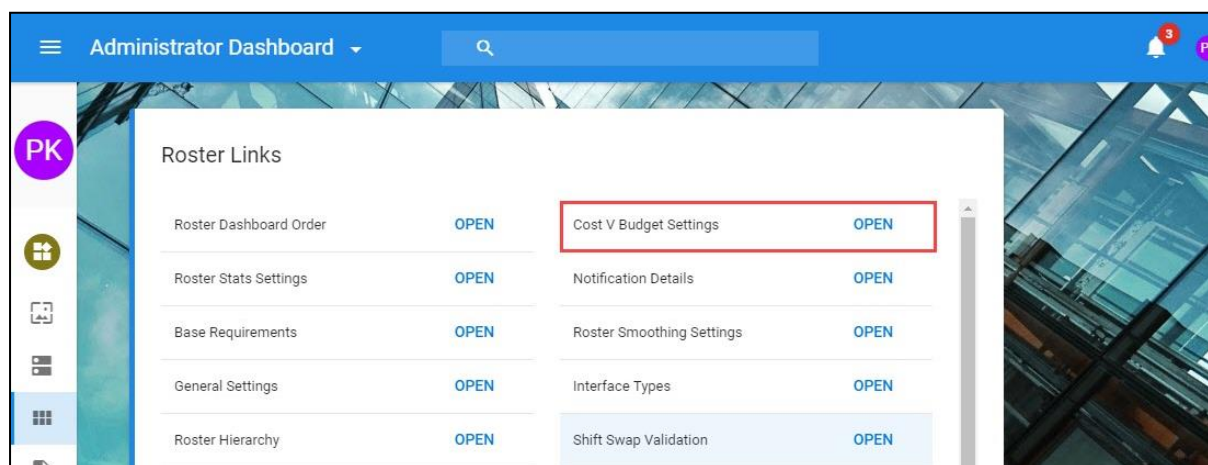

8.6. Cost V Budget Settings

The *Costs vs Budget* feature allows you to compare your budget for the day or week, against the costs that occur during that day or week. The *Cost vs Budget* for the week view is automatically shown on top of the *Roster Details* screen. This is shown in the screenshot below.

To configure the *Cost vs Budget* settings:

1. Click **Open** on *Cost V Budget*.

The *Cost V Budget Settings* pop-up displays.

2. Select the *Over Budget Colour* from the drop-down list.
3. Select the *Under Budget Colour* from the drop-down list.

In this example, if the *Team Area* is under Budget the *Cost vs Budget* display will be green, if the *Team Area* is over Budget the *Cost vs Budget* display will be red.

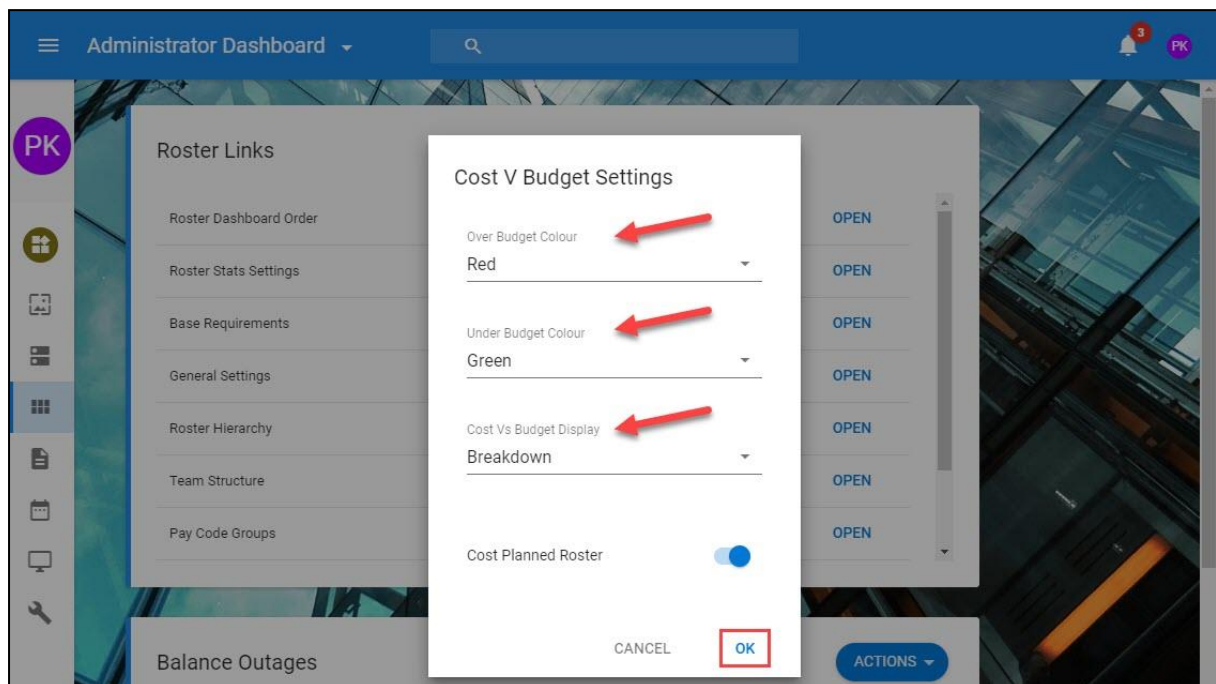

4. Select the *Cost Vs Budget Display* from the drop-down list.

Here it is possible to split out the values displayed that make up the Over or Under Budget value. This makes it possible to view the value associated with Costs, Budget and the Difference. It is possible switch between *Difference* or *Breakdown*. In this example, **Breakdown** is selected.

5. Switch **On** the *Cost Planned Roster* indicator, if applicable.

For further information on *Cost Planned Roster*, view the training material on CoreHR University.

6. Click **OK**.

The *Cost V Budget* section, and the **Calculate Costs** button are now available on the *Roster Details* screen.

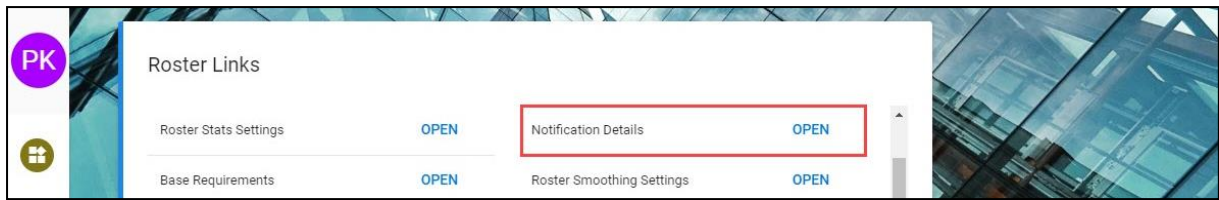

8.7. Notification Details

The *Notification Details* option allows you to configure default notifications. These notifications are set at company level. Here, it is possible to configure notifications to:

- Employees, when a manager has *Published* a week in roster.
- Managers, when an employee within their remit has clocked in late for work.
- Managers, when an employee within their remit is a no show for work.

To configure *Notifications Details*:

1. Click **Open** on *Notification Details*.

The *Notification Details* screen displays. Here it is possible to configure the following notifications:

- Publish Week
- Late Alert
- No Show Alert

8.7.1. Publish Week Notifications

1. Select the **Publish Week** tab.
2. Enable the *Notify the Notification Centre* indicator.
3. Enable the *Send employee Email* indicator, if applicable.
4. Enter the default text for the *Email/MMS Subject*.
5. Enter the *Email Body*.

For default configuration, using the text '(start)' and '(end)' allows the dates for the period to be placed in the mail by the system. Therefore:

- (start) = The first date of the period being published.
- (end) = The last date of the period being published.

6. Click **Save**.

A screenshot of the 'Notification Details' configuration screen. The top bar is blue with a back arrow and 'Administrator Dashboard'. Below is a breadcrumb 'Administrator Dashboard > Notification Details'. There are three tabs: 'Publish Week' (selected, indicated by a red arrow), 'Late Alert', and 'No Show Alert'. The 'Publish Week' tab contains two toggle switches: 'Notify Employee Notification centre' (turned on) and 'Send Employee Email' (turned on). Below these are two text input fields: 'Email/MMS Subject' with the placeholder text 'Your schedule for (start) to (end) is now available to view' and 'Email Body' with the placeholder text 'Your schedule for (start) to (end) is now available to view. For more information contact...'. A red rectangle highlights the toggle switches and the two text input fields. At the bottom right, there is a green 'SAVE' button with a red arrow pointing to it. The 'corehr' logo is at the bottom center.

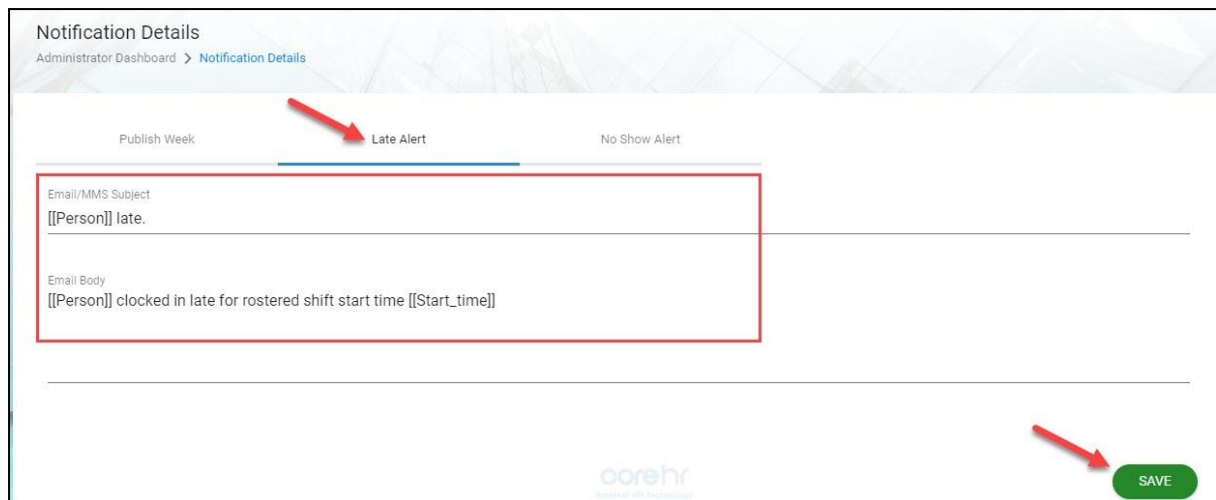

8.7.2. Late Alert Notifications

Late Alert Notifications are sent to team managers, when an employee within their remit is late.

1. Select the **Late Alert** tab.
2. Enter the default text for the *Email/MMS Subject*.
3. Enter the *Email Body*.

For default configuration, using the text '[[Person]]' allows the employee to be placed in the mail by the system.

4. Click **Save**.

The screenshot shows the 'Notification Details' page in the CoreHR system. The breadcrumb trail is 'Administrator Dashboard > Notification Details'. There are three tabs: 'Publish Week', 'Late Alert' (which is selected and highlighted with a red arrow), and 'No Show Alert'. The 'Late Alert' tab contains two text input fields. The first field, labeled 'Email/MMS Subject', contains the text '[[Person]] late.'. The second field, labeled 'Email Body', contains the text '[[Person]] clocked in late for rostered shift start time [[Start_time]]'. A red box highlights both input fields. At the bottom right of the form, there is a green 'SAVE' button, which is also pointed to by a red arrow. The CoreHR logo is visible at the bottom center of the page.

8.7.3. No Show Alert Notifications

No Show Alert Notifications are sent to team managers, when an employee within their remit does not show up for work.

1. Select the **No Show Alert** tab.
2. Enter the default text for the *Email/MMS Subject*.
3. Enter the *Email Body*.

For default configuration, using the text '[[Person]]' allows the employee to be placed in the mail by the system.

4. Click **Save**.

SAVE

8.8. Interface Types

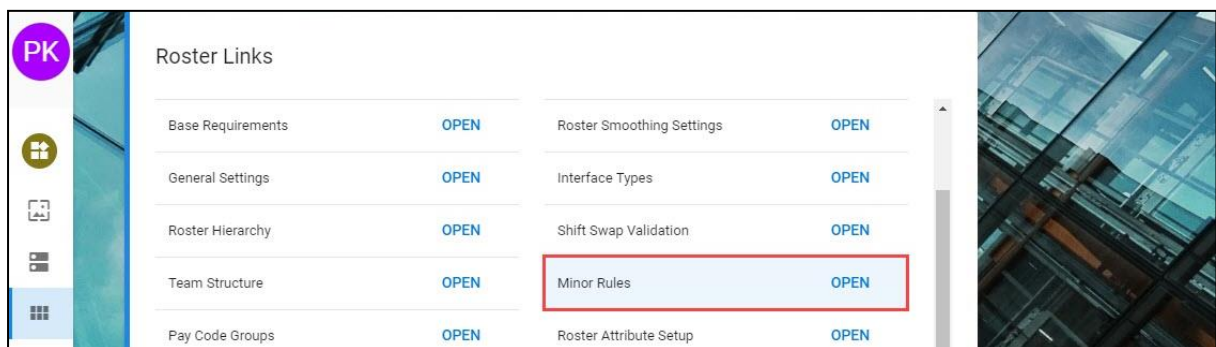

The *Interface Types* screen holds the configuration settings required for Roster Interface Files. These files are used to load historical data into the system. This historical data can then be used by the system to predict trends, when a manager generates demand. When the *Generate Values* process is run, the system calculates predicted values for the period based on last year's actual values. For further information see the *Generate Demand* training material on CoreHR University

8.9. Minor Rules

In some cases, minor employees are entitled to different break rules than employees greater than the age of 18. Therefore, separate *Minor Rules* track the break times minors are entitled to.

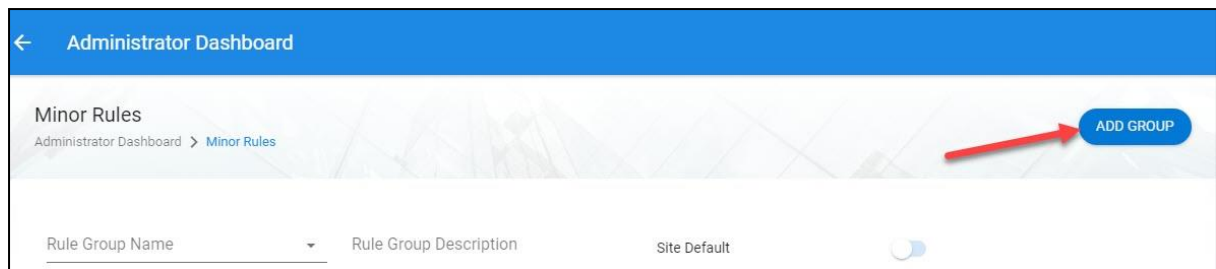

To add a *Minor Rule*:

1. Select **Open Minor Rules**.

The *Minor Rules* screen displays.

2. Click **Add Group**.

8.10. Roster Attribute Setup

An *Attribute* is effectively a means of applying a label to an employee's pattern. This will be the task/job that the employee is scheduled to complete. The *Attributes* are user specified, examples may include 'Cashier', 'Floor', 'Security' or 'Training'. The *Attribute* can then be displayed on the *Roster Details* screen and can also be overridden on a day level. From a system point of view, the *Attribute* is a job/task that is available within *CoreRoster* to be assigned to an employee, for each pattern they are working within the week. For further information, view the *Roster Attribute* training material on CoreHR University.

8.11. Event Diary

Administrators can add and manage events on *CorePortal*. Example events may include a company day, a fire drill, or Christmas events, etc. Managers can view planned events that may affect their staffing requirements, for example, any events that may affect their team area, from a rostering or time and attendance perspective. Events are visible to managers from the following screens:

- Roster Details
- Interface Details
- Leave Request
- Team Scheduler

For further information, view the Event Diary training material on CoreHR University.

9. AutoRoster

9.1. AutoRoster Overview

AutoRoster creates the schedule for your employees automatically by matching demand (how many people needed) to employees available to work with the required skill set. By running *AutoRoster*, it allows the system to automatically satisfy the:

- *Area Rules* and *Roster Requirements* assigned to a *Team Area*.
- *Validation Rules* assigned to a *Team Area*.
- *Employee Contract Details*, to determine availability, suitability, etc.

The *Roster Requirements* identify how many employees with a specified job title are required at a specific time. The *Validation Rules* then ensure there are no roster violations and the most appropriate employees are selected, as specified on their *Contract Details*, first when *AutoRostering*.

These rules dictate the logic that gets applied when the *AutoRoster* process is run to complete a *Team Area Roster*. For example, applying the business logic and/or rules that you require the system to apply when choosing the most appropriate employees to fill each roster gap. Therefore, *AutoRoster* reduces the time it takes to create a *Roster*.

There are a number of different ways for *AutoRoster* to be configured, these configuration items have been detailed earlier in the document, click each link below to view further information:

- [One Rule Only](#)
- [Split Rules](#)
- [Roster to Contract](#)
- [Roster Breaks](#)

9.2. Auto Roster Breaks

The system will automatically assign breaks to a day based on *WTD Rules*, when a shift is amended the break is recalculated. Configuration can allow *AutoRoster* of breaks to the most optimal times in the day to reduce staff shortages. This change is to try preventing all employees getting put on the same break time if they are working the same shift.

When breaks are being applied, the system completes a check to try reducing all employees getting the same break, this is done by checking the employees start time and end time and then staggering the breaks across the day.

**Note:**

The *Break Recalculation* functionality can be used in line with the *Retail Calculation* type only.

To configure the breaks:

1. Go to *Back Office > CoreTime/CoreRoster > System Params > Reference Q – Z > Working Time Parameters*.
2. Enter the *Working Time Group*.
3. Click **Roster Break Rules**.

This displays the *AutoRoster Break Rules* section of the screen.

These rules specify the times in which the *AutoRoster* should assign breaks to employees.

The highlighted section to the left of the screen specifies what breaks the employees are entitled to during their shift.

Rule Type	From	To	Break After	Duration	Paid	Shift Duration	No Break in First	No Break in Last	Max Consecutive Hours	Split Break After	Minimum Split Duration
Standard	0.00	4.00		0.25	☒		1.00	1.00	5.00	10.00	
Standard	4.00	8.00		1.00	☒		1.00	1.00	5.00	10.00	0.50
Standard	8.00	12.00		0.25	☐		1.00	1.00	5.00	10.00	0.50
Minor	4.00	10.00		1.00	☒		1.00	1.00	5.00	10.00	
					☐						
					☐						
					☐						

Standard/Minor Rules

☒ One Rule Only ☐ Multiple Rules Gap between breaks: 3 Minor Age Threshold:

In the below example, you can see that:

- For a *Standard Rule Type*.
 - Within the first 4 hours of the employee's shift.
 - The employee is entitled to a 25-minute paid break.

Rule Type	From	To	Break After	Duration	Paid	Shift Duration	No Break in First	No Break in Last	Max Consecutive Hours	Split Break After	Minimum Split Duration
Standard	0.00	4.00		0.25	☒		1.00	1.00	5.00	10.00	
Standard	4.00	8.00		1.00	☒		1.00	1.00	5.00	10.00	0.50
Standard	8.00	12.00		0.25	☐		1.00	1.00	5.00	10.00	0.50

The highlighted section on the right provides guidance to the *AutoRoster* for when breaks can be assigned.

Working Time Parameters

Working Time Group: WTD Working Time Directive: UK Site: ☒ Pav Code Groups: Roster Break Rules

AutoRoster Break Rules

Rule Type	From	To	Break After	Duration	Paid	Shift Duration	No Break in First	No Break in Last	Max Consecutive Hours	Split Break After	Minimum Split Duration
Standard	0.00	4.00	0.25	1.00	☒	1.00	1.00	1.00	5.00	10.00	0.50
Standard	4.00	8.00		1.00	☒		1.00	1.00	5.00	10.00	0.50
Standard	8.00	12.00		0.25	☐		1.00	1.00	5.00	10.00	0.50
Minor	4.00	10.00		1.00	☒		1.00	1.00	5.00	10.00	

Standard/Minor Rules

☒ One Rule Only ☐ Multiple Rules Gap between breaks: 3 Minor Age Threshold:

In the below example, you can see that the system:

- Cannot apply the break in the first hour of the shift.
- Cannot apply the break after 3 hours of the shift.
- Must apply the break before the employee has worked 5 consecutive hours.
- Must split the break into 2 breaks after 10 hours.

Working Time Parameters

Working Time Group: WTD Working Time Directive: UK Site: ☒ Pav Code Groups: Roster Break Rules

AutoRoster Break Rules

Rule Type	From	To	Break After	Duration	Paid	Shift Duration	No Break in First	No Break in Last	Max Consecutive Hours	Split Break After	Minimum Split Duration
Standard	0.00	4.00	0.25	1.00	☒	1.00	1.00	1.00	5.00	10.00	0.50
Standard	4.00	8.00		1.00	☒		1.00	1.00	5.00	10.00	0.50
Standard	8.00	12.00		0.25	☐		1.00	1.00	5.00	10.00	0.50
Minor	4.00	10.00		1.00	☒		1.00	1.00	5.00	10.00	

Standard/Minor Rules

☒ One Rule Only ☐ Multiple Rules Gap between breaks: 3 Minor Age Threshold:

It is possible for rules to be specified for minor employees, to keep in line with regulatory responsibilities.

To create a *Minor Break Rule Type*:

1. Select **Minor** from the *Rule Type* dropdown list.

Rule Type	From	To	Break After	Duration	Paid	Shift Duration	No Break in First	No Break in Last	Max Consecutive Hours	Split Break After	Minimum Split Duration
Standard	0.00	4.00		0.25	☒		1.00	1.00	5.00	10.00	
Standard	4.00	8.00		1.00	☒		1.00	1.00	5.00	10.00	0.50
Standard	8.00	12.00		0.25	☐		1.00	1.00	5.00	10.00	0.50
Minor	4.00	10.00		1.00	☒		1.00	1.00	5.00	10.00	
Night					☐						

For further information on the full configuration required for *Break Recalculation*, view the *Break Recalculation* training material on CoreHR University.

9.2.1. Assign Working Time Group

The *Working Time Group* must be assigned to the applicable *Work Group* or directly to the employee record, to ensure the *Working Time Directive* is applied during *AutoRoster*.

Assign to Work Group

To assign the *Working Time Group* to a *Work Group*:

1. Go to *Backoffice > CoreTime/CoreRoster > System Params > Work Groups*.
2. Enter the *Work Group*.
3. Select **General Parameters – 2**.
4. Enter the *Working Time Group*.
5. Click the  button to save.

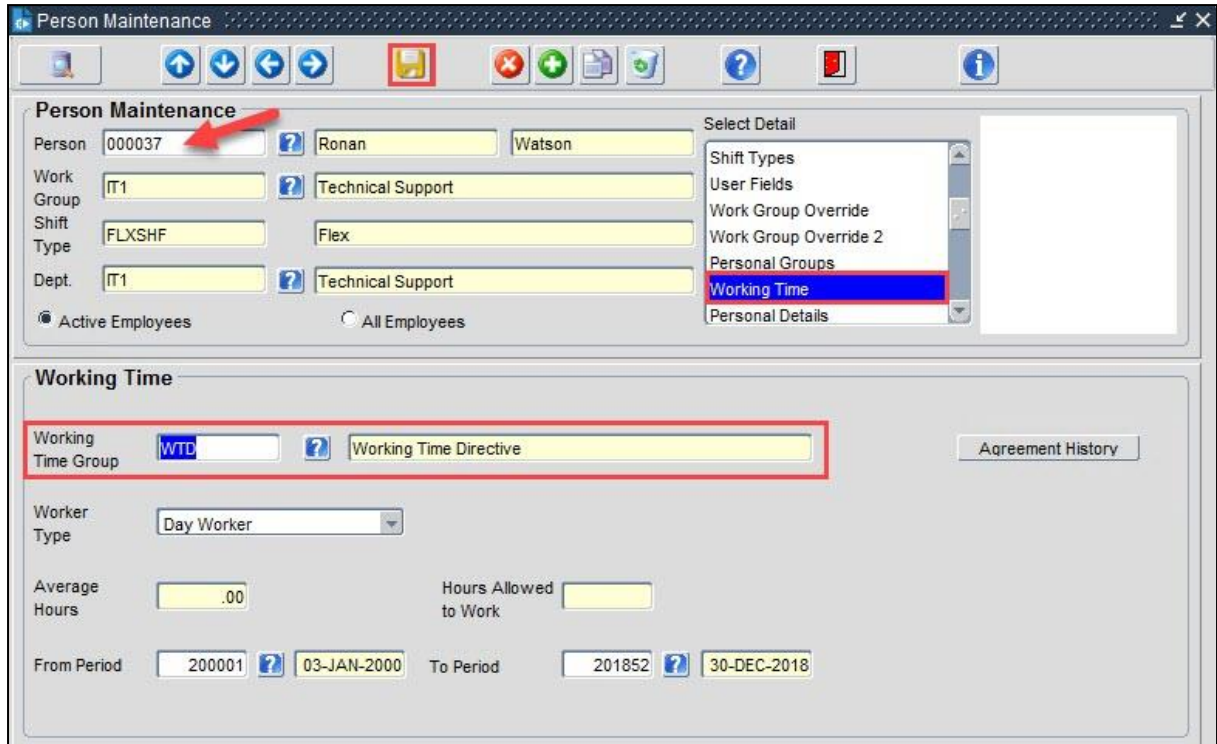

General Details		Select Details
Work Group	IT1	General Parameters - 1
Company	1	General Parameters - 2
Holiday Scheme	CC	General Parameters - 3
Shift Type	37.50_001	Default Payroll Hours
Default OT Pay Code	2005	Default Payments

General Parameters - 2	
Working Time Group	WTD
☒ Calculate Clockings	
☐ Allow Generation of Default Clocks	
☐ Confirm Unapproved Hours	
☐ Display Pay Codes on Pers. Clockings	
☐ Apply Pay Code Adjustment	

Assign to Employee

To assign the *Working Time Group* to an employee:

1. Go to *Back Office > CoreTime/CoreRoster > Pers Data > Person Maintenance*.
2. Enter the *Person*.
3. Select **Working Time**.
4. Enter the *Working Time Group*.
5. Click the  button to save.

The screenshot shows the 'Person Maintenance' window with the 'Working Time' tab selected in the 'Select Detail' pane. A red arrow points to the 'Person' field (000037). A red box highlights the 'Working Time Group' field, which contains 'WTD' and 'Working Time Directive'. Below this, the 'Worker Type' is set to 'Day Worker'. The 'Average Hours' field is set to '.00'. The 'From Period' is set to '200001' (03-JAN-2000) and the 'To Period' is set to '201852' (30-DEC-2018). The 'Hours Allowed to Work' field is empty. The 'Agreement History' button is visible on the right.

10. Uncovered Shifts

10.1. Uncovered Shifts Overview

As per the previous *AutoRoster* section, *AutoRostering* allows the system to automatically satisfy the *Area Rules* assigned to a *Team Area*. As the *AutoRoster* rules can be quite strict, the *AutoRoster* procedure may not fully fill the available shifts with employees. The *Uncovered Shifts* procedure should then be run after an *AutoRoster*, to further complete the *Roster*, and fully filling the available shifts with employees, using less strict *Validation Rules*.

10.1.1. Uncovered Shift - Validation Rules

Validation Rules for *Uncovered Shifts* operate similarly to the *AutoRoster Validation Rules* as they can include mandatory rules, for example:

- Work/Rest/Absent
- Available Days
- Available Times, etc.

Where *Uncovered Shift Validation Rules* may vary from *AutoRoster Validation Rules* is that rules such as 'Match Job Titles' or 'Contract Rostered Days' may be selected but not marked as mandatory, or not selected at all. This makes the *Uncovered Shift* validation rules more lenient, as more employees are required to fill the shifts.

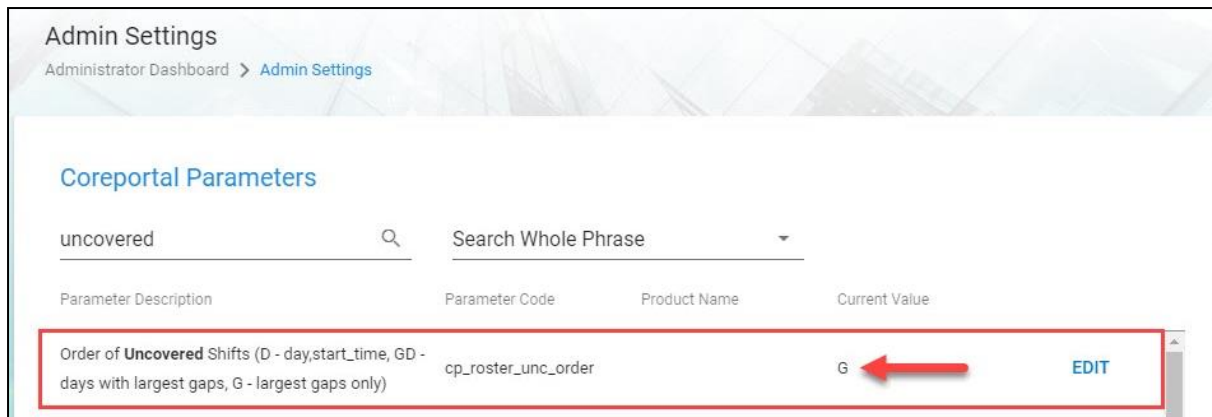

View section [7.8. Validation Rules](#), for further information on creating a *Validation Rule Template*, and assigning it to a *Team Area*.

10.1.2. Order Uncovered Shifts Configuration

It is possible to configure the order in which *Uncovered Shifts* are displayed on screen. This is controlled by the below *Admin Setting*:

Parameter Description	Parameter	Setting
Order of Uncovered Shifts	cp_roster_unc_order	• Set to 'GD' to order by the days with the largest gaps. • Set to 'D' to order by Day and start time. • Set to 'G' to order by the largest gaps.

For example, if *Uncovered Shifts* are displayed based on the largest gap of *Uncovered Shifts*, this is based on the highest number of occurrences of a day, and within that day, by the highest amount of times it is required.

For example, a rule exists where it requires 4 'Cashiers' and 1 'Cleaner'. Therefore, the number of:

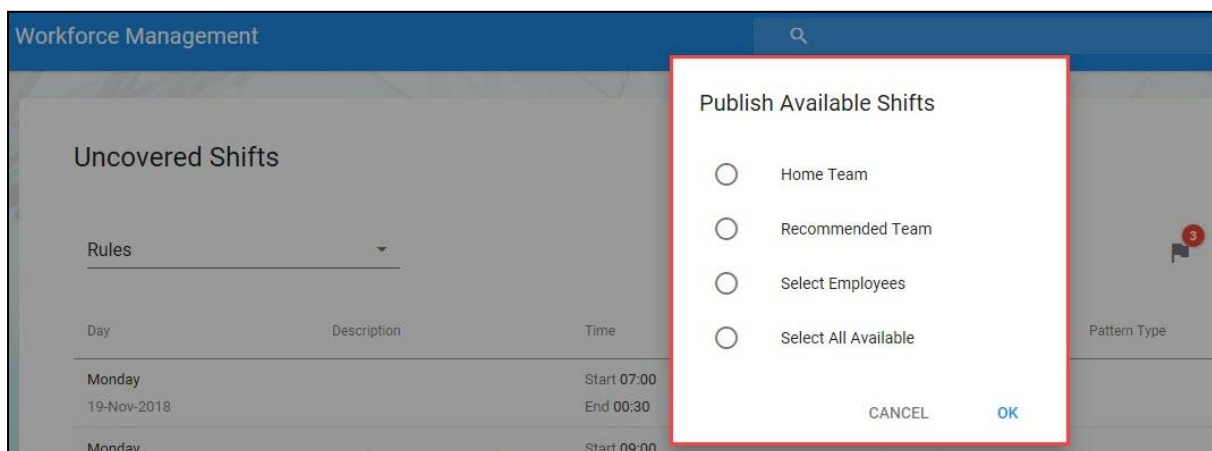

- Day occurrences is 5
- Times occurrences for Cashiers is 4
- Time occurrences for Cleaners is 1

10.2. Publish Uncovered Shifts to Employees

It is possible to manually assign employees to the Uncovered Shifts, or to Publish Uncovered Shifts for employees to then view and accept. It is possible to identify the employees the shifts are published to, for example:

- Home Team
- Recommended Team
- Selected Employees
- Select All Available

The publish available shifts screen is displayed in the below screenshot.

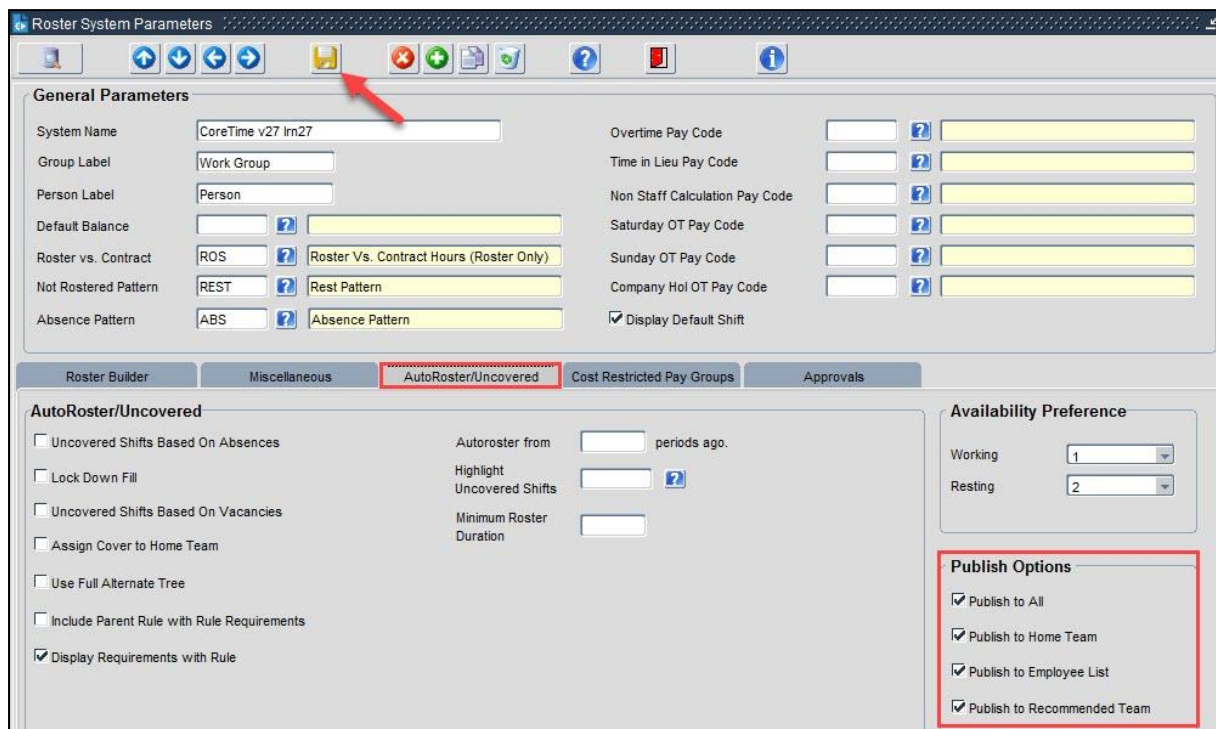

The options available for *Publishing Available shifts* are configurable via *Backoffice*. To configure:

1. Go to *Back Office > CoreTime/CoreRoster > System Params > Roster Parameters > System Parameters*.
2. Select the **AutoRoster/Uncovered** tab.
3. Tick each applicable *Publish Options* that are required.

These options then appear on *CorePortal* for team managers, when *Publishing Uncovered Shifts* to employees.

4. Click the  button to save.

Roster System Parameters

General Parameters

System Name	CoreTime v27 Im27	Overtime Pay Code	
Group Label	Work Group	Time in Lieu Pay Code

☒ Display Requirements with Rule			

Availability Preference

Working	1
Resting	2

Publish Options

- ☒ Publish to All
- ☒ Publish to Home Team
- ☒ Publish to Employee List
- ☒ Publish to Recommended Team

10.2.1. Publish Uncovered Shifts Validation Rules

Publish Uncovered Shifts Validation Rules are required, these are generally more lenient than as the employee will make the decision. For example, you may never want to *AutoRoster* employees outside of available times so *AutoRoster/Uncovered Shifts* Validation Rule is mandatory, but employees may decide to work outside of availability as a once off.

View section [7.8. Validation Rules](#), for further information on creating a *Validation Rule Template*, and assigning it to a *Team Area*.

11. Absences and Leave

11.1. Absence Overview

In *Roster* any absence that has at least one work day between the start date of the absence and end date of the absence is seen as a *Rostered* absence and is treated like a standard *Absence* in *CoreTime*. The absence calculates as per the duration of the day based on the *Pattern* times

In *Roster* all balances should be tracked in hours. The nature of *Roster* means the day duration constantly changes so an hour balance is seen as the most accurate.

The following options are available within *Roster* when booking absences:

- Absence on work days
- Absence on rest days (Unrostered Bookings)
- Absence using start and end time
- Part day absence (standard calculation)
- Part day absence (retail calculation)

For further information on Roster Absences, view the Roster Absences training material on CoreHR University.

12. CorePortal Parameters

12.1. Admin Settings References

The table below details some sample *Admin Settings* that can be configured for *Roster* solutions.

Note:

- There are 4 mandatory *Admin Settings*, that must be set to 'Y'. This are detailed in the below table.
- This is not an extensive list of available *Roster Admin Settings*. To ensure your *Roster* solution is best optimised to your organisational requirements, contact your CoreHR Project team.

Admin Setting	Setting	Detail
cp_roster_installed	Y	Mandatory for all Roster solutions.
cp_roster_rep_dlines	Y	Mandatory for all Roster solutions.
cp_roster_lev_node	4	Mandatory to set to lowest level for all Roster solutions e.g. if 5 hierarchy levels, set to 5.
cp_roster_active	Y	Mandatory for all Roster solutions.
cp_roster_show_diff	Y	Roster Details – displays difference between contract hours and rostered hours.
cp_roster_detcol5	DIFFERENCE	Roster Details – in conjunction with cp_roster_show_diff
cp_roster_avail	Y	Availability - toggles employee view of availability. If set to 'Y' displays the options Number of Sundays, number of late nights and available for late nights
cp_roster_pubholiday	N	Availability – Public Holiday does not work with Retail calc so option should not be available
cp_my_approvals_sswap	Y	Shift Swap – Enable to allow employees to submit shift swap requests.
cp_hide_swp_app_checkbox	N	Shift Swap – Ensures Shift Swaps can be filtered on My Approvals widget
cp_roster_show_swap	Y	Roster Details - Allows a manager to swap shifts via Change Roster
cp_roster_show_position	N	Roster Details – Employee info displayed in the scrolling section.
cp_roster_show_location	N	Roster Details – Employee info displayed in the scrolling section.

Admin Setting	Setting	Detail
cp_roster_show_team_area	Y	Roster Details – Employee info displayed in the scrolling section.
cp_roster_show_job	Y	Roster Details – Employee info displayed in the scrolling section.
cp_roster_show_wgrou	Y	Roster Details – Employee info displayed in the scrolling section.
cp_roster_show_dept	Y	Roster Details – Employee info displayed in the scrolling section.
cp_rules_all_days	Y	Roster Rules – option to view all days simultaneously
cp_my_apptterms_doc_swap	NULL	Delete out entry to remove link.
cp_my_apptterms_doc_avail	NULL	Delete out entry to remove link.
cp_roster_show_col_avg	N	Roster Details – display column
cp_roster_show_col_allow	N	Roster Details – display column
cp_roster_show_col_cost	N	Roster Details – display column
cp_roster_hide_til_pub	Y	Employee Dashboard – hides pattern until roster is published.
cp_roster_pub_notify	Y	Notifies employees when roster published via notifications
cp_roster_av_org_role	MGRESS	Manager Dashboard - Availability notification
cp_roster_av_org_group	WRKGRP	Manager Dashboard - Availability notification
cp_my_approvals_avail	Y	My Approvals – Allow mgr approve availability request
cp_rost_avail_cyc_cntrct	N	Roster Details – Contract Details
cp_display_rest_absence	Y	Unrostered Booking
p_alw_unrost_on_rest_day	Y	Unrostered Booking
cp_roster_unc_order	D	Uncovered Shifts – Order by days
