1. Overview

1.1. Purpose of the Guide

The purpose of this guide is to explain the *Calculate Hours* screen. Previously this screen was available in the back office only and has now been brought out to Portal. The screen allows users to calculate both future calculation and real time calculation for selected employees.

This guide will outline:

- A description of the screen.
- An explanation of the key fields.
- Types of calculation.
- How to configure the *Calculate Hours* screen.

2. The Calculate Hours Screen

The *Calculate Hours* screen is designed to give further information on processed hours.

To begin with, a summary of the last Calculate hours run displays at the top of the *Calculate Hours* screen.

The screenshot shows the 'Calculate Hours' interface. At the top left, there are two circular progress indicators: a green one labeled '108 Processed' and a blue one labeled 'Unprocessed'. In the top right corner, there is a green button labeled 'Complete'. Below these, there are several controls: a 'Run For Person' toggle switch, a 'Select Company*' dropdown menu currently showing 'Unit Test Company', and two 'Work Group' dropdown menus labeled 'Work Group Start*' and 'Work Group End*', both with placeholder text 'Select a work group to start/end the range'. At the bottom, there are two more toggle switches: 'Real Time Calculation' and 'Future Calculation'.

It details the following:

Field	Detail
Employees Processed	The number of employees whose hours have been calculated.
Employees Unprocessed	The number of employees who have yet to have their hours calculated.
Errors	Any issues which have stopped the hours from being calculated.
Status	The Status of the run. Statuses can be Complete , In Process or Scheduled .

**Note:**

Once a company is selected, the first and last workgroup will default in to the Work Group fields.

Moving down the screen, there are a number of toggles, which are detailed in the table below.

Toggle	Detail
Run for Person	This allows you to run for just one selected employee.
Future Calculation	This toggle allows you to run a future calculation for selected employees. The dates to run are only displayed if the option is selected.
Real Time Calculation	This allows you to run a real time calculation for selected employees.

2.1. Types of Calculation – Who to calculate for?

There are three scenarios based on the options to calculate hours.

2.1.1. Option 1: System Users linked to the option Generate Timesheets

Option	Detail
Home Company	When selected, users can access all work groups for their home company.
All Companies	When selected, users can access all work groups in all companies.

System Users has the following three options to run :

Option	Detail
Company	If there is only one company, this defaults in the selection.
Work Group	This defaults to the first and last work group but can be changed for a group or for one work group.
Employee	This is a Generate Timesheet option and is based on System User Access.

2.1.2. Option 2: HR Admin Access

Option	Detail
HR Admin Access	Users are given a list of employees where the option is given to Select All or select one employee to run the calculation for. Company and work group options are not available when calculations are run using HR Admin Access.

2.1.3. Option 3: Team Area Access

Option	Detail
Team Area Access	This option is based on the team area structure and will run for employee's home team.

2.2. Calculation at Employee Level

**Note:**

Calculate hours will always run for the person even when running in a multi appointment site.

See below an example of Calculation at Employee Level.

Example:

1. An employee has two appointments.
2. The calculate hours is set to run for the Work Group linked to Appointment 1.
3. The calculation runs for both the employee appointments as it is run at a person level.

2.3. History

The *History* screen displays the details of the last run calculations completed by the employee.

The screen displays information on the calculations, which are detailed in the table below.

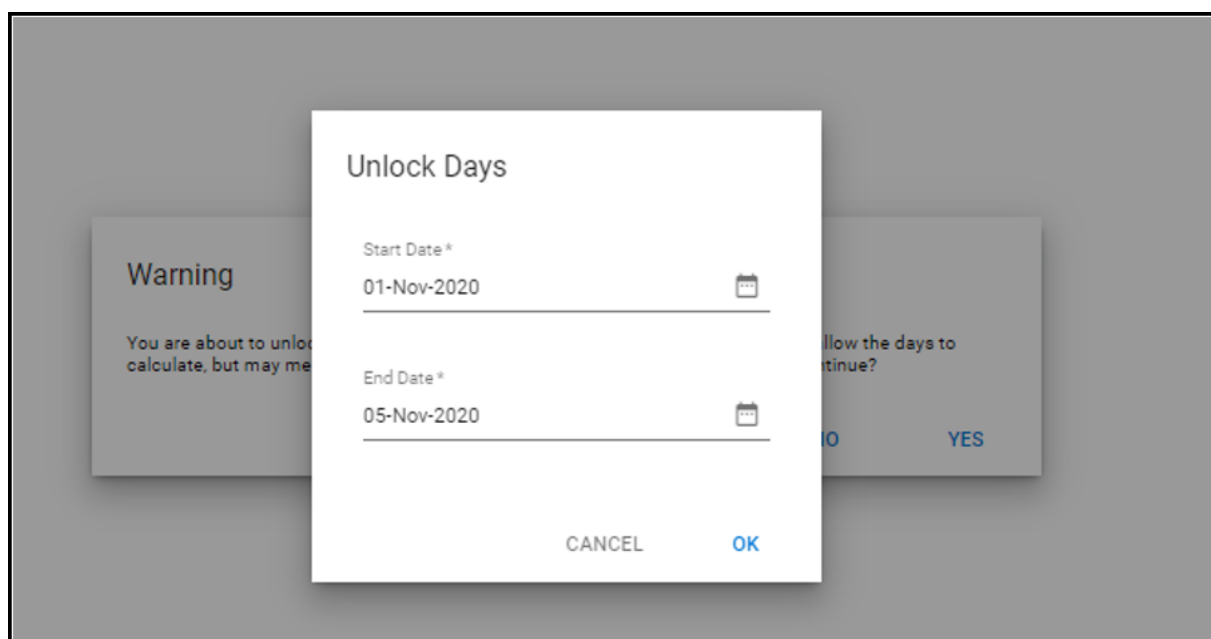

Field	Detail
Username	The user who started the calculation
Person	When the employee option is selected
Start Work Group/End Work Group	When calculation is run for a work group these must be included.
Team Area	Team Area selected

Run Dates	The dates for the hours run.
Calculation Dates	The dates the future calculation was run for.
Number of Employees Calculated	The number of employees calculated.
Run Time Seconds	The length of time the calculation takes to return
Status of the Calculation	Status

2.4. Unlock Days

When a future calculation completes, you are provided the option to Unlock Days.

This means the day recalculates and any manual entries on the day are deleted. This is only possible with future days.

3. How to Configure

The Menu options required to set up Calculate Hours are the following:

Task	Menu Option
Core Portal Calculate Hours	CorePortal Calculate Hours - WFM Admin - reference
Get Hours Calculation	Shifts > Get hours calculation - reference -
Create Hours Calculation	Shifts > Create hours calculation - reference
Calculation Errors	Shifts > Get hours calculation errors - reference -

Create Hours Calculation	Shifts > Create hours calculation unlockdays - reference
Get Workgroups	Shifts > Get workgroups - reference
Get Companies	Shifts > Get companies - reference
Companies Transfer Access	Shifts > Get companies transferaccess - reference
Companies calendars period	Shifts > Get companies calendars period - reference
Calculate People	Roster > Get calculate people - reference

3.1. Security

The system requires the user to choose which mode the *Calculate Hours* screen should run in.

To choose the mode, complete the following:

1. Quick Jump to *WFM Dashboard*.
2. Select Settings.
3. Select **General Settings**
4. Here you see the Calculate Hours Access dropdown where you can select Team Area Access, Structure Code Access or System User Access.

General Settings
WFM Admin Dashboard > General Settings

Calculate Hours Access

SAVE

Mode Selected	Details
Team Area Access	It can be run for an individual team area or for an individual employee and is based on the kind of Roster Team Area Access the user has. Selecting a team area that has sub teams will run the calculation for the parent and all the sub teams belonging to it.
Structure Code Access	This uses HR Admin access when deciding who to run the calculation for. When set to this mode, the user can run for All employees or a select employee.
System User Access	In this mode, if All Companies is selected, all companies are available for selection. If Home Company is selected, the user only has access to their Home company.
