1. Release Notes Overview

1.1. Purpose of this Document

This document provides a list of the new, enhanced and optional features that have been delivered for each module in the v28 release of CoreHR.

For each individual feature release note, the following is provided:

- Summary / high-level description of the change
- Guidance on how to use this
- Any configuration / setup associated with it (if any)
- Any items to consider when using this feature, if upgrading from an earlier version to v28

1.2. Understanding Continuous Releasing

New to v28 is the introduction of new and enhanced functionality being brought into XD continuously. **Head to XD Hub to see what is Available and Coming Soon!**

All of these changes are either New, Enhanced or Optional you will get updates on the XD Hub on how to set up this functionality **see Self Service**

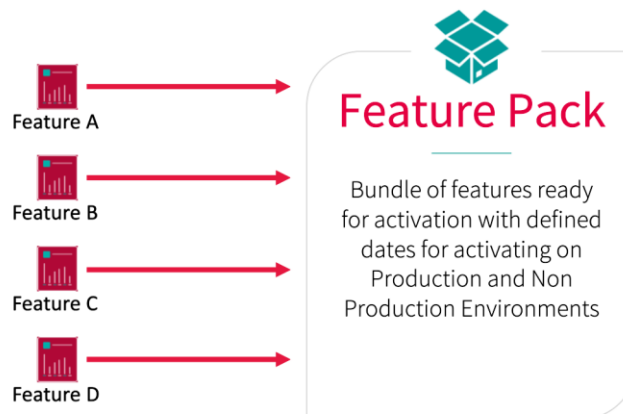

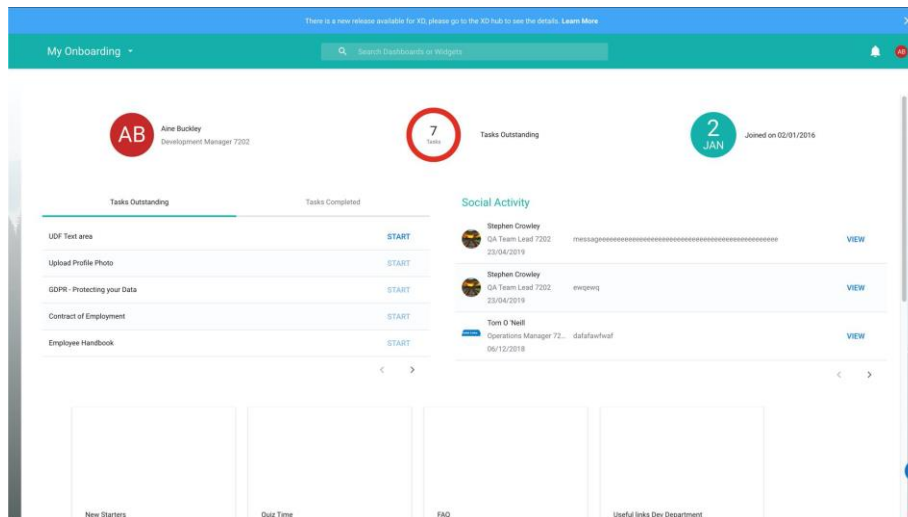

In v28 New features are seamlessly released to customer environments so customers will not go through further major upgrades. So robust functionality is continuously being added for customers to self-serve. Unlocking more value from the system by self-serving features via the XD Hub and no BAU disruptions while upgrading.

1.2.1. Feature Pack

Feature Packs are bundles of features ready for activation within defined dates for activating on Production and Non-Production Environments. Each piece of functionality that is included under the new continuous releasing will be highlighted with a Feature Pack Logo and noted as Coming Soon!

In the background we will be creating new and enhanced functionality in stages, before introducing into **all** customer profiles:

1. Feature packs are created
2. Features are added to Feature packs
3. Feature pack updated with UAT and Live dates and published on XD Hub
4. Only users with access to the XD Hub will get a banner on screen to highlight new feature pack is launched

1.2.2. Self Service

Once the Feature Pack information is published in XD Hub, the user can acknowledge the upcoming changes and complete the set-up steps with the support of the XD Assistant. The feature will be then available to use in Non-Production Environments and a week later Production Environments.

Note:

The Feature Packs will be enabled on the environment whether acknowledgement is made or not.

Compulsory New & Enhanced Functionality will be enabled at General Release for all customers

1.2.3. XD Hub - Support

- **Feature Guides:** Description of all features since v28.
- **Minor Release Notes:** List of all since v28, published when available. Flags to identify when going to UAT/Live
- **Feature Packs:** List of features that are being made available in the latest feature pack and dates for activation on UAT and live
- **XD Assistant Guides:** Guides to download to the XD Assistant from the feature guide page. Self Service for administrators

1.3. Important Inclusions

Some new features will include a ★ next to the title in the contents page. This is to indicate that this is a particularly important addition in this release for that product.

All New Features are marked in each section with

New Feature

All Enhanced Features are marked in each section with

Enhancement

New or Enhanced Feature that is an Optional Feature

Optional Feature

Feature Pack Logo

New to v28 feature are marked with the Feature Pack Logo

1.4. Supporting Documentation

In addition to the release notes supplied in this document, additional user and configuration guides have been created for the more substantial changes in this version.

All these documents can be found [here](#) on the CoreHR University.

Where a document has been produced to support a new feature, this will be referred to in the release note for that feature and will include:

- Document name
- Link to the document on the CoreHR University

Each section will have the following box with description on any Supporting Documentation, Configuration Requirements, Upgrade Considerations and JIRA references

A white icon of a document with lines, representing supporting documentation.	Supporting Documentation or eLearning Programs with interactive hyperlinks
A white icon of two interlocking gears, representing configuration.	Is Configuration Required?
A white icon of a circular arrow, representing upgrade or refresh.	Upgrade Considerations
A white icon of a lowercase 'i' inside a circle, representing information or JIRA reference.	JIRA Reference

2. Workforce Management

2.1. Time and Attendance

2.1.1. Generate Timesheets ★

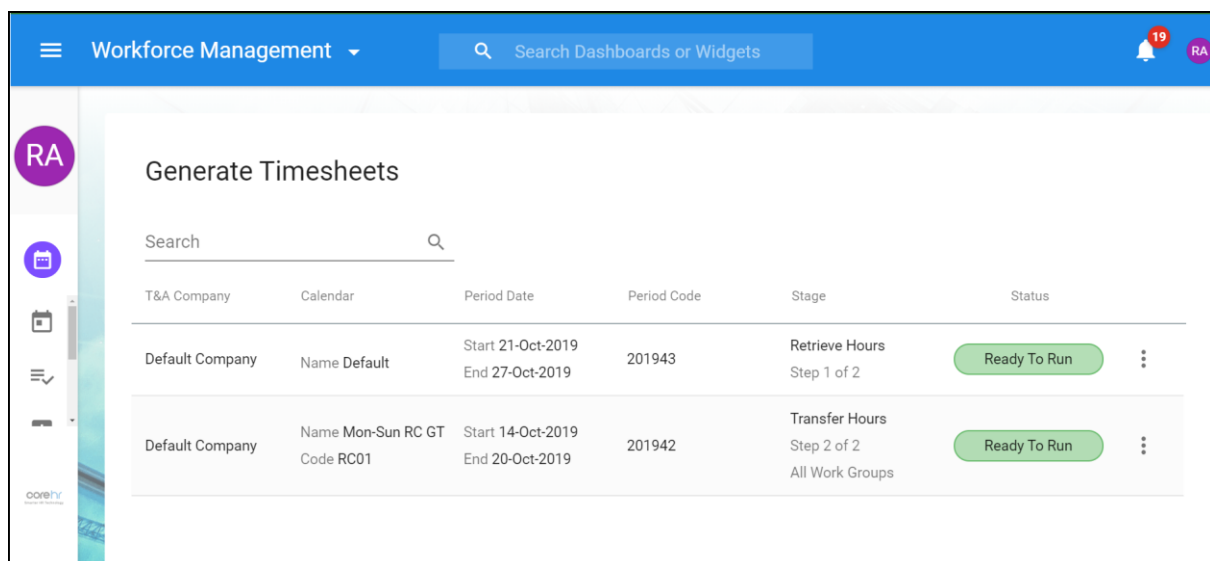

New Feature

The Generate Timesheets functionality is now available in Portal from either the Workforce Management dashboard or the Payroll Dashboard. This means:

- More streamlined payroll integration.
- Access to functionality alongside PayPortal
- Ability to view generated Payroll Hours detail before transferring to payroll.
- User can continue to work while jobs run in the background.
- Estimated duration is given
- User is notified when the job is complete.

This is a two-step process as follows:

- **Retrieve Hours:** This allows you to convert Time & Attendance timesheets into Payroll Hours based on payroll rules configured in WFM.
- **Transfer Hours:** This allows you to review Control Totals and helps you decide whether the payroll Hours are correct to transfer. The Transfer Hours process will either send Payroll Hours to CoreHR Payroll or create an interface file for third party payroll integration.

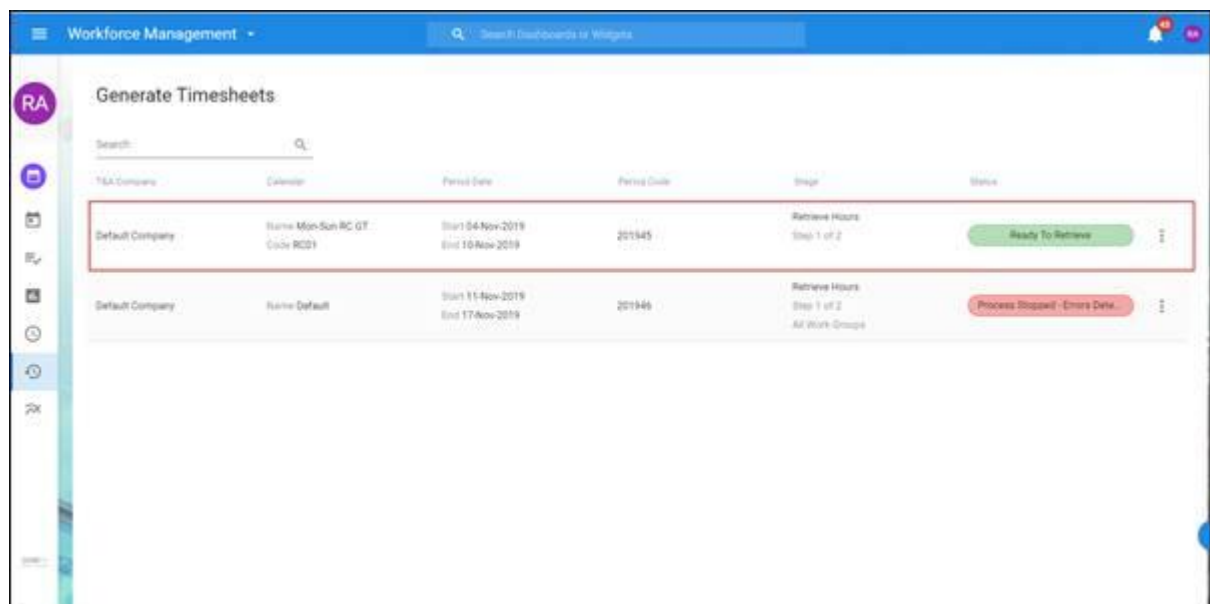

T&A Company	Calendar	Period Date	Period Code	Stage	Status
Default Company	Name Default	Start 21-Oct-2019 End 27-Oct-2019	201943	Retrieve Hours Step 1 of 2	Ready To Run
Default Company	Name Mon-Sun RC GT Code RC01	Start 14-Oct-2019 End 20-Oct-2019	201942	Transfer Hours Step 2 of 2 All Work Groups	Ready To Run

	For further Training on this, please see WFM v28: Generate Timesheets User Guide
	Is Configuration Required? Yes. Configuration is required.
	Upgrade Considerations No
	RR-923

2.1.1.2. Generate Timesheets Enhancements

Enhancement

Further enhancements have been made to the Generate Timesheets process.

What has changed?

- Parallel runs:** The Generate Timesheet process usually writes to a number of tables. The system needs routines to extract the existing timesheet data from the underlying tables to temporary tables for comparison.
 - There is an option to control the portal generate timesheets so that it writes to temporary tables.

- Scripts are run to copy existing tables for the week, periods identified for the parallel run.
- **Status updates** are now taking place in real time. Previously if a job failed the status stayed at job submitted.
- **Timesheet Input:** Selective Errors/Warnings give Administrators greater clarity into timesheet input errors and this helps to troubleshoot any issues which may have arisen.
- **Sign Off Hours:** Administrators ability to Sign off and approve hours such as:
 - Unconfirmed Stop & Warn Errors
 - Historical Unconfirmed Stop & Warn Errors
 - Historical Unconfirmed Stop & Warn Errors

Key Wins

- Increased ability to troubleshoot with errors/warnings given when inputting timesheets or signing off hours.
- Real time updates.
- Increased facility for return to work interviews.
- Parallel run giving increased confidence in system when comparisons can be made.

	• For further information on the Generate Timesheets Process please see WFM V28 Generate Timesheets User Guide. • For further information on Parallel Runs, the configuration guide is coming soon.
	Is Configuration Required? Yes
	Upgrade Considerations None
	WM-23

2.1.3. Hide Personnel Number on Co-Workers Screens**Enhancement**

From v28, it is possible to hide employee personnel numbers from displaying on the screens below:

- ESS Co-Workers Leave/Absence
- ESS Co-Workers Roster
- MSS Co-Workers Leave/Absence (accessed from the Leave Request approvals).
- MSS Co-Workers Roster (accessed from the Leave Request approvals).

This is controlled by an enhancement to the existing *CorePortal* parameter detailed in the below table and screenshot:

CorePortal Parameter	Parameter Description	Explanation
CP_SHOW_PERSONNEL_NUMBER	If set to Y, the Personnel Number for employees will be shown on the Team Scheduler	This parameter has been expanded to include the below screens. When this parameter is OFF (set to 'N'), then employee personnel numbers are not displayed on the employee's or manager's view of the below screens: • Co-workers Absence/Leave • Co-workers Roster

Admin Settings
Administrator Dashboard > Admin Settings

Coreportal Parameters

the Personnel Number for emj × 🔍 Search Whole Phrase

Parameter Description	Parameter Code	Product Name	Current Value	
If set to Y, the Personnel Number for employees will be shown on the Team Scheduler	cp_show_personnel_number	CorePay	N	EDIT

	Is Configuration Required? None required.
	Upgrade Considerations - For new installations on v28+, this is defaulted to "N". - For upgrading customers, this will remain at the value it was pre-upgrade.
	WDB-148

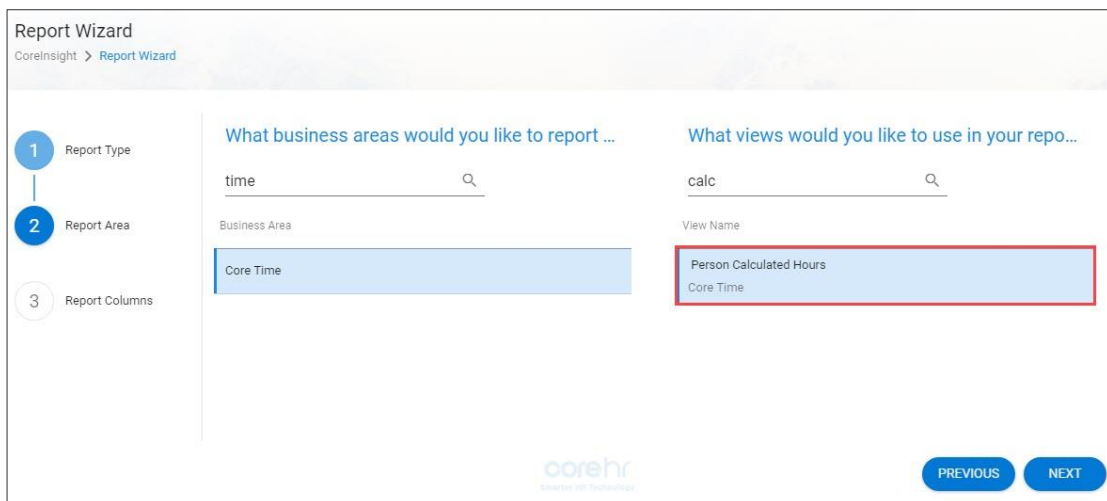

2.1.4. Rejected Timesheets Reporting

Enhancement

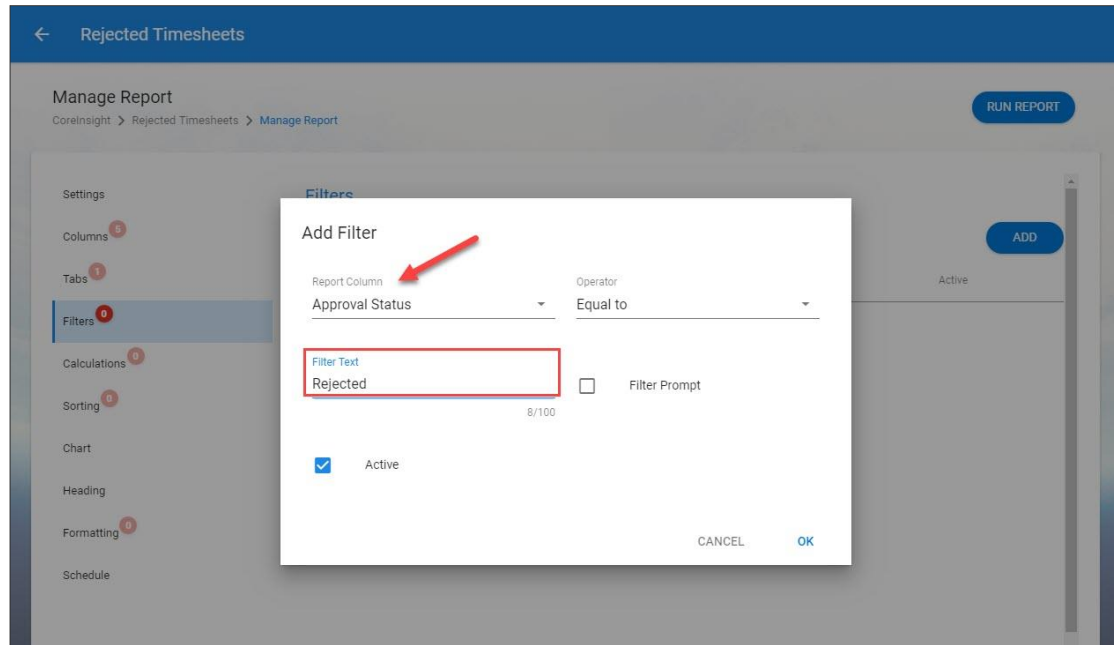

From v28, it is now possible to report on rejected timesheets via *CoreInsight*. The 'Rejected' *Approval Status* is available to report on from the below business area and view:

Business Area	View Name
Core Time	Person Calculated Hours

In the below example, a report is created from the **Person Calculated Hours** *View Name*.

A filter can be added to the **Approval Status** *Report Column*, to ensure only timesheets with an **Approval Status** of 'Rejected' are returned in the report.

The below screenshot details this example 'Rejected Timesheet's report.

Rejected Timesheets			
CoreInsight > Rejected Timesheets			
Data as of 08-Jul-2019 10:16			
Approval Status	Pay Code And Description	Period	Date Rejected
Rejected	1005 - Basic Hours	201851	18-JAN-2019 10:45
Rejected	1005 - Basic Hours	201851	18-JAN-2019 10:45
Rejected	1005 - Basic Hours	201851	18-JAN-2019 10:45
Rejected	1005 - Basic Hours	201851	18-JAN-2019 10:45
Rejected	1005 - Basic Hours	201851	18-JAN-2019 10:45
Rejected	1005 - Basic Hours	201851	18-JAN-2019 10:45
Rejected	1005 - Basic Hours	201851	18-JAN-2019 10:45

	Is Configuration Required? None required.
	Upgrade Considerations Previously it was not possible to report on timesheets in a 'Rejected' status. Reports can be created or updated now to filter on this value in the <i>Person Calculated Hours > Approval Status</i> column.
	WDB-130

2.1.5. Leave Request Enhancements

Enhancement

There are some new enhancements which have changed the way in which leave requests can be viewed. Previously, employees were only able to see three leave requests at a time on the page and were unable to filter. This has now been expanded to allow requests to display on the full page and tabs have been added to allow the user to filter.

How has the feature changed?

- There is an expanded view to view all requests
- Start date, end date and date submitted are all included as columns on the page.

You can now filter by:

- Leave Date
- Leave Status
- Time periods i.e. leave taken in the last three months.

To get to the *My Requests* screen:

1. Quick Jump to the *Employee Dashboard* screen
2. Go to *My Requests*
3. Select **View All**

WFM Release Notes

My Requests								
Employee Dashboard > My Requests

	No further documentation required.
	Is Configuration Required? No
	Upgrade Considerations None
	WM - 3

2.1.6. HR Admin Absence Entry & Team Maintenance**Enhancement**

This function provides key Workforce Management screens to HR Administrators.

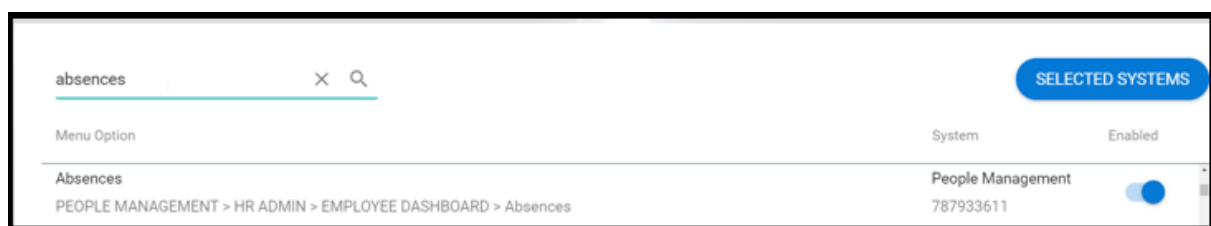

Through People Management's Command Centre, HR Administrators can now view and manage absences and assign team areas in the one location.

1. Absence Entry

- HR Administrators can enter and view absences via People Management.
- The *Absence Entry Screen* and *Absence Summary Screen* both use People Management security.
- HR Admin & Appointment Driven Sites
 - The absences displayed are for the appointment being viewed
 - The absence entry automatically picks up the appointment being viewed
 - To toggle between appointments, you can use the appointment selection button on top of the screen.

How to Configure

- Absence Entry is controlled via a menu option called - People Management > HR Admin > Employee Dashboard > Absences

**Key Wins**

- HR Admin can view and record absence from the People Management Dashboard.
- Users no longer need to jump between multiple screens to complete key tasks.

2. Team Maintenance

What has changed?

- HR Administrators can now be given key tasks to complete for employees in one location without the use of multiple screens.
- Team Area Assignment is managed from the People Management Command Centre.
- HR Administrators are now able to update employees Team Area Assignments as part of the New Starter Checklist.
- Employee leave dates will automatically be assigned to employees Team Area Assignment This removes the need for a manager to have to manually end it.
- Managers can assign Team Areas to their employees directly from the New Starters Task.

Team Area Assignment

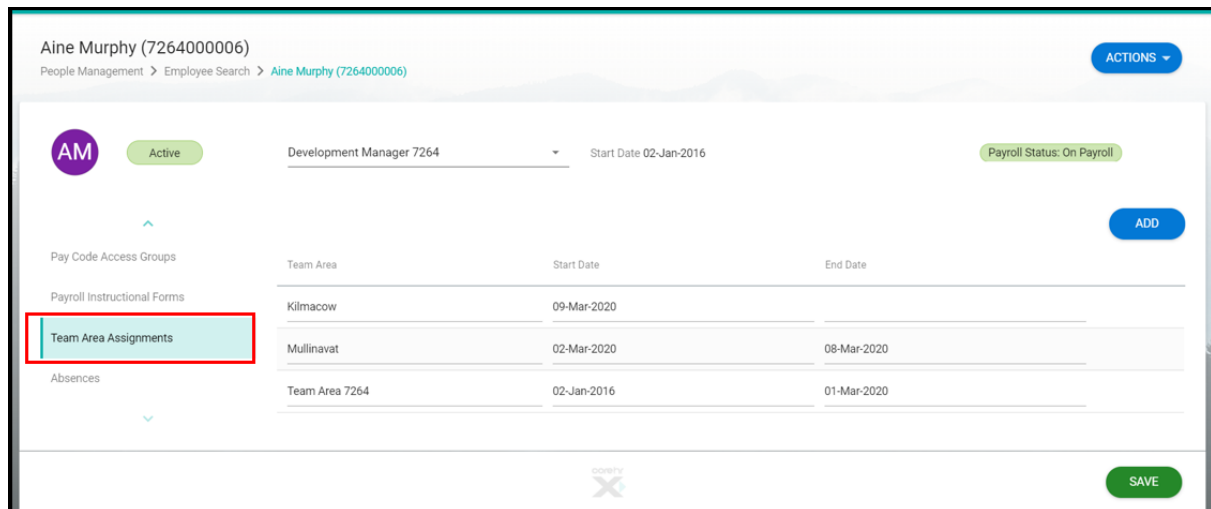

- HR Administrators will have the full Roster hierarchy available to them to select Team areas, if they have no specific Team Area access assigned to their user.
- If the HR Administrator has access, they will only see the areas they have access to in the drop-down menu provided.
- If the menu option is switched on, the Assign Team Area option will also be visible on the New Starters Task list.

Note: Team Area Assignment applies only to customers with Roster solution in place.

Key Wins

- Managers will now be able to delegate some of their workload to a designated admin cutting down on waiting times and adding to efficiency.
- Automatically end team area: The manual task of assigning an end date to a Team Area when an employee is made a leaver is removed.
- Team Area Assignment: Users no longer need to jump between multiple screens to complete an employee set up.

2.1.7. HR Transfer Leave, Absence & Entitlements **Coming Soon!**

New Feature

This feature allows an employee who changes their contract within a company to carry over their remaining entitlements to their new appointment where it's a confirmed future replacement.

What has changed?

- The employee can now transfer their balance entitlement remaining balance to their new appointment.
- The system automatically pulls through the balance remaining from their previous appointment.
- Only balances relating to the appointment you are replacing are displayed.
- The balance recalculates using the end date of the previous appointment as the replacement date being entered on the screen.
- If a user leaves before saving, no changes are saved to the balance and it reverts to its original values.
- On saving, you are prompted if you want to accept the remaining entitlement for the previous appointment into the new balance.

Key Wins

- HR Administrators no longer need to complete manual adjustments and enter absence records to correct those recorded against the previous appointment that exist after the replacement date.
- HR Administrators do not need to request employees to re-submit leave requests requested against the previous appointment that exist after the replacement date.
- There is no need to manually recalculate and assign balances to the new appointment.

Note: This feature only applies to appointment driven sites.

Configuration

To Switch On:

1. Navigate to *WFM Configuration Settings*
2. Go to General Settings
3. Switch the **Transfer Future Leave to On**

	WM-220

2.1.8. Manager Leave Delegation

Enhancement

This new feature streamlines the process for managers delegating duties when going on leave. Previously managers were unable to specifically filter for those users and admins with their branch.

What has changed?

- A facility is provided for administrators to limit the managers returned based on a specified level such as location.
- This list of managers returned are filtered to location of the manager completing the delegation.
- If managers wish to delegate org role access they no longer need to filter for specific people as was previously necessary.

Configuration

1. Go to the Data Configuration Centre.
2. Search for Delegation Org Role Restriction.
3. Select **Restrict Delegation List** to enable the feature.
4. Switch **On**.
5. Select the Limit Delegation By level required.
6. The delegation list returned will automatically be filtered to managers where their *home* location matches the manager completing the delegation location.

Key Wins

- Benefits to large enterprises who have a significant number of managers access multiple sites, by automatically filtering the managers returned.
- Managers are stopped from inadvertently delegating to managers outside of the specified level.

	No further documentation required.
	Is Configuration Required? Yes
	Upgrade Considerations None
	WM – 170.

2.1.9. Pay Code Groupings – Link Managers to Employee List**Enhancement**

This feature groups pay codes together in a more effective way so employees can have access to the appropriate pay codes to put through their requests. Previously the software could not be configured so Manager's input could be linked/restricted to personalised pay groups that are assigned to employees.

What has changed?

- Manager's input can be linked/restricted to personalised pay groups that are assigned to employees.
- A manager can be granted access to additional pay code within the group that are marked as *Manager Only*.
- Pay Codes marked as *Manager Only* which are assigned to employees personalised pay code groups are not returned to employees in either Timesheets or Leave Requests.
- A manager can be limited to the pay codes assigned to the Employees Personalised Pay Code Group.

Other Key Points

- **Timesheet Input:** As the Manager moves through the people – the pay codes returned should be reflective of personalised pay code groups assigned to the employee and/or the employee appointment combination.
- Employee Leave Requests are limited so employees are unable to select or enter *manager only* pay codes.
- Employee Timesheets are limited so employees are unable to select manager pay codes

- Manager Type pay codes are set at pay code level.

	Full training on this feature is available on the CoreHR University. Document name: Pay Code Access Groups - Configuration Guide
	Is Configuration Required? Yes.
	Upgrade Considerations None
	WM-92

2.1.10. Manager - Sign Off Own Hours **Coming Soon!**

Enhancement

This feature allows managers to approve and sign off their own hours so that the Time and Attendance process can be fully completed.

What has changed?

- Managers can now approve and sign off hours.
- Support the ability for configure at Global Level Org Level and Username level.
- The Options are controlled via SQL level.

Configuration

The Setting can be controlled by the following:

- **Global Level:** This controls All Users.
- **Org Roles:** This controls All Users with an Org role.
- **Username Level:** This controls all individual users.

Key Wins

- No next level approval needed as the onsite manager is the highest approval level that manages day to day/weekly operations.
- Facility is given to the onsite managers to approve/sign off their employee hours.

Sign Off Hours – Switch off Bulk Reject Option

What has changed?

- A new option to remove the Bulk Reject button has been added to assist managers when they inadvertently select the **Reject** button.

Key Wins

- By providing the option to remove the button, this means managers no longer risk rejecting hours by accident through pressing it when bulk uploading.
- Managers no longer need to contact a system administrator to correct the error.

Configuration

1. Quick jump to Site Manager > Admin Settings
2. Search for parameter *Approve/Sign Off hours - Reject Option Off*
3. Click Edit to update the value:
 - a) Set to **Y** to switch off the bulk reject option.
 - b) Set to **N** (default setting) to switch on the bulk reject option.

Sign Off Hours – Exclude Timesheet Pay code claims

What has changed?

- The Sign off hours process has been enhanced to allow *Save for Later* timesheets to be excluded from those which are being sent to Payroll.
- These hours are now considered as claims and are excluded until they need to be approved and the timesheet is routed through the standard Submission and Approval process as needed.

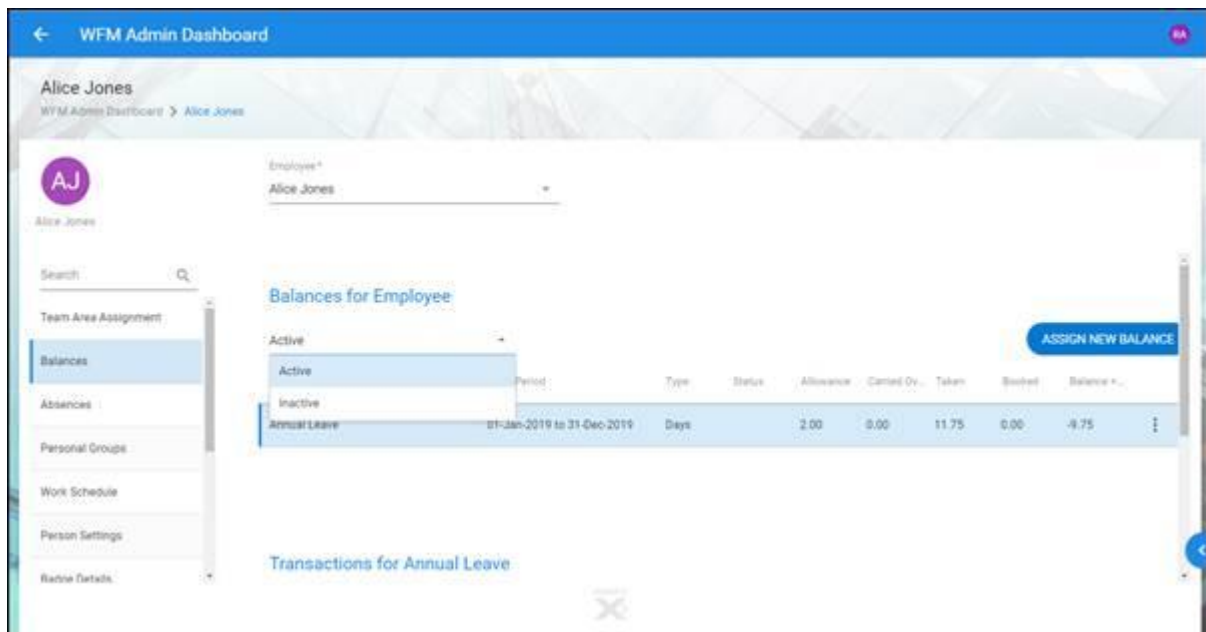

Key Wins

- Timesheets are approved at the appropriate time and managers are less likely to approve timesheets which are designated *Save for Later*.

	No further documentation needed.
	Is Configuration Required? Yes.
	Upgrade Considerations No Upgrade considerations
	WM-7

2.1.11. Hide Inactive Balances **Coming Soon!****Enhancement****What has changed?**

- With the enhancement of Hide Inactive Balances, it is now no longer possible for employees to see any inactive balances i.e. from a previous position.
- When a manager changes the portal parameter option cp_hide_inactive_balance to Y, the employee will only see the current active balances on their My Balances Widget.
- If it is disabled, employees will have visibility of all previous balances.

Key Wins

- The employees only now sees the balances for their current role.
- Avoids confusion in regard to annual leave and entitlements.

	No further documentation needed.
	Is Configuration Required? Yes.
	Upgrade Considerations No Upgrade considerations
	WM-60

2.1.12. Timesheet Input Improvements **Enhancement****Timesheet Input & Roster Details**

The *Timesheet Input* screen security has been enhanced to include Employee Team Area Access when viewing or maintaining timesheets from Roster Details. The changes also apply to the inscreen employee navigation.

What has changed?

- There are no longer requirements to maintain Employee Team Area and Organisational Role to support the Timesheet Input screen

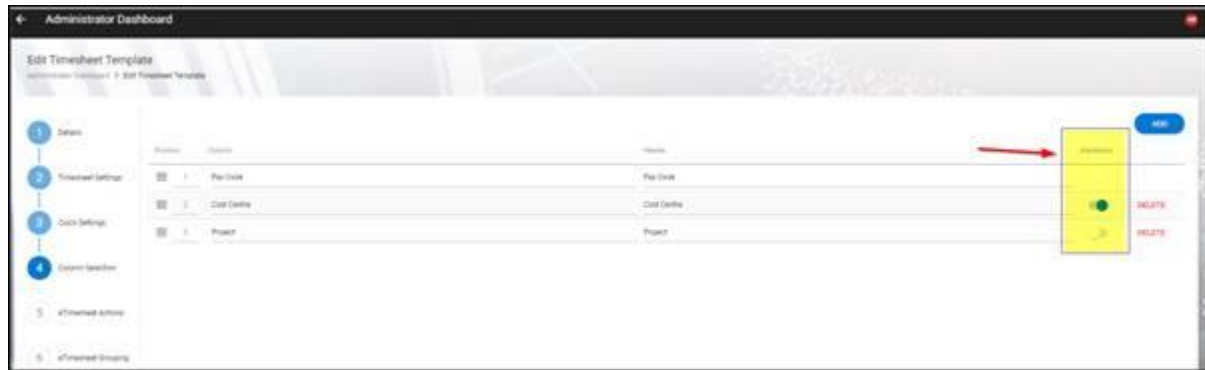

Key Wins

- A more streamlined process for administrators.
- Once employees are assigned to their team area, a roster manager will automatically be able to view or maintain employee timesheets without needing any extra configuration.
- No changes to existing screens that have options to call the Timesheet Input screen.

Timesheet Input Screen - User Improvements

The following improvements have been completed for the *Timesheet Input Screen*:

- **Screen Layout Improvements:** Using compact views, cosmetic improvements have been completed to the screen alignment to support the display of additional lines in pay code and clocking grids. The pay code column has been expanded to display the full text.
- **Days of week in Attendance and Clocking grid Re-aligned:** Details line up correctly for the 7 days displayed.
- **Expanded Access:** You can call the *Timesheet Input Screen* from the Generate Timesheets process (for more details see Generate Timesheets User guide)
- **Resolved errors and Error Messaging:** Commenced Appointments starting later in the month were not appearing when the periods were rolled forward. This has now been resolved.
- **Appointment ID:** Employee Appointment Id was not displaying to managers. This has now been resolved.
- **Template Changes:** When copying a timesheet, a new **Include Comment on Copy** indicator has been added to exclude comments from any previous weeks. When timesheets are copied from a previous period, the cursor now goes to the hours column.
- **Mandatory Input:** A Mandatory Input can be enforced for selective columns such as Cost Centre & Project and this has been added to the *Timesheet Template Screen*.
- **Pay Codes:** If a user has only one pay code assigned, it is now selected by the screen automatically and the cursor moves to the next editable field.
 - Pay Code groupings assigned at appointment level now restrict users to their appointed level. The grouping is no longer bypassed and returns only specific paycodes.
- **Screen Improvements:** The screen now reverts to the default font and screen size once Graphs and Clocking grids are switched off.
- **Mandatory Input:** A *Mandatory Input* column has been added to the Timesheet Template screen, for example Cost Centre & Project

Timesheet Inputting AM/PM

Previously, when a manager inputted hours, an error occurred when the advanced option 'CHECK AM PM' was enabled. An error occurred telling the manager to insert AM or PM against the paycode. The timesheet template then did not allow the user to specify AM or PM.

To resolve the issue, the following steps should be completed:

- Connect to the Back Office.
- Enable the advanced option **Control Parameters > Advanced Option > CHECK AM PM**. Once this is enabled, you can add AM/PM to the Absence pay code on the timesheet template.
- Select the option **Add AM PM** next to the pay code.
- This option opens a pop up screen where a user can select a day and select AM/PM.

	No further documentation required.
	Is Configuration Required? Yes
	Upgrade Considerations No

2.1.13. TUPE date – Length of Service and Continuance Dates

Enhancement

Changes have been made to Balance and Occupational Entitlements to introduce TUPE dates. This takes in to account an employee's length of service when the existing company is part of an acquisition and the employee is given a new start date.

What has changed?

- The system now has the option to factor in TUPE dates for service calculations when determining entitlements to Occupational and Leave Balances, so the employee's full service is included.
- There are new drop-down values to the existing options on forms.
 - For balance entitlements, see Balance Parameters/Employee Start Date now has a *Continuance/Tupe Date* option.
 - For Occupational Absence, see *Absence Pay Parameters/ Length of Service Basis* now has *Continuance/Tupe Date*

Example:

An employee joined Company A on 01-Jan-1999

Their Occupational Sick Entitlement is 20 days. After 10 years' service, the employee gets an extra 5 days sick leave

Company A is acquired by Company B on 01-Jan-2020

The employee is given a start date with Company B of 01-Jan-2020 & TUPE Date = 01-Jan-1999 (Company A)

Employee Length of Service is now 21 years and 11 months in Nov 2020

Therefore, the TUPE date is 1-Jan-1999 and the latest start date is 01-Jan-20

The employee's starting figure for Occupational is 25 days (i.e., 20 + 5 days)

Key Wins

- The system gives an accurate representation of employee entitlements if they have worked for the previous organisation.

Parameters Configuration

The parameters which control the format of the TUPE date need to be set up for the calculations to be applied to the employee.

Note:

Length of Service and TUPE date can be based on time in company or appointment history. Where length of service is based on appointment history, the necessary appointment history for the employees must exist in personnel history.

Occupational Absence Parameters

1. Connect to the Back Office
2. Navigate *Input>Advanced Input Features >Absence Pay> Absence Pay Parameters*
3. *Select Absence Rules* from the top right dropdown menu
4. In the more section, see the Length of Service Basis column. Select Continuance/TUPE Date, where selected the default dates are
 - a. Company Service Override date
 - b. TUPE Date
 - c. Company Service date
 - d. Date joined

2.1.14. **Advance Period** **Enhancement****What has changed?**

- The Advance Period screen has been brought out to Portal.
- Administrators are now able to advance the Time and Attendance period on Portal.
- The screen now shows any exceptions which may arise such as Unconfirmed Hours or Unapproved Leave Requests.

Key Wins

- Avoids the need to use Back Office.

	For information, see the Advance Period Configuration guide .
	Is Configuration Required? Yes.
	Upgrade Considerations None.

2.1.15. Calculate Hours

Enhancement

The Calculate Hours Screen has been moved from the Back Office to Portal. The screen allows managers and administrators to:

- Run a future calculation for selected employees
- Run a real time calculation for selected employees
- Hours can be calculated through:
 - System Users linked to Generate Timesheets
 - HR Admin Access
 - Team Area Access
- The History Screen displays the details of the last run calculations completed.

Enhancement

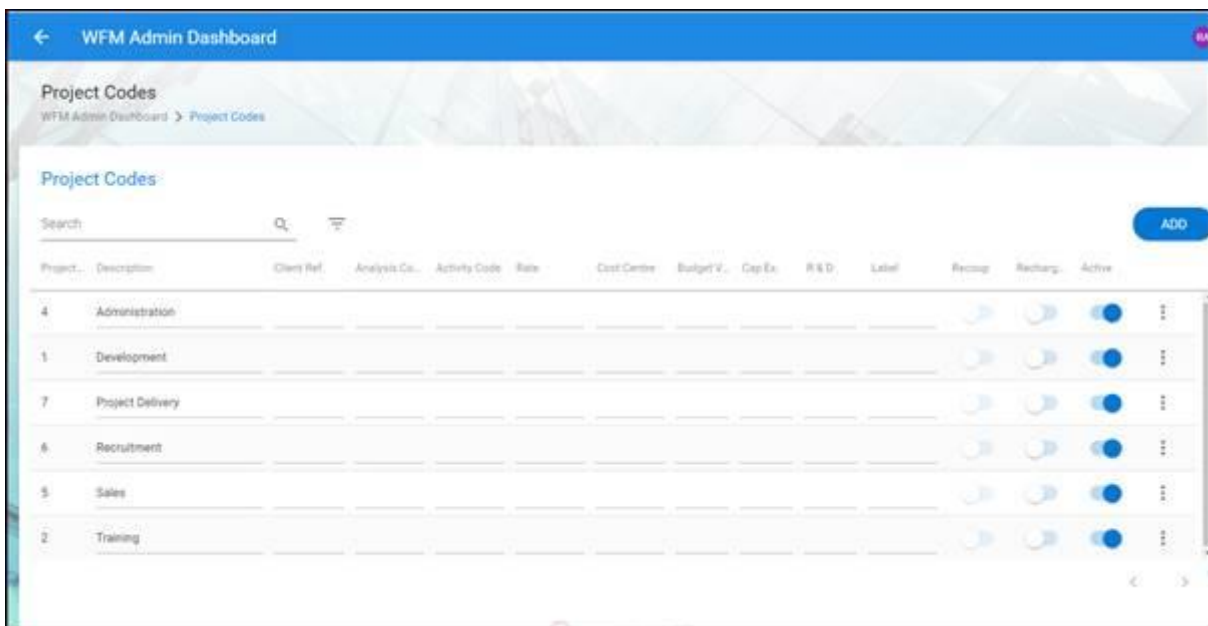

2.1.16. Project Codes Coming Soon!

Enhancement

The *Project Codes Reference Data* screen has been converted to the updated UI standard including new columns and improved search and filtering.

Key Wins

- Project Code reference data is now available from the *WFM Configuration Centre*
- An improved search and filter option supports searching or filtering any column displayed on screen.
- The screen now contains Project Code Criteria Groups which enable groups of project codes to be assigned by Criteria Grouping.
- Project Criteria Groupings are used within the *Timesheet Input* screen to pre-filter the project code available to employees.

2.1.17. Grosvenor Clockings Integration**Enhancement**

Clockings are now fully integrated, with XD teaming up with Grosvenor Technologies to manage the exchange of Clocking information.

Key Wins

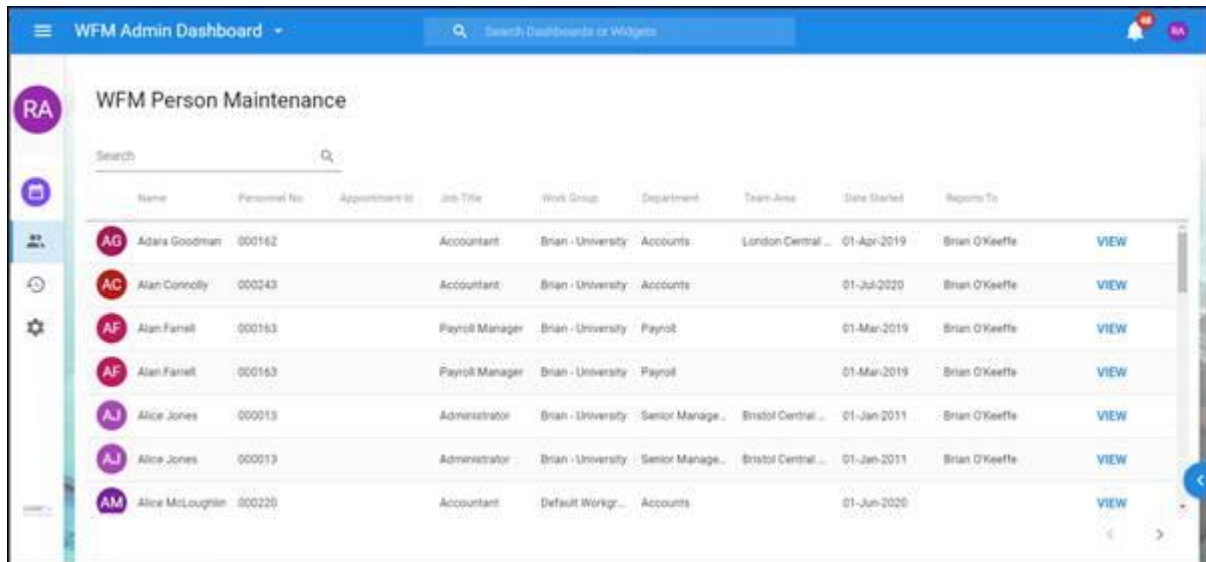

- A new admin screen is available to show the clockings which have been uploaded.
- Clocking errors are reported and notifications sent to an Administrator for review.
- Ability to check past clockings up to 180 days in the past.
- Ability to adjust the frequency of when failure mails are sent.
- You can view the details of a Batch Reload

	For further documentation see WFM v28 Grosvenor Clockings Integration User Guide
	Is Configuration Required? Yes.
	Upgrade Considerations No
	WM-618

2.1.18. Person Maintenance

Enhancement

Changes have been made to the Person Maintenance screens. Previously these screens which were in the Back Office are now accessed through Core Portal. This means there is no longer a need to switch between Back Office and Portal.

2.1.19. Work Groups

Enhancement

The *Work Groups* screen and configuration has been moved from the Back Office where it formerly resided. Now this can all be customised and configured on Core Portal.

Key Wins

- Work Groups settings can now be copied from one Work Group to another.
- Work Groups can be marked as Inactive. Inactive Work Groups will not be visible on the dropdown lists across the XD platform.
- A count of the number of Active Employees in a Work Group is provided.
- Key pieces of information on the Summary screen can be quickly updated.
- Labels can be attached to Work Groups and easily grouped together.

What has changed?

The *Work Group* screens are accessible through the WFM Dashboard in Portal for the first time and allows you to do the following:

- Drill in to the Work groups and configure pay codes, default payment rules etc.
- Add a new work group with minimum fields.
- Delete a Work Group with no employees attached

- Edit an existing work group
- Switch the Work Group option on or off on the Configuration Screen.

2.1.20. WFM Data Configuration Centre

Enhancement

The WFM Configuration Centre widget is a new enhancement where users can access WFM screens in a faster and more efficient way.

What has changed?

Previous widgets Roster Links and Time & Attendance setting have been amalgamated in to one central widget to open the following:

- Balance Configuration
- Company
- Configuration Settings
- Reference Data
- Roster Configuration Settings

Note:

You will now have access to the new WFM Configuration Data Centre. The switch over to the new widget will be automatic as part of your move to V28. Please review existing processes to ensure they are updated to look at the new WFM Configuration Data Centre where applicable.

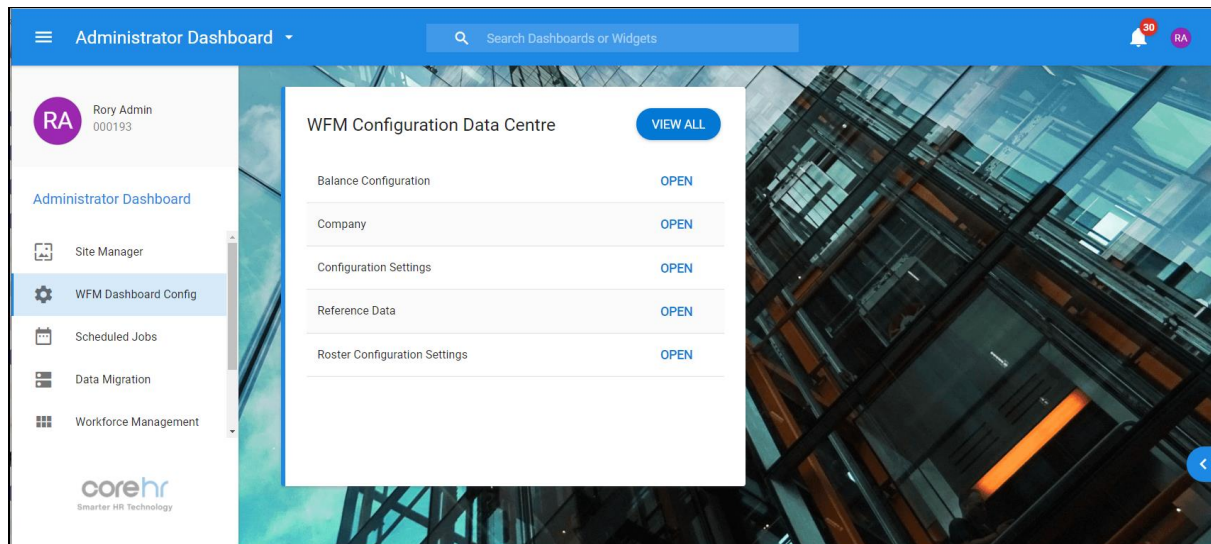

What has changed?

Previous widgets Roster Links and Time & Attendance setting have been amalgamated in to one central widget to open the following:

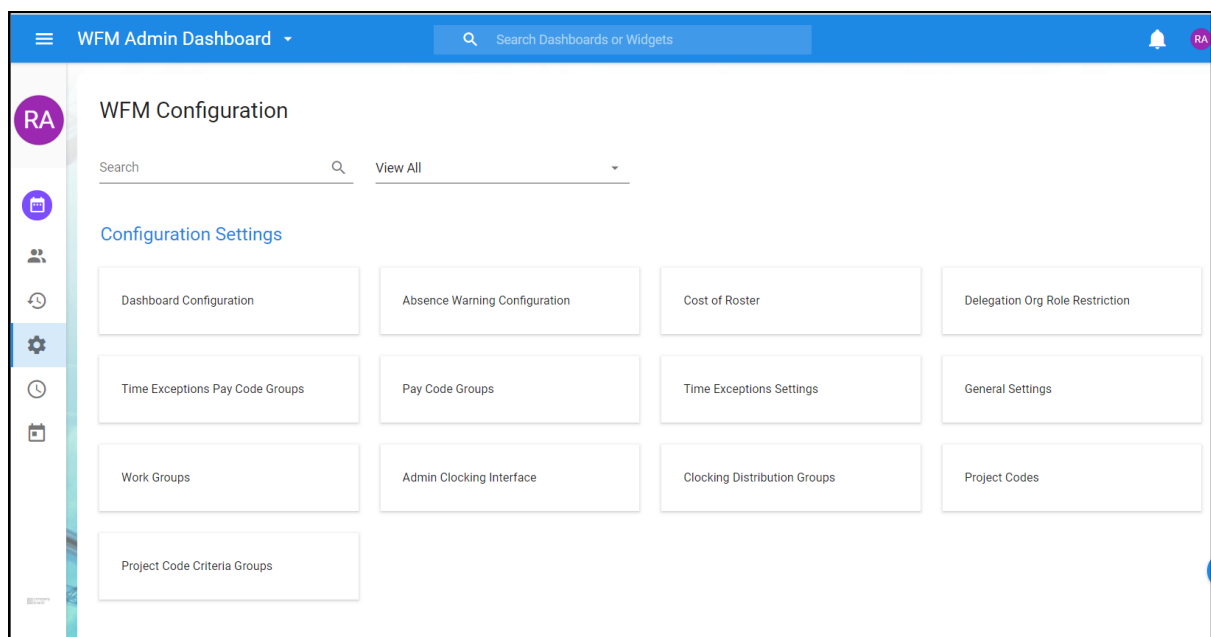

- Balance Configuration
- Company
- Configuration Settings
- Reference Data
- Roster Configuration Settings

How to Find it

1. Quick Jump to *Administrator Dashboard*
2. Select **WFM Dashboard Config.**

3. Select **View All** to access further detailed screens

Key Wins

- Enhanced user experience with everything in one place.
- No longer necessary to click between screens.

- Key word search facility.

	No further documentation required.
	Is Configuration Required? No
	Upgrade Considerations No
	

2.1.21. Annual Leave Balances and Impacts on Public Holidays and Part Time Staff **Coming Soon!**

Enhancement

The balance configuration for Annual Leave and Public Holiday Entitlements for Part Timers has been enhanced with a number of changes.

New balance configuration

The New Balance Configuration means there is no longer any need to create multiple Annual Leave balances per differing FTE hours.

Others benefits include:

- The *Days Values Generated* is now based on the Employee's FTE Hours divided by the Personnel Default Hours divisor (number of days).
- There is now validation to ensure only one method can be selected.

An example of this would be if an Employee's FTE Hours are 20 and Personnel Default Hours divisor is 5 days, then 4 hours is calculated for the Public Holiday Day ($20 \div 5 = 4$).

Key Benefits

- Deployment is now faster and with less administration, removing the need to create or maintain multiple balances.
- Existing Balance Configuration where new contracts are structured no longer need to be reviewed.
- Increased accuracy on Leave Entitlement calculation.

Where Annual Leave Entitlements are linked to Public Holidays

Previously, annual leave balances had a one-to-one relationship to Public Holidays Schemes. Where Companies operate across multiple jurisdictions such as Ireland and the United Kingdom, the public holidays dates differ.

The benefits of the current changes are:

- The current configuration enforces the creation of an Annual Leave balance per jurisdiction.
- Administration set-up and maintenance have been increased.

New option to Link to the Employee's Scheme

The new option linking to the Employees Scheme removes the Annual Leave balances one-to-one relationship. There is a new software option to use the Employees Public Holidays. This gives multi jurisdiction companies the following benefits:

- It removes the need to create Annual Leave balance per jurisdiction.
- It validates to ensure only one method can be selected.

	No further documentation required.
	Is Configuration Required? Yes.
	Upgrade Considerations No.
	WM-765

2.1.22. Shift Types

Enhancement

You can now see *Shift Types* on its own new screen in Portal. Here you can add, edit or de activate a shift.

Code	Name	Short Name	Type	Label	Employees Assig...	Active
17.30_001	17hrs 30mins - 3.30hrs Mtwtf	pt	Cycle	Declan	3	☐
17.30_002	17hrs 30mins - 7hrs Mt, 3.30 W	pt	Cycle	Declan	0	☒
21.00_001	21hrs - 7 Hrs Mtw	pt	Cycle		5	☒
25.00_001	25hrs - 5 Hrs Mtwtf	pt	Cycle		5	☒
28.00_001	28hrs - 7 Hrs Mtw	pt	Cycle		0	☒
35.00_001	35hrs - 7 Hrs Mtwtf	FT	Cycle		110	☒
35.00_003	35hrs - 7 Hrs Mtwtf	FT	Cycle		0	☒

Key Wins

- All Shifts display the one landing screen with key pieces of information pertaining to each shift type.
- You can use a free text label to group shifts together to make them easier to search and to filter.
- Shifts can be activated and de-activated depending on your preference.
- You can customise shift types to be period or cycle based.
- You can filter shifts by type or by employees assigned.

	For further information please see the Shift Types User Guide .
	Is Configuration Required? Yes.
	Upgrade Considerations No.
	WM - 429

2.1.23. Reason Codes

Enhancement

Reason Codes are now available on the WFM Admin Dashboard on a new landing summary page.

Reason Code	Description	Type	Active
SK007	Psychiatric	Absence	☒
SK008	Back Problems	Absence	☒
SK009	Musculo-Skeletal	Absence	☒
SK010	Cough/Cold/Flu	Absence	☒
SK011	Asthma	Absence	☒
SK012	Respiratory	Absence	☒

Whats New?

- Ability to add/maintain Reason Codes and Reason Code Groups on Portal.
- Reason Codes and Groupings are available within the same menu.
- Marking a Reason Group as inactive so it is not be visible on dropdown lists.

Absences : You are required to select from a predefined list of reason codes as to why the employee was absent i.e. If absence is sickness, the reason is flu.

Overtime: When entering an Overtime Type pay code, you are required to select from a predefined list of reason codes as to why the employee was working overtime i.e. If the overtime selected is Overtime 1.5 the reason is holiday cover.

Balance Adjustments : Entering a balance adjustment for an employee i.e. Manually adjusting an employee's balance by adding or subtracting values. Examples of this include updating the carried forward element of a balance so the reason is holidays owed.

**Note:**

The screen has two tabs, Reason Codes and Reason Code Groups

Key Wins:

- **Listing and Search:** The Reason Codes are listed and searches can be made based on Code, Description and Type.
- **Filter:** You can filter your search by Type and Active.
- **Inactive Reason Codes:** The Reason Code can be marked as Inactive. Once marked as inactive the reason codes will no longer be available in any Reason Code dropdowns.

**Note:**

When deleting codes you are stopped on validation where reason codes are in use.

	No further documentation required.
	Is Configuration Required? Yes.
	Upgrade Considerations No
	WM - 851

2.2. Roster

2.2.1. Cost of Roster ★

New Feature

From v28, the Cost of Roster functionality provides organisations with the ability to cost their Roster and compare it to Budget. This means that you can view real-time data regarding:

- Budget versus
- Planned Costs versus
- Actual Costs

This enables managers to make better-informed business decisions by keeping in line with team budgets. The budget information is presented on-screen with the option to update on-demand, as required. In order to aid management, it provides:

- Roster managers with Budget, Planned Costs, and Actual Costs information to help manage costs effectively
- Administrators with the ability to cost other events, such as absenteeism and overtime

The Cost of Roster functionality provides the ability to:

- Display and report on Budget vs Planned vs Actual
- Manage costs in values or hours
- Control what is visible to certain users
- Control what is visible per screen

The screenshot shows the 'Cost of Roster' configuration page. On the left is a sidebar with 'Display Controls' highlighted. A red arrow points to the 'Display Budget Values' toggle, which is currently turned on. Below this are sections for 'Employer Cost Allocations', 'Personal Overrides', and 'Additional Settings'. The main area has two tabs: 'Budget,Planned & Actual' (selected) and 'Hours & Values'. A table is displayed with columns for 'Screen', 'Budget', 'Planned', and 'Actual'. Each cell contains a toggle switch. A red box highlights the rows for 'Roster Details (Day View)', 'Uncovered Shifts', 'Time Exceptions', 'Approve Sign Off Hours', and 'Roster Details(Week/Summary)'. At the bottom, there are dropdowns for 'Over Budget Colour' (set to Red) and 'Under Budget Colour' (set to Green), and a 'Cost Planned Roster' toggle which is also turned on.

Screen	Budget	Planned	Actual
Roster Details (Day View)	☒	☒	☒
Uncovered Shifts	☒	☒	☒
Time Exceptions	☐	☒	☒
Approve Sign Off Hours	☐	☒	☒
Roster Details(Week/Summary)	☒	☒	☒

Over Budget Colour: Red
Under Budget Colour: Green
Cost Planned Roster: ☒

	Full training on this feature is available here on the CoreHR University. Document name: Workforce Management v28: Cost of Roster – User Guide
	Is Configuration Required? Full configuration on this feature is available here on the CoreHR University. Document name: Workforce Management v28: Cost of Roster – User Guide
	Upgrade Considerations This functionality is off by default and must be configured following an upgrade if intending to use it.
	RR-865

2.2.2. Day View: Rostered Times**Enhancement**

From v28, it is possible to configure the *Roster Details - Day* view to indicate when an employee is rostered on a shift for another Team Area, other than the Team Area you are viewing. Therefore, letting you know that the employee is not available to be rostered to the Team Area, you are viewing, during these times.

If the **Day View – Rostered Times** indicator is switched ON, then rostered shifts are highlighted on the Day view, regardless of the Team Area. For example, you can see the employee below is working in this Team Area from 15:00 to 18:00, however, is working in another Team Area from 11:00 to 15:00.

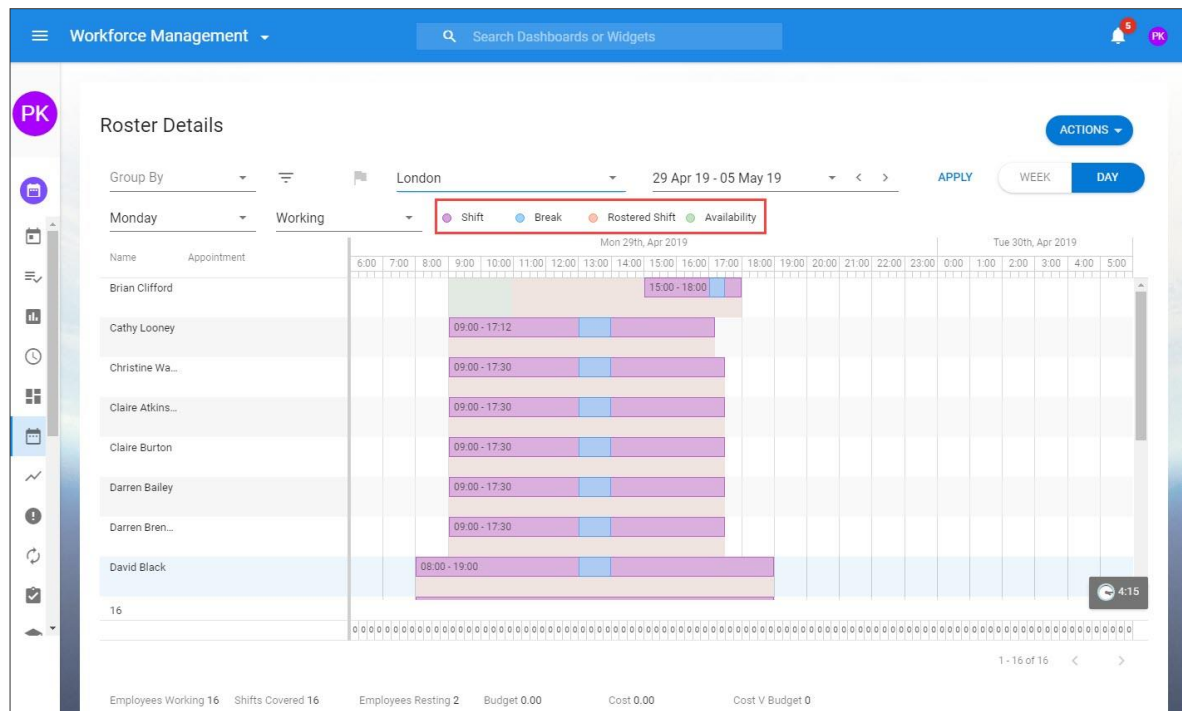

Therefore, you can see that the employee is unavailable to be rostered to this Team Area during that time.

The Day view legend is new in v28, therefore, you will see this legend for the first time, if upgrading.

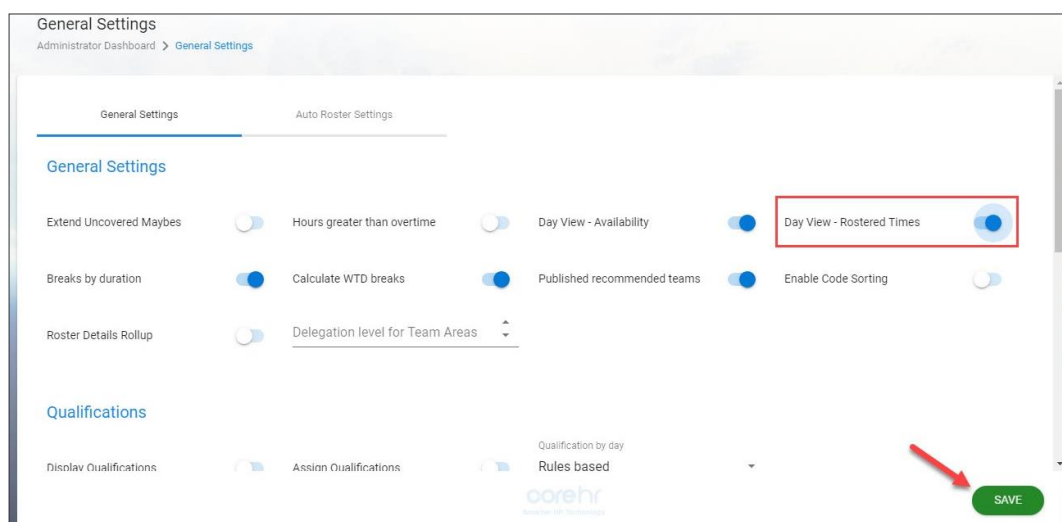

- The Shift and Break items are always displayed.
- The Availability item is displayed if switched ON (existing functionality).
- The employee's shifts will display ahead of the employee's availability if the times of both overlap on the day.

The Rostered Shift item is displayed if switched ON.

This can be switched ON/OFF via the Roster Links widget. To do this:

1. Quick jump to Roster Links.
2. Click **Open General Settings**.
3. Switch **ON/OFF** the Day View – Rostered Times indicator.
4. Click **Save**.

**Note:**

If the option Day View – Rostered Times indicator is switched ON, the colour for all shifts will be displayed ahead of the employee's available times on the Day View.

	Is Configuration Required? As per guidance above. Switch ON/OFF the <i>Day View – Rostered Times</i> indicator.
	Upgrade Considerations This feature defaults OFF upon upgrade.
	WDB-110

2.2.3. Rollup: Roster Details Week View

Enhancement

From v28, you can roll up an employee's roster to a single line per shift on the *Roster Details - Week* view screen.

By default, when an employee is rostered across different variables in a week, this splits the employee across multiple rows on the Roster Details screen. This means there may be multiple rows per employee for their:

- Rostered team area
- Rostered shift type
- Rostered qualification

In the below example, you can see two rows for the employee, as they are rostered on two different Qualifications for the week.

WFM Release Notes

Martin Blake		London	Budget Analyst		09:00 - 17:30	09:00 - 17:30	09:00 - 17:30	09:00 - 17:30	09:00 - 17:30	Rest	Rest

When in Roll Up mode, the screen merges these multiple rows into a single row. During this Roll Up, the rostered Qualifications, Team Areas, and Shift Types are not displayed in the information/detail columns to the left of the screen. This is because as a single Team Area or Qualification is not applicable to the entire merged row. If an employee is rostered on multiple shifts in the one day these will continue to be displayed on multiple rows. You can now see one row for the employee below, as the roster is in 'Roll Up' mode.

When in 'Roll Up' mode, you can choose to display one of the following additional items alongside the shift start and end time in the roster box:

WFM Release Notes

- None (default, if you are not using Attributes)
- Qualification
- Team Area
- Attribute (default, if you are using Attributes)

In the below example, you can see the *Qualification Extra Display Item* is selected.

Roster Settings
Workforce Management > Roster Settings

Display: Start/End Times | Day Start: 06:00 | Include Sub Groups: ☐ | View All Shifts: ☒

Roster Roll Up: ☒ | Extra Display Item *: Qualifications | Roster Polling: ☐

Position	Column	Filter
1	Person	Person
2	Team Area	Team Area
3	Job Title	Job Title
4	Cost Centre	Cost Centre
5	Project	Project

The *Qualification* now shows on each shift for the employee, when the roster is in *Roll Up* mode.

Roster Details

Group By: | Location: London | Period: 29 Apr 19 - 05 May 19

Name	Appointment	Mon 29th	Tue 30th	Wed 1st	Thu 2nd	Fri 3rd	Sat 4th	Sun 5th
Brian Clifford		15:00 - 18:00 Health & Safety Cert	09:00 - 17:30 Health & Safety Cert	09:00 - 17:30 Diploma In Management	09:00 - 17:30 Diploma In Management	09:00 - 17:30 Diploma In Management	Rest Health & Safety Cert	Rest Health & Safety Cert
Cathy Looney		09:00 - 17:12	09:00 - 17:12	09:00 - 17:24	09:00 - 13:00	09:00 - 12:00	Rest	Rest
Christine Walker		09:00 - 17:30	09:00 - 17:30	09:00 - 17:30	09:00 - 17:30	09:00 - 17:30	Rest	Rest
Claire Atkinson		09:00 - 17:30	09:00 - 17:30	09:00 - 17:30	09:00 - 17:30	09:00 - 17:30	Rest	Rest

**Note:**

The 'Group By' functionality on the Roster Details screen for Team Area, Qualification and Attribute will be grouped per shift. All other items that are in the 'Group By' dropdown is associated at an employee level rather than day level. For example, if the screen is grouped by Location this will group the employees under the Location that is assigned to them at an employee level.

2.2.4. Day View: Display Employee Working or Resting**Enhancement**

From v28, it is possible to filter to *Roster Details – Day* view to display employees who are:

- **Working:** Displays employees that are scheduled to work for the day selected
- **Resting:** Displays employees that are scheduled off, for the day selected
- **Working & Resting:** Displays both i.e. employees working and resting, for the day selected

This is controlled by a new drop-down list added to the screen, located beside the day drop-down list, shown in the below screenshot. In this example, you see employees who are working.

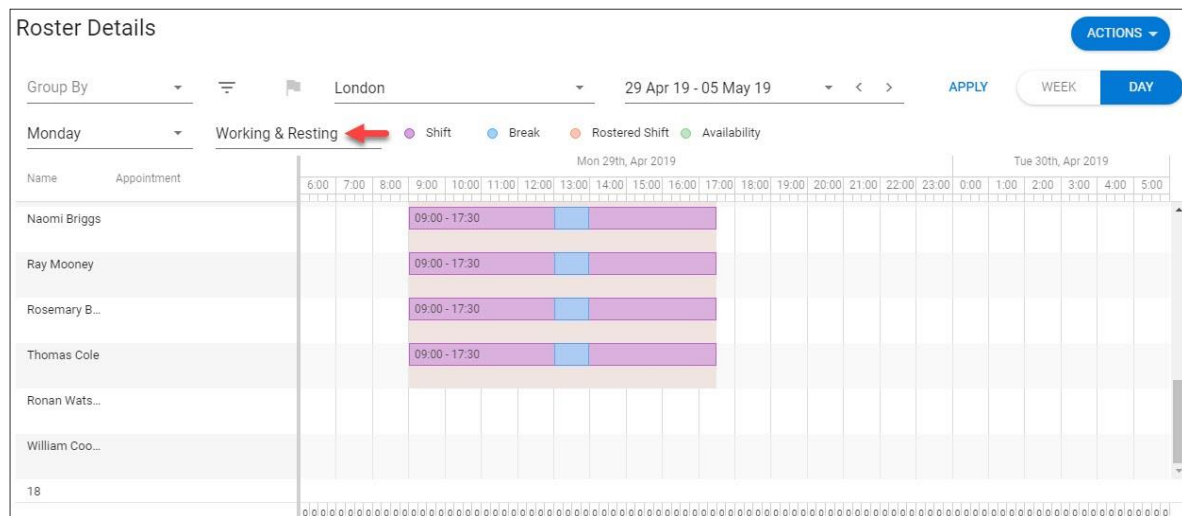

In this example, you see employees who are Resting.

In this example, you see employees who are:

- Working

- Resting

	Is Configuration Required? No, the new filter is available by default on the <i>Roster Details - Day</i> view screen.
	Upgrade Considerations None.
	N/A (No Jira)

2.2.5. Display Roster Changes

Enhancement

From v28, the restriction of only creating rosters up to three months in advance has been removed. Previously rosters could only be updated within the rolling window of one month back and three months forward. It is now possible for Roster to display changes regardless of the Roster Rolling Period.

This means that the roster is automatically generated for the future week you wish to schedule. Before v28, if you wanted to preview a week in a future period, no data would have been generated outside of the three months forward, one month back window.

From v28:

- The Roster Details screen is automatically refreshed when previewing a period, outside the three-month rolling period.
- The *Roster Details* screen is automatically updated after the AutoRoster process is run outside of the rolling period.
- An absence that is created within the three-month rolling period but is for a day that is outside the three-month period, is displayed automatically when you preview the period.

The following actions are required when using the below features outside of the one month back three-month forward window:

- You must click **Apply** to refresh the week for a newly created Absence to be displayed for the week you are previewing.
- You must click **Apply** to refresh the week, if you roster a person through the *Uncovered Shifts* process, for the change to be displayed.
- You must click **Apply** to refresh the week for changes to be displayed, that have been made via the *Change Roster* function.

Note:

For the week to update outside on the rolling one month back, three months forward the user must be running the roster for the lowest level Team Area. Running at the parent team outside of the rolling one month back three months forward will not refresh the period.

	Is Configuration Required? None Required.
	Upgrade Considerations None
	WDB-20

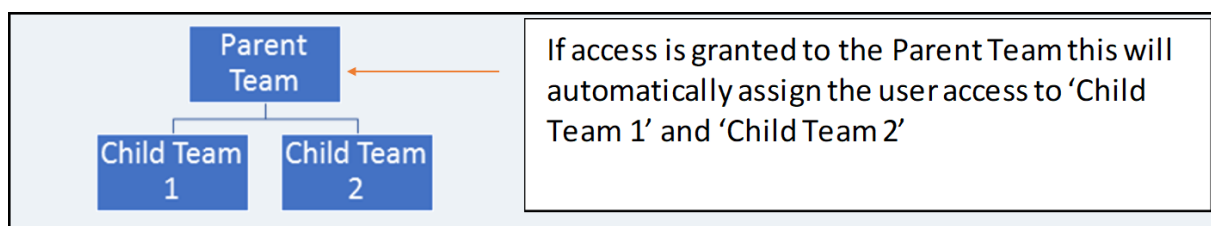

2.2.6. Assigning Team Area Access

As per v28, it is now possible to assign Team Area access by assigning the parent team area.

- If a user is granted access to a Parent Team Area, the user will automatically have access to all the child teams of the parent Team Area.
- This removes the need to assign all the child teams to the user individually.

If Access is granted to the Parent Team,

- This will automatically assign the user access to 'Child Team 1' and 'Child Team 2'.
- This will provide users with access to a Parent Team Area will give users access to all sub-teams.
- If a user has access to a parent team only, they now can view the sub-teams of the parent team.
- Assigning access at the lowest level Team Area will continue to work as-is.

	Is Configuration Required? None required.
	Upgrade Considerations If Managers have access assigned at a Parent Team level, they will now have access to all the sub-teams under the parent's structure.
	RR-1474

2.2.7. Publish All – Uncovered Shifts

Enhancement

This new feature allows manager to publish multiple shifts with a single click. Once the shifts are all the same time and duration, they can be rolled up, to display on one row and be published in bulk.

Users can also publish all “Uncovered Shifts” without manually selecting every single shift.

What does this mean?

- Managers can have a rolled-up view and filter on uncovered shifts.
- Time saving to publish shifts by allowing managers *Publish All* with a single click.
- Employees only receive one notification per *Publish*, reducing multiple alerts and constant notifications.
- Employees can accept available shifts by only seeing each distinct shift once.

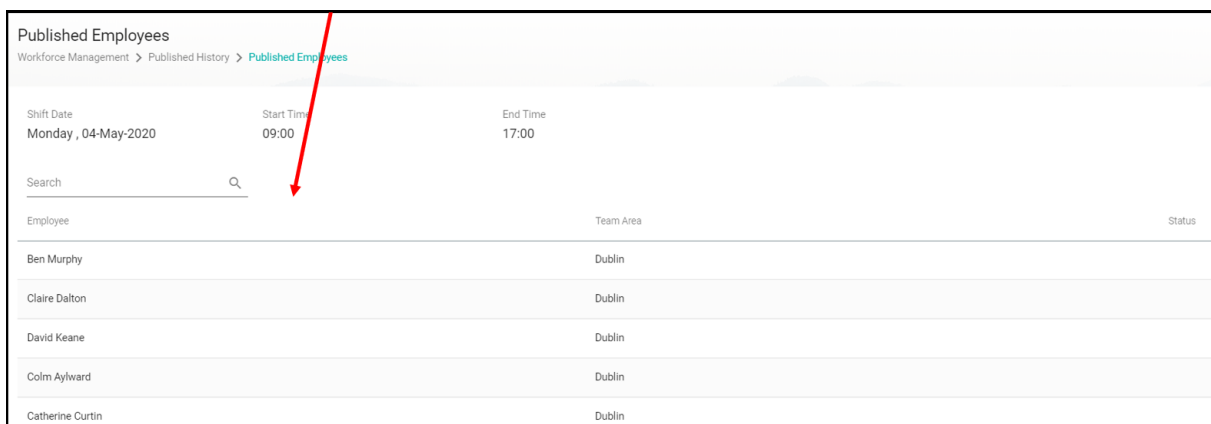

**Note:**

If there are multiples of the same shift available for the employee to accept (same date, times and requirements), the employee will only have each distinct shift displayed to them once, as only one can be accepted by the employee.

Notifications

Notifications have been updated to make sure that employees only receive one notification per *Publish* routine regardless of the number of shifts that are there for the employee to accept.

- If the same shifts are republished, the employee receives another notification if they are still valid to work the shift.
- The notification is based on the Publish run rather than the individual shifts available to work.
- The shift remains available until the shift is covered.

Published Employees
Workforce Management > Published History > Published Employees

Shift Date	Start Time	End Time
Monday, 04-May-2020	09:00	17:00
Search		
Employee	Team Area	Status
Ben Murphy	Dublin	
Claire Dalton	Dublin	
David Keane	Dublin	
Colm Aylward	Dublin	
Catherine Curtin	Dublin	

Filter Feature

The *Publish All* filter is applied to both the detailed and the Rolled-up view and allows the results to be filtered down to:

- Day
- Requirements
- Start Time
- End Time
- Pattern

If the Uncovered Shifts have been filtered and the user selects **Publish All**, only the filtered shifts will be published out or available for employees to accept.

Example 1:

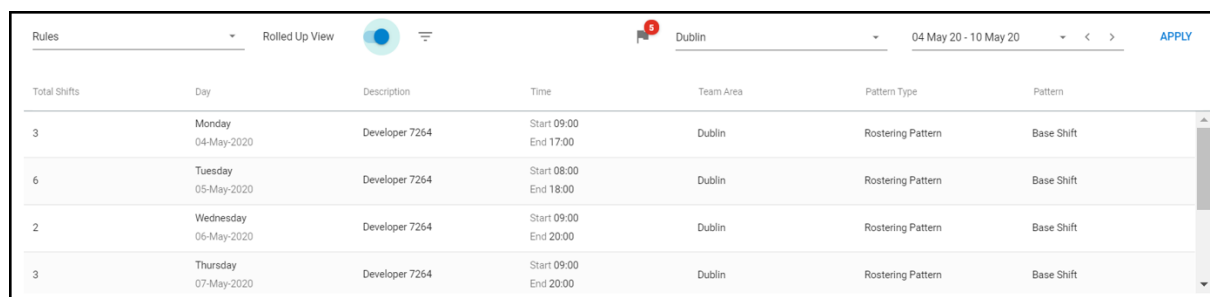

If a user filters the “Uncovered Shifts” to only return Monday and selects **Publish All**, only Monday’s “Uncovered Shifts” are published.

Example 2:

If the “Uncovered Shifts” are filtered and the user selects **Publish All** and then removes the filter, all the options as part of the filtered **Published All** will remain selected.

Example 3:

If a user filters the “Uncovered Shifts” to return Monday only and selects **Publish All**, the user then removes the filter. All of Monday’s “Uncovered Shifts” will continue to have the **Publish** option selected but all other days will not have the **Publish** option selected.

Rolled up view

Total Shifts	Day	Description	Time	Team Area	Pattern Type	Pattern
3	Monday 04-May-2020	Developer 7264	Start 09:00 End 17:00	Dublin	Rostering Pattern	Base Shift
6	Tuesday 05-May-2020	Developer 7264	Start 08:00 End 18:00	Dublin	Rostering Pattern	Base Shift
2	Wednesday 06-May-2020	Developer 7264	Start 09:00 End 20:00	Dublin	Rostering Pattern	Base Shift
3	Thursday 07-May-2020	Developer 7264	Start 09:00 End 20:00	Dublin	Rostering Pattern	Base Shift

What does it do?

- A rolled-up view is available to show distinct shifts in one row with a corresponding number of Uncovered Shifts displaying.
- Users can publish out all shift groups or can limit it to filtered shifts.
- The *Rolled-Up View* toggle controls which mode the screen is running in.
- A *Rolled-up view* removes the need to scroll between pages to find the uncovered shift the user wishes to publish, especially where there is a large volume of Uncovered Shifts in a period.
- It provides a summary to the user of the Uncovered Shifts and where are the largest staffing gaps in the week.

	Is Configuration Required? Yes
	Upgrade Considerations None
	WM-130

2.2.8. Roster Timesheets Access Types Selection

Enhancement

A configuration in *Roster General Settings* has been added which allows you to configure the type of access you wish timesheets to run on, from the Roster Details Screen.

The 3 options are as follows:

- 1) Access anyone on screen (no navigation):** This is an override which will allow you access to anyone on the roster details screen, but navigation within timesheets is disabled.
- 2) Access based on Home Team Area:** This allows you access anyone whose home team area you are viewing. Navigation works within the timesheet screen showing you everyone whose home team is the team you are viewing.
- 3) Access based on Org Role:** This allows you to access anyone you have org role access to and to navigate between any employee you have org role access to.

Key Wins

- Allows greater flexibility in how you control access to timesheets on roster details.
- With the first configuration (default), anyone can be accessed on the roster screen but we lose navigation within timesheets.
- With the use of the second option access is based on Home Team Area.
- Navigation is restored inside timesheet input screen but the list is limited to people within the selected team area and sub teams.
- With the use of the third configuration option access is based on org role.
- Navigation is restored inside timesheet input screen but the list is limited to people within your org roles remit.

This new config is controlled by the following parameters

- ts_access_mode on the system configuration table ct_roster_system_param

	No further documentation required.
	Is Configuration Required? Yes.
	Upgrade Considerations No
