1. Overview

1.1. Purpose of the Guide

The purpose of this document is to provide guidance on how User Defined Fields (UDFs) are configured.

This includes UDFs that are stored against:

- Employees
- Posts
- Contracts

This document will provide instruction on how to:

- Create & edit UDFs.
- Make UDF items available on People Management.
- Make UDF items available to managers to view or update.
- Make UDF items available to employees to view or update.

1.2. What are User Defined Fields?

1.2.1. UDFs Explained

User Defined Fields (UDFs) are used to hold data where the system doesn't provide this as standard. These would typically be items that are specific to an individual organisation and will differ from company to company.

For example, a company may wish to store a record of standard company equipment that has been given to an employee. This can be captured in a UDF that is configured to display the exact equipment list specific to that company.

UDFs can be created against:

- An employee
- A post
- A contract

UDFs may be configured using the following elements:

- Up to 12 standard fields:
 - Text
 - Number
 - List
 - Date
 - Text Area
- Start Date & End Date

There is no limit to the amount of UDFs that can be configured.

1.2.2. Access to UDFs

UDFs are configured via the *People Management* dashboard. UDFs are available as standard to all HR administrators via *People Management*. However, for each UDF created, it is possible to define if managers and employees should also see it.

It is also possible to identify UDFs that contain particularly sensitive data, to apply an additional level of security for HR administrators to access it.

1.2.3. Reporting on UDF Data

All UDF data is full reportable XD Insight.

2. Where are UDFs Configured?

2.1. Where to Access UDF Configuration

To access the UDF configuration screen:

1. Quick jump to the *Data Centre* widget and **Open** *HR Admin Setup Settings*.
2. Search for *User Defined Objects* and select the corresponding option under *HR Configuration*.

3. The *Maintain User Defined Fields* screen will open.

User Defined Type All				
Reference Code	Description	Security Required		
CE	Company Equipment	☐	...	
CLIN	Clinical Registration	☐	...	
CRB	DBS Checks	☐	...	
ERCTW	Cycle To Work Scheme	☐	...	
ERER	New Equipment Request	☐	...	
ERSC	Salary Certificate	☒	...	
HEALTH	Health Insurance Details	☒	...	
ID	Person Id Numbers	☐	...	
MATB1	Maternity And Paternity Form (Smp, Ospp)	☐	...	

2.2. Maintain User Defined Fields Screen Overview

The *Maintain User Defined Fields* screen is main area on PeopleXD for configuring UDFs. This screen lists all of the available UDFs on PeopleXD, by default.

Reference Code	Description	Security Required	
CE	Company Equipment	☐	...
CLIN	Clinical Registration	☐	...
CRB	DBS Checks	☐	...
ERCTW	Cycle To Work Scheme	☐	...
ERER	New Equipment Request	☐	...
ERSC	Salary Certificate	☒	...
HEALTH	Health Insurance Details	☐	...
ID	Person Id Numbers	☐	...
MATB1	Maternity And Paternity Form (Smp, Ospp)	☐	...
NL	Notification Of Leaver (Mr)	☐	...

Please see the table below for a brief explanation of the elements available on this screen:

#	Item	Description
1	User Defined Type drop down list	Defaults to <i>All</i> . Update to filter the UDFs displayed on screen by their type including: <i>Employee, Post Profiles, Post Appointments</i> . Please note: Other UDF types are not relevant to People Management.
2	Reference Code	The system reference data code. This will be particularly important to reference when reporting on UDFs.
3	Description	The actual description displayed for the UDF throughout PeopleXD.
4	Security Required	If checked, this indicates that an additional level of security access is required for a HR administrator to access this UDF on PeopleXD.
5	Data Labels	Access to the configuration of the UDF items

#	Item	Description
6	User Data	Can be used to default the data held in the UDF.
7	Advanced	Options required to define: • if this is an Employee / Post / Contract UDF. • if this should be visible and editable on ESS / MSS.

3. Creating a UDF

3.1. Step 1: Add New UDF Code

On the *Maintain User Defined Fields* screen:

1. Click the **Add** button to make a new blank row available.
2. Enter the new code and description for the UDF.
 - *Code*: Max of 6 alphanumeric characters
 - *Description*: Max of 40 alphanumeric characters

Maintain User Defined Fields

User Defined Type: All

☐		Text	Choose	Choose	☐		Define List Items
☐		Text	Choose	Choose	☐		Define List Items
☐		Text	Choose	Choose	☐		Define List Items
☐		Text	Choose	Choose	☐		Define List Items
☐		Text	Choose	Choose	☐		Define List Items
☐		Text	Choose	Choose	☐		Define List Items

Buttons: OK, CANCEL

2. Add each required item to the screen.

Click into the next available blank row and update the following items (full details in table):

- Active
- User Description
- Data Type

Note: It is possible to configure a maximum of 12 items per UDF. It is possible to display default 'From Date' and 'To Date' fields on each UDF, so keep this in mind if running out of available items when configuring the UDF.

Field	Description
Active	Select this to ensure the field displays on screen.
User Description	The actual label that will appear for this field on screen. Max 20 alphanumeric characters.
Data Type	• Text: User input will be alphanumeric only. • Number: User input will be numeric only i.e. no characters. • Date: User input will be in date format only i.e. DD-MON-YYYY • List: User can select from a predefined list of items. ○ When this option is used, the Define List Items button is enabled to record the list of items. ○ Click this button to open the 'Define List Items' screen and update all list items ○ Max 40 alphanumeric characters ○ Select the Active indicator • Text Area: User can input up to 4000 alphanumeric characters. • Reference: N/A – only applicable for Manager Requests
Reference Type	Not applicable for People Management
Description Mode	Not applicable for People Management
Mandatory	Enable to flag the items on the UDF as mandatory. Disable to make the items optional. Mandatory fields appear with a * on all screens where the UDF record can be created / updated.
Format Mask	Not applicable for <i>People Management</i>

3. Click the **Ok** button to save the items.

For example, a UDF configured to include the following items:

XD People Management: User Defined Field (UDF) Configuration – User Guide

Active	User Description	Data Type	Reference Type	Description Mode	Mandatory	Format Mask	
☒	Name on Passport	Text	Choose	Choose	☐		Define List Items
☒	Passport Number	Text	Choose	Choose	☐		Define List Items

OK CANCEL

would appear like this on the *User Defined Data* screen for an employee:

← Jillian Carey (000101) SA

Passport Details

People Management > Employee Search > Jillian Carey (000101) > Passport Details

Appointment: Started

Payroll Administrator

Name on Passport* Jillian Carey

Passport Number* PD1234567

Expiry Date* 29-Mar-2024

SAVE

Once all items have been configured, click the **OK** button at the end of the screen to save and return to the *Maintain User Defined Fields* screen.

3.3. Step 3: Define User Defined Type

The *User Defined Type* specifies if the data recorded in this UDF is for an Employee, Post, or Contract. This must be set for every UDF created. There is no default setting.

To set the *User Defined Type*:

1. On the *Maintain User Defined Fields* screen, click on the  button for the UDF and click the **Advanced** option.

Maintain User Defined Fields

User Defined Type: All

Reference Code	Description	Security Required	
ERSC	Salary Certificate	☒	...
HEALTH	Health Insurance Details	☒	...
ID	Person Id Numbers	☐	...
MATB1	Maternity And Paternity Form (Smp, Ospp)	☐	...
NL	Notification Of Leaver (Mr)	☐	...
PASS	Passport Details	☒	...
POST	Mandatory Checks	☐	...
RIH	Contract Change (Mr)	☐	...
TT	Term Time Working Arrangement	☐	...
WKPERM	Certificate Of Sponsorship	☐	...

The *Advanced Settings* window opens:

Advanced Settings

Passport Details

UDF Type

☒ Employees
 ☐ Post Appointments
 ☐ Manager Requests
 ☐ Document Requests

☐ Employee Requests

Post Profiles ☐
 Cascade to UDF Type ☐

E-Recruitment ☒

CorePortal

2. Select the required indicator,
 - These are grouped under *UDF Type*.
 - It is only possible to select 1 option per UDF.
3. Click **OK** to save the selection made

The options relevant to People Management are outlined below:

Option	Description
Employees	If the UDF should be held against the employee record, the 'Employees' option should be selected.
Post Appointments	If the UDF should be held against the contract record, the 'Post Appointments' option should be selected.
Post Profiles	UDFs can be linked to a Post Profile record. When this option is used the data captured on the Post can be cascaded to either the 'Post Appointment' or 'Employee' records linked to the Post Profile. • If the UDF should be available to update on a Post Profile record, the <i>Post Profiles</i> option should be selected. • When selected, a further option of <i>Cascade to UDF Type</i> is made available. ○ Enabled: Data captured on the Post will cascade to either the Post Appointment OR Employee record ○ Disabled: Data captured on the Post will not cascade to either the Post Appointment OR Employee record. The UDF will still be available for either the Post Appointment OR Employee, but no data is pre-populated in it. • Select either Employees or Post Appointments, to confirm which record type this UDF is relevant to.

3.4. Step 4 (Optional): Employee & Manager Access to the UDF

All UDFs are available by default to HR administrators via People Management. UDFs must be explicitly set to show and update for:

- Employees on Employee Profile
- Managers on Employee Profile

To update the Employee and Manager Self Service settings for a UDF:

1. On the *Maintain User Defined Fields* screen, click on the  button for the UDF and click the **Advanced** option.

The *Advanced Settings* window opens. All indicators are grouped in the 'CorePortal' section.

The image shows a screenshot of the 'Advanced Settings' window. At the top, there is a section for 'E-Recruitment' with a green toggle switch. Below this is a section titled 'CorePortal' which is highlighted with a red rectangular box. Inside the 'CorePortal' section, there are four toggle switches: 'Display on CorePortal' (green), 'Allow Update on CorePortal' (green), 'Hide Dates on CorePortal' (green), and 'Appointment Specific' (grey). Below the 'CorePortal' section, there are two dropdown menus: 'Request Type' with 'Choose' selected, and 'Country'. At the bottom right of the window are 'OK' and 'Cancel' buttons.

2. Update the options as required:

- **Display on CorePortal:**
 - The UDF will display on CorePortal ESS and MSS.
 - Manager or employee will require menu options to view the UDFs.
 - This does not affect HR administrators who will have access to the UDF by default on the People Management Dashboard.
- **Allow Update on CorePortal:**
 - The UDF can be updated on CorePortal via ESS and MSS screens.
 - Manager or employee will require menu options to update the UDFs.
 - This does not affect HR administrators who will have access to the UDF by default on People Management Dashboard.

3.5. Step 5 (Optional): Hide *From Date* and *To Date*

It is possible to hide the default *From Date* and *To Date* fields that are available to display for each UDF.

To do this:

1. On the *Maintain User Defined Fields* screen, click on the  button for the UDF and click the **Advanced** option.
2. The **Hide Dates on CorePortal** indicator is available under CorePortal
 - **On:** The standard *From Date* and *To Date* fields will be hidden on all Portal screens
 - **Off:** Date will be displayed on all Portal screens.
3. Click **OK** on the *Advanced Settings* screen to save the selection made

This is a global setting for the UDF and will impact on the employee's, manager's and HR administrator's view of the UDF.

Employee Profile UDF:

4. Updating UDFs

4.1. Edit a UDF

To edit a UDF, return to the *Maintain User Defined Fields* screen (see section [2.1 Where to Access UDF Configuration](#)).

4.1.1. Update the UDF Description

1. On the *Maintain User Defined Fields* screen, update/overwrite the description (max 40 alphanumeric characters).
2. Click the **Save** button to save the changes.

- a. Update the **Active** indicator to show / hide a field
- b. Update/overwrite the User Description to edit the label of the item (max 20 alphanumeric characters)
- c. To delete an item:

Deactivate the item OR overwrite with new item details. Delete function is not available.

Note: The items will delete even if data is held on these for an employee record.

- d. Update the *Data Type*.
- e. Update the **Mandatory** indicator (if allowed - see [3.6 Make Fields Mandatory](#))

Note: This may have an impact on data already held for that field, if it doesn't match the new data type requirements.

3. Click the **OK** button to save.

4.1.3. Add a New Item

Follow the steps outlined in [3.2 Configure Data Labels](#).

Note: It is only possible to configure a maximum of 12 items per UDF.

4.1.4. Update the Advanced Settings

On the *Maintain User Defined Fields* screen, click on the  button for the UDF and click the **Advanced** option.

- See [3.3 Define User Defined Type](#) for details on how to update the *UDF Type* settings on this screen.
- See [3.4 CorePortal Options](#) for details on how to update the display settings for the UDF, to control the display to a manager or employee.
- See [3.5 Hide 'From Date' and 'To Date'](#) for details on how to control the display of the default date fields.
- See [3.6 Make Fields Mandatory](#) for details on how to make UDF items mandatory.

4.2. Making a UDF Inactive

There is no option to make a UDF inactive on PeopleXD. However, it is possible to prevent this from displaying to employees and managers by updating the CorePortal display settings.

1. On the *Maintain User Defined Fields* screen, click on the  button for the UDF and click the **Advanced** option.

The *Advanced Settings* window opens. All indicators are grouped in the 'CorePortal' section.

2. Disable the following indicators:
 - Display on CorePortal.
 - Allow Update on CorePortal.
3. Click **OK** to save.

The UDF will no longer display on screen for employees and managers.

4.3. Deleting a UDF

It is only possible to delete a UDF if it hasn't already been used to capture data for an employee / post / contract.

To delete a UDF:

1. On the *Maintain User Defined Fields* screen, click on the  button for the UDF and click the **Delete** option.
2. You are prompted to confirm that you wish to delete the record.

Certificate Of Sponsorship			

ADD

Files

5.1.2. User Defined Objects in Settings

System	Menu Option
People Management	User Defined Field Codes

5.2. Manager

For the manager to access the UDFs for their employees & their contracts on the *My Team > View Profile screen*, they require the following menu options:

System	Menu Option	Description
CorePortal	Coreportal – Manager User Defined View	User can view any employee OR contract UDFs but not update
CorePortal	Coreportal – Manager User Defined Update	User can view employee OR contract & update UDFs that are shared on CorePortal and have been configured to allow updates.

Note: For a manager or employee to access UDFs (either to view or edit), the UDF must first be configured to display on CorePortal. Please see [3.4 CorePortal Options](#) for instructions on how to do this.

5.3. Employee

For the employee to access the UDFs for their employee record or contracts on the *My Profile* screen, they require the following menu options:

System	Menu Option	Description
CorePortal	Coreportal – Employee User Defined View	User can view any employee OR contract UDFs but not update
CorePortal	Coreportal – Employee User Defined Update	User can view employee OR contract & update UDFs that are shared on CorePortal and have been configured to allow updates.

 **Note:** For a manager or employee to access UDFs (either to view or edit), the UDF must first be configured to display on CorePortal. Please see [3.4 CorePortal Options](#) for instructions on how to do this.

6. Additional Security Required Configuration

If the UDF will be used to capture data that is particularly sensitive, which should not be made generally available to all HR administrators, it is possible to flag this as requiring additional security. This means that a user will need to be given an additional level of access to that specific UDF to see this on CorePortal.

6.1. Security Required Flag

On the *Maintain User Defined Fields* screen:

1. Select the **Security Required** indicator for the UDF.

Maintain User Defined Fields

User Defined Type
All

Reference Code	Description	Security Required	
ERSC	Salary Certificate	☒	...
HEALTH	Health Insurance Details	☒	...
ID	Person Id Numbers	☐	...

Cancel Add Save

2. Click the **Save** button to save.

6.2. Additional User Security Access

Users will need to be granted access to see the UDF. To do this:

1. Quick jump to the *Data Centre* widget and **Open People Management**.
2. Search for and select *System Users*.
3. On the *System Users* screen:
 - a. Select the **Portal** account option.

- b. Select the Username.
 - c. Select Security Type = *User Defined Access*.
 - d. Click **Show Access**.
4. The grid below updates to display all UDFs that have the *Security Required* indicator enabled.

The screenshot shows the UDF Configuration interface. At the top, there are two tabs: 'Accounts' (selected) and 'Back Office'. Under 'Accounts', there are two radio buttons: 'Portal' (selected) and 'Back Office'. To the right, there are four dropdown menus: 'Username' (000013), 'Security Type' (User Defined Access), 'Structure Code' (empty), and 'Access Level' (User defined code). Below these are four buttons: 'Delete User Access', 'Copy User Access', 'Clear', and 'Show Access' (highlighted with a red arrow). Below the buttons is a table with the following data:

Reference Code	Description	Active	Access Granted
ERSC	Salary Certificate	☒	☐
HEALTH	Health Insurance Details	☒	☐
PASS	Passport Details	☒	☒

5. Update the **Access Granted** indicator
 - **On:** User has access to view / update the UDF on CorePortal
 - **Off:** User does not have access to view / update the UDF on CorePortal.
6. Scroll to the end of the screen and click **Save**.

Note: This is applicable only to the HR administrator's access to UDF records via People Management. If the *Security Required* flag. This is not applicable to the manager's or employee's access to UDFs on the Employee Profile.
